Industrial Revolution.—The war was hardly over when the control of British policy passed into the hands of the younger WILLIAM PITT (1784), who enjoyed the entire confidence of the king. Now began the Industrial Revolution in England, the great development of manufacturing machinery driven by steam, which, owing to the vast wealth of Great Britain in coal and iron, and to the command of raw materials secured by her maritime supremacy, rapidly converted her into the 'workshop of the world,' and made her an industrial instead of an agricultural nation.

War with France.—But another revolution was arising in France. France became an aggressive republic, and Britain became the protagonist of Europe in the resistance to Fr. aggression. In the first period (1793–1802) of the great war the British took directly only an insignificant part in land operations, but dominated the seas, and the domination was converted into a decisive supremacy by the *Battle of the Nile* (1798). But this did not prevent France from immensely extending her power on the Continent, the work in great part of Napoleon Bonaparte. In the second stage (1803–15), when the Fr. Republic had disappeared and NAPOLEON was Emperor, France was finally paralysed for all maritime purposes by NELSON'S victory at *Trafalgar* (1805), and then Britain took up the rôle of a military power by sending her armies to the Peninsula under WELLINGTON (1808), who proved himself more than a match for each of Napoleon's greatest marshals in turn. Napoleon was overthrown by the combined forces of Europe, and was sent to Elba (1814). The Powers met in congress to reconstruct the European system; then Napoleon made his last throw, and Wellington held him at bay at *Waterloo* (1815) until the arrival of the Prussians under Blücher made that great battle an overwhelming rout. Napoleon became a prisoner on St. Helena.

The British Empire.—Since 1815 Britain has fought with no European Power save with Russia in the *Crimea* (1854–56). The last hundred years have witnessed the new expansion of the Brit. transoceanic empire, the development of democracy, and the development of great commercial and industrial questions and problems of social reform. The XVIII. cent. gave her a firm hold upon INDIA, and by 1820 the British were the paramount power over the whole Peninsula and the direct rulers of a third of it. That third was increased to a half during the Governor-Generalship of Dalhousie (1848–56). In the next

year broke out the *Indian Mutiny*, the great revolt of the sepoys or native army. Its suppression established the Brit. dominion more firmly, and the government was transferred from the East India Company to the direct control of the Crown (1858). There have been no more wars in India, though fears of Russ. aggression have compelled the maintenance of a huge army, and caused a great war in Afghanistan (1879), while the restlessness of frontier tribes has necessitated perpetual expeditions and 'little wars.'

The XVIII. cent. lost Britain the United States, but gave her CANADA. Also almost accidentally AUSTRALIA was annexed (1788) to provide a dumping-ground for convicts; while the Napoleonic war gave Britain the Dutch CAPE COLONY, which was primarily seized (1795) to prevent it from being used by the French. Out of the convict settlements grew the Australasian colonies, which in the middle of the cent. were given self-government. The self-governing colonies developed into states, and at the close of the XIX. cent. the Australian group formed themselves into a Federation (*the Commonwealth*). In this they had been anticipated by the colonies in North America which now form the Canadian *Dominion*. Canada itself was the first of the colonies to receive self-government (1840), which was soon granted to the rest; and they were empowered in 1867 to form a federation which Newfoundland alone has refused to join. New Zealand similarly declined to join the Australian Commonwealth, and remains a separate dominion. In South Africa numbers of the Dutch, discontented with Brit. Government, trekked into the interior (1836), where the Transvaal and Orange Free State Republics were set up (1856). Differences between the Republics and the British as paramount power in South Africa led to the great South African War (1899–1902), followed by the incorporation of the Republics in the British Empire, the grant of self-government, and their incorporation with the Cape and Natal in the *Union of South Africa* (1910).

Home Reform.—The Fr. Revolution caused a strong reaction of sentiment in the governing classes against all tendencies to alter the distribution of political power. The reaction continued predominant for many years after Waterloo; but in 1832 the demand of the middle classes for a revised system of representation brought about the great REFORM BILL, which abolished rotten boroughs and enfranchised the whole middle class. After another thirty-five years the demand of the labouring classes for enfranchisement produced Disraeli's Reform Bill (1867), which transferred the balance of political power from the middle classes to the working-men. The agricultural labourer, however, was still excluded, and it was not till 1885 that he received a vote and the House of Commons became a completely democratic assembly. Manhood suffrage and adult suffrage did not become questions of practical politics till 1912. Outstanding social measures of recent years introduced *Old Age Pensions* (1908) and *National Insurance* (1911).

The Legislative Union of IRELAND to Great Britain was carried through the Parliaments of Great Britain and Ireland in 1800. But the king's refusal to allow the *Act of Union* to be accompanied by *Catholic Emancipation* still left Ireland with an angry sense of grievance. Though the special grievance was removed in 1829 the mass of the Irish people still retained the sense that they were governed in accordance with Eng. ideas for the satisfaction of the Prot. minority, who had hitherto held an unqualified ascendancy. The demand for repeal of the Union was accompanied by the formation of secret societies and by periodical explosions of violence and outrage. The arrival of the democratic Parliament (1885), in which four-fifths of the Irish members were supporters of what was now called the *Home Rule* movement, set Home Rule in the forefront of the programme of the Liberal party, which, with one short interval (1893–95), was excluded from power for twenty years (1885–1905). A Home Rule Bill to re-establish an Irish Parliament was passed by the House of Commons, 1913, and, the veto-power of the House of Lords having been broken by the *Parliament Act* (1911), may become law if the Liberals can retain power for other two years.

Finally, reference may be made to the most striking feature of British commercial policy in the XIX. cent., the gradual development of *Free Trade* from the reforms of Huskisson (1823) to Peel's abolition of the Corn Law (1845), and the complete disappearance of Protection under the financial guidance of Mr. Gladstone. It remained for the XX. cent. to challenge the verdict of the XIX. and to set *Tariff Reform* in the front of the programme of the political party which has hitherto had no opportunity of carrying out that programme.

ENGLISH LANGUAGE.

English belongs to the Teutonic group of the Aryan or Indo-European languages, which comprise most of the literary languages of Europe. Teutonic is further subdivided into Scandinavian and Germanic, to which latter group English belongs. Originally it was a Low or N. German dialect or collection of dialects spoken by the Angles, Jutes, Saxons, and Frisians dwelling on the N.W. coast of Germany and in modern Schleswig-Holstein, and the languages which it resembles most to-day are Dutch and Frisian. Even before they left the Continent the English had borrowed a few foreign words, one or two from Celtic, but many more from Latin, chiefly of military significance (e.g. *camp, wall, mile*), or commercial (e.g. *mint, pound, inch, wine, cheese, butter, pepper*), and a few referring to Christianity, such as *church* and *minster*.

On coming to Britain (449–547 A.D.) they found the island occupied by a Celtic race, just freed from Roman government, speaking in the towns a Latin dialect and in the country at large a Cymric or Britannic form of Celtic from which Modern Welsh is descended. From these two languages the English learnt practically nothing; the names of their oldest cities are Latin (cf. *Chester* from *castra*=camp); most of the rivers (cf. *Avon, Esk, Ouse*) and hills (*Pennine* Chain) are Celtic; otherwise the only words, probably of Celtic origin, that English owes to the Early Britons are *down* (a hill), *combe, bin* (orig.=a manger), *dun* (the colour), *crock* (a pitcher), and one or two others. Between 597 and 630 England was taught Christianity, in the S. by the Roman Augustine, in the N. by the Irishman Aidan, and through this new teaching English first became a literary language. The history of the language as seen in this literature has been divided into three periods—Old English (630–1150 A.D.), Middle English (1150–1550 A.D.), and Modern English (1550 A.D. onwards).

The **Old English** Period has been called the Period of Full Endings, because it retains the inflectional endings of its words with their full vowel values (cf. O.E. *drincan*, Mid. E. *drinken*, Mod. E. *drink*). Old English was a highly inflected language, containing four cases, nominative, accusative, genitive, and dative; three grammatical genders, masculine, feminine, and neuter; two noun declensions, strong (with plural in *-as*, or *-a* when feminine) and weak (with plural in *-an*); two adjective declensions, definite and indefinite; two verb conjugations (as to-day), strong (with change of vowel-stem in the past tense) and weak (with addition of a suffix to the stem in the past); and two tenses, present and past. To-day English has entirely lost grammatical gender and adjective declension, and of noun declension keeps only the forms of the nominative singular and plural and the genitive singular; in *whilom*, however, is found a remnant of the dative plural (O.E. *hwilum*), and in *witena-gemot* (meeting

of the wise) of the genitive plural. Old English spelling was, as far as possible, phonetic; the vowels had the sounds of Modern French or German rather than Modern English (*i.e.* *a* as in *father*, *é* as in *they*, *i* as in *élite*, etc.), and *h* in the middle and end of words had the guttural sound of *ch* in Modern German (cf. *ich*). In general sound the language more closely resembled German than Modern English, and many Old English words are much longer than their modern descendants (cf. *fortnight* from O.E. *fēowertinĕniht*). Another peculiarity of Old E., shared with German, but partially lost in Modern English, was the power of forming compound words (*e.g.* O.E. *dæg* (day) gives a compound *dægred* (red day), meaning dawn, which in its turn gives *dægredsang*, meaning dawn-song, *i.e.* morning service). With the coming of Christianity many more Latin words came into English, some ecclesiastical (e.g. *priest, monk, nun, bishop, school, anthem*), some domestic (e.g. *cook, kitchen, dish, fork, cup, kettle*), some names of plants (*lily, rose*), and a few miscellaneous (*turn, offer*). In one point Old English differs from Modern, in that it attempted more to translate foreign terms rather than adopt them whole (e.g. *Exodus* = *Utgang*, the Out-going; *evangelium* = *godspell*, our *gospel* or good news).

In the IX. and X. cent's England was exposed to the attacks of the Scandinavians, who overran the North and Midlands and finally settled down among the English. Their influence upon the language was very great. Firstly, they enriched the Northern and Midland dialects with many Scandinavian words, many of which have crept into standard English; such words are usually (in origin) of legal significance (e.g. *law, outlaw, fellow, crave, hustings, riding, wapentake, husband, thrall*), nautical terms (e.g. *boatswain, steersman*), or forcible, often colloquial, expressions (*ugly, clumsy, smack, bawl, crazy, dumps, egg on, dowdy*). Secondly, they had great influence on the grammatical structure of the Northern dialects. As the English and Scandinavians both spoke cognate languages in which the stems of the simplest words were often alike, to make themselves understood to one another, they would often enunciate the stem of a word without heed to its inflectional endings, and hence the gradual weakening of endings which spread to all dialects after the Conquest. They also simplified the noun declension by practically abolishing the weak declension (except in such forms as *oxen, kine* (from *cow*), *children, brethren*) and making the strong masculine declension the chief declension (cf. O.E. *nama*, gen. sing. *naman*, nom. plur. *naman*, gen. plur. *namena* with Mod. E. *name*, gen. sing. *name's*, nom. plur. *names*, gen. plur. *names'*). One other change in grammar that dates from the Old English Period is the formation of new tenses (future, perfect, pluperfect), with the help of the auxiliaries *sceal* (shall), *will*, and *habban* (have).

In 1066 England fell into the hands of the Normans, and English became a medley of peasant dialects with little or no literature, while French became the language of culture. There were then four main dialects in English: *Northumbrian* or *Northern*, *Mercian* or *Midland*, *West Saxon* or *Southern*, and *Jutish* or *Kentish*. Before the Conquest, West Saxon had been the literary dialect, but in the confusion after 1066 it lost its pre-eminence, and finally, in Chaucer's days, it was the East Midland dialect round London that prevailed and became the ancestor of modern standard English. We still have, however, a few words from other dialects in Modern English: *vixen* (fem. of *fox*) is a southern form of *fixen*, and *left* (hand) and *kernel* are Kentish forms.

In XII. cent. English recovered its literary power, and the **Middle English** Period began. This period is called the Period of Weak Endings, as nearly all inflexional endings were weakened to *e* (cf. O.E. *drincan* = Mid. E. *drinken*). In the XV. cent. this inflexional *e*, when alone, became mute, and hence the modern final mute *e* in such words as *alive, bone*, etc. One great influence that French had was in the introduction of prepositional phrases in place of the cases (e.g. *the son of the king* for *the king's son*), and this, coupled with the gradual loss of inflexions, caused the disappearance of the complicated Old E. noun and adjective declension. After 1200 the language was re-spelt after French methods (*e.g.* O.E. *mūs* became *mouse*, and *mȳs, mice*), and the old phonetic spelling was largely lost. From 1066 onwards the language was flooded with French words, and even French suffixes for word-formation (cf. drunk*ard*, knav*ery*). The words introduced by the Normans refer chiefly to War and Feudalism (e.g. *war, captain, aid, armour, mail, baron, fealty, homage, tenant, vassal*), to Law (*arrest, assize, case, fee, estate, sue, plea*), and the Chase (*chase, brace, forest, covert, sport, venison*). Every English writer of culture, such as Chaucer or Gower, borrowed more words still, such as *courage, comfort, adventure, chamber, folly*, and often the French word would oust its Old Eng. synonym.

About 1550 the **Modern English** Period began. This has been called the Period of Lost Endings, as most of the inflexional endings disappeared during it (cf. Mid. E. *drinken* = Mod. E. *drink*). But the most important change of this period was in the sound of the accented vowels (chiefly when long), which altered from the sounds they still have on the Continent to their present sounds in English (*e.g.* in *mate, hide, but*). The guttural *ch* sound has also disappeared, although represented in spelling (cf. *light*), which, for the language as a whole, has scarcely altered since 1600. The great influence upon English in the XVI. cent. was the Renaissance, or revival of classical learning. This led to many more words being borrowed from Latin and Greek, not through French, but directly. Often it happened that words were thus borrowed which already existed in the language in another form (cf. *balm—balsam*; *challenge—calumny*; *dainty—dignity*). Words also were borrowed, usually through French, from Italian, chiefly terms of war (*attack, cannon, colonel*) or of art (*arcade, balustrade, balcony*), and directly from Dutch, chiefly sea-terms (e.g. *sloop, yacht, reef, rover, deck, hull*) or military terms (e.g. *leaguer, waggon*). One result of the revival of classical learning was the so-called Etymological spelling of some of our Latin words; for instance, because Mid. E. *dout* was derived from Latinian *dubitare* it was spelt *doubt*. During the Elizabethan period English attained a curious verbal flexibility which distinguishes it to-day from other European languages; a word, originally one single part of speech, may be used as any other part of speech (e.g. *clean*, originally an adjective, is an adverb in *clean gone*, a verb in *to clean*, and a noun in *to have a clean*). Many writers after 1600 have enriched English with words of their own coinage: Shakespeare gives us *bare-faced, beguile, dwindle, hint, hurry, lonely*, and phrases like *yeoman's service* and *towering passion*; the Authorised Version of the Bible gives *Babel, helpmate, prodigal* (son), *scapegoat, howling wilderness, eleventh hour*; Milton gives *gloom, pandemonium, impassive, irresponsible*; and Sir Thomas Browne, *hallucination*. In the XVIII. cent. more words were borrowed from French (e.g. *anachronism, anecdote, decadence, suicide*) and from Ital., chiefly musical (*opera, soprano, piano, tenor*). In the XIX. cent. and after, the growth of science and philosophy led to many more words being formed from Latin and Greek, such as *telephone, locomotive, aeroplane, psychology, dogma*.

The chief characteristic of Modern English is not elegance, but terseness and vigour, which renders it the best language for business purposes. The practical side of the English race is shown in the simplicity of its grammatical forms and the logical order of its sentences. It is also seen in the power of converting whole phrases into nouns or adjectives (cf. *It's the man who wrote it's fault*, and *The Adulteration of Food and Drugs Act*). An unpractical side is shown in the archaic and unphonetic spelling, dating from the XVI. cent. Another characteristic of English

which renders it capable of high poetic expression is its wealth of synonyms, arising out of the two languages, Teutonic and Latin, that build up its vocabulary. By means of these synonyms, English more than any other language can differentiate between the emotional and the intellectual idea (contrast the ideas conveyed by *fatherly—paternal*; *motherhood—maternity*; *friendly—amicable*; *holy—sacred*).

Language* (2nd edit., 1912); Toller, *Outlines of the History of the Eng. Language* (1900); also O.E. dictionaries, readers, etc., by Skeat, Morris, Sweet; and *Oxford Eng. Dictionary*, edit. by Sir James Murray.

ENGLISH LITERATURE.

English literature in its beginnings is associated with the introduction of Christianity. The first known native writer was CÆDMON, a monk of Whitby Abbey (d. 680), but only a fragment of his verse rendering of the Book of *Genesis* remains. It is, however, believed that a considerable oral lit. existed before his days, consisting of heroic legends brought over at the time of the Conquest of Britain by the Angles and Saxons. Some of these were probably reduced to writing in the VII. cent., examples surviving in the epic fragment known as *Widsith*, and the fine poem, *Beowulf*, in which are told the adventures of that hero with the monster, Grendel. The writers of these poems are unknown, and while *Widsith* probably belongs to a period before Cædmon, *Beowulf* is believed to have been written about 700. Bede's *Ecclesiastical History* belongs to the VIII. cent., but was written in Latin. The next considerable writer after Cædmon and the unknown author of *Beowulf*, is Cynewulf (VIII. cent.), who wrote the poems *Christ*, *Elene*, *Fates of the Apostles*, and *Juliana*. These native poets all used an alliterative measure, and wrote in an O.E. northern dialect. The O.E. 'Elegies,' *Deor*, *The Wanderer*, *The Seafarer*, and others, mark a further advance, and though their date of composition is uncertain, it is believed to be not later than the X. cent. To this latter period also belong the two excellent poems, *The Battle of Brunanburh* and *The Battle of Maldon*.

Eng. prose began with the trans. by King ÆLFRED (d. 901) of Latin originals, and the same great king is credited with having commenced the *Saxon Chronicle*. Other later prose writers were Ælfric and Wulfstan. With the exception of these and the *Chronicles* of Peterborough and Worcester, there was little native lit. of merit from the death of Ælfred to about the middle of the XIII. cent., thanks to the troublous times (Danish invasions, Norman Conquest, etc.) through which the country passed. There was indeed the valuable chronicle of Geoffrey of Monmouth (d. 1154), but it was written in Latin. Another writer, however, who claims notice was Layamon (fl. 1200), whose poem *Brut* was derived from Geoffrey's chronicle, and the Anglo-Norman poet Wace. This poem introduced the Arthurian story into Eng. lit.

The Norman Conquest introduced a new language and a new lit., the influence of which was long felt; but though many of the legends and traditions then introduced became incorporated in Eng. lit., there were many others, such as *Havelok the Dane*, *King Horn*, *Guy of Warwick*, which were of native origin, and, though first written in Norman-French, had assumed a vernacular form by the middle of the XIII. cent. From this period to the age of Chaucer (1340-1400) and his contemporaries, though there was a growing lit., there was nothing of outstanding merit, save the exquisite lyric, *Sumer is icumen in* (*c.* 1250), and, perhaps, another lyric, *Alison* (*c.* 1300).

Age of Chaucer.—Fr. influence was still strong in England when CHAUCER produced his *Canterbury Tales* and other poems, but though his subjects were often derived from Fr. sources, his genius transformed all that he touched and gave it distinction and native character. Chaucer was the first of the great Eng. poets, and the most notable literary figure of his age. Several of his contemporaries, however, demand consideration, amongst the most notable being John Gower, who wrote *Confessio Amantis*, William Langland, author of the *Vision of Piers Plowman*, and Laurence Minot, who wrote, in a northern dialect, stirring poems in celebration of the victories of Edward III. To these succeeded three poets of a distinctly Chaucerian type—Lydgate, Occleve, and Stephen Hawes. Eng. prose is represented by the writings of John Wycliffe (1320-84), Sir John Mandeville, and Sir Thomas Malory's *Morte d'Arthur* (1470).

A school of SCOTS poetry came into existence during this period, which was not without its influence on later Eng. lit., the authors including Barbour, Henryson, DUNBAR, and Gavin Douglas. The trans. of *Froissart*, by Lord Berners, commenced to appear in 1523, between which date and the earlier publication of the *Morte d'Arthur*, CAXTON had translated and printed numerous prose romances and other works. Amongst other contributors to the wealth of Eng. prose must be mentioned Sir Thomas More (1478-1535), author of the *History of Richard III.*, and the theological writers and translators, Tyndale, Latimer, Coverdale, and Cranmer.

Elizabethan Age.—Eng. poetry, which had somewhat declined since Chaucer's death, was revived and developed by two young men of noble birth, Sir Thomas Wyatt (1503-42) and the Earl of Surrey (1517-47). They experimented in new measures, and introduced Ital. forms of verse, and so provided the vehicles of expression for later and greater poets. Wyatt introduced the Petrarchian sonnet into Eng. verse; and Surrey, in his trans. of the *Æneid*, appears to have been the first Eng. writer to employ regular blank verse (blank verse lines had appeared in Chaucer's prose 'Tale of Melibee'). Minor poets belonging to this period are Churchyard, Gascoigne, Tusser, and Sackville. The brave and courtly Sir Philip Sidney (1554-86) achieved something approaching greatness in his *Astrophel and Stella* sonnets, and *Arcadia*; and the second great Eng. poet was discovered in his friend, EDMUND SPENSER (1552-99), whose *Faërie Queene* and other poems are amongst the masterpieces of Eng. poetry. Amongst notable prose works belonging to this period may be mentioned Roger Ascham's *Toxophilus* and *The Schoolmaster*, Richard Hooker's *Ecclesiastical Polity*, John Lyly's *Euphues*, Richard Hakluyt's *Principal Navigations*, and the numerous writings of Francis Bacon.

The most dominant feature of Eng. lit. in the age of Elizabeth was the DRAMA (*q.v.*), which began at an earlier period with the Miracle, Mystery, and Morality plays, and which reached its highest development in the hands of SHAKESPEARE. But it may be noted that many of the dramatists of this period also achieved more or less distinction as narrative or lyric poets. Thus Marlowe would be notable if only for his narrative poem, *Hero and Leander*; Ben Jonson, besides being a great dramatist, was the author of *Underwoods* and some of the most exquisite lyrics in the language; George Chapman translated the *Iliad* and *The Odyssey*; and if Shakespeare had never written a single play he would still be a great poet by reason of his incomparable *Sonnets*, his *Venus and Adonis*, and *The Rape of Lucrece*. There was also a considerable body of Elizabethan and early JACOBEAN writers, other than dramatists, who were distinguished as poets, and amongst these may be named Michael Drayton, author of *Poly-Olbion*, *Nymphidia*, etc.; Samuel Daniel, famed for his epistles and sonnets; William Browne, who wrote *Britannia's Pastorals*; the lyric poets, Thomas Campion and Thomas Carew; William Drummond of Hawthornden, the sonneteer and friend of Jonson; and that quaint and crabbed poet, Dr. John Donne, the first of the 'Metaphysical School' (*q.v.*). Several of these poets, as has been

noted, overlap into the Stewart period, but in style and manner they belong properly to the age of Elizabeth.

Age of Milton.—The latter part of the XVII. cent. may be classed as the age of MILTON. Amongst the courtly poets of this time were Wither, Suckling, Waller, and Cowley, and all Milton's own early poetry was written before the outbreak of the Civil War and the overthrow of the monarchy. But the severe rule of the Puritans, who closed the theatres and discouraged all forms of worldly pleasure, made itself felt in the lit. of the period. Milton's poetic masterpiece, *Paradise Lost*, was written in his later years, and not published until 1667, but there were a number of other poets contemporary with him whose seriousness and religious fervour dominated all they wrote. Prominent amongst these were Richard Crashaw, George Herbert, Henry Vaughan 'the Silurist,' and Francis Quarles. Robert Herrick (1591–1674) was, however, a bard of another type. Born in the reign of Elizabeth, he died in the same year as Milton, and his most characteristic work is distinguished by its wit, paganism, and lyric charm.

The note of high seriousness and the spirit of contemplation which distinguished the poetry of the Miltonic period is to be found no less in the prose. Milton himself, besides being one of the greatest of Eng. poets, was a distinguished prose-writer. To this time also belong Izaak Walton's *Lives* and *The Compleat Angler*, Burton's *Anatomy of Melancholy*, Sir Thomas Browne's *Religio Medici*, and the masterly productions of Hobbes, Jeremy Taylor, Clarendon, and numerous others.

Age of Dryden and Pope.—The licentiousness of Eng. society in the period succeeding the Restoration introduced a decadent spirit into lit., yet it is worthy of remark that England's greatest epic, *Paradise Lost*, was published seven years after the Restoration. The most dominant figure in the country's literature of this period was DRYDEN, who was forty-three years of age when Milton died, and whose first considerable poem was his *Stanzas on the Death of Oliver Cromwell* (1658). Had Dryden lived in any other period than that in which he did, he would doubtless have left the world his debtor by a much larger body of fine poetry; for the exigencies of his life compelled him to pander to the depraved taste of his age, and his work for the stage constitutes the larger part of his output. This, notwithstanding his contribution to England's poetical lit., was very considerable, and the masculine vigour of his lines has secured for him an honoured niche in the Temple of letters. Other poets of this time who cannot be overlooked were Prior, Marvell, and Samuel Butler, the author of *Hudibras*. But though the output of poetry was somewhat meagre, the harvest of prose was singularly rich, and includes the works of such various writers as Sir William Temple, John Locke, Gilbert Burnet, Jeremy Collier, Isaac Barrow, Richard Baxter, George FOX, John Bunyan, and the diarists, John Evelyn and Samuel Pepys.

POPE (1688–1744) was destined to be the natural successor of 'glorious John,' as the elder poet has been called. The heroic couplet, however, in the hands of Pope, lost the vigour which had distinguished it when employed by Dryden, but what it lost by effeminacy it perhaps gained in wit and polish. In other words, the satire of Dryden might be compared to the stroke of a broadsword; that of Pope to the thrust of a rapier. Other poets contemporary with Pope were James Thomson (1700–48), author of *The Seasons*; Thomas Gray (1716–71), of 'Elegy' fame; and William Collins (1721–59), whose odes are amongst the best in the Eng. classic style. Like the age of Dryden, that of Pope witnessed the production of many prose masterpieces. These include the satirical writings of SWIFT; the essays of Steele and Addison; the theological and critical works of Bentley and Joseph Butler; the philosophical writings of Berkeley; and the voluminous output of Defoe, the father of the Eng. novel.

Age of Johnson.—The next period of importance includes, besides the various writings of the great lexicographer, SAMUEL JOHNSON, the works of Edmund Burke and Oliver Goldsmith, and the novels of Fielding, Smollett, Richardson, and Sterne. Two poets of eminence, William Cowper (1731–1800) and George Crabbe (1754–1832), form a connecting-link between the XVIII. and XIX. cent's. The poetry of the former is distinguished by a gentle domesticity; that of the latter by a stern and rugged realism.

Daniel Defoe has been referred to as 'the father of the ENG. NOVEL.' It is true there had been fantastic 'romances' pub. in England long before the days of Defoe, but they were chiefly adaptations from foreign sources, and were not by any means 'novels,' as we now understand the word. Defoe was a journalist and pamphleteer by profession, and not until he was nearly sixty did he first turn his attention to fiction, and write his masterpiece, the picaresque yet moral story, *Robinson Crusoe* (1719–20). It was followed by his other autobiographical stories, *Captain Singleton*, *Moll Flanders*, and *Colonel Jacque*. Samuel Richardson (1689–1761) was over fifty years of age when his first novel, *Pamela*, appeared; this, together with its two successors, met with much appreciation. Richardson understood female character, but his men were not drawn with so firm a hand. FIELDING (1707–54) began his *Joseph Andrews* as a burlesque of *Pamela*, but he was a writer of too original genius to remain content with parody, and the completed work failed in its earlier intention. In *Tom Jones* he produced a far greater work, which is generally considered his masterpiece. He was a more vigorous writer than Richardson, and drew both men and women equally well. Smollett (1721–71) was a novelist of coarser fibre. He gave the flesh-and-blood sailor to Eng. fiction; he drew largely on the adventurous element; but he is often unpleasantly coarse. Lawrence Sterne (1713–68), by virtue of his *Tristram Shandy* and *Sentimental Journey*, has secured a place among the great novelists. After these came several writers of fiction who can be but named—Horace Walpole, Clara Reeve, Mrs. Radcliffe, 'Monk' Lewis, Henry Mackenzie, Robert Bage, and Fanny Burney. Maria Edgeworth's first novel appeared in 1800; Jane Austen's in 1811; Sir Walter Scott's in 1814; and Susan Ferrier's in 1818. See NOVEL.

XIX. Century.—In poetry a period of transition from the artificial style of the XVIII. cent. was reached in the works of Cowper and Crabbe. The next dominating influence was that of Robert Burns. Like Shakespeare, BURNS borrowed not a little from his predecessors. He owed much to Robert Fergusson and Allan Ramsay. But what he borrowed he subsequently made his own. His sturdy individuality and close kinship with nature paved the way for WORDSWORTH, who became the high-priest of Nature in all her moods. Of Southey little need be said. The great body of his verse is forgotten, but he lives deservedly by his fine prose and a handful of lyrics. Thomas Campbell (1777–1844) gave to Eng. lit. a few poems which will not readily be forgotten; and the same may be said of Chatterton and Blake. The XX.-cent. desire for realism has led to Blake's being hailed as 'The English Nietzsche.' *The Ancient Mariner*, *Christabel*, and a few other poems by COLERIDGE are amongst the greatest treasures of Eng. poetic lit. SCOTT'S romantic poems marked an epoch in Eng. literary history, but his fame will rest almost entirely on the *Waverley Novels*. The arrogant and tempestuous genius of Lord Byron drove Scott from the field of poetry, and though Byron's influence in lit. and society lasted long after his death, it was subsequently effaced in England, though there have been gleams of a revival of appreciation. SHELLEY and KEATS belong to the highest order of lyrical poets, and conquer by sheer beauty of form and expression. It is extremely unlikely that the exquisite quality of their work can ever lack admirers. TENNYSON, who succeeded Wordsworth as poet-laureate, began as an

imitator of Byron and Keats, but he quickly assumed a strong and unassailable position in poetry. His refined lyrical accomplishment, and his close interest in the affairs of his time, secured for him an extensive popularity. The sad and thoughtful note of Matthew Arnold's poetry made a deep appeal, and the excellence of his craftsmanship has been generally admitted. ROBERT BROWNING had to wait long for popular recognition. But, notwithstanding the depth and sincerity of his work, the grotesqueness and cragginess of his style must ever militate against his success with the general reader. The poetry of his wife, Elizabeth Barrett B., though of a more generally intelligible type, is often disfigured by careless workmanship and outrageous rhymes. The gentle piety which distinguishes the poetry of Christina Rossetti supplied a want of the time, and met with its due meed of appreciation. The work of Dante Gabriel Rossetti, William Morris, and SWINBURNE may be classed together. Though the general high quality of their writings is indisputable, the remoteness in choice of subject is such as can appeal only to the cultured reader.

The modern essay has been finely cultivated by Leigh Hunt, Lamb, Hazlitt, and De Quincey; history by Gibbon, Macaulay, Hallam, Milman, Freeman, Kinglake, Gardiner, Froude, and Green; art, criticism, philosophy, economics, and sociology by Hume, Carlyle, Ruskin, Arnold, Pater, and many others.

Sir Walter Scott, who was the founder of the Eng. historical novel, issued his last story in 1831. He had found a sedulous, though somewhat dull, imitator in G. P. R. James, who was already in the field, and met with considerable success. Lytton and Beaconsfield both published their first novels in 1827; and Captain Marryat the earliest of his sea-stories in 1829. After Scott, the next writers to give distinction to Eng. fiction were DICKENS, whose *Pickwick Papers* appeared in 1837; and THACKERAY, who, though only one year the junior of Dickens, did not achieve much success until the publication of *Vanity Fair* in 1847. After these came a group of women novelists of eminence—the Brontës, George Eliot, and Mrs. Gaskell. It is impossible even to mention by name in this place the many writers who were once highly popular, but it may be observed that Anthony Trollope, Charles Reade, Charles Kingsley, and, perhaps, Wilkie Collins have still their admirers. Robert Louis Stevenson combined fine style and imagination. George Meredith and Thomas Hardy have created new schools of fiction, and there is at present no evidence to suggest the possibility that their best work will be surpassed, or even equalled, in the immediate future.

XX.-cent. English lit. shows the contest between romance and realism in poetry, fiction, and drama, witness, *e.g.* Rudyard Kipling. The cult of realism has led to the identification of lit. pure with sociology and politics. This is seen in the works of Hardy (to some extent), H. G. Wells, G. B. Shaw, and Arnold Bennett. See also SCOTLAND: *Literature*; UNITED STATES: *Literature*.

Saintsbury's *Short History of English Literature*; Craik's *Manual of English Literature*; also other histories by Taine, Gosse, Stopford Brooke, and Andrew Lang (1912); *Cambridge History of English Literature*, edit. by Ward and Waller (1907, *sqq.*); brief *History of English Literature*, by Compton-Rickett (People's Books, 1912; with Bibliography); Chambers's *Cyclopædia of English Literature*.

ENGLISH LAW.

The roots of England's present legal system lie far in the past. Anglo-Saxon laws are closely akin to those of the Continent. Though Scandinavian, and with the Norman Conquest, Frankish elements entered in, yet Celtic influence both in England and in Scotland was very slight, so that Eng. law can be considered as a distinctly native as well as Teutonic thing. William I. determined that if possible England should not become over-feudalised and decentralised—hence that famous compilation known as *Domesday Book*. The so-called *Leges Henrici Primi* are a compilation from earlier sources; in the XII. cent. the book of Ranulf Glanvill is important; this developed the system by which legal action might be taken through one of a number of formulæ. The study of Rom. law underwent a great revival in Europe. Rom. and Canon Law were studied at Oxford; the latter became the Church law for England, and in conflict with secular Eng. law gave rise to quarrel of Henry II. and Becket. Two other documents of this age are important: *The Dialogue of the Exchequer* and Bracton's note-book. Although *Magna Carta* was, in form, a 'grant' by the king, its place in Eng. legal history is prominent, not only for what it directly accomplished, but for its significance in later controversies.

The reign of Edward I. is of fundamental importance for Eng. law and constitution. The foundation was laid on which later cent's were to build. Edward's legislation, though sometimes 'harking back' to earlier times, anticipates much later legislation. Few important developments took place between XIII. cent. and the Tudor age. Though it occurred to some then to remodel Eng. law on a Rom. basis, there was nevertheless a revival of Eng. mediæval law. During the Stewart period Edward Coke, John Selden, and William Prynne defended ancient Eng. privileges against royal encroachments. During XVIII. cent. a large amount of legislation was passed; much now done by the executive was then attempted by direct legislation. The *Commentaries* of William Blackstone, pub. 1765, are another of the important series of famous Eng. law works; the radical Bentham was destructive in spirit, but he inspired the reform legislation of Romilly and Brougham. The XIX. cent. has seen much important legislation, and, among legal changes, the union of old courts with the new Supreme Court of Judicature.

Judicature.—Minor cases are tried by petty sessional courts, consisting of at least two justices of the peace; more important cases are reserved for the assizes, held quarterly in provincial towns, and the Central Criminal Court, which, besides judges, have a jury consisting of residents in district where case is tried, from 12 to 23 in number. The Court of Criminal Appeal (1907) may reconsider appealed cases but does not retry them. The Royal Prerogative, exercised through the Home Secretary, may secure a reprieve for a condemned criminal. Separate courts are established for the City of London. The Court of Chancery deals with certain civil cases beyond the power of circuit courts.

Pollock and Maitland, *History of English Law*; and other works by Maitland.

ENGLAND, CHURCH OF, a term meaning not simply Eng. Christianity but the **Anglican Church**, which is peculiar in England and to England. Its story cannot be separated from Eng. history. The beginnings of Eng. Christianity are obscure, but it is probable that Rom. missionaries came in with the Rom. soldiery in the II. cent. A native CELTIC CHURCH arose, which was swept away by the Anglo-Saxon invaders in the V. cent., except in Celtic parts of Britain. (For Celtic Christianity, see PATRICK, ST.; COLUMBA, ST.; etc.) Christianity was reintroduced into Britain by St. Augustine in 597, but the progress of the faith was gradual. The newly founded Church had also to reckon with the remnants of the ancient Celtic Churches, but Celtic tradition gradually gave in to the Roman in the observances of Easter and other matters. The pre-Norman Church was a glorious one, and produced saints and scholars—the greatest the Venerable Bede.

At the Norman Conquest the Eng. Church entered more into the main stream of Western Christianity, and was very similar to the rest of the Churches under the sway of the Roman See. Continual strife between Church and State took place over the Church Courts.

A climax was reached in the quarrel between Henry II. and St. Thomas Becket. The XIV. cent. saw the beginning of LOLLARDY, led by John Wycliffe—a heretical movement which became mixed with schemes of social reform. A strong anti-clerical feeling had grown up as a result of the ecclesiastical abuses of the day, and anti-papal legislation was passed. Lollardy was suppressed, but it smouldered, and with the advent of the New Learning and the outbreak of the Continental REFORMATION a new era dawned.

The changes which took place in England under Henry VIII., the throwing off the papal power and nationalising of the Church, the thoroughgoing Protestantism of Edward VI., the reaction under Mary, and the Elizabethan *via media*, show the intimate relation of Church and State in England. The exact importance of the change which took place at the Reformation has been the object of fierce controversy, but it cannot be denied (1) that the amount of change was considerable, many, though not all, of the characteristics of the mediæval Church were modified; (2) that since then the ANGLICAN CHURCH has been isolated in Christendom, holding a position which to some seems Catholic, to others Protestant.

In the XVII. cent. came the PURITAN movement, which entered the political sphere in the Civil War and Commonwealth; the Restoration, followed by the permanent separation of NONCONFORMISTS, began the modern condition of religious life and parties in England.

The XVIII. cent. was a time of comparative though not of absolute stagnation, until the METHODIST REVIVAL at its close; though this started within the bounds of the Church it soon passed outside it. In the XIX. cent. came the OXFORD MOVEMENT, which, carrying the revival of religious life into other channels than Evangelicalism, revived Catholic faith and tradition, reintroducing many practices that had been obsolete since the Reformation. This has produced the modern *Anglo-Catholicism*, in which sometimes the doctrinal side, sometimes the ritual, is stressed. Thus a type of Christianity has been produced which has no parallel elsewhere, save in the daughter churches in English-speaking countries.

The doctrinal standard of the **Church of England** is the *Book of Common Prayer*, as last revised in 1662, and any changes have to be sanctioned by Parliament. The Church is represented in the House of Lords by the archbishops of Canterbury and York, and most of the bishops of England and Wales. The Church of Ireland was disestablished in 1871. A Bill to disestablish the Church of Wales passed the House of Commons, 1913, but was rejected by the Lords. It is important to remember that the Church of England is the mother-Church of a large Anglican communion existing throughout the Brit. Empire. Convocation, which had not met for more than a century, was re-established in 1852, and has done much for the Church.

Gee and Hardy, *Documents illustrative of Eng. Church History*; Wakeman, *History of the Church of England*; Canon Masterman, *Church of England* (1912: People's Books).

ENGLEFIELD, SIR FRANCIS (*c.* 1520–96), R.C. adherent of Queen Mary; supported persecution; went abroad, 1539; plotted against Elizabeth; attainted and estates forfeited, 1585; lived in Rome, Netherlands, and Spain.

ENGLEHEART, GEORGE (1752–1829), Eng. miniature artist; rival of Cosway.

ENGLEWOOD (40° 53′ N., 73° 58′ W.), town, New Jersey, U.S.A. Pop. (1910) 9924.

ENGLISH CHANNEL, narrow sea, between England and France; joins North Sea at Strait of Dover—its narrowest part (*c.* 21 miles), and, owing to chalk ridge, also its shallowest (12–13 fathoms); stretching W., joins Atlantic between Scilly Isles and Cape Ushant. Area is *c.* 23,900 sq. miles; length, *c.* 350 miles; average breadth, over 70 miles; highest tide, 42 ft. at St. Germain. Cliffs and lowlands alternate on both coasts; Eng. coast extends from Strait of Dover to Land's End. Only important river it receives is Seine, from France. In E. C. are Isle of Wight and Channel Islands (*q.v.*). Chief seaports are (in England) Falmouth, Plymouth, Southampton, Portsmouth, Brighton, Newhaven, Hastings, Folkestone, Dover; (in France) Cherbourg, Le Havre, Dieppe, Boulogne, Calais. E. C. is called in French *La Manche* (the sleeve), owing to its shape. A proposal to construct a *Channel Tunnel* was made in France in 1856, and several other schemes to avoid the sea-passage have been mooted since. Captain Webb swam the E. C. in 1875; Burgess in 1911. Blériot was the first to fly the E. C., July 1909.

ENGLISHRY, LAW OF, legal term used under the Norman kings referring to proof of Eng. birth. If a man was slain, unless he was proved to be Eng., the *hundred* was compelled to pay a fine or produce the murderer.

ENGRAVING.—(1) The art of designing or cutting inscriptions on stone, wood, or other hard substance. (2) A method of reproducing designs and pictures by printing from metal plates or wood blocks upon which the design has been cut, or, as is now general in the case of the former, mechanically produced by photography and corrosion with acid. The design appears on the plate or block either in incised or in raised lines; and for printing, in the former case the plate is wiped clean after being inked, leaving the ink only in the cut lines, while in the latter the raised parts of the plate only are inked.

Singer, *Etching and Engraving* (1897); Herkomer, *Etching and Mezzotint Engraving* (1892).

ENGROSS, to buy up goods so as to make a 'corner' in the market; criminal offence in Britain until 1844.

ENGYON, former town, Sicily; site unidentified.

ENID (36° 23′ N., 97° 53′ W.), city, Oklahoma, U.S.A. Pop. (1910) 13,799.

ENKHUIZEN (52° 42′ N., 5° 17′ E.), port, Holland, on Zuider Zee; has interesting churches. Pop. (1910) 7748.

ENNIS (52° 51′ N., 8° 59′ W.), town, County Clare, Ireland. Pop. 5093.

ENNISCORTHY (52° 31′ N., 6° 33′ W.), town, County Wexford, Ireland. Pop. 5458.

ENNISKILLEN, INNISKILLING (54° 21′ N., 7° 38′ W.), town, County Fermanagh, Ireland; successfully resisted James II.'s forces, 1689; famous Dragoon regiment was originally enlisted here. Pop. 5412.

ENNIUS, QUINTUS (239–170 B.C.), one of earliest Latin poets; celebrated as author of the *Annales*, a narrative poem on Rom. history; and a number of tragedies, of which only fragments have been preserved; the father of Rom. epic poetry.

ENNODIUS, MAGNUS FELIX (474–521), bp. of Pavia; wrote an apology for Pope Symmachus and other theological works, being the first to call the Rom. bp. 'papa'; theologically he was *semi-Pelagian*.

ENNS (48° 13′ N., 14° 29′ E.), town, Upper Austria. Pop. (1910) 4436.

ENOCH, in *Genesis*, son of Cain, and also descendant of Seth. There are two Books of Enoch (*q.v.*).

ENOCH, BOOKS OF.—There are two pseudepigraphic works with this name: the more important is the *Ethiopic Book of Enoch*; it is quoted in *Jude* 5^{14}, etc., and may be the source of eschatological colouring of *Matthew* 19^{28}. Its influence on early Christian and late Jewish lit. was considerable. It gradually was forgotten, and lost till the Ethiopic version was discovered in 1773. Its original language was either Hebrew or Aramaic, but which uncertain. It is certainly composite, and the division of it by R. H. Charles probably as near the mark as any. Chapters 72–82 he assigns to before 130 B.C., 83–90 before 161 B.C., 91–104 to 134–95 B.C., 1–36, a very composite part, earlier than 166 B.C., 37–71 (wherein occurs a remarkable passage in which the Messiah is pre-existent Son of Man) before 64 B.C. *The Book of the Secrets of Enoch*

(written partly in Gk., possibly some in Hebrew) exists only in Slavonic trans., written by a Hellenistic Jew in Egypt, 30 B.C. to 70 A.D.

Charles, *The Book of Enoch, The Book of the Secrets of Enoch.*

ENOS (40° 42′ N., 26° 5′ E.), town, Adrianople, European Turkey. Pop. *c.* 7500.

ENRIQUEZ GOMEZ, ANTONIO (d. 1661), Span. poet, dramatist, and novelist.

ENSCHEDE (52° 13′ N., 6° 53′ E.), town, Overysel, Holland. Pop. (1910) 34,201.

ENSENADA, CENON DE SOMODEVILLA, MARQUES DE LA (1702–81), chief minister in Spain, 1743; carried out various reforms; exiled, 1766.

ENSIGN, national, military, or naval flag or banner; also, until 1871, the officer of a regiment who bore the colours (*q.v.*). The word is now chiefly applied to a naval flag. See FLAG.

ENSILAGE, preservation of cattle fodder, such as hay, in an airtight and watertight chamber (*silo*), in which it undergoes partial fermentation.

ENSTATITE, green mineral of pyroxene group; a silicate of magnesium containing iron oxide and alumina.

ENTABLATURE, term in arch. which includes the architrave, frieze, and cornice.

ENTAIL (Fr. *tailler,* to cut), an estate settled according to the rule of descent, *i.e.* limited to a person and the heirs of his body, general or special, male or female. It is a freehold of inheritance. See FEE.

ENTEBBE, see BRIT. E. AFRICA (UGANDA).

ENTENTE CORDIALE, term used to denote friendly relations between France and Britain; mainly due to Edward VII. and Loubet, Fr. pres.; Anglo-Fr. agreement, signed April 1904, solved many differences; has since been extended to Russia; acts as offset to Triple Alliance (Germany, Austria, Italy).

ENTERIC, see TYPHOID FEVER.

ENTERITIS, inflammation of intestines.

ENTHYMEME, syllogism (*q.v.*) in which either a premise or the conclusion is omitted; the commonest form of syllogistic arguments in daily life. See LOGIC.

ENTOMOLOGY (Gr. *entomon,* an insect; *logos,* subject), the science which comprises all the branches of knowledge connected with Insects. The richness of the insect world, with its 250,000 species, renders e. one of the most important of the many branches into which Zoology is divided; and its importance is further increased on account of the harmful activities of many kinds of insects. The study of insect pests is generally termed Economic Entomology.

ENTOMOPHILY, see POLLINATION.

ENTOMOSTRACA, a comprehensive name, under which are generally grouped the more elementary orders of Crustacea (*q.v.*), minute creatures living in fresh water or in the sea, and distinguished by the simplicity of their structure. These lowly Crustaceans follow four types:—

(1) THE PHYLLOPODA (Gk. *phullon,* a leaf; *pous,* a foot), including Brine-shrimps, Shield-shrimps, and Water-fleas, with body protected by a shield-like shell, and with swimming feet bearing leaf-like respiratory plates. Mostly inhabitants of fresh water.

(2) THE OSTRACODA (Gr. *ostrakodes,* shell-like), small forms, mostly microscopic, common in fresh water and the sea. They are completely enclosed in a double-valved shell.

(3) THE COPEPODA (Gr. *kope,* an oar; *pous,* a foot), mostly minute Crustaceans occurring in fresh water and in the sea. The shell-less body is usually in distinct segments, except in many degenerate forms; parasitic on the skin or gills of fishes, such as the Fish-lice.

(4) CIRRIPEDIA or THYROSTRACA (Lat. *cirrus,* a tuft of hair; *pes,* a foot) include the Barnacles and the Acorn-shells. They are, when adult, sessile Crustacea with body protected by strong limy plates.

ENTRAGUES, CATHERINE HENRIETTE DE BALZAC D', MARQUISE DE VERNEUIL (1579–1633), was mistress of Henry IV. of France; notorious for her complicity in political intrigues.

ENTRE MINHO E DOURO (41° 30′ N., 8° 20′ W.), old province, Portugal, bordering on Atlantic; area, 2790 sq. miles. Cereals, fruits, wine; stock raised. Pop. 1,170,361.

ENTRE RIOS (*c.* 30° 20′ S., 59′ W.), province, Argentina, S. America; area, 28,784 sq. miles; rivers, Uruguay, Parana; produces cereals; stock raised. Pop. (1910) *c.* 416,000.

ENTRECASTEAUX, JOSEPH-ANTOINE BRUNI D' (1739–93), Fr. navigator; famed for his surveys of New Caledonia, Tasmania, and other coasts.

ENVIRONMENT, see EVOLUTION, EUGENICS.

ENVOY, diplomatic minister inferior to ambassador (*q.v.*); full title is *e. extraordinary and minister plenipotentiary.* See DIPLOMACY.

ENZELI, seaport of Resht (*q.v.*).

ENZIO (d. 1272), king of Sardinia; hero of many brilliant military exploits in Italy; captured by the Bolognese (1249), in whose hands he remained prisoner until his death.

ENZYME, see FERMENTATION.

EOBANUS, HESSUS HELIUS (1488–1540), Latinised name of Ger. humanist of Hesse-Cassel; his Lat. letters and poems were much esteemed.

EOCENE (Gr. *eos,* dawn; *kainos,* recent), name given by Sir C. Lyell to lowest and oldest members of rocks of Tertiary period; contain what Lyell considered first traces of testaceous fauna. He classified the Tertian formations according to proportion of fossil remains that each contained. E. rocks are divided into Lower, and Upper or *Oligocene*; composed of clays, loams, marls, and calcareous sandstones, whilst here and there are interspersed layers of a thick and widespread series of limestones and lignite; and found chiefly in the Isle of Wight, S.E. England, on both sides of the Mediterranean, Central Europe, Spain, West Africa, and along the Atlantic coast of N. America. Their characteristic feature is the great size coupled with the wide distribution of *Nummulites*—a forminifera organism which apparently flourished in the Eocene seas in vast numbers.

During the E. period there grew in England such plants as laurel, fern, and cactus, and trees such as palm, fig, pine, cypress. Otodus lamna, carchardon, and other sharks were numerous, whilst traces remain of such mollusca as conus, voluta, oliva, and nautilus. Reptiles include crocodiles, lizards, and a few large snakes and turtles. There were several early forms of present-day birds, including the eagle, flamingo, gull, heron, owl, pelican, plover, quail, and vulture. Animals were represented by such orders as Dinocerata and Tillodonts. See GEOLOGY.

EON DE BEAUMONT, CHARLES GENEVIÈVE LOUIS AUGUST ANDRÉ TIMOTHÉ D' (1728–1810), Fr. adventurer; for many years wore woman's dress; diplomatic agent to Russia; in exile, 1765–77; after Revolution lived in England.

EOS, see AURORA.

EÖTVÖS, JOZSEF, BARON (1813–71), Hungarian writer and politician; composed plays to aid reform movement; Minister of Public Instruction, 1848; wrote *The Influence of the Predominant Ideas of the Nineteenth Century upon the State*; advocated popular education and religious freedom; wrote memoirs.

EPACT, see CALENDAR.

EPAMINONDAS (*c.* 418–362 B.C.), Theban general; expelled Spartan garrison, 379 B.C.; defeated Spartans at Leuctra, 371, and Mantinea, 362; did much for Thebes politically, and developed military strategy.

EPAULETTE, distinctive shoulder ornament on military and naval uniform coats; still worn by certain officers in Brit. navy, but discarded in Brit. army since 1855.

ÉPÉE, CHARLES-MICHEL, ABBÉ DE L' (1712–89), Fr. ecclesiastic; famed for work as a deaf and dumb educationist.

EPEIRA, see under SPIDERS.

EPERJES (49° N., 21° 17′ E.), town, Hungary; has Gothic cathedral. Pop. 13,098.

ÉPERNAY (49° 3′ N., 3° 57′ E.), town, Marne, France; champagne centre. Pop. 20,291.

ÉPERNON (48° 37′ N., 1° 39′ E.), town, Eure-et-Loir, France.

EPHEBEUM, hall for the exercise of youths in ancient gymnasiums.

EPHEBI, class of young men in ancient Athens who formed a sort of univ.; they were aged 18 to 20 and under state supervision; institution lasted till III. cent. A.D.

EPHEMERIDÆ, see MAY-FLIES.

EPHESIANS, EPISTLE TO THE, is usually grouped with Epistles to *Colossians*, *Philippians*, and *Philemon*, as the Epistles of the Imprisonment. Its tone is somewhat different from the earlier Pauline Epistles; its eschatology is more spiritual, emphasis is laid on Church and family life; the interpretation of the person of Christ and the writer's conception of faith, love, and knowledge are allied to St. John. Some have thought it to be by another hand than St. Paul's, but now the trend of criticism is favourable to genuineness. If genuine it must have been written at either Cæsarea or Rome, probably Rome. The words, 'in Ephesus,' in chap. 1[1] are doubtful, so it may be a circular letter. In any case St. Paul's style and theology are here more developed; external evidence for it (Marcion and Muratorian Canon) is fairly good.

J. Armitage Robinson, *The Epistle to the Ephesians.*

EPHESUS (*c.* 37° 57′ N., 27° 20′ E.), ancient Ionian city, in Lydia; chief of twelve on coast of Asia Minor; traditionally founded by Carians and Leleges, and taken by Androclus at time of Ionian migration; on N. side of city there was formerly a lake (now a marsh) constituting an inner harbour, outer harbour being formed by mouth of Cayster (the deposits from which were E.'s ultimate ruin).

A little S. of E., on a plain bounded by two hills, stood famous *Temple of Diana* of the Ephesians, built by Chersiphron (a Greek) in VI. cent. B.C. and burnt ('tis said) by Herostratus (to perpetuate his own name) on night of Alexander the Great's birth (Oct. 356 B.C.); restored later, but destroyed by Goths, and only traces of foundations now remain (excavated since 1863); once one of the world's seven wonders, and probably largest Gk. temple ever built. Other buildings of which a few ruins are left are the Agora theatre, odeum, stadium, gymnasium, temples of Zeus Olympius and Julius Cæsar. E. was conquered in turn by Crœsus, Persians, Macedonians, and Greeks; flourished when other Ionian cities were decaying; capital of province of Asia under Romans, and by far the greatest city in Asia Minor; conspicuous also in early Christian history (witness St. Paul's Epistle and Council of E.). E. is now a magnificent village.

Hogarth, *Excavations at Ephesus* (1908).

Third Œcumenical Council of E., opened (431 A.D.) under presidency of Cyril of Alexandria, with 160 bp's present; condemned the Nestorian heresy, that Christ had two persons besides two natures; Nestorius himself was excommunicated.

EPHOD (Hebrew word, meaning *unknown*), in the 'Priestly Code' is part of the high-priest's official costume; it covered the front, possibly too, the back of the body. It was probably an ancient relic of the cult of Jahweh; may have been originally a loin cloth, and used in divination. The prophets objected to it.

EPHOR, name of five magistrates of ancient Sparta who became important in VII. cent. B.C.; in some ways they could override the kings; e's were abolished by Cleomenes III. *c.* 230 B.C.

EPHORUS OF CYME (*c.* 400–330 B.C.), Gk. historian; wrote universal history (29 books) and other works; style very rhetorical.

EPHRAEM SYRUS, ST. (b. *c.* 300), the most famous father of the Syrian Church of IV. cent.; at Council of Nicæa; went to Edessa, then centre of Syriac culture. An ascetic, he devoted himself to writing and teaching. His works, consisting of hymns, homilies, sermons, and commentaries, were written in Syriac. Many are thus preserved, others only in Gk., Lat., Armenian, and Slavonic translations.

Burkett, *Early Eastern Christianity.*

EPHRAIM, Israelitish tribe (named after the younger s. of Joseph), dwelling in the central portion of Canaan. Within its territory were Shechem, Samaria, and Shiloh.

EPIC, THE, EPOS, the highest and most dignified form of narrative poetry, usually dealing with great events of past times (hence also called *Heroic*). The *Iliad* and *Odyssey*, attributed to Homer (VIII. cent. B.C.), are usually regarded as the first epics, but epic stories were undoubtedly repeated orally long before being reduced to writing. Amongst later Gk. epic writers were Parmenides and Empedocles. The earliest Latin epics were written by Nævius and Ennius. These were followed by the greatest of Rom. epics, the *Æneid* of Vergil (70–19 B.C.). Later epic poets of eminence were Lucan and Statius. Other famous epics are *Beowulf* (Old Eng.), the *Chanson de Roland* (mediæval Fr.), *Nibelungenlied* (Teutonic), the *Mahâbhârata* (Ind.), Tasso's *Jerusalem Delivered*, Ariosto's *Orlando Furioso*, Dante's *Divina Commedia*, Camoen's *Lusiads*, Milton's *Paradise Lost*, Spenser's *Faerie Queene.* Among mock-epics may be instanced Butler's *Hudibras.* See also BURLESQUE.

Ker, *Epic and Romance* (1897); MacNeile Dixon, *English Epic and Heroic Poetry* (1912).

EPICHARMUS (d. 450 B.C.), Gk. comic dramatist; b. Cos; celebrated writer of the Dorian school, many of whose subjects were drawn from the Sicilian life of his day; survives only in fragments; highly esteemed by Plato.

EPICTETUS, Stoic philosopher of the I. cent. A.D.; a slave in Rome, afterwards freed. When Domitian expelled the philosophers from Rome he settled and taught in Epirus. His philosophy was predominantly ethical and religious, its main tenets being the care of God for man, the indifference of all social distinctions, and the dependence of man's happiness upon his will.

EPICURUS AND EPICUREANISM.—EPICURUS (341–270 B.C.), though an Athenian, was probably b. in Samos. In 307 he settled in Athens, and there formed a society of friends, whose central meeting-place was a garden in the town. The decay of the free city-state naturally led to concentration of thought upon the interests of the individual and to separation of ethical from political theory. The ethical doctrine of E. was hedonistic: welfare consists in pleasure and in pleasure alone. But, unlike the Cyrenaics (*q.v.*), he urged his friends to have regard, not only to the pleasant moment, but to the pleasure of life as a whole; to estimate, therefore, the pleasures of the mind and of friendship above those of the body; and to prefer calm to violent excitement. Far from being 'epicures,' the members of the society (at any rate in its earlier days) led a frugal and abstemious life. In physics E. maintained a crude form of atomism; in metaphysics a crude materialism, with which he inconsistently combined a belief in freedom of the will.

Lucretius, *De Rerum Natura* (trans. by H. A. J. Munro); R. D. Hicks, *Stoic and Epicurean*; W. Wallace, *Epicureanism*; Zeller, *Stoics, Epicureans, and Sceptics.*

EPICYCLE, see ASTRONOMY.

EPICYCLOID, curve generated by a point on the circumference of a circle rolling externally on a fixed circle, both circles being in the same plane. Curve has n cusps if radius of fixed circle is n times that of rolling one.

EPIDAURUS, name of two ancient Gk. cities.—(1) EPIDAURUS THE HOLY, city on E. coast of Argolis, with natural harbour in N. and open bay in S.; possessed fertile territory surrounded by sea and hills;

origin ascribed to Carian colony; later occupied by Ionians, then by Dorians. Objects of interest include: image of Athena in Acropolis; shrine of Aphrodite; temples of Dionysus, Artemis, and Hera. The *Hieron* (Sanctuary) of Asclepius, 8 miles inland, an ancient place of pilgrimage for the sick, has been excavated, and precincts (with magnificent theatre, stadium, baths, gymnasium, and hospital) have been cleared; sacred road from E. lined with tombs. (2) EPIDAURUS THE HUNGRY, city of Peloponnesus, E. coast of Laconia; founded by (1), and abandoned in Middle Ages; now in ruins.

EPIDEMIC, any disease affecting for a time numbers in one locality, *e.g.* measles, smallpox, diphtheria, scarlet fever, whooping-cough, influenza. **Endemic Disease** is one continually present in a district, *e.g.* cholera in parts of India.

EPIDERMIS, see SKIN.

EPIDOTE, mineral of same group as garnets, composed of silica and alumina; partially transparent and of foliated or granular structure; colour: green, grey, or yellow, usually, but some varieties red or black; found in Scotland and many other localities associated with gneiss.

EPIGASTRIUM, a division of abdomen (*q.v.*); the pit of the stomach.

EPIGONI (classical myth.), descendants of the Seven against Thebes who, ten years after the death of their fathers, marched against Thebes and destroyed the city.

EPIGRAM, the terse and happy expression, in prose or verse, of a single thought or subject; usually accentuated in verse by a striking conclusion. The Greeks and Latins (especially Catullus and Martial) were famous epigrammatists; and in modern times the French, Germans, and English and other nations have cultivated the art. Pope, in particular, was celebrated for his epigrams in verse.

Dodd, *The Epigrammatists.*

EPIGRAPHY, the classification and elucidation of inscriptions.

EPILEPSY, term applied to a nervous affection, characterised by sudden spasmodic attacks of unconsciousness usually accompanied by convulsions, there being three varieties, *grand mal*, *petit mal*, and *Jacksonian epilepsy*. About a quarter of the cases begin before the age of 10 years, and about three-quarters between the ages of 10 and 20. Children in whose families there are histories of nervous disorders, insanity, alcoholism, etc., are especially liable to be affected, and the exciting causes include practically any cause of undue nervous irritation. In *grand mal* there are two stages, the first termed the *aura*, a peculiar feeling, taking different forms, experienced by the individual previous to an attack, and warning him that it is coming on, while at the second stage a piercing and characteristic cry is uttered and the person falls down suddenly unconscious. The head is turned to one side, the face first pale and then livid, the pupils dilated. Later, about half a minute afterwards, convulsions come on, the tongue may be bitten, the face is purple, with the eyes protruding, and the breathing difficult. The convulsions usually pass off after a few minutes, the person becomes comatose and then falls asleep naturally.

In *petit mal* there is usually sudden unconsciousness, but there may be only slight giddiness, and there are no convulsions. After an attack, however, the mind may be somewhat affected for a time, and the person may perform actions—even criminal actions have been known—of which he is afterwards unconscious.

E. must be distinguished from hysteria, from convulsions in uræmia, and from unconsciousness due to apoplexy, drunkenness, etc.

E. requires careful medical treatment: attention is given to the preservation of the general health, the patient is advised to live an open-air life, and an attempt is made to remove the cause of the nervous irritation, while bromides are given internally. When a person is in a fit his collar or other restricting clothing is unfastened, a cork is put between the teeth to prevent biting the tongue, and care is taken that he does not injure himself in the convulsions.

Jacksonian epilepsy is due to a brain lesion, and usually occurs in adults. There are convulsions, twitchings, and perhaps paralysis of muscles, but no unconsciousness. The cause of the brain lesion, *e.g.* syphilis or hæmorrhage, must be treated by a medical man, and a surgical operation may be necessary, *e.g.* to remove bone pressing on the brain.

Turner, *Epilepsy.*

EPILOBIUM, see ONAGRACEÆ.

EPILOGUE, address in prose or verse at end of play by way of explanation, or to crave indulgence. It was employed by Shakespeare and his contemporaries, but was most used in age of Dryden and his immediate successors.

EPIMENIDES (VI. cent. B.C.), famous Cretan poet and prophet.

ÉPINAL (48° 10′ N., 6° 26′ E.), town, Vosges, France, on Moselle; manufactures cotton, paper, embroidery; has fine library and old church; strongly fortified. Pop. (1911) 30,042.

ÉPINAY, LOUISE FLORENCE D'ESCLAVELLES D' (1726–83), Fr. authoress; noted for intimacy with Rousseau and Baron von Grimm. She wrote *Conversations d'Émilie* and *Mémoires.*

EPIPHANIUS, ST. (315–402), bp. of Constantia (Salamis) in Cyprus; a vigorous and narrow Father; wrote *Ancoratus* (Anchor of Faith) and *Panarion* (Drug Chest); learned and honest, but untrustworthy authority.

EPIPHANY, FEAST OF (Gk. *epiphania* from *epiphainein*, to show forth), kept Jan. 6, twelve days after Christmas (whence *Twelfth Day*), commemorates the showing of Jesus to the Magi; is first alluded to by Clement of Alexandria as observed by the Basilidians of Egypt, *c.* 194 A.D. It was probably 'taken over' by the Church from the Egyptian festival of the blessing of the Nile on the same date. It came to be the festival of the Baptism of Christ; as this idea had an Adoptionist and Ebionite colouring E. was observed rather as Christ's birthday, which only later was put on Dec. 25. Epiphanius at first believed Jan. 6 was the day of Christ's 'Birth after the flesh,' though he afterwards adopted the view that Dec. 25 was really His birthday. In 385 Jan. 6 was observed as Christ's birthday in Bethlehem—witness the old Jerusalem lectionary. In the Oriental churches E. still retains its early connection with baptism and the blessing of the waters, *e.g.* in the Armenian Church children are generally baptized then, but in the West its original meaning has been overlaid.

Duchesne, *Origines du culte chrétien.*

EPIPHYTES, plants whose roots attach to other plants; may have aerial roots also, *e.g.* aroids and orchids. See PARASITISM.

EPIRUS, EPEIRUS (40° N., 20° 30′ E.), mountainous region in N.W. of ancient Greece; bounded by Illyria, Macedonia, Thessaly, Arcadia, Ambracian Gulf, and Ionian Sea; principal mts., Acrocerannii and Pindus; chief rivers, Celydnus, Acheron, Thyamis. E.'s best known ruler was Pyrrhus (*q.v.*); Republic established *c.* 200 B.C., but overwhelmed by Romans, 167; peopled mostly by Albanians since 1400; Turkish since 1468, except S.E. strip (Arta) assigned to Greece, 1881; invaded by Greeks in Turco-Balkan War (*q.v.*), 1912.

EPISCOPACY.—The origin of E. in the Christian Church is a much vexed question over which Catholic and Prot. divines have disputed. It seems possible that the bishops and presbyters of New Testament times were identical; the threefold ministry of the Church was probably not there at first, though when a clear system is developed it is that which is found. By the time of St. Ignatius we reach monarchical E. The essential nature of E. is asserted by Catholic theologians, Rom., Gk., or Anglican. The Amer. Methodist,

Protestant Episcopal, the Swed. Lutheran, the Moravian, and Hungarian Unitarian Church possess forms of E.

Gore, *Orders and Unity*.

EPISCOPIUS, SIMON (1583–1643), Dutch theologian; prof. at Leyden; follower of Arminius; banished at Synod of Dort, 1618, but returned, 1626.

EPISODE, part of a Gk. tragedy coming between choric songs; in modern use, means an interesting story or incident introduced into a longer narrative.

EPISTAXIS, bleeding from the nose, due either to local or general causes, may be stopped by grasping firmly the sides of the nose between the finger and thumb, or by applying ice externally, or cotton soaked in alum or turpentine internally up the nostrils, or by plugging the nostrils.

EPISTEMOLOGY, theory of process of knowing.

EPISTLE, a formal kind of letter; compositions addressed by the Apostles to the Romans, Corinthians, Galatians, and others; portion of Scripture appointed to be read in churches. The literary e. was largely cultivated by the ancients. Verse e's were popularised in France by Marot, Boileau, Voltaire, and others. The form was also frequently used by Eng. poets, from XVI. to XIX. cent's.

EPISTYLE, Gk. name for the architrave in architecture.

EPITAPHS, inscriptions on, or for, a tomb. The earliest which have survived have been found on the coffins and tombs of the ancient Egyptians. The Greeks and Romans also made considerable use of the e. In England it has been popular from very early times. For a long period Latin was the language most commonly used. The e's written by Pope, Goldsmith, William Browne, and other poets have considerable literary merit. Shakespeare's e. runs:

> 'Good frend, for Jesus sake forbeare,
> To digg the Dust enclosed heare:
> Bleste be the Man that spares thes stones,
> And curst be he that moves my bones.'

On Jonson's tomb is inscribed:

> 'O, Rare Ben Jonson.'

On that of Keats:

> 'Here lies one whose name was written in water.'

Amongst famous mock-epitaphs may be quoted that by Garrick on Goldsmith:

> 'Here lies Nolly Goldsmith, for shortness called Noll,
> Who wrote like an angel, but talked like poor Poll.'

That written by the Earl of Rochester on Charles II. is well known:

> 'Here lies our Sovereign lord the King
> Whose word no man relies on;
> Who never said a foolish thing
> And never did a wise one.'

Pettigrew, *Collection of Epitaphs*.

EPITHALAMIUM, bridal-song, of which the finest examples are by Theocritus, Catullus, and Statius; some of the Fr. and Ital. poets; Spenser and other Eng. poets.

EPITHELIUM, cell-tissue, forming the cuticle on the skin, and lining the intestines, bladder, etc. See CANCER.

EPIZOA, parasitic crustaceans of order *Copepoda*; fish-lice.

EPIZOÖTICS, the study of parasites living on human beings. See PARASITISM, PARASITIC DISEASES.

EPODE, a lyric poem; in early Gk. poetry it followed the strophe and antistrophe.

EPONA (classical myth.), Rom. protectress of horses.

EPONYM, mythical founder of a race, *e.g.* Romulus of Rome, Tros of Troy.

EPPING (51° 42′ N., 0° 7′ E.), town, Essex, England; famous forest (open to public since 1882). Pop. (1911) 4253.

EPPS, JAMES (1821–1907), Eng. homœopathic chemist; founder of famous firm of chocolate and cocoa manufacturers.

ÉPRÉMESNIL, JEAN JACQUES DUVAL D' (1745–94), Fr. politician; deputy of the nobility to Constituent Assembly; at first held republican views, but later supported the monarchy; guillotined.

EPSOM (51° 20′ N., 0° 16′ W.), town, Surrey, England; has medicinal springs. Epsom Downs have famous racecourse (where the 'Derby' and 'Oaks' are run). Pop. (1911) 19,156.

EPSOM SALTS, MAGNESIUM SULPHATE ($MgSO_4.7H_2O$), is obtained from dolomite or magnesite by the action of sulphuric acid, or by purifying the native sulphate; also occurring dissolved in mineral waters, *e.g.* at Epsom and Seidlitz. A valuable saline purgative, especially for children, in constipation associated with liver disorders, or in dropsy.

EQUATION.—An equation is simply a statement of equality between two algebraic expressions. E's are of two kinds—(i.) *identities*, and (ii.) e's of *condition* (see ALGEBRA), of which only the second will be dealt with here.

I. SIMPLE EQUATIONS, in which only first degree terms occur.

(*a*) *One unknown quantity.*

e.g. $3x-5=5x-13$.

Solution of such e's is effected by transposition of terms. Thus we get

$5x-3x=13-5$, whence $2x=8$ and $x=4$.

(*b*) *Several unknown quantities.*

e.g. $6x+2y-5z=13$ . . (1)
$3x+3y-2z=13$ . . (2)
$7x+5y-3z=26$ . . (3)

The general method of solution may be stated thus: Eliminate one unknown quantity by combining the e's in pairs, thus obtaining one less e. involving one less unknown; continue this process until left with a simple e. After finding the value of the unknown occurring in this e., the values of the others can be obtained successively by substitution.

In the example taken, multiplying (1) by 3 and (2) by 2 and combining we get

$12x-11z=13$ . . . (4)

From e's (1) and (3) we similarly obtain

$16x-19z=13$ . . . (5)

Combining (4) and (5) after multiplication by 4 and 3 respectively, we have $13z=13$. Hence $z=1$. Substituting this in either (4) or (5) we get $x=2$, and putting both these values in (1), (2), or (3), we find $y=3$.

II. QUADRATIC EQUATIONS, which involve powers of the unknowns not higher than the second.

(*a*) *One unknown quantity.*

e.g. $3x^2+7x-6=0$.

The left-hand side may be written $(3x-2)(x+3)$, and if *either* of the factors is zero the e. will be true. Hence $x=\frac{2}{3}$ or $x=-3$. Both values are admissible, and any quadratic e. similarly has two solutions.

Consider the e. $a\{ax^2+2bx+c\}=0$. This can be written $\{ax+b+\sqrt{b^2-ac}\}\{ax+b-\sqrt{b^2-ac}\}=0$.

Hence $x=\dfrac{-b-\sqrt{b^2-ac}}{a}$ or $\dfrac{-b+\sqrt{b^2-ac}}{a}$, and the roots of the e. will be (i.) real and different, (ii.) real and equal, (iii.) imaginary, according as (i.) b^2 is $>ac$, (ii.) $b^2=ac$, (iii.) b^2 is $<ac$.

(*b*) *Several unknown quantities.*

The principle of the method of solution is in general the same as for simple e's of similar type, but usually is more difficult, owing to greater difficulty in elimination.

III. CUBIC AND QUARTIC (OR BIQUADRATIC) EQUATIONS.—A cubic e. involves powers of the unknown not higher than the third, a quartic not higher than the fourth, and so on. It can be shown that an e. of the nth degree must have n roots, real or imaginary, and no more.

A general algebraical solution of e's of higher degree

ERNESTI, JOHANN CHRISTIAN GOTTLIEB (1756–1802), Ger. classical scholar.

ERNESTINE LINE, see WETTIN.

ERODE (11° 20′ N., 77° 40′ E.), town, Madras, India. Pop. 15,529.

EROS (classical myth.), Gk. god of love; represented as a beautiful boy; associated with the love of Psyche; called Cupid by the Romans. E. is also name of a minor planet.

EROSION, term applied to the eating away of coast-line by sea; common on S.E. coast of England; combated by concrete-work, sea-walls, etc.

ERPENIUS, THOMAS, THOMAS VAN ERPEN (1584–1624), Dutch Orientalist.

ERRATICS, stones which occur in places where existing geological formation does not correspond to their structure; due largely to glaciers.

ERROLL, FRANCIS HAY, 9TH EARL OF (d. 1631), Scot. noble; joined Span. cause; defeated Scot. army, 1594; app. commissioner to arrange union of Scot. and Eng. Crowns, 1604.

ERSCH, JOHANN SAMUEL (1766–1828), Ger. bibliographer.

ERSKINE, EBENEZER (1680–1754), Scot. theologian; led Secession from Church of Scotland, *c.* 1733; his followers incorporated into United Presbyterian Church, 1847. *Life*, by M'Ewen.

ERSKINE, HENRY (1746–1817), Scot. lord advocate; famed for his brilliant oratory and wit; also a poet of some distinction.

ERSKINE, JOHN, OF DUN (1509–91), Scot. Reformation leader; tried to mediate between contending factions.

ERSKINE, JOHN (1695–1768), Scot. jurist; pub. *Principles of the Law of Scotland* (1754), and *Institutes of the Law of Scotland* appeared posthumously.

ERSKINE, RALPH (1685–1752), Scot. ecclesiastic; bro. of Ebenezer E.; seceded from Established Church, 1737.

ERSKINE, THOMAS, 1ST BARON (1750–1823), Brit. lawyer; b. Edinburgh; s. of 10th Earl of Buchan; called to Bar, 1778; noted for several famous defences, including Captain Baillie, Admiral Keppel, and Lord George Gordon; M.P. for Portsmouth, 1785; Chancellor to Prince of Wales; Lord Chancellor, 1806–7; great reputation as an orator.

Campbell, *Lives of the Chancellors*.

ERSKINE, THOMAS, OF LINLATHEN (1788–1870), Scot. theologian; an advocate, but never practised, devoting himself to religious work with extreme evangelical party; wrote several works.

ERYSIPELAS, acute infectious disease, characterised by a spreading inflammation of the skin, caused by a *streptococcus*, a form of bacterium, usually invading a slight surface wound of the face. The onset is sudden with rise of temperature, and a red patch soon appears on the skin, spreading in all directions, blisters and pustules forming. The face is swollen and painful, but in a few days the temperature goes down and the skin comes off. The treatment is isolation of the person and careful nursing to keep up the strength; a vaccine has proved efficacious. Local antiseptics, *e.g.* hot carbolic fomentations, are applied to the affected surface.

ERYTHEMA, skin-rash due to exposure, irritation, or use of drugs; also found as accompanying symptom in several fevers; treatment consists of cooling ointments, and sometimes antipyretics (drugs which reduce fever).

ERYTHRÆ (38° 20′ N., 26° 30′ E.), ruined ancient city, Asia Minor; modern Litri.

ERYTHRÆA, see ERITREA.

ERZERUM, ARZRUM (39° 57′ N., 41° 19′ E.), town and vilayet, Armenia, Asiatic Turkey; at junction of trade routes to Trebizond, Transcaucasia, Persia, etc.; great distributing centre; important fortress; Armenians massacred here, 1895. Pop. *c.* 80,000. Vilayet: area, 19,300 sq. miles. Pop. *c.* 650,000.

ERZGEBIRGE (50° 40′ N., 13° 40′ E.), mts., between Saxony and Bohemia; highest peaks, Keilberg (4072 ft.), Fichtelberg (3980 ft.); produce lignite, silver, lead, etc.

ERZINGAN, ERZINJAN (39° 40′ N., 39° 50′ E.), town, Erzerum, Turkey in Asia; has copper, cotton, and silk manufactures; thermal springs. Pop. *c.* 20,000.

ESAR-HADDON, king of Assyria, reigned 681–668 B.C.; succ. Sennacherib; overthrow of Tyre accomplished by him and his successor Asshur-bani-pal.

ESAU, in *Genesis*, son of Isaac and bro. of Jacob, by whom E. was robbed of his birthright.

ESBJERG (55° 28′ N., 8° 25′ E.), port, W. coast of Jutland, Denmark. Pop. (1911) 18,208.

ESCANABA (45° 44′ N., 87° 14′ W.), town, Michigan, U.S.A. Pop. (1910) 13,194.

ESCARP, see FORTIFICATION.

ESCAUT, see SCHELDT.

ESCHATOLOGY, the doctrine of the last things; has gone through important changes in Jewish and Christian theology. The roots of the Christian doctrine lie in the Old Testament. At first there is very little that is eschatological; by degrees the idea is developed of the 'day of the Lord,' especially in *Amos* and *Isaiah*. Thus the conceptions of the 'coming of God,' judgment, and future bliss and an eternal kingdom, appear. Of personal immortality there is at first, too, very little; nothing more than the dim existence in Sheol for good and bad alike. In the two cent's before Christ this tendency, together with the moral difficulty of imagining this life to be the best of all, and the growing Messianic expectation, led to the growth of a large apocryphal and apocalyptic lit. Zoroastrian and possibly other influences, besides, had mingled with the purely Jewish aspirations during the Persian period. Hence it was into a world already teeming with eschatological ideas that Christianity came. The first generation of Christians lived in the immediate expectation of the coming of their Lord. This hope was disappointed, and Christian ideas of heaven and hell developed gradually. They are always prominent in popular theol., and the importance of e. in Christian origins has only recently been realised.

Schweitzer, *Quest of the Historical Jesus*; Alger, *Doctrine of a Future Life*; Oesterley, *Doctrine of the Last Things*.

ESCHEAT, the reversion of an estate to the Crown or lord of the manor, upon the tenant's dying intestate without heirs, or upon forfeiture for treason or felony.

ESCHENBACH, WOLFRAM, see MINNESINGERS.

ESCHENBURG, JOHANN JOACHIM (1743–1820), Ger. man of letters; trans. Shakespeare.

ESCHSCHOLTZ, JOHANN FRIEDRICH (1793–1831), German traveller, physician, and naturalist.

ESCHWEGE (51° 11′ N., 10° 3′ E.), town, Hesse-Nassau, Germany. Pop. (1910) 12,546.

ESCHWEILER (50° 49′ N., 6° 19′ E.), town, Prussia, Germany. Pop. (1910) 24,740.

ESCOBAR Y MENDOZA, ANTONIO (1589–1669), Spanish ecclesiastic; famous preacher and prolific writer.

ESCOIQUIZ, JUAN (1762–1820), Span. politician; entered Church; tutor to Ferdinand VII.; imprisoned for conspiracy, 1807; later in confidence of Ferdinand; exiled, 1815; wrote several works.

ESCORIAL, or ESCURIAL, palace of kings of Spain, 31 miles from Madrid; it contains a church, convent, and seminary; built, 1563–93; whole range of buildings is square in shape, with church in centre; total area, 396,782 sq. ft.; royal burying-ground; the library, damaged by fire (1671), contains many early MSS.; the church, according to some, is one of finest European buildings of its kind; palace contains many valuable paintings of Velazquez and others.

Calvert, *The Escorial* (1910).

ESCOVEDO, JUAN DE (d. 1578), Span. official; was sec. to Don John of Austria; associated with

various political intrigues; assassinated at instance of Philip II.

ESCUINTLA (14° 20′ N., 90° 39′ W.), town, Guatemala, Central America. Pop. *c.* 12,000.

ESCUTCHEON, term used in heraldry for shield displaying armorial bearings.

ESDRAS, see APOCRYPHAL LITERATURE.

ESERINE, or Physostigmine, see CALABAR BEAN.

ESHER (51° 22′ N., 0° 22′ W.), town, Surrey, England.

ESHER, WILLIAM BALIOL BRETT, 1ST VISCOUNT (1817–99), Eng. judge of Common Pleas, 1868; Master of the Robes, 1883; Solicitor-Gen., 1868; cr. Viscount, 1897.

ESK, four rivers, Scotland: (1) NORTH E. (56° 45′ N., 2° 26′ W.), Kincardine, Forfar, flows into N. Sea; length, 30 miles; (2) SOUTH E. (56° 47′ N., 3° 3′ W.), Forfar, flows into N. Sea; length, 50 miles; (3) confluence of NORTH E. (55° 53′ N., 3° 5′ W.) and SOUTH E. (55° 51′ N., 3° 5′ W.), flows into Firth of Forth; length of each stream is under 20 miles; (4) confluence of BLACK and WHITE E. (55° 19′ N., 3° 14′ W.), flows into Solway Firth; length, 37 miles.

ESKILSTUNA (59° 21′ N., 16° 28′ E.), town, on Hjelmar R., Sweden; chief seat of iron and steel industries. Pop. (1910) 28,371.

ESKIMOS, or ESQUIMAUX, aboriginal inhabitants of N. America, chiefly found in Greenland and Alaska. Their numbers have been computed at 40,000, and the area they inhabit is upwards of 15,000 sq. miles. They are very conservative in habit, and show little desire to adopt civilised manners of life. They are short of stature (average height about 5 ft. 4 in.); have broad, fat faces, black eyes, and coarse black hair. They live by hunting and fishing. For the latter purpose they use the 'kayak,' a light skin canoe, 18 ft. by 2 ft., with an opening in the top, in which the occupant seats himself, wrapped in waterproof skins. In this canoe they capture seals, which they take with the harpoon, to which is attached a line with floats. Hunting is done by means of dogs and sledges. In summer they live in tents near open water. Their winter huts are made of turf and snow, and heated by oil lamps. They usually congregate in settlements of twenty or thirty families. In 1912 the Stefansson Expedition discovered on the Arctic shores of N. America, near Coronation Gulf, some 2000 white Eskimos whose red hair, blue eyes, implements, and other characteristics led to the theory that they are descended from Old Norse vikings who visited N. America from *c.* 1000 onwards.

Nansen, *Eskimo Life* (1893).

Eskimo Dogs, see under DOG FAMILY.

ESKI-SHEHR (39° 44′ N., 30° 18′ E.), town, Asia Minor. Pop. *c.* 35,000.

ESMARCH, JOHANNES FRIEDRICH AUGUST VON (1823–1908), Ger. army surgeon; prof. of Surgery at Kiel (1857); surgeon-gen. in Franco-Prussian war (1870–71); great authority on military surgery, invented many surgical appliances, particularly the bandage called after him, and wrote several medical works, especially on 'first aid.'

ESMERALDAS (1° N., 79° 28′ W.), department, Ecuador, S. America; area, 7439 sq. miles. Pop. *c.* 15,000; capital of dep. is ESMERALDAS, at mouth of river E.

ESNA, ESNEH (25° 14′ N., 32° 33′ E.), town, Upper Egypt, on W. bank Nile; barrage. Pop. 19,103.

ESOCIDÆ, see PIKES.

ESOTERIC, something of a secret or mysterious character; that which is revealed to few; applied to religion, *e.g.* e. Buddhism.

ESPAGNOL SUR MER, LES, naval battle (described in Froissart's Chronicles) fought between Edward III. and Span. fleet off Winchelsea; after hard-fought battle Edward won.

ESPALIER, frame of trelliswork upon which fruit trees are trained for better exposure to sun and air; also the trees so trained.

ESPARTERO, BALDOMERO (1792–1879), Span. statesman; of humble birth; enlisted, 1807; fought in America, 1815–23; vigorous defender of Isabella in Civil War of 1832; of strong liberal and democratic sympathies; finally crushed Carlists, 1840; became regent, 1841–43; retired from political life, 1856.

ESPARTO, or SPANISH GRASS (*Stipa tenacissima*), a N. African grass, possessing extremely tough leaves, largely used in paper manufacture.

ESPERANCE (33° 50′ S., 122° E.), seaport and bay, south coast of W. Australia.

ESPERANTO, an international language invented by Dr. L. Zamenhof, of Warsaw, in 1887; introduced into England in 1902. The system is very simple, as there are no exceptions to rules, and no irregularities. The pronunciation is phonetic. It is claimed that the grammar, which is embodied in seventeen terminations, and thirty prefixes and affixes, may be learnt in an hour.

ESPINAL (4° 11′ N., 74° 59′ W.), town, Colombia; tobacco and earthenware. Pop. 10,500.

ESPINEL, VINCENTE MARTINEZ (1551–1634), Span. novelist and poet; freely drawn upon by Le Sage (*Gil Blas*).

ESPIRITO SANTO (20° S., 40° 30′ W.), state, Brazil, S. America; area, 17,312 sq. miles; surface mountainous in W. and S.; drained by Doce and other rivers; produces coffee, cotton, rice, sugar, tobacco. Pop. *c.* 300,000.

ESPRONCEDA, JOSÉ IGNACIO ENCARNACION DE (1808–42), Span. poet.

ESQUIMAULT, naval station and naval yard on Vancouver Is., Canada; imperial garrison replaced by Dominion troops, 1906.

ESQUIMAUX, see ESKIMOS.

ESQUIRE.—In Middle Ages an e. was a young man who attended a knight; now the term is legally applicable to any gentleman, *i.e.* according to some, one who bears coat armour, or to gentlemen by position or education; but the exact use of the term is open to question.

ESQUIROL, JEAN ÉTIENNE DOMINIQUE (1772–1840), Fr. physician; succeeded in amending the conditions in lunatic asylums, new asylums being constructed according to his ideas; chief physician at Charenton asylum (1826); author of several medical works.

ESQUIROS, HENRI FRANÇOIS ALPHONSE (1812–76), Fr. man-of-letters.

ESS, JOHANN HEINRICH VAN (1772–1847), Catholic divine, prof. at Marburg, and Biblical student.

ESSAY, used as a verb, means to try, or attempt; more generally used as noun to describe a short prose composition, complete in itself. The name and the form was invented by Montaigne (*q.v.*), and his first collection of *Essais* was pub. in 1580. They met with immediate popularity; were trans. into Eng. in 1603 by John Florio (*q.v.*), and are believed to have influenced Shakespeare. They certainly made a favourable impression on Francis Bacon (*q.v.*), whose own first vol. of *Essays* appeared in 1597. The next Eng. essayist of importance, in point of date, is Abraham Cowley (1618–67). The Golden Age of the Eng. e. was the XVIII. cent., when Steele and Addison were contributing to the *Tatler*, *Spectator*, and *Guardian*. Charles Lamb and De Quincey are amongst the greatest of our later essayists. Notable Fr. essayists have been Sainte-Beuve, Théophile Gautier, Jules Lemaître, and Faguet. Emerson's *Essays* occupy a high place in Amer. lit.

ESSEG, ESSEGG, or ESZEK (45° 33′ N., 18° 43′ E.), town, Croatio-Slavonia, Hungary. Pop. (1910) 31,383.

ESSEN (51° 28′ N., 7° 1′ E.), town, Pruss. Rhineland province, Germany; railway centre; coal, iron, steel; has Krupp's steel works; formerly site of Benedictine nunnery. Pop. (1910) 294,629.

ESSENES, Jewish sect (II. cent. B.C.), who have been the object of much hist. inquiry, because of their possible influence on religious life during Christ's lifetime. They strictly observed the Levitical law;

were famed for priestly sanctity; and abstained from worldly affairs.

ESSENTUKI (44° N., 42° 40′ E.), spa, Terek, Transcaucasia, S. Russia. Pop. *c.* 10,000.

ESSEQUIBO (7° N., 59° W.), district and river, Brit. Guiana, S. America.

ESSEX (51° 44′ N., 0° 30′ E.), county, E. England, having on N. Cambridgeshire and Suffolk, on E. North Sea, on S. Thames, on W. Hertfordshire and Middlesex; area, 1657 sq. miles; long, flat coast-line with shallow bays, occasionally fringed with marshland; inland, surface undulating, wooded, and well covered with meadows; owing to low-lying ground, land sometimes inundated. Chief rivers, Thames, Stour, Colne, Chelmer, Lea, Crouch, Roding, and Stort; great grain-producing county; important oyster-fishing. Principal towns are Chelmsford (county town), Colchester, Stratford, Barking, Braintree, and Brentwood; watering-places, Southend-on-Sea, Clacton-on-Sea, and Walton-on-the-Naze; Essex, being near London, is thickly populated. Industries include: Gt. Eastern Railway works, powder and water works, and breweries; important docks at Tilbury and Plaistow; manufactures agricultural implements and silk. Essex churches are famous for timber porches and towers, brasses and stained glass. There are some fine monastic remains; castles include Hedingham, Audley End, and two towers at Hadleigh. Pop. (1911) 1,351,102. **Essex, Kingdom of**, former Anglo-Saxon kingdom; included county of Essex, and at times the adjoining counties of Hertford and Middlesex; records are chiefly of VII. cent.; conquered by Danes, *c.* 870.

J. C. Cox, *Essex* (1910).

ESSEX, EARLDOM OF, created during XII. cent., and first held by the Mandeville family; subsequently by the Bohuns and Bourchiers, and by Thomas Cromwell. The title passed to the family of Devereux in 1572, and was held by them for three generations, after which it was conferred upon the family of Capel.—**Walter Devereux**, 1st earl (1541–76), succ. as Viscount Hereford (1558); cr. Earl of E. (1572); earl marshal of Ireland (1576).—**Robert Devereux**, 2nd earl (1566–1601), Eng. statesman; favourite with Queen Elizabeth; lord-deputy of Ireland (1599); disobeyed queen, and was executed.—**Robert Devereux**, 3rd earl (1591–1646), served in attack on Cadiz (1625); lieut.-general of army sent against Scot. Covenanters (1639); became commander of Parliamentary army on outbreak of Civil War; twice m., but d. without issue, and line became extinct.—**Arthur Capel** (1632–83), Eng. statesman; cr. 1st earl of Capel line (1661); ambassador to Denmark (1669); lord-lieut. of Ireland (1672–77); arrested after Rye House Plot; found dead.

ESSLINGEN (48° 44′ N., 9° 19′ E.), town, Württemberg, Germany. Pop. (1910) 32,216.

ESSONNES (48° 35′ N., 2° 26′ E.), town, Seine-et-Oise, France; paper and machinery. Pop. 10,000.

ESTABLISHMENT, CHURCH.—Before the conversion of the Rom. Empire as a whole to Christianity the Church was illegal, though persecution was intermittent. Afterwards the Church tended to encroach on the State and high claims of temporal power were made by mediæval churchmen. In England the Church was a unity before the State, and as only one religion existed to which all belonged, the separation of Church and State would have been unthinkable, though great delimitation of their respective spheres continually led to difficulty. In England the Anglican Church stands in a special relation to the State, and its prelates sit in the House of Lords. The (Presbyterian) Church of Scotland is likewise established, though its clergy are not represented in Parliament, hence it is very difficult to define wherein e. consists. Its existence is quite compatible with the toleration of other churches; it only means privilege, sometimes hardly more than prestige. The quarrels about possible *Disestablishment* really rage more round *Disendowment*. See DISESTABLISHMENT.

ESTAING, CHARLES HECTOR, COMTE D' (1729–94), Fr. admiral, captured at siege of Madras, 1759; assisted Americans against British, 1778; executed in Fr. Revolution as loyalist.

ESTANCIA, S. American cattle-run; equivalent to U.S.A. 'ranch' and Australian 'station.'

ESTATE, landed property; rank or condition; also collective name given to a governing body, as 'The Three E's'—the lords, clergy, and commons. Burke described journalism as 'the fourth e.'

ESTATE DUTY.—By Finance Act (1894) all property passing at death is liable to duty at from 1 to 15%; e. d's increased by Finance Acts, 1907 and 1909–10. See DEATH DUTY.

ESTCOURT, RICHARD (1668–1712), Eng. comedian and dramatist.

ESTE (45° 13′ N., 11° 39′ E.), town, Venetia, Italy. Pop. 10,779.

ESTE, noble family, originally from N. Italy, which divided into two branches in XI. cent. From one which went to Germany descended the Dukes of Brunswick; subdivided in turn into Brunswick-Lüneburg and Brunswick-Wolfenbüttel. The former became electors and kings of Hanover, and sat on Brit. throne, 1714–1901; they are sometimes called Guelphs. The other branch remained in Italy, and were lords of Ferrara, Modena, and Reggio; famous and cultured princes in Renaissance and Reformation times. Members of this house married into the greatest families, *e.g.* one m. a dau. of Louis XII.; another, Mary, was 2nd wife of James II. of England.

Gardner, *Princes and Poets of Ferrara*.

ESTEBANEZ CALDERÓN, SERAFIN (1799–1867), Span. poet and man of letters; wrote under name of 'El Solitario.'

ESTELLA (42° 35′ N., 2° 7′ W.), town, Navarre, Spain. Pop. 5736.

ESTEPA (37° 17′ N., 4° 56′ W.), town, Seville, Spain, formerly in hands of Moors; olive oil. Pop. 9000.

ESTEPONA (36° 25′ N., 5° 10′ W.), port, Malaga, Spain; wine, fruit, and fish. Pop. 10,000.

ESTERHAZY OF GALANTHA, aristocratic Magyar house, dating perhaps from XIII. cent., famous since XVI. cent.; Forencz Zerhazy (1563–94) became lord of Gálantha; his s. Miklos, or Nicholas, obtained Frakno, a large estate, since held by his descendants. He and his s. supported Hapsburg dynasty, latter being cr. prince (1687). Prince Nicholas Joseph (1714–90) built magnificent Schloss Esterhazy and patronised art and music. His s., Grand-Prince Paul Anthony (1786–1866), was ambassador in London (1815).

ESTERS, organic compounds whose preparation from acid and alcohol is a reversible reaction, and hence complete conversion never takes place unless some other agent such as strong sulphuric or hydrochloric acid is present. Pleasant fruity-smelling liquids used as flavourings.

ESTHER, BOOK OF.—E., a Jewess of Susa, becomes wife of King Ahasuerus (Xerxes); aided by her cousin Mordecai, delivers the Jews from a massacre ordered by the king; in celebration of their deliverance the feast of the Purim is founded; the aim of the book is undoubtedly to explain the feast; has a hist. nucleus, but the story has probably been freely treated; its tone is far less religious than Old Testament as a whole; date, IV. or III. cent. B.C. According to some, its origin is mythological, E. and Mordecai being really names of deities.

ESTHONIA (59° 10′ N., 26° E.), farthest N. Baltic province of Russia; bounded N.W. by Baltic and S. by Livonia; chief town, Reval; area, *c.* 7600 sq. miles; shores rocky; interior flat, mostly forest lands; also moors, small lakes, and sluggish rivers; soil not fertile; most important product, Indian corn; cattle reared; fishing industry important. Original people, Esths (Finnish); aristocracy Germans. Pop. (1910) 467,400.

ESTIENNE, family of celebrated Fr. painters and scholars. The most noted members were ROBERT E. (1503–59), and his s., HENRI E. (1531–98), famed as a Gk. scholar and lexicographer. His best-known works are *Thesaurus linguæ Græcæ*, a monumental work, and *Précellence du langage francois.*

ESTON (54° 33′ N., 1° 8′ W.), town, Yorkshire, England. Pop. (1911) 12,026.

ESTOPPEL, in law, a bar by which a person is prevented from alleging or denying a previous statement or action.

ESTOUTEVILLE, GUILLAUME D' (1403–83), French prelate, abp. of Rouen.

ESTOVERS, legal term for a tenant's right to make use of timber on land tenanted by him.

ESTRADA, LA (42° 40′ N., 8° 30′ W.), town, Pontevedra, N.W. Spain; mineral springs. Pop. (1910) 24,168.

ESTRADES, GODEFROI COMTE D' (1607–86), Fr. marshal and diplomatist; served in Italy, Catalonia, and Holland (1648–72); was entrusted with missions to Holland and England; secured restitution of Dunkirk.

ESTREAT, legal term for a duplicate of, or extract from, an original document.

ESTRÉES, GABRIELLE D' (1573–99), Fr. peeress; mistress of Henry IV., over whom she exercised great influence.

ESTREMADURA, EXTREMADURA (39° N., 8° 40′ W.), ancient division of central and W. Portugal and W. Spain; length, *c.* 160 miles; capital, Lisbon; Portug. part S. of Tagus—great navigable waterway—low, flat, marshy; N., mountain-chain (Torres Vedras over 2200 ft.); Span. part mostly tableland bisected by mountains; extensive sheep-farming.

ESTREMOZ (38° 51′ N., 7° 32′ W.), town, Portugal. Pop. *c.* 7900.

ESZEK, see ESSEG.

ESZTERGOM, GRAN (47° 47′ N., 18° 43′ E.), town, Hungary; archiepiscopal see. Pop. 16,948.

ETAH (27° 40′ N., 78° 40′ E.), town and district, United Provinces, India. Pop. 8000. District: area, 1737 sq. miles. Pop. 863,948.

ÉTAMPES (48° 27′ N., 2° 9′ E.), town, Seine-et-Oise, France; has several interesting old churches; market-gardening, quarrying; damaged during Fronde War. Pop. 9000.

ÉTAMPES, ANNE DE PISSELEU D'HEILLY, DUCHESSE D' (fl. 1526–47), mistress of Francis I.; after his death was driven from court by Diane de Poitiers, and came to an obscure end.

ÉTANG DE BERRE, see BOUCHES-DU-RHÔNE.

ÉTAPLES (50° 32′ N., 1° 38′ E.), town, Pas-de-Calais, France. Pop. 5136.

ETAWAH (26° 45′ N., 79° 2′ E.), town and district, United Provinces, India; has many fine Hindu temples, finest now used as mosque. Area, 1691 sq. miles. Pop. of town, 42,570; of district, 863,948.

ETCHING, the art of producing pictures by printing from metal plates upon which a drawing has been scratched by a needle. The plate, usually of copper, less frequently of zinc, is uniformly covered with a thin coating of a resinous substance impervious to acid, known as 'e. ground,' and then smoked black. The artist now draws the picture with a sharp etching-needle upon the resinous ground, so that lines of the bare metal appear. The plate is then placed in a bath of dilute nitric acid, which 'bites in' the lines exposed, and does not affect the parts still covered by the 'ground.' If it is desired to have certain lines finer than the others, the fine lines are covered over with Brunswick-black varnish, and the plate again placed in the acid bath, so that the other lines are further bitten in, a process which may be repeated as often as desired. When complete, the plate is removed from the acid, the ground cleaned off with turpentine, and the plate, upon which the design appears scratched upon the metal, is inked, its surface wiped clean so that the ink is left only in the bitten-in lines, and printed. In *dry point e.* the drawing is scratched with the etching-needle directly upon the metal plate, which is then inked and printed. See Hamerton, *Etcher's Handbook*; Rhead, *Etching.*

ETEOCLES (classical myth.), s. of Œdipus, king of Thebes; he and his bro., Polynices, agreed to reign alternately for a year at a time; differences subsequently arising brought about the Theban War. The bro. kings met in single combat and both were killed.

ÉTEX, ANTOINE (1808–88), Fr. artist, sculptor, and architect; designed Napoleon's tomb in Invalides.

ETHANE (C_2H_6), hydrocarbon; constituent of coal gas; faintly luminous; an additive compound of ethylene (see OLEFINES).

ETHELBERT, ÆTHELBERT (552–616), king of Kent; converted to Christianity by St. Augustine; first to write Saxon laws—*dooms.*

ETHELDREDA, ST., ÆTHELDREDA (630–79), abbess of Ely; name corrupted into St. Audrey. 'Tawdry' comes from St. Audrey's Fair.

ETHELRED, see ÆTHELRED.

ETHER ($C_2H_5.O.C_2H_5$) a colourless liquid with characteristic taste and smell, prepared by distilling definite proportions of sulphuric acid and alcohol; B.P. 35°; anæsthetic and solvent for carbon compounds.

ETHEREDGE, SIR GEORGE (1635–91), Eng. dramatist; was a courtier and man of wealth and fashion. In his three plays, *Love in a Tub, She Would if She Could,* and *The Man of Mode,* he inaugurated the comedy of intrigue. His work is distinguished by sprightliness and wit.

ETHERIDGE, JOHN WESLEY (1804–66), Eng. Wesleyan minister; Oriental and Biblical scholar.

ETHERS, organic compounds which contain two hydrocarbon groups united to one oxygen atom. All, except the gas-methyl ether, are inflammable liquids.

ETHICS, or MORAL PHILOSOPHY, is often defined as the systematic study, or the science, of conduct or of character. But we can study conduct and character in several ways. We may ask what takes place 'in a man's mind,' as we say, when he acts or wills to act, when he succumbs to or resists temptation, when he forms habits, and so on. We may trace the development of individual conduct from the imitative stage of infancy to the relatively rational life of an adult. To these psychological researches we may add the anthropological, and trace the development of moral conduct and social order in the race from the wild life of savagery to the comparatively reasonable morality of civilised peoples. But these positive studies, though they occupy a great part of treatises on ethics, are really but introductory to the ethical problems proper. When we have ascertained the psychological conditions of conduct and have noted what kinds of conduct have in history been regarded as good and bad, there remain questions such as, How far are actual moral judgments justifiable? What ought we to regard as morally good or bad, right or wrong? What is the moral ideal? What is true welfare? Thus ethics is concerned, not so much with character and conduct directly, as with moral judgments upon them, which it seeks to understand and test and clarify.

Upon what do we pronounce moral judgments? Some moralists have maintained that the goodness or badness of conduct depends wholly on the motive which prompts it. By *motive* may be meant the emotion which inclines a man to certain actions, or the end which he hopes to achieve by these actions. In the latter sense 'motive' is narrower than 'intention,' for a man intends not only the end that he wants, but also the means that he knows to be necessary to its attainment and the consequences that he knows will follow from its realisation; thus a man's motive may be to see a friend, but the journeys he undertakes in order to do so and the expenditure he incurs are, though not part of his motive, also intentional. Others (*e.g.* Mill) have argued that the morality of an act depends only on its consequences and not at all on its motive. Both parties to this controversy make an

artificial separation of agent from act. An act may be beneficial or injurious, but can have no moral value except as an indication of an agent's intention and character. But, again, the agent's motive should not be judged without any reference to the consequences of his conduct. Motive in the sense of the prompting emotion is comparatively unimportant, for moral judgments are certainly not mainly directed on states of feeling. Motive in the sense of the end desired is also too narrow, for the well-meaning fool, whose ends taken abstractly are good, but who neglects to consider the consequences of his actions, does not deserve unqualified approbation. The true object of moral judgment is either the general character of the agent or his acts as revelations of character, and such acts we judge as wholes, considering both the agent's motive and his actual intention, and also such consequences as he ought reasonably to have foreseen.

The first movement of reflection upon established maxims of conduct is usually simple revolt. Traditional principles are termed unreasonable, conventional, finally fictitious and false. All men, it is argued, are really selfish, and the high-sounding maxims under which they veil their selfishness represent nothing but the prudence of thieves afraid to attack one another. This doctrine of selfishness (*Egoism*) is often expressed —*e.g.* by the Cyrenaics (*q.v.*) and Epicureans (*q.v.*), and in modern times by Hobbes (*q.v.*)— in the form of Psychological Hedonism, that a man *can* have no other motive than his own pleasure. Were this true, it would be senseless to adjure men to aim at anything else; moral choice would be impossible. It is now generally admitted, however, that the doctrine is psychologically false: we do not often aim at pleasure as such, and usually should miss it if we did. But, even so, it remains conceivable that only selfish action is reasonable.

The ordinary honest man replies to the selfish doctrine that he knows perfectly well what is right and wrong without any argumentation. This reply formulated as a theory is known as *Intuitionism*. Thus (1) Shaftesbury (*q.v.*) and Hutcheson argued against Hobbes that we have in 'Moral Sense' a faculty which disinterestedly approves or disapproves conduct as right or wrong in itself, just as the Æsthetic Sense approves beauty and disapproves ugliness. But this theory tends to reduce the distinction of right and wrong to that of good and bad 'form,' or decorous and nasty, and to neglect the notion of obligation which distinguishes moral from æsthetic consciousness. (2) Butler therefore speaks rather of *Conscience*, a principle which in the system of human nature 'plainly bears upon it the marks of authority over all the rest,' so that conscientious, not selfish, conduct is truly following the law of our nature. More recently Martineau also developed a theory of conscience, which he regards as unerringly deciding between rival motives. (3) Earlier writers, such as Cudworth and Clarke, also insisted on the immediate and disinterested character of moral intentions, but regarded them as due, not to a special moral faculty, but to the activity of *Reason*, which apprehends moral truths in the same way as mathematical truths. (4) Kant (*q.v.*) also relates the moral law to reason — viz. to 'practical reason' or rational will, and argues that since the law must hold alike for all rational beings, our purposes ought to be such that we can will them, not for ourselves only, but as universal maxims for all men.

Appealing to the internal law, Intuitionism is an advance upon dogmatic reference to external commands or customs. But as a final theory it is defective. The verdicts of conscience, though now rapidly and unreflectively pronounced, usually represent the moral standards of our society, and issue from past reflection of ourselves or others. They are not above criticism, unless criticism means an attempt to bias conscience. Their asserted infallibility conflicts with actual variations in moral ideas. Moreover, when laws or duties seem to conflict, decision on the right course to pursue is not immediate, but often involves laborious reflection. Lastly, if we can give no account of our moral valuations, we cannot convince one who dissents; all equally conscientious conduct will be equally laudable, however foolish or barbarous it may be.

If we are to show that our duties are constituents of an *intelligible* idea, we must start, as the Greeks started, from a consideration of the question: What is the true welfare of a rational human being? An apparently simple answer to this question is, Pleasure. A thoroughgoing egoistic hedonism, such as the Cyrenaic, bids us cull the pleasures of the moment, whencesoever they arise. But, since such extravagant pleasure-seeking defeats its own end, the more practical, though less consistent, hedonism of the Epicureans looks beyond the moment and chooses among pleasures, preferring calm to violent intensity. Social hedonism (or *Utilitarianism*), on the other hand, whilst agreeing that welfare or happiness consists in pleasures, finds the end of action in the happiness of the greatest number, and not of the agent alone. Bentham, the founder of Utilitarianism, was more interested in legislative reform than in ethics, and scarcely attempted to reconcile this doctrine with his belief in the natural selfishness of mankind. He merely pointed out that fear of the punishments or 'sanctions' imposed by God, nature, public opinion, and law acts as a restraining force upon self-indulgence. But on this showing the most praiseworthy man would be he who combines successful selfishness with skilful evasion of the penalties. J. S. Mill added to the list of *sanctions* the internal or moral sanction of conscience, but this cannot furnish a bridge from natural selfishness to altruism, because unless we already approved unselfish action, we should not feel remorse for selfishness, nor do we gain the pleasures of a satisfied conscience if our aim is nothing higher than simply to gain them. Mill further suggested that, just as a miser may come to love money for its own sake, so naturally selfish man, finding beneficence pleasant, may come to love disinterested virtue by unreflective association. But were our approval of virtue thus irrational, reflection would soon convince us of our folly. The fact is that a consistent hedonism must be selfish; Utilitarianism as an ethical theory is inconsequent, though well-meaning. Mill was practically abandoning hedonism when he maintained that pleasures differ qualitatively in value. Bentham had held that any pleasure is as good as another if it is as intense, as fruitful of further pleasures, as free from consequent pains, and the like; and this must be so; if welfare consists merely in feeling pleased. Mill rightly recognised that this doctrine is subversive of morality: it is better to be Socrates dissatisfied than a pig satisfied. But if some pleasures are higher than others, their greater value must depend, not on their character as feelings, but on the activities and purposes from which they result; and we can no longer attempt to find man's welfare simply in the satisfaction of his nature as a sensitive being. Herbert Spencer's attempt to re-establish hedonism upon the doctrine of evolution really succeeded, not in its purpose, but in showing that function is more important than feeling.

Whilst consistent hedonism regards all pleasures as good alike, those schools of thought which may be roughly classed together as *ascetic* tend to regard pleasure as not a good at all, or even as positively an evil. Virtue, they say, is the only good, but they represent virtue as consisting essentially in the suppression of desire. They exaggerate the truth that self-restraint is necessary to all good living for men into the doctrine that the excision of passion and desire is the ideal of conduct. But regulation is a very different thing from excision. The orderly family life, for instance, which largely is (and ought still more to be) the basis of our social organisation, involves restraint of sensual passion, but would be impossible were passion abolished. Asceticism sunders reason from feeling and desire, and so leaves reason nothing to busy itself about. The reasonable man is not really one who lacks desires, but simply one whose desires

are reasonably ordered and directed. The examples of the *Cynics* (q.v.) and of the early anchorites of Eastern Christianity (on whom *vide* Lecky, *History of European Morals*, ii. 101 f.) show how intimately the highest exercises of human nature are inbound with its most primitive impulses; for in attempting to cut out desire and passion they had to abandon society and civilisation and human love for a life of isolation too often genuinely sordid, but not often genuinely humble. The attitude of the *Stoics* (q.v.) was more dignified, and in its way even heroic; but theirs too is the negative morality of 'natures over-proud,' who regard the ordinary joys and sorrows of our life as at best 'indifferent,' and think that if one likes to do a thing, doing it is very likely wrong, and is certainly morally worthless.

In Kant also is to be found a similar opposition of duty to inclination. In a purely reasonable being, indeed, such as God, reason and will would coincide; we cannot conceive of a moral struggle in God. But we have also a sensuous nature and like to do much which we ought not to do; therefore, the moral law appears to us in the form of an imperative of duty, which claims obedience, not as a means to happiness or anything else, but absolutely or, as Kant says, categorically. But Kant makes this rift in human nature radical; the only moral motive is reverence for the moral law; conduct has moral value only when it springs from sense of duty, none when it springs from inclination; and instead of pointing to a higher stage when desire and duty shall be reconciled, Kant rather argues that the fiercer the struggle, the greater is the merit of right action. So far Kant leaves the moral law empty and formal, nor does he help matters much by the doctrine already mentioned, that we can test the rightness of proposed conduct by asking whether we could wish every one to act in the same way. This is a useful warning against making exceptions in our own case, but pressed further is hardly true. His subsequent doctrines—that we should treat humanity always as an end, aiming at the happiness of others and our own perfection, and that we should keep before us the ideal of a 'kingdom of ends' or society of free unselfish moral agents—whilst an advance towards a more substantial morality, are scarcely consistent with his premises.

In Plato and Aristotle, and again in modern *idealism*, is found a broader conception of welfare as the systematic, harmonious, and comprehensive realisation of capacity, or, in more simple language, as 'making the most of oneself.' Welfare cannot indeed be described in detail, just because it is an ideal never completely attained, and even to mention its main constituents separately obscures their vital interconnection in actual experience. But it does not, as asceticism holds, exclude pleasures, or even sensual pleasures. The sensual man's error lies, not in thinking bodily pleasures good, but in neglecting the more specifically human goods, such as the acquirement and advancement of knowledge, the appreciation and production of beauty, the reception and reciprocation of friendship and love, the worship of God and enjoyment of divine peace. Moral virtue aims at the attainment of these goods for oneself and others. Not for oneself only, for the good of man as a social being must be a social good. Making the most of oneself does not mean hurting one's neighbour, and it is an error to oppose self and others as if the unselfish really lost through seeking the good of others and the selfish attained real good at the cost of others. Selfishness, even when not sensual, is always narrow, and its last stage, as Plato shows in his sketch of the Tyrant, is desolation. Even when he thinks that he has got all that he wanted from life, he has lost the love of others and the feeling for their good, and thereby has lost the power of genuinely appreciating all that is greatest and most beautiful in thought and art. Plato says that the unjust man, whilst always in truth miserable, is most miserable if he goes undetected and unpunished; and similarly it may be said of the selfish man that he loses most if he never recognises his loss.

References: R. A. P. Rogers's *Short History of Ethics* and H. Sidgwick's *Outlines of the History of Ethics* are convenient historical surveys of the subject. Of numerous text-books there may be specially mentioned J. S. Mackenzie's *Manual of Ethics* and J. H. Muirhead's *Elements of Ethics*. Both give numerous references to the literature of the subject, and the latter has also a useful bibliography of the chief English works. Selby-Bigge's *British Moralists* contains selections from writers of the XVII. and XVIII. cent's, with introduction and an excellent index.

ETHIOPIA ('land of the swarthy-faced'), name given by the ancients to an extensive tract of country on both sides of the Upper Nile. It was bounded on the N. by Egypt, on the E. by the Red Sea, and is covered by the modern Nubia and Abyssinia. It was also the Hebrew 'Cush' referred to in the Bible. The capital was Meroë, which became one of the principal trade centres of the ancient world. It was conquered by Cambyses, king of Persia, about 530 B.C.; and again, in later times, by Augustus. In the days of Nero Meroë was in ruins. Traces of its ancient glory, however, are still to be found.

ETHNOLOGY, science treating of relations of races to each other; distinguished from ANTHROPOLOGY, the study of man in relationship to other mammals. See RACES OF MANKIND.

ETHYL (C_2H_5), hypothetical alkyl radical, base of *Ethyl Series* of organic compounds; nearest affinity is $(C_2H_5)_2$, inflammable gas soluble in alcohol; compounds include ALCOHOL (C_2H_5OH) (*q.v.*), ETHYLAMINE, formed by replacing one to three atoms of hydrogen in ammonia by ethyl; $C_2H_5NH_2$ (mono-ethylamine) is a volatile inflammable liquid with strong basic properties. ETHYL CHLORIDE (C_2H_5Cl) is formed by union of alcohol and hydrochloric acid; volatile liquid used as local anæsthetic; ETHER (*q.v.*) is ethyl oxide $(C_2H_5)_2O$.

ETHYL ALCOHOLS, see ALCOHOLS.

ETHYLENE, see OLEFINES.

ÉTIENNE, CHARLES GUILLAUME (1778–1845), Fr. dramatist.

ETNA (37° 44′ N., 15° E.), volcano, Sicily; height, *c.* 10,760 ft.; summit generally under snow; central districts wooded; soil at base fertile, producing fruits and vegetables; observatory situated about 1000 ft. below summit; last eruption, 1910. See SICILY.

ETNA (40° 29′ N., 80° 1′ W.), town, Pennsylvania, U.S.A. Pop. (1910) 5830.

ETON (51° 29′ N., 0° 37′ W.), town, Buckinghamshire, on N. bank of Thames opposite Windsor; famous for Coll. founded by Henry VI. (1440) and completed next century; beautiful old buildings including quadrangles and chapel; many additions since; new buildings (opened by Edward VII.) have library and classical museum. Among famous Etonians were: Chatham, Fox, Canning, Gladstone, Shelley, the Walpoles, and Wellington. Pop. (1911) 3192.

ÉTRETAT (49° 43′ N., 0° 13′ E.), seaside resort, Seine-Inférieure, France.

ETRURIA (*c.* 43° 14′ N., 11° 25′ E.), a district of ancient Italy, probably including in early times N. Italy, between Alps and Tibor, but later reduced to district bounded by the Arno, Apennines, and the Tiber. Formerly inhabited by Etruscans—a powerful people of whose history little reliable is known, and whose origin is much disputed. Etruscans' own account was that they came from Lybia and formed a mixed race with the *Rasena*, who emigrated from N. Italy; modern critics incline to the view that a Pelasgic race subdued the Umbrians and were conquered by Rhætian people, called Rasena. Etruria was divided into three great nations occupying Circumpadane Etruria in N.; Etruria Proper in centre; and Campania in S.

Time when Etruscan civilisation began is calculated from objects found in tombs, at about 1000 B.C. Little

is known of history, but before VI. cent. E. probably held sway over Mantua, Felsina, Melpum, and perhaps Latium and Campania; last three kings of Rome were Etruscans. After expulsion of Tarquins, E. strove in vain to get foothold in Rome under Lars Porsena of Clusium; was subjected to Rome in 283, and ultimately defeated by Q. Fabius Maximus at battle of Vademonian Lake (*c.* 310); after this E. gradually lost independence and was absorbed in the Roman State. A former treaty with Carthage, by which E.—who held power over shipping in Tyrrhenian Sea—got Corsica and Carthage Sardinia, proves their one-time proud position.

E. was once thickly populated with well-distributed towns, of which the chief were: Veii, Tarquinii, Falerii, Cære, Volci, Clusium, Cortona, Perusia, Volsinii, Arretium, Fæsulæ, and Populonium. The people were great warriors, and the country drew much wealth from its agriculture and forestry, for which the land was exceedingly well adapted, with rich soil for crops and cattle; fine tracts of forests; and the three rivers, Arnus, Umbro, and Tibor. E. also amassed great wealth by her commerce, and became an important centre for foreign traders.

At first the government lay with the kings, who were elected for life, but these were greatly dependent upon State leaders and aristocracy; later, the office of kingship was abolished and magistrates appointed. A league of twelve cities met at Temple of Voltumna. The people were divided into three classes: aristocracy, the curiæ, and slaves; their habits and customs are mostly to be deduced from pictures and carvings found in excavated tombs; these indicate a manner of living similar to Romans; large houses, rich garments and armour (spears, swords, daggers, shields, greaves, and helmet) in bronze and iron and of Roman type, athletics, games, gladiators, dancing, and music. Religion incurred much human sacrifice to gods (many of Gk. and Rom. origin). Etruscans were not brilliant in art, but pictures and statuary are of good standard; best paintings and fine gold and silver ornaments found at Tarquinii, Chiusi, Volci, Cære, and Veii. The Etruscan language disappeared after the III. cent. B.C.

E. was restored by Napoleon (1801), and united to Fr. Empire (1807); for later history, see TUSCANY.

Dennis, *Cities and Cemeteries of Etruria* (2nd ed., 1878).

ETTENHEIM (48° 15′ N., 7° 48′ E.), town, Baden, Germany. Pop. 3106.

ETTLINGEN (48° 57′ N., 8° 25′ E.), town, Baden, Germany. Pop. 8668.

ETTMÜLLER, ERNST MORITZ LUDWIG (1802–77), Ger. philologist.

ETTMÜLLER, MICHAEL (1644–83), Ger. physician, prof. of Bot. (1676), and also prof. of Surgery and Anatomy, at Leipsig; author of many medical works. ETTMÜLLER, MICHAEL ERNST (1673–1732), s. of above; prof. of Medicine (1702), and afterwards, at different times, of Anatomy, Surgery, Physiology, and Pathology at Leipzig.

ETTRICK (55° 29′ N., 3° 3′ W.), river, Selkirkshire, Scotland; joins Tweed; near source is village and parish of E. (55° 26′ N., 3° 12′ W.). The *Ettrick Shepherd* was James Hogg (*q.v.*).

ETTY, WILLIAM, R.A. (1787–1849), Eng. artist; painter of hist. subjects; great colourist; untiring student of anatomy. His landscapes and drapery always harmonise admirably with his figures.

ETYMOLOGY, science treating of the origin and history of words.

EU (50° 2′ N., 1° 25′ E.), town, Seine-Inférieure, France; has XVI.-cent. castle, damaged by fire, 1902; fine Gothic church; Jesuit chapel; manufactures flour. Pop. 5400.

EUBŒA (38° N., 24° E.), largest island, Grecian Archipelago; separated from mainland on S.W. by channel, N.W. part of which was anciently called Eubœan Sea and narrowest part Euripidus (*c.* 120 ft.), and spanned by bridge; area, 1505 sq. miles. Chief town, Carystos. E. coast is steep and rocky, W. sloping gradually; interior wooded, fertile, mountainous; hot springs in N.; iron, coal, and marble in S. Principal products—corn, oil, wine; minerals—lignite and chrome ores. People mostly Greeks and Albanians. E. was subjugated by Athenians, Philip of Macedon, Romans, Venetians, and Turks. Part of Greece since 1830. Pop. 116,903.

EUBULUS (fl. *c.* 350 B.C.), Athenian statesman; famed for his financial abilities and love of peace, in which latter policy he had a strong opponent in Demosthenes.

EUBULUS (fl. 370 B.C.), Gk. comic dramatist.

EUCALYPTUS, genus of trees of natural order *Myrtaceæ*, including about 150 species, growing chiefly in Australia and Tasmania, often to the height of 150–200 ft., and sometimes to 450–500 ft. Many species are called gum-trees, from their resinous exudations, and their leaves are leathery, containing numerous oil-glands. They are believed to assist in the prevention of malaria in marshy districts, probably rather by the drainage of the large roots than from the antiseptic action of the smell. From the *E. rostrata* a red gum is obtained, used medicinally as a powerful astringent, while the oil distilled from the *E. globulus* is used as an antiseptic for wounds, etc., and internally as a spray in diphtheria or foul bronchitis, also as a stomachic, or for lowering the temperature, etc., in the same way as quinine, to which, however, for this purpose it is inferior.

EUCHARIST.—The beginning of the E. is to be found in the Last Supper instituted by Christ. According to the Synoptic Gospels it was a Paschal meal, according to St. John it was not. Probably the latter is right. The ideas underlying it of sacrifice and communion are to be found among the Jews and other ancient peoples (see Robertson Smith, *Religion of the Semites*). The earliest New Testament account is in *1 Corinthians* 11, where the words, 'I have received of the Lord,' refer to a special divine revelation to Paul. The account in *St. Mark* comes next, where the words, 'I will not henceforth drink of the fruit of the vine,' have, it has been said, an antique ring about them. The Lucan and Matthean narratives add the words, 'This is my blood, etc.,' but are probably due to the influence of the Pauline passage. St. Luke puts the delivery of the cup before the bread. St. John is very different, with no commemorative rite. Some have denied on quite insufficient grounds the historicity of the Markan narrative. In the *Acts* we read that the Christian Church was continual in the 'breaking of bread and in prayers.' Catholic theologians have believed this justifies communion 'in one kind.' Of extra canonical accounts of Eucharistic observance one of the most important is that in the *Didaché*, in which occur the words, 'As this broken bread was scattered upon the mountains and being gathered together became one, so may Thy Church be gathered together from the ends of the earth into Thy kingdom.'

Much dispute has arisen over the possible identification of the primitive E. with the *Agape* or love feast. Probably they were at first united, then separated, and the Agape gradually died out. From the beginning the E. was commemorative of the death of Christ, and symbolic language, the precise theological implication of which it is very difficult to determine, was used. Gradually the conception of the Eucharist as a sacrifice became more definite, the perpetuation of the sacrifice on Calvary. This was the predominant one in Mediæval Theol and is the distinguishing characteristic of the Catholic Mass. The doctrine of *Transubstantiation*, the actual identification of the sacramentally consecrated elements with the body and blood of Christ, was defined by the Lateran Council of 1215, confirmed and elaborated by the Council of Trent of 1565, and is the official doctrine of the Rom. Church. At the Reformation the Prot. churches all departed more or less from the Catholic doctrine. The Lutheran view was not *transubstantia-*

tion, but *consubstantiation*, the body and blood of Christ were present, not in, but with, the elements. Protestants now generally view the rite as entirely symbolical. In the Anglican Church various views are prevalent, the Anglo-Catholic party asserting belief in a *real* though not a corporeal presence. In most Non-conformist churches the E. is observed, though in some it is dropped. Quakers have never observed it. It has not generally the importance in religious life among Protestants which it has with Catholics. The forms of celebration differ widely, the Anglican is like the primitive, the Rom. very ancient in parts, the Gk. considerably different.

Harnack, *History of Doctrine*; P. Gardner, *The Origin of the Lord's Supper*.

EUCHRE, card game, very popular in U.S. and Australia. It is played by two or more persons with thirty-two cards, all cards below seven being withdrawn from the pack.

EUCKEN, RUDOLF CHRISTOPH (1846–), Ger. philosopher; prof. of Philosophy, Univ. of Jena (1874–); earlier writings historical, later, constructive; philosophy not merely intellectualistic, but religious inspiration applied to practical problems; awarded Nobel prize for Lit. (1908); originator of ACTIVISM.

He maintains that by Action comes Truth, that Action is the safest cure for all evils that beset humanity, that while Contemplation is apt to warp the intelligence, Action strengthens and develops the mind. Like pragmatism, activism sees in truth a matter of life rather than of reason.

E.: a philosophy of Life, by A. J. Jones (1912).

EUCLID, Gk. mathematician of III. cent. B.C.; nothing known of life except that he taught math's at Alexandria; immortalised by works, *Elements of Geometry* and *Data*; object of latter is to show that, given certain data, other facts can be determined from them; in famous *Elements* (13 books) hardly any important geometrical truth is omitted, and the demonstrations are so remarkably clear, concise, and exact, that for the last 2000 years the work has everywhere been used as an introduction to the study of geometry; also attributed to E.: *Porisms* (3 books), *Conic Sections* (4 books), *Fallacies*.

Thomas Smith, *E.: his Life and System* (1902).

EUCRATIDES (*c.* 175–129 B.C.), king of Bactria; opponent of Demetrius, whose dynasty he dethroned; kingdom extended to W. India; murdered by his s.

EUDÆMONISM, any ethical theory may properly be called eudæmonistic which holds that the moral end, by reference to which the moral value of action should be determined, consists in Welfare and Happiness (*eudaimonia*); but generally the term is applied only to hedonistic theories that identify Happiness with Pleasure.

EUDOCIA AUGUSTA (401–460), wife of Theodosius II., Byzantine emperor; celebrated for her literary gifts; wrote poems, and paraphases of scriptural works.

EUDOXIA LOPUKHINA (1669–1731), Russ. Empress; m. Peter the Great (1689), but the union proved unhappy. Famed for her beauty and asceticism, she was soon neglected by her husband, and subsequently took the veil.

EUGANEAN HILLS (45° 18′ N., 11° 40′ E.), volcanic mountain range, N. Italy; highest peak, Monte Venda, 1750 ft.

EUGENE (44° 3′ N., 122° 51′ W.), town, Oregon, U.S.A. Pop. (1910) 9009.

EUGENE OF SAVOY, PRINCE (1663–1736), s. of Prince E. Maurice; owing to dislike of Louis XIV., entered service of Emperor Leopold I.; served on Rhine; defeated Turks at Zenta (1697); fought in War of Spanish Succession (1699); with Marlborough at Blenheim (1704); fought against Fr. at Cassano (1705), and wounded (1706); gov. of Milan (1707); fought in Flanders, at Oudenarde (1708), and Malplaquet (1709); continued war against France when Britain had withdrawn from alliance; returned to Vienna (1714); commander against Turks (1717), and defeated them with great slaughter in battle of Belgrade (1717); peace was concluded (1718); made vicar-gen. of Italy (1724); again went on campaign against France (1734), but returned after peace of 1736. He was a daring commander, reckless of his soldiers' lives.

Malleson, *Prince Eugene*.

EUGENICS (Gk. *eu*, well, and *genos*, race), the science which treats of the physical well-being of a race and of the influences which tend towards improvement or degeneration. From early times efforts have been made by various nations to produce a physically sound race; the Spartans, for instance, exposed newborn children on hilltops to weed out weaklings, thus producing the finest men, if the most uncultured and unintellectual, in the whole of Greece. It was left, however, to Sir Francis Galton (*q.v.*) to crystallise the idea into a science. Besides writing and research, Galton founded a chair of Eugenics in the University of London, now held by Pearson, who has directed much valuable statistical research, which has not been impugned. Eugenists hold that nature is much more important than nurture (their relations being expressed by 6 to 1). Goring confirmed the earlier work of Heron, proving, from statistics taken from criminals (assumed to represent for this purpose a chance selection of the general population), that consumption is almost if not wholly due to heredity. Drunkenness is also stated to be much less due to surroundings than to inherited tendencies. Other work of the Eugenists claims to prove that the professional classes are much less fertile in production than the wastrels of the community, and to check one factor in the consequent increase of the less fit, the Mental Deficiency Bill was introduced in 1912, but was almost immediately dropped.

Though the movement has the usual number of camp-followers, who bring e. into disrepute by their fantastic theorising, it is a most valuable science, and one which, if properly put into practice, will certainly raise the physical standard of mankind. There is in Britain a E. Society, a monthly review, and an International Congress was held in 1912. Most of the periodicals are published in Germany, where the movement has spread with marvellous rapidity.

Pearson, *The Scope and Importance of National Eugenics* (Dulau & Co.); Elderton, *The Relative Strength of Nurture and Nature* (Dulau); Pearson, *Tuberculosis, Heredity, and Environment* (Dulau).

EUGÉNIE, EX-EMPRESS, MARIE-EUGÉNIE-IGNACE-AUGUSTINE DE MONTIJO (1826–), b. Granada; of Span., Ital., and Scot. descent; m. Louis Napoleon, afterwards Napoleon III. (1853); retired to Chislehurst, Kent, with deposed emperor and s., the Prince Imperial (1871).

EUGENIUS, name of four popes, of whom the most important were: E. III. (1145–53), pupil of St. Bernard. During his reign Arnold of Brescia was for a time supreme in Rome, and Second Crusade took place. E. IV. (1431–47) engaged in strife with the Colonna family; deposed by the Council of Basel, but restored (1443).

EUGUBINE TABLES, see IGUVIUM.

EUHEMERUS (fl. 300 B.C.), Gk. writer on mythology.

EULABES, a bird. See GRACKLE.

EULACHON, see under SALMON FAMILY.

EULENSPIEGEL, TILL, hero of a XVI.-cent. Ger. chap-book, full of coarse rustic jests and broad satire.

EULER, LEONHARD (1707–83), eminent Swiss mathematician; b. Basel; Bernouilli's pupil; prof. at St. Petersburg (1730); at Berlin at invitation of Frederick the Great (1741–66); returned to St. Petersburg, where he died; awarded Academy Prize ten times; totally blind during last years of life. E. chiefly worked at problems left by Newton. Wrote *Théorie de la Construction et de la Manœuvre des Vaisseaux*;

Institutions of the Differential and Integral Calculus; *Theory of Planetary Motion*. *Life* by Rudio (1884).

EUMALACOSTRACA, see under MALACOSTRACA.

EUMENES (d. c. 316 B.C.), famous Macedonian gen. who, after serving under Philip II. and Alexander, became ruler over Cappadocia.

EUMENES I., king of Pergamum (263–241 B.C.). **EUMENES II.**, king, 197–159 B.C.; formed alliance with Rome; Pergamum flourished in his reign.

EUMENIDÆ, see WASPS.

EUMENIDES, THE, see ERINYES.

EUMENIUS (*c.* 260–311 A.D.), Rom. panegyrist.

EUMOLPUS (classical myth.), reputed founder of the Eleusinian mysteries.

EUNOMIUS (d. *c.* 394), bp. of Cyzicus; was leader of extreme Arian party; his heresy condemned by Council of Constantinople.

EUNUCHS, emasculated male persons; commonly employed as servants in Oriental harems.

EUPALINUS, Gk. architect who constructed an aqueduct for Polycrates of Samos (d. 522 B.C.), which still exists.

EUPATORIA (45° 11′ N., 33° 22′ E.), port, Russia, on W. coast of Crimea. Pop. 17,915.

EUPATORIUM, family of composite plants common in America, and found in parts of Europe; various species used medicinally, and others in dyeing and tanning.

EUPATRIDÆ, nobility of Attica; probably they alone possessed political power, and not the *Geomori* (country folk) or *Demiurgi* (artisans); only a Eupatrid could be *polemarch* or *archon*.

EUPEN (50° 37′ N., 6° 3′ E.), town, Rhine province, Prussia. Pop. (1910) 13,540.

EUPHAUSIACEA, see under MALACOSTRACA.

EUPHEMISM, soft or pleasant turn given to the expression of a rude or unpleasant fact.

EUPHONIUM, brass wind instrument of saxhorn family, with four and sometimes five valves; usual pitch, C or B flat.

EUPHORBIA, oil obtained from seeds of *E. lathyris*; similar to croton oil; EUPHORBIUM is resin obtained from various African species of e.; used in liniments, etc.; both preparations are strong and pungent.

EUPHORBIACEÆ, dicotyledons characterised by the extreme variety of their vegetative organs, being mostly fleshy leaved herbs in Britain, shrubby or tree-like in the tropics, many possessing a cylindrical succulent stem with the leaves reduced to spines. The tissues contain *latex*, that of Hevea and Manihot when dried forming commercial rubber. The flowers are unisexual, and in Euphorbia are much reduced. They are massed together in a specialised inflorescence termed a *Cyathium*. Each cyathium consists of a single centrally-placed female flower surrounded by five groups of male flowers represented by one stamen.

EUPHORION (fl. 220 B.C.), Gk. poet and grammarian; valued elegies.

EUPHRANOR (IV. cent. B.C.), Gk. artist and sculptor.

EUPHRASIA, see EYEBRIGHT.

EUPHRATES (31° N., 47° 22 E.), largest river in W. Asia. Total length, *c.* 1800 miles; breadth varies greatly, above estuary ½ mile. Source, in Armenia, consists of two arms, Kara Su (rising N.E. of Erzerum) and Murad Su (rising near Lake Van, and joining near Keban Maadin); flows through mountainous region of Taurus; lower down separates Mesopotamia from Syria and Syrian Arabia; joined by Tigris at Kurna; united rivers called Shat-el-Arab, and flows into Persian Gulf by many branches. Upper course is wild and mountainous; country levels near Hit, and river in middle and lower courses flows through plains, deserts, and swamps, sparsely cultivated and inhabited by lawless Bedouin Arabs. Between Ana and Hit river is studded with islands. In ancient times rich cultivated plain well watered by canals; several mouths of smaller canals still kept open. Near Basra quantities of dates and rice are grown. Banks of river teem with ancient remains representing all periods; site of Babylon. Principal tributaries: Sajur, Balik-Su, Khabúr, and Kharúm. Present chief towns: Samsat, Bir, Ana, Hit, Hilla, and Basra. Formerly used as means of transportation, even of armies, now, owing to rapids, currents, falls, rocks, and ruins of dams, river is rendered unnavigable in middle and upper courses. Chesney's expeditions (*c.* 1830–35) discovered navigation impossible above Bir, except for native rafts. Great floods take place, due to melting snows on mountains of upper course.

Chesney, *Euphrates Expedition* (1850); Geere, *By Nile and Euphrates* (1904).

EUPHUISM, name for a stilted style of writing invented by John Lyly (*q.v.*) in fantastic romance *Euphues* (1579–80). It was intended for the reading of the upper classes; naturalness was carefully avoided, the style being distinguished by far-fetched metaphors, similes, and alliteration. Queen Elizabeth succumbed to it; Shakespeare mocked at it in *Love's Labour's Lost*. Greene and others imitated it; but its vogue was exhausted early in James I.'s reign.

EUPLECTELLA, see under SPONGES.

EUPOLIS (fl. 446–411 B.C.), Gk. comic poet; rival of Cratinus and Aristophanes.

EUPOMPUS (IV. cent.), Gk. artist.

EURAFRICAN, offspring of European and native African.

EURASIAN, term used to designate half-castes sprung from Europeans and Asiatics; principally in India. *Eurasia* in geography is Europe and Asia taken together.

EURE (49° 5′ N., 1′ E.), department, N.W. France; area, 2330 sq. miles; drained by Eure and Seine; produces cereals, timber, flax, fruit. Pop. (1911) 323,651.

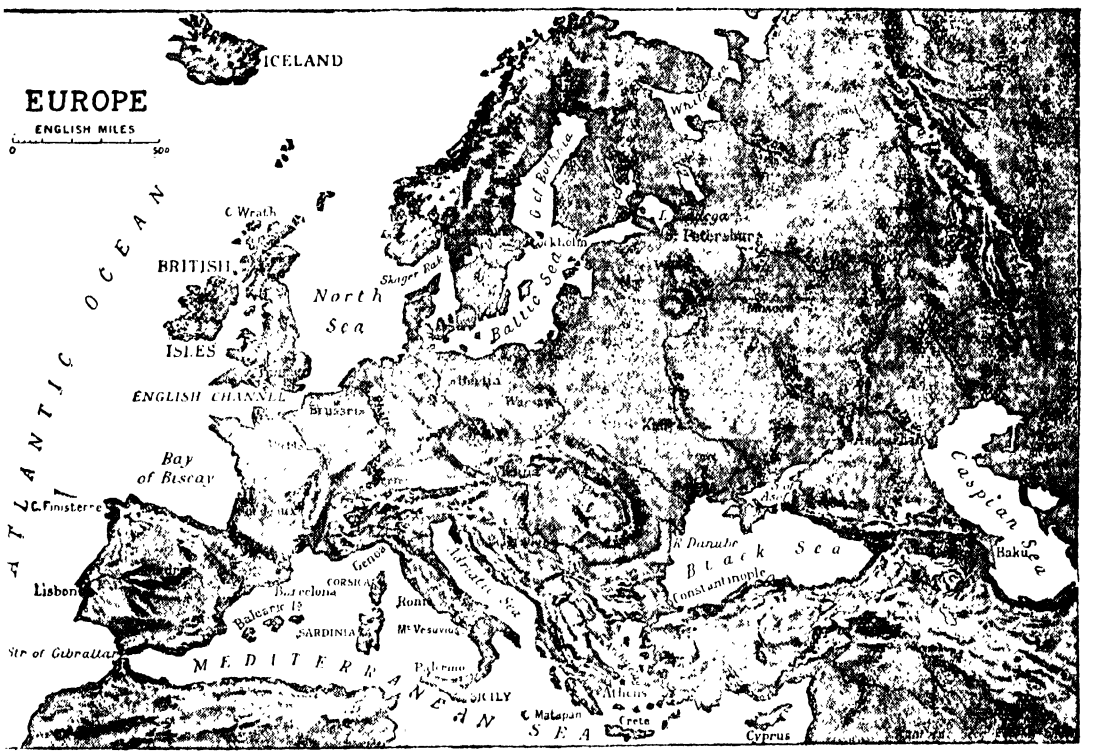
EURE-ET-LOIR (48° 25′ N., 1° 30′ E.), department, N.W. France; area, *c.* 2291 sq. miles; drained by Eure, Loir, and Seine; produces wheat, silk, cider; woollens. Pop. (1911) 272,255.

EUREKA (40° 52′ N., 123° 58′ W.), port, California, U.S.A. Pop. (1910) 11,845.

EUREKA SPRINGS (36° 24′ N., 93° 45′ W.), town and health resort, Arkansas, U.S.A.; has famous medicinal springs. Pop. 3572.

EURIPIDES (480–406 B.C.), Gk. tragic dramatist; b. Salamis; s. of Mnesarchus, a wealthy trader; was intended for an athlete, but adopted painting, subsequently turned to dramatic work, and brought out his first play, the *Peliades*, at the age of twenty-five. E. is said to have written about ninety plays; gained the first prize at the age of thirty-five, and four times subsequently. Unlike his great contemporaries, Æschylus and Sophocles, he appears to have taken no part in public affairs. On the contrary, he is known to have been a student and recluse; his domestic life is said to have been unhappy, and he doubtless suffered from the attacks of his great contemporary, Aristophanes (*q.v.*). In later life he forsook Athens and made his home at the court of Archelaus, king of Macedon, and tradition attributes his death to violence at the instance of jealous enemies. His extant works include: *Alcestis*, *Medea*, *Hippolytus*, *Hecuba*, *Andromache*, *Suppliants*, *Ion*, *Heraclidæ*, *Troades*, *Helena*, *Phœnissæ*, *Orestes*, *Bacchæ*, *Iphigenia in Aulis*, *Hercules Furens*, *Iphigenia in Tauris*, *Electra*, and *The Cyclops*. As has been explained elsewhere (DRAMA), E. ranks below Æschylus and Sophocles, but his plays served as the model for later writers.

Donne, *Euripides*; A. D. Thomson, *Euripides and the Attic Orators*; Decharme, *Euripides and the Spirit of his Dramas* (Eng. trans.); Verrall, *Euripides, the Rationalist*.



EUROPA (classical myth.), dau. of Agenor, king of Phœnicia; carried away to Crete by Zeus, under form of white bull, and became mother of Minos, Sarpedon, and Rhadamanthus.

EUROPE, the most westerly and smallest continent of the Old World, has an area of 3,750,000 sq.

miles; its mainland lies between 36° and 71° 6′ N., and between 66° 20′ E. and 9° 30′ W. The extreme length (from Nordkyn on the N. to the S. of Greece) is about 2400 miles, the extreme width from E. to W. about 3000 miles. Europe is bounded N. by the Arctic Ocean, on the E. (from Asia) by the Ural Mountains, Ural River, and the Caspian Sea, S. and S.E. by the Caucasus, Black Sea, Bosphorus, Sea of Marmora, Dardanelles, and Ægean Sea, S. by the Mediterranean as far as the Strait of Gibraltar, where Europe is 8½ miles distant from N.W. Africa, W. by the Atlantic Ocean.

Physical Features.—The Brit. Isles are separated from the mainland by the Eng. Channel and North Sea, Iceland by the North Sea, Novaya Zemlya, Spitzbergen, etc., by the Arctic Ocean. The coast-line, about 48,000 miles in extent, is very much broken. It throws out the great south-pointing peninsulas of Norway and Sweden goes westward by the Carpathians, the hills of the Crimea, and the Caucasus to the Caspian Sea; there are N. offshoots in the Vosges and mountains of Bohemia and S. Germany, and S. offshoots in the Apennines, the Dinaric Alps, and Pindus range, and the Transylvanian Alps and Balkans.

About two-thirds of the surface is a great plain, of which the greater part is under 600 ft. above sea-level. It begins in S. of England and extends through N. and E. of France (which was united to England in a recent geological period), N.E. to the tundras along the Arctic Ocean, and E. and S.E. to the Caspian and Black Seas; low lands extend along the coast and lower courses of rivers of Portugal, Spain, S. France, Italy, Turkey, and Greece; and along the Danube, encircled by the Alps, Carpathians, and Balkans, are the plains of Hungary and Walachia. A considerable area around the N. end of the Caspian Sea is below

(Scandinavia) on the north, Spain and Portugal (Iberian Peninsula), Italy, and that of Turkey, Greece, and the Crimea on the south, and the north-pointing peninsula of Denmark. All along it are islands, sheltered roadsteads, and situations for harbours. The many land-locked seas and considerable inlets and the navigable rivers bring a large area within convenient reach of the sea. Except in Russia no place is more than 300 miles from the sea, and the great plain of Hungary is the only large region from which access to the sea is difficult. In the N. traffic is interrupted in winter by the freezing of seas and waterways.

The mountainous regions are three: the chain along the west of Scandinavia, the Urals, and a series of chains running E. and W. across the centre and south. This third line begins at the Atlantic in the ridges of the Span. plateau, continues along the Cantabrian Mountains and the Pyrenees, passes through France by the mountains of Auvergne and the Cevennes to the Jura and the Alps, and thence sea-level. There are two great lake areas, one in the low-lying district round the Baltic, the other in the mountainous region of the Alps, both districts which have been subjected to intense ice action.

The Alps and the Valdai Hills are the principal watersheds; from the former flow the Rhine (to the North Sea), Rhône, Po, and Adige (to the Mediterranean), and the Danube (to the Black Sea); from the latter descend the N. Dvina (to the White Sea), the Volga (to the Caspian), the Don and Dneiper (to the Black Sea), the W. Dvina and Niemen (to the Baltic). The countries of Europe are, in order of size, Russia, Austria-Hungary, Germany, France, Spain, Sweden, Norway, Britain, Italy, Rumania, Bulgaria, Greece, Servia, Portugal, Turkey, Switzerland, Denmark, the Netherlands, Belgium, Albania, Montenegro, Luxemburg, Andorra, Lichtenstein, San Marino, and Monaco.

GEOLOGY.—Archæan and Palæozoic rocks appear in the N. (the Outer Hebrides, Norway, N. Russia, etc.),

and in the great mountain ranges above mentioned. S. of the northern band Cambrian, Silurian, Devonian, and Carboniferous strata were deposited, stretching from Cumberland and Wales eastward. Then followed the Permian, Palæozoic, and Mesozoic periods, during which the sea covered much of S. and central Europe, the Cretaceous period, in which there was a great upheaval, continued in the Eocene, Miocene, and Pliocene periods, the last-named being the age of volcanoes. The Glacial period practically completed the conformation of the continent. The precious metals are not found in abundance, but there are rich veins of coal (chiefly in Britain, Belgium, France, Germany), iron (the same, Sweden, and Spain), copper (Sweden and Spain), lead (Spain), zinc (Germany), mercury (Spain and Austria), sulphur (Sicily), and salt (Austria).

Owing to the position of the continent in the N. temperature zone, the influence of the Gulf Stream along the N.W., the large amount of inland water, and the slope and exposure of the great plain, Europe has more temperate yet more varied CLIMATE than any other continent. The extreme N. is arctic, the sheltered Mediterranean district sub-tropical. The S.W. winds, blowing over the warm Gulf Stream, bring abundant moisture and heat which are arrested by no western mountains; nowhere is agriculture impossible owing to drought except in S.E. of Russia and in interior of Spain. As a rule, rainfall decreases and temperature increases from W. to E.

FLORA and FAUNA vary in accordance with climate; *i.e.* from sub-arctic to sub-tropical. Indigenous animals include bear, wolf, elk, chamois, many species of deer, foxes, hares, and rabbits. A few bison are left in Central Europe. The North Sea provides a valuable fishing-ground for herring, cod, mackerel, etc., while tunny-fishing is an important Mediterranean industry. Of native trees, fir, oak, apple, pear, and cherry are the most common; while many varieties, *e.g.* myrtle and fig, imported centuries ago from Asia; are found to thrive excellently.

Every cultivated product can be grown farther N. than in other continents. The central regions produce timber, fibres, cereals, and hardier fruits, the S. sub-tropical fruits, the N. the hardier cereals; abundance of pasture and excellent fisheries.

Races.—The languages spoken may be classified as Indo-European, Semitic, and Slav, the races roughly described as Caucasian. The question of races is by no means settled, but ethnologists, now entirely disregarding the test of language, tend to divide European races into the three chief classes of 'Teutonic' (tall, dolichocephalic, with blue eyes and fair hair), 'Mediterranean' (of middle height, dolichocephalic, with dark hair and eyes), and 'Alpine' (stocky and brachiocephalic, with medium colouring), possibly all modifications of one original European race. The identity of the Iberians, who preceded the Celts in Britain and are to be traced in Spain and elsewhere, is still disputed, while the Celts, it is thought, were midway between the Teutonic and Mediterranean types. The ethnological problems of the Gk. and Ital. peninsulas are still unsolved.

The total population is estimated (1913) at 450,000,000.

HISTORY.

The earliest civilisation of E. was in the Troad, the east coast of Greece (*q.v.*), and the islands of the Ægean Sea. This Pelasgian, Mycenæan, or Minoan period lasted from *c.* 2000–1000 B.C.; the Minoan towns are supposed to have acquired their arts from Egypt through Phœnician traders. The Hellenic period followed, and by the VII. cent. B.C. the highly organised and cultivated city-states of Greece were flourishing, while the rest of Europe was occupied largely by Celtic and Teutonic races, who for many cent's preserved their tribal organisation. One aspect of the history of E. is the fall of the city-state and the tribe before the Empire, and the subsequent overthrow of the Empire by the modern nation. There were signs of unity in Greece in the alternate Athenian and Spartan supremacy, but never any true pan-Hellenic feeling; it was no great disgrace to Medize, and the alliance against Philip of Macedon was too late to save Greece from the decisive defeat at Chæronea (338 B.C.).

The vast Empire of Alexander the Great, the next salient feature of history, broke up after his death in 323 B.C., and was succeeded by the world-power of the **Romans**. The Rom. Empire existed in some form until 1806. Rome ceased to be its centre in 330 A.D. when Constantine the Great established his capital at Byzantium, henceforth Constantinople; it was divided into East (Byzantine) and West in 395, with Rome as the capital of the Western division; it was restored to nominal unity by the deposition of Augustulus, last Rom. emperor of the West, by the Goths in 476, but this event really meant the final division of East and West. The disputes about images in the churches caused the pope and Romans to repudiate the rule of the Byzantine emperor at the close of the VIII. cent., and in 800 Charlemagne, king of the Franks, was crowned emperor by the pope. See ROME; BYZANTINE EMPIRE.

The Empire was attached to Germany from 962 (when Otto I. was crowned, receiving the title of Holy Rom. emperor of the Ger. people) to 1806, although the dignity was elective, and, as in the great contest of 1519, the sovereigns of other lands sometimes became candidates for election. The Byzantine Empire kept alive Gk. civilisation, and protected Europe from the hordes of Asia until 1453, when it fell before the Turks. The Byzantine Empire, however, was a mediæval and Oriental rather than a Rom. State, and the fall of the Western Empire in 476 is always taken to be the end of the ancient and beginning of the modern history of Europe.

Christianity became the religion of the Rom. Empire in 312; it was preached to the Goths by Ulfilas (*q.v.*) in 376; the Irish and Franks were converted in the V. cent., the English, VII. cent., the rest of N. Europe, VIII.–XIII. cent., and Hungary, X. cent. Christianity and the tradition of Empire gave rise to some of the chief characteristics of mediæval Europe; the conception of a theocratic world-power, of which the spiritual side was the papacy, the temporal aspect the emperor, has been ascribed to the Middle Ages. The struggle of papacy and Empire for supremacy in this theocratic government was the chief political fact. The crusades, Gothic arch., and the production of epic and romantic lit. are other salient features. See EMPIRE, HOLY ROMAN.

The XV. cent. saw **The Renaissance**, which largely modified Christian by classical civilisation, and in Spain, France, and England the establishment of strong modern monarchies. The XVI. cent. swept away the notion of the world-power of papacy and Empire, the Reformation being largely an index of the movement to establish independent nations with national churches. The result of the wars of religion, which raged until the Treaty of Westphalia in 1648, was that the principle was established *Cujus regio ejus religio*.

The XVII. cent. was marked by the decline of **Spain**, the leader of Europe since the union of its provinces at the close of the XV. cent. by Ferdinand and Isabella. Their grandson, Charles V., ruled over Spain, the Netherlands, and the Empire, besides monopolising the trade with the New World discovered in 1498 through Span. encouragement. Spain was also the chief Catholic power, and so religious, national, and commercial rivalry united Europe against her.

After the abdication of Charles V. (1555) the Empire was settled on his younger son, and so separated from Spain, but for a cent. the Span. and Austrian Hapsburgs continued to trouble the Balance of Power (*q.v.*), a doctrine which now succeeded the mediæval ideal of a world-empire. Holland successfully secured its independence of Spain, after a fight which exhausted the latter, at the close of the XVI. cent.; Elizabethan sailors inflicted great damage on Span. commerce and

destroyed her fleets, and the last great war of religion, the Thirty Years War (1618–48), left the petty Ger. States practically independent of the emperor. Finally France, the natural enemy of Spain, as situated between Spain and the Span. Netherlands, obtained the aid of Cromwell's Ironsides, brought Spain, which had not accepted the Treaty of Westphalia, to sue for peace, and by the Treaty of the Pyrenees, 1659, tied the hands of Austria and Spain.

The following period, 'the age of Louis XIV.', is that of the ascendancy of **France**. This was one of the most glorious periods of Fr. history, but France was fatally weakened by the wars in which Condé, Turenne, Villars, and others conquered Span. and Ger. territory, and at the close of Louis' reign the successes of Marlborough in the War of the Span. Succession (1702–13) ended with the Treaty of Utrecht, whereby Britain obtained important concessions from both Spain and France, and began to come forward as a great power. At the same time Russia under Peter the Great (1682–1725) had become the chief northern power. The War of the Austrian Succession (1740–48) brought important accessions to Brit. territory overseas at the expense of France. By the accession of Louis XIV.'s grandson, Philip of Anjou, to the throne of Spain in 1700, France and Spain had been drawn together, and Bourbon 'family compacts' were a feature of European politics of this time. The revolt of Britain's Amer. colonies (1775) was assisted by both France and Spain, and Brit. ill-feeling against France lasted after the Treaty of Versailles (1783), by which the independence of U.S.A. was recognised. Britain, Holland, and the king of Prussia made a Triple Alliance in 1788 to guarantee Holland against Fr. aggression.

The **Fr. Revolution** in 1789 dwarfed every other European event; the first modern democracy was temporarily established; **Napoleon** abolished the shadowy Holy Rom. Empire (the emperor retaining that title for his Austrian dominions), became dictator on the Continent, and was a perpetual menace to Britain. At last Britain, which had restrained Napoleon by sea and in Spain, succeeded in forming the great European coalition, which brought his empire to an end in 1814. By the treaties of 1815 the Bourbons were reinstated, Lombardy and Venice were made into an Austrian kingdom, and the Austrian Netherlands were annexed to Holland. In nearly every country of Europe monarchs now carried out repressive measures against the beginnings of democratic agitation, Russia, Austria, and Prussia forming a Holy Alliance for the purpose in 1815. Risings in Spain and Portugal started in 1820, and the Carbonari movement commenced in Italy. The Holy Alliance successfully put down the Ital. rebels, but, with the defection of Russia to the Gk. side and aid of Britain, the Gk. revolt against the Turks resulted in the establishment of Gk. independence (1827). This war, in which Britain was compelled to play into the hands of **Russia**, was the beginning of the XIX.-cent. crusade of Russia against Turkey. The Crimean War (1854–56) showed the dread of the powers of Russian extension in Europe. The July Revolution of 1830 in France established the limited Orleanist monarchy overthrown in the year of revolutions, 1848. Italy, Hungary, and Vienna itself rose against Austria, Italy becoming an independent kingdom (1861), and Hungary winning self-government under the dual system (1867) of the present Austria-Hungary.

Britain this year had to deal with its chartist movements. The pre-eminence of Prussia in **Germany** was shortly afterwards recognised. Prussia had been slowly growing into a strong state since the early XVII. cent., and had defeated Austria in her War of Succession. She now joined in the Liberal outcry against Austria; a *casus belli* was found in the Schleswig-Holstein question (*q.v.*), and in 1866 Prussia inflicted on **Austria** the crushing defeat of *Königgrätz*. From this time **Austria** becomes more and more an Eastern power. The final step in Prussia's rise to the position of a great power was in her defeat of France and capture of Paris in 1870–71. France had established the Second Empire under Napoleon III. in 1852, but with the defeat of *Sedan* (1870), where Napoleon himself was captured, the Empire fell, and the Third Republic was established. In 1871 the king of Prussia was raised to the position of German emperor. An important event of 1870 was the conquest of Rome from the pope by the nationalists. Germany, through the skill of Bismarck, managed to conciliate her fallen foe Austria, and to allay the jealousy of Russia, and in 1872 these three powers made the famous *Dreikaiserbund*; but Russia soon became restless under Germany's control, and began to draw nearer to France. Austria and Russia joined in aiding the Christians of the Balkan States against Turkey, 1877–78, which led (despite the first remonstrances of Britain) to the further dismemberment of Turkey; Montenegro, Rumania, and Servia becoming independent, and Greece receiving Thessaly. Austria-Hungary was allowed to occupy Bosnia and Herzegovina in 1881, and in defiance of the protests of Britain, France, and Russia annexed the same in 1908. Turkey was also forced in 1878 to promise better treatment of Christians in Armenia and other reforms—never carried out.

Opposition to Fr. and Russ. interests in Africa and the Mediterranean led Italy to join her old mistress Austria in the Triple Alliance with Germany of 1882; this has endured for three decades. Russia was led, by bribe of support against Turkey, to accept Bismarck's proposition of a new alliance in 1884, and Russia, Germany, and Austria made a second league. Neither of the allies, however, aided Russia during the Bulgarian revolution of 1885–86, and the result was a long interval of friendship between France (which had never unbent towards Germany) and Russia.

Britain, although interfering in the East to protect the Turk, or restrain his atrocities, maintained on the whole a policy of 'splendid isolation' in the second half of the XIX. cent., but in 1904 made with France the *entente cordiale*, which covered France's annexation of Morocco, and, by inclusion of France's ally, Russia, led to the *Triple Entente* which now counterbalances the *Triple Alliance* (renewed 1913) in Europe. In the XX. cent. among the most momentous events in European history have been the defeat of Russia by an Asiatic power, Japan (1904–5), the Alliance of the Balkan States to drive the Turk out of Europe (see TURCO-BALKAN WAR, 1912–13), and Germany's rise as a Great Naval Power, challenging Brit. supremacy of the seas (see NAVIES).

Cambridge Modern History (1903, etc.); Lavisse et Rambaud, *Histoire Générale*; *Periods of European History* (8 vols., 1893); Hassall, *Handbook of European History* (1902); Freeman, *Historical Geography of Europe*; Stanford's Compendium, *Europe*; Latham, *Nationalities of E.*; Geikie, *Prehistoric E.* (1880).

EURYDICE (classical myth.), dau. of Nereus, and wife of Orpheus (*q.v.*).

EURYMEDON (d. 414 B.C.), celebrated Athenian general who performed distinguished service in Peloponnesian War; killed off Syracuse.

EURYPTERINA, see ARACHNIDA.

EUSDEN, LAURENCE (1688–1730), Eng. poet and clergyman; made poet laureate (1718); referred to in Pope's *Dunciad*.

EUSEBIUS (Gk. *eusebes*=pious), in the first four cent's A.D. a common name of churchmen, many of whom have been canonised.

EUSEBIUS OF CÆSAREA (264–340), ecclesiastical historian; bp. of Cæsarea, and one of the greatest Christian scholars and most prolific writers of his age. His *Ecclesiastical History*, which traces the history of the Christian Church from the beginning to the triumph of Constantine, was written *c.* 326. His *Life of Constantine* carries on the story several years later. Amongst his other surviving works are his *Preparation of the Gospel* and *Demonstration of the Gospel*, defences against paganism and Judaism. His *Ecclesiastical*

History incorporates many valuable fragments from earlier writers now lost, and his *Onomasticon* deals with the topography of Palestine. Some works survive only in fragments, or in Latin, Syriac, and Armenian versions. E.'s theology had Arian tendencies, in reaction, perhaps, from the *Sabellianism* of his day.

Eng. trans. in *Nicene and Post-Nicene Fathers.*

EUSEBIUS OF EMESA, Gk. theologian, pupil of Eusebius of Cæsarea; very learned and a student of astronomy.

EUSEBIUS OF LAODICEA (fl. 250), b. Alexandria; bp. of Laodicea; noted for orthodoxy and saintliness.

EUSEBIUS OF NICOMEDIA (d. 341), Gk. bp. and theologian, powerful under Constantine and Constantius; of Arian sympathies; eventually signed Creed of Nicæa.

EUSEBIUS OF ROME, pope, 309, but deposed.

EUSEBIUS OF SAMOSATA (d. 381), strongly anti-Arian bp.; martyred.

EUSKIRCHEN (50° 39′ N., 6° 48′ E.), town, Rhine prov., Germany. Pop. (1910) 12,420.

EUSPONGIA, see under SPONGES.

EUSTACHIAN TUBE, see EAR.

EUSTATHIUS, Gk. ecclesiastic, abp. of Thessalonica, 1175; student of Homer and Pindar; denounced abuses of his time; author of various works.

EUSTATHIUS (XII. cent. A.D.), Gk. romance writer.

EUTAW SPRINGS (33° 20′ N., 80° 18′ W.), village, S. Carolina, U.S.A.; here Americans defeated British, 1781.

EUTERPE, family of Central and S. American palms; includes cabbage-palm, *E. oleracea.*

EUTHANASIA, from a Gk. word signifying easy death, is a term used for shortening life in hopeless cases, or dulling the sensibilities of the dying by means of drugs. The first is absolutely forbidden.

EUTHYDEMUS (fl. *c.* 230 B.C.), king of Bactria; famed for his three years' successful resistance of the attacks of Antiochus the Great.

EUTIN (54° 8′ N., 10° 36′ E.), town, Schleswig-Holstein, Germany. Pop. 5399.

EUTROPIUS (fl. *c.* 350–78), Rom. historian; his *Breviarium Historicæ Romanæ* covers history of city from its foundation to time of Emperor Valens. The work is noted for simplicity and purity of style.

EUTYCHES (*c.* 380–456), presbyter and archimandrite at Constantinople; opposed Nestorius, but himself excommunicated for saying Christ was of two natures before the incarnation and one afterwards.

EUTYCHIDES (IV. cent. B.C.), Gk. sculptor; famous for statue of Fortune.

EUXINE, see BLACK SEA.

EUYUK, EYUK (40° 13′ N., 34° 40′ E.), village, Asia Minor; has interesting ruins of structure belonging to period earlier than that of Gk. civilisation.

EVAGORUS (fl. *c.* 410–374 B.C.), king of Salamis (Cyprus); was associated with Conon, the Athenian, in his defeat of the Spartans at Cnidus (394).

EVAGRIUS, surnamed 'Scholasticus' (*c.* 536–600), Church historian; b. in Syria; his *Ecclesiastical History* covers the years 431–593, and continues the work of Eusebius and others; Eng. trans. in Bohn's *Ecclesiastical Library.*

EVANDER (classical myth.), s. of Hermes and an Arcadian nymph; is said to have led an Arcadian colony into Italy, some sixty years before Trojan War. Upon the arrival of Æneas at Latium, E. became his ally against the Latins.

EVANGELICAL ALLIANCE (founded 1846), an association of Brit. denominations, to further religious liberty and evangelical principles; has annual conferences and international meetings.

EVANGELICAL ASSOCIATION, Amer. denomination founded in 1800 by Jacob Albright.

EVANGELICAL CHURCH CONFERENCE, an assembly of representatives of German Prot. churches, begun in 1848.

EVANGELICAL UNION, religious sect which separated from the Secession Church of Scotland in 1843; amalgamated with Congregational Union, 1896.

EVANS, SIR ARTHUR JOHN (1851–), Brit. archæologist; important discoveries in Crete; excavated palace at Cnossos.

EVANS, AUGUSTA JANE (Mrs. Wilson) (1835–1909), Amer. novelist; author of *St. Elmo* (1866).

EVANS, SIR GEORGE DE LACY (1787–1870), Brit. soldier; served in Peninsular, Carlist, and Crimean Wars; present at Waterloo, Alma, Inkerman.

EVANS, SIR JOHN (1823–1908), Eng. archæologist and geologist; s. of headmaster of Market Bosworth Grammar School; pres., Soc. of Antiquaries, 1885–92; pres., Geological Soc., 1874–76; treasurer of Royal Soc.; K.C.B., 1892.

EVANS, OLIVER (1755–1819), Amer. engineer who made valuable experiments in steam locomotion.

EVANS, ROBLEY DUNGLISON (1846–1912), Amer. naval commander-in-chief, known as 'Fighting Bob E.'

EVANSON, EDWARD (1731–1805), Eng. cleric; rector of Tewkesbury, 1769; afterwards became Unitarian minister; wrote on theology and Bible criticism.

EVANSTON (42° 5′ N., 87° 42′ W.), city, Illinois, U.S.A., on Lake Michigan; seat of North-Western (Methodist) Univ. Pop. (1910) 24,978.

EVANSVILLE (38° N., 87° 30′ W.), city, Indiana, U.S.A., on Ohio; lumber; flour and cotton mills. Pop. (1910) 69,647.

EVARTS, WILLIAM MAXWELL (1818–1901), Amer. politician and lawyer.

EVE, in Bible, wife of first man and mother of human race; name in Hebrew is *khavvah,* interpreted by *Genesis* as 'life.' Probably original writer of *Genesis* (q.v.) idealised some popular tradition in such manner as to embody certain truths concerning human nature suggested by his own experience. Thus Eve's formation from Adam's rib expresses dependence of weak on strong, while serpent's choice of her indicates her more sensuous nature. Story has been made starting-point of many speculations; Augustine originated discussion as to whether Eve's soul was immediately breathed into her by God, or was taken from Adam; and Milton, in *Paradise Lost,* develops theory that Adam's fall was due to his love for Eve, owing to which he preferred to share her fate rather than be separated from her.

EVELETH (47° 27′ N., 92° 33′ W.), city, Minnesota, U.S.A.; iron-ore mines. Pop. (1910) 7036.

EVELYN, JOHN (1620–1706), Eng. diarist and author; Surrey gentleman, of Royalist sympathies. His famous *Diary,* covering the period 1640–1706, remained in MS. until 1818. He was also the author of *Sylvia,* a work on gardening. E. was one of the founders, and some time sec. of the Royal Soc., and was noted for the purity of his life in a dissolute age.

EVERDINGEN, ALLART VAN (*c.* 1621–75), Dutch landscape artist and engraver.

EVEREST, MOUNT (27° 59′ N., 86° 58′ E.), peak of Himalayas, in Nepal, India; highest mountain in world (29,002 ft.); named after SIR GEORGE EVEREST (1790–1866), Brit. soldier and engineer who conducted trigonometrical survey of Himalayas (*q.v.*).

EVERETT.—(1) (42° 22′ N., 71° 3′ W.) city, Massachusetts, U.S.A.; steel and iron manufactures. Pop. (1910) 33,484. (2) (47° 58′ N., 122° 12′ W.) city, Washington, U.S.A.; sawmills; iron smelters. Pop. (1910) 24,814.

EVERETT, ALEXANDER HILL (1790–1847), Amer. diplomatist and author.

EVERETT, CHARLES CARROLL (1829–1900), Amer. Unitarian minister; prof. at Harvard University.

EVERETT, EDWARD (1794–1865), Amer. politician and orator; Gk. prof. at Harvard, 1815; sat in Congress, 1825–35; gov. of Massachusetts, 1835–39; ambassador to Britain, 1841; pres. of Harvard, 1846; Sec. of State, 1852; Senator, 1853–54; supported Union by patriotic speeches during Civil War.

EVERETT, JOSEPH DAVID (1831–1904), Eng. scientist, author of handbooks on physics.

EVERGLADES (26° 20′ N., 80° 30′ W.), a large shallow lake, occupying part of peninsula of Florida, U.S.A.; encloses thousands of islands, covered with dense thickets; inhabited in part by Seminole Indians.

EVERLASTINGS, or **IMMORTELLES,** popular name of plants, belonging generally to the *Compositæ*, whose flowers retain their form and colour when dried. The *Helichrysum grandiflorum*, which grows wild at the Cape, and the *Ammobium alatum*, found in New South Wales, are well-known examples. Much used for 'memorial' wreaths, especially in France.

EVERSLEY, CHARLES SHAW LEFEVRE, VISCOUNT (1794–1888), Eng. barrister and politician; M.P. from 1830; Speaker of House of Commons, 1839–57; Viscount, 1857.

EVESHAM (52° 5′ N., 1° 57′ W.), market town, on Avon, Worcestershire, England; has remains of Benedictine abbey, founded VIII. cent.; town hall and grammar school are of XVI. cent.; scene of defeat of Simon de Montfort by forces of Prince Edward, Aug. 1265; market-gardening. Pop. (1911) 8341.

EVIDENCE, that which makes manifest; any form of proof. In law, e. is usually either *direct* or *circumstantial*.

(1) In a court of law the 'best' e. only is admissible, and therefore a copy of a letter will not be admitted in e., if the original can be obtained. Similarly a witness must tell what he himself knows, and not what some one else has told him, except in certain cases when *hearsay* e. is accepted. As a general rule, only such matters will be admitted in e. as are relevant to the issue in dispute, *i.e.* which tend to prove or disprove the main fact in dispute (which is called the *fact in issue*). Anything that a party to a lawsuit or a prosecution said or wrote is admissible in e., if it is *against* the interests of that party, and if it throws light on the matter in dispute, but it will not usually be admitted if it is in his *favour*. Again, anything which a party has done in the matter which is in dispute, or anything which explains the matter in dispute, will be admitted in e. both *for* and *against* that party. Moreover, when it is important to know the state of a man's mind when he did an act, anything he said or did while accomplishing the act, or anything which he did or said in other transactions, is admissible in e. This is often done when it is sought to prove that a man was insane when he committed a murder.

(2) As opposed to direct e., *circumstantial* e. merely proves surrounding circumstances from which the fact in issue may be inferred. In murder trials this is frequently the only e. available.

(3) Sometimes first-hand e. is not forthcoming, *e.g.* the statements made by the victim of a murder. In that case the dying declaration of the victim will be allowed in e. If the original of a document is lost or destroyed, e. of its contents may be given, as, for example, a *copy* of the document can be put in, or a person may state from memory what the contents of the document were.

(4) Persons guilty of crime may make *confessions*, and such confessions are admissible as e. against them, but not against their accomplices. But such confessions will not be admissible unless they are voluntary, and they will not be deemed voluntary if they are made in consequence of any threat or inducement held out by a person in authority. The prosecutor is deemed a person in authority for such a purpose; so, too, are judges, magistrates, constables, and other officers of justice. It lies with the prosecution to show that a confession is voluntary; but a confession does not become involuntary by the fact that it was made whilst the accused was drunk, though this fact would diminish its value; nor is it involuntary when made under promise of secrecy.

(5) Not every kind of person can be called as a witness, and those called on to give e. cannot be compelled to answer every question put to them. No person can be compelled to give an answer to a question which would render him liable to criminal proceedings. The law will not allow the powers of courts of justice to be employed as a means of extorting confessions of crime. The law, too, regards communications which pass between married couples as privileged. No wife or husband can be compelled to disclose any such communication. Of similar nature are the communications which pass between a person and his legal advisers. No barrister or solicitor can, without his client's consent, be called upon to disclose any communication that his client may have made to him in his professional capacity; but such communication must not have been made in the furtherance of some criminal object, or the privilege lapses.

(6) Medical men can be compelled to reveal confidential communications. With regard to priests, authorities are somewhat conflicting. The priest may disclose such a communication, but judges would not countenance compulsion.

Pitt Taylor, *Law of Evidence* (9th edit., 1895).

Evidence, King's, testimony of accomplice to a crime, purchased by pardon; accomplice is usually acquitted before evidence is taken; the corresponding procedure in Scots Law is taking evidence from a *socius criminis*.

EVIL EYE is the name given to the belief that the human eye is capable of malignant influence. Such belief was common amongst ancient nations, and is still very widespread, not only amongst savage races, but many civilised peoples. Envy is supposed to be at the root of the mischief, and extravagant praise was and is regarded as an unmistakable sign of its presence.

Elworthy, *The Evil Eye* (1895).

EVOLUTION.—So familiar are we with the word 'evolution' that we ignore its assumption that there has been a true *evolutio* or unfolding of pre-existing characters in the descent of living things. But the general idea of the theory of evolution, or, more accurately, the THEORY OF DESCENT, is admitted by all: that the earth is peopled with animals and plants which have not indeed sprung up into sudden disconnected existence, but are connected with each other in a long line, or lines, of descent; that no matter how different they appear, all living things are blood relations, descended from simpler and still simpler ancestors. This great theory, although it received new life from the researches of Darwin and Wallace and Lamarck, is no new doctrine, for almost since scientific understanding began a hazy notion of connection between living things has prevailed. Gradually the idea gained in definiteness: in the V. cent. B.C., Empedocles, 'the father of the evolution idea,' held that the four elements played upon by love and hate yielded plants and animals, of which some were successful and survived; in the IV. cent. B.C., Aristotle, with wonderful insight, considered that nature was a unified development, living things forming a continuous line of descent which in the beginning had sprung from inanimate matter; and so with few additions of importance the subject stood, the fact of continuous descent recognised, its means unknown—until the present-day theories loomed on the horizon. Buffon and Erasmus Darwin are but two of the many XVIII.-cent. naturalists who, seeking in the action of environment, the struggle for existence, natural selection, and isolation, vague keys to the causes of variation, foreshadowed the truths which Lamarck, Darwin, and their successors were to place on a firm basis.

The theory that life is a long heritage receives support mainly from two sources: the direct evidence of Palæontology (*q.v.*), which has actually traced in a few cases the steps and stages by which one kind of organism has gradually developed into a rather different kind of organism; and the indirect evidence of the geographical distribution of animals, that creatures of a given kind have often an area of greatest abundance,—a geographical headquarters,—and that, as one

recedes from the headquarters, animals are found still showing the headquarters characters, but less and less predominantly, until these characters are all but swamped in newer developments. Such a series can be satisfactorily explained only on the assumption that all the creatures concerned had a common origination, probably located in the headquarters area, from which they have gradually diverged. The theory of common ancestry gains further strength from the fact that it makes clear many otherwise unaccountable similarities in the embryological developments of different creatures.

Evolution depends on two working causes: the organism itself, and its environment. The first provides the constant variations which are apparent even in the children of the same parents; the second directs, or prunes, or selects these variations. Various theories lay stress upon different aspects of the development of variations and of their interactions with environment. Thus Darwinism holds that exceedingly minute variations occur in all directions round a given mean, and that in the struggle for food and mates those animals with variations which hamper their efficiency are driven out of existence—in other words, that a natural selection is at work which prefers the most efficient variants, that the fittest survive. Such exceeding minute and gradual changes in character as Darwin postulated are known as 'continuous variations'; but there also occur 'discontinuous variations,' 'mutations,' or 'sports,' in which a new character suddenly leaps into existence, to persist or be eliminated as selection may decide. But 'variations' arise from other sources than the inherent tendency of the organism to vary, and on those in particular Lamarckism lays stress. The surroundings of an organism may change and induce some compensating change in the animal or plant; or an animal may find a habit, say that of burrowing, useful in some way, and the exercising of the habit may encourage a particular development of (say) short strong limbs, and hard scoop-shaped claws suitable for burrowing. Certainly the unwonted use of an organ leads to its better development (functional modification), just as disuse leads to degeneration. As certainly the individual is thereby benefited, and if such 'acquired characters' are transmissible (a doubtful point) so also is its progeny likely to persist, thus strengthened for the battle with circumstances. (See HEREDITY, MENDELISM, MIMICRY, PROTECTIVE COLORATION.)

EVORA (38° 34′ N., 7° 46′ W.), city, the ancient *Ebora*, Portugal; has cathedral, abp.'s see; seat of univ., 1550–1769; cotton cloth, wine. Pop. 16,152.

ÉVREUX (49° N., 1° 9′ E.), town, Eure, France, with XI.-cent. cathedral; textiles. Pop. 18,300.

EWALD, GEORG HEINRICH AUGUST (1803–75), Ger. theologian and Oriental scholar; b. Göttingen; first book, on *Genesis*, published 1823; prof. of Philology, Göttingen, 1827–37; prof. of Philology, Tübingen, 1838, of Theology, 1841; recalled to Göttingen, 1848. His *History of People of Israel*, finished in 1859, is work of great erudition.

EWALD, JOHANNES (1743–81), Dan. lyrical poet; most famous work the lyrical drama, *The Fishers*, which contains the Dan. national song; and other notable writings are his dramatic poem, *Adam and Eve*, and a tragedy, *Rolf Krage*.

EWART, JAMES COSSAR (1851–), Scot. zoologist noted for treatises on echinoderms and hybrids.

EWART, WILLIAM (1798–1869), Eng. Liberal politician; advocate of criminal law reform, and promoter of free libraries and the metric system.

EWE, negro tribe of Slave Coast, W. Africa.

EWELL, RICHARD STODDERT (1817–72), Amer. Confederate general.

EWING, ALEXANDER (1814–73), Scot. Episcopalian bp. of Argyll and the Isles (1873).

EWING, JULIANA HORATIA ORR (1841–85), Eng. writer of numerous popular children's stories.

EWING, THOMAS (1789–1871), Amer. lawyer and politician; Sec. of Treasury, 1841; of Interior, 1850; delegate, Peace Conference, 1861.

EXAMINATIONS, educational tests applied to pupils in schools, undergraduates in univ's, and competitors for posts, prizes, and distinctions. Organised competition for posts is old as civilisation (the Chin. public service was recruited by e. over 3000 years ago), and the degree system, which is coeval with univ's, was based on e's. Mediæval e's, partly oral, laid chief importance on theses prepared and publicly delivered by examinees, and neglected mnemonic tests, which are chief features of modern e's. The modern system of e. papers is not found until the early XVIII. cent. The thesis gradually became disused except for highest degree of a faculty, the Doctorate. A very high standard was prescribed for candidates for Oxford M.A. and B.A. degrees during reign of Charles I.; the e. for M.A. (which cannot be conferred till lapse of three years after taking of B.A.) was replaced by simple payment of fee in 1807, and the same thing has happened at Cambridge. In the new univ's, Manchester, etc., the M.A. degree is conferred on Honours graduates of three years' standing, and on pass students who undergo further 'M.A.' e's. In Scottish univ's the B.A. (though not the B.Sc.) has been dropped, and the candidate's first degree is M.A. In Amer. univ's A.B. S.B., and Ph.B., are the ordinary degrees, and the highest honour Ph.D. (requiring 2–4 years study from graduation). The system of allowing students to specialise in one subject and receive an 'honours' degree after e. in that alone was initiated (1830) at Oxford, where the preliminary e. is called Responsions ('Smalls'), the intermediate, Moderations ('Greats'). Cambridge has only two e's, the Previous ('Little Go') and Tripos. The older univ's were primarily teaching bodies, but London Univ. established in 1858 an independent examining body and confers its degrees on *external* examinees, as also does Dublin. The *Examining Univ.*, which does no teaching itself, spread to India and the Brit. Colonies (see UNIVERSITIES). Honorary degrees are conferred by all univ's, but Dublin also confers its degrees, after payment of fees, on women who have qualified for Oxford or Cambridge degrees. London Univ. admitted women to its e's, 1878, Cambridge, 1881, Oxford, 1884; but last two do not grant them degrees.

The Fr. *baccalauréat* is equivalent to Eng. matriculation, Scot. Univ. *preliminary* e.; or Ger. school-leaving (*Abiturienten*) e.; the Fr. academic degree is that of *licencié* in any of the faculties, the German that of Doctor. The Fr. *Agrégation* is a State competitive e. for posts in secondary schools. E's for medical degrees are State e's in Germany. Public e's, for which pupils in Eng. secondary schools often train, are held locally by a board of Oxford and Cambridge examiners and by the College of Preceptors. In Scotland school *leaving-certificate* e's take place annually under the Scotch Education Department. Grammar schools, high schools, and other secondary schools (the equivalents of the Ger. *Gymnasia* and Fr. *lycées*) may under certain conditions obtain Government inspection, which is given yearly to all State schools, primary or secondary. Owing to shortage of officers it has been proposed lately to abolish Army Entrance E's. School inspection is a branch of the Civil Service, the lower branches of which were thrown open to public competition on basis of e. in 1870. In U.S.A. entrance e's are dispensed with in many universities (not Harvard, Yale, Princeton, and Columbia) when pupil of certain recognised schools receives approval of his principal. The e. system has been much criticised and its imperfections allowed even by its supporters, and the State is the only employer of labour to grant offices as e. prizes; it eliminates, however, the element of jobbery.

EXARCH.—(1) Title of viceroy of Byzantine emperor, *e.g.* of Ravenna. (2) Head of an ecclesiastical province or chief see; in Gk. Church the deputy of a legate, generally a bp. (3) Head of Bulgarian Church.

EXCELLENCY, title held by Brit. colonial ad-

ministrators, ambassadors, viceroy of India, lord-lieut. of Ireland; by pres. of France; and by gov's of N. Amer. States.

EXCHANGE, to give one thing for another; to barter; the public building where business transactions are made; to give one person for another, as the e. of prisoners of war; the e. of regiments between officers, etc.

The term is applied in particular to the London **Royal Exchange**, which is the central bourse of metropolitan commerce. The first building, erected by Sir Thomas Gresham, was opened in 1571 by Queen Elizabeth. It perished in the Great Fire (1666), and its successor met with the same fate in 1838. The present building was opened by Queen Victoria in 1844. The principal 'market' days are Tuesdays and Fridays, and the busiest time from 3 p.m. to 4 p.m. Besides the Royal Exchange, there are numerous other trade e's, such as the Corn, Coal, and Stock Exchanges, and similar buildings for like purposes are to be found in all the larger provincial cities and towns.

The **Stock Exchange** is the market for stocks and shares in public companies, such as railway, mining, and the great industrial undertakings, debentures, consols, and all the securities for the repayment of loans issued by governments, municipal corporations, and trading companies. The dealers in these securities confine their operations to a small section of these securities, and do not deal in any others. Each section constitutes a 'market,' and it is to the market for any particular class of securities that a broker resorts on behalf of a client who either wishes to purchase or sell stocks or shares. Amongst the principal markets on the London Exchange may be mentioned the Consol Market, for the sale of government securities, the Amer. Railroad Market, the Foreign Market, which concerns itself with foreign securities, the 'Kaffir Circus,' for the transaction of business relating to S. African mines, the 'Jungle,' the market for W. African securities, and the Industrial Market for the sale of stocks and shares in industrial undertakings.

EXCHEQUER, department of Government which deals with public moneys. Name (Low Latin, *scaccarium*, Fr. *échiquier*) is derived from checked cloth on which money was counted. In early times Eng. E. department was called 'the tallies' from old method of keeping accounts by means of notched sticks. Chief authority for early procedure is Richard Fitz Neal, whose *Dialogus de Scaccario* was written about 1180.

Court of Exchequer, originally a revenue court, later became ordinary court of law, its judges being known as barons. In 1834 old offices were abolished by Act of Parliament, and new E. under comptroller-gen. came into existence; this however, proved unsatisfactory, and in 1866 the E. as a separate department was entirely done away with, the existing e. and audit department being founded in its place. E. at present day is official style of state revenue; monies due to Government are paid into Bank of England or of Ireland to account of E., and are supervised by auditor-gen., who grants payments on receipt of orders proceeding from Treasury.

Chancellor of Exchequer is now first finance minister of Crown; he was originally an Under Treasurer appointed to keep counter-roll to that of Lord High Treasurer, and was judge in E. court. Chancellor sat as judge for last time in 1735.

H. Hall, *Antiquities of the Exchequer* (1891) and *Court Life under the Plantagenets* (1901). Publications of Pipe Roll Society.

EXCISE, Inland Revenue tax upon dutiable goods; license charges for permission to deal in, or retail, wines, spirits, tobacco, etc.; the department which superintends this taxation.

EXCLUSION BILL, bill brought before parliament, 1679, to exclude the R.C. Duke of York from the throne; most important political subject of last years of Charles II.

EXCOMMUNICATION, term used for the deprivation of a Christian of the right to communicate, or for entire cutting off from Christian Church. It has parallels both in the Old Testament and elsewhere, and is referred to several times in the New Testament. In the Middle Ages the penalty was frequently inflicted, even kings being excommunicated. Heresy, immorality, or refusal to recognise in any way the Church's authority render men liable to e. It has seldom been resorted to in Prot. countries, but can still be pronounced in England by ecclesiastical courts. It is still inflicted by the R.C. Church on her disobedient children, and in the mission field native converts are excommunicated for immorality. The Scot. Presbyterian Church can exercise the power of e.

EXCRETION, waste product of a plant or animal; differing from a secretion in not being produced for a useful purpose.

EXE.—(1) (50° 37′ N., 3° 26′ W.) river, England; flows through Somerset and Devon and enters Eng. Channel. (2) (37° 47′ S., 144° 36′ E.) river, Victoria, Australia.

EXECUTION.—(1) Act of carrying out the death penalty. See CAPITAL PUNISHMENT. (2) In law, the making of a legal instrument valid, *e.g.* the e. of a will or a deed; process of carrying out a judgment of a court; writ by which an officer carries out a judgment.

EXECUTIVE, see ADMINISTRATION.

EXECUTOR, person whom a testator appoints to wind up his estate and distribute the assets in accordance with the terms of the will. When the deceased has left no will there can be no executors and no probate. The property, if *realty*, will go to his heir-at-law, and if *personalty* to his next of kin. But as it is desirable to wind up the estate the Court will appoint an *administrator*, who will be in practically the same position as an e. In general, any person may be appointed as e., but infants, lunatics, and bankrupts. A person desiring to be made an administrator applies to the Court, which will appoint the husband or wife of the deceased in preference to others; failing either of these, the next of kin. Executors and administrators are not entitled to any remuneration unless the will specially provides for it, but they are entitled to reasonable out-of-pocket expenses incurred in the course of their duties. Having buried the testator, proved the will, paid the testator's debts, and called in the money owing to the estate, the executor's next duty is to distribute the assets among the beneficiaries. An e. is, however, bound to pay the just debts of the testator before he distributes the property. An e. is not generally responsible for the defaults of his co-executor, unless he has contributed to them in some way; but, if he sees his co-executor commit a breach of trust, he must stop it at once, or he would be held personally responsible.

EXEDRA, in classical arch., an out-of-doors semi-circular seat, generally vaulted over; an alcove.

EXEGESIS, word used by Christian theologians for explanation of the Bible with regard to matters of faith and morality; used of literal and allegorical expositions; demands knowledge of original text, and therefore touches textual criticism.

Cave, *Introduction to Theology* (1896).

EXELMANS, RENÉ JOSEPH ISIDORE, COUNT (1775–1852), Fr. marshal; served under Murat in Austria and Spain; accompanied Napoleon to Russia.

EXEQUATUR, official document of authority issued by a foreign sovereign to his consuls.

EXETER (50° 43′ N., 3° 31′ W.), city, county town of Devonshire, England, on Exe. Ancient and historic city, believed to have been occupied by Romans. Cathedral founded XII. cent., finished XIV. cent., of Norman and Geometrical Decorated styles; fine organ, beautiful roof and screens, and minstrels' gallery. Other places of interest are: Rougemont Castle (XI. cent.), Guildhall (XV. to XVI. cent.), Albert Memorial Museum, Technical Coll. Manufactures include agricultural implements; chief market for 'Honiton' lace. Pop. (1911) 48,660.

E. A. Freeman, *Exeter* (1887); Addleshaw, *Exeter Cathedral* (1898).

EXETER (42° 58′ N., 70° 57′ W.), town, New Hampshire, U.S.A., on Exeter river; machinery, boots and shoes. Pop. 5000.

EXETER BOOK, a collection of XI.-cent. O.E. poetry, etc., preserved at Exeter Cathedral, and containing such poems as *Christ, Juliana, Guthlac*; pub. by Early Eng. Text Society.

EXETER, EARLDOM, MARQUISATE, AND DUKEDOM OF, titles held by different Eng. families at different dates. John Holland, Earl of Huntingdon, was cr. duke (d. 1400); executed for conspiracy against Henry IV. Earldom held by Cecil family from 1605–1801, when raised to marquisate.

EXETER HALL, building in the Strand, London; erected 1831; became property of Young Men's Christian Association, 1880, and was the scene of many important Free Church, philanthropic, and Liberal meetings; Strand Palace Hotel erected on its site, 1909.

EXHIBITION, a public display, particularly of arts, crafts, etc.; an allowance made to students in a univ. The public e. is an institution of comparatively modern date. E's were held in England in the latter part of the XVIII. cent., and also in France; and these were followed by others in the early years of the XIX. cent. The exhibits, however, were the productions of the countries in which they were held. The title 'The Great Exhibition' is still attached to the first international e. held in London (1851), although in magnitude it has been greatly surpassed by many others, notably those held in Paris, Chicago, and St. Louis. If the idea of a great international e. did not actually originate with the Prince Consort, he certainly took the leading part in giving effect to it. A building, constructed of iron and glass, was designed by Sir Joseph Paxton, and erected in Hyde Park. It was opened by Queen Victoria (May 1, 1851), and during the 144 days it remained open was visited by upwards of 6,000,000 people. At the close of the e., the building, under the name of 'The Crystal Palace,' was removed to Sydenham, Kent. Within the last quarter of a cent. many notable e's have been held in Manchester, Glasgow, and other large provincial centres.

EXHUMATION, the act of removing a corpse from a burial-place, the authority for which lies in the hands of a coroner, but in England directions are usually given by the Home Secretary.

EXILARCH, hereditary office, held by leader of Babylonian Jews, who were called 'the people of the Exile.'

EXILE, see BANISHMENT.

EXMOOR FOREST (51° 10′ N., 3° 45′ W.), elevated moorland, on S.W. borders Somersetshire and N.E. Devonshire, England; ancient forest.

EXMOUTH (50° 37′ N., 3° 24′ W.), watering-place, at mouth of river Exe, Devonshire, England. Pop. (1911) 11,963.

EXMOUTH, EDWARD PELLEW, 1ST VISCOUNT (1757–1833), Brit. sailor; commanded in E. Indies, 1804; North Sea, 1810; Mediterranean, 1811; bombarded Algiers, 1816; vice-admiral, 1832.

EXODUS, BOOK OF, second book of Old Testament; name of Gk. derivation, meaning 'departure.' Naturally divided into three parts; first part (chaps. 1 to 18) is historical, describes enslavement of Children of Israel in Egypt, birth and upbringing of Moses, his mission as deliverer of his race, the ten plagues, institution of Passover, and the departure from Egypt; second part (chaps. 19 to 24) is legislative, narrates the giving of the law on Sinai, and confirmation of Mosaic Covenant; third part (chaps. 25 to 40) is chiefly constructive, narrates orders respecting Tabernacle, consecration of Aaron's family as priests, making of Golden Calf and resulting punishment, and finally the building of the Tabernacle. E. shows many traces of Egyptian influence; numbers of Egyptian words occur, and regulations of Mosaic law show influence of Egyptian life. E. is a compilation by various writers from documents of different date, its sources, according to Driver and other authorities, being same as those of *Genesis* (q.v.). The sources, P, or the Priests' Code, J, and E, are generally easily recognisable; the last two are not always easily distinguishable in the legislative sections. First eighteen chapters have their source mainly in J and E, with extracts from P in various chapters; chaps. 19 to 24 and 31 (v. 18) to 34 (v. 28) are from J and E, except for three verses in chap. 24 ascribed to P, to whom also chaps 25 to 31 (v. 18) and 34 (v. 29) to 40 are due.

Exodus, W. H. Bennett (Century Bible); S. R. Driver, *Introduction to Literature of Old Testament.*

EXODUS, THE, the departure from Egypt and journey to Palestine of the Children of Israel, described in *Exodus, Leviticus, Numbers, Deuteronomy,* and *Joshua* (qq.v.). These books are now known to be of composite character, and to have been written long after the events they describe; this accounts for the non-continuity of the story and for the incompatibility of some of the statements. The facts are not easily separable from tradition, especially as no mention of the Israelites has been discovered among Egyptian inscriptions, and there is thus no external evidence with which to compare the Israelite records.

Exodus, W. H. Bennett (Century Bible, Jack).

EXOGAMY, see FAMILY.

EXORCISM, ceremony of casting out evil spirits. Important in early Christian Church. R.C. Church has form of service for exorcising demons, and a minor order, 'Exorcists.'

EXOTHERMIC, see CHEMISTRY (THERMO-C.).

EXOTIC, something of a foreign character; particularly applied to rare foreign plants.

EXPATRIATION, act of compulsory or voluntary exile. See BANISHMENT.

EXPERT, legal term for specialist whose services are employed in courts of law.

EXPLOSIVES.—The essentials of an explosive are that it shall be as powerful as possible, smokeless, and sufficiently stable to withstand ordinary conditions of manufacture, storage, and carriage. Explosives are usually mechanical mixtures of substances which may not be explosive in themselves, but which unite with the production of large volumes of gases. The union is brought about by the application of heat or by percussion. Gunpowder is a mixture of charcoal, sulphur and nitre. Chlorates and permanganates are used sometimes instead of nitre. Chlorates mixed with aromatic compounds make powerful blasting preparations.

Propellants (which on explosion throw neighbouring substances some distance) consist of nitrogen compounds. Nitro-glycerin and gun-cotton may be regarded as nitric acid in which the hydrogen has been replaced by a carbon group. High explosives for shells are made from picric acid and its compounds, since these are easily detonated by percussion and heat. Mercury fulminate forms the chief constituent in fuses, detonators, and caps. Smokeless propellants are mostly modifications of gelatinised gun-cotton with nitro-glycerin.

Guttmann, *Manufacture of Explosives* (1895).

EXPROPRIATION, act of depriving of proprietary rights. The term is especially applied to a Government action in appropriating, or modifying, personal rights in property.

EXTENSITY, the perception of space is supposed by many psychologists to develop (mainly through motor activity) out of a vague experience of voluminousness or 'extensity.' Some regard this experience as confined to visual and tactual perception; others think it discernible in all sensation.

EXTENUATING CIRCUMSTANCES, extreme provocation, previous good character, etc., urged in defence of a criminal.

EXTERRITORIALITY, in international law, exemptions from law of any state which in special circumstances are enjoyed by members of a foreign

state within its dominions. These privileges accrue to sovereigns, ambassadors, armies, and public ships. Sovereigns, unless incognito, are immune from jurisdiction of foreign country.

EXTORTION, oppressive or illegal exaction by a public official or private person.

EXTRACT, in pharmacy, a concentrated preparation made either by evaporating the juice obtained from a plant, or by solution of soluble dried substances.

EXTRADITION, the act of delivering up to the government of a foreign country a person accused of committing crime within that country. All civilised countries have e. treaties, and there is generally little hesitation in transferring criminals. A foreign criminal would be extradited from the United Kingdom only on the request of the diplomatic agent of the Power made to the Home Sec., who would refer the matter to a magistrate. After allowing the accused fifteen days for appeal against the magistrate's decision, the e. would become effective. Political offences do not, in England, come within the scope of e. treaties.

EXTRAVASATION, passing of fluids through wounds or perforations in vessels of body, *e.g.* escape of fæces from ruptured intestine into abdominal cavity, or of blood from split blood vessels as the result of a blow.

EXTREME UNCTION, R.C. sacrament, in which sick persons at the point of death are anointed with oil (Epistle of *St. James* 5^{14}), blessed by bp.

EYBESCHUTZ, JONATHAN (1690–1764), Ger. rabbi and scholar.

EYCK, HUBERT VAN (c. 1370–1426), and **JAN VAN E.** (c. 1389–1440), Flem. artists; founders of the early Flem. school. They were court painters of Philip, Duke of Burgundy. Their subjects are chiefly scriptural, and, apart from the general excellence of their work, the bro's are credited with the invention of oil-painting, colours having been previously mixed with gums. Examples of their works are to be seen in the London Nat. Gallery, and at Bruges, Ghent, Antwerp, Paris, and other continental cities. Their sister, Margaret, was also a painter of eminence. See PAINTING.

Weale, *Van Eyck* (Masterpieces of Colour).

EYE, the organ of sight, the essential part being a globular mass, the *eyeball*, contained in a bony cavity of the skull called the *orbit*, communicating with the brain by the *optic nerve*, and moved in the cavity by a set of small muscles, while it has three refractive media through which the rays of light pass, the *aqueous humour* in front, the *crystalline lens* in the middle, and the *vitreous humour* behind.

The EYEBALL is an almost perfect sphere, *c.* 1 inch in diameter, the front part bulging slightly forwards. It has 3 coats, the outer protective fibrous covering, or *sclerotic*, being white and opaque, except in the more prominent front part, where it is transparent and forms the *cornea*, a fine canal, the canal of Schlemm, running round the eyeball at the junction of opaque and transparent parts. The sclerotic is continued behind on to the optic nerve, which pierces it. The middle coat consists of the *choroid membrane*, the *ciliary processes*, and the *iris*, the first extending not quite so far forwards as the canal of Schlemm, being deeply coloured with pigment cells, and containing many fine blood-vessels; the ciliary processes extend radially round the eyeball at the junction of the sclerotic and cornea, containing the radiating fibres of the ciliary muscle, whose function is to regulate the lens in accommodating the eye to near objects; while the iris is a thin, coloured curtain hanging in front of the lens of the eye, perforated in the middle with a circular hole, the *pupil*, for the transmission of light.

The inner coat is a delicate structure, the *retina*, which becomes thinner towards the front, the nervous part ending behind the commencement of the ciliary processes, while the pigmented part is continued on to the back of the iris. The retina has two small round marks upon it, one in the middle, called the *yellow spot*, the centre of which is thinned out and is the point of keenest vision, and the other below and to the inner aspect of this, with raised edges and depressed in the middle, called the *blind spot*, which is the point of entrance of the optic nerve. The retina is formed of 8 layers of elements: (*a*) the pigmented layer, composed of pigmented hexagonal flat cells; (*b*) the layer of rods and cones, minute nervous structures which receive the impressions of light, the rods being more numerous except at the yellow spot, which has only cones; (*c*) outer granular layer of oval cells; (*d*) outer molecular layer of interlacing cell branches; (*e*) inner granular layer of oval cells; (*f*) inner molecular layer of interlacing cell branches; (*g*) layer of large nerve cells; (*h*) layer of nerve fibres, which go to the optic nerve.

The *aqueous humour*, between the cornea and the lens, is composed of water with a very slight solution of albumen and salt, believed to be secreted by the choroid membrane.

The *crystalline lens*, held in position by ligaments from the ciliary processes, is situated behind the pupil, in contact with the iris, making a depression into the vitreous humour behind. Convex on both sides, it is composed of many thin layers of transparent ribbon-like fibres, whose effect is to increase the lens' refractive power. The *vitreous humour* occupies the interior of the eyeball behind the lens, and is a transparent jelly of practically the same composition as the aqueous humour contained within a fine hyaloid membrane.

The muscles which move the eyeball in the orbit consist of the four *rectus muscles*, one above, one below, and one on each side; the *superior oblique* pulls the eyeball downwards and outwards by a pulley; the *inferior oblique* pulls it upwards and inwards. The eyelids protect the eye in front, and are composed of skin, with some fibres of the *orbicularis palpebrarum* muscle, the *sphincter muscle* of the orbit, plates of fibro-cartilage, called the *tarsal plates*, glands which lubricate the edges of the lids, large modified sweat glands (the latter, when inflamed, cause a 'stye'), and a layer of mucous membrane covering the back of the eyelids and the front of the eyeball, called the *conjunctiva*.

The *lachrymal gland* secretes the tears, which bathe and prevent irritation of the cornea and conjunctiva, and lies in the upper and outer part of the orbit, several ducts from it opening upon the upper part of the conjunctiva. The tears are conveyed away by two small canals from the inner angle of the eye communicating with the nose.

Sight.—The rays from a luminous object strike the cornea, and converge from it to pass through the aqueous humour. Those which fall on the farthest out parts of the cornea are shut off by the iris, but the central rays pass through the pupil to the lens, which, having a high refractive index, greatly converges them. The rays then pass through the vitreous humour, and are brought to a focus on the sensitive retina, forming upon it an inverted, but otherwise exact, image of an object. Probably by some chemical change the nervous elements in the retina are stimulated, and this impression is transmitted by the optic nerve to the brain.

The eye, in a position of rest, normally sees distinctly objects about 20 ft. or more away, and it requires to be specially accommodated to very near objects. This is brought about by a change in the lens, the anterior surface becoming more convex, and the posterior surface very slightly more concave, through contraction of the ciliary muscle, which drags upon the suspensory ligament of the lens. See VISION.

Diseases and Defects.—For BLINDNESS; see separate article under that heading.

ASTIGMATISM results from irregularity in the lens or the cornea, causing indistinctness of some parts of the image on the retina, and is cured by the use of suitable glasses; PRESBYOPIA is a failure of accommodation due to the deficiency in power of the ciliary

muscle and hardening of the lens in old age. MYOPIA (*i.e.* near- or short-sightedness) and HYPERMETROPIA (far-sightedness) are due to abnormal shape of the eye, usually hereditary, the globe being lengthened and the rays brought to a focus in *front* of the retina in the former, and *behind* the retina in the latter. See SPECTACLES.

A STYE is due to inflammation of one of the large sweat glands in the eyelid, and is treated by frequent hot-water fomentations; while BLEPHARITIS is inflammation and ulceration at the edges of the lids, with yellow crusts sticking the eyelashes together, for the cure of which yellow oxide of mercury ointment is applied daily. In both, tonics are given and the general health looked after, as they do not usually occur in healthy people.

The conjunctiva is affected by various types of inflammation. CATARRHAL CONJUNCTIVITIS, a common and simple form, is characterised by reddening of the white of the eye, and by a gummy exudation. It is treated by a mild astringent solution, *e.g.* boracic acid, or silver nitrate, used as a lotion thrice a day. PURULENT CONJUNCTIVITIS is much more dangerous, and in the form of *Ophthalmia neonatorum*, which attacks newly born children through irritating discharges from the mother, it is the cause of over a third of the blindness in European children. Washing the eyes with solutions of silver nitrate, e.g. *argyrol*, immediately after birth prevents its occurrence. PHLYCTENULAR CONJUNCTIVITIS is a form in which little pustules occur, especially on the margin of the cornea, and should be treated with mild astringent solutions, and by attending to the general health; while in TRACHOMA or GRANULAR CONJUNCTIVITIS reddish granules form, generally on the conjunctival surface of the upper lid, and this type requires treatment, perhaps operative, by a medical man, under whose care, indeed, all eye diseases should at once be put.

KERATITIS, inflammation of the cornea, often associated with ulceration, is treated by bathing with boracic acid or silver nitrate solutions and shading the eye from the light; one form of it, *interstitial*, is generally characteristic of congenital syphilis.

IRITIS, or inflammation of the iris, arises from many causes, *e.g.* tuberculosis, rheumatism, and is treated by dilating the pupil with atropine; but it may require operative treatment.

CATARACT is opacity in the lens, which may be present at birth, or caused by diabetes, by changes in the lens in old age, extension from eye disease elsewhere, or by wounding of the lens; and it can only be cured by an operation.

The retina may be affected by inflammation, bleeding, by the blocking of the arteries supplying it, or inflammation of the optic nerve.

GLAUCOMA, due to increased tension in the eyeball, affects the retina and causes the person affected to see coloured rings or 'halos' round lights. It is treated by surgical operation.

Swanzy and Werner, *A Handbook of the Diseases of the Eye and their Treatment* (10th ed., 1912).

EYE (52° 18′ N., 1° 8′ E.), market town, Suffolk, England.

EYEBRIGHT (*Euphrasia*), root-parasitic found in Britain, as *E. officinalis*; astringent properties; member of Scrophulariaceæ.

EYEMOUTH (55° 52′ N., 2° 5′ W.), seaport village, at mouth of Eye, Berwickshire, Scotland; important fisheries.

EYLAU (54° 22′ N., 20° 40′ E.), town, East Prussia, Germany, near Königsberg; foundries and sawmills; great battle (1807), in which Napoleon defeated Russians and Prussians. Pop. (1910) 3274.

EYRA, see under CAT FAMILY.

EYRE, EDWARD JOHN (1815-1901), Brit. administrator and explorer; successively gov. of St. Vincent and Jamaica.

EYRE, SIR JAMES (1734-99), Eng. judge.

EYRE, SIR VINCENT (1811-81), Brit. general distinguished in Afghan War and Ind. Mutiny.

EYRIE, or EYRY, nesting-place of eagle or hawk; also the brood reared there.

EZEKIEL, Hebrew prophet, whose name signifies 'God strengthens me,' or 'God is strong,' was the son of Buzi, and of priestly descent; he was carried off to captivity in Babylonia with Jehoiachim by Nebuchadnezzar in 597 or 599 B.C., and apparently spent the rest of his life in a Jewish colony on banks of the Chebar, about 200 miles N. of Babylon. He began to prophesy about five years after the Captivity, and continued to do so for about twenty-two years. Book may be divided into three parts, of which the first (chaps. 1-24) contains denunciations of the sins of the age and prophecies concerning impending fall of Jerusalem. Second part (chaps. 25-32) consists of prophecies concerning heathen nations of Ammon, Moab, Edom, Philistia, Tyre, Sidon, Egypt. Third part (chaps. 33-48) is full of consolation and promises future restoration, ending with a vision of the Temple. The authenticity of the book has never been seriously impugned.

Ezekiel, W. F. Lofthouse (Century Bible); Driver, *Introduction to Literature of Old Testament*.

EZRA, Old Testament character at time of Jews' return from Exile; his work is described in Books of *Ezra* and *Nehemiah*.

EZRA, THIRD BOOK OF.—This apocryphal book is called *First Esdras* in the Septuagint and Syriac versions, *Third Esdras* in the Vulgate. It has been compiled chiefly from Book of *Ezra*, with interpolations from *2 Chronicles* and *Nehemiah*; of original additions, story of Darius and three wise men is most remarkable. This book was used by Josephus, and detracts from merit of his history; it is quoted by Athanasius and other early writers. Rejected by Council of Trent.

Wright, *Introduction to Old Testament*.

EZRA, FOURTH BOOK OF.—This book is called *Second Esdras* in English Apocrypha, and is also variously known as *Apocalypse of Ezra*, *1 Ezra*, *3 Ezra*, and *5 Ezra*. Original text is not extant, but according to Syriac, Arabic, Armenian, and other versions, book was written in I. cent. A.D. It has no connection with the canonical book, but contains a series of visions dealing with racial and religious questions.

EZRA AND NEHEMIAH, BOOKS OF.—These books, which are the sequel to *Chronicles*, were originally regarded as one book in the Hebrew Canon; they are named respectively *First* and *Second Esdras* in the Vulgate, *Second Esdras* and *Nehemiah* in the LXX. Each may be divided into two parts. First part of *Ezra* (chaps. 1-6) relates return from exile under Zerubbabel, *c.* 536 B.C., and rebuilding of temple, *c.* 516 B.C.; second part (chaps. 7-10) deals with second return under Ezra, *c.* 457 B.C. First part of *Nehemiah* (chaps. 1-7) gives Nehemiah's journey from Shushan, *c.* 144 B.C., and reconstruction of walls of Jerusalem; second part (chaps. 7 (v. 73*b*) to end) treats of restoration of Jewish religion and reform of various abuses. Written chiefly in Hebrew, with portions in Aramaic, books are a compilation; those parts written in first person may be ascribed to personal memoirs of Ezra and Nehemiah respectively, while those in third person are by a later writer whom many authorities believe to have been the author of *Chronicles*.

Ezra, Nehemiah, and *Esther*, T. W. Davies (Century Bible); Driver, *Introduction to Literature of Old Testament*.

EZZOLIED, XI.-cent. Ger. poem on Christ's life.

F, 6th letter of Eng. and Latin alphabet, deriving its form from the Greek *digamma* (q.v.).

FABBRONI, ANGELO (1732–1803), Ital. author.

FABER, FREDERICK WILLIAM (1814–63), Eng. theologian and hymn writer; became R.C., 1845; wrote many ascetical and devotional works.

FABER, JACOBUS, FABRI (*c.* 1455–1536), French Prot. reformer; trans. New Testament (1523) and subsequently whole Bible into Fr.

FABER, JOHANN (1478–1541), Ger. R.C. theologian, but partly sympathetic with Reformation leaders.

FABER, JOHN (*c.* 1690–1756), Eng. engraver whose mezzotints of portraits are well known. His f., JOHN (*c.* 1660–1721), was also a well-known engraver.

FABER, KASPAR (fl. 1775), founder of firm of Ger. pencil makers.

FABERT, ABRAHAM DE (1599–1660), Fr. marshal; famed for heroism and devotion.

FABIAN, ST., pope, 236–50; martyred in Decian persecution.

FABIAN SOCIETY, see SOCIALISM.

FABIUS, Rom. patrician *gens*; distinguished members are: QUINTUS FABIUS MAXIMUS RULLIANUS, six times consul; won victory at *Sentinum*, 295 B.C. QUINTUS FABIUS MAXIMUS VERRUCOSUS, dictator (221 B.C.); wore out Hannibal and saved the State by masterly tactics, drawing on the Carthaginians and refusing to fight; hence called the *Cunctator* (delayer). QUINTUS FABIUS PICTOR (fl. 220 B.C.), earliest Rom. annalist; fought in Gallic War; wrote, in Gk., hist. of Rome from the earliest period to his own day. QUINTUS FABIUS ALLOBROGICUS, defeated Allobrogi, 121 B.C.

FABLE, sometimes called 'apologue,' is a fictitious narrative intended to enforce some moral or useful precept, and the characters are generally animals. This form of lit. is of very ancient origin, and many of the earliest f's that have come down to us from the Greeks are supposed to be derived from earlier Buddhist moral stories called *jātakas*. Æsop (*q.v.*) is generally regarded as the first fabulist, but very little is known about him, save that he is believed to have lived in the VI. cent. B.C. At a later period Babrius, a Gk. writer, made himself responsible for the first collection of Æsop. Amongst Lat. writers, the f's of Phædrus (*q.v.*), a freedman of Augustus, are noteworthy. The greatest of modern fabulists was Jean de La Fontaine (*q.v.*); Florian (*q.v.*) ranks next to him among Fr. fabulists. Noted Ger. fabulists were Christian Gellert (1715–69) and Gotthold Lessing (1729–81). Eng. verse fables have been written by Dryden, Prior, and Gay. Rostand's *Chanticleer* and Maeterlinck's *The Blue Bird* are f's in dramatic form.

FABLIAUX, short moral or satirical metrical tales in old Fr. lit. From one to two hundred still survive, mostly written during the XII. and XIII. cent's. Boccaccio, Chaucer, La Fontaine, and later story-tellers made free use of the mediæval f.

FABRE, FERDINAND (1827–98), Fr. novelist; deals chiefly with mountain-village life.

FABRE D'ÉGLANTINE, PHILIPPE FRANÇOIS (1750–94), Fr. dramatist, poet, and revolutionist; guillotined.

FABRETTI, RAPHAEL (1618–1700), Ital. archæologist.

FABRIANI, SEVERINO (1792–1849), Ital. educationist.

FABRIANO (43° 21′ N., 12° 53′ E.), town, Ancona, Italy; paper-mills. Pop. 9417.

FABRICIUS, GAIUS LUSCINUS (fl. 285–78 B.C.), Roman consul and popular hero; famed for his victories over the Lucanians, Samnites, and Tarentines; censor (275), and distinguished by his promotion of social reforms.

FABRICIUS, GEORG (1516–71), Ger. poet and scholar.

FABRICIUS (ACQUAPEDENTE), HIERONYMUS (1537–1619), Ital. anatomist; prof. of Anatomy at Padua after Fallopius (*q.v.*); author of several works on anatomy, specially embryology.

FABRICIUS, JOHANN ALBERT (1668–1736), Ger. scholar and bibliographer.

FABRICIUS, JOHANN CHRISTIAN (1745–1808), Dan. naturalist; then prof. of Nat. History and Political Economy at Kiel (1775); made important researches and wrote several works on entomology.

FABRIZI, NICOLA (1804–85), Ital. patriot.

FABYAN, ROBERT (d. 1513), Eng. merchant and chronicler; his *New Chronicles of England and France*, first pub. 1516.

FAÇADE, front, or face, of a building, generally architecturally embellished.

FACCIOLATI, JACOPO (1682–1769), Ital. philologist.

FACTOR.—(1) A constituent element which helps to bring about a particular result. (2) An agent entrusted with the possession of goods for the purpose of selling them on commission. He has, under the Factors Act (1889), an implied authority to dispose of them in the ordinary course of his business, and can bind his principal on a *bona fide* sale, even where he has no express authority to sell. (3) In Scotland, the steward of an estate.

FACTORY ACTS, the Factory and Workshop Act (1901), and other legislative measures, regulate the employment of women and young persons in mills and workshops, fixing the hours, meal-times, holidays. See LABOUR.

FACULTY.—(1) Term signifying the powers of the mind, such as memory, imagination. (2) Order granted by a bp. allowing an act otherwise illegal; thus any important internal arrangement of church furniture, organ, etc., would necessitate a f. The Court of Faculties, an Abp.'s Court, founded by Henry VIII., now confines its attention chiefly to granting licences of marriages without publication of banns. (3) The term is also used to designate the collective members of a learned profession, or university, such as the f's of law, science, medicine, arts, etc.

FAED, THOMAS (1826–1900), Scot. artist; *genre* pictures.

FAENZA (44° 17′ N., 11° 53′ E.), walled city, Ravenna, Italy; formerly famous for Majolica ware, known from name of town as 'faience'; cathedral; silk manufactures. Pop. 13,966.

FAEROE, FAROE (62° 10′ N., 7° W.), islands in N. Sea, between Iceland and Shetland. Capital, Thorshavn, in Strömö. Seventeen out of twenty-two inhabited; coast-line steep, inland flat-topped mts.; currents dangerous, and storms frequent, so that even harbours are insecure, but always free from ice. Produce peat and coal. Industries: sheep-farming, fishing, wild-fowling. Area, 539 sq. miles. Pop. (1911) 18,000.

FÆSULÆ (43° 50′ N., 11° 18′ E.), ancient name of Fiesole (*q.v.*).

FAFNIR (Norse myth.), guardian of the Nibelung hoard; slain by Sigurd the Volsung.

FAGGING, system in Eng. public schools by which

juniors are compelled to perform certain duties for the senior boys. The system dates back several cent's.

FAGGOT, bundle of sticks; name once given to a non-existent soldier whose name appeared on muster-roll; 'faggot-votes' were created, till 1884, by sub-dividing property amongst nominal owners, or by such sale of property under mortgage or otherwise as would entitle these owners to a vote.

FAGUET, ÉMILE (1847–), Fr. literary critic; prof. of Fr. Lit., Sorbonne; member of Académie française.

FAHRENHEIT, GABRIEL DANIEL (1686–1736), Ger. scientist who introduced use of quicksilver and new scale for thermometers. See THERMOMETERS.

FAIDHERBE, LOUIS LÉON CÉSAR (1818-89), Fr. soldier, writer, colonial administrator. Increased Fr. W. African possessions; gov., Senegal, 1854; commanded army of north in Franco-Prussian War.

FAIENCE (Fr.), name given to a kind of fine glazed earthenware, originally made at Faenza (*q.v.*).

FAILLY, PIERRE LOUIS CHARLES DE (1810–92), Fr. general; won battle of *Mentana* in Italy against Garibaldi (1867); defeated at *Beaumont* (1870) in Franco-Prussian War.

FAIN, AGATHON JEAN FRANÇOIS, BARON (1778–1837), Fr. historian; Napoleon I.'s sec.

FAINT or **FAINTING,** loss of consciousness due to weakness of heart's action. See SHOCK.

FAIR, a public market held on an extensive scale on a fixed date and in a particular place. Formerly the f. was largely mixed up with the showman's business, but this has to a great extent been eliminated. In various parts of England f's are known as the 'Wakes.' F's are now held for a specific purpose, as the sale of horses, cattle, poultry, dairy produce, etc. Thus Horse F's are held at Horncastle, Woodbridge, Barnet; Nottingham has its Goose F.; Gloucester, a Cheese F. F's date from the Roman occupation, but they first become of importance after the Norman Conquest. St. Bartholomew's F. was instituted in 1133 and was not suppressed until 1855.

FAIR HEAD, BENMORE (55° 13′ N., 6° 9′ W.), promontory, Antrim, Ireland; *c.* 640 feet high.

FAIR ISLE (59° 33′ N., 1° 38′ W.), island between Orkney and Shetland; 480 feet high in one part; area, 3 sq. miles. Pop. (1911) 139.

FAIR OAKS, SEVEN PINES, railway station, 7 miles E. of Richmond, Virginia, U.S.A., on Chickahominy; scene of victory of Federals over Confederates, June 1, 1862.

FAIRBAIRN, ANDREW MARTIN (1838–1912), Scot. Congregationalist theologian; principal of Mansfield College, Oxford, till 1909; wrote numerous works, especially on religion, philosophy, and dogmatics.

FAIRBAIRN, SIR WILLIAM (1789–1874), Scot. engineer; along with Lillie built up a famous business in Manchester, and improved mill-works and water-wheels; established shipbuilding yard at Millwall, London; first to build an iron ship; erected Conway and Menai Straits tubular bridges, 1845 (with Robert Stephenson); made steam-boiler improvements; Pres., Brit. Assoc., 1861; Bart., 1869. *Life,* by Pole (1877).

FAIRBANKS (65° N., 147° 50′ W.), town, Alaska; largest gold camp in interior of Alaska. Pop. (1910) 3541.

FAIRFAX, EDWARD (*c.* 1580–1635), Eng. author; trans. (in verse) Tasso's *Jerusalem Delivered* (1600), and wrote a treatise on witchcraft.

FAIRFAX OF CAMERON, FERDINANDO FAIRFAX (1584–1648), Scot. baron; Roundhead general in Civil War; routed, Marston Moor; gov. of Hull, 1643, York, 1644.

FAIRFAX OF CAMERON, THOMAS FAIRFAX, BARON (1612–71), s. of above, Eng. soldier; served under Charles I. before outbreak of Civil War, after which became lieut.-general under his f., Lord Fairfax, on Parliamentary side; distinguished in long contest in Yorkshire; became commander-in-chief of Parliamentary forces in 1645; routed Royalists at Langport, 1645; during second Civil War he reduced Kent and forced Royalists to surrender Colchester (1648); opposed execution of king, and refused to act as judge at his trial; put down insurrection at Burford (1649), and soon afterwards retired from active service; Member of Restoration Commission, 1660.

FAIRFIELD (41° 8′ N., 73° 15′ W.), town, Connecticut, U.S.A.; rubber manufactures. Pop. (1910) 6134.

FAIRFIELD (41° N., 92° W.), city, Iowa, U.S.A.; seat of Parsons Coll.; wagons, farm implements. Pop. (1910) 4970.

FAIRHAVEN (41° 38′ N., 70° 58′ W.), town, Massachusetts, U.S.A., at mouth of Acushnet; iron goods; yacht-building. Pop. (1910) 5122.

FAIRHOLT, FREDERICK WILLIAM (1814–66), Eng. antiquary and wood-engraver; his best-known work is *Costume in England* (1846).

FAIRIES, supernatural beings, both of good and evil influence; also known by the names of 'brownies,' 'elves,' and various other terms. In Devon and Cornwall they are called 'pixies'; in Ireland, 'gentle people.' In popular belief 'good' f's can be helpful in many ways, and their interest is to be encouraged; but 'wicked' f's spirit away children, leaving changelings in their places, and commit various other kinds of mischief. These malignant spirits sometimes assumed the appearance of beautiful women who lured people to destruction or madness. The belief in f's has been common to all lands and to all periods.

Hartland, *Science of Fairy Tales* (1891).

FAIRLIE, ROBERT FRANCIS (1831–85), Scot. engineer; invented double-bogie engine (1864).

FAIRMONT (39° 28′ N., 80° 9′ W.), city, W. Virginia, U.S.A., on Monongahela; coal mines. Pop. (1910) 9711.

FAIRY RINGS, circular spaces of rich dark grass, nourished by decayed fungi, supposed by the superstitious to be the places where fairies hold their revels.

FAITH may be defined as the assent of the intellect to truths on evidence extrinsic to them; thus we believe in the existence of Mt. Erebus because of our belief in the explorers who have seen it. From this it is clear how large a part f. plays in daily life. *Supernatural* or *religious* f. merely adds to the definition, that the extrinsic evidence is supernatural or religious, *e.g.* the authority of God who has revealed the truth. Faith has also the sense of a body of beliefs; and, still further, it is often loosely used to describe confidence, trust which indeed presupposes, but is not itself faith. See RELIGION.

The doctrine that bodily diseases can be healed without any specific treatment by the faith of the suffering,—**Faith-healing,**—is now widely held, not only by followers of Christian Science (*q.v.*), but also, among others, by the sect called the Peculiar People, founded by John Banyard (1838). Healings at Lourdes and other places of pilgrimage are also by some attributed to faith-healing, and it is not disputed that nervous diseases may benefit in this way.

FAITHFULL, EMILY (1835–95), Eng. philanthropist and lecturer on women's emancipation.

FAITHORNE, WILLIAM (1627–91), Eng. artist and engraver; produced crayon portraits and engravings of many eminent persons from Charles I. downwards.

FAIZABAD (37° 8′ N., 70° 39′ E.), fortified town, on river Kokcha; capital, Badakshan, Afghanistan; military post.

FAJARDO (18° 20′ N., 65° 40′ W.), town, Porto Rico, on E. coast; commercial centre; sugar. Pop. 3000.

FAKHR UD-DIN RAZI (1149–1209), Arab. theologian and historian.

FAKIR, name given to Indian ascetics corresponding to Muhammadan dervishes (*q.v.*); some live in monasteries, others are mendicant.

FALAISE (48° 53′ N., 0° 11′ W.), town, Calvados, France; birthplace of William the Conqueror. Pop. 6740.

FALASHAS, Hamitic tribe in Abyssinia; claim to

represent ten lost tribes of Israel, and practise Jewish religion. Hold Abraham's day, day of Covenant, Passover, harvest festival, and Feast of Tabernacles.

FALCÃO, CHRISTOVÃO DE SOUSA (*c.* 1512–57), Portug. poet.

FALCK, ANTON REINHARD (1777–1843), Dutch statesman.

FALCON (*c.* 10° N., 72° W.), maritime state, Venezuela; extends along coast on Caribbean Sea; capital, Coro. Area, 9573 sq. miles. Pop. 139,110.

FALCONE, ANIELLO (1600–65), Ital. artist; battle-scenes.

FALCONER, HUGH (1808–65), Scot. botanist; advised tea-planting and growing cinchona bark in Ind. Empire; saved teak forests from reckless felling; described Ind. fossil fauna.

FALCONER, WILLIAM (1732–69), Brit. poet and sailor; b. Edinburgh; drowned at sea; author of *The Shipwreck* (1673) and the *Universal Marine Dictionary* (1769).

FALCONET, ÉTIENNE MAURICE (1716–91), Fr. sculptor.

FALCONIDÆ, see HAWK FAMILY.

FALCONRY, a field sport popular among upper classes during Middle Ages, and, though severely checked by civil wars of Charles I., still in existence. F. consists in hunting birds and small animals by means of falcons or hawks. These are either taken from the nest and trained (called *eyesses*), or captured when full-grown and tamed (called *passage-hawks*). When hunting-bird is sufficiently trained, it is taken out hooded to the place where it is to be 'entered at the quarry,' when the hood is removed. Falcons are entered at winged game, hawks at winged and ground game. The females are more frequently used than the male, owing to their superior strength. When a falcon sights its quarry it rises to a height above it and 'stoops' upon it, while a hawk does not rise but flies in a straight line. After killing, the bird is called back by the 'lure,' hooded, and taken back.

Cox and Lascelles, *Coursing and Falconry* (1892); Mitchell, *Art and Practice of Hawking* (1900).

FALCONS, see HAWK FAMILY.

FALDSTOOL, reading-desk in Anglican or R.C. churches; folding stool used by R.C. bishops.

FALERII (42° 20′ N., 12° 25′ E.), one of twelve chief cities of Etruria; W. of Tiber, N. of Mount Soracte; destroyed by Rome, 241 B.C.; modern Castellana.

FALERIO (43° 7′ N., 13° 25′ E.), ancient town, Picenum, Italy; modern Fallerone.

FALGUIÈRE, JEAN ALEXANDRE JOSEPH (1831–1900), Fr. artist and sculptor.

FALIERO, MARINO (1279–1355), doge of Venice; executed for plotting to murder nobles and declare himself prince.

FALK, JOHANN DANIEL (1768–1826), Ger. philanthropist and author.

FALK, PAUL LUDWIG ADALBERT (1827–1900), Ger. politician; Prussian Minister of Public Worship and Education; retired, 1879.

FALKE, JOHANN FRIEDRICH GOTTLIEB (1823–76), Ger. historian.

FALKIRK (56° N., 3° 48′ W.), town (parliamentary burgh), Stirlingshire, Scotland, including suburbs of Stenhousemuir, Grahamston, Bainsford, and Camelon; centre of fertile agricultural and extensive coal-mining district; important iron manufactures, dating from XVII. cent.; breweries, explosives; formerly noted for cattle markets, called 'Trysts'; scene of defeat of Wallace by Edward I. (1298), and victory of Prince Charlie's army (1746). Pop. (1911) 33,569.

FALKLAND (56° 16′ N., 3° 13′ W.), royal burgh, Fifeshire, Scotland, at foot of E. Lomond Hill. Ancient palace (*c.* 1450–1540) was favourite residence of Stewart sovereigns; James V. d. here (1542); restored by Marquis of Bute (1888).

FALKLAND ISLANDS, ILES MALOUINES (East: 51° 41′ S., 57° 51′ W.; West: 51° 35′ S., 60° W.), Brit. Crown Colony in S. Atlantic (300 miles E. of Magellan Straits), consisting of East Falkland (3000 sq. miles), West Falkland (2300 sq. miles), and dependencies of South Georgia (*c.* 1000 sq. miles) and other dependencies (South Orkneys, South Shetlands, Graham's Land, Sandwich group); includes over 100 small islands; capital, Stanley (East Falkland). Coast is irregular, with many excellent harbours; highest point, Mt. Adam (over 2300 ft.); many small rivers and lakes; no forests, and no coal, peat being burnt; climate healthy. Chief industry is sheep-rearing; whaling stations; wool, hides, tallow, whale-oil exported. F. I. were sighted by Davis (1592); called after Lord F. by Captain Strong (1689); permanently occupied by Britain (1832), and used as penal colony for some years; administered by gov. Pop. (1911) 2300.

FALKLAND, LUCIUS CARY, 2ND VISCOUNT (*c.* 1610–43), Eng. soldier and politician; fought against Scots (1639); member of Short and Long Parliaments; at first supported Parliamentary party; Sec. of State (1642); espoused Royal cause, and killed at Newbury (1643); wrote *Discourse on Infallibility*; in philosophy was a rationalist; friend of Clarendon. *Life and Times*, by Marriott (1907).

FALL RIVER (41° 40′ N., 71° 10′ W.), city, Massachusetts, U.S.A., at mouth of Taunton; has many handsome buildings; extensive cotton manufactures; ironworks. Pop. (1910) 119,295.

FALL, THE, see ADAM, EVE, SIN.

FALLACY, breach of logical rule, though loosely applied to any false statement. Fallacies may be used as (1) Logical, in the mere form of statement, without regard to the meaning of the terms; (2) Material, concerned with the subject-matter of the argument. See LOGIC.

FALLIÈRES, CLÉMENT ARMAND (1841–), Fr. statesman; from country lawyer rose to be Prime Minister, Pres. of Senate (eight times), and Pres. of Republic (1907–13).

FALLMERAYER, JAKOB PHILIPPI (1790–1861), Ger. traveller and historian; travelled in East; best known for his views on Slavonic origin of modern Greeks; wrote history of Morea during Middle Ages and other works.

FALLOPIUS, GABRIELLO, FALLOPIO (1523–62), Ital. anatomist; prof. of Anat. in Ferrara, in Pisa, and afterwards in Padua; made several anatomical discoveries, and author of an early and valuable work on anat. **Fallopian Tubes**, see REPRODUCTIVE SYSTEM, GYNECOLOGY.

FALLOUX, FRÉDÉRIC ALFRED PIERRE, COMTE DE (1811–86), Fr. hist. writer and politician; Minister of Public Instruction; Member of Académie française.

FALLOW, land left untilled, or unsown for a year or more, for the purpose of giving rest to the soil. This system is now to a great extent rendered unnecessary by the use of manures, and by the alternating of turnip and other root crops with cereals.

FALMOUTH (50° 7′ N., 5° 3′ W.), seaport, Cornwall, England, on S. side of estuary of Fal; has excellent harbour, defended by castles—Pendennis on W., St. Mawes' on E.; headquarters of Royal Cornwall Yacht Club; fisheries; shipbuilding; engineering. Pop. (1911) 13,136.

FALSE POINT (20° 20′ N., 86° 46′ E.), cape, port, and lighthouse, Cuttack district, Bihar and Orissa, India.

FALSE PRETENCES, the obtaining of goods by this method means that they were obtained by false representation made either verbally, by writing, or by conduct which is calculated to deceive. The maximum punishment is five years' penal servitude.

FALSTER (54° 50′ N., 12° E.), Dan. island in Baltic Sea; *c.* 27 miles long; area, 183 sq. miles; agricultural. Pop. *c.* 35,000.

FALTICENI (47° 28′ N., 26° 16′ E.), town, Suceava, Rumania; large annual horse and cattle fair. Pop. 9643.

FALUN (60° 33′ N., 15° 35′ E.), town, Sweden; famous copper mine. Pop. (1910) 11,582.

FAMA (classical myth.), the goddess of rumour.

FAMAGUSTA (35° 7′ N., 33° 57′ E.), seaport town, E. coast of Cyprus; near ruins of Salamis; important in Middle Ages; taken by Richard Cœur de Lion, 1191; by Turks, 1571. Pop. 3400.

FAMILIAR, spirit or demon supposed to be in attendance on a necromancer; attendant attached to household of the pope or R.C. bp's; an official of the 'Holy Office' (Inquisition).

FAMILISTS ('Family of Love'), Dutch sect, founded by Joris and Niclaes in XVI. cent.; held that love was essential character of religion.

FAMILY, as the word is now understood, means the father, mother, their children, and other kindred. This modern conception of the term is derived from the ancient patriarchal form of f., in which the eldest male was essentially the 'father of the family,' and exercised supreme powers over his wife, or wives, their children, and the husbands and wives of the children, during the entire length of his days. It has been assumed by some writers that the patriarchal form was preceded by a promiscuous state, when sexual relations existed between persons of near kin. As opposed to this theory there is plenty of evidence regarding *exogamy*, associated with totemism, which prohibited marriage between members of the same tribe (i.e. *endogamy*). Arising out of the prohibition demanded by the custom of exogamy there came into existence the *beenah* form of marriage, of which there are numerous examples in the Bible. By this method a woman of one tribe received a lover, or lovers, from another tribe, and all children born of the connection became the property of the mother's tribe. Often, however, the father forsook his own tribe and was formally received into that of the mother of his offspring. Marriage by capture, or by purchase, was also contemporaneous with the *beenah* form of marriage. The term *family* is also used by botanists and zoologists to describe trees, plants, or animals belonging to a particular genus.

Lubbock's *Origin of Civilisation*; H. S. Morgan's *Ancient Society*; and works by Sir H. S. Maine, Westermarck, and McLennan; Bosanquet, *The Family* (1906).

FAMILY OF LOVE, see FAMILISTS.

FAMINE, distress and starvation caused by dearth of food; may be caused by failure of harvest owing to insect pests, drought, or other unfavourable weather conditions, or by war, excessive taxation, insufficient means of transport, or other difficulties in distributing food supplies. India's liability to f., which has occurred at intervals throughout Christian era (*e.g.* 1022, 1344, 1770, 1790, 1876, 1900), is chiefly due to intensely tropical climate; preventive measures include promotion of irrigation and railway systems, and agricultural improvements. Great f's occurred at Rome, 436 B.C.; in Egypt, 1064–72; in England, 1005, 1069; Ireland, 1822, 1846–47; China, 1877–88, 1888–89; Russia, 1891–92, 1905; universal f's, 879, 1162.

FAN, an implement used for producing coolness in the atmosphere, and upon the skin. Feather f's upon long handles were used by the ancients, and were regarded as symbols of royalty. In the Middle Ages f's were used in churches to keep flies from the consecrated elements. Small feather f's began to be used in England during Elizabeth's reign. The modern folding f. is of Jap. origin. From the XVII. cent. onwards France has been the chief seat of the f. industry.

Rhead, *History of the Fan* (1909).

FAN VAULT, in arch., decorative kind of vaulting resembling an open fan.

FANCY, passive imagination, in which the sequence of images and thoughts is casual and not the development of a plan.

FANG, FAN, cannibal race of the Fr. Congo; warriors, hunters, and workers in metal.

FANNERS, apparatus for winnowing grain; current of wind blows away chaff; first machine f. built in 1737; see also BLOWING-MACHINES.

FANO (43° 50′ N., 13° 2′ E.), town, Italy, on Adriatic Sea; cathedral; remains of triumphal arch of Augustus; ancient *Fanum Fortunæ*. Pop. 10,638.

FANSHAWE, SIR RICHARD (1608–66), Eng. diplomat and poet; Royalist in Civil War; after Restoration was ambassador to Portug. and Span. courts; trans. Camoens's *Lusiads* and other poems. His wife, LADY FANSHAWE, wrote remarkable *Memoirs*.

FANTASIA, musical composition of free or original design; term loosely applied to medley of popular tunes, a favourite type of music with mediocre pianists.

FANTI, native race of African Gold Coast; polygamous; marriage is by barter, but women are held in much regard; skilled artificers; fetish worshippers.

FANTI, MANFREDO (1806–65), Ital. soldier; commanded division in war between Austria and Piedmont, 1859; War Minister, 1860; commanded army in Papal States and subdued Umbria, 1860.

FANTIN-LATOUR, IGNACE HENRI (1836–1904), Fr. artist.

FANUM FORTUNÆ (43° 50′ N., 13° 2′ E.), ancient town, Umbria, Italy; celebrated temple of Fortuna, whence the town's name; modern Fano.

FARABI (870–950), Arab. scholar; student of Aristotle; Latin and Ger. trans. of some of his works.

FARAD, practical unit of electrical capacity; capacity of condenser giving difference of potential of 1 volt when charged with 1 coulomb.

FARADAY, MICHAEL (1791–1867), Eng. physicist; originally a bookbinder's apprentice, F. was app. assistant in the Royal Institution Laboratory on Davy's recommendation; worked there for fifty-four years; after 1833 as Fullerian Prof. of Chem.; experimented on the diffusion and liquefaction of gases and on the alloys of steel, and introduced the ideas of *polymerism* and *isomerism*. He discovered the induction of electric currents, the identity of electrification produced by different methods, and the different capacities of substances for participation in electrical induction. He was the first to recognise the chemical decomposition set up by an electric current, and to detect the rotation of the plane of polarised light in a magnetic field. He discovered the continuous rotation of magnets and wires conducting an electric current round each other. See ELECTRICITY.

Thompson, *Michael Faraday: His Life and Work*.

FARAH (32° 30′ N., 62° 10′ E.), town, Afghanistan, on river Farah; ancient *Phra*; river flows into Lake Hamun.

FARAZDAQ (*c.* 641–728), Arab. poet.

FARCE, humorous dramatic work, broadly comic in design, and depending upon ridiculous, sometimes clownish, situations for its effects, in which it differs from 'comedy,' a more witty and refined class of play.

FARCY, see GLANDERS.

FAREHAM (50° 52′ N., 1° 10′ W.), market town and watering-place, Hampshire, England, on Portsmouth Harbour; earthenware. Pop. (1911) 9674.

FAREL, GUILLAUME (1489–1565), Fr. reformer; preached Reformed doctrines in Switzerland; led Reformation party in Geneva, 1534, but was expelled with Calvin, 1538; d. Neuchâtel.

FAREWELL, CAPE (59° 44′ N., 43° 54′ W.), most southerly point in Greenland.

FARGO (46° 48′ N., 96° 45′ W.), city, N. Dakota, U.S.A., on Red River; R.C. and Prot. Epis. see; seat of State Agricultural and Fargo Colleges; centre of wheat trade; ironworks. Pop. (1910) 14,331.

FARGO, WILLIAM GEORGE (1818–81), Amer. express carrier and railway magnate.

FARIA Y SOUSA, MANUEL DE (1590–1649), Portug. poet and historian.

FARIBAULT (44° 20′ N., 93° 4′ W.), city, Minnesota, U.S.A., on Cannon; educational centre; furniture, woollens. Pop. (1910) 9001.

FARÍD UD-DÍN 'ATTÁR (1119–1229), Pers. poet, mystic, and traveller; prolific writer of verse.

FARIDKOT (30° 40′ N., 74° 46′ E.), native Sikh state, Punjab, India; chief town, FARIDKOT. Area, 642 sq. miles. Pop. (1911) 130,374.

FARIDPUR (23° 36′ N., 89° 53′ E.), town and district, Dacca division, Bengal, India; chief product, rice. District: area, 2281 sq. miles; pop. 1,937,646. Town: pop. 10,774.

FARINA, SALVATORE (1846–), Ital. novelist.

FARINATO, PAOLO (1522–1606), Ital. artist and architect.

FARINELLI, CARLO BROSCHI (1705–82), celebrated Ital. singer; enjoyed highest favour at Span. court under Philip V. and Ferdinand VI.

FARINGDON, GREAT (51° 30′ N., 1° 36′ W.), market town, Berkshire, England.

FARINI, LUIGI CARLO (1812–66), Ital. politician and writer; carried out negotiations with Napoleon III.; helped to unite Central Italy with Piedmont; premier, 1862–63.

FARMER, RICHARD (1735–97), Eng. ecclesiastic and Shakespearean commentator.

FARMERS' ALLIANCE.—Amer. political movement; began 1867, when it was called the *Grange*, aiming at improving the conditions of farming class socially and economically; had practically ceased by 1876. *Alliance* movement began 1889, principally in S.; advocated secret ballot, etc., and aimed also at doing away with national bank. *Populist* movement, beginning in Kansas, 1890, aimed at establishing eight hours' day, State control of telegraphs, telephones, and railways, and other reforms; united with Democratic party in 1896 and 1900.

FARMERS-GENERAL, Fr. association which farmed public taxes; system led to much abuse, and was abolished by Revolutionaries, 1789.

FARMING, see AGRICULTURE.

FARNABY, THOMAS (*c.* 1575–1647), Eng. grammarian.

FARNBOROUGH (51° 18′ N., 0° 45′ W.), town, Hampshire, England. St. Michael's Church contains tombs of Napoleon III. and Prince Imperial. Pop. (1911) 14,202.

FARNBOROUGH, THOMAS ERSKINE MAY, BARON (1815–86), Eng. historian.

FARNE ISLANDS, FEARNE (55° 38′ N., 1° 37′ W.), group of islets off N.E. coast of Northumberland, England.

FARNESE, Ital. family, who governed Parma 200 years. Alexander F. became Pope Paul III. in 1534; gave large properties to his natural children, of whom best known is Pierluigi, afterwards Duke of Parma, whose s., Ottavio, was father of famous general, Alexander F. (*q.v.*). Line became extinct, 1731. FARNESE PALACE in Rome is a beautiful Renaissance building.

FARNESE, ALEXANDER (1545–92), Duke of Parma; brilliant soldier and statesman; succ. Don John of Austria as gov. of Netherlands, 1578; reduced southern provinces, which became Span. Netherlands; wished to reconquer northern provinces, but was prevented by Philip II.'s schemes elsewhere, which twice compelled him to leave Netherlands at critical moment and lead army to France.

FARNESE, ELIZABETH (1692–1766), queen of Spain; wife of Philip V.; noted administrator.

FARNHAM (51° 13′ N., 0° 48′ W.), market town, on Wey, Surrey, England; has ancient castle, residence of Bp. of Winchester; hop plantations. Pop. (1911) 7365.

FARNWORTH (53° 33′ N., 2° 24′ W.), town, Lancashire, England; cotton-mills; collieries. Pop. (1911) 28,142.

FARO (37° N., 7° 52′ W.), town, Algarve, Portugal; fruit, cork, fish. Pop. 12,000.

FAROE ISLANDS, see FAEROE.

FARQUHAR, GEORGE (1678–1707), Eng. dramatist; was for some time an actor; first play was *Love and a Bottle* (1698), followed by *The Constant Couple, Sir Harry Wildair, The Inconstant, The Recruiting Officer,* and *The Beaux' Stratagem,* his most successful play; dramas well constructed, humorous and sprightly: *Best Plays* in Mermaid Series.

FARR, WILLIAM (1807–83), Eng. medical statistician.

FARRAGUT, DAVID GLASGOW (1801–70), Amer. admiral; entered navy, 1821; served several years in Mediterranean; remained faithful to Union in Civil War; commanded Western Gulf Squadron, 1861; took New Orleans, 1862, Mobile, 1864; admiral, 1866. *Life,* by Mahan (1893).

FARRAR, FREDERICK WILLIAM (1831–1903), Eng. cleric; headmaster of Marlborough, 1871; rector of St. Margaret's, 1876; dean of Canterbury, 1895; wrote religious works and school stories. *Life,* by his son (1904).

FARRAR, GERALDINE (1882–), Amer. soprano; début as Marguerite at Royal Opera House, Berlin, 1901.

FARREN, ELIZABETH (*c.* 1759–1829), Eng. actress; m. 12th Earl of Derby (1797).

FARREN, WILLIAM (1786–1861), Eng. actor.

FARRER, THOMAS HENRY, BARON F. OF ABINGER (1819–99), Eng. statistician.

FARRIER, shoer of horses, or veterinary surgeon.

FARS (30° N., 52° E.), province, on Persian Gulf, Persia; capital, Shiraz; Bushire is principal port; area, *c.* 53,500 sq. miles; interior is mountainous, with long fertile valleys; many salt lakes. Produces corn, rice, fruits, tobacco, opium, hemp, and wines; cattle and sheep reared; manufactures woollen, cotton, and silk goods. Pop. *c.* 1,000,000.

FARTHING, smallest Eng. copper coin; originally of silver; copper f's date from Stewart times.

FARTHINGALE, female hooped petticoat, first worn in England in Elizabeth's reign.

FARUKHABAD, FARRUKHABAD (27° 23′ N., 79° 37′ N.), city and district, Agra division, United Provinces, India. City is joint municipality with Fategarh; Mahrattas defeated here by Lake, 1804; held by native troops, 1857–58. Pop. 67,338. District forms part of Doab; capital, Fategarh; chief crop, rice. Area, 1685 sq. miles. Pop. 925,812.

FASANO (40° 50′ N., 17° 20′ E.), town, Bari, Italy; olive oil.

FASCES, bundles of birch or elm rods, from which an axe-head projected, carried by *lictors* before Roman magistrates.

FASCIA, in arch., a flat band, portion of the architrave.

FASCINATION, term applied in botany to peculiar growth, which sometimes appears in plants, characterised by flattening of growing point and consequent irregularity of structure.

FASCINE, long cylindrical bundle of sticks, closely bound together, used in fortification and military engineering.

FASHION, see COSTUME.

FASHODA (9° 55′ N., 32° 10′ E.), town, on White Nile, Egyptian Sudan; occupied by Fr., July 1898; surrendered to Kitchener, Nov. 1898; modern Kodok.

FASTI, in ancient Rome, days on which it was permissible to transact business (as opposed to *nefasti*); lists of these days being published in Forum, word came to mean 'calendar,' which included sacred and historical Fasti.

FASTING.—Fasting from religious motive is found in practically all religions, and is often regarded as the invariable and inseparable accompaniment of piety. It has been suggested that it originated as a preparation for the eating of sacrificial food; or it may have been considered as in itself an act of worship, or as a means of subjecting the physical to the spiritual faculties. F. at stated times was practised by Hindus, Parsees, Greeks, Romans; in Egypt there seem to have been no obligatory general fasts, but those about to be initiated into the religious mysteries of Isis and

Osiris were obliged to practise rigorous abstinence beforehand. Among the Jews f. was important, and on the 10th day of the 7th month was compulsory for whole nation, disobedience being punishable by death. Other compulsory fasts were afterwards ordained to commemorate certain national disasters, and seem to have been generally observed.

In the time of our Lord a great number of fasts were held; and although Christ Himself neither required nor forbade His disciples to fast, the Church has ordained many f. seasons for its members. Church of England does not insist on the observance (though the Book of Common Prayer includes a 'Table of the Vigils, Fasts, and Days of Abstinence to be observed in the year'), and in Scotland it is practically unknown among members of Presbyterian churches. The Gk. Church has a great number of fasts, which are strictly observed; and the R.C. Church has, besides the vigils of certain Feasts, the great fast in Lent, weekly abstinence from meat on Fridays, and four annual fasts, called the Quatembers, of three days in one week each. Among Muhammadans f. is compulsory in the month of Ramadan.

In Scotland *Fast days* are held in the week preceding Communion, but much of their religious character has gone.

Dr. Tanner and Succi went forty days without food; Jacques in 1891 fasted for fifty days, but in all cases water was taken daily.

Nelson, *Fasts and Festivals of Church of England* (1810).

FASTOLF, SIR JOHN (d. 1459), Eng. soldier, distinguished in Fr. wars; gov. of Bastille, 1420; regent of France, 1422; won victory at *Rouvray*, 1429; in some respects original of Shakespeare's Falstaff.

FAT, natural oils in plants and animals; most important are olein, stearin, palmitin.

FATA MORGANA, phenomenon seen in Strait of Messina; similar to mirage (*q.v.*).

FATALISM, doctrine of inevitable predetermination.

FATEHGARH, cantonment, 3 miles E. of Farukhabad; has Government gun-carriage factory; European population massacred, 1857. Pop. *c.* 13,000.

FATEHPUR (25° 55′ N., 80° 53′ E.), town and district, Allahabad, United Provinces, India. Town contains two fine mosques; agricultural trade. Pop. 19,281. District forms part of Doab. Area, 1618 sq. miles. Pop. 686,391.

FATEHPUR SIKRI (27° 5′ N., 77° 42′ E.), town, Agra district, United Provinces, India; former capital of Mogul Empire, founded by Akbar, 1569; remains of magnificent mosque and other ruins.

FATES, in classical mythology were represented by three women: Clotho, who spun the thread of life; Lachesis, who assigned to man his lot in life; Atropos, who cut the thread.

FATHER, male parent; one who begets, also one who originates; name applied to God, to the Pope, to priests of R.C. Church; to the Early Christian writers, known as 'the apostolic fathers,' who were contemporary with, or immediately followed, the apostles; senior member of a society, parliamentary body, etc. The term, 'f. of comedy,' has been applied to Aristophanes; 'f. of tragedy,' to Æschylus; 'f. of Eng. poetry,' to Chaucer; 'f. of Eng. prose,' to Roger Ascham. See FAMILY.

FATHERLASHER, see BULLHEADS.

FATHERS OF THE CHURCH, Early Christian teachers and writers renowned for saintliness and orthodoxy. The *patristic* period is by some writers continued to XIII. cent. in Latin Church, and to Council of Florence (1441) in Gk. Church, but is more generally considered to mean period from time of Apostolic Fathers (II. cent.) till rise of schoolmen in Middle Ages, ending for Gk. Church with John of Damascus (*c.* 756) and for Latin Church with Gregory the Great (d. 604); it is usually subdivided into periods before and after Council of Nicæa, 325 A.D. *Ante-Nicene* fathers include: Greek—Justin Martyr, Irenæus, Athenagoras, Clement of Alexandria, Hippolytus; Latin—Tertullian, Minutius Felix, Cyprian. *Post-Nicene* fathers include: Greek — Eusebius, Athanasius, Basil, Cyril of Jerusalem, Gregory Nazianzen, John Chrysostom, Cyril of Alexandria, John of Damascus; Latin—Ambrose, Jerome, Augustine, Gregory the Great. Farrar, *Lives of the Fathers* (1889); Series of *Fathers for Eng. Readers* (S.P.C.K.).

FATHOM, nautical measure (6 ft.) of depth.

FATIMITES, FATIMIDES, dynasty descended from Ali and Fatima, dau. of prophet Muhammad, of which chief members were: AL-MAHDI 'OBAIDALLAH (909–33), caliph of Tunis; conquered N. Africa. AL-QA'IM MUHAMMAD (933–45) gained Sicily. MOIZZ ABŪ TANĪM MA'ADD (969–75) conquered Egypt; founded Cairo. AZIZ ABU MANSŪR NIZĀR (975–96) extended N. African possessions. HAKIM (996–1020) persecuted Christians; gave impetus to Crusades. ZAHIR (1020–35) lost and regained Syria. MOSTANSIR (1035–94) lost Cairo to Turks; afterwards recovered. MOSTA'LI (1094–1101); possessions in Palestine lost to Franks. AMIR (1101–30) lost Tyre to Franks; assassinated. ZĀFIR (1149–54) lost Ascalon; murdered. 'ADID (1160–71), last F. caliph, deposed and died, 1171, when new dynasty was founded by vizier Saladin. See EGYPT.

FAUBOURG, Fr. equivalent for suburb; applied to various parts of Paris absorbed by that city.

FAUCES, the passage between the mouth and the pharynx, the soft palate being above and the root of the tongue below, while at the sides are the pillars of the f., with the tonsils between them.

FAUCHER, LÉONARD JOSEPH (1803–54), Fr. journalist and politician; minister of public works under Louis Napoleon; subsequently minister for interior; wrote on economics.

FAUCHET, CLAUDE (1529–1601), Fr. antiquary and historian.

FAUCHET, CLAUDE (1744–93), Fr. ecclesiastic, at court of Louis XVI., but sympathised with Revolution; protested against king's execution, and himself guillotined.

FAUCIT, HELENA SAVILLE (1817–98), Eng. actress and author; famous for Shakespearean impersonations; m. Sir Theodore Martin; wrote *Shakespeare's Heroines*, etc.

FAUJAS DE SAINT-FOND, BARTHÉLEMY (1741–1819), Fr. geologist; took up study of law, but abandoned profession; investigated rocks of the Alps; as assistant commissioner of mines travelled through Europe studying nature of rocks.

FAULT, geological term denoting a fracture in the strata which has also a displacement of deposits on either side of the fracture. F's, which are found in rocks of all kinds and ages, may be of a simple or compound nature, *i.e.* there may be the one single f., or the single original f. may be accompanied by minor f's branching off the main one like branches of a tree. The cause of f's is at present unknown, although there have been many suggestions. A sudden yield of strata along a f. line causes an earthquake, with which phenomena f's are therefore directly connected. Numerous f. lines are shown on geological maps.

FAUNA, animals of any region.

FAUNTLEROY, HENRY (1785–1824), Eng. banker; hanged for forgery.

FAUNUS (classical myth.), the Rom. god of agriculture and of shepherds; later identified with the Gk. Pan (*q.v.*).

FAURE, FRANÇOIS FÉLIX (1841–99), Pres., Fr. Republic; shipowner at Le Havre; entered Parliament and became Colonial Minister; Pres., 1895–99.

FAURÉ GABRIEL (1845–) Fr. musical composer of great originality; cantata *The Birth of Venus* produced at Leeds Festival, 1898.

FAURIEL, CLAUDE CHARLES (1772–1844), Fr. littérateur; private sec. to Fouché, 1799; resigned post to devote himself to letters; principal work,

Histoire de la Gaule Méridionale sous la Domination des Conquérants Germains.

FAUST, Faustus, a character around whom much legend has crystallised. Dr. John Faustus is said to have been b. at Knittlingen, in Württemberg, and to have d. about 1540. By most accounts he was a wandering necromancer, who lived by his wits, and there are a number of references to him by contemporaries. The earliest pub. account of the F. story was that of Johann Spies, issued at Frankfurt, in 1587. The story runs that F., the learned doctor, sold his soul to the devil (Mephistopheles), who restored his lost youth and permitted him to enjoy all kinds of worldly pleasures for twenty-four years, at the end of which time he was carried to Hell. An Eng. version appeared some time after 1588, and upon this Christopher Marlowe founded his great tragedy (first played in 1594; pub. 1604). Goethe's masterpiece, conceived upon somewhat more ambitious lines, was pub., pt. i., 1808; pt. ii., 1831. Musical works on F. story have been composed by Gounod, Berlioz, and Boito.

FAUSTINA (d. 141), wife of Emperor Antoninus Pius. Her dau., Faustina (d. 175 A.D.), was wife of Emperor Marcus Aurelius, who was devoted to her.

FAVARA (37° 15′ N., 13° 37′ E.), town, Girgenti, Sicily; sulphur mines. Pop. 20,398.

FAVART, CHARLES SIMON (1710-92), Fr. dramatist; wrote vaudevilles and comic operas: *Le Coq du village, Annette et Lubin, Les Trois Sultanes,* and *Ninette à la Cour.* Madame F. was a noted actress.

FAVERSHAM (51° 19′ N., 0° 52′ E.), market town, river port, Kent, England; remains of abbey founded by King Stephen; important oyster fisheries; gunpowder mills. Pop. (1911) 10,619.

FAVRAS, THOMAS DE MAHY, MARQUIS DE (1744–90), Fr. soldier; on Royalist side at Revolution; tried to aid Louis XVI.; arrested, 1789; hanged, 1790.

FAVRE, JULES CLAUDE GABRIEL (1809–80), Fr. politician; actively participated in revolutions of 1830 and 1848; leader of Republican party, 1863; Foreign Minister on dissolution of Empire, but resigned.

FAVUS, skin disease, occurring on the scalp and sometimes on other parts of the body, forming yellow, irregular, cup-shaped crusts, with a mousy smell, caused by the growth of a fungus, and usually continuing for several years. The treatment is to remove the crusts with a starch poultice, clean the part thoroughly, and apply formaldehyde, dilute carbolic acid, or similar parasiticides.

FAWCETT, HENRY (1833–84), Eng. political economist; b. Salisbury; ed. King's Coll. School, London, and Cambridge; lost eyesight, 1858; prof. of Political Economy, Cambridge, 1863; M.P. for Brighton, 1865; took leading part in movements for abolition of religious tests at the univ's, advocacy of compulsory education, preservations of commons and open spaces, and amelioration of condition of natives of India. His enthusiasm for India gained for him title of 'member for Hindustan'; F. worked for representation of women in political affairs; Postmaster-General in Gladstone's administration, 1880; initiated parcels post, sixpenny telegrams, savings bank, and postal orders. His wife, **Millicent Garrett F.** (1847–), wrote *Political Economy for Beginners* (1870), *Life of Queen Victoria* (1895), etc.; ardent advocate of votes for women.

Leslie Stephens, *Life of Henry Fawcett* (1885).

FAWCETT, JOHN (1768–1837), Eng. actor.

FAWKES, FRANCIS (1720–77), Eng. clergyman, poet, and translator.

FAWKES, GUY (1570–1606), Eng. conspirator; became zealous Catholic, acting as agent of Span. party in England; fought for Spain in Netherlands; returned to England at Catesby's invitation to assist in Gunpowder Plot, 1604; arrested in cellar beneath Parliament House, Nov. 4, 1605; tortured until revealed conspirators' names; and hanged.

FÁY ANDRÁS (1786–1864), Hungarian poet and novelist.

FAYAL (38° 23′ N., 28° 48′ W.), one of Azores Islands; chief town, Horta; exports fruit. Pop. 22,385.

FAYETTEVILLE (36° 4′ N., 94° 4′ W.), city, summer resort, Arkansas, U.S.A.; contains state Industrial Univ.; flour-mills, lumber manufactures. Pop. (1910) 4471.

FAYETTEVILLE (35° N., 78° 45′ W.), city, N. Carolina, U.S.A., on Cape Fear River; cotton and silk factories. Pop. (1910) 7045.

FAYRER, SIR JOSEPH, Bart. (1824–1907), Eng. physician; surgeon in Lucknow Residency during the Mutiny (1857); prof. of Surgery in Calcutta Medical Coll. (1859); pres. of the India Office Medical Board (1874); author of works on Ind. medical subjects.

FAYUM (29° 22′ N., 30° 55′ E.), province, Upper Egypt; area, *c.* 500 sq. miles; well watered and fertile, a portion in N. being occupied by Lake Kirket-el-Kerun (ancient Mœris); inhabitants chiefly agriculturists; principal products, fruit, cereals, rice, cotton. Pop. 441,583. Chief town, **Fayum,** pop. 37,320.

FAZOGLI, Fazokl (11° 15′ N., 34° 50′ E.), district, Anglo-Egyptian Sudan, on both banks of Blue Nile; exports gold, tobacco. Pop. *c.* 500,000.

FEAR, CAPE (33° 48′ N., 77° 59′ W.), southerly point, N. Carolina, U.S.A.

FEARNE, CHARLES (1742–94), Eng. jurist.

FEASTS, Festivals, are occasions periodically set apart for mourning or rejoicing, or in celebration of some deity, saint, hero, or special event. Such f's are common to all peoples and all countries. The ancient Egyptians had their f's of the Dead, and others in honour of Isis, Osiris, etc. The Greeks followed with their two early f's—the harvest and the vintage—but these were soon increased by the addition of f's in celebration of innumerable deities, out of which arose the Olympic, Nemean, Pythian, and Isthmian games. The Romans, imitating the Greeks, had their Lupercalia, in honour of Pan; Saturnalia, in honour of Saturn, and numerous other f's.

The Hindus observe many f's, among the more important being Pongal, Holi, Dasahara, and Dipavali; these had their origin in the changes of the seasons, but became identified with certain gods and goddesses. Of the Muhammadan f's may be mentioned Muharram, commemorating the martyrdoms of Ali and his sons, Hasan and Husain; and Ramazan, sacred as the month in which Muhammad returned from his meditation. Amongst the Jewish celebrations may be mentioned the Passover and the F. of Tabernacles. Christian peoples honour Christmas, or the Nativity, Easter, Whitsuntide, Trinity Sunday, besides numerous days devoted to the memory of saints and martyrs. There are besides several f's to which a more secular and local interest attaches, *e.g.* St. David's Day (March 1); St. Patrick's Day (March 17); St. George's Day (April 23); St. Andrew's Day (Nov. 30); Empire Day, May 24; in Canada, Dominion Day (July 1); in Australia, Anniversary Day (Jan. 22 or 26); in S. Africa, Union Day, May 31; in France, the *Fête nationale* (July 14); in America, Independence Day (July 4).

FEATHER.—Feathers are elaborate structures possessed only by one group of animals, namely, birds, and each is derived primarily from a small, hollow, epidermal *papilla,* whose centre is occupied by a core of more internal tissue. The epidermis produces the f. itself, whilst the pulp, which nourishes the developing f., and remains as a shrunken mass in the mature quill, is derived from the central portion. A mature f., like the large f's from the wing of a goose, consists of two main parts, the quill or *rachis,* and the closely packed lateral branches or *barbs.* The quill is grooved on the under surface, and contains two apertures, one basal, through which the f. derived nourishment when immature, the other situated on the under surface in the neighbourhood of the lowest barbs. Each barb produces smaller barbs or *barbules* on either side, and

these again terminate in minute hooks or *barbicels*. Apart from the lowest barbs, which are imperfect, the barbules, by means of their hooklet systems, produce a strong and elastic structure, impervious to air, and capable owing to its concave under-surface of resisting great pressure from below. Most f's bear, near the base, a small additional structure termed the *after-shaft*. Where the system of hooklets is imperfect, a softer, more downlike f. is produced, as in the ostrich, the *down* which covers the duckling and chicken, and also constitutes an important part of the mature plumage of many birds, being somewhat similar in character, though it may consist merely of a small apical tuft of fluffy matter. Minute hair-like structures, termed *filoplumes*, are often found surrounding the bases of the larger f's, as in the goose, and these either branch very little, or not at all. The f's of the heron are peculiar in that they shed a dry, greasy substance termed *powder-down*. F's are believed to have evolved from the reptilian scale, and are essentially similar in development.

F's form an important article of commerce, the value of imports into the U.K. exceeding two millions sterling. Many f's are made into boas, whilst ostrich f's and the plumage of tropical birds are much used in trimming hats. The inordinate use of birds' plumage for personal adornment led to a strong humanitarian reaction against the wholesale destruction of birds this involved, and the wearing of ospreys was forbidden at Court. An attempt to obtain parliamentary legislation (1908) restricting the importation of plumage was unsuccessful. The smaller f's of poultry and game birds are used to stuff cushions and beds, quilts being stuffed with the delicate down of the eider-duck. The quills are used for pens, toothpicks, and paint-brushes.

FEATHER GRASS (*Stipa pennata*), Brit. garden plant having feathery awns; Esparto is of the genus.

FEATHER STARS, see ECHINODERMATA.

FEATHERSTONE (53° 42′ N., 1° 20′ W.), town, W. Riding, Yorkshire, England; coal mines. Pop. (1911) 14,377.

FEATLEY, DAVID, FAIRCLOUGH (1582–1645), Anglican Divine, in Westminster Assembly.

FEBRONIANISM, Ger. R.C. movement which aimed at establishing independence of national churches, and opposed pontifical claims. System was first proclaimed in 1763 by Johann Nikolaus von Hontheim in his *De Statu Ecclesiæ et legitima potestate Romani pontificis*, pub. under pseudonym, 'Justinus Febronius,' whence name.

FEBRUARY (Lat. *Februarius*), 2nd and shortest month of the modern year; contains 28 days, and in leap years 29; amongst the Romans it was the feast of expiation and purification, and the month in which the Lupercalia were held. Candlemas Day (2nd) and St. Valentine's Day (14th) occur during this month.

FÉCAMP (49° 46′ N., 0° 22′ E.), seaport, watering-place, Seine-Inférieure, France; has XIII.-cent. Benedictine abbey church; 'Benedictine' liqueur distillery; deep-sea fisheries; various manufactures. Pop. 15,400.

FECHNER, GUSTAV THEODOR (1801–87), Ger. philosopher and psychologist; based metaphysics on natural science, and proceeded by methods of induction and analogy; founded psycho-physics, and discovered psycho-physical law of relation between stimulus and sensation.

FECHTER, CHARLES ALBERT (1824–79), Anglo-Fr. actor; famed in England and America for Shakespearean impersonations.

FECKENHAM, JOHN (d. 1585), Eng. cleric; became Abbot of Westminster, 1556; sent to Tower in 1560 for refusing to take Oath of Supremacy; most of remaining life spent in captivity.

FEDERALISTS, Amer. political party which, under leadership of Alexander Hamilton and John Adams, controlled national affairs and carried out various reforms between 1789 and 1801, after which it lost power, partly owing to hostility between leaders. By 1820 it had practically ceased to exist. See UNITED STATES: *History*.

FEDERATION, CONFEDERATION, the union of several states under one government so that they stand before the world as one united body, although the several states reserve certain departments of administration for their own control. A recent instance is the Commonwealth of Australia, in which everything not specifically reserved for the Federal Government is under jurisdiction of the several States; while in the Dominion of Canada everything is under jurisdiction of the Federal Government except what is specifically reserved for the several governments of the Provinces forming the Dominion. Other examples are the United States of America, the German Empire, the Swiss Republic, Argentine Republic, Brazil, Mexico, Venezuela, and Federated Malay States. Ancient federations were the Ætolian and Achæan Leagues in Greece; and the Lycian League in Roman times. A closer form of Union than Federation is *Unification* (*e.g.* the Union of 1707 between England and Scotland and the Union of South Africa, 1910), which involves complete legislative union, there being only one central Government and one supreme Parliament, sovereignty and legislative rights being abandoned by the individual States or kingdoms which are merged in such a union.

Hamilton, *The Federalist*; Oliver, *Life of Alexander Hamilton*.

FEDERICI, CAMILLO (1749–1802), Ital. playwright; prolific writer of popular comedies.

FEE, the charges of a professional man; the educational charges at a univ. or coll.; land held in 'fee simple' (*i.e.* freehold), by which the holder is the absolute owner, and may do with it as he pleases. The opposite of this is land which is 'entailed,' *i.e.* inalienable land which descends to the heirs of his body and their heirs.

FEHMARN, FERMERN (54° 28′ N., 11° 10′ E.), island in Baltic, belonging to Prussian province of Holstein; separated from mainland by F. Sound. Pop. *c.* 10,000.

FEHMIC COURTS, mediæval Ger. courts, which became an important institution in XII. cent.; attained greatest degree of power in Westphalia, where they continued to exist (after being abolished elsewhere in XVI. cent.) till 1811, when Jerome Bonaparte put an end to them. Pres. of court was app. by overlord of juridical centre.

FEHRBELLIN (52° 50′ N., 12° 46′ E.), town, Brandenburg, Prussia, Germany; scene of defeat of Swedes by Frederick, Great Elector, 1675.

FEITH, RHIJNVIS (1753–1824), Dutch poet and novelist; wrote didactic and lyrical poems; *Ferdinand and Constantia*, and other popular novels.

FELANITX, FELANICHE (39° 29′ N., 3° 12′ E.), town, island of Majorca, Spain; earthenware; wine.

FELDKIRCH (47° 13′ N., 9° 36′ E.), town, Vorarlberg, Austria-Hungary; occupies strong strategic position. Pop. (1910) 5057.

FÉLIBRIGE, Fr. association (founded, 1854) for reviving Provençal speech and lit. See PROVENCE.

FELIDÆ, see CAT FAMILY.

FELIS, see under CAT FAMILY.

FELIX, name of 5 popes: FELIX II. raised to papal chair during exile of Liberius, 356–57, on whose return F. retired.—FELIX III. (483–92) repudiated deed of union pub. to end quarrel between Church and Monophysites.

FELIX (VIII. cent.), bp. of Urgela in Spain.

FELIX, ANTONIUS (fl. 55 A.D.), Procurator of Judæa, before whom St. Paul preached.

FELIX OF VALOIS (1127–1212), founder of order of Redemptionists or Trinitarians.

FELIXSTOWE (51° 58′ N., 1° 22′ E.), seaside resort, at mouth of Orwell, S.E. coast, Suffolk, England. Pop. (1911), with Walton, 8667.

FELL, JOHN (1625–86), dean of Christ Church,

Oxford, and bp. of Oxford (1676); Royalist in Civil War; maintained Church services during Commonwealth; after Restoration became canon and subsequently dean of Christ Church, D.D., and royal chaplain (1660); vice-chancellor (1666–69); strict disciplinarian; restored many of the college buildings; did much to promote learning; name associated with Tom Brown's rhyme beginning 'I do not like thee, Dr. Fell.'

FELLÁH (Arabic 'tiller'), Egyptian labourer, descended from, and much resembling, ancient Egyptians; formerly oppressed by Turks.

FELLENBERG, PHILIPP EMANUEL VON (1771–1844), Swiss educationist.

FELLING (54° 57′ N., 1° 34′ W.), town, Durham, England; collieries. Pop. (1911) 25,020.

FELLOW, graduate of a univ., holding a fellowship; member of a learned society; at the older Brit. univ's a f. shares in the government of his coll. and receives an annual payment from its revenues. In other univ's a f. usually receives a fixed sum for a limited period for the purpose of research, etc.

FELLOWS, SIR CHARLES (1799–1860), Brit. archæologist, noted for his discoveries in Lycia.

FELO DE SE, SUICIDE (*q.v.*).

FELONIES, see CRIMINAL LAW.

FELSITE, fine-grained igneous rocks of acid composition, often mixture of quartz and orthoclase, but generally recognised as only a variety of quartz porphyry.

FELSPAR, FELDSPAR (Ger. *feldspat*, field spar), mineral of foliated structure found in nearly all parts of world; hard silicate, constituent of granite, gneiss, and greenstone; in colour, white or pink with pearly lustre; much used in manufacture of porcelain.

FELSTEAD (51° 52′ N., 0° 26′ E.), village, Essex, England; has important public school, founded 1564.

FELT, a matted woollen substance, produced, not by weaving, but by placing numerous layers of hair together and applying pressure by means of heated steam rollers.

FELTON, CORNELIUS CONWAY (1807–62), Amer. scholar; pres. of Harvard; wrote *Greece, Ancient and Modern.*

FELTON, JOHN (d. 1628), Eng. soldier; assassin of Duke of Buckingham; hanged.

FELTRE (46° 1′ N., 11° 54′ E.), town (ancient *Feltria*), Venetia, Italy; bp.'s see; cathedral. Pop. 5314.

FELTRE, MORTO DA (d. 1519), Venetian artist.

FELUCCA, swift, three-masted, lateen-rigged vessel, used in Mediterranean.

FEMERN (54° 28′ N., 11° 10′ E.), island, Baltic Sea, belonging to Germany. Pop. *c.* 10,000.

FENCE, slang term for receiver of stolen property.

FENCING, the art of single combat with swords or other steel hand weapons, in which skill and not sheer force is employed, and in which the importance of time, measure, and guard must be recognised. The principle of keeping time includes reducing all movements to minimum in extent and number; measure means remaining out of easy reach when defending, and attacking only when within easy striking distance; keeping guard is to be so placed that all regular attacks and parries can be made with least expenditure of energy. During the Middle Ages the use of complete suits of mail caused f. to be neglected, but on the subsequent disuse of armour the art was revived.

Scientific swordcraft would seem to have originated in Germany, where there were gilds of f. masters in the XV. cent.; in the following cent. the state of society in Italy was such that skill in single combat was essential, and in that country the rapier style was first introduced; the art was further developed by the Spaniards, whose improvements the Italians afterwards adopted. The Ital. style, with long rapiers, was great practised in Elizabethan England; but in the XV cent. a new school was founded in France, in which the long rapier was superseded by a shorter weapon. The use of this caused the disappearance of the dagger, which up to this time had been considered necessary as an additional weapon. The new style quickly came into favour, and the Ital. method fell into disrepute. Most of the f. terms used in England are derived from Fr. words. Such are the *tierce*, a position in parrying which protects the upper part of the body on the right; *carte*, which protects the left upper part; and the *seconde*, which protects the lower part. A *riposte* is a quick return thrust after a parry, and a *remise*, the second of two thrusts given on the same lunge. A beat with the right foot is called an *appel*, and a beat of the blade against that of the opponent is known as a *battement*; while a *flanconnade* is a thrust made at the opponent's side under his arm.

The weight of the *sabre* (or sword) is against its use for thrusting in fencing, and leaves it with few of the powers of the rapier for attack or defence. Nevertheless its point makes it a valuable weapon for a thrust on occasions. The cut, the guard, and the point are the three actions both in sabre-fencing and in sabre against lance or bayonet. In one-third of the blade from the point the greatest force of the blow is concentrated (and the sabre is expressly fashioned for cutting by a sharp and heavy blow); this is called the *centre of percussion*, and is relied upon for attack. In about a third of the blade from the hilt, the *forte*, lies the strength for defence.

Carl Thimm, *Bibliography of Fencing and Duelling*; Chapman, *Foil Practice.*

FÉNELON, BERTRAND DE SALIGNAC (1523–89), Fr. diplomatist; ambassador to England at period of St. Bartholomew massacre.

FÉNELON, FRANÇOIS DE SALIGNAC DE LA MOTHE (1651–1715), Fr. ecclesiastic and author; s. of the Comte de F.; became tutor to the Duke of Burgundy, and subsequently abp. of Cambrai; his sympathy with, and defence of, Madame Guyon, the Quietist, involved him in prolonged theological controversy, and his didactic novel, *Télémaque*, gave offence to Louis XIV. His other works include a treatise on the *Education of Girls*, *Dialogues of the Dead*, *Maxims of the Saints.* He was notable for the dignified austerity of his life, his gracious manners, and for his benevolence and charity; his style is rich, eloquent, and full of classical allusions. *Life*, by Viscount St. Cyres (1903).

FENESTELLA, Rom. historian of the age of Tiberius.

FENESTRATION, term in arch., relating to the arrangement of window spaces.

FENG-TIEN, SHENG-KING (*q.v.*).

FENIANS, brotherhood of Irishmen, formed in New York by John O'Mahony in 1857, to secure independence of Ireland; spread rapidly among Irishmen all over world; not only made various unsuccessful attempts to raise insurrection in Ireland, but also essayed invasion of Canada in 1866 and 1870; became a secret society in 1872. In 1882 the Phœnix Park Murders, and in 1883–85 the existence of a society advocating use of dynamite, showed a development of Fenian spirit.

The Fenian Movement (Irish Library).

FENNEL (*Fœniculum*), plant with yellow aromatic flowers; used in sauces as carminative and condiment; a genus of L. Umbelliferæ.

FENNER, DUDLEY (1558–87), Eng. theologian, an able expounder of Puritan theology.

FENNY STRATFORD (52° N., 0° 45′ W.), market-town, Buckinghamshire, England. Pop. (1911) 5171.

FENRIR (Norse myth.), monster wolf; offspring of Loki (*q.v.*).

FENS, district, E. of England, embracing parts of Lincolnshire, Northamptonshire, Huntingdonshire, Cambridgeshire, and Norfolkshire; flat, marshy tract of land round Wash, intersected by rivers and channels. Principal rivers which flow through F. into Wash are Gt. Ouse, Witham, Welland, Nen, and Cam. Preservation of F. depends on preservation of river-

banks, hence earthen embankments to protect it from sea and rivers. Water is drained into rivers by steam-pumps; Romans said to have been first to undertake drainage and preservation of F., and under them land became fertile; later, owing to neglect and incursions of sea, F. converted into morass; most successful attempt at drainage was Earl of Bedford's (XVII. cent.), in district called Bedford Level. On islands of firmer ground are monastic buildings. In Lincolnshire F. are some fine parish churches. Cathedrals of Ely and Peterborough and church of King's Lynn most noteworthy ecclesiastical buildings. Hereward the Wake had his camp of refuge on F.; now converted into a healthy grazing and agricultural district; has considerable barge traffic.

Wheeler, *History of Fens of S. Lincoln* (2nd ed., 1897).

FENTON (52° 49′ N., 2° 12′ W.), town, Staffordshire, England; china and earthenware; incorporated in county borough of Stoke-on-Trent, 1910.

FENTON, EDWARD (fl. 1577–1603), Eng. navigator; served under Frobisher, and commanded *Mary Rose* against Armada.

FENTON, ELIJAH (1683–1730), Eng. poet and translator; associated with Pope in trans. of *Odyssey*.

FENTON, SIR GEOFFREY (1539–1608), Eng. politician and author.

FENTON, LAVINIA (1708–60), Eng. actress; m. 3rd Duke of Bolton.

FENWICK, SIR JOHN (d. 1697), Eng. general; implicated in Jacobite plots against William III.; beheaded.

FEOFFMENT, O.E. conveyance of land by 'livery of seisin,' in which one of the acts of the feoffor was to deliver a clod of earth, or some such trifle, to the feoffee. Before the date of the Statute of Frauds (1678) a deed was unnecessary.

FERDINAND I. (1793–1875), Austrian emperor; intermittently insane; abdicated in 1848, when his nephew Francis Joseph became emperor.

FERDINAND I.-III., Holy Roman emperors.

FERDINAND I. (1503–64), Emperor of Holy Rom. Empire; b. Spain; m. Anna, sister of Louis of Bohemia and Hungary, at whose death he claimed both crowns; king of Bohemia, 1526; opposed in Hungary by John Zapolya, who was aided by Turks; succ. his bro., Charles V., as emperor, 1558; tried to reconcile his R.C. and Prot. subjects.

FERDINAND II. (1578–1637), Emperor of Holy Rom. Empire; gov. of Styria, Carinthia, and Carniola in 1596; king of Bohemia, 1617; of Hungary, 1618; emperor, 1619. His quarrel with Frederick V., Elector Palatine, in whose favour he was deposed in Bohemia in 1618, was opening of Thirty Years War. F. banished Protestants in 1627; restored Church lands by Edict of Restitution, 1629; made Treaty of Prague, 1635.

FERDINAND III. (1608–57), Emperor of Holy Rom. Empire; king of Romans, 1636; emperor, 1637; continued Thirty Years War till 1648; arranged Polish Alliance to combat Sweden.

FERDINAND I.-IV., kings of Naples; F. IV. of Naples became F. I. of the Two Sicilies (*q.v.*).

FERDINAND I. (1423–94), king of Naples; defeated John of Anjou; warred against Turks, 1480–81; excommunicated in 1489 by Pope Innocent VIII.

FERDINAND II. (1469–96), king of Naples (1495).

FERDINAND IV. (1751–1825), king of Naples; succ. on his f's accession to throne of Spain, 1759. Influenced by his wife, Maria Carolina, he waged war against France, 1796, but was defeated; formed alliance with Austria against France, 1805. After *Austerlitz*, Napoleon conquered Naples and gave it to Joseph Bonaparte. F. again fled to Sicily, but returned after Napoleon's downfall; rest of life passed in career of despotism and merciless persecution.

FERDINAND I. and II., kings of Leon; Leon was united with Castile by Frederic the Great and finally joined in 1230, so that the kings of Leon were also kings of Castile (*q.v.*).

FERDINAND I., THE GREAT (d. 1065), king of Castile; famed for military triumphs and for individual piety. His death was followed by civil conflict between his three sons, amongst whom he divided his possessions.

FERDINAND II. (d. 1188), king of Leon; noted for soldierly qualities.

FERDINAND I.-IV., kings of Castile; F. V. of Castile became F. V. of Spain (*q.v.*).

FERDINAND III., THE SAINT (1199–1252), king of Castile; famed for wars with the Moors.

FERDINAND IV. (d. 1312), king of Castile; weak and insignificant ruler.

FERDINAND V.-VII., kings of Spain; descended from kings of Castile (*q.v.*).

FERDINAND V., THE CATHOLIC (1452–1516), king of Spain; m. Isabella (*q.v.*) of Castile, his cousin, 1469; with her succ. to throne of Castile, 1474 (as Ferdinand V.); as Ferdinand II., succ. his f., John I., as king of Aragon, 1479; defeated Moors; annexed their last stronghold, Granada, 1492; Navarre, 1515; united whole of Spain under his sway, and forwarded voyages of Columbus. See SPAIN: *History*.

Prescott, *History of Reign of Ferdinand and Isabella*.

FERDINAND VI. (1713–59), king of Spain (1746); of a pacific, shy, and melancholy temperament.

FERDINAND VII. (1784–1833), king of Spain; proclaimed king in 1808 on abdication of f., Charles IV.; soon afterwards forced by Napoleon to abandon claim to Span. throne; restored to throne, 1814; ruled despotically; re-established Inquisition; declared incapable of governing, 1823; in character false and vicious.

FERDINAND I. and II., kings of the Two Sicilies; F. I. of the Two Sicilies was F. IV. of Naples.

FERDINAND II. (1810–59), king of the Two Sicilies; despotic ruler; popular discontent evinced by attempted risings in 1837, 1841, 1844, 1847; general rising in Sicily, 1848, was suppressed by bombardments; hence his nickname—*Bomba*.

FERDINAND I. (1373–1416), king of Aragon.

FERDINAND III. (1769–1824), Grand Duke of Tuscany; Elector of Salzburg, 1802; of Wurzburg, 1805; finally restored to Tuscany, 1815.

FERDINAND I. (1345–83), king of Portugal.

FERDINAND (1577–1650), elector-abp. of Cologne.

FERDINAND, DUKE OF BRUNSWICK (1721–92), Prussian soldier; served in Seven Years War; distinguished at *Prague*; defeated French at *Crefeld* and *Minden* (1758, 1759); field-marshal, 1758.

FERDINAND, MAXIMILIAN KARL (1861–), tsar of Bulgaria, s. of Prince August of Saxe-Coburg and Gotha; succ. Prince Alexander of Battenburg, who abdicated (1887); assumed title of king (1911); m. Marie Louise (d. 1899), dau. of Duke of Parma; m. Princess Eleonore of Reuss-Köstritz (1908); heir, Prince Boris (b. 1894). F. was commander-in-chief of forces of Balkan Allies in Turco-Balkan War (*q.v.*). See BULGARIA.

FERENTINO (41° 41′ N., 13° 16′ E.), town (ancient *Ferentinum*), Rome, Italy; bp.'s see. Pop. 8072.

FERENTINUM (c. 42° 40′ N., 12° 7′ E.), ancient town, Etruria, Italy; birthplace of Emperor Otho (32 A.D.).

FERETORY, in arch., a shrine or memorial chapel.

FERGHANA (40° N., 71° E.), province, Russ. Turkestan, in valley of Syr-Daria; formed in 1876 from khanate of Khokand; fertile, well-watered plain, enclosed by mountains; produces large crops of grain, cotton, fruit; coal, iron, lead, and silver found; inhabitants, chiefly agriculturists, consist mainly of Sarts, Uzbegs, and Kara-Kirghiz; principal towns, Marghelan, Khokand, Namangan, and Andjan. Area, 35,446 sq. miles. Pop. (1910) 2,034,200.

FERGUS FALLS (46° 18′ N., 96° 5′ W.), city, on Red River, Minnesota, U.S.A.; flour-mills; woollen factories. Pop. (1910) 6887.

FERGUSON, ADAM (1723–1816), Scot. philosopher and historian; prof. of Natural Philosophy,

Edinburgh, 1759; Moral Phil., 1764; wrote *History* ... philosophical works.

FERGUSON, JAMES (1710–76), Scot. astronomer; b. Keith; studied Edinburgh; went to London (1743), and there lectured on experimental philosophy; principal work, *Astronomy explained upon Newton's Principles.*

FERGUSON, ROBERT, THE 'PLOTTER' (*c.* 1637–1714), anti-Catholic agitator under Charles II., and author of *History of the Revolution* (1706).

FERGUSON, SIR SAMUEL (1810–86), Irish poet and antiquary.

FERGUSSON, JAMES (1808–86), Scot. author; wrote a *History of Architecture,* and works on kindred subjects.

FERGUSSON, SIR JAMES (1832–1907), Brit. statesman; Postmaster-General (1891–92); gov. of S. Australia (1868), New Zealand (1873–75), Bombay (1880–85).

FERGUSSON, ROBERT (1750–74), Scot. poet; b. Edinburgh; ed. St. Andrews; d. in Edinburgh madhouse. His Scots poems exercised a marked influence on Burns, who borrowed from him the measure since known as the 'Burns stanza.' F.'s Eng. verses have little merit.

FERGUSSON, SIR WILLIAM, Bart. (1808–77), Scot. surgeon; surgeon in Edinburgh Royal Infirmary (1836); prof. of Surgery in King's College, London (1840); invented several useful surgical instruments, and devised new methods of operative procedure, especially excision of joint as substitute for amputation of a limb.

FERIÆ, Rom. 'free' or festival days, holidays; f. were either special (*imperativæ*), ordered for special occasions; or legal (*publicæ*), and these were periodically recurrent, like the *Saturnalia* (in mid-December), or held when the priests decided, *e.g.* the *Compitalia* (see FEASTS). The term f. is applied ecclesiastically to days of the week except Sunday and Saturday, Monday being f. *secunda.*

FERISHTA, MUHAMMAD KASIM (d. 1611), Persian historian.

FERMANAGH (54° 20′ N., 7° 30′ W.), inland county, Ulster, Ireland; almost divided into two parts by Upper and Lower Loughs Erne; surface generally hilly and undulating, mountainous in W., culminating in Cuilcagh, 2188 ft.; well-wooded, several fertile vales; large tracts uncultivable; limestone, coal, iron, and marble found; principal industry agriculture; pottery works (Belleek); manufactures of coarse linen; chief town, Enniskillen. Area, 715 sq. miles. Pop. (1911) 61,811.

FERMENTATION, a change brought about in various substances, especially organic liquids, by agents called ferments, which are of two kinds: *organised* ferments, or living organisms, bacteria, yeasts, moulds; and *unorganised* ferments or enzymes, or soluble chemical substances. In order to bring about f. by organised ferments the organisms must be alive and growing, and certain conditions are necessary for their growth. Suitable nourishment and sufficient moisture must be present, the temperature must be within a certain limited range, about blood-heat, some of the organisms require the presence of oxygen, while various poisonous substances, *e.g.* acids or alcohols in too great quantity, or antiseptics, will kill them and thus prevent f.

These organisms are either unicellular masses of protoplasm, *bacteria,* which multiply by fission of the cells (see BACTERIOLOGY); or more highly developed cells which multiply by budding, *yeasts*; or still more highly developed organisms, which branch freely and multiply by the formation of special organs, *moulds.* They live on nutritive substances in the liquid and give out products, allied to the unorganised enzymes, which break down the more complicated organic substances in the liquid, *e.g.* sugars, into simpler substances, *e.g.* alcohols and carbon dioxide, this process receiving the name of f. Alcoholic f. is the most important economically, and, *e.g.* in the making of *beer,* it is caused by a yeast (*Saccharomyces cerevisiæ*) acting on solutions of sugars, glucose, or dextrin, extracted from malt, and changing them into alcohol, carbonic acid gas, and small quantities of other substances which give the liquid its special flavour.

The most important unorganised ferment is *diastase,* which is contained in malt, and changes starch into glucose, while others are ptyalin in the saliva, and pepsin in gastric juice, which have much the same properties.

J. R. Green, *The Soluble Ferments and Fermentation* (2nd ed., 1901).

FERMO (43° 11′ N., 13° 43′ E.), town (ancient *Firum*), Italy, 4 miles from Adriatic; cathedral; archbishop's see; trade in grain, silk, and wool; was Rom. colony founded 264 B.C.; remains of Rom. walls. Pop. 16,914.

FERMOY (52° 8′ N., 8° 16′ W.), market town, on river Blackwater, County Cork, Ireland; has R.C. coll.; military barracks; salmon-fishing. Pop. 6126.

FERNANDEZ, ALVARO (fl. 1450), Portug. voyager to W. Africa.

FERNANDEZ, DIEGO (fl. 1545–71), Span. soldier; wrote on Peruvian history.

FERNANDEZ, JOHN (fl. *c.* 1445), Portug. West African explorer.

FERNANDEZ, JUAN (XVI. cent.), Span. navigator; discovered the islands (1563) which bear his name—islands associated with the castaway, A. Selkirk.

FERNANDEZ, LUCAS (XV. cent.), Span. dramatist.

FERNANDINA (30° 40′ N., 81° 36′ W.), city, port entry, Florida, U.S.A.; popular summer and winter resort; cotton and lumber manufactures; large export trade. Pop. (1910) 3482.

FERNANDO DE NORONHA (3° 50′ S., 32° 30′ W.), island in S. Atlantic, off coast of Brazil; penal settlement.

FERNANDO PO (3° 30′ N., 8° 47′ E.), island, W. coast of Africa, in Bight of Biafra; capital is Santa Isabel; coast steep, inland mountainous; principal peak, Mt. Clarence (*Span.* Pico Santa Isabel). Vegetation luxuriant; cocoa, coffee, sugar, tobacco, and vanilla plantations; inhabitants European, Bantus, negroes. Discovered XV. cent. by Portug. navigator Fernão do Po; now under Span. gov.-gen. Area, 780 sq. miles. Pop. *c.* 25,000.

FERNEL, JEAN FRANÇOIS (1497–1558), Fr. natural philosopher and physician, author of several scientific works.

FERNEY (46° 15′ N., 6° 6′ E.), town, Ain, France; associations with Voltaire. Pop. *c.* 2000.

FERNIE (49° 25′ N., 115° 5′ W.), city, Brit. Columbia, Canada, on Canadian Pacific Railway; extensive coal mines.

FERNOW, KARL LUDWIG (1763–1808), Ger. critic and archæologist.

FERNS, see PTERIDOPHYTA.

FEROZEPUR, FIROZPUR (30° 56′ N., 74° 48′ E.), town and district, Punjab, Brit. India, near the Sutlej; contains important arsenal; commercial centre. Pop. 49,341. District: area, 4302 sq. miles; pop. 958,072.

FEROZESHAH (30° 53′ N., 74° 49′ E.), village, Punjab, Brit. India; scene of Brit. victory over Sikhs, Dec. 21, 1845.

FERRAND, ANTOINE FRANÇOIS CLAUDE, COMTE (1751–1825), Fr. statesman and author.

FERRAR, NICHOLAS (1592–1637), Anglican theologian; lived a life of study and devotion.

FERRAR, ROBERT (d. 1555), Eng. martyr and bp; app. to see of St. David's, 1548; accused of heresy under Mary; burnt at Carmarthen.

FERRARA (44° 50′ N., 11° 39′ E.), capital of F. ...vince, N. Italy, 3½ miles S. of Po; cathedral ... XII. cent.) and other fine churches; Castello, ... de Diamanti (XV. cent., containing picture gallery), univ., and library; long flourished under

illustrious house of Este (*q.v.*); celebrated school of painting, XV.–XVI. cent.; birthplace of Tasso and Guarini. Pop. (1911) 95,196. Province: area, 1012 sq. miles; pop. (1911) 300,877.

Noyes, *Ferrara* (Mediæval Town Series).

FERRARA, ANDREA (fl. late XVI. cent.), Ital. sword-maker.

FERRARI, GAUDENZIO (1484–1549), Ital. artist and sculptor; pupil of Leonardo da Vinci; religious subjects.

FERRARI, PAOLO (1822–89), Ital. comic dramatist of the Goldoni school.

FERREIRA, ANTONIO (1528–69), Portug. poet; wrote *Castro*, a tragedy; also elegies, sonnets, etc.

FERRERS, Norman Eng. family, which held large fiefs after Conquest; held earldom of Derby, 1138–1266; barony, 1299–1450, when it passed to Devereux family, afterwards to Shirley, who have been Earls Ferrers since 1711.

FERRERS, LAURENCE SHIRLEY, 4TH EARL (1720–60), hanged at Tyburn for murder of his steward.

FERRET, see WEASEL FAMILY.

FERRI, CIRO (1634–89), Rom. painter; follower of Pietro da Cortona; painter of frescoes, etcher, architect.

FERRI, ENRICO (1856–), distinguished Ital. socialist and criminologist.

FERRIC AND FERROUS SALTS, see IRON.

FERRICYANOGEN, radical, non-existent in free state, forming ferricyanides, *e.g.* potassium ferricyanide ($Fe_2(CN)_{12}K_6$), formed by union of potassium ferrocyanide and chlorine, and used in manufacture of blue dyes (Turnbull's blue).

FERRIER, ARNAUD DU (d. 1585), Fr. diplomatist.

FERRIER, JAMES FREDERICK (1808–64), Scot. philosopher; b. Edinburgh; prof. at Edinburgh and St. Andrews. F. rejected common-sense systems as absorbing philosophy into psychology; began with consciousness involving the ego conscious of itself as present in all its products; held the ego a necessary constituent of the conception of matter.

FERRIER, SUSAN EDMONSTONE (1782–1854), Scot. novelist; pub. anonymously *Marriage* (1818), *The Inheritance* (1824), and *Destiny* (1831). Her books are full of humour and lively descriptions of Scot. life and character. She was a friend of Scott, who thought highly of her work.

FERRO, HIERRO (27° 43′ N., 18° W.), one of the Canary Islands; famous as first meridian chosen by Fr. scientists, 1630.

FERROCYANOGEN, radical, non-existent in free state, forming ferrocyanides, *e.g.* potassium ferrocyanide, formed by union of potassium cyanide and water in iron vessels, and used in manufacture of blue dyes (Prussian blue).

FERROL (43° 29′ N., 8° 13′ W.), fortified seaport; prov. Corunna, Spain; chief Span. naval arsenal; excellent harbour; extensive dockyards; contains naval school; textiles, naval stores, sardine-fishing. Pop. (1910) 26,252.

FERRUCCIO, FRANCESCO (1489–1530), Florentine soldier; took Volterra, 1530; captured at *Gavinana*, and killed by Maramaldo.

FERRY, public passage across a water-space; also the boat used for such purpose. Before bridges became common, the f. was an important means of transit. A famous ferry across the Forth gave its name to the places on either side (N. and S. Queensferry).

FERRY, JULES FRANÇOIS CAMILLE (1832–93), Fr. premier; attacked Jesuits in education bills; responsible for acquisition of Tunisia and general policy of expansion.

FERSEN, FREDERIK AXEL, COUNT VON (1719–94), Swed. soldier and politician; served with distinction in Seven Years War; leader of Hat Party in Sweden from about 1755 onwards; opposed policy of Gustavus III.

FERSEN, HANS AXEL, COUNT VON (1755–1810), Swed. soldier and statesman; served in Finland, 1788; aided Fr. royal family at Revolution; took no part in Swed. Revolution in 1809; killed by mob at funeral of Crown Prince of Sweden.

FERTILISATION, see POLLINATION, REPRODUCTION.

FESA, FASA (28° 53′ N., 53° 43′ E.), town, Fars, Persia; silk manufactures; dates and tobacco. Pop. *c.* 4000.

FESCENNIA (*c.* 42° 20′ N., 12° 30′ E.), ancient city, Etruria; said to give name to ancient Rom. songs. **Fescennine Verses,** early kind of Lat. poetry, employed at harvest festivals. The verses were often of coarse and obscene character.

FESCH, JOSEPH (1763–1839), ecclesiastic, born in Corsica, intimate with Bonaparte family; abp. of Lyons, 1802; cardinal, 1803; Fr. ambassador at Rome, 1804; after fall of Napoleon he lived in Rome; had a fine art collection.

FESCUE (*Festuca*), genus of grasses (*q.v.*); Meadow F., Sheep's F., Tall F., and Hard F. are important pastural grasses.

FESSE, see under HERALDRY.

FESSENDEN, WILLIAM PITT (1806–69), Amer. financier and politician; supported abolition of slavery; member of Peace Congress, 1861; twice chairman of finance committee; sec. of Treasury, 1864–65.

FESSLER, IGNAZ AURELIUS (1756–1839), Hungarian scholar and ecclesiastic; a monk, he later left R.C. Church and became a Lutheran, then a Moravian; in trouble with secular and ecclesiastical authorities for liberal views; wrote several works.

FESTINIOG (52° 58′ N., 3° 56′ W.), town, Merionethshire, Wales; slate quarries. Pop. (1911) 9682.

FESTIVAL, see FEASTS.

FESTOON, garland of flowers, fruit, or leaves, arranged in a curve, for decorative purposes; used also for anything arranged in such manner. In sculpture and arch., an ornamental relief to imitate a real garland.

FESTUS, PORCIUS, Rom. procurator of Judæa, before whom St. Paul was tried 62 A.D. (*Acts* 25).

FESTUS, SEXTUS POMPEIUS (fl. II. cent. A.D.), Lat. scholar; his abstract of Flaccus's *De Verborum Significatione* was edit. by K. O. Müller (1839).

FÉTIS, FRANÇOIS JOSEPH (1784–1871), Belg. musician; prof., Paris Conservatoire; wrote much on music and musicians.

FETISHISM, a word used with varying meaning to signify the cult of inanimate objects, particularly when supposed to be inhabited by some deity or spirit. Fetish is often used for the figure or idol wherein the god resides, also for a charm possessed with the potency of the deity. The W. Africa *ju-ju* is a type of fetish.

Nassau, *F. in W. Africa* (1904).

FETTERCAIRN (56° 51′ N., 2° 35′ W.), village, Kincardineshire, Scotland.

FEU, Scot. legal term denoting the sale of land by means of a perpetual rent, in place of the payment of a capital sum. Since the passing of the *Quia Emptores* statute (1290) such an arrangement has not been possible in England.

FEUCHÈRES, SOPHIE DAWE, BARONNE DE (1795–1840), Eng. adventuress; once a servant, became mistress of the Prince de Condé.

FEUCHTERSLEBEN, ERNST, FREIHERR VON (1806–49), Austrian physician and poet; dean of faculty of medicine, Univ. of Vienna (1844); Under-Sec. of State for Education (1848); author of many medical, philosophical, and poetical works.

FEUDALISM, system of social organisation which arose among the nations of Europe on the disruption of the Rom. Empire. It is primarily an association for purposes of safety, the weaker folk placing themselves under the care of an *overlord*, and surrendering to him their lands, which they subsequently received again on feudal tenure. In return for the protection extended to them by the overlord they did *homage* and swore *fealty* to him, and undertook to serve him

on field of battle; they thus became his followers, living on land allotted to them and looking to him for justice and safety. With the growth of nationalities, local feudal lords became a menace to royal power; but the centrifugal tendencies of the continental systems were modified in England by the statesmanship of William the Conqueror. The system he introduced may be said to represent both the purely feudal European system and that of the former kings of England, although in many respects it differed from both. As the successor of Edward the Confessor, William retained the older administrative and judicial organisation of the country; as the conqueror, he established a system of military organisation, in order to secure the possession of his conquests; and by distributing widely the lands of the more powerful barons, and constituting himself the direct overlord of every freeman in England, compelling each to swear allegiance to him before all intermediaries, he established a more centralised form of government than was possible in France and Germany, where each great feudal lord had a large number of *vassals* who were bound to support him even against the king should occasion arise. Various forms of feudal service due from vassal to overlord included military and court service; *aids* and *reliefs* also had to be paid, and the overlord had rights of *wardship* of heir during minority, and of marriage of heiress. See FRANCE, p. 625 B.

Abdy, *Feudalism* (1890); Round, *Feudal England*; Maitland, *Domesday Book and Beyond*; and standard histories of England, France, Germany, etc.

FEUERBACH, ANSELM (1829–80), Ger. artist; famed for his interpretation of classical subjects.

FEUERBACH, LUDWIG ANDREAS (1804–72), Ger. philosopher; reduced Hegelianism to naturalism; denied immortality. Combining Spinoza's substance and Fichte's Ego, F. held that the only absolute is the sense-endowed man; that only the sensible is real, and that truth is perceived by the educated senses. According to F., pleasure is man's highest good, and is attainable only in society.

FEUERBACH, PAUL JOHANN ANSELM VON (1775–1833), Ger. criminal jurist; by his writings he did much to promote the emendation of criminal law.

FEUILLANTS, Fr. political club founded in Revolutionary times by various members of Jacobin Club; ceased to exist soon after Aug. 10, 1792.

FEUILLET, OCTAVE (1821–90), Fr. novelist and dramatist; his French is notable for its purity, and his writings enjoyed marked popularity.

FEUILLETON, portion of a newspaper devoted to literary and scientific articles, and especially to novels in serial form and light lit.

FEUQUIÈRES, ISAAC MANASSÈS DE PAS, MARQUIS DE (1590–1640), Fr. general and diplomat. His grandson, **Antoine, Marquis de F.** (1648–1711), wrote *Mémoires sur la Guerre*.

FÉVAL, PAUL (1817–87), Fr. novelist; wrote criminal and hist. stories.

FEVER, general term applied to elevation of the normal temperature of the body, due either to disturbance of the nervous system, to disturbance of the heat-losing apparatus of the body (*i.e.* the skin, respiratory system, etc.), or, most usually, to the action in the body of various bacterial or other poisons, which cause increased breaking down of protoplasm, diminish the loss of heat from the body, and interfere in various ways with the functions of the organs of the body. A temperature higher than 106° F. in the human body is very dangerous.

FEVERFEW, composite plants; best known is Wild F. (*Matricaria parthenium*), a strong-smelling evergreen. Gold-leaved F. is common in gardens.

FEVERWORT, HORSE GENTIAN (*Triosteum*), plant of order *Caprifoliaceæ*; berries of Amer. variety (*Tinkar's Root*) used as substitute for coffee.

FEYDEAU, ERNEST-AIMÉ (1821–73), Fr. novelist, dramatist, and miscellaneous writer.

FEZ (34° 6′ N., 4° 53′ W.), largest city, Morocco, to which it was annexed, 1548; now one of its capitals; formerly capital of a Moorish kingdom; celebrated for centuries as a holy city, and once famous as a seat of learning; is surrounded by walls; has many fine mosques, univ., and the Sultan's palace; commercial centre; active caravan trade; manufactures woollen, morocco leather goods, gold and silver ware; was besieged by Berbers and other tribes supporting Mulai Zin, the bro. of Mulai Hafid, in his claim to sultanship (1910), and was relieved by Fr. troops; inhabitants chiefly Moors, Arabs, Berbers, Jews. Pop. *c.* 140,000.

FEZZAN (26° 30′ N., 16° E.), region of Sahara; Italian province to S.E. of Tripoli; capital, Murzug; shut in N., S., and E. by Sahara and hills; barren plateaux; shallow valleys with fertile oases (the only cultivated spots) where a little grain, some vegetables, and the principal food, dates, are grown; gentle slope to E.; climate very dry, but healthy, except for malaria; soda obtained from salt lakes in N.W., only export trade. Pop. *c.* 43,000.

FIACRE, ST., a VII.-cent. monk of Irish birth, settled at Breuil in France.

FIARS, in Scots law are the standard prices fixed by sheriffs for different kinds of grain, relative to the payment of clerical stipends, etc.

FIBER, musk rat or Musquash; see under MOUSE FAMILY.

FIBRIN, a protein which appears in the blood when it escapes from the body, due to the action of the fibro-ferment, which comes probably from the white corpuscles or blood-platelets, on the fibrinogen contained normally in the blood, the presence of which gives rise to coagulation.

FIBULA, see SKELETON.

FICHTE, IMMANUEL HERMANN VON (1797–1879), Ger. philosopher; ed. Berlin; defended his f.'s philosophy against Hegel. See FICHTE, JOHANN GOTTLIEB.

FICHTE, JOHANN GOTTLIEB (1762–1814), Ger. philosopher; founder of Subjective Idealism; b. Lusatia; studied theology at Jena and Leipzig; prof. at Jena, 1794–99, dismissed on charge of atheism, and finally Rector of new Berlin Univ.; converted from Spinozistic determination by Kantian doctrine that the category of causality applies only to phenomena. F. proceeded to deny the thing-in-itself. Knowledge is not due to the action of things-in-themselves on the percipient subject; both 'matter and form' of knowledge are the product of the active Ego. The manifold of experience and the *à priori* forms of cognition are alike due to a creative faculty in us. In every intellectual act in general the Ego posits first itself and then the Non-ego in distinction from itself, and finally recognises itself as one with the Non-ego. This creative Ego is pure Ego in general, not the individual, but the absolute, Ego. From this, however, Fichte attempts to deduce the former, since the distinction of individuals is required by morality. The Ego is essentially an activity, striving after independence and freedom, which are reached proportionately to successful resistance of our rational being to our lower tendencies. Freedom is the highest expression of the moral law. To be virtuous, one must continually 'fulfil his vocation,' and act for sake of duty only.

Adamson, *Fichte*.

FICHTELGEBIRGE (50° 2′ N., 12° E.), mountain p, Bavaria, N.E. of Baireuth; highest peak, chneeberg, 3450 ft.

FICINO, MARSILIO (1433–99), Ital. philosopher; b. Arno valley; s. of eminent physician; translator, editor, commentator of Plato and Alexandrians; erudite scholar and saint, founded school of mystics, to which belonged Agrippa of Nettesheim, Ramus, Telesio. Forerunner of Renaissance; profoundly influenced Platonic studies in Italy. Philosophy and religion are identical, for both study wisdom and truth, and God is wisdom and truth: religion is

common to all men; its purest form is known through Christ, whose teaching suffices in all circumstances of life; reason is necessary to faith. Platonism makes possible acceptance of Christ by speculative minds.

FICK, AUGUST (1833–), Ger. comparative philologist.

FICKSBURG (29° S., 27° 48′ E.), town, Orange Free State, S. Africa.

FICTION, see NOVEL, and also under literature of different countries.

FICUS, see FIG.

FIDDES, RICHARD (1671–1725), Anglican scholar and theologian; wrote *Life of Cardinal Wolsey* and bther works.

FIDDLE (Lat. *fidula*), old term for any stringed instrument, generally violin; now popular or derogatory name for violin (*q.v.*).

FIDEICOMMISSA, in Rom. law, trusts formed to carry out will of one deceased; clumsy law often nullified wills, and f. remedied abuses by allowing a dying person to bequeath property to one who should hand it on to another.

FIDENÆ, modern CASTEL GUIBILEO (*c.* 42° N., 12° 30′ E.), ancient city, on Tiber, Italy.

FIDUCIARY, legal term for something held in trust.

FIEF, land held in fee of a superior.

FIELD, CYRUS WEST (1819–92), Amer. capitalist; b. Stockbridge, Massachusetts; planned first Atlantic cable, succeeding in laying one in 1866, after several failures.

FIELD, DAVID DUDLEY (1805–94), Amer. jurist; chairman of two commissions appointed to codify law and procedure in New York State.

FIELD, EUGENE (1850–95), Amer. poet; pub. several volumes of poems of childhood.

FIELD, FREDERICK (1801–85), Anglican theologian and scholar, particularly of patristics.

FIELD, HENRY MARTYN (1822–1907), Amer. preacher and author; wrote travel and hist. books.

FIELD, KATE (1838–96), Amer. journalist, lecturer, and actress.

FIELD, NAT (1587–1633), Eng. dramatist and actor; wrote two comedies, *A Woman is a Weathercock*, and *Amends for Ladies*; collaborated with Massinger and Fletcher.

FIELD OF THE CLOTH OF GOLD, meeting between Henry VIII. of England and Francis I. of France, near Calais (June 1529); so called because of the splendour displayed on both sides.

FIELD, STEPHEN JOHNSON (1816–99), Amer. lawyer; judge of Supreme Court of California, 1851; judge of Supreme Court of U.S., 1863.

FIELD, WILLIAM VENTRIS, BARON (1813–1907), Eng. judge.

FIELDFARE, see under THRUSH FAMILY.

FIELDING, ANTHONY COPLEY (1787–1855), Eng. artist; chiefly celebrated for his water-colours (land- and sea-scapes).

FIELDING, HENRY (1707–54), Eng. novelist; b. Glastonbury; s. of an army officer; ed. Eton and Leyden; thrown upon his own resources, he turned his attention to the London stage, and between 1730 and 1736 produced a number of plays long since forgotten. He married Miss Cradock, a small heiress, in 1734, and after having dissipated her fortune again turned playwright and theatre-manager, but with little success. He subsequently studied law; was called to the Bar, and joined the Western Circuit, eventually becoming a magistrate and the recipient of a pension. F. discovered the true bent of his genius when, after the publication of Richardson's *Pamela*, he commenced to write *Joseph Andrews* as an avowed parody. As, however, the work grew in his hands, the original idea was lost sight of. F.'s first novel was pub. in 1742, and met with some success. It was followed by other notable productions, including his powerful satire, *Jonathan Wild the Great*, *Tom Jones* (1749), *Amelia* (1751), and numerous other works. F. ranks amongst the greatest of Eng. novelists. He held up a merciless mirror to the people and the manners of his day. His characters are always drawn with a masterly hand, and his style is bracing and vigorous.

Life, by Austin Dobson (English Men-of-Letters Series).

FIELDING, WILLIAM STEVENS (1848–), Canadian statesman.

FIELD-MARSHAL, a Brit. military honour which, since 1736, has been the highest in the army; selection rests with the king.

FIELD MOUSE, see MOUSE FAMILY.

FIELDS, JAMES THOMAS (1817–81), Amer. publisher and author.

FIENNES, NATHANIEL (*c.* 1608–69), Eng politician and soldier; Roundhead in Civil War; distinguished at *Worcester* and *Edgehill*; sentenced to death for surrendering Bristol to Royalists in 1643, but pardoned.

FIERI FACIAS, in Eng. law a writ addressed to sheriff empowering execution in an action for debt, etc.

FIESCHI, GIUSEPPE MARCO (1790–1836), Corsican criminal; attempted assassin of Louis Philippe; guillotined.

FIESCO, GIOVANNI LUIGI (*c.* 1523–47), Count of Lavagna, Genoese noble; planned conspiracy to destroy Doria family and overthrow government; succeeded in neither object; accidentally drowned.

FIESOLE (43° 50′ N., 11° 18′ E.), town, ancient Fæsulæ, on hill above Arno, near Florence, Italy; one of ancient Etruscan confederation; contains Etruscan and Rom. antiquities; bp.'s see; XI.-cent. cathedral; native place of painter, Fra Angelico; straw-plaiting. Pop. 5163.

FIFE (56° 15′ N., 3° 10′ W.), maritime county in E. of Scotland; bounded on N. by Firth of Tay, on E. by Ger. Ocean, on S. by Firth of Forth, on W. by Perth, Clackmannan, and Kinross shires; county town, Cupar; maximum length and breadth, 41½ and 21 miles respectively. Area is 492 sq. miles. Eden (29½ miles) and Leven (16½ miles) are only rivers of consequence. Climate is mild, and rainfall varies. Many golf-courses and watering-places (including St. Andrews). Fife has valuable coal-fields and busy coaling ports. Large percentage of land is cultivated, and agriculture extensively carried on. Damask is manufactured at Dunfermline (*q.v.*); linoleum and other manufactures at Kirkcaldy (*q.v.*); large number of small seaports; chief port, Burntisland. Pop. (1911) 267,734.

FIFE, a flute-like instrument, generally in B flat or F; chiefly used in military music along with drums; old form 'cross' flute; modern form 'conical.'

FIFE, ALEXANDER WILLIAM GEORGE DUFF, DUKE OF (1849–1912), Scot. nobleman; husband of Princess Louise Victoria Alexandra Dagmar, eldest dau. of Edward VII. (b. 1867, m. 1889, cr. Princess Royal, 1905); two dau's, Princess Alexandra (1891) and Princess Maud (1893).

FIFTH MONARCHY MEN, extreme Puritan sect. who looked for the second coming of Christ upon earth to found the V. monarchy foreshadowed in *Daniel*, the successor to the Assyrian, Persian, Macedonian, and Roman empires. The sect was radical in politics; it was dispersed by Cromwell in 1653, and the leaders imprisoned.

FIG (*Ficus carica*), a native of the Mediterranean region, where it has been cultivated since very early times. The leaves are palmate, veined, and stipulate, the stipules acting as bud-protecting structures. The receptacle consists of a hollow, pear-shaped structure, the so-called 'fruit,' with a small opening at the apex. The flowers, which are unisexual, are packed inside this, the staminate ones being nearest the top, with the female flowers, of which there are two kinds, long and short styled, below. The long-styled form alone sets seed, the other type, termed gall flowers, being utilised by a wasp, Blastophaga, for the deposition of its ova, one of which is laid in each flower. In so

doing the insect pollinates the fertile flowers by transferring pollen from the male part of the inflorescence.

FIG, INDIAN, see CACTUS.

FIGARO, comic barber; hero of Beaumarchais's comedies, *Le Barbier de Seville* and *Le Mariage de Figaro*; also of operas by Mozart and Rossini. He is represented as lively and cunning, and his roguery outwits every one. The name was subsequently adopted as the title of a Fr. journal.

FIGEAC (44° 36′ N., 2° 3′ E.), town, on Célé, Lot, France; cloth manufactures. Pop. 4324.

FIGUEIRA DA FOZ (40° 40′ N., 7° 25′ W.), watering-place, at mouth of Mondego, Beira, Portugal; grain, wine, and fruit. Pop. 7890.

FIGUERAS (42° 15′ N., 2° 54′ E.), town, fortress, Gerona, Spain; various manufactures; taken by French, 1794, 1808, 1811, and 1823. Pop. 10,714.

FIGWORT (*Scrophularia*), wild flowers; *S. nodosa*, knotted f., and *S. aquatica*, purple flowers, are common in Britain.

FIJI, archipelago in Pacific; about 250 islands, of which some 80 are inhabited, forming a British Crown colony. Area, *c.* 7430 sq. miles. Capital, Suva, on S.E. coast of Viti Levu. Principal islands, Viti Levu, Vanua Levu, and Taviuni; others are Kandavu, Koro, Ngau, Ovalau, and numerous islets, enclosing Koro Sea; larger islands of volcanic formation, and smaller low coral. The surface is rugged and covered with luxuriant vegetation and beautiful hills (3000–4000 ft.). Larger islands contain open, dry, undulating country, except certain rich tracts along coast of the two largest; many large rivers afford waterways to rich lands on their banks — fertilised by frequent floodings; good climate and tropical vegetation—fruits abounding; chief food, yam; sugar-cane, cotton, and turmeric cultivated; chief exports include bêche-de-mer, mother-of-pearl, and cocoa-nut oil. Vanua Batevu is a trading centre. Inhabitants, of Melanesian-Polynesian stock, formerly cannibalistic and savage, are now mostly all christianised by Wesleyans. The Fijis were discovered by Tasman in 1643; little known till XIX. cent., and ceded by chiefs and people to Britain in 1874. The Gov. is also High Commissioner and Consul General for Western Pacific; Legislative Council is partly elected. Pop. (1911) 139,540 (including some 3700 Europeans and over 40,000 Indians).

Guppy, *Fiji* (1904); Thomson, *The Fijians* (1910).

FILANGIERI, CARLO (1784–1867), Neapolitan soldier and politician; Prince of Satriano. F. fought in Netherlands, Spain, Sicily; reduced Sicily to submission (1849); viceroy of Sicily till 1855; War Minister, 1859.

FILANGIERI, GAETANO (1752–88), Ital. reformer; advocate of free trade; wrote *La Scienza della legislazione.*

FILARIA, see under NEMATODA.

FILARIASIS, disease occurring in the tropics, caused by a parasite, *Filaria sanguinis hominis*, which probably enters the body in infected water; the embryos are found in the general circulation during the day, in the lung capillaries at night, and the adult filaria inhabit the lymphatics, causing elephantiasis or swelling of the tissues through blocking the lymphatics, milky urine, etc.

FILDES, SIR LUKE (1844–), Eng. artist and book illustrator; amongst his best-known works are *The Doctor* (Tate Gallery), *The Casual Ward*, State portraits of King Edward VII. and Queen Alexandra; R.A. (1887).

FILE, instrument used for smoothing or cutting metal; consists of steel bar with roughened surface which is broken up into points or ridges; in roughness they vary from 'dead-smooth' to rasps, which are used for coarse working on horn and timber as well as on metal.

The term is also applied to a pointed wire on which letters are affixed for purposes of reference.

FILE FISHES (*Monachanthidæ*), laterally flattened bony fishes, so called on account of their hard, prickly skins; sometimes destructive to pearl fisheries; tropical and subtropical seas.

FILELFO, FRANCESCO (1398–1481), Ital. scholar.

FILEY (54° 13′ N., 20° W.), watering-place, Yorkshire, England, on North Sea. Pop. (1911) 3228.

FILIBRANCHIA, see LAMELLIBRANCHIATA.

FILIBUSTER (Fr. *flibustier*), pirate or buccaneer; especially applied to U.S. adventurers, who led attacks upon parts of Span. America.

FILICAJA, VINCENZO DA (1642–1707), Ital. poet; wrote patriotic odes and sonnets.

FILICALES, see PTERIDOPHYTA, PALÆOBOTANY.

FILIGREE, metal-work, usually composed of fine gold, silver, or copper wire, arranged in delicate patterns, used in decorating jewellery, to which it is soldered. F. has been worked from very early times in Egypt, Greece, India, and other countries.

FILLAN, ST., FAELAN, name of two saints, whose lives are legendary, supposed to have come to Scotland from Ireland; commemorated on Jan. 9 and June 20. The St. F. whose feast is kept on Jan. 9 is supposed to have evangelised Scotland in VIII. cent.

FILLMORE, MILLARD (1800–74), Amer. statesman; entered Congress, 1832; advocated abolition of slavery; became 13th Pres. of U.S.A., 1850; became unpopular with Whig party by signing Fugitive Slave Law.

FILMER, SIR ROBERT (d. 1653), Eng. political writer; Royalist in Civil War; suffered greatly under Commonwealth; wrote the *Patriarcha*, defending Divine Right.

FILON, PIERRE MARIE AUGUSTIN (1841–), Fr. author; has written on Eng. life and lit.

FILOSA, a group of Amœboid Rhizopods, minute Protozoa without a clear external coat of protoplasm, and with the body processes (*pseudopodia*) branched, *e.g.* EUGLYPHA, a freshwater form protected by hexagonal plates.

FILTER, a cone of unsized paper, felt, etc., mesh of which permits fluid to pass, while retaining solid particles. A hollow cylinder of porcelain retains bacteria when water is pumped through under pressure. Charcoal filters are inefficient because bacteria feed on them, and pass through the enlarged pores.

FINANCE, the money dealings between man and man, and the business of public revenue and expenditure. It is an item of political economy. F. in personal matters is mainly concerned with the disposal of capital or income in investments, and with the adjustment of expenditure to income: the safety of investments, the proportion of income to be set aside for investment, the raising of additional income, are all questions of personal f. The main question of national f. is the raising of revenue. In earlier ages, conquest was followed by tribute, and a very important contribution to the coffers of the State. In later times the land owner, holding his land from the Crown, was the chief contributor (under varying degrees of compulsion) to the royal treasury, in return for his lands. To-day in civilised states the payment of taxes, either direct on income, or indirect through the Customs and Excise, is the main element in national revenue, and legislative sanction is required for the levying of such taxes. Hence f. is subject to the will of Parliament. Local finance is concerned with the expenditure of rates, and is strictly defined and limited.

Bastable, *Public Finance*; E. Carroll, *Principles and Practice of Finance*; Plehn, *Public Finance.*

FINCH, see NOTTINGHAM, EARLDOM OF.

FINCH FAMILY (*Fringillidæ*), a large family of perching birds, with 700 species, found throughout the whole world with the exception of Madagascar, Australia, and New Zealand and the neighbouring islands. They are seed-eating birds of small size, characterised by their short, thick, conical beak, with smooth biting edges. There is much variation and much beauty in the colouring of their plumage. Some finches have exceedingly stout, clumsy bills, the lower half being deep and strong; such are the rare Brit.

HAWFINCH (*Coccothraustes vulgaris*) and common GREENFINCH (*Ligurius chloris*), and the N. American RED CARDINAL (*Cardinalis virginianus*) and GROSBEAKS (*Hedymeles*). Others have less clumsy and deep beaks, *e.g.* the familiar CHAFFINCH (*Fringilla cælebs*), the highly emigratory BRAMBLING (*F. montifringilla*), the BULLFINCH (*Pyrrhula rubicilla*), the CANARY (*Serinus canarius*), so called because of its abundance in the Canary Islands, the SPARROWS (*Passer*, etc), the REDPOLLS and LINNETS (*Linaria*), the SISKINS (*Chrysomitris*), the ROSE FINCH or SCARLET GROSBEAK (*Carpodacus*) of N. Europe, and the curic CROSSBILLS (*Loxia*), easily recognised by the seeming misfit of the two halves of the bill, which cross near the tip. The BUNTINGS belong also to this family; see EMBERIZIDÆ.

FINCH OF FORDWICH, JOHN FINCH, BARON (1584–1660), Eng. judge.

FINCHLEY (51° 36′ N., 0° 9′ W.), town, forming N. suburb, London, 7½ miles N.W. of St. Paul's. Pop. (1911) 39,425.

FINCK, FRIEDRICH AUGUST VON (1718–66), Pruss. general; subsequently in Dan. service.

FINDEN, WILLIAM (1787–1852), Eng. engraver.

FINDLATER, ANDREW (1810–85), Scot. editor; chiefly known as editor of *Chambers's Encyclopædia*, and other works pub. by the same firm.

FINDLAY (41° 1′ N., 83° 38′ W.), city, Ohio, U.S.A.; natural oil and gas fields; flour-mills, glass-works. Pop. (1910) 14,858.

FINDLAY, SIR GEORGE (1829-93), Eng. railway manager; general manager for L. & N.W. Ry.

FINDLAY, JOHN RITCHIE (1824–98), Scot. journalist and philanthropist; one of proprietors of *The Scotsman*; founder of Scot. Nat. Portrait Gallery.

FINE, deprivation of money as punishment for misdemeanour; in England and Scotland seldom exceeds £25; never inflicted for felony or high treason.

The term is also used for various charges in connection with property.

FINGAL'S CAVE, see STAFFA.

FINGER-AND-TOE, a plant disease caused by a fungus which attacks plants of the order *Cruciferæ*, *e.g.* turnips, cabbages. The fungus develops in the cells of the root, which increase greatly in size, and nodules are formed on the exterior which break down and give rise to an unpleasant smell. Quicklime mixed with the soil is a preventive, and plants attacked are burned. See MYCETOZOA.

FINGER-PRINTS, the system of identification by this means has been used from very early times. Its employment for criminal identification was introduced into India by Sir William Herschel, and it subsequently superseded the Bertillon measurement system in England. As the skin-markings of the fingers remain the same from childhood to old age, the system has been found extremely valuable. Impressions are taken by placing the bulb of the finger on an inked slab, and afterwards pressing it on a white paper slip. The slips are classified under various headings, of which the principal are 'loops,' 'arches,' 'whorls,' and 'composites.' There are books dealing more fully with the subject by Sir Francis Galton, Sir E. R. Henry, and Fauld. The taking of finger-prints for identification purposes gave rise to Indian Passive Resistance movement in Transvaal. See ASIATIC QUESTION.

FINGO, S. African tribe, offshoot from Zulus, much improved by W. influence.

FINIAL, in Gothic arch., usually a foliage ornament forming the termination of gables, spires, etc.

FINIGUERRA, MASO (1426–64), Ital. craftsman; noted as a draughtsman and metal-worker; famous early engraver.

FINISHING, in textile industry, is a purely mechanical process which gives a characteristic appearance to the surface of the material and also affects its 'handle' or feel. Cotton fibres which shrink during bleaching, etc., are stretched on stentering frames while damp, and as they travel over the frame hot air is blown on to them, so that when they reach the end of the frame they are dry and stretched. They can be previously impregnated with starch to stiffen them or with china clay to weight them. By sending stretched cloth over a combination of rollers with or without heat it may be given an ordinary finish, a high gloss, a watered or embossed effect, according to the nature of the rollers. This is *calendering*. *Beetling* gives a linen-like appearance to cotton by making each thread prominent. Woollen goods are finished by *milling*, which subjects the fabric to mechanical friction to bring about felting or matting by the close interlocking of the hairs in the threads. The surface is subjected to *raising*, *i.e.* passing over bent spikes which pull up any hairs which have sunk below the surface. By shearing or cropping with an instrument like a lawn-mower the hairs are made of equal length *Crabbing* prevents the unequal shrinkage of worsted. *Lustreing* of silk is effected by stretching it beyond its original length. *Scrooping* gives the silk feel.

FINISTÈRE (*c.* 48° 20′ N., 4° W.), department, W. France; area, 2729 sq. miles; produces flax, cereals, linen; capital, Quimper. Pop. (1911) 809,771.

FINISTERRE (42° 53′ N., 9° 16′ W.), cape, N.W. Spain; off which British twice defeated French in 1747.

FINITE DIFFERENCES, CALCULUS OF (*Mathematics*).—Deals with the changes in value which arise in functions as a result of *finite* changes in the value of the variables on which the functions depend. It is thus different from the Differential Calculus, which is concerned with the *limits* of the ratios of the increments of mutually dependent quantities as these increments become indefinitely small. If u_x denotes a function of x, Δx a given *constant* increment of x, then Δu_x, the corresponding increment in u_x is given by $\Delta u_x = u_{x+\Delta x} - u_x$, and we have $\frac{\Delta u_x}{\Delta x} = \frac{u_{x+\Delta x} - u_x}{\Delta x}$. $\frac{\Delta}{\Delta x}$ is the fundamental operative symbol of the calculus of finite differences, as $\frac{d}{dx}$ is in the differential calculus. It should be noted that $\frac{\Delta u_x}{\Delta x}$ is a true fraction, both numerator and denominator having definite magnitude. The theorems of finite differences are utilised in interpolation, as, *e.g.*, the altitude of a star at different times being observed, required the meridian altitude; and they have important applications in actuarial calculations. See Boole, *Finite Differences*.

FINLAND (65° N., 27° E.), country in N.W. of Russian Empire; bounded on N. by Norway; W. by Sweden and Gulf of Bothnia; S. by Gulf of F.; length, *c.* 700 miles; breadth, 112–370 miles; area, *c.* 144,000 sq. miles; includes large part of Russ. Lapland; capital, Helsingfors; coast much indented, and many small islands; interior eaten up with large and small lakes—connected naturally or artificially; Lake Saima—composed of over 100 large and numberless small lakes—with natural outlet over Imatra Falls (finest in Europe); connected by canal (36 miles) with Gulf of F.; Lakes Enare, Uleå, Kemi, Payanne; highest mts. (in Lapland), Haldefjall (4126 ft.); principal rivers, Kemi, Ulea, Kymmene (used for driving mills and floating logs from inland forests, which cover great expanses belonging largely to State); great extent of swamps. Climate is healthy; severely cold in winter, snow lying from Nov. to April; polar in Lapland; summer hot and dry; bears, wolves, and seals are found; soil fertile, but mostly pasture-land; wood utilised for pulp for paper-mills; granite of excellent quality is quarried. Principal towns are Helsingfors, Abo, Tammerfors, Uleåborg. People are Finns, Swedes, Russians, Germans, Laps. Important industries comprise iron and mechanical works, textiles, wood industries, paper, leather, chemicals. F. was annexed by Russia (1809), deprived of privileges but given nominal autonomy; governed by Russ. Grand-

Duke. Diet—elected by universal suffrage and summoned or dissolved by Grand-Duke—may decide anything except fundamental laws and land and naval defence organisations. Pop. (1910) 3,120,000.

History.—Finns came from Volga region; conquered by Swedes in XII. and XIII. cent's. Gradual encroachments by Russia led to cession of F. to Russia, 1809; Swedish constitution was allowed to remain, but in XIX. cent. was often violated; Russ. language was made official, 1899, and Russ. military system enforced, 1901. Constitution was reformed, 1906, and concessions made.

Language and Literature.—Finnish or Suomi belongs to Ugro-Finnic branch of Uralo-Altaic family; agglutinative, has no articles and prepositions, and in verb no tenses except present and past; many dialects. Lit. began with religious subjects, although folk poetry handed down orally is old, *e.g.* the epic *Kalevala*, compiled by Lönnrot. There are Finnish newspapers and translations of Shakespeare, etc. Runeberg, poet and dramatist, F.'s greatest artist.

Dobson, *Finnish Revolution in Preparation* (St. Petersburg, 1911); Renwick, *Finland To-day* (1911).

FINLAND, GULF OF (60° N., 27° E.), shallow arm of Baltic Sea; Lakes Ladoga and Onega drain into it, hence water is but slightly salt.

FINLAY, GEORGE (1799–1875), Brit. historian; entered into Gk. struggle for independence; his history of Greece, first pub. in instalments, is the standard authority.

FINMARK (70° N., 24′ E.), province on N. coast of Norway, including several islands; capital, Hammerfest. Area, 17,918 sq. miles. Pop. (1910) 38,065, chiefly fishers and herdsmen.

FINN MAC COOL, FINGAL, Celtic legendary hero, leader of the *fiann* in Ireland; his name occurs in Macpherson's *Poems of Ossian* and in Gaelic ballads.

FINSBURY, district of London, N. of the Thames.

FINSEN, NIELS RYBERG (1860–1904), Dan. physician; discovered curative use of violet and ultra-violet rays in skin diseases. See ELECTRO-THERAPEUTICS, LUPUS.

FINSTERSWALDE (51° 37′ N., 13° 40′ E.), town, Prussia, Germany; cloth factories, iron foundries. Pop. (1910) 13,114.

FIORENZO DI LORENZO (*c.* 1440–1522), Ital. artist; lived at Perugia, where most of his best works are to be seen. These include a *Nativity*, *Adoration of the Shepherds*, and other religious subjects; one of most distinguished painters of the Umbrian school.

FIORENZUOLA (44° 56′ N., 9° 56′ E.), small town, Piacenza, Italy. Pop. 3658.

FIORILLO, JOHANN DOMINICUS (1748–1821), Ger. artist and writer on art.

FIR, a collective term which comprises two coniferous genera of evergreens, viz. Abies (e.g. *Abies pectinata*, the silver f.), and Picea (e.g. *Picea excelsa*, the Norway spruce or spruce f.). Both genera include valuable timber trees; whilst resins, balsams, and turpentines are also produced, one species, *Abies balsamea*, yielding Canada balsam, an indispensable reagent for optical and microscopic work. Of the two, Picea is the more hardy, extending throughout Siberia, and found abundantly on the slopes of the Alps, Urals, Rocky Mountains, and other high ranges. The leaves, which are borne spirally on the main axis, are usually tetragonal, but in some species (*P. ajanensis*) they are flattened. The cones, which mature in one year, are shed intact. In Abies the leaf is usually flattened, often with a median groove on the upper surface, and possesses two well-marked resin passages, one in each half of the leaf. The cones are large, and shed their scales, leaving the bare axis on the tree for a time. The Scots f. is a *Pine* (*q.v.*).

FIRBOLGS, legendary Irish race supposed to be Briton invaders.

FIRDAUSI, FERDUSI (940–1020 A.D.), Pers. poet; sometimes called 'the Homer of Persia,' and undoubtedly the greatest poet of his country. His real name was ABÚ-'L KÁSIM MANSÚR, and he was b. at Shadab (Khurásán). After spending upwards of thirty years in the writing of his great epic, *Shah Náma*, founded on the history of the Pers. kings, he presented his work to the Sultan Mahmud, but being disappointed by the reward given, incurred the Sultan's displeasure, and spent many of his remaining years in exile at Bagdad, where he composed another famous poem, *Yusuf and Zuleikha*, dealing with the loves of Joseph and Potiphar's wife. See PERSIA.

FIRE (O.E. *fyr*), flame or conflagration. According to classical myth., f. was given to mankind by the god Prometheus, who contrived to steal some sparks from the chariot of the sun, which he conveyed to earth hidden in a hollow tube. The raising of f. by means of a concave mirror, or burning-glass, was employed by the Greeks, and is referred to by Aristophanes; and Plutarch speaks of the sacred altar f's being kindled in this manner. Probably the earliest means of raising f was by rubbing two sticks together, and this method is still found in use amongst primitive races. Another common way of f.-making is that described by Mr. E. B. Tylor—known as the 'stick and groove' method—by which 'a blunt-pointed stick is run along a groove of its own making in a piece of wood lying on the ground.' Such is the method employed in New Zealand and the South Sea Islands. Other simple processes are making a stick rotate rapidly, with the palms of the hands, in a round hole in a block of wood; striking together two pieces of quartz smeared with sulphur, or else friction between a piece of quartz and one of iron pyrites. F.-raising by means of flint, steel, and tinder-box is also of very early origin, and was the general method in England and other countries down to the invention of lucifer matches.

F., apart from its usefulness to man, has from very early times been associated with many religious and heathen ceremonies. **Fire-walking** is a religious ceremony, widespread in all ages and still practised in Tahiti; priests and other devotees walk barefoot over hot stones, charcoal, or cinders.

E. B. Tylor's *Researches into the Early History of Mankind.*

FIREBALL.—(1) Explosive ball used for illumination or incendiarism; (2) ball lightning.

FIRE-BRAT, *Thermobia furnorum*, a representative of the primitive wingless insects, Thysanura, so called because of its occurrence in the warm parts of some Brit. bakehouses.

FIREBRICKS, bricks made from certain *fireclays*, which will withstand high temperature without fusion, used for lining flues and furnaces. Many varieties of fireclays exist, nearly all being shales obtained from the Coal Measures, and containing only small quantities of lime, potash, or soda.

FIRECLAYS, see FIREBRICKS.

FIRE-DAMP, see MARSH-GAS.

FIRE-FLIES, see POLYMORPHA.

FIRENZE, Ital. name for Florence (*q.v.*).

FIRENZUOLA, AGNOLO (*c.* 1493–1544), Ital. poet and man of letters; works distinguished by satirical qualities, licentiousness, and elegant style.

FIRES.—The great wastage caused by fire (estimated at £50,000,000 per annum) and loss of life have led to the adoption of elaborate measures for fire prevention and extinction. In order that a building be protected as far as possible against f., it must be constructed so that a f. in one room cannot easily spread to another, the lighting and heating arrangements must be carefully planned and executed, and appliances for extinguishing a f., or for checking its progress to some extent until the arrival of the fire-brigade, must be readily available. The floors should be stoutly built and well supported, the doors well fitting and preferably lined with sheet iron or asbestos cloth, and the ceilings carried on wire netting or metal instead of the ordinary laths.

A further great protection is afforded by the use of

one of the patent fire-resisting materials for floors, partitions, etc. Lift wells and shaft holes are a source of danger, and they should be protected by doors or shutters, special fire-resisting glass being used for skylights. Defective flues, stoves standing on floor boards, lamps, and gas jets in unsafe positions are common sources of f's. Electric light is much safer than gas, and f's due to it are almost invariably caused by careless or improper wiring. Too much confidence should not be placed in fire-resisting materials, for they are not really fireproof, and they can only hold the f. in check for a limited time. Local f. appliances usually consist of rows of buckets kept full of water, hand chemical extinguishers, and automatic sprinklers, which at a certain temperature discharge water from the ceilings of rooms, and in some cases from a central tower. In these sprinklers the water is carried under pressure to the desired points, and prevented from issuing only by a thin covering of some fusible metal. At a temperature of about 160° F. this metal softens and collapses, thus releasing the water, which is discharged in a shower.

Large buildings always should be provided with fire-*escapes*, the most efficient form being an external staircase of iron extending from top to bottom, and accessible from the windows of each floor by balconies. Canvas tubes or chutes are also used, but under most conditions they are less efficient than a staircase, which has the great advantage of being always in readiness. In the event of a f. in a large factory or warehouse the safety of the workpeople depends upon their being got out quickly, and in order to facilitate this some firms have a regular system of f.-*drill*. The danger is still greater in the case of theatres, music-halls, and other places of entertainment, and the exits are carefully planned so as to empty the building in the shortest possible time. The real danger in a theatre f. is not so much from the f. itself as from panic amongst the audience, resulting in doorways and corridors becoming jammed with struggling people, and in this way a false alarm of f. may be attended with fatal consequences. If some modified form of f.-drill could be instituted for all threatres many lives undoubtedly would be saved, but the problem is a difficult one.

When a building is discovered to be on f. it is of the utmost importance that the f.-*brigade* should be summoned immediately, and the telephone is largely used for this purpose. There are also various types of public automatic street *alarms*, a common form consisting of a metal box with a glass door, the alarm being given by breaking the glass and pulling a handle which telegraphs the number of the box to the district f.-station. The equipment of a modern f.-brigade is elaborate and costly, the most important appliance being the f.-engine for pumping water on to a burning building. Until quite recently the pumps were all worked by steam, the *engines* being drawn by horses, but petrol motor engines are now rapidly asserting their superiority. They are very much faster, and may be made of greater power than is possible in a horse-drawn vehicle, where weight has to be carefully considered.

An ordinary motor engine has a pumping capacity of about 400 or 500 gallons per minute, but they may be made of sufficient power to deliver over 1000 gallons per minute. F's in docks or in warehouses along the water side are frequently inaccessible from the land side, and in such cases steam-driven f.-boats are used. The water is conveyed from f.-engines in hose-pipes made of leather or of rubber protected with canvas or cotton, and issues through nozzles of various designs, giving either a jet or a spray, the spray being useful for clearing away smoke. The hose is sometimes raised to a considerable height by attaching it to a telescopic ladder. Another form of f.-engine is the chemical engine, which delivers water charged with some gas that will not support combustion, generally carbon dioxide, and the hand chemical extinguishers work on a simi'ar principle. Other accessary appliances are telescopic f.-escapes, hook ladders, and jumping-sheets. The *firemen* are provided with ropes, and axes for breaking through doors and other obstructions. The efficiency of a f.-brigade depends not only upon its promptness in responding to calls and its ability in f. fighting, but also upon its capacity for extinguishing f's with the least possible damage from water and the firemen's axes.

FIRESHIP, vessel filled with combustibles or explosives, fired and set adrift against hostile fleet; used by Drake against Span. Armada.

FIREWORKS, products of the art of *pyrotechny*, *i.e.* the making of scenic effects by fire and chemical compounds. Pyrotechny is of very ancient origin, f's of a kind being known in China for many ages, while displays were given in Rom. circuses from an early date. Gunpowder, however, practically revolutionised the art and researches of chemists, and scientists have rendered the making of modern f's a fine art. The burning of certain minerals, mixed in definite proportions, gives different coloured effects, and upon this fact the variations in f's may be said to lie. The minerals generally used, and the colour effects they produce are as follows: barium — green; calcium — red; copper — green or blue; lithium carbonate — purple-red; salts of strontium—crimson; sodium—yellow; sulphide of antimony—white; sulphide of arsenic—white.

Charcoal and sulphur are greatly used, too, and mixed with a proportion of nitre form gunpowder. After the compounds have been mixed they are packed in cylindrical cases, generally made of pasteboard, and the cases are made with mathematical precision, for much depends on their size and shape.

Amongst simple f's are crackers, squibs, Roman candles, stars, sparks, maroons, Bengal lights, jack-in-the-boxes, coloured fire, etc., whilst the more complicated are rockets, bombs, rotating or Catherine wheels, and set pieces (battles or portraits).

The chief pyrotechnists in England are Messrs. Brock and Messrs. Pain, and the Crystal Palace has become famous for the displays held there. Such displays are expensive, and may amount to £20,000 or more.

FIRKIN, old measure of capacity, equal to 9¼ imperial gallons; small cask.

FIRMÂN, Turk. passport; also name given to edicts issued by Sultan or his officials.

FIRMICUS, MATERNUS JULIUS (IV. cent.), Rom. writer on religion and astron.

FIRMINY (45° 23′ N., 4° 20′ E.), town, Loire, France; coal mines; steel and glass works. Pop. 17,000.

FIROZABAD (28° 45′ N., 52° 35′ E.), town, Fars, Persia; grain and rice.

FIROZPUR (30° 57′ N., 74° 38′ E.), district, Punjab, India; area, 4300 sq. miles. Pop. 1,000,000; its capital, FIROZPUR, pop. 50,000, contains arsenal.

FIRST-FOOT, prevalent superstition in Scotland and N. of England regarding the first person who crosses the threshold after midnight on New Year's Eve. Such person must not come empty-handed. A woman brings ill-luck; dark-complexioned males bring most luck.

FIRST OF JUNE, BATTLE OF THE (1794), naval engagement, fought to W. of Cape Ushant, between Brit. fleet under Lord Howe and Fr. fleet under Villaret-Joyeuse, in which British captured six ships and won glorious victory, yet failed in their object of intercepting a Fr. convoy of grain from America.

FIRTH, CHARLES HARDING (1857–), Eng. historian; prof. of Modern History (Oxford).

FIRTH, MARK (1819–80), Eng. steel manufacturer and philanthropist.

FIRUZKUH (35° N., 52° 48′ E.), small province, Persia.

FISCHART, JOHANN (*c.* 1545–91), Ger. satirical writer and Doctor of Laws; satirised all contemporary

follies; over fifty authentic works, including *Das glückhafft Schiff von Zürich.*

FISCHER, EMIL (1852–), Ger. chemist; prof. of Chem. in Berlin; won Nobel prize for Chem., 1902; has prepared ozazones, rosanilin dye-stuffs, and compounds of uric acid, but his greatest work is the synthesis of the simplest proteins from amido-acids. While synthesising carbohydrates he investigated many of their properties and the action of ferments.

FISCHER, ERNST KUNO BERTHOLD (1824–1907), Ger. philosopher of Hegelian school; prof. at Jena.

FISH, HAMILTON (1808–93), Amer. politician; Sec. of State, 1869–77; had considerable share in settling Alabama dispute.

FISHER, RT. HON. ANDREW (1862–), Australian politician; b. Kilmarnock; leader of Federal Labour Party, 1907; Prime Minister of Commonwealth (1908–9) and (1910–).

FISHER, GEORGE PARK (1827–1909), Amer. writer on theol. and history.

FISHER, JOHN (*c.* 1469–1535), Eng. Churchman; bp. of Rochester; advocated reasonable reform in Eng. Church, but opposed Lutheranism; opposed Henry VIII.'s divorce, and was executed for his denial of king's ecclesiastical supremacy; canonised in 1886.

FISHER, JOHN ARBUTHNOT FISHER, 1ST BARON (1841–), Brit. Admiral of the Fleet; commanded *Inflexible* at *Alexandria*; helped to draw up Army Reform Scheme; first Sea Lord, 1904–10; instituted the 'Dreadnought' policy; received O.M., 1905; peerage, 1909.

FISHES, class—*Pisces*, form a great class near the base of the vertebrate stock. They are most closely related to the Amphibians, with which they are associated in the group *Ichthyopsida*, but from these, as from other vertebrates, they can be easily distinguished, owing mainly to characters impressed upon them by their aquatic life. The study of fishes, from whatever point of view, is known as *Ichthyology* (Gk. *ichthus*, a fish).

The majority of fishes are spindle-shaped, with head, trunk, and tail graduated into each other, so that the minimum of resistance is offered to their passage through water; but there are also 'flat'-fishes, 'globe'-fishes, 'ribbon'-fishes (*qq.v.*), and others, the habits of which have led them to depart from the typical form. For swimming purposes their bodies are very muscular, the muscles lying in flakes—segments or myotomes—and actuating the swimming organs, or fins, the paired sets of which probably represent the limbs of other vertebrates. The exterior of the body is generally protected by scales of various forms and types.

Their SENSES are similar to those of higher animals. Hearing and taste are feebly developed, but smell, associated with the nostrils and even, it has recently been discovered, with the dorsal vibratile fin in the Rockling, is acute. Tactile organs, barbels, elongated fin-rays, and perhaps the lateral line are highly developed, especially in abyssal fishes, where they compensate for the reduction or absence of eyes. But in most there are efficient eyes, sometimes stalked, rarely, as in Anableps, with both an upward and a downward-looking segment.

Their FOOD consists of many shore forms of seaweed, or of organic matter abstracted from mud, but most pelagic fishes are carnivorous, feeding on minute crustacea, jelly-fishes, worms, molluscs, etc., or on fishes smaller than themselves. According to their habit they are furnished with flat crushing, or sharp biting teeth.

All fishes breathe the air dissolved in the water which washes their gills. Here foul BLOOD, driven by the two-chambered heart, is purified and returns to the head and body. An accessory to respiration is the air-bladder, which in the Dipnoi has lung-like functions and drives pure blood to the incipiently three-chambered heart, where it mixes with the impure body blood.

Some fishes, a few Bony Fishes and Sharks, bring forth living young, but, as a rule, the **Eggs** are fertilised and hatch externally. Sometimes they are laid in sand or gravel, the male afterwards depositing spermatozoa, or 'milt,' upon them, or are attached to water-weeds; but the great majority of marine fishes lay enormous numbers of floating eggs. It has been calculated, for example, that in a single season a female cod will produce on an average 4,398,700 eggs. The ovary of a female fish is eaten under the name of *roe*; and from the salted roes of sturgeon *caviare* is made. Amongst Elasmobranchs the large eggs are protected in a horny capsule—the 'mermaid's purse.' The eggs once laid and fertilised, most fishes leave their further development to chance, but the males of several species (notably the Sticklebacks) build nests for their protection and guard them faithfully, or, as in the Pipe-Fishes, retain them temporarily in an external pouch. *Spawning* habits afford many points of interest.

Familiarity has robbed of their strangeness the **annual migrations** of salmon, shad, sturgeon, and others, from their feeding-grounds in the sea to their spawning-beds in fresh water, but one is still lost in wonder at the marvellous journeys of the common eel, which, after years spent in its river, at the call of nature sets its face steadfastly for the ocean, and there seeks the great depths far from land in which to deposit its eggs, whence the young eels (*Leptocephali*), totally unlike their parents, make their way back unguided to the rivers again.

The **colours** of fishes deserve special mention, and although it is impossible to be dogmatic about these, it will be found, as a rule, that the brightest and most varied colours occur amongst shore fishes and especially amongst such as frequent the brilliant coral reefs of tropical seas. Oceanic fishes which are surface-feeders have often blues and greens on the upper portions of their bodies, while the fishes of the dark ocean depths are sombre in colour—often dark purples or black. Change of colour is a phenomenon more or less marked amongst shallow-water fishes, most striking perhaps in some Bermudas sea-perches, but noticeable even in the plaice of Brit. seas.

Fishes are found in seas and fresh waters all the world over. Some are confined to deep water, some hug the shore, while others spend their whole lives in their native streamlets or lakes; but there are wandering forms which seek now fresh now salt water, there are others which can leave the watery element to make journeys overland or to bask on high roots. The specialised Dipnoi are exceptional in being able, on account of their lung-like air-bladder, to withstand a continued drought, coiled up in a mud-burrow.

Owing to their hard scales many fishes have been preserved as **fossils**, even from Upper Silurian times, when Elasmobranchs first made their appearance, through the Carboniferous and succeeding periods, when these simpler fishes predominated in the seas. And from the rocks one can trace how they were gradually ousted from supremacy in numbers by the advent of Bony Fishes in the Jurassic period and their rapid increase in later Cretaceous and Tertiary times.

Fish as food brings sometimes less than a blessing, for the enormous prevalance of the giant tapeworm (*Bothriocephalus latus*) in the inhabitants of E. Europe is due to the fact that the larva of the tapeworm, harboured in pike, trout, turbot, perch, and such-like, is passed on to man when these fishes are consumed in a semi-cooked state.

According to their structures and affinities living fishes are divided into three main groups, which again are split into smaller divisions:—

Fishes, class PISCES, aquatic vertebrates which breathe all their life long by means of gills, and possess fins.

Sub-Class I., ELASMOBRANCHII or CARTILAGINOUS FISHES, fishes with cartilaginous skeleton, skin covered with minute enamelled bony warts (placoid scales), a varying number of gill-slits and no air-bladder or lung Divided into two orders—

ORDER 1, *Selachii*, *Plagiostomi*, or *Selachians* (q.v.), transverse mouth on under surface, preceded by a projecting rostrum, tail asymmetrical (heterocercal), usually five gill-slits not covered by a protecting plate (operculum). Examples—Sharks, Dogfishes, Skates, Rays.

ORDER 2, *Holocephali*, bones developed only as slender rings in notochordal sheath, skin naked, four gill-slits covered by an operculum. Examples—Chimæra, Callorhynchus.

Sub-Class II., TELEOSTOMI, fishes with a more or less bony skeleton, skin covered with soft, circular scales (cycloid); the gill-slits are always covered with a well-developed operculum, and there is present an air-bladder, which, when it has a vascular function, returns purified blood into the veins. Divided into four orders—

ORDER 1, *Crossopterygii*, with lobed pectoral and pelvic fins, fringed with fin-rays, scales, and dermal skull bones often enamelled, air-bladder bilobed. Examples—Polypterus and Calamoichthys.

ORDER 2, *Chondrostei*, body covered with large bony plates in definite rows, internal skeleton cartilaginous, spiral valve in intestine, tail asymmetrical (heterocercal). Example—Sturgeons (*Acipenser*).

ORDER 3, *Holostei*, skeleton bony, air-bladder lung-like in structure, and aiding in respiration, spiral valve in intestine, tail heterocercal. Examples—Amia and Lepidosteus.

ORDER 4, *Teleostei* (Gk. *teleos*, true; *osteon*, a bone), BONY FISHES (*q.v.*), skeleton ossified, no spiral valve in intestine, tail pseudo-symmetrical (homocercal). Includes by far the greatest number of living fishes. Examples—Carps, Eels, Salmon Family, Herrings, Cod Family, Flat-Fishes, Perches, and Globe-Fishes.

Sub-Class III., DIPNOI, MUD-FISHES or LUNG-FISHES, skeleton partly bony, partly persisting as cartilage; skin covered with soft circular scales (cycloid); gill-slits covered by an operculum; an air-bladder present which resembles and acts as a lung, sending purified blood to the heart, which is incipiently three-chambered; tail primitively symmetrical (diphycercal). Examples—Ceratodus, Protopterus, and Lepidosiren.

Jordan, *Guide to the Study of Fishes*; Günther, *An Introduction to the Study of Fishes* (1880); Sir Herbert Maxwell, *Brit. Freshwater Fishes* (1912); and FISHES, vol. 7, in *Cambridge Natural History*, and Part IX. of Lankester's *Treatise on Zoology*.

Fisheries.—The term includes the ordinary fisheries of the sea, which concern not only fishes themselves, but crabs, lobsters, shrimps, prawns, and shell-fish, and such diverse industries as sponge, coral, pearl, and whale 'fisheries.'

The importance of fisheries proper as a means of food supply may be estimated from the fact that Grimsby alone sends out 600 trawlers, which garner over three million pounds worth of fishes annually, and that the fishermen of the Brit. Isles land in a year 958,000 tons of sea-produce worth more than £10,120,000. These vast numbers are distributed in the main amongst a comparatively small number of fishes, such as herring, cod, haddock, and various types of flat fishes, such as plaice, dabs, and flounders.

In pursuit of these species, fisheries are prosecuted in inshore and in offshore districts, where fishes are plentiful. The latter are generally shallow sea areas characterised by abundance of fish food, and by the presence of suitable spawning-grounds. Most frequented are the North Sea, the Dogger Bank, and the Newfoundland Banks with their cod fisheries, but the Atlantic Plateau, the Banks of Iceland and of Morocco are also much exploited. Inshore fisheries are pursued mainly by the use of wind-driven boats, furnished with long lines bearing many baited hooks, and, in the case of salmon, by coastal stake-nets; in addition to this, outshore fisheries employ steam-propelled line boats furnished with a beam or otter trawl—a large, heavy weighted net which is dragged over the bottom. Further, migratory types of fish, such as herrings, pilchards, and mackerel, are captured by 'drift-nets'—walls of netting hanging perpendicularly in sea, into meshes of which fishes strike as they swim.

Fisheries Law.—Fishery legislation is both local and international, and has two aims—that of protecting the fishermen and that of protecting the fish. The preservation of trout and salmon in rivers is enforced by regulations dealing with property rights, with restrictions as to the means by which the fishes may be caught—for example, by exclusion of weirs and nets, and by institution of periods (close terms) during which fishing for a particular species is illegal.

In the sea, fisheries are protected by international law. **Territorial Waters** are the littoral sea, or inland gulfs, which can be occupied by the sovereign of the land. There are international treaties concerning the control of the Eng. Channel, North Sea, etc. etc. Three miles from the shore and six miles from the entrance to bays or gulfs is the minimum territorial limit. Within this area the use of trawl-nets is prohibited, and many fish nurseries are thus safeguarded. Further efforts are made to preserve immature individuals of edible fishes by regulating the size of meshes of nets and by prohibiting the sale of fishes under a given size. See ANGLING.

FISHGUARD (51° 59′ N., 4° 58′ W.), seaport town, Pembrokeshire, Wales; Irish Channel service; good harbour; fisheries.

FISHKILL-ON-HUDSON, FISHKILL LANDING (41° 31′ N., 73° 57′ W.), village, New York State, U.S.A.; iron and rubber manufactures. Pop. 4000.

FISH-LICE, see ENTOMOSTRACA.

FISK, JAMES (1834–72), Amer. financier; assassinated.

FISK, WILBUR (1792–1839), Amer. educationist.

FISKE, JOHN (1842–1901), Amer. historian and philosopher; graduated Harvard; his hist. writings form a complete colonial history of the U.S.A.

FISKE, MINNIE MADDERN (1865–), Amer. actress and theatrical manager; most famous rôle, 'Becky Sharp'; has played 'Nora' and 'Tess.'

FISSIPEDIA, a sub-order of Carnivora (*q.v.*).

FISTULA, (*a*) abnormal opening from the surface of the body into a normal canal or organ; or (*b*) an abnormal opening from one normal canal or cavity in the body to another, *e.g.* (*a*) anal fistula, (*b*) recto-vesical fistula, between rectum and urinary bladder.

FITCH, JOHN (1743–98), Amer. engineer; pioneer of Amer. steam navigation.

FITCH, SIR JOSHUA GIRLING (1824–1903), Eng. educationist.

FITCH, RALPH (fl. 1583–1606), Eng. merchant and Eastern traveller.

FITCH, WILLIAM CLYDE (1865–1909), Amer. author and playwright.

FITCHBURG (42° 32′ N., 71° 52′ W.), city, Massachusetts, U.S.A., on Nashua; tools, machinery, textiles. Pop. (1910) 37,826.

FITTON, MARY (fl. 1600), dau. of Sir Ed. Fitton, of Gawsworth, Cheshire; Queen Elizabeth's maid of honour; Earl of Pembroke's mistress; the supposed 'dark lady' of Shakespeare's sonnets.

FITZ GERALD, EDWARD (1809–83), Eng. man-of-letters; trans. some dramas of Calderon; wrote several miscellaneous works; was a delightful letter-writer, and secured world-wide fame by his paraphrase of *Omar Khayyám* (first pub. 1859); *Life*, by A. C. Benson, John Clyde, T. Wright.

FITZ NEAL, RICHARD, FITZ NIGEL (d. 1198), Eng. bp. and treasurer; wrote *Dialogus de Scaccario*, describing exchequer procedure; bp. of London, 1189.

FITZ OSBERT, WILLIAM (d. 1196), Eng. crusader and social reformer; executed.

FITZ PETER, GEOFFREY, EARL OF ESSEX (*c.* 1190–1213), Eng. chief justiciar.

FITZ STEPHEN, ROBERT (fl. 1160–82), Eng. military leader.

FITZ STEPHEN, WILLIAM (fl. 1160–90), Eng. judge; wrote life of Becket.

FITZ THEDMAR, ARNOLD (1201–74), Eng. chronicler.

FITZ WALTER, ROBERT (fl. c. 1210–35), Eng. baron; principal figure in baronial opposition to King John.

FITZBALL, EDWARD (1792–1873), Eng. dramatist and librettist.

FITZGERALD, family name of Dukes of Leinster, and of former Earls of Desmond, latter title being extinct since 1601, when the last earl (restored, 1600, seventeen years after his f.'s attainder and execution for rebellion) died unmarried. Both families trace descent from Dominus Otho, a Florentine noble, who came to England before Norman Conquest and whose s., Walter, was castellan of Windsor in Domesday times. John F. was cr. Earl of Kildare in 1316, title descending in family until James, 20th earl, was Duke of Leinster in 1766.

FITZGERALD, LORD EDWARD (1763–98), Irish soldier, politician, and conspirator; fought in America, 1781–82; travelled in Canada, 1789, where he was made chief of Bear Indians; on return became M.P. for Kildare; joined United Irishmen, 1796; had share in organising conspiracy in Dublin, 1797, after discovery of which he was arrested, dying a fortnight later from wound received during struggle preceding his arrest. His wife, Pamela, was said to be dau. of Duke of Orleans.

FITZGERALD, RAYMOND (d. 1182), constable of Leinster.

FITZGERALD, THOMAS, 10TH EARL OF KILDARE (1513–37), Irish rebel, 1534; ultimately surrendered, was executed and attainted, 1537.

FITZHERBERT, SIR ANTHONY (1470–1538), Eng. jurist.

FITZHERBERT, MARIA ANNE, MARIA ANNE SMYTHE (1757–1837), secretly married after death of second husband to George IV. when Prince of Wales in 1785; marriage invalidated by previous Royal Marriages Act. The Prince and Fox denied the marriage, which, on the break with Princess Caroline, was resumed by special papal permission, but finally ended in 1803.

FITZHERBERT, THOMAS (1552–1640), Eng. Jesuit; active plotter against Elizabeth.

FITZ-OSBERN, ROGER (c. 1071), Earl of Hereford; rebelled against William I., and was banished.

FITZ-OSBERN, WILLIAM (d. 1071), Earl of Hereford; favourite of William I.

FITZROY (37° 49′ S., 144° 59′ E.), manufacturing town, N.E. suburb of Melbourne, Victoria, Australia. Pop. 32,000.

FITZROY, ROBERT (1805–65), Brit. admiral and meteorologist; surveyed coasts of Patagonia and Tierra del Fuego, and commanded surveying expeditions of the *Adventure* and *Beagle*, being accompanied by Darwin on latter; gov. of New Zealand, 1843–45; meteorologist to Board of Trade, 1854; pub. *Weather Book*, 1863. Newspaper weather forecasts are based on his system of storm warnings.

FITZWILLIAM, SIR WILLIAM (1526–99), Eng. administrator.

FITZWILLIAM, WILLIAM WENTWORTH FITZWILLIAM, EARL (1748–1833), Brit. politician and administrator.

FIUME (45° 19′ N., 14° 27′ E.), chief seaport, kingdom of Hungary, on Adriatic, at mouth of Fiumara, in Gulf of Quarnero; has several harbours; large shipping trade and varied manufactures, including torpedoes and tobacco. Principal buildings are: cathedral, governor's and emperor's residences, naval academy. F. was annexed to Hapsburg dominions, 1471; passed to Hungary, 1779; came under direct Hungarian rule, 1870. Pop. (1910) 49,806.

FIVE MEMBERS, the five M.P.'s whom Charles I. tried to arrest in 1642, this forming the chief exciting cause of the Civil War. They were John Pym, John Hampden, Sir A. Haselrig, William Strode, and Denzil Holles.

FIVE-MILE ACT, Eng. law passed in 1665 forbidding nonconforming divines to minister as clergymen, tutors, or teachers within 5 miles of a town or of any place where they had once officiated, unless they took the oath of non-resistance.

FIVES, Eng. game played at public schools and most universities; played by two or four players in rectangular court, which sometimes has buttress on left side and step; server flings ball on to front wall so that it bounds on to right-hand wall; striker returns it *vice versa*; play is then open, but ball must always touch front wall above a certain height; only the server can score; when he loses a stroke he becomes striker. Fifteen points constitute game; balls are made of twine and cork covered with kid; padded gloves are worn. BAT F., played with wooden racquet, is similar game.

FIX, THÉODORE (1800–46), Swiss economist and journalist.

FIXTURES, may be defined under two heads—landlord's f's and tenant's f's. The first-named must remain when a person gives up a tenancy; the second are, in law, such f's as the tenant is duly entitled to remove. It may be noted that an agriculturist may remove fencing, etc., which has been provided by himself, at the expiry of his tenancy; and a market-gardener may remove shrubs, plants, etc.; but an ordinary householder cannot remove trees, bushes, plants, etc., although planted by himself.

FJORD, FIORD, Anglicised form of the Norweg. name for long, narrow, and frequently deep and precipitous inlets of the sea so common in Norway.

FLACCUS, Rom. family; famous members are Quintus Fulvius, distinguished in war against Carthage; Marcus Fulvius supported the Gracchi; Caius Valerius, Rom. poet (I. cent. A.D.), wrote *Argonautica*.

FLACCUS, QUINTUS HORATIUS, see HORACE.

FLACH, GEOFROI JACQUES (1846–), Fr. writer on history and law; b. and ed., Strassburg, Alsace; prof. of Comparative Legislation at Collège de France, 1879; wrote *Les Origines de l'ancienne France* and other works on Old Fr. law.

FLACIUS, MATTHIAS (1520–75), Lutheran reformer and writer; father of critical study of ecclesiastical history; wrote *Catalogus Testium Veritatis*.

FLACOURT, ÉTIENNE DE (1607–60), Fr. colonial administrator; wrote *History of Madagascar*.

FLAG, any light cloth flown in the air and bearing device to convey definite meaning or signal; usually attached to a halyard or staff, the end so attached being called the *hoist*, while the length from the staff to the free end is called the *fly*. Military use of f's in England dates back to Norman Conquest, if we may accept as proof the pennons and f's occurring in representations of the Conqueror's troops on the Bayeux tapestry. Of mediæval f's the *pennon* was a mark of knightly rank; it was small and triangular in shape, and showed the heraldic bearings of the owner; the *banner*, rectangular in shape and varying in size according to rank of owner, was carried by all above the degree of a knight simple, including the king; and the *standard* was of much greater size, and was a tapering f., generally richly embroidered and slit slightly at the narrow end; it was borne by peers or knights of importance in the Middle Ages. Less-important mediæval f's were the *pennoncel*, borne by esquires, the *banderoll*, the *guydon*, and the *gonfanon*.

Regimental f's, called the *colours*, are of silk, with gold and crimson cords and tassels; old disused colours are placed in parish church or minster at headquarters of the regiment, and the presentation of new colours is a religious ceremony of much dignity and solemnity. *White flag* is a sign of truce; *red-cross flag* is sign of ambulance, hospitals, etc.

The *Royal Standard* (the personal f. of the Brit. sovereign) is a banner in shape, with the arms of England on the first and fourth quarters, the Scot. arms on the second, and those of Ireland on the third.

In its Scot. form the Royal Standard has Scot. arms on first and fourth quarters, Eng. arms on second. The *Union Jack*, the Brit. national flag, is formed by combination of crosses of St. George, St. Andrew, and St. Patrick; the first two were united in 1603, when James VI. of Scotland became James I. of England, the union being effected by keeping the blue field and white St. Andrew's cross of the old Scot f., and representing the Eng. white field by a narrow border or fimbriation round the red St. George's cross; in 1801 Ireland joined the Union, and St. Patrick's cross was incorporated with the other two. The *ensign* is a naval f., and is of three colours, red, white, and blue, according to a now obsolete threefold division of the fleet. The *red ensign*, a red f. with the Union Jack in the first quarter, is now used by merchant vessels; the *white ensign*, a white f. with the red cross of St. George and the Union Jack in the upper canton, is now only flown by the Royal Navy and Royal Yacht Squadron; and the *blue ensign*, a blue f. with the Union Jack in the first quarter, is now carried by the Naval Reserve and certain yacht clubs.

National f's of other countries include: U.S.A.—*Stars and Stripes*—thirteen stripes (representing thirteen original states) of alternate red and white, with forty-eight white stars on blue ground in first quarter, to represent existing number of states; French—*Tricolour*—blue, white, and red vertical stripes, blue being next halyard or staff; Dutch—red, white, and blue horizontal stripes; Belgian—black, yellow, and red vertical stripes; Swiss—a white cross on red field; Spanish—three horizontal stripes, yellow between two reds, crown-surmounted escutcheon on middle stripe. The f. of Ger. Imperial Navy is white field divided into quarters by white-edged black cross, with black Prussian eagle on white ground in centre, and in first quarter black, white, and red bars surcharged with iron cross. Ger. mercantile marine f. has black, white, and red horizontal stripes. Ital. mercantile marine f. has green, white, and red vertical stripes, with arms of Savoy in centre. The f. of the Austrian navy is like that of the merchant service (red, white, and red horizontal stripes), with shield and imperial crown in centre. The Russian navy has for f. a blue St. Andrew's cross on white field; the merchant service, white, blue, and red horizontal stripes. The Dan. navy has a white St. George's cross on red field; Swed. navy, yellow St. George's cross on blue field; Turk. navy, white star and the crescent moon on red field; Gk. navy's f. has nine horizontal stripes, blue and white alternately, with white cross and crown in top left-hand corner; Jap. naval f. has red rising sun, with white background.

Pirate f. is black, quarantine yellow, mutiny red. F. at half-mast signifies mourning.

Macgeorge, *Flags*; Hulme, *Flags of the World* (1897).

FLAGELLANTS, religious confratornities of Middle Ages, members of which marched in bands, scourging themselves in public in reparation for sin; they became extravagant during plague periods of the XIV. cent.; but, subjected to papal persecution, soon disappeared. A temporary revival occurred in 1414.

FLAGELLATA, MASTIGOPHORA, class containing many often exceedingly minute Protozoa; simplest forms, known as *Monads*, are scarcely distinguishable from Rhizopods, but all are furnished with one or more whip-like filaments or *flagella*, by which they move and capture food. Some live independently in fresh or salt water, and feed upon bacteria and minute organisms; others contain colour-bearing grains (chromoplasts or chromatophores) which enable them to live like plants. Many live in and on decaying vegetable or animal substances, and still more occur as external or internal parasites. The latter live in the digestive tract of many animals, especially Insects and Vertebrates, frequently causing disease and death.

Sub-Class I.—EUFLAGELLATA: minute animals with one or more flagella; widely distributed in fresh water (e.g. *Euglena*), decaying vegetation, or parasitic in bodies of animals; latter group includes HÆMOFLAGELLATES, parasitic in blood of vertebrates, e.g. *Trypanosomes* (q.v.). Sub-Class II.—DINOFLAGELLATA or PERIDINIALES: mostly marine forms (some parasitic), with ventral groove, two flagella, and body protected by rigid cellulose covering, e.g. *Peridinium*. Sub-Class III.—CYSTOFLAGELLATA or RHYNCHOFLAGELLATA: floating marine forms, with inflated gelatinous body, *e.g.* the phosphorescent *Noctiluca*.

FLAGEOLET, simple musical instrument, consisting of straight tube with mouthpiece and finger-holes. See FLUTE.

FLAGSHIP, the ship which in a squadron serves as headquarters of the senior officer commanding; is distinguished by a flag corresponding to his rank. **Flag-Captain**, officer in command of admiral's ship.

FLAHAUT DE LA BILLARDERIE, AUGUSTE CHARLES JOSEPH, COMTE DE (1785–1870), Fr. soldier; ambassador at Berlin, 1831; Vienna, 1841–48; England, 1860–62.

FLAIL, a club-headed whip used for threshing corn by hand. Also a favourite weapon in mediæval warfare.

FLAMBARD, RANULF (d. 1128), Eng. bp.; formed church benefices for William Rufus, at whose death he fled to France; returned, reinstated, 1106.

FLAMBOROUGH HEAD (54° 7′ N., 0° 4′ W.), promontory, on Yorkshire coast, England; lighthouse.

FLAMBOYANT, in arch., the last development in Gothic tracery, which prevailed in France during XV. and part of XVI. cent's. The tracery flows upwards in wavy divisions like flames of fire. See ARCHITECTURE.

FLAME.—When a gas, or mixture of gases, is heated to a certain temperature it burns with production of light and heat. The amount and colour of light varies with the gas burnt. Coal gas burns with a yellowish, hydrogen with an almost colourless f. The luminosity of the f. depends (1) on the temperature—the higher it is, the greater the luminosity; (2) on the density of the gases of the f.—the more compressed the gases are, the greater the luminosity; (3) on the amount of solid matter in the f. Powdered charcoal in a hydrogen f. will make it luminous. The incandescent mantle, a film of alkaline earths, increases the luminosity of the ordinary gas jet, and a block of lime placed in the oxyhydrogen f. produces an intense white light. The chief constituents of the ordinary f. is ethylene, which when burned produces carbon dioxide and water.

Four regions can be distinguished in a f.: (1) the inner cone of unburnt gas, (2) a non-luminous blue region, (3) a luminous f. with (4) a faintly luminous mantle. In the blue region carbon monoxide and water are formed, with traces of carbon dioxide and hydrogen. The carbon monoxide and hydrogen are oxidised into carbon dioxide and water in the outer cone. In the faintly luminous mantle, carbon monoxide, hydrogen, and small quantities of hydrocarbons which have escaped combustion in the luminous parts of the f. are burnt. The non-luminous character of this area is due to the cooling effect of the air, which is drawn into the f. The gases as they reach the luminous area are surrounded by burning material which raises them to the temperature at which marsh gas and ethylene are decomposed into acetylene and hydrogen.

FLAMEL, NICHOLAS (d. 1418), Fr. alchemist.

FLAMEN, in ancient Rome, priest in service of some special god; three chief f's were those of Jupiter, Mars, and Quirinus.

FLAMINGO, a long-legged wading bird, intermediate between goose and stork; characterised by long neck and peculiar beak, bent sharply downwards medianly, and exceptional in upper jaw moving on lower; plumage bright pink to scarlet; gregarious, inhabiting sub-tropical swamps, and breeding in colonies.

FLAMINIA, VIA (43° 15′ N., 12° 45′ E.), one of most ancient highways, Italy; extended from Rome to Ariminum; built by censor G. Flaminius, 220 B.C.

FLAMININUS, TITUS QUINCTIUS (c. 228–174 B.C.), Rom. soldier and politician; subdued Macedonia; became consul, 198; won decisive

victory at *Cynoscephalæ* in Thessaly, 197; represented Rome in Greece, 192.

FLAMINIUS, GAIUS, Rom. plebeian soldier and statesman; twice consul; defeated Gauls, 223 B.C.; defeated by Hannibal and killed at *Trasimene Lake*, 217; built Circus Flaminius on Campus Martius, and the Flaminian Way. See FLAMINIA, VIA.

FLAMSTEED, JOHN (1646–1719), first astronomer-royal of England; grad. Cambridge, 1674; app. by Charles II. astronomical observator to king; formed the first trustworthy catalogue of fixed stars, and supplied lunar observations by means of which Newton verified his lunar theory; principal work, *Historia Cœlestis* (1723).

FLANDERS (51° N., 3° E.), the land of the Flemings, comprising modern Belg. provinces of E. and W. Flanders, part of Zeeland (Holland), and of northern France; stretched along North Sea from Somme to Scheldt; famed in Middle Ages for powerful Counts and sturdy burghers; centre of woollen manufactures, hence intimately connected with England, which supplied wool; had many industrial towns like Bruges and Ghent. F. was conquered by Julius Cæsar, 51 B.C.; came under Frankish kings, IX. cent.; Counts of F. subject to France for five cent's; William the Conqueror's wife, Matilda, was Count of F.'s dau.; popular rising under Arteveldes (*q.v.*), XIV. cent.; F. passed to Burgundy, 1384; crushed under Austrian and Spanish rule, 1477–1794 (see NETHERLANDS), not securing independence like United Provinces of North in XVI. cent.; France secured part, 1659, 1679, and whole, 1794–1814; incorporated in Netherlands, 1815; since 1831 part of Belgium (*q.v.*). E. F. area, 1158 sq. miles; pop. (1910) 1,123,755. W. F., area, 1249 sq. miles; pop. (1910) 881,033. For **Flemish Literature**, see HOLLAND (LANGUAGE AND LIT.). For **Flemish Art**, see PAINTING.

FLANDRIN, JEAN HIPPOLYTE (1809–64), Fr. artist; pupil of Ingres; religious frescoes.

FLANNEL, soft woollen cloth, the best of which is made in Wales, the original home of the industry. The fleecy softness of 'raised' f. is secured by carding; but firmer f. wears better and shrinks less.

FLANNELETTE, fleecy cotton cloth, used as a substitute for flannel. As it is highly inflammable its use for children's clothing is dangerous.

FLAT, a self-contained apartment approached through a stair or a hall, with its own entrance door. In English law, occupiers are ordinary tenants, not lodgers; each flat is separately rateable and has right of support on the flats below. Scots law recognises absolute right of proprietorship of a flat independently of ownership of the rest.

FLAT WORMS, see PLATYHELMINTHES.

FLATBUSH, former town, Long Island, New York, U.S.A.; now included in Brooklyn, N.Y.

FLAT-FISHES (*Pleuronectidæ*), laterally compressed fishes, which lie on one side, hidden under the surface of sand at the bottom of shallow seas. They include some of the most valuable of food fishes; found in all seas. The most important Brit. forms are halibut and turbot (*qq.v.*), the brill, a turbot-like fish, but without tubercles, the plaice, with orange spots, the dark-brown flounder or fluke, often found in rivers, the dabs, and the almost black elongated soles.

FLATHEADS, small tribe of N. Amer. Indians, now living in Montana.

FLAUBERT, GUSTAVE (1821–80), Fr. novelist; b. Rouen. His works, most of which have been trans. into Eng., are either realistic novels or hist. romances, and include *Madame Bovary, Bouvard et Pécuchet, Salammbô, L'Éducation sentimentale, Trois Contes*, etc. He was a slow and careful writer, and one of the greatest stylists France has produced. See Merejkowski's *Lifework of F.*

FLAVEL, JOHN (*c.* 1630–91), Eng. Presbyterian preacher and author; voluminous writer on theol.

FLAVIAN (fl. *c.* 450), bp. of Constantinople and martyr.

FLAVIGNY (47° 30′ N., 4° 32′ E.), small town, Côte d'Or, France; textiles; 'Flavigny anise.'

FLAX (*Linum usitatissimum*), an annual plant belonging to the family Linaceæ. It possesses a tall, slender, upright stem, clothed with small leaves. The flower is large and brilliant blue, and persists only one day. Many flowers are borne at the apex of the stem. The fruit is a capsule, and contains when ripe ten flat seeds—*linseed*. The original home of the f. is Western Persia, but for many thousand years it has been cultivated all over the north-temperate and subtropical zones in such stations as are suited to it. It demands for its best development a cool and moist climate. In Ireland, Eastern Russia, Belgium, and Holland it reaches its finest quality. F. is cultivated for the sake of its seeds and of its fibre. Linseed yields, on pressing, an oil which is valuable in the manufacture of paint and of printer's ink. The compressed refuse is used as *oil-cake* for feeding cattle, and the ground seed constitutes *linseed meal*.

The *bast* of the stem (that part of the fibre which surrounds the wood) is the raw material of linen. To obtain it the f. stems, from which the seed pods have been removed, are rotted for 10 to 15 days in hard water; they are then beaten to break up the wood, and subjected to various combing processes, by means of which the long bast fibres are separated from shorter fibres, and from the wood—these forming the *tow*. From the fibre thus obtained thread is manufactured by spinning, and cloth by weaving the thread.

Sharp, *F., Tow, and Jute Spinning*.

FLAXMAN, JOHN, R.A. (1755–1826), Eng. sculptor; as a boy had feeble health, but imbibed a love of art from his f., who was a moulder of figures. He became an Academy student, and found scope for his abilities as a designer for Wedgwood. In 1782 he began to devote himself to statuary and monumental sculpture, and thus established his fame as the greatest of Eng. classical sculptors, his designs in illustration of Homer, Æschylus, and Dante being especially famous.

Sidney Colvin, *Drawings of F.* (with biography).

FLEABANE, general term for asteraceous plants popularly supposed to keep off fleas; best known European species, *Pulicaria dysenterica*.

FLEAS, from the order *Siphonaptera* or *Aphaniptera*, are wingless, compressed insects, with piercing mouth parts, and are external parasites of almost all animals and birds. They are responsible for the spread of several diseases, *e.g.* plague in India. Well-known examples are the human flea (*Pulex irritans*) and the jigger (*Sarcopsylla penetrans*), a terrible American pest.

FLÉCHIER, VALENTIN ESPRIT (1632–1710), Fr. writer and cleric; bp. of Lavaur, 1685; of Nîmes, 1687; noted for eloquent sermons and funeral orations.

FLECKEISEN, CARL FRIEDRICH WILHELM ALFRED (1820–99), Ger. critic and philologist.

FLECKNOE, RICHARD (d. *c.* 1678), Eng. poet and dramatist; satirised by Dryden.

FLEET, the entire body of a nation's war-vessels, or a division of the same located in some particular waters; applied also to fishing-boats.

FLEET PRISON, famous gaol which stood in Farringdon St., London; existed in Norman times; destroyed by Great Fire in 1666 and again during Gordon Riots in 1780; used for Star Chamber and Chancery prisoners, debtors, and bankrupts.

Fleet Marriages.—Clandestine marriages performed by disreputable or pseudo-parsons in or near Fleet Prison; suppressed in 1754.

FLEET STREET, famous London street, with many newspaper offices; identified with journalism. See *Fleet St. in Seven Centuries*, by W. G. Bell (1912).

FLEETWOOD (53° 56′ N., 3° 1′ W.), seaport, watering-place, Lancashire, England; fisheries. Pop. (1911) 15,876.

FLEETWOOD, CHARLES (d. 1629), Eng. politician and soldier; Roundhead in Civil War;

present at *Dunbar* and *Worcester*; commander-in-chief, Ireland, 1652–55; commander-in-chief, 1659.

FLEETWOOD, WILLIAM (1656–1723), Eng. ecclesiastic; held sees of St. Asaph and Ely.

FLEGEL, EDUARD (1855–86), Ger. West African traveller and author.

FLEISCHER, HEINRICH LEBERECHT (1801–88), Ger. Oriental scholar.

FLEMING, PAUL (1609–40), Ger. poet; lyrics, sonnets, hymns.

FLEMING, RICHARD (fl. 1406–31), Eng. ecclesiastic; founder of Lincoln Coll., Oxford.

FLEMING, SIR SANDFORD (1827–), Canadian engineer and author.

FLEMISH LITERATURE, see HOLLAND (LANGUAGE AND LITERATURE).

FLEMISH SCHOOL, see PAINTING.

FLENSBURG (54° 46′ N., 9° 26′ E.), seaport, Germany; breweries, distilleries. Pop. (1910) 60,931.

FLERS (48° 44′ N., 0° 35′ W.), town, Orne, France; linen and cotton manufactures. Pop. 14,000.

FLESH-FLY, general term for flies whose larvæ feed on flesh; the common European species is *S. carnaria*; the American, *S. sarracenia.*

FLETCHER, ANDREW, OF SALTOUN (1655–1716), Scots politician; took part in Monmouth's rising of 1685; afterwards travelled; returned to Scotland, 1689; was prominent politician from 1703 till 1707, opposing Anglo-Scot. Union.

FLETCHER, GILES (1548–1611), Eng. author and State official; wrote *The Russe Commonwealth.*

FLETCHER, GILES (1584–1623), Eng. poet; s. of above; author of *Christ's Victory* (1610).

FLETCHER, HORACE (1849–), Amer. dietician; founder of system (*Fletcherism*) for thorough mastication of food.

FLETCHER, JOHN (1579–1625), collaborated with Francis Beaumont (*q.v.*).

FLETCHER, JOHN WILLIAM (1729–85), Eng. clergyman; intimate friend of Wesley.

FLETCHER, PHINEAS (1582–1650), Eng. poet, bro. of Giles F. (jun.); author of *The Purple Island.*

FLEURANGES, ROBERT (III.) DE LA MARCK (1491–1537), Fr. marshal and historian; distinguished at *Marignano*, 1515; captured Cremona; imprisoned in Flanders, where he wrote his history.

FLEUR-DE-LIS, the lily-flower heraldic device borne as the royal arms of France from very early times down to the extinction of the monarchy. The triple heads are said to typify the Trinity.

FLEURUS (50° 30′ N., 4° 33′ E.), village, Belgium; scene of four battles in Span. and Fr. wars. Pop. 6231.

FLEURY, ABRAHAM JOSEPH (1750–1822), Fr. actor.

FLEURY, ANDRÉ HERCULE DE (1653–1743), Fr. politician and ecclesiastic; cardinal, 1726; governed France, 1726–43; tried to maintain peace, improved commerce; sent force against Austrians, 1733.

FLEURY, CLAUDE (1640–1723), Fr. Church historian; educated several Fr. princes; wrote *Histoire Ecclésiastique,* work of great learning in twenty vol's.

FLEXNER, SIMON (1863–), Amer. pathologist; discovered (with Jobling) serum treatment for cerebro-spinal meningitis.

FLIEDNER, THEODOR (1800–64), Ger. Lutheran pastor; founder of Prot. order of Deaconesses; pastor of Kaiserswerth, 1822; founded there deaconesses' home and seminary for infant-school teachers.

FLIES, see DIPTERA.

FLIGHT is the passage of an animal through the air by means of wings, which are limbs specially adapted for the purpose. Flying animals,—which include insects, birds, and bats, but not so-called flying squirrels, flying opossums, or flying fish,—whatever their species and however different the appearance of their wings, all fly according to the same principles. It has been supposed that the air-sacs and cavities in the bones of birds when filled with heated air supported the birds after the manner of a balloon, but this has been disproved, the purpose of the sacs being to assist in regulating the temperature and in aerating the lungs more completely, the f. of birds being due to the weight of the animal and the power of the wings inducing a resistance in the air sufficient to propel it upwards and onwards. Weight is as necessary as power for the purpose of f., as, without sufficient weight to overcome air currents simply by inertia, the animal would be unable to direct its movements and would be at the mercy of every wind that blew. This fact is greatly in favour of the idea that a flying machine should not be a light, balloon structure, having a very large surface exposed, but should be comparatively heavy and compact, depending for its ability to fly solely on the power of its flying mechanism.

Pettigrew (1867) has shown that the wings of all flying animals are built as screws, and when they vibrate they twist in opposite directions during the up and the down strokes, striking upwards and forwards for the up strokes, and downwards and forwards during the down strokes, passing through the air obliquely as a boy's kite when pulled on, or as an oar in the water in rowing. Professor Marey, a few years afterwards, elaborated the theories of Pettigrew by means of the sphygmograph (an instrument in which movements are recorded by a pointer on a revolving drum) and by photography, showing the movements of the different feathers of a wing. The wings of birds and other animals are made to vibrate at very high rates of speed, and in the course of a vibration they cover over a large space so rapidly that it forms, as it were, a solid support for the animal; and by vibrating at a high speed light wings of small size perform the work of heavy wings of large size vibrating slowly, while the resistance of the air is also greater to a swiftly moving object than to one moving slowly, so that the propulsion of the animal is much assisted. This may also be brought about by the velocity of the wind being high, so that one sees birds flying easily in a breeze with but little movement of their wings. Since the parts of the wing nearest to the body of the animal pass through a very much shorter space than those farthest away in exactly the same time, the wing is necessarily an elastic body so as to avoid violent vibration of its parts.

Aviation.—The possibility of human beings flying is a subject which has engaged the attention of man since early times, as one may learn from the myths of Pegasus, the flying horse, and of Dædalus, who constructed wings of feathers and wax. At a somewhat later period various persons are said to have flown from St. Mark's, Venice, in Spain, and in Nuremberg, while near the beginning of the XVI. cent. an Ital. alchemist attempted to fly from Stirling Castle to France, but soon fell, breaking a leg; Leonardo da Vinci also wrote at some length on the subject of f., designing wings which could be fitted to the body for the purpose. Borelli in 1670 investigated the mechanism of flying in birds and designed artificial wings, his theories being followed by many authorities as late as the XIX. cent. In 1768 Paucton designed a flying-machine fitted with screws, while somewhat later Cayley constructed a model which flew on the same principles, other experimenters following with more or less success. In 1868 d'Amécourt exhibited a model driven by steam and propelled by screws, and Pénaud, a few years after, had some success with models fitted with elastic in place of rigid screws.

The flying-machine built by Henson in 1843 was the first attempt on a large scale to combine propelling screws with supporting planes, and Stringfellow, who had been associated with him, invented a much improved model with a light engine. At the end of the XIX. cent. Langley and Hiram Maxim each constructed models driven by steam which flew short distances—that of Langley, in 1896, flying half a mile on the Potomac River in America. Experiments were also carried out by gliding aeroplanes carrying passengers, by Lilienthal in Germany, Pilcher in England, and Chanute in America, each of whom made several

hundred flights, the two former, however, being killed.

At the same time investigations were being carried out by Wilbur and Orville Wright in Ohio, U.S.A., at first merely with gliders, but afterwards with aeroplanes fitted with a petrol motor, and in 1903 they accomplished a flight of fifty-nine seconds' duration with one of the latter machines, while in 1905 they covered 22¼ miles in a flight. Meanwhile Santos Dumont had been experimenting in France with dirigible balloons, in 1901 winning the Deutsch prize for encircling the Eiffel Tower in Paris; but in 1906 he constructed an aeroplane on the box-kite design, fitted with a petrol motor, and succeeded in flying 220 metres. Also in France, Farman designed an aeroplane of the biplane type, and in 1908 won the Deutsch-Archdeacon prize of £2000 for a circular flight of one kilometre. The brothers Wright, however, were even more successful, and coming over to France in 1908 Wilbur Wright broke all previous records by remaining in the air for 2 hrs. 20 mins. 23 secs. on a biplane of his and his bro's design. The next year saw great developments in the science of aeronautics, especially as regards the *monoplane* as opposed to the *biplane*, the former being lighter, swifter, and more easily started than the latter, which, however, is more stable; and in this year (1909) the Eng. Channel was first crossed by an aeroplane, Blériot accomplishing this feat in a monoplane of his own design, while Paulhan won the *Daily Mail* prize of £10,000, flying from London to Manchester within twenty-four hours, with only one stop for fuel. Aeroplane meetings have since been held all over Europe and N. America, while flights have been made so far away as China and S. America. In 1910 the Alps were crossed by an aeroplane by way of the Simplon Pass, Chavez, the aviator, being, however, fatally injured in landing; and in 1911 the circuit of Great Britain was accomplished by Lieut. Conneau (Beaumont) of the Fr. Navy (who won the prize of £10,000 offered by the *Daily Mail*), and by Vedrines. In the summer of the same year the first aerial post was established, messages being carried from London to Windsor, 21 miles away, the first voyage taking only ten minutes. Airships of the dirigible balloon type are treated under BALLOON (*q.v.*). All the great European countries now have Flying Corps attached to their military forces for scouting and other purposes. *Hydroplanes*, which can mount from, alight, and travel on smooth water surfaces, as well as fly in the air, are also attracting growing attention. Brit. Aerial Navigation Act (1913) prescribes certain areas forbidden to airmen; chief aim is to protect against foreign spies, and foreign airmen are required to obey strict rules as to landing, etc.

Walker, *Aviation* (1912: T. C. & E. C. Jack).

FLINCK, GOVERT (1615–60), Dutch artist; portraits, Scripture pieces, and *genre* pictures.

FLINDERS, MATTHEW (1774–1814), Eng. explorer; entered navy, 1790; fought in *Bellerophon*, 1794; surveyed great part of Australian coast, 1795–96, discovering Bass Strait; led expedition to explore Australian coast, 1801; on return wrecked, and imprisoned at Mauritius for six years; returned to England, 1810; pub. *A Voyage to Terra Australis*, 1814.

FLINSBERG (50° 54′ N., 15° 21′ E.), village, watering-place, Silesia, Germany; mineral springs.

FLINT (43° 1′ N., 83° 41′ W.), city, Michigan, U.S.A.; carriages; woollen goods. Pop. (1910) 38,550.

FLINT (53° 15′ N., 3° 9′ W.), seaport, county town, Flintshire, Wales; smelting and chemical works. Pop. (1911) 5474.

FLINT, variety of quartz; colour, brown, red, yellow, or grey; clouded, marbled, spotted, or veined; found embedded in chalk in round lumps or nodules; readily strikes spark with steel; easily split into sharp fragments, whence much used by ancients for knives, axes, and arrow-heads; now used in manufacture of earthenware and glass.—**Flint Implements**, remains of the Palæolithic period found in caves, river-beds, and ancient burial-places. See ARCHÆOLOGY.

FLINT, AUSTIN (1812–86), Amer. physician; prof. of Med. in Buffalo Coll. (1847), Louisville (1852), and Bellevue Coll., New York (1861); author of numerous works on medical subjects.

FLINT, AUSTIN (b. 1836), s. of above; Amer. physiologist; prof. of Physiology in Buffalo Coll. (1858) and elsewhere; author of many works on physiology.

FLINTSHIRE (53° 15′ N., 3° 8′ W.), county, N. Wales; bounded N. by Irish Sea, N.E. by Dee, E. by Cheshire, S.W. by Denbighshire; detached portion Maelor lies a few miles S.E.; area, 255 sq. miles. F. produces coal, limestone, zinc, lead, iron; good pasturage; main rivers, Dee and Clwyd; chief towns, Mold, Flint (county town), St. Asaph; ruins of F. Castle; Hawarden (Gladstone's home). Pop. (1911) 92,720.

FLOATING BATTERY, device for coast defence or attack against coast fortifications; a floating gun-platform, heavily armed, with small navigating power.

FLOATING DOCK, see DOCK.

FLOATING ISLAND, common in Chinese rivers and lakes; an artificial island of earth and vegetation on a floating platform of wood.

FLODDEN (55° 36′ N., 2° 7′ W.), hill, near village of Branxton, Northumberland, England; scene of battle, Sept. 9, 1513, in which Scots were defeated by English, and James IV., king of Scots, and many of his nobles slain.

FLODOARD, a Fr. priest (894–966) whose chronicles of Reims Cathedral are of much value to the historian.

FLOOD, THE, see DELUGE.

FLOOD, HENRY (1732–91), Irish orator and politician; elected to Irish Parliament, 1759; became leader of national party; vice-treasurer of Ireland, 1775, holding office till 1781; was in favour of Lord North's colonial policy; had share in organising Irish volunteers in 1778; resigned office in 1781, and returned to his former party, where, however, he found himself superseded by Grattan, with whom he afterwards quarrelled on the Irish Bill of Right introduced by the latter. F. entered Brit. Parliament in 1783; o[illegible] repeal of Catholic disabilities; introduced Reform Bills in 1784 and 1790; retired from public life, 1790; *Life and Correspondence* (edit. by W. Flood, 1838).

FLOOD PLAIN, term in physical geography relating to sediment accumulated in a valley by river, which, when river is full, causes the valley to be flooded by acting as a barricade to the waters.

FLOORCLOTH, usually oilcloth or linoleum. The former has a canvas ground, which is treated with size, and successive coats of paint, laid on with a kind of trowel. The pattern is printed from wooden blocks. Linoleum is also based on a canvas ground, the coating consisting of powdered cork, mixed with oxidised linseed oil and resin, which is crushed into the canvas by means of heated steam rollers.

FLOQUET, CHARLES THOMAS (1828–96), Fr. politician; Pres. of Chamber, 1885, 1886–87, 1889–92; concerned in Panama case, 1892.

FLOR, ROGER DI (d. 1306), soldier and adventurer; fought in Sicily and East; besieged Magnesia; assassinated by Michael Palæologus.

FLORA (classical myth.), Rom. goddess of the spring-time, and of flowers.

FLORE AND BLANCHEFLEUR, XIII.-cent. romance; several times trans. into English.

FLORENCE (34° 49′ N., 87° 47′ W.), city, Alabama, U.S.A., on Tennessee; coal mines; iron manufactures. Pop. (1910) 6689.

FLORENCE, FIRENZE (43° 46′ N., 11° 15′ E.). Tuscan city, Italy, on Arno, in fertile valley among Apennines; capital of F. province; world-famous for its art treasures, glorious history, and natural beauty. F. abounds in wonderful mediæval and Renaissance buildings, rich picture-galleries, fine statuary, gardens, etc. Among most notable churches are the Duomo (magnificent cathedral; begun 1294), with Campanile of Giotto (1334 onwards), Baptistery (XII. cent.: famous bronze doorways), and Museum

(containing Della Robbia's reliefs); San Lorenzo (with Laurentian Library, Brunelleschi's Old Sacristy, Michael Angelo's New Sacristy, and Medici Tombs), Santissima Annunziata (founded 1250; Del Sarto frescoes), La Badia (rebuilt 1285, 1625), Santa Croce (begun 1294; beautiful cloisters; tombs of Michael Angelo and Alfieri), San Marco Monastery (XV. cent.), Santa Maria Novella (begun 1278; Spanish Chapel and 'Green Cloisters'), San Miniato (XI. cent.; Tuscan Romanesque), Or San Michele (Gothic; XIV. cent.; tabernacle by Orcagna), Santo Spirito (1487), Santa Maria del Carmine (dating from 1422; celebrated frescoes). Famous Palaces include Palazzo Vecchio (1300–1600; now town hall), Uffizi (Picture and Sculpture Galleries: many masterpieces, including *Venus de Medici*), connected (by long corridor crossing Arno on famous XIV.-cent. Ponte Vecchio) with Pitti Palace (begun 1440; more masterpieces; lovely Boboli Gardens), Palazzo Medici or Riccardi (*c.* 1430), Palazzo Strozzi (1489–1550). Other leading features are Loggia dei Lanzi (XIV.-cent. arcade with celebrated sculptures), Il Bargello (National Museum: art treasures), Accademia di Belli Arti (art collection), Archæological Museum, Il Bigallo (Gothic loggia; 1352–58), Michael Angelo's house, city walls (XIII. cent.), and gates, Cascine (park), Prot. cemetery (graves of Mrs. Browning, Savage Landor, Clough, etc.), Lung' Arno (riverside promenade).

History.—Ancient Florentia was an unimportant Rom. city; undistinguished till XII. cent., when Republic started (1115) on Countess Matilda of Tuscany's death; fierce feuds arose between Papal and Imperial parties, afterwards Guelphs (*q.v.*) and Ghibellines; aristocratic Ghibellines triumphant with Emperor Frederick II.'s help, 1249–50; democratic Guelphs predominant, 1250–60, when defeated at *Montaperto*; Ghibellines in power, 1260–66, Manfred (*q.v.*) being overlord; Dante (*q.v.*) born at F., 1265; Ghibellines crushed at *Benevento*, 1266, Manfred killed, Charles of Anjou chosen protector. Government of restored Republic (*Secondo Popolo*) was entrusted by ruling merchant-guilds (money-changers, wool-merchants, silk-weavers, furriers, etc.) to a *Signoria* selected from their Presidents (*Priori*) and a *Gonfaloniere* ('banner-bearer,' pres. of Priori) supported by civic militia, *buonuomini* (magistrates), and various councils. This 'Republic of merchants' defeated combined forces of Pisa, Arezzo, and Ghibellines at *Campaldino*, 1289. Guelphs split into two factions—*Neri* (Blacks) and *Bianchi* (Whites); latter (including Dante) were expelled, 1301. Walter of Brienne, Duke of Athens, abolished Constitution, 1342, but fled, 1343. Notwithstanding famine (1346), plague (1348; described in Boccaccio's *Decameron*), and repeated popular risings (against oligarchical government of Albizzi, Strozzi, etc.), F. now flourished exceedingly; many fine buildings erected and dominions extended by conquest of Pisa (1406), Cortona (1414), and acquisition of Leghorn (1421).

Medicis (*q.v.*) assumed supreme power, but retained republican institutions, 1434; made F. rich and powerful, the chief centre of Renaissance and Humanists, home of a famous School of Painting, and cradle of modern Ital. language, lit., and learning. The word 'florin' testifies F.'s former pre-eminence in banking. The populace stirred by Savonarola (*q.v.*) expelled Medicis, 1494; Savonarola burned at stake, 1498. Machiavelli (*q.v.*) served as Sec. of State to Gonfaloniere, 1498–1512, when Spaniards restored Medicis. Medicis were rebanished, 1527; F. besieged by Charles V., Oct. 1529, gallantly defended by Michael Angelo and others, capitulated, Aug. 1530. Medicis now overthrew Republic and ruled as Dukes of F.; extended rule over all Tuscany (*q.v.*), becoming Grand-Dukes, 1569, F. being capital. House of Medici became extinct, 1743, and F. passed to Austria; taken by France, 1799; under Austrian Grand-Dukes again, 1814 till 1859, when united to Italy; capital of Italy, 1865–70, when Rome was selected.

A provincial town, F. now lives on former glories; favourite tourist centre and residential resort for foreigners. Industries include woollens and silks, straw-plaiting, jewellery, porcelain, glass, mosaics, works of art, etc. Pop. (1911) 232,260.

Ruskin, *Mornings in Florence*; Vaughan, *Florence and her Treasures* (1911); Lucas, *A Wanderer in Florence* (1912).

FLORENCE, COUNCIL OF (from 1438), a council which met with object of uniting Gk. and Rom. Churches; first formal meeting at Ferrara, 1438; first session, Florence, Feb. 1439. Subjects discussed were the *filioque*, pontifical supremacy, Eucharist, and purgatory. Union was decreed and signed by Pope and Byzantine emperor, July 1439; Union of Armenians, Jacobites, Syrians, subsequently decreed at various dates; Union finally refused by Constantinople Synod, 1472.

FLORENCE OF WORCESTER (d. 1118), Eng. chronicler and monk.

FLORES.—(1) (39° 20′ N., 31° 18′ W.) westernmost of the Azores Islands. (2) (8° 30′ S., 121° E.) island, Dutch E. Indies, S. of Celebes.

FLOREZ, ENRIQUE (1701–73), Span. historian.

FLORIAN, JEAN PIERRE CLARIS DE (1755–94), Fr. poet, dramatist, and fabulist.

FLORIAN, ST. (*c.* 190-230), martyr, whose relics were treasured in Poland.

FLORIANOPOLIS (27° 36′ S., 48° 27′ W.), city, on W. coast of island Santa Catherina, Brazil; exports dairy and agricultural produce. Pop. 33,000.

FLORIDA (25° to 31° N., 80° to 87° W.), most south-easterly State of U.S.A., situated on a peninsula between Atlantic and Gulf of Mexico; bounded on N. by Georgia and Alabama and S. by Florida Channel. Area, 58,666 sq. miles. Capital, Tallahassee. Coast (*c.* 1200 miles) has many islands, bays, and keys, the latter being sometimes rocky, sometimes overgrown, and with fertile soil. Interior is low and flat (highest point *c.* 350 ft.); numerous lakes—the largest being Okeechobee in S. (*c.* 1000 sq. miles and shallow); many marshes and swamps of which the largest are, the Everglades in S. connected with Lake Okeechobee, the Kissimmee, Cypress, and part of the Okefenokee swamps; there are abundant springs—many mineral. Large number of rivers, of which the most important and navigable are: St. John's, Ocklawaha, Hillsboro, Calooshatchie, Apalachicola, and St. Mary's. The climate is tropical, but cooled by sea breezes; healthy, although malaria is not unknown. The soil although sandy is various and fertilised by heavy rains (the annual fall being *c.* 54 inches); great expanses of swamp, drained, have become fertile land; fruit grows abundantly, and market-gardening is carried on extensively; low hummocks, dry enough for cultivation, produce large crops of cotton, sugar-cane, and grain; cocoa-nuts grow, and natural products include Ind. corn, coffee, rice, and tobacco. Animals include black bears, cougars, wild-cats, wolves, alligators, and small game. Industries comprise tobacco manufacture, lumber trade, turpentine, tar, rosen, and pitch works, sugar-making, salt-evaporation, coral and sponge fishing; valuable fisheries. Chief towns: Key West, Jacksonville, Pensacola, Tampa, Gainesville with state univ. F. was discovered (1512) by Juan Ponce de Leon; explored by De Soto (1539); Span. till 1763; British till 1781; Span. again till 1819, when ceded to U.S.A.; admitted into Union as State (1845); war with aborigines, 1834–42; State taking Confederate side, not readmitted to Union till 1868.

F. is governed by a Senate of 32 and a House of Representatives of 68 members; Senators are elected for 4 years, Representatives for 2; Democrats in power, 1911–13. Pop. (1910) 752,619.

Davidson, *The Florida of To-day* (1889); Norton, *A Handbook of Florida* (1892).

FLORIDA (34° 7′ S., 56° 11′ W.), town, capital of department, Uruguay. Pop. *c.* 2500. Department has area 4763 sq. miles. Pop. (1909) 47,699.

FLORIDA CHANNEL (26° N., 79° 40′ W.),

strait separating Florida state from Bahamas and Cuba.

FLORIDABLANCA, DON JOSE MOÑINO, COUNT (1728–1808), Span. statesman.

FLORIDOR (fl. *c.* 1640–71), Fr. actor; leading player of his day.

FLORIN, originally a Florentine gold coin; Eng. gold f's were struck by Edward III.; the silver f. (value 2*s.*) dates from 1849.

FLORIO, JOHN (*c.* 1553–1625), Eng. scholar and translator; pub. an Ital.-Eng. dictionary and other works; famous as the translator of Montaigne's Essays (1603). He was an intimate of Jonson, and, presumably, of Shakespeare.

FLORIS, FRANS (1520–70), Flem. artist.

FLORUS (II. cent. A.D.), Rom. historian.

FLORUS, JULIUS, Rom. jurist and poet; fl. during the reign of Augustus.

FLORUS, PUBLIUS ANNIUS (II. cent. A.D.), Rom. poet and rhetorician.

FLOTSAM, JETSAM, AND LAGAN (or *Ligan*), goods cast away at sea. The first is the name given to goods that float on the surface of the water; the second to goods that have sunk; the third to sunken goods attached to a buoy, or other sea-mark. Goods under all three headings become crown property, failing the original owner's claiming them.

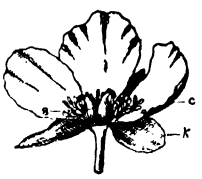
FLOUNDER, see FLAT-FISHES.

FLOUR, the powdered and refined grain of wheat, rye, and other cereals, but particularly of wheat. The ground oat-berry is called *meal*. The grinding of wheat by means of stones (pestle and mortar) dates back to a very early period, and is known to have been the system employed several cent's B.C. Later, stone rollers were employed, to be followed by iron ones, but present-day milling is done with chilled steel rollers. In modern f.-milling the grain is carefully cleansed before it is ground, and in the process of milling the outer husks and all the constituent parts of the wheat-berry are carefully separated. It was claimed by the supporters of the 'Standard Bread' movement (1910–11) that this excessive refining process removed from the f. highly necessary nutritive properties, but public opinion will probably remain divided as to the use of highly refined white bread and whole-meal bread, in the latter of which the husk is ground up along with the kernel of the berry. Whole-meal bread, it is claimed, is more nourishing than white bread, but, on the other hand, it is often found to disagree with delicate digestions, and in that case reliance upon white bread becomes a necessity. Oats are more nourishing than wheat, because they contain a larger quantity of saline and fatty matter. See BREAD.

FLOURENS, GUSTAVE (1838–71), Fr. revolutionary author; one of Commune leaders.

FLOURENS, MARIE JEAN PIERRE (1794–1867), Fr. physiologist, pupil of Cuvier; prof. of Comparative Anatomy in Museum of Jardin du Roi (1832); prof. of Natural History in Collège de France (1855); author of numerous works on physiology and natural history.

FLOWER, a specialised shoot of limited growth bearing the essential organs of reproduction, the stamens and carpels, apically. The portion of the shoot which bears the stamens and carpels is termed the receptacle, and as a rule also carries two other sets of leaves—the sepals, protective in character and collectively forming the *calyx*, and the petals, often brightly coloured and insect-attracting, termed the *corolla*. Where, as in the Liliaceæ (*q.v.*), the calyx and corolla do not differ in appearance, they are grouped together as the *perianth*. In the more primitive flowers (*e.g.* Magnoliaceæ, Ranunculaceæ, Nymphæaceæ) the whole or part of the floral organs exhibit a spiral arrangement on the axis, but in the majority the floral parts are given off in whorls, the sepals outermost and then the petals, stamens, and carpels successively. The *receptacle* in the earlier types (*e.g.* Magnoliaceæ) has a pronouncedly conical character, with the result that the *carpels* project above the rest of the floral leaves and are said to be *superior*, the remaining structures being said to be *hypogynous*. In other cases the receptacle becomes flattened, forming a disc, which either shows very clearly above the calyx, as in the sycamore and orange, or may bear the sepals at its margin, as in many Rosaceæ. From this disc-like form the next step is produced by the development of a central depression or cavity, owing to the more rapid growth of the margins, as in the rose. The result is that the outer whorls appear to arise at the same level or even above the carpels, and are then said to be *perigynous*. Finally, the hollowing may become so pronounced that fusion of the carpels and receptacle has resulted, as in the apple and narcissus, the calyx, corolla, and stamens then seeming to be borne actually upon the ovary, and being termed *epigynous*, whilst the ovary is said to be *inferior*.



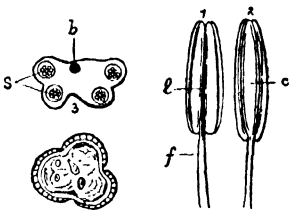


DIAGRAM OF A FLOWER IN LONGITUDINAL SECTION. *k*, one of the sepals which compose the calyx; *c*, one of the petals which similarly make up the corolla; *a*, the stamens; *g*, one of the carpels making up the pistil. (*After Strasburger.*)

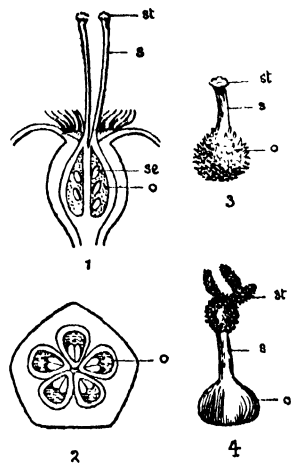
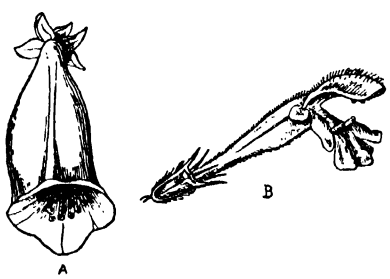


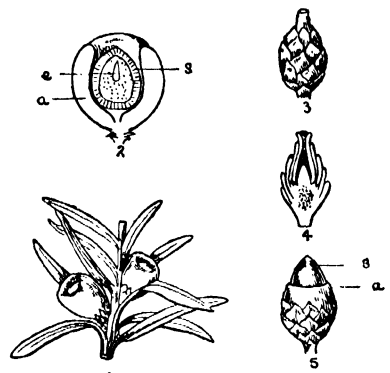
The *calyx* is primarily protective, and so is often tough and may be covered with hairs. In some cases its functions cease with the opening of the flower, as in the poppy, in which the petals are shed as the bud unfolds; in most other cases its functions extend throughout the life of the flower, whilst in a few (*e.g.* Rosaceæ, Leguminosæ) it is persistent and protects the developing fruit. Certain of the Ranunculaceæ, such as delphinium and aconitum, have developed petaloid brightly-coloured calices, owing to the reduction and modification of the petals as nectaries, whilst the catkin-bearing flowers are devoid of calyx, their place being taken by overlapping scales.

DIAGRAMS ILLUSTRATING THE STRUCTURE AND PARTS OF THE STAMEN. 1, ventral, and 2, dorsal view of an entire stamen; *f*, filament; *l*, one of the two anther lobes; *c*, connective. 3, cross section of the anther to show the four pollen-sacs (*s*); *b*, the fibro-vascular bundle of the connective. 4, a single pollen grain of the wallflower, highly magnified (about 450 times), showing the wall of the grain, with the three thin places at any one of which the pollen tube may grow out, also the three nuclei.



Stamens and Petals.—The *sepals* in the higher groups are coherent or gamosepalous, this usually being accompanied by a similar fusion of the *petals*, termed gamopetaly. Whilst most flowers are radially symmetrical or actinomorphic, there is in nearly all groups a tendency to bilateral symmetry or zygomorphy, owing to the development of nectariferous spurs or other honey-protecting devices. Thus we have the larkspur and monkshood in the Ranunculaceæ, the Papilionatæ, such as the sweet pea, the Labiatæ, Scrophulariaceæ, and many others, exhibiting this character, which tends to prevent all but those insects efficient as pollen-bearers from obtaining the secreted honey. The *stamens* are numerous in many groups (Rosaceæ, Ranunculaceæ) and are arranged spirally, but there is a general tendency to reduction in most groups correllated with the greater specialisation of the remaining floral members. In the Malvaceæ the stamen head or anther is extensively subdivided, thus compensating for numerical reduction, whilst in the Compositæ the individual stamens are united by their

anthers. Each stamen consists of two portions, the stalk or filament, and the anther, which is composed of four pollen sacs bearing the pollen grains. The latter are often delicately sculptured and ornamented, and, when transferred to the receptive surface of the carpellary structures, produce a fertilising tube down which the male elements are borne. The carpels in the simplest cases are separate or *apocarpous* (*e.g.* strawberry, buttercup), but in the majority fusion has occurred, the coherent structures forming a *syncarpous* ovary.



DIAGRAMS ILLUSTRATING THE STRUCTURE OF THE PISTIL. 1, longitudinal section of the pistil of the apple, showing two of the divisions of the ovary (*o*) containing ovules (*se*), also two of the free styles (*s*) and stigmas (*st*). 2, transverse section of same, showing that five carpels (*o*) are present in all, making up a five-celled ovary; round the whole is the receptacle wall which thickens to form the edible part of the fruit. 3, the pistil of a lime flower (*Tilia*), showing the stigmas (*st*), the united styles (*s*), and the ovary (*o*). 4, pistil of the woodrush (*Luzula*), showing the three free stigmas, the united styles, the ovary of three united parts.

Pollination.—The carpels bear one or more ovules and at the apex possess a specialised receptive portion for the pollen grains, which is termed the *stigma*, and is often of either a sticky or a brush-like character. Each ovule when mature contains a central embryo-sac in which there are three nuclear groups: (1) the egg-cell, forming the embryo on fertilisation, and two synergidæ; (2) the polar nuclei, which, on fusion with the second male nucleus, form the *endosperm* or embryonic food reserve; (3) the antipodals, which are abortive. The double nuclear fusion of two male nuclei from the pollen grain, one with the ovum and the other with the polar nuclei, is a characteristic and constant feature, and has no parallel in any other plant group. Many devices are adopted to secure cross-pollination, such as the maturation of one set of organs before the other (protandry, protogyny), by the development of unisexual flowers bearing carpels or stamens only, as in catkinate flowers, and by the protection of the stigmatic surface from the pollen of the same flower, as in orchis and iris; whilst a further means to this end is seen in the elaborate devices of many plants for the attraction of insect visitors by bright coloration, scent, and honey. See POLLINATION.

TWO ZYGOMORPHIC FLOWERS. *A*, foxglove; *B*, hempnettle. In both cases the flower is symmetrical about a median line only.

With regard to the arrangement of the individual flowers on the axis, it will be seen that although in some plants, such as the tulip, the blooms are borne singly, in the majority the formation of an inflorescence is resorted to. All inflorescences fall into two classes: the *cymose* or definite, in which the main axis is terminated by a flower and the further growth is due to the development of secondary axes; and the *racemose* or indefinite, in which the main axis, though it may branch, is of unlimited growth and bears a series of flowers from the base upwards. The chief modifications of the cyme are the dichasium, formed by the development of secondary, tertiary, and subsequent axes in pairs, and the helicoid and scorpioid cymes, which result from unilateral branching. The raceme

DIAGRAMS OF THE NAKED OVULE AND SEED OF THE YEW, A GYMNOSPERM. 1, part of a yew branch, showing the ripe seeds, partially enveloped in the pinkish pulp (*arillus*); 2, longitudinal section of same; *s*, the naked seed, *a*, the arillus, *e*, the embryo, surrounded by its food material (*endosperm*). 3, young ovule of the yew, projecting above its scale leaves. 4, section of the same, showing that the ovule has no surrounding ovary. 5, the young seed, after fertilisation, with the arillus (*a*) beginning to grow up round the naked seed (*s*).

which develops sessile flowers is termed a spike (*e.g.* barley), whilst if the main axis is foreshortened so that all the florets appear to spring from one level, like the ribs of an umbrella, a racemose umbel results (Umbelliferæ). Finally, by the development of sessile flowers on the foreshortened and apically flattened main axis, a dense head of florets termed a capitulum is produced, such as occurs in the dandelion, daisy, and other Compositæ. Kerner's *Natural History of Plants*.

FLOWER, SIR WILLIAM HENRY (1831–99), Eng. zoologist.

FLOWERING RUSH (*Butomus umbellatus*), European plant with rose-coloured umbel; of order *Alismaceæ*.

FLOWERS, ARTIFICIAL, are used chiefly in millinery and for decorative purposes. France, Belgium, Britain, and Holland are the chief centres of production; chief materials used are taffetas, muslins, satins; cotton wool, wire, and paper; thin metal sheets and blown glass; occasionally stone and china ware.

FLOWERS OF TAN, see MYCETOZOA.

FLOYD, JOHN (1572–1649), Eng. Jesuit author.

FLOYD, JOHN BUCHANAN (1807–63), Amer. politician.

FLOYER, SIR JOHN (1649–1734), Eng. physician; author of many medical (particularly on baths) and other works.

FLUDD, ROBERT (1574–1637), Eng. physician and philosopher; believed to be the inventor of the barometer; one of the founders of modern freemasonry in England.

FLÜGEL, GUSTAV LEBERECHT (1802–70), Ger. Oriental scholar.

FLÜGEL, JOHANN GOTTFRIED (1788–1855), Ger. lexicographer.

FLUID, a term describing states of matter which

flow, i.e. the liquid and gaseous; for the physics of f's, see HYDROMECHANICS.

FLUKES, a kind of TREMATODE WORMS (*q.v.*).

FLUME, see AQUEDUCT.

FLUMINI MAGGIORE (39° 24′ N., 8° 32′ E.), small town, Sardinia; centre of lead and zinc mining district. Pop. 4000.

FLUORESCEIN, or RESORCIN-PHTHALEIN ($C_{20}H_{12}O_5$), alkaline solution; shows magnificent yellow-green fluorescence which is imparted to wool and silk; colour is faint and fades, but mixed with other dyes it imparts fluorescence.

FLUORESCENCE, discovered by Brewster in 1833, is a self-luminosity exhibited by certain bodies, such as fluor-spar. It differs from phosphorescence in the time it lasts after the light is cut off, disappearing instantaneously in liquids, not quite so abruptly in solids. If a beam of sunlight is allowed to fall on a solution of chlorophyll, which is green, it becomes in the fluid a bright blood-red colour. Some bodies exhibit fluorescence only in the liquid state, others in the solid state only. Solutions of sulphate of quinine in sulphuric acid have a blue fluorescence. Fluorescence is probably produced by some molecular change in the body.

FLUORINE (F = 18·9), an irritating gas and the most energetic halogen; combines with all elements except nitrogen and oxygen. It is liberated on passing an electric current through hydrofluoric acid in platinum vessels. It decomposes cold water, and has bleaching and antiseptic properties. HYDROFLUORIC ACID (H.F.), obtained by decomposing fluor-spar with strong sulphuric acid, is a colourless volatile (the vapour being a deadly poison) liquid; M.P. 19° C. It is chemically very active, attacking glass (whence its use for glass etching), and its salts are called fluorides.

FLUOR-SPAR, DERBYSHIRE SPAR, FLUORITE, transparent mineral, common in Cornwall and Derbyshire; composition, fluoride of calcium. Generally colourless, but sometimes of yellowish or greenish hue, also found bluish and reddish. Often found in tin or lead mines, but also in granites, slates, and limestones; made into vases and ornaments.

FLUSHING, VLISSINGEN.—(1) (51′ 26′ N., 3° 34′ E.) Fortified seaport town, Zeeland, Holland, on island Walcheren; active shipping trade. Pop. (1910) 21,363. (2) (40° 48′ N., 73° 53′ W.) Former town, Long Island, New York, U.S.A.; now part of borough of Queens, N.Y. City. Pop. c. 16,500.

FLUSTRA, see under POLYZOA.

FLUTE (Ital. *flauto*; Fr. *flûte*), a wood-wind instrument which produces sound by the player partly covering the 'embouchure' or mouth-hole with the lower lip, and blowing against the opposite side of the mouth-hole. The f., which is a very ancient instrument, consisted of one piece in its original form, and until comparatively recent times had only finger-holes and no keys. The old *Flûte-à-bec* was played straight to the mouth. The 'transverse' f. was not known until a few cent's ago, and the modern instrument of this type has been carried to a high pitch of perfection by a succession of improvements, due among others to Quantz, Boehm, Siccama, Clinton, and Carte. First one key then others were introduced, until the present eight-keyed f. was evolved. By this means the player was enabled to give the complete chromatic scale with a fair amount of accuracy. But the f. was still an unsatisfactory instrument until the middle of the XIX. cent. when an immense improvement in tone was effected. Boehm replaced the 'cone' f. (with conical body and cylindrical head) by the 'cylindrical' f. (with cylindrical body and conical head). This change, together with the substitution of open for closed keys, gave the f. a much more perfect quality of tone and intonation. The f. is generally made of wood or ebonite, and consists of three parts—head, body, and foot; modern f. has a compass of three octaves with chromatic semitone; it is a non-transposing instrument, and in orchestra is assigned the leading part among wood-winds. Many instruments, simple and complex, belong to the f. family, *e.g.* concert f., piccolo or octave f. (which is pitched one octave higher than concert f.), fife (*q.v.*), old-fashioned *Flûte d'Amour* made in A, and straight or 'fipple' f.'s, such as recorder, *Flûte-à-bec*, flageolet, and whistle.

FLUX, see BLACK FLUX.

FLUXION, a name given by Newton to the rate of flow or change of a variable quantity, called a *fluent*. F's was the name of what is now commonly known as the Infinitesimal Calculus (*q.v.*), and the *method of f's* differed from the method of infinitesimal calculus in referring the rate of change of y not to the independent variable x, but to time (t), to which the change of x was also referred. In Newton's notation the fluxions of $x \times y$ were represented as $\dot{x} \times \dot{y}$.

FLY, see DIPTERA and HOUSE-FLY.

FLY (8° S., 143° E.), river, New Guinea; enters Gulf of Papua.

FLY-CATCHER, or 'BEAM-BIRD' (*Muscicapa grisola*), a late spring migrant, arriving in Britain in May, and leaving for India, Arabia, and Africa in Sep.; plumage, similar in both sexes, brownish above, with darker streaks—under parts pale with brown markings; food chiefly small insects, occasionally berries.

FLY-FISHING, see ANGLING.

FLYGARE-CARLÉN, EMILE (1807–92), Swed. novelist.

FLYING BUTTRESS, in arch., an open buttress for supporting the thrust of a vault.

FLYING COLUMN, military light detachment, usually composed of all arms, for quick movements.

FLYING DRAGON, see LIZARDS.

FLYING DUTCHMAN, the phantom ship of Vanderdecken, doomed to beat around the Cape of Good Hope; its appearance was said to presage evil; opera of Wagner's.

FLYING FISH, so named from its habit of leaping from water to escape foes, by means of powerful tail-stroke; pectoral fins extremely elongate and wing-like, acting as sustaining gliding-planes.

FLYING FOXES, FOX-BATS, FRUIT-BATS (*Pteropodidæ*), family of Bats (*q.v.*), containing 136 species, distinguished by enormous size (up to 5 feet from tip to tip of wings); many have fox-like heads; feed on fruits, flowers, and the juices of trees; occur in warmer regions of Old World.

FLYING LEMUR, see GALEOPITHECUS.

FLYING MACHINES, see FLIGHT.

FLYING SQUIRREL, a general term including certain rodents of squirrel family, characterised by possession of a tough membrane stretching from body wall to toes, which assists in parachute-like flight from tree to tree. See MARSUPIALS.

FLY-WHEEL, see under ENGINE.

FOCA, town, Bosnia; chief industry, silver filigree and inlaid work; formerly Turkish capital of Herzegovina vilayet. Pop. c. 5000.

FOCHABERS (57° 37′ N., 3° 5′ W.), village, Elginshire, Scotland, near mouth of Spey; near it is Gordon Castle.

FOCSANI (45° 47′ N., 27° 15′ E.), town, Putna, Rumania; grain, wine; fortification works. Pop. (1911) 25,032.

FOCUS, see LENS.

FODDER, food of herbivorous domestic animals; term generally used for dried grass—hay and straw—and Leguminosæ—beans, peas, clover, tares, etc.

FŒTUS, see OVUM, EMBRYOLOGY.

FOG, water dust suspended in the atmosphere close to the earth, depends on the solid matter in the air. If the air is free from dust the temperature may be below dew-point, but no drops of water will form, for as soon as water is present it will evaporate. But if particles of dust are present the water condenses on them as a thin film, from which re-evaporation does not take place readily. The water is probably produced in favourable sites by the movement of masses of moist air at different temperatures. In the country, f. is

usually white, and consists of minute water-globules which disperse the sunlight by repeated reflection, but it is fairly translucent. In the town, soot and smoke blacken it, so that light may be quite obscured. The presence of f. in the air decreases the velocity of sound.

Fog-Signals, audible warnings used at sea and on railways. International law decrees that ships in fog must give warning of their approach by siren (steamship), by fog-horn (sailing ship). Ships at anchor give warning by bell. On railways detonators are laid, and explode on contact with the engine wheels.

FOGARAS (45° 47′ N., 24° 54′ E.), capital, F., Hungary. Pop. *c.* 5000. The province has area of 725 sq. miles. Pop. *c.* 88,000.

FOGAZZARO, ANTONIO (1842–1911), Ital. poet and novelist; author of *The Saint*.

FOGELBERG, BENEDICT ERLAND (1786–1854), Swed. sculptor.

FOGGIA (41° 27′ N., 15° 31′ E.), town (ancient *Arpi*) and episcopal see, Foggia, Italy; agricultural produce. Pop. (1911) 76,534.

FÖHN, warm and dry wind of the Alpine valleys.

FÖHR (54° 43′ N., 8° 30′ E.), Ger. island, N. Sea, off W. coast of Pruss. province of Schleswig-Holstein.

FOIL, a plate of metal between leaf and sheet metal in thickness, used in metal decoration and for wrapping articles.

FOIL, see FENCING.

FOIX (42° 57′ N., 1° 36′ E.), formerly capital of Foix County, now capital of Ariège, on river Ariège. Near it is an old castle belonging to Counts of Foix. F. has iron and steel works. Pop. 7000.

FOIX, Fr. family which took title of count from F. district; RAIMOND ROGER (d. *c.* 1223), famous as Crusader and in Albigensian movement. GASTON IV. (d. 1472), m. heiress of Navarre, and was named successor by her father, John II. GASTON (1489–1512), 'The Thunderbolt of Italy,' was slain at Ravenna, and Navarre was divided by France and Spain.

FOIX, PAUL DE (1528–84), Fr. abp. and diplomatist.

FOLARD, JEAN CHARLES (1669–1752), Fr. soldier and writer; served in Italy, 1702–5; at Malplaquet, 1709; in Malta, 1714; Spain, 1719; gov. of Bourbourg, 1711; wrote *Essays on War*.

FOLD, in geology, a bend or curvature in the stratified rocks composing the earth's crust. F's are often best seen where strata is exposed, such as in cliffs on the seashore or in quarries. F's are due to upheavals, caused by earthquakes, or to pressure, whereby the earth's crust is so moved as to fold over. They are of two kinds, simple and complex. In the latter case a simple fold may be further folded. Fine examples are found in the Alps.

FOLENGO, TEOFILO (1491–1544), Ital. poet.

FOLEY, JOHN HENRY (1818–74), Irish sculptor.

FOLEY, SIR THOMAS (1757–1833), Brit. admiral; served under Nelson at Copenhagen.

FOLIATION, in geol., parallel layers of different minerals; found in schists and gneisses.

FOLIGNO (42° 57′ N., 12° 43′ E.), town (ancient *Fulginia*) and episcopal see, Perugia, Italy; silks, woollens. Pop. 9511.

FOLIO, page in a ledger; printer's term for sheet folded once; book containing such sheets; the number of a book; in legal documents in Gt. Britain and Ireland, 72 words, in United States 100 words.

FOLKES, MARTIN (1690–1754), Eng. archæologist.

FOLKESTONE (51° 5′ N., 1° 11′ E.), seaport, watering-place on English Channel, Kent, England; has fine harbour, esplanade; fisheries; terminus of steam-packet route to Boulogne. Pop. (1911) 33,495.

FOLKLAND, A.-S. term for land held by custom, or without documentary title.

FOLKLORE, the science devoted to the study and elucidation of traditions and folk-tales. Eng. F. Society was founded 1878. Similar societies also exist in America, France, and other countries. See Andrew Lang's *Custom and Myth*, and *Myth, Ritual, and Religion*.

FOLKMOOT, FOLKMOTE, O.E. national assembly, originally attended by all freemen of a shire; later by magnates only.

FOLLEN, AUGUST LUDWIG (1794–1855), Ger. poet and translator.

FOLLETT, SIR WILLIAM WEBB (1798–1845), Eng. politician and lawyer.

FOLLICLE, see SKIN.

FOMENTATION, application of warm fluid to part of body so as to relieve pain; generally of flannel soaked in boiling water, and covered with waterproof.

FONBLANQUE, ALBANY WILLIAM (1793–1872), Eng. journalist; wrote for *The Times* and other journals; subsequently edit. *The Examiner*.

FOND DU LAC (43° 46′ N., 88° 21′ W.), city, Wisconsin, U.S.A.; machinery; lumber manufactures. Pop. (1910) 18,797.

FONDI (41° 21′ N., 13° 27′ E.), town, ancient *Fundi*, Caserta, Italy; cathedral; monastery in which Thomas Aquinas taught; taken by Turks, XVI. cent. Pop. 9930.

FONNI (40° 6′ N., 9° 20′ E.), town, island of Sardinia. Pop. 4500.

FONSAGRADA (43° 7′ N., 7° 6′ W.), town, Galicia, Spain; flour-mills. Pop. 17,302.

FONSECA, BAY OF (13° 10′ N., 87° 45′ W.), inlet of Pacific, bordering Honduras, Salvador, and Nicaragua, Central America.

FONSECA, MANOEL DEODORO DE (1827–92), Brazilian soldier and statesman; led successful insurrection in Brazil and proclaimed republic (1889), and became first pres. (1891).

FONT, receptacle for holding water used in baptismal rite; generally made of stone, though some bronze and leaden examples have been found; took place of earlier baptisteries (*q.v.*), few of which were built after IX. cent.; early mediæval f's were generally circular in form; at later date octagonal shape became more frequent, while some square examples also occur. Eng. f's include some beautiful examples of Norman, Early English, Decorated, and Perpendicular styles.

FONTAINE, JEAN DE LA, see LA FONTAINE.

FONTAINE, PIERRE FRANÇOIS LÉONARD (1762–1853), Fr. architect.

FONTAINEBLEAU (48° 24′ N., 2° 42′ E.), town, Seine-et-Marne, France; surrounded by picturesque forest; favourite resort of Fr. landscape painters; magnificent palace, from Middle Ages to abdication of Napoleon in 1814 one of chief residences of kings of France; revocation of Edict of Nantes signed here, 1685; sandstone quarries; porcelain. Pop. 14,200.

FONTANA, DOMENICO (1543–1607), Ital. architect; builder of the Vatican Library and Quirinal.

FONTANA, LAVINIA (1552–1614), Ital. artist; like her f., Prospero, among the imitators of Raphael; has left some very fine portraits.

FONTANA, PROSPERO (1512–97), Ital. artist.

FONTANE, THEODOR (1819–98), Ger. novelist and poet.

FONTANES, LOUIS, MARQUIS DE (1757–1821), Fr. poet and statesman; grand master of Paris univ. under empire; wrote *Éloge* on Washington.

FONTARABIA, see FUENTERRABIA.

FONTENAY-LE-COMTE (46° 28′ N., 0° 48′ W.), town, Vendée, France; suffered in Huguenot and Vendean wars; textiles. Pop. 8000.

FONTENELLE, BERNARD LE BOVIER DE (1657–1757), Fr. man of letters; a voluminous writer, best known works being *Entretiens sur la Pluralité des Mondes* and *Histoire des Oracles*; sec. of Académie française, where he pronounced famous *Éloges*.

FONTENOY (50° 34′ N., 3° 30′ E.), village, Belgium, near Tournai, province of Hainault; site of fierce battle (1745) during War of Austrian Succession, between French commanded by Marshal Saxe and British, Austrians, Dutch, and Hanoverians under Duke of Cumberland, George II.'s s. Object of allies was to

relieve fortress of Tournai held by French. Success of British at beginning due to celebrated attack by Cumberland; finally allies were forced to retreat.

FONTEVRAULT (47° 11′ N., 0° 3′ E.), town, Maine-et-Loire, France; has celebrated XI.-cent. abbey, destroyed during first revolution, now a convict prison.

FONTINALIS, genus of mosses. Greater Water-Moss (*F. antipyretica*), being incombustible, is used for lining woodwork near chimneys.

FOO-CHOW, see FU-CHAU.

FOOD, the material taken into the body in order to preserve life, and for the purpose of the growth and repair of the tissues. F. ought to contain proteins, carbohydrates or starches, fats, certain acids, inorganic salts, and water, and these substances are obtained from various sources. Meat has about 20 % of proteins, a small percentage of fats, the greater part, over 70 %, being water. Grains, wheat, barley, etc., contain starch, and also a small amount of proteins, and when made into bread contain about 70 % of starch, whole-meal bread containing a higher percentage of proteins than white bread, and therefore being more nutritious. Oats, maize, and rye contain more fats than other grains, while rice has very little fats or proteins. Beans, peas, and lentils have a large percentage of proteins, and form a very nutritious f. Potatoes contain much starch, but very little proteins or fats, and should be combined with foods containing these substances. Vegetables and fruits are chiefly valuable for the salts and acids they contain. Milk is the most nutritious beverage, containing all the necessary food substances, and infants obtain absolutely all the nutrition required from human milk. Tea, coffee, and cocoa are stimulants only, and have no nutritive value, while alcohol, especially in the form of beer and porter, is slightly nutritive as well as stimulating, but, in large quantities, has a depressant action. See DIETETICS and DIGESTION.

Preservation.—Food preservation has been practised by man in different forms since a primitive stage of civilisation, drying and salting the flesh of animals, preserving fruit juices by fermenting them into wines, and drying and pressing milk into cheese being well-known methods in very early times. It is only within recent times, however, that the reasons for, and the principles in, food preservation have been really understood, for it is only since the middle of the XIX. cent. that it has been known that the decomposition of foodstuffs is not due to any property of the actual substances themselves, but to the action upon them of invading organisms. Modern methods are, therefore, directed towards preventing the presence or the life of such organisms, a variety of different systems being employed.

The most general method is that invented by François Appert, which consists in packing the food to be preserved in *cans*, usually made of sheet steel, with a thin layer of tin upon it, immersing them in a calcium chloride solution, and then sterilising them by exposure to steam at a high temperature, the lid and any hole which has been made to allow of the escape of the heated air being closed with solder. Meats of different kinds and fruits in syrup are preserved in this way. Fruit may also be preserved by boiling in syrup and then drying (*candied* fruits), or by boiling with an equal weight of sugar until it breaks down slightly, both methods depending on the fact that sugar in solution has a bactericidal action; or the fruit may be heated in water of a sufficient temperature to effect sterilisation in vessels, which are then carefully closed so as to shut out air. Fruits, *e.g.* grapes, plums, apples, and also vegetables are excellently preserved by *drying*.

Salt is a fairly good preservative for meats, etc., but its taste is always very evident; while boracic acid, salicylic acid, and other chemical antiseptics are also becoming much used, but, while efficient preservatives, their effect on the consumer is injurious. The drying of meats is a method hardly practised at all now, except a few instances abroad, *e.g.* biltong, a species of sun-dried meat in S. Africa. Fish is sometimes dried, and sardines and other fish are preserved by packing them in oil; eggs, by submersing them in water-glass or lime water; and milk, either by heating to such a temperature as will kill organisms in it, or by evaporating it down to a viscid consistency either with or without the addition of sugar, and packing in tins, or by drying to a powder.

Refrigeration is a valuable method widely used to-day in preserving food, as organisms are unable to grow at a temperature below the freezing-point of water, and enormous quantities of meat, beef, mutton, etc., fish, eggs, and fruit are imported frozen from Australia, New Zealand, the West Indies, and other colonies into Britain, and kept in this state till required.

FOOL, professional or court jester, or buffoon. Such jesters were employed amongst the ancient Greeks, and they were to be found at most European and Eastern courts during the Middle Ages and down to comparatively modern times. The f.'s dress was parti-coloured; he wore a close-fitting hood decorated with a cockscomb upon his shaven head, and carried a 'bauble' in his hand.—**The Feast of Fools** was a mock-religious observance in the Middle Ages, probably derived from Rom. *Saturnalia*. It reached its greatest development in the XI. and XII. cent's, when the choir-boys used to elect one of their number as bp., go to church, and hold a mock service; these customs lasted till the XVI. cent. (later in France).

FOOL'S PARSLEY (*Æthusa Cynapium*), annual umbelliferous plant; poisonous.

FOOLSCAP.—(1) A conical dunce's cap; (2) a size of writing-paper, about 13 × 17 in., of which the original water-mark was a jester's or fool's cap or hood.

FOOT, the end portion of the leg, upon which animals rest when standing or walking; in man, more particularly, that part of the lower limb beyond the ankle. There are certain superficial landmarks which may be noted. At the inner side of the ankle the internal *malleolus*, part of the tibia, may be easily felt, while at the outer side, slightly farther back and lower, is the external malleolus, part of the fibula. Behind the malleoli on either side tendons are seen passing from the muscles on the leg above to the foot, the most noticeable being the *tendon Achillis* passing to the back of the heel. On the front of the foot a nerve may be made out, the *musculo-cutaneous* nerve, beneath the skin, which goes to the toes, and a venous arch also passes across the front, conveying the blood from the foot to the superficial blood-vessels of the leg.

The ankle joint is formed by the tibia and fibula of the leg and the *tarsal bones* of the foot. The tarsal bones are seven in number, roughly of a cubical form, the uppermost, or *astragalus*, articulating with the leg bones, below it being the *os calcis* or heel bone, and in front the *scaphoid*. In front of the scaphoid are three wedge-shaped bones, the three *cuneiforms*, and to their outer side, in front of the os calcis, is the *cuboid*.

In front of the last four, which are in a more or less regular row, are five long *metatarsal* bones, and each metatarsal has in front of it three *phalanges* (in the great toe, two only) or bones of the toes. Between each of the bones are surfaces covered with cartilage, forming slightly movable joints, and the bones are strongly bound to one another by ligaments, whole tendons from the muscles of the leg come round the bones to be attached at different points, and also serve to assist in holding them in place.

The movements of the foot are brought about by the muscles of the leg, the tendons of which act upon the different bones of the foot to which they are attached. The muscles of the calf are attached to the os calcis by the strong tendon Achillis, while from other muscles on the back of the leg come one tendon attached to the scaphoid, and another which is attached below [illegible] wards, those tendons passing on the internal side of the leg. On the external

side there is a tendon which goes to be attached to the outer metatarsal bone, and another which runs across the sole of the foot to be attached to the metatarsal bone of the great toe. On the front of the foot there are five tendon slips coming to the different toes from a muscle on the front of the leg, the action of which is to make them turn downwards, while there are also four slips from a little muscle which springs from the os calcis, which assist in the same movement. It is by the combination of the actions of these tendons controlled by the muscles of the leg that the harmonious movements of the foot are brought about.

FOOT-AND-MOUTH DISEASE, a contagious disease of animals, attacking cattle, sheep, pigs, and goats; characterised by the appearance of little blisters on the mouth, lips, and tongue, the heels, coronets, and interdigital spaces of the feet, and on the udder, with some fever, running a course of eight or ten days. Soft, easily digested food, salines, or other laxatives are given, and mild antiseptics and astringents, *e.g.* alum, zinc oxide, applied to the affected parts. The animals attacked are isolated or destroyed.

FOOTBALL has been played since Roman times; it was penalised by several rulers from Edward II. to Elizabeth. Since that time the number of players on each side has been greatly reduced, and rules now make the game a science instead of a mere mêlée.

F. falls into three main divisions—Association, Rugby, and miscellaneous forms played by certain schools and clubs.

Association is played on a ground the maximum measurements of which are 130 × 100 yards, the minimum 100 × 50 yards; goals are 8 yards wide, 8 ft. high; the ball is round, and from 27·28 inches in circumference. The field is divided by a half-way line, with 'penalty lines' 18 yards in front of goal, and is bounded by touch lines. Eleven players constitute a side—goalkeeper, two backs, three half-backs, and five forwards. The object of the game is to kick the ball between the goal-posts of the opposing team. Handling the ball, except by the goalkeeper, is forbidden, though a player may use his head. The goalkeeper and full backs defend, the forwards carry on the main attack, while the halves 'feed' the forwards. When the ball is kicked beyond the touch line it is thrown in by one of the opposing team, generally one of the halves. Penalty kicks for various offences are taken from a point 12 yards in front of offenders' goal. A 'corner kick' is taken when the ball is kicked over the line by one of the players whose line it is; the ball is kicked from a corner of the back line so as to swerve in front of the goal. If the ball is kicked over by one of the opposite side it is kicked back from a point in front of the goal. The rules are enforced by a referee and two linesmen.

Professionalism has spoiled Association in Britain, and the number of amateur clubs and schools which play it is steadily decreasing in consequence.

Rugby Union differs from Association by the fact that the ball may be carried. The usual dimensions of the field are 110 × 75 yards, divided by a half-way line and two 'twenty-fives' drawn 25 yards in front of each goal; the ball is oval, 11–11¼ inches long. On each side there are eight forwards, two halves, four three-quarters, and a full back. The rules are rather complicated and cannot here be fully enumerated. The main things forbidden are fouling, forward passing, 'feet up' in the scrum, and 'off-side,' picking up ball in the scrum, or not releasing it when tackled. Points may be scored in the following ways: a *try* (3 points), when player carries ball over opponents' line, which may be converted into a *goal* (5 points) by a place-kick taken from a place opposite the scoring point; penalty goal (3 points), kick taken from point where opponents were penalised; free-kick from a 'mark' or a 'dropped goal' each counting 4 points. The 'scrum' takes place after such things as a forward pass or a crooked throw-in from touch. The opposing forwards form up against each other and one of the halves puts in the ball, which is either heeled or rushed along to suit circumstances.

In U.S.A. Yale Univ. adopted Rugby Union rules, 1876. Changes have been made and the game is rougher than Brit. f. Amer. rules are: field, 110 by 53⅓ yards; players number eleven; scrum resolves itself into series of single contests; *touch-down* (Brit. 'try') counts 5, and the goal resulting from it 6 points; goal from *drop-kick* counts 4, and a *safety* (Brit. 'touch-down') 2 points; passing forward is permitted on occasion.

The most famous Rugby team was the 'All Blacks' of New Zealand, who toured Britain in 1905, undefeated except by Wales. Their tactics, which developed three-quarter play to an enormous extent, were taken up by several clubs and schools, notably by Glenalmond, which in three school matches scored 181 points to 3 (1910). Eton, Harrow, and other schools play f. games of their own, while the 'Australian game' is a development of Rugby. The Northern Union game, a variety of Rugby, is much faster; clubs seceded from the Rugby Union (1895–96) owing to a dispute about professionalism.

Notable events in football:—

ASSOCIATION.—English Cup instituted, 1871; Scottish Cup, 1873; first international match played, 1872; professionalism legalised, 1885; Football League started, 1889.

RUGBY.—First international match played, 1870; new regulations regarding referee, 1884; dispute resulting in suspension of international matches, 1887–89; penalty goal introduced, 1889. Secession of Northern Union, 1895; visit of New Zealand team, 1905; new rules regarding 'touch' introduced, 1910–11.

Sewell, *The Book of Football* (1911); Vassall and Budd, *Football, The Rugby Game* (1909).

FOOTE, ANDREW HULL (1806–63), Amer. naval commander.

FOOTE, SAMUEL (1720–77), Eng. actor and dramatist; b. Truro; ed. Oxford; after squandering two fortunes, went on stage; first essayed tragedy, than genteel comedy; eventually achieved success by marvellous powers of mimicry; wrote a considerable number of plays very popular in their day, such as *The Liar*, *The Mayor of Garratt*, *The Devil on Two Sticks*, *The Nabob*, and *The Capuchin*; appears to have been devoted to Garrick, although his rival, and was famed for wit, repartee, and kindliness of disposition.

FOOT-POUND, see ENGINE.

FOOTSCRAY (37° 4′ S., 144° 56′ E.), city, Victoria, Australia; 4 miles W. of, and suburban to, Melbourne; stone quarries. Pop. 18,000.

FORAIN, JEAN LOUIS (1852–), Fr. artist and caricaturist; contributes satirical sketches of Fr. life to Parisian illustrated journals.

FORAMINIFERA, a group of unicellular animals, the vast majority of which are marine, characterised by the possession of a simple or elaborate test or shell, which may be of a calcareous, or arenaceous, but never of a siliceous nature, penetrated or enveloped by delicate protoplasmic processes, which branch and anastomose freely (cf. *Heliozoa*). The shells, which are extremely variable in character, are always primarily single-chambered, and from this starting-point, a closely coiled spiral, a globular mass, a chain-like series, and many other forms may be evolved. The initial chamber may be large, when the individual is said to be *megalospheric*, or minute, when it is termed *microspheric*. The microspheric form produces the megalospheric, and this may produce a number of similar individuals, but eventually free-swimming sexual cells result, which on conjugation reproduce the microspheric form. Many species are littoral, occurring attached to the fronds of seaweeds, but others are planktonic and are often modified for a surface life, the test being produced into long spiny processes, and the outer protoplasm being highly vacuolate. One of the best known of these is *Globigerina*, the shells of which accumulate on the ocean floor, forming the well-known

fine mud termed *Globigerina* ooze. This ooze may, by subsequent pressure, ultimately solidify, forming the so-called 'grey chalk.' In addition to this, however, the tests of various species form a very considerable proportion of other calcareous rocks, as instanced by such terms as *Nummulitic* and *Succamina* limestones (from the preponderance of *Nummulites* and *Saccamina* respectively), whilst chalk (*q.v.*) itself consists very largely of *Textularia* and allied genera. The F. have a geological range commencing with the Upper Cambrian, but first become important from a rock-forming standpoint in the Carboniferous period.

FORBACH (49° 11′ N., 6° 53′ E.), town, Alsace-Lorraine, Germany; pottery; coal mines. Pop. (1910) 10,107.

FORBES (33° 25′ S., 148° 3′ E.), town, N.S.Wales, Australia; commercial centre; several mills. Pop. 4500.

FORBES, ALEXANDER PENROSE (1817–75), Scot. Anglican ecclesiastic; associated with the Puseyites.

FORBES, ARCHIBALD (1838–1900), Brit. journalist; noted war correspondent in Franco-Ger. War, 1870–71; Carlist War, 1873; Russo-Turkish War, 1877; Zulu campaign, 1879.

FORBES, DUNCAN, OF CULLODEN (1685–1747), Scot. judge and politician; prominent anti-Jacobite; supported Government in 1715 and 1745; Lord Advocate, 1725; pres., Court of Session, 1737.

FORBES, EDWARD (1815–54), Brit. botanist; prof. of Bot., King's Coll., London (1842); Palæontologist to Geological Survey of Great Britain (1844); pres., London Geological Soc. (1853); Natural History prof., Edinburgh Univ. (1854); investigated the bot., geol., and zool. of the Mediterranean area, especially the effect of climate on distribution; and published works on molluscs and starfish.

FORBES, JAMES DAVID (1809–68), Scot. scientist; prof. of Natural Philosophy, Edinburgh Univ., 1833; principal of St. Andrews University; investigated heat, glaciers, temperature of earth at different depths, and thermal conductivity of iron.

FORBES, SIR JOHN (1787–1861), Scot. physician; practised medicine in different parts of England; physician to the royal household (1841); author of numerous medical and other popular works.

FORBES-ROBERTSON, SIR JOHNSTON (1853–), Brit. actor; one of the most gifted and artistic of modern Shakespearean and romantic actors.

FORBIDDEN FRUIT, ADAM'S APPLE, fruit of citrus. *Citrus Medica* has 'tooth-marks' in its rind.

FORBIN, CLAUDE DE (1656–1733), Fr. naval commander.

FORCE, see DYNAMICS and ENERGY.

FORCE PUMP, see PUMP.

FORCELLINI, EGIDIO (1688–1768), Ital. philologist.

FORCEPS, scissor-like instrument with flattened or expanded ends, used in surgery, dentistry, etc., or for any delicate work where objects are too small or inconvenient to handle.

FORCHHAMMER, PETER WILHELM (1801–94), Ger. archæologist.

FORCHHEIM (49° 44′ N., 11° 5′ E.), town, Bavaria, Germany; formerly fortified; seat of diets in Middle Ages. Pop. (1910) 9150.

FORCING, process by which plants, etc., are artificially matured; consists in growing them in hot-houses either for whole or part of growth; fruits forced in Britain include grapes, peaches, and apricots.

FORD, EDWARD ONSLOW (1852–1902), Eng. sculptor.

FORD, JOHN (1586–*c.* 1640), Eng. dramatist; b. Ilsington (Devon); ed. Oxford; studied law, but eventually devoted himself solely to dramatic authorship. In his choice of subjects F. was sometimes abnormal, and there is much that is repulsive in his plays, but they are distinguished by great intensity of passion and literary quality of a very high order. His plays include *'Tis Pity She's a Whore, The Lover's Melancholy,* and *Perkin Warbeck*; author, with Dekker and Rowley, of *The Witch of Edmonton.*

FORD, PAUL LEICESTER (1865–1902), Amer. novelist and historian; wrote *The True George Washington,* etc.

FORD, RICHARD (1796–1858), Eng. traveller and author; wrote Murray's *Handbook to Spain.*

FORDE, FRANCIS (fl. 1746–70), brilliant Eng. leader, under Clive, in India.

FORDHAM, formerly village, New York, U.S.A.; now part N.Y. city; seat of St. John's (R.C.) Coll.

FORDUN, JOHN OF (XIV. cent.), Scot. chronicler; his *Scotichronicon* covers Scot. history till 1153; left materials for further volumes, which Walter Bower of Inchcolm brought down to 1437; chief authority on early Scot. history.

FORECLOSURE, in Eng. law, action by which a mortgagor is prevented from redeeming a mortgaged estate or property. See MORTGAGE.

FOREIGN ENLISTMENT ACT, 1870, enacted that any Brit. subject enlisting in service of a foreign state at war with a state friendly to Britain, was guilty of misdemeanour.

FOREIGN LEGION, LÉGION ÉTRANGÈRE, French army corps of various nationalities; raised in 1831 for service in Africa; fought well in Crimean and Franco-German Wars; consists of 8000 troops in all.

FOREIGN OFFICE, Brit. administrative department which manages national relations with foreign countries; presided over by Sec. of State for Foreign Affairs; separate office established, 1782.

FORELAND, NORTH AND SOUTH (N.—51° 22′ N., 1° 26′ E.; S.—51° 10′ N., 1° 24′ E.), two headlands on coast of Kent, England, having Downs and Goodwin Sands between them; lighthouse on each.

FORENSIC MEDICINE, see MEDICINE (MEDICAL JURISPRUDENCE).

FORESHORE, the stretch of coast comprised between high and low water mark at ordinary tides. The proprietary rights are vested in the Crown unless modified by local custom or by royal grant to a subject.

FOREST FLY, HORSE FLY (*Hippobosca equina*), very small insect, parasitic on horses, cattle, etc.; plentiful in New Forest, Hampshire.

FORESTRY.—The term *forestry* is used at the present day to denote the whole process of economic management of woodlands—that is, the cultivation of trees in such manner as to secure the maximum return of forest products, and at the same time to retain the forest in a state of permanent and unimpaired productivity. F. in this sense has been known, however, for less than a cent.; before that period it usually meant the provision of suitable sporting- and pleasure-grounds for the rich. The reason for the comparative youth of rational f. (as compared with the ancient art of agriculture) is to be sought for in the fact that so long as the demands of small populations and modest industries could be readily supplied by the cutting of natural wood, there was no pressing reason for the artificial regeneration of the forests as they fell beneath the axe. To-day, however, with the world's population steadily increasing, and with new industries demanding an ever larger supply of wood, it is no longer possible to be blind to the fact that even the vast reserves of countries like Canada and Siberia cannot meet, permanently and unaided, the world's requirements.

Economically, f. is distinguished from agriculture by the fact that the capital involved is represented partly by standing wood, on which it is very easy to encroach by untimely cutting; since untimely cutting is usually the result of financial strain, it generally follows that replanting is not undertaken, and that a part of the forest is thus destroyed. It is also the case that a newly planted forest does not give any return for a large number of years. The second of these two considerations makes it quite improbable that any large amount of afforestation will take place without financial aid from the State;

the first requires, that should this aid be given, the forests must either be acquired, or at least adequately controlled, by the State. This is the case in all those countries where f. is in a satisfactory condition. In India nearly 25 % of the country is under State-controlled forest; in Germany 66 % of the forests are either State-owned or State-controlled: in most other European countries the forests are privately owned, but are controlled to some extent by the State.

In U.S.A. there are numerous national (besides several state) forest reserves, embracing some 263,000 sq. miles, controlled by the Forest Service. New forest areas are added by presidential proclamation. Tracts denuded by fire are reforested from some thirty forest nursery stations.

In Great Britain f. is in an extremely unsatisfactory condition. The woodlands are largely privately owned, and are quite free from all State supervision. Left thus to the caprice or necessity of the owner, they have in too many cases ceased to exist, with the result that large areas of the country eminently suited to the growing of trees are to be classed as waste land, grouse moor, or deer forest. It is instructive to compare the areas under forest in this and other countries: we find that whereas Austria has 33 % of the total area under forest, Germany 26 %, and France 16 %, Great Britain has only 4 %. And to this we must add that mountain and heathland occupy 20 %.

The uses which a forest serves are various, and may be classed under two heads: (1) *Direct uses*: here we include the production of fuel and, much more important, of *timber*. By timber we understand wood which is to be used for building or similar purposes, and that which is to be employed in the manufacture of toys, ornaments, matches, etc., and the exceedingly important *wood-pulp*. Besides wood a forest supplies an enormous variety of minor products—bark, turpentine, fodder, seeds, and so on.

(2) *Indirect uses*: it has been demonstrated that by the presence of a forest in a countryside the climate is rendered somewhat cooler; the soil is kept considerably moister; springs have a more regular supply; erosion and denudation of the soil are prevented; rapid passage of heavy rains into watercourses is prevented, and consequent flooding is diminished.

The formation of a new forest or the placing of a forest under proper management is preceded by the preparation of a *forest working plan*. This takes account of all questions relating to the finance of the forest, the provision of labour, the selection of trees to be grown, the programme of planting and cutting, and the construction of roads and rides in the forest. The actual management of the forest may be divided into (1) SILVICULTURE, treats of the raising of seedlings, the planting of young trees, the subsequent thinnings, and the general tending of the forest until it is ripe for cutting. (2) FOREST UTILISATION includes the process of felling, and conversion of the timber into the form in which it serves as raw material for the industry requiring it. Of great importance are the construction and maintenance of suitable means of transport—whether by road, water, or rail. (3) FOREST PROTECTION deals with the suppression of animal pests—rabbits, squirrels, some birds, and many insects; with the means of averting the attacks, and of preventing the spreading, of parasitic fungi; with the various devices used for minimising the danger of fire, storms, and snow; and with the damage which may be done by man. Protection in this case is attained by suitable *forest laws*. These may make it penal to light fires, or to smoke in the forest; or they may prohibit entrance into young plantations, where great damage may be done by trampling on young trees.

Schlich, *Manual of F.*; *Practical F.*, by Curtis, Fuller, Gifford.

FOREY, ÉLIE FRÉDÉRIC (1804–72), Fr. marshal; commanded Mexican Expedition, 1862–63, and took Puebla.

FORFAR (56° 39′ N., 2° 53′ W.), county town, Forfarshire, Scotland; ancient royal residence; royal burgh; linen and jute manufactures. Pop. (1911) 10,849.

FORFARSHIRE (56° 45′ N., 2° 55′ W.), large maritime and agricultural county in E. Scotland, and corresponding to district of Angus; county town, Forfar; bounded by Kincardineshire, Aberdeenshire, and Perthshire, and having for seaboard Firth of Tay and German Ocean; area, 890 sq. miles. Arable land has lately shown substantial increase. Cattle are bred, and coarse fabrics from flax, jute, etc., are manufactured; also leather, gloves, soap; principal towns, Dundee, Arbroath, Montrose. Pop. (1911) 281,419.

FORFEITURE, originally the term applied to the passing into king's hands of the goods and real property of a treasonable or felonious person. This law was abolished in 1870. The term now means a penalty or fine.

FORGERY, making a false document with intent to defraud. This may be done by alteration of its contents, by adding to its contents, or by signing it in the name of any other person with the intention to defraud. The punishment varies according to the nature of the offence, the maximum being penal servitude for life.

FORGET-ME-NOT, see BORAGINACEÆ.

FORGING, the working of iron or steel when it is at white heat and thus in a malleable state. It is chiefly a moulding process. The steps are: (1) 'swagging,' or reducing to necessary size, or the converse, 'upsetting,' or enlarging; (2) 'bending' to necessary angle; (3) 'welding,' or joining different pieces; (4) 'holing,' or boring; (5) 'severing,' or lopping off. Forging is now increasingly done by machinery, and is then known as 'die forging,' which reduces the amount of skilled labour required very considerably.

FORK, see CUTLERY.

FORLI (44° 13′ N., 12° 2′ E.), town (ancient *Forum Livii*) and episcopal see, Forli, Italy; cathedral; old castle; picture-gallery. Pop. 15,802.

FORLIMPOPOLI (44° 12′ N., 12° 7′ E.), town (ancient *Forum Popilii*), Forli, Italy.

FORLORN HOPE (from Dutch, *verloren hoop*, 'a lost troop'), military troop told off for any dangerous employment, such as leading a charge at a critical moment, storming a breach, etc.

FORM, in metaphysics, the developed actuality, that which gives reality to matter (Aristotle); according to Kant, the element of an object due to mind, as distinguished from 'matter,' the manifold of sense.

FORMALDEHYDE, see FORMALIN.

FORMALIN(E) (Formaldehyde) (CH_2O), prepared by condensation after passing the vapour of methyl alcohol mixed with air over heated copper. It has a pungent smell, and is at ordinary temperatures a gas, commercial formalin being a solution of it in water or alcohol, which is used as an antiseptic, deodorant, and preservative.

FORMAN, ANDREW (d. 1521), abp. of St. Andrews; sometime one of the Vice-Regents of Scotland.

FORMAN, SIMON (1552–1611), Eng. physician and astrologer, practising in London; author of several works on astrology.

FORMEY, JOHANN HEINRICH SAMUEL (1711–97), Franco-Ger. philosophical writer.

FORMIA, formerly MOLA DI GAETA (41° 15′ N., 13° 38′ E.), town, on Gulf of Gaeta, Caserta, Italy. Pop. 8108.

FORMIC ACID (H.COOH), fatty acid prepared by heating oxalic acid and glycerine or passing carbon monoxide over soda-lime. Liquid (B.P. 101°), pungent irritating odour, blisters skin, has acid reaction and reducing properties.

FORMOSA (c. 25° S., 60° W.), territory, N.E. part Argentine Republic, S. America; occupies forest-covered plain between rivers Paraguay, Pilcomayo,

and Bermejo; capital, Formosa. Area, 41,402 sq. miles. Pop. 15,000.

FORMOSA, Taiwan (23° 30′ N., 121° E.), Jap. island in W. Pacific, off coast of China. Area, 13,840 sq. miles. Chief town, Taipe. Mountainous—chief summits being Mt. Morrison (c. 14,270 ft.) and Mt. Sylvia (12,480 ft.). Volcanoes in N. Plain stretching to W., with short mt. range presenting sheer cliff to Pacific. Two rivers—both called Tamsui Kai; hot springs numerous; mountains thickly wooded; country fertile, well-cultivated, with tropical vegetation. Climate damp and hot; malaria prevalent in N. Typhoons common. Peopled by aboriginals,—uncivilised and fierce,—Chinese traders, and Japanese. Agricultural products include rice, tea, sugar, camphor, jute, etc. Active fisheries. Industries comprise flour-milling, sugar and tobacco, oil, spirits, and iron-works. Minerals: gold, silver, sulphur, petroleum. Live stock: buffaloes, oxen, swine, goats, poultry. Trade mostly with Japan. Chief ports are Taipe and Anping. Ruled by Dutch (XVII. cent.); ceded by China to Japan (1895), under whose rule much progress is being made. Pop. (1908) 2,984,590.

Formosa, by Davidson (1903), Clark (1896).

FORMOSUS, Pope during turbulent period (891–96).

FORMULA, prescribed or established rule; a formal confession of faith; a general rule in mathematics; symbolic description of a substance in chemistry, etc.

FORNER, JUAN BAUTISTA PABLO (1756–99), Span. satirist.

FORRES (57° 37′ N., 3° 37′ W.), market town and royal burgh, on the Findhorn, Elginshire, Scotland; among public buildings are town hall, Falconer Museum, and Anderson's Institution; Nelson Tower on Cluny Hill; health-resort; has ruined castle, once a royal residence, and a remarkable sculptured monolith called Sweyno's Stone, said to commemorate a victory over Danes; chemicals and artificial manure; boots and shoes. Pop. (1911) 4421.

FORREST, EDWIN (1806–72), Amer. actor; famous in Shakespearean tragedy.

FORREST, RT. HON. SIR JOHN (1847–), Australian statesman and explorer; commanded expedition in search of Dr. Leichhardt (1869); first Premier and Treas. of W. Australia (1890–1901); Minister of Defence under Commonwealth (1901–3); Minister of Home Affairs (1903–4); Prime Minister (March–June, 1907); pub. *Explorations in Australia, Notes on Western Australia.*

FORREST, NATHAN BEDFORD (1821–77), Amer. soldier; raised regiment for Confederates in Civil War, 1861; became cavalry gen. After many brilliant exploits, surrendered, May 1865. F. was uneducated, but had great natural abilities.

FORSSELL, HANS LUDVIG (1843–1901), Swed. political and hist. writer.

FORST (51° 44′ N., 14° 40′ E.), town, on Neisse, Brandenburg, Prussia; woollen cloth. Pop. (1910) 33,828.

FORSTER, FRANÇOIS (1790–1872), Fr. engraver.

FÖRSTER, FRIEDRICH CHRISTOPH (1791–1868), Ger. poet and historian.

FORSTER, GEORGE EULAS (1847–), Canadian statesman; Minister of Finance (1888–96).

FORSTER, JOHANN GEORG ADAM (1754–94), Ger. author and traveller.

FORSTER, JOHN (1812–76), Eng. historian, biographer, and editor; several hist. works, biographies of Goldsmith and Landor, and standard *Life of Charles Dickens* (1872–74).

FORSTER, JOHN COOPER (1823–86), Eng. surgeon; surgeon to Guy's Hospital (1870); pres. of Royal Coll. of Surgeons (1884); introduced new surgical measures; author of *Surgical Diseases of Children* and other surgical works.

FORSTER, WILLIAM EDWARD (1818–86), Brit. politician; was distinguished member of Mr. Gladstone's Cabinets from 1870 onwards; introduced and carried Education Bill of 1870, by which school boards were established; Chief Sec. for Ireland, 1880; forced to take strong line of action against Land League, which he proclaimed illegal; opposed separation of Brit. and Irish Parliaments; a Quaker of high character. *Life,* by Reid (1888).

FORSYTH, PETER TAYLOR (1848–), Eng. Congregational preacher and author.

FORT AUGUSTUS (57° 8′ N., 4° 43′ W.), village, at S. extremity Loch Ness, Inverness-shire, Scotland; old fort now converted into Benedictine abbey and coll.

FORT DE FRANCE (c. 14° 55′ N., 61° W.), town, Martinique, Fr. W. Indies; has naval arsenal. Pop. 27,069.

FORT DODGE (42° 30′ N., 94° 30′ W.), city, on Des Moines River, Iowa, U.S.A.; seat of Tobin Coll.; centre of extensive coal mines, limestone and gypsum quarries; railway workshops. Pop. (1910) 15,543.

FORT EDWARD (43° 17′ N., 73° 34′ W.), village and township, on Hudson River, New York, U.S.A.; seat of Fort Edward Collegiate Instituto; paper-mills, potteries. Pop. 4000.

FORT GEORGE (57° 35′ N., 4° 4′ W.), fortress, on Moray Firth, Inverness-shire, Scotland; built, 1748.

FORT LEE (40° 52′ N., 73° 58′ W.), town, on Hudson River, New Jersey, U.S.A. Pop. 3500.

FORT MADISON (40° 38′ N., 91° 25′ W.), city, Iowa, U.S.A., on Mississippi; railway workshops; lumber mills. Pop. (1910) 8900.

FORT SCOTT (37° 48′ N., 94° 43′ W.), city, Kansas, U.S.A., on Marmiton; railway centre; extensive trade in bituminous coal; foundries, potteries. Pop. (1910) 10,463.

FORT SMITH (35° 24′ N., 94° 25′ W.), city, Arkansas, U.S.A.; cotton mills; furniture. Pop. (1910) 23,975.

FORT WAYNE (41° 2′ N., 85° 4′ W.), city, Indiana, U.S.A., at head of Maumee; important railway centre; contains numerous public and educational institutions; railway workshops, foundries, flour and woollen mills; fort built, 1794, by General Wayne. Pop. (1910) 63,933.

FORT WILLIAM (48° 12′ N., 89° 25′ W.), town, Ontario, Canada; large trade in grain; sawmills. Pop. 10,000.

FORT WILLIAM (56° 48′ N., 5° 5′ W.), town, tourist resort, at foot of Ben Nevis, Inverness-shire, Scotland; fortress unsuccessfully besieged by Jacobites, 1746.

FORT WORTH (32° 45′ N., 97° 20′ W.), city, Texas, U.S.A., on Trinity; seat of Fort Worth Univ.; Polytechnic Coll.; Medical Coll.; manufactures flour; foundries. Pop. (1910) 73,312.

FORTALEZA (3° 43′ S., 38° 24′ W.), city and port, Ceará, Brazil, near mouth of Ceará; rubber, sugar, cotton. Pop. 33,000.

FORTESCUE, SIR JOHN (c. 1394–1476), Lord Chief Justice of England under Henry VI.; wrote Latin legal works and *Governance of England.*

FORTESCUE, SIR JOHN (c. 1531–1607), Eng. politician; Chancellor of Exchequer and Privy Councillor, 1589; knighted, 1592; Chancellor of Duchy of Lancaster, 1601.

FORTEVIOT (56° 21′ N., 3° 32′ W.), village, Perthshire, Scotland; ancient capital of the Picts.

FORTH (56° 7′ N., 4° 14′ W.), river and firth, E. of Scotland; river rises on N.E. side of Ben Lomond, flows eastward with many windings (links of Forth), and expands into Firth of Forth; chief tributaries. Teith, Allan, and Devon. Firth of Forth, an inlet of North Sea, extending from Alloa eastward about 50 miles; navigable for largest vessels to Queensferry, smaller vessels to Alloa; river steamers to Stirling; contains islands Inchcolm, Cramond, and fortified Inchkeith; many good harbours; coaling ports; to W. of Forth Bridge on Fife coast is bay of St. Margaret's Hope, with naval base of Rosyth; important fisheries. See Bridges.

FORTIFICATION, the art of strengthening military positions in such a way that they may be defended by force inferior in number to that which attacks them. Its objects are to give protection to defenders of position and to place obstacles in enemy's way. F. may be subdivided into *field* and *permanent* f's.

Field Fortifications are works hastily constructed for temporary purposes, to shelter troops on the battlefield, or to protect isolated posts. Their construction is as old as the existence of armies. They now generally consist of lines of detached redoubts, which check the enemy's onslaught by their fire and allow the defenders to rush upon the attackers at favourable opportunity. They are also used to defend bridges, and to prevent access to important passes. The *redoubt*, which is the most important closed field-work, is a quadrangle enclosed by a ditch and parapet; other works of this kind are the redan and lunettes; *redan* is simplest form employed, and consists of two parapets of earth raised to form a salient angle with the apex towards the enemy; there is a ditch in front, and it is unprotected in the rear. *Lunettes* are redans with short flanks, intended chiefly for protection of avenues, bridges, and curtains of field-works. Parapets are made 3 ft. thick to be proof against rifle bullets, or 7½ against artillery. Cover is also sometimes provided by digging trenches over which men can fire. Other important characteristics of field f. are the clearance of the foreground in order to expose the enemy in his advance, and the creation of obstacles to hinder that advance. Among obstacles used wire entanglements stretched between posts are important; *abattis* are branches of trees pegged down to the ground; and military pits may be dug.

Permanent Fortifications.—Early forms were extremely simple, consisting merely of banks or mounds of earth or fence of palisade, which gave considerable advantage to defenders when at close quarters with enemy. They were on commanding positions, and were usually employed against nomadic tribes of about equal strength. Later, when centres of population increased, stone and brick walls were built, high enough to prevent escalade, and broad enough to enable defenders to convey men and ammunition from one part to another. To get necessary breadth two walls were built, with earth filling up the space between. A flooded moat was subsequently added as additional defence. Next improvement was building of towers at intervals along walls to protect entrance gates and cover offensive sorties. This constitutes practically whole art of f. as known to ancients.

Great modifications were caused by introduction of artillery, first change being an increased thickness of walls, and greater diameter of towers, which were called *roundels* (round towers offering best resistance to rams), and were large enough to hold several cannon. Banks of earth were then thrown up behind, which strengthened the wall and gave width to enable besieged to work cannon there. Albrecht Dürer may be mentioned here as link between old and new styles, counter-arched revetments being ascribed to him. It was found, however, that round towers left undefended small angles close to the walls; to improve matters, shape was changed to an irregular pentagon, with one side facing inward and four outward; this was called *bastion*, in use by 1500. Most European nations had system of bastionary f. First, chronologically, was Ital. school, which, except concerning the flanking fire, made little alteration in essential characteristics of f. They had no glacis, no tenaille, no ravelin, no covered way; their main wall (*enceinte*) was of stone or brick, their bastions were small, and there were long spaces (*curtains*) between them. As the system developed there were many improvements. Bastions became larger, curtains shorter; ditches were widened and deepened, and covered way was invented; this was to allow troops to be drawn up unseen by enemy, and enable besieged to keep up closer fire on besiegers. To cover the gates which were in middle of curtains, *demilunes* were placed before them in ditch; this, a crescent-shaped work, was afterwards changed into triangular one, called *ravelin*.

Daniel Speckle of Strassburg made great improvements, laying foundation of system afterwards perfected by Vauban. He built fortresses at Ingolstadt, Ulm, Strassburg, and other places. Further developments were brought about by Fr. and Ital. engineers in XVII. and XVIII. cent's, Vauban making the Fr. school the most important in Europe. His methods were marked by great perfection of detail and adaptation to local needs; and his system of attack was such that he himself was unable to construct a rampart to withstand it. He constructed thirty-three new fortresses, improved over one hundred, and conducted in person over forty sieges. Among his followers may be mentioned Cormontaigne and Carnot, whose works generally consisted of a continuous polygon surrounding the position, with a bastion front, covered by outworks, on each side. Vauban in his second and third systems had made use of old walls, making hollow bastions by placing counter-guards in front of existing corner-towers, and thus avoiding necessity of entire rebuilding. Cormontaigne widened the gorge of the ravelin, and reintroduced the step formation of the covered way. Montalembert used chiefly the *tenaille* or star trace, but later inclined to polygonal system.

Dutch methods were of great repute from middle of XVI. cent. onwards; chief characteristics of system were low ramparts, wide, shallow ditches with many outworks, and flooding of country beyond the glacis; brought to great perfection by Coehoorn, contemporary and rival of Vauban. He was director-general of fortresses of United Provinces; invented 'Coehoorn mortar'; system applied to numerous places in Holland, notably Bergen-op-Zoom.

Ger. school of f's identified itself chiefly with the tenaille system. *Tenaille* consists of succession of lines forming salient and re-entering angles alternately, with the addition of ravelins and other outworks. Polygonal system, which was developed from tenaille system, is also associated with Germany, and is characterised by bomb-proof casements, and a simple trace. An important Ger. engineer was Rimpler (d. 1683), who wrote a book advocating the polygonal trace.

Modern methods of defending large fortresses are largely due to Montalembert, already mentioned as advocate of tenaille and polygonal systems. He constructed field f's at Anklam and Stralsund, and founded arsenal at Ruelle. His fortress has been described as 'an immense battery.' Instead of an intricate trace arrangement he adopted a tenaille so arranged that the besieged could direct overwhelming fire against besiegers. He also foresaw that in future detached forts would be necessary, and designed for these his caponier flanking. His system of surrounding position with single or double line of detached forts or high situations which could support each other by fire and give facilities for sorties, has been adopted in many places, one of most important being Paris, where there are an enceinte with bastions and two lines of detached forts. Detached forts began in early XIX. cent. to be more important than enceinte. Range of artillery had greatly increased, and henceforth girdles of forts were built at some distance in front of enceinte in order to keep besiegers as far away as possible. Cologne and Coblenz, Belfort, Grenoble, Besançon, and Verona are among fortresses constructed in this way. The introduction of the rifled gun caused further developments about middle of XIX. cent., the general trend of which has been to reduce large detached forts to small infantry redoubts. About 1885 the long shell made its appearance, necessitating further modifications such as the improvement of cover by bomb-proof concrete roofs 6 to 10 ft. thick,

and greater strength in the revetments. The introduction of smokeless powder in 1890 made concealment an essential in the designs of all f's.

In Europe military authorities generally are agreed as to the necessity for fortifying important places and as to the best means whereby this end is to be attained. Places which are in themselves worth fortifying are strategical positions, places where stores may be kept, places commanding important passes or bridges over large rivers, and great railway centres. The details of modern f's may be briefly described as follows: the place to be defended is surrounded by a girdle of small detached forts or redoubts at a distance of from 4 to 6 miles from the place, and from 1 to 2½ from each other. These are garrisoned by forces varying from half a company to half a battalion. Between these redoubts and concealed behind natural features are the howitzers; while a few fortress guns and magazines are artificially hidden. A trench railway round the batteries to carry ammunition is of fundamental importance. An enceinte is generally considered a desirable adjunct; but those constructed within last forty years have for the most part been simple 10 or 12 ft. walls with loopholes at intervals, which are of no practical use against modern artillery fire. A few modern details may be given; thus, concrete has replaced brick and stone works, because it offers greatest resistance to heavy shells, 5 ft. of concrete being enough to stop one large shell. It is used for parapets, casements, and revetments. The *escarp* or inner wall of the ditch is now of less importance, but a very solid counterscarp, the opposite wall of the ditch, is generally used. Electric searchlights are placed in disappearing domes; and iron and steel casements are used to give additional strength. See also COAST DEFENCE.

Royal Military Academy, *Text-Book of Fortification* (1893); Sir G. S. Clarke, *Fortification* (1907); Viollet-Le-Duc, *Military Architecture* (1907); works of Speckle, Dürer, Vauban, Montalembert, etc.

FORTROSE (57° 35′ N., 4° 8′ W.), royal burgh and watering-place, on Moray Firth, Black Isle, Rossshire, Scotland; ruined cathedral.

FORTS, see FORTIFICATION.

FORTUNA, FORTUNE (classical myth.), Latin goddess to whom shrines were erected in several places. She was believed to have the power of granting prosperity to whom she would.

FORTUNATUS, character in mediæval stories, who received from Fortune an inexhaustible purse, and stole from the Sultan a cap that would transport its wearer wherever he would go.

FORTUNATUS, VENANTIUS HONORIUS CLEMENTIANUS (530–609), Frankish ecclesiastic; bp. of Poitiers and hymnologist.

FORTUNE-TELLING, see PALMISTRY.

FORTUNY, MARIANO JOSE MARIA BERNARDO (1838–74), Span. artist; notable as colourist.

FORUM, an open space for the transaction of public business. The Roman f. was a rectangular building, surrounded by basilicas, etc. It was also the name given to a tract of open country in the neighbourhood of the Capitoline hills.

FORUM APPII (*c.* 41° 30′ N., 13° E.), ancient town, on Via Appia, Latium, Italy. Christians from Rome here met Apostle Paul.

FORUM CLODII (*c.* 42° 10′ N., 12° 10′ E.), ancient town, on Via Clodia, S. Etruria, Italy.

FORUM TRAJANI (40° N., 8° 50′ E.), ancient town, Sardinia, on river Thyrsus.

FOSBROKE, THOMAS DUDLEY (1770–1842), Eng. clergyman and antiquary.

FOSCARI, FRANCESCO (1373–1457), Doge of Venice; elected, 1423; supported Florentine campaign against Milan; increased Venetian dominions. His s., JACOPO, accused of receiving bribes and of treason, was imprisoned and exiled.

FOSCOLO, UGO (1778–1827), Ital. poet and patriot; author of several tragedies of high merit, including *Tieste*, *Ajax*, and *Ricciarda*; and a political work, *Letters of Jacopo Ortis*. At first an admirer of Napoleon, he became disgusted with Bonaparte's despotic aims, and, quitting the Fr. military service, devoted himself to lit.; finally retired to England.

FOSS, EDWARD (1787–1870), Eng. lawyer and biographical writer.

FOSSA, a carnivore; see under CIVET FAMILY.

FOSSA NOVA, Cistercian abbey, Rome province, Italy; deathplace of Thomas Aquinas, 1274.

FOSSANO (44° 33′ N., 7° 42′ E.), town, episcopal see, Cuneo, Italy; silk. Pop. 7682.

FOSSICK, word of Australian origin, applied to a miner who potters about in abandoned workings; hence a casual or trifling workman.

FOSSIL, remains of plants and animals embedded in minerals; term includes foot-marks of animals. Formerly called *petrifactions*, owing to organic parts being replaced by petrifying solution; thus the gradual decay of organic matter allowed each cell to be replaced, and corals, leaves, etc., showing complete structure, are found. Fossil forests have been found in coal, *e.g.* Parkfield Colliery, Wolverhampton. Fossil ferns show the development of the plant from Devonian Period.

FOSSOMBRONE (43° 42′ N., 12° 48′ E.), town, Pesaro, Italy; silk manufactures; ancient *Forum Sempronii*. Pop. 7240.

FOSSOMBRONI, VITTORIO, COUNT (1754–1844), Ital. statesman and mathematician.

FOSSORIAL WASPS, see WASPS.

FOSSWAY, one of the ancient Rom. roads of Britain, running from neighbourhood of Lincoln to Exeter; remains still exist.

FOSTER, JOHN (1770–1843), Eng. Baptist minister and essayist.

FOSTER, SIR MICHAEL (1836–1907), Eng. physiologist: prof. of Physiology at Univ. Coll., London (1869); prælector (1870) and prof. (1883) of Physiology at Cambridge; pres. of Brit. Association (1899); author of *Textbook of Physiology* and other works; elected M.P. for London Univ. (1900). He had a great influence on the study of biology in England.

FOSTER, MYLES BIRKET (1825–99), Eng. water-colour artist and book-illustrator.

FOSTERAGE, custom common in mediæval Europe, and especially in Ireland, where children of good family were brought up by foster-parents, who received a fosterage fee and support in old age.

FOSTORIA (41° 10′ N., 83° 26′ W.), city, Ohio, U.S.A.; glass and flour manufactures. Pop. (1910) 9597.

FOTHERGILL, JOHN (1712–80), Eng. physician; practised med. with great success in London; author of one of the first descriptions of diphtheria in English, under title of *Sore Throat attended by Ulcers*.

FOTHERING(H)AY (52° 32′ N., 0° 27′ W.), village, Northamptonshire, England. Ancient ruined castle was scene of imprisonment and execution of Mary, Queen of Scots, 1587.

FOUCAULT, JEAN BERNARD LÉON (1819–68), Fr. scientist; Copley medallist, Royal Soc., 1855; invented gyroscope and polariser, determined the absolute velocity of light, and demonstrated diurnal motion of the earth.

FOUCHÉ, JOSEPH, DUKE OF OTRANTO (1763–1820), Fr. politician; entered enthusiastically into Revolution; prominent in Jacobin movement; suppressed revolt at Lyons with utmost severity; on return quarrelled with Robespierre, who had him expelled from Jacobin Club; imprisoned for short time in 1795; ambassador to Cisalpine Republic, 1797; Chief of Police, 1799, continuing in office under Napoleon, who cr. him Duke of Otranto, 1808; deprived of office, 1810, and sent to Rome as titular gov. After Napoleon's fall, F. became Minister of Police under Louis XVIII.; retired from public life, 1816, and d. in exile.

L. Madelin, *Fouché* (Paris, 1901).

FOUCQUET, JEAN (*c.* 1415–85), Fr. artist; celebrated for miniatures.

FOUGÈRES (48° 20′ N., 1° 12′ W.), town, Ille-et-Vilaine, France; formerly one of strongest places in Brittany, frequently besieged; boots and shoes manufactured. Pop. 21,000.

FOULA (60° 8′ N., 2° 5′ W.), island, Shetlands, Scotland; area, 5 sq. miles; fish.

FOULAHS, see FULAHS.

FOULD, ACHILLE (1800–67), Fr. politician and financier.

FOULIS, ANDREW (1712–75) and **ROBERT** (1707–76), Scot. publishers; famed for beautiful and scholarly editions of Gk., Lat., and other classics.

FOULLON, JOSEPH FRANÇOIS (1717–89), Fr. administrator and financier; hanged by populace after fall of Bastille.

FOUNDATIONS are the natural earth-bed, rock, or other substance upon which the walls of a building rest. In selecting the site for a structure it is first of all necessary to examine the nature of the ground, and if a substantial natural f. cannot be reached at a moderate depth it must be provided by artificial means (*e.g.* by piles or concrete). Rock is the best natural f.; certain kinds of clay also serve the purpose; and sand and gravel likewise possess good weight-bearing qualities, but these latter are subject to the action of 'scour,' *i.e.* disintegration by water. Then, sometimes, the ground itself is of an artificial character, which means that at some period a hollow has been filled in with waste material, and where this is encountered it is always necessary to go deeper until a substantial natural f. is reached. A bed of concrete is now the method usually employed to provide a f. where the ground is found insufficient to support a building; and the alternative to this is the use of piles, which are driven deep into the soil, and upon the heads of which a timber platform is laid; piles are used in canal-cities like Venice and Amsterdam. Stone footings to the walls are also sometimes used.

FOUNDER, popular name for LAMINITIS, disease of horses and cattle in which laminæ of foot are inflamed; treatment consists in bleeding, poulticing, and purges, because f. is frequently caused by indigestion or constipation.

FOUNDING, or MOULDING, is a method of casting metals by preparing a mould in green or dry sand or in loam. A pattern, usually of wood, but sometimes of metal, is used; the sand is firmly beaten about it and damped; the pattern is withdrawn, and molten metal poured in. In order to withdraw the pattern it is necessary that the mould should be made in two parts, which fit upon one another.

FOUNDLING HOSPITALS are institutions established for the care and education of abandoned children, and, either State-supported or otherwise endowed, are to be found in France, Italy, Russia, America, and other civilised countries. The London F. H. was founded by Captain Thomas Coram in 1739, for the reception of 'deserted children,' who were placed in a basket at the entrance. It is now a home for illegitimate children whose mothers are known. The institution now maintains upwards of 500 girls and boys, who are afterwards put out to service or trade. They are well trained in music, a feature begun under the influence of Handel.

Folks, *Care of Destitute, Neglected, and Delinquent Children* (1902).

FOUNTAIN may be either a natural flow of water from a rock, or from the soil, or a stream diverted into an artificial and ornamental basin. The early Greeks were especially fond of constructing ornamental f's, and they were usually dedicated to deities or heroes. The Romans also built some celebrated f's. Excellent modern examples are to be found in Paris and at Versailles, also at the Crystal Palace (Sydenham) and various other places in England.

FOUNTAINS ABBEY, Cistercian monastery, near Ripon, Yorkshire, England; founded XII. cent. by Thurston, abp. of York; one of largest and best preserved of Eng. ecclesiastical ruins.

FOUQUÉ, FRIEDRICH HEINRICH KARL DE LA MOTTE (1777–1843), Ger. soldier and romanticist; wrote *Undine* and many novels, plays, and romances.

FOUQUET, NICOLAS, FOUCQUET (1615–80), Fr. statesman; Viscount of Melun and Vaux, Marquis of Belle-Isle; through influence of Mazarin became Procureur-Général, 1650; Finance Minister, 1653; lavish patron of art and science; of great wealth and extravagance; becoming too powerful, was arrested, 1661, and after long trial imprisoned for life at Pignerol.

FOUQUIER-TINVILLE, ANTOINE QUENTIN (1746–95), Fr. revolutionist; public prosecutor under the Terror; guillotined.

FOURCHAMBAULT (47° 2′ N., 3° 5′ E.), town, on Loire, Nièvre, France; large ironworks.

FOUR-EYED FISH, see KILLIFISHES.

FOURIER, FRANÇOIS CHARLES MARIE (1772–1837), Fr. social philosopher; developed theory of social reorganisation based on principle of co-operation. His scheme was to divide society into autonomous sections (*phalanges*) of about 1700 persons living in common building (*phalanstère*) with fixed amount of arable land attached; members to choose their own employment and receive minimum wage; surplus money to be divided between labour, capital, and talent. F. wrote *Théorie des Quatre Mouvements et des Destinées Générales,* etc.

FOURIER, JEAN BAPTISTE JOSEPH (1768–1830), Fr. mathematician; served in Egypt under Bonaparte; chief works: *Analyse des Équations déterminées* and *Théorie Analytique de la Chaleur,* in the latter of which he suggested what are now known as **Fourier's Series.** These are series of the form

$$a_1 \sin x + a_2 \sin 2x + \ldots + b_0 + b_1 \cos x + b_2 \cos 2x + \ldots$$

It is often important to be able to express a given function of x in terms of sines or cosines of multiples of x. Fourier first solved the general problem.

Any function of x which is single-valued, finite, and continuous between $x=0$ and $x=\pi$, or, if discontinuous, has only finite discontinuities each of which is preceded and succeeded by continuous portions, can probably be developed into a series of the form

$$f(x)=a_1 \sin x + a_2 \sin 2x + a_3 \sin 3x + \ldots$$

where $a_m=\frac{2}{\pi}\int_0^{\pi} f(x) \sin mx \, dx=\frac{2}{\pi}\int_0^{\pi} f(a) \sin ma \, da$;

and the series and the function will be identical for all values of x between 0 and π (not inclusive, unless $f(x)=0$ when $x=0$ and $x=\pi$).

e.g., $x=2(\sin x - \frac{1}{2}\sin 2x + \frac{1}{3}\sin 3x - \frac{1}{4}\sin 4x + \ldots)$

Similarly, for the same conditions,

$$f(x)=\tfrac{1}{2}b_0 + b_1 \cos x + b_2 \cos 2x + b_3 \cos 3x + \ldots$$

where $b_m=\frac{2}{\pi}\int_0^{\pi} f(x) \cos mx \, dx=\frac{2}{\pi}\int_0^{\pi} f(a) \cos ma \, da$;

$$e.g., x=\frac{\pi}{2}-\frac{4}{\pi}\left(\cos x+\frac{1}{3^2}\cos 3x+\frac{1}{5^2}\cos 5x+\frac{1}{7^2}\cos 7x+\ldots\right)$$

which is true from $x=0$ to $x=\pi$, both inclusive.

If $f(x)=-f(-x)$, $f(x)$ is an *odd* function, and the expansion in a series of sines is valid for values of x between $-\pi$ and $+\pi$, except possibly for $x=0$. If $f(x)=f(-x)$, $f(x)$ is an *even* function, and the cosine series for $f(x)$ is valid from $-\pi$ to $+\pi$, including the value 0. Hence any function can be developed into a series holding for *all* values between $-\pi$ and π, for

$$f(x)=\frac{f(x)+f(-x)}{2}+\frac{f(x)-f(-x)}{2}$$

and is thus expressed as the sum of an even and an odd function.

By putting $x=\frac{cz}{\pi}$ we can extend the limits, and we obtain

$$f(x)=\tfrac{1}{2}b_0+b_1\cos\frac{\pi x}{c}+b_2\cos\frac{2\pi x}{c}+b_3\cos\frac{3\pi x}{c}+\ldots$$
$$+a_1\sin\frac{\pi x}{c}+a_2\sin\frac{2\pi x}{c}+a_3\sin\frac{3\pi x}{c}+\ldots$$

where $b_m=\frac{1}{c}\int_{-c}^{c}f(x)\cos\frac{m\pi x}{c}\,dx$

and $a_m=\frac{1}{c}\int_{-c}^{c}f(x)\sin\frac{m\pi x}{c}\,dx$; this expansion is valid between the limits $x=-c$ and $x=+c$.

Fourier's series can be integrated term by term, the resulting series being the integral of the corresponding function, but only in certain cases can such series be differentiated with valid results.

Byerly, *Fourier's Series and Spherical Harmonics*; Fourier, *Théorie de la Chaleur*; De Morgan, *Differential and Integral Calculus*.

FOURMIES (50° 1′ N., 4° 1′ E.), town, Nord, France; wool-combing and spinning; glass works. Pop. 14,000.

FOURMONT, ÉTIENNE (1683–1745), Fr. Orientalist.

FOURNIER L'HÉRITIER, CLAUDE (1745–1825), Fr. revolutionist.

FOURNIER, PIERRE SIMON (1712–68), Fr. engraver; chiefly notable for improvements in type-founding.

FOURTOU, MARIE FRANÇOIS OSCAR BARDY DE (1836–97), Fr. politician.

FOUSSA, Foosa, see under CIVET FAMILY.

FOWEY (50° 21′ N., 4° 38′ W.), market town, seaport, Cornwall, England; important XIII. and XIV. cent's; good harbour; pilchards, china clay.

FOWL, a domestic bird of Asiatic and Amer. origin; body stout and flight feeble; cock polygamous and often brightly coloured; hen usually shows more subdued plumage; both characterised by possession of wattles and comb, these being larger in male than female; young, produced from eggs, covered with down at birth. POULTRY-FARMING.

FOWLER, CHARLES (1792–1867), Eng. architect.

FOWLER, EDWARD (1632–1714), Eng. ecclesiastic and theological writer.

FOWLER, SIR HENRY HARTLEY, see WOLVERHAMPTON, VISCOUNT.

FOWLER, SIR JOHN (1817–98), Eng. civil engineer; built Manchester, Sheffield, Lincolnshire Ry., and London Metropolitan Ry.; adviser to Khedive of Egypt; co-operated with Sir Benjamin Baker in designing Forth Bridge.

FOWLER, WILLIAM (d. *c.* 1614), Scot. poet; uncle of Drummond of Hawthornden.

FOX (*Canis vulpes*), an animal allied to the wolf, dog, and jackal, and included with them in group *Canidæ*; characterised by long, bushy tail, or *brush*, by upright and somewhat large ears, short legs, and comparatively slender build; extremely intelligent and cunning, and feeds upon various small mammals and birds, and also fruit; preserved for hunting in Britain; his astuteness has made him a favourite character in fable, the classic being Reynard the Fox (*q.v.*).

FOX, CHARLES JAMES (1749–1806), Brit. (Whig) statesman; 3rd s. of Henry Fox, Lord Holland; b. Westminster; ed. Eton and Oxford; early addicted to gambling; M.P., 1768; spoke against Wilkes; became junior lord of Admiralty, 1770; resigned, 1772; opposed Royal Marriage Act, thus incurring dislike of George III.; junior lord of Treasury, 1773; quarrelled with Lord North and joined Opposition, 1774; influenced by Burke; became great leader of Whigs; opposed Lord North's Amer. policy, and sided with colonists; Foreign Sec. under Rockingham, 1782, but retired soon after latter's death, and later formed ministry with Lord North known as the *Coalition*, which was unpopular both with king and country, and ended, 1783.

Whigs were utterly defeated in election of 1784, and for twenty-two years F. remained out of office; during most of this period he was rival and opponent of Pitt, the Prime Minister; opposed free trade with Ireland, 1785, and commercial treaty with France, 1787; prominent in impeachment of Warren Hastings; advocated removal of religious disabilities and abolition of slave trade; opposed Pitt's policy during Fr. Revolution, which he upheld; carried Libel Bill, 1792; opposed Anglo-Fr. war, 1793. After Pitt's death in 1806 F. became Foreign Sec., but died a few months afterwards and was buried in Westminster Abbey. A brilliant orator and possessed of great personal charm, his powerlessness as a statesman is attributable partly to the reputation gained by his early excesses, partly to the continued disfavour of George III.

Lord John Russell, *Life and Times of Charles James Fox* (1859–66).

FOX, EDWARD (*c.* 1496–1538), Eng. bp.; sent on missions concerning Henry VIII.'s divorce; had share in drawing up Ten Articles, 1536.

FOX, GEORGE (1624–91), Eng. Quaker; founder of Society of Friends; b. Drayton; early gave himself up to religion; began to preach in 1647, and soon afterwards began missionary travels, which continued throughout his life; many times imprisoned; travelled in Scotland, Ireland, W. Indies, America, Holland; advocated doctrine of 'Light within,' and discontinuance of sacraments and tithes; d. in London. See FREE CHURCHES (SOCIETY OF FRIENDS).

FOX, HENRY RICHARD VASSALL, see HOLLAND, BARON.

FOX, RICHARD (*c.* 1448–1528), Eng. bp.; chief sec. to Henry VII.; bp. of Exeter and Lord Privy Seal, 1487; bp. of Bath and Wells, 1492; of Durham, 1494; arranged commercial treaty with Netherlands, and marriage of James IV. of Scotland and Margaret, dau. of Henry VII.; Chancellor of Cambridge, 1500; bp. of Winchester, 1501; founded Corpus Christi Coll., Oxford, 1515–16.

FOX, SIR STEPHEN (1627–1716), Eng. politician; fled to France with Charles II., at whose Restoration he received many lucrative appointments.

FOX, SIR WILLIAM (1812–93), New Zealand politician; went to New Zealand, 1842; prominent in demanding autonomy for colony; four times premier of New Zealand, 1856, 1861–62, 1869–72, 1873.

FOX BATS. see FLYING FOXES.

FOXE, JOHN (1516–87), Eng. author and ecclesiastic; chiefly remembered by his *Acts and Monuments* (1563), better known as 'Foxe's *Book of Martyrs*.'

FOXGLOVE, natural order *Scrophulariaceæ*, biennial and perennial plants; common purple foxglove (*Digitalis purpurea*) contains a poison, digitalis, used medicinally.

FOXHOUNDS, dogs capable of great speed and endurance, used in fox-hunting; chief characteristics of good f. are: short back, large head with long ears, straight fore-legs, round feet with well-arched toes; colour is generally white, with black and tan markings; height, 20–24 inches.

FOX-HUNTING.—The fox has been hunted in England since Anglo-Saxon times, but till the middle of the XVII. cent. more for the purpose of extermination than for sport. The modern form of f.-h. may be said to date from the reign of Charles II., when it became exceedingly popular with wealthy landowners, and packs of hounds were kept in all parts of England.

The hunting-season lasts from November till about March. In the early morning the earths are stopped to prevent the fox from taking to ground. Hounds are 'thrown off' about 10 a.m., pick up the scent and pursue, followed by the huntsman (who manages the pack), the whipper-in (his subordinate), and the members of the hunt. At the 'kill' the head and brush are kept as trophies.

There are in England about 170 packs, while the sport is popular in the E. of Ireland and in parts of Scotland, and it has been introduced into all parts of the English-speaking world. The most famous Eng. packs are the Quorn, Meynell, Belvoir, and Lord

Middleton's; the Peshawur Vale pack is celebrated in India.

Scarth Dixon, *The Sport of Kings* (1900); Underhill, *The Master of Foxhounds* (1904).

FOX-SHARK (*Alopecias vulpes*), found in Atlantic and Pacific Oceans; upper lobe of tail is tremendously lengthened; total length, 5–12 feet; feeds on small fish, but does not attack man.

FOXTAIL GRASS, genus of grasses (*Alopecurus*) valued for pasturage and lawns.

FOX-TERRIER, see under DOG FAMILY.

FOY, MAXIMILIEN SÉBASTIEN (1775–1825), Fr. soldier and politician; served with distinction in Fr. Revolutionary wars; fought in Netherlands, Italy, Austria, Turkey, Peninsula; wounded at *Waterloo*.

FOYERS, FALLS OF (57° 12′ N., 4° 34′ W.), two cascades, 40 and 165 ft. in height, on river Foyers, Inverness, Scotland; power utilised for generating electricity for aluminium works.

FOYLE, LOUGH (55° 7′ N., 7° 5′ W.), gulf on N. coast, Ireland; receives river F., on which Londonderry (*q.v.*) is built; navigable for moderately sized craft; length, 15 miles; breadth, 1–10 miles.

FRA DIAVOLO, soubriquet of Michele Pezza (*c.* 1760–1806), Ital. brigand and soldier; considerable source of annoyance to French troops in Italy, 1799–1806; captured and executed; F. D. is name of opera by Auber.

FRACASTORO, GIROLAMO (1483–1553), Ital. physician; prof. of Philosophy at Padua (1502), afterwards practising med. at Verona; renowned for versatility, being poet, philosopher, physician, scientist, and artist; author of a once famous rhyming medical work, *Syphilidis, sive Morbi Gallici*, and of many other works and poems.

FRACTION, see ARITHMETIC.

FRACTURES, see BONE.

FRAGA (41° 30′ N., 0° 15′ E.), town, Huesca, Spain; formerly in hands of Moors, well fortified till Peninsular War. Pop. 7000.

FRAGONARD, JEAN-HONORÉ (1732–1806), Fr. artist; his voluptuous style was highly popular in his day, and, after a period of neglect, his work is now again valued.

MacFall, *Fragonard*.

FRAHN, CHRISTIAN MARTIN (1782–1851), Ger. archæologist and numismatist.

FRAMING, the craft of embellishing pictures and mirrors with carved or gilded frames, began in England in Tudor times. Composition moulding, in place of carved wood, is now largely used.

FRAMINGHAM (42° 14′ N., 71° 33′ W.), town, on Sudbury, Massachusetts, U.S.A.; boots and shoes. Pop. (1910) 12,948.

FRAMLINGHAM (52° 13′ N., 1° 21′ E.), market town, Suffolk, England; ruined castle, ancient residence of Dukes of Norfolk.

FRANC, Fr. silver coin, and monetary unit; worth about 9½d. (19 cents); also used in Belgium and Switzerland.

FRANÇAIS, ANTOINE, COUNT DE NANTES (1765–1836), Fr. author and politician.

FRANÇAIS, FRANÇOIS LOUIS (1814–97), Fr. artist; landscapes.

FRANCAVILLA (40° 33′ N., 17° 35′ E.), town, Apulia, Italy; textiles. Pop. 20,422.

FRANCE (42° 20′ to 51° 6′ N., 4° 42′ W. to 7° 39′ E.), republic, S.W. Europe; bounded N.E. by Belgium, Germany; E. by Germany, Switzerland, Italy; S. by Mediterranean, Spain; W. by Atlantic; N.W. by Eng. Channel; greatest length, *c.* 600 miles; breadth, 550 miles; area, 207,054 sq. miles.

N. and W. are flat, almost nowhere over 600 ft. above sea-level, but with small hilly parts in Brittany and Normandy and to S.E. of Nantes. In S. centre is great plateau of Auvergne, with average elevation of 3000 ft., and with number of extinct volcanic cones (Puy de Dôme, Mont Doré, etc.) rising above it to heights of 5000–6000 ft. In S.E. are the Cévennes, which are continued northward by mts. of Charollais, Côte d'Or, and Plateau of Langres, from which Monts Faucilles are sent off across Upper Moselle to meet Vosges. Along E. of this line of mt. ranges is valley of lower Rhône and Saône, extending over 300 miles from N. to S.; E. of this and N. of Doubs are Vosges Mts.; between Doubs and upper Rhône are Jura Mts., and between upper Rhône and Mediterranean are spurs of Graian, Cottian, and Maritime Alps, reaching heights of 13,000 to 15,000 ft. (Mont Blanc, 15,780). In S.W. the Pyrenees stretch along frontier between F. and Spain, and the great plain of Landes extends along W. coast between rivers Adour and Garonne. Coasts are well adapted for maritime relations with other countries; on N. Dieppe, Calais, and Boulogne share passenger traffic from England; at mouth of Seine stands the large port of Le Havre; farther W. the rocky peninsula of Cotentin juts into Eng. Channel, terminating in Cape de la Hogue, near Cherbourg. Most westerly point is Cape Ushant, off rocky coast of Brittany. W. coast borders on Bay of Biscay, chief ports being Brest, Lorient, Nantes, Rochefort, and Bordeaux; on S. coast is Gulf of the Lion, to E. of which are Marseilles, the chief southern port, and Toulon, headquarters of Mediterranean Fleet of France; and still farther E. are Nice, Cannes, Mentone, chief towns of Fr. Riviera. Principal rivers flowing into Eng. Channel are Somme, Seine, Orne; to Atlantic, Vilaine, Loire, Charente, Dordogne, Garonne, Adour; to Mediterranean, Rhône.

Climate is temperate, but varies according to districts, the winter of the Mediterranean region being very mild, that of the Vosges, for example, very severe; mean winter temperature, *c.* 42° Fahr., summer 68° Fahr.; rainfall over lower regions ranges from 20 to 30 inches, increasing in higher districts.

Geology.—The central plateau consists chiefly of Archæan rocks, which occur also in Finisterre and great part of Brittany; secondary formations occur to N.E. of Auvergne plateau, and in Jura, where great masses of limestone appear; and the Paris basin and Aquitaine are of tertiary formation.

FRENCH HISTORY.

F. was first peopled by *Palæolithic* tribes (remains like those of Stonehenge, but on a much larger scale, being found at Carnac and elsewhere), then by *Iberians*, whose racial identity is not yet agreed upon, and afterwards by Celtic races called in F. *Gauls*.

Roman Gaul.—Gaul (*q.v.*) was bounded by the Rhine, Jura Mts., Mediterranean, Pyrenees, and Atlantic. In Cæsar's days it was inhabited by Belgians in N., Celts N. of the Loire, Aquitanians in S.W., Ligurians and Greeks of Marseilles in S.E. The Romans founded Aix and Marseilles (122–18 B.C.) and appropriated the land afterwards called Provence. In 58–50 B.C. JULIUS CÆSAR conquered all Gaul, in eight different raids or campaigns. In the seventh, Vercingetorix, after a desperate resistance, had to surrender on the fall of Alesia. Gaul was subject to the Romans for five hundred years, and became part of the Western Empire with Great Britain, Spain, and Italy. It had a Rom. government, and spoke a Romance language; towns and roads were built; the Christian religion was introduced by St. Denis in Paris, St. Martin in Tours, etc.

Merovingians and Carolingians.—In the V. cent. over 600,000 Germans, who had been long threatening and kept back with difficulty, crossed the Rhine and went through Gaul to Africa. The Franks, successively led by their chiefs, Pharamond (420), Clodion (428), Mérovée (448), penetrated as far as the Somme. They founded the dynasty of the MEROVINGIANS (420–752). In 451 the Huns from Asia invaded Europe under their chief, Attila; Paris was saved by St. Geneviève and Orléans by its bishop, St. Aignan; they were met and defeated in the *Plain of Champagne* (451) by the united forces of Mérovée, Ætius, Rom. general, and Alaric I., king

of the Visigoths. The Frank, CLOVIS, took possession of the whole of Gaul after defeating the Romans at *Soissons* (486), the Germans at *Tolbiac* (496), the Burgundians at *Dijon* (500), and the Visigoths at *Vouillé* (507). He divided his kingdom between his four sons, a custom carried on in the next dynasty. The Frankish kings finally became *rois fainéants*; and were ruled by the *Maires du palais*, one of whom, CHARLES MARTEL, repulsed the Arabs under Abderahman at *Poitiers* (732), thus saving Europe. His s., PÉPIN LE BREF, shut up the last Merovingian king, CHILDERIC III., in a cloister, took the crown (752), and was ancestor of the CAROLINGIANS (752–987), so named from Charles the Great. He left two sons, CARLOMAN, who did not live long, and Charlemagne (768–814). Aquitaine submitted to CHARLEMAGNE, who became sole master of F. He crossed the Alps, conquered Didier, king of the Lombards, and confirmed to the Pope the church lands given by Pépin le Bref.

On Christmas Day, 800, Leo III. crowned Charlemagne Emperor of the West (see EMPIRE, HOLY ROMAN), an empire extending on the south to the Ebro in Spain and the Garigliano in Italy, the Bosna and the Theiss on the east, and to the Elbe on the north. Charlemagne was one of the founders of European civilisation. He created dukes, counts, etc., to keep order in the provinces, had his laws (*Capitulaires*) written, founded Aix-la-Chapelle, his capital, held there his '*Académie Palatine*' of learned men, amongst whom were the Eng. monk Alcuin and Eginhart, his historian, and established schools in his palace. His s., LOUIS LE DÉBONNAIRE (814–40), was not the man to carry on his work. His sons revolted against him, and after his death, by the Treaty of Verdun (843), divided the empire into Germany, Italy, and France, with CHARLES LE CHAUVE (843–77) as king of the last named. In 877, by the Edict of Kiersy-sur-Oise, Charles allowed his vassals' land and offices to become hereditary, thus establishing FEUDALISM (*q.v.*). Eventually the town of Laon alone remained to the crown. The smaller landowner sought protection of the greater, declaring himself his vassal, and by the end of the X. cent. F. was divided into about a hundred fiefs or *arrière-fiefs*, the chief of which were the counties of Vermandois, Champagne, Toulouse, Flanders, and the duchies of France with Artois, Burgundy, Normandy, and Aquitaine. The Church, with her large landed property, abbeys, and monasteries, was powerful, the only repository of learning, and a rival to the purely feudal forces as well as to the monarchy which after cent's of struggle triumphed over the feudal system.

The later Carolingian kings were too weak to repel the NORTHMEN, who had already appeared at the end of Charlemagne's reign and had sailed up the rivers, plundering and burning. The lords called to the throne CHARLES LE GROS (884), king of Germany, thinking he would have more power than the lawful heir, but under his reign the Northmen came as far as Paris, where Count Eudes and Bp. Gozlin made a brave defence. Charles bribed the Northmen to retreat, and was dethroned for his cowardice. CHARLES LE SIMPLE (896–923), the restored Carolingian king, gave by the Treaty of St. Clair-sur-Epte (911) the province since called Normandy (*q.v.*) to the Northmen, whose chief, Rollo, married his dau., Gisèle.

Capetians.—The barons, who had brought the Carolingians to the throne, had taken their provinces one by one, administered them, and usurped most of the royal functions. HUGH CAPET, who possessed the Ile de France and Orléanais, imprisoned the Carolingian heir, Charles of Lorraine, and seized the throne. He began the third dynasty, that of the CAPETIANS (987–1792).

The first Capetians, Hugh Capet (987–96) and Robert, his s. (996–1031), set themselves to strengthen their hold upon the throne. Under Henry I. (1031–60) the Normans (*q.v.*) became the first race of

Europe; they conquered the south of Italy, and under PHILIP I. (1060–1108) conquered England (1066). F., 'the eldest child of the Church,' took the lead in the Crusades (*q.v.*), and Henry, Duke of Burgundy, founded the kingdom of Portugal; but the king of F. took no part in these events.

LOUIS VI. (1108–37), one of the strongest kings of the line, helped the *Communes* to win their franchise, established order in his demesne, and encouraged local forces to fight in his army. He was beaten by Henry I. of England at *Brenneville*, but repulsed an invasion of the Emperor Henry V. The reign of Louis VII. (1137–80) was unfortunate. He went on the second crusade (1147) with Conrad, emperor of Germany, against the advice of his minister and biographer, Suger, after whose death he repudiated his wife, Eleanor of Aquitaine. Eleanor married (1152) Henry II., future king of England, who thus became possessor of about half of F.

By PHILIP AUGUSTUS (1180–1223) the throne of France was much strengthened. He went on the third crusade with Frederick Barbarossa and Richard

Cœur de Lion, whom he encouraged in revolt against his f., Henry II. They took St. Jean d'Acre together, but disagreed afterwards, and Philip went back to F., and plotted with King John of England to take Normandy. After the death of Richard I., Philip Augustus confiscated Normandy, Anjou, and Poitou (1204) as suzerain of Arthur of Brittany, who had been murdered. He won the battle of *Bouvines* (1214) over Otto IV., emperor of Germany, and Ferrand, Count of Flanders. In the S. the religious war of the Albigenses ended in Simon de Montfort's taking Toulouse from its count, Amaury. Philip Augustus instituted the *Cour des Pairs* (Chamber of Peers), which lasted until 1789, and established the *Quarantaine le Roi*, a period of forty days between challenge and combat. During that time quarrelsome nobles might come to terms and even appeal to the king. He also sent *baillis, prévôts, sénéchaux* to judge lawsuits, etc., with appeal to himself. Paris grew, the Cathedral of Notre Dame was in process of completion, the Hôtel-Dieu (hospital), the Louvre (palace), and the Halles (market) were built. The Univ. was founded and called 'the eldest daughter of the king.' After the death of LOUIS VIII. (1223–26) his widow, Blanche of Castille, was regent until 1236, and, with the aid of the poet, Count Thibaut of Champagne, repressed the nobles; she prepared for the union of several provinces to the crown, and carefully educated her s., LOUIS IX. (1226–70), one of the finest figures of Fr. history. 'St. Louis' disapproved of the confiscations of his grandfather, Philip Augustus, and by the Treaty of Abbeville recognised the king of England as Duke of Guyenne (1259), on condition that he should give up any claim on Normandy or any border provinces. He led the two last crusades (1248, 1270), and died of the plague at Tunis. In his time were built the hospital of *Quinze-Vingt*, the *Sainte Chapelle*, and the *Sorbonne*. The chronicler Joinville records the good government and prosperity of F.

PHILIP III. *le Hardi* (1270–85) added Poitou and Toulouse to the crown; his s., PHILIP IV. *le Bel* (1285–1314), added Navarre and Champagne. After a war with England he married his dau. Isabelle to the s. of Edward I. of England, a marriage which led later to the Hundred Years War. Increased expenses of administration led him to raise new taxes on salt (the *gabelle*), Jews, Lombards, the clergy, etc., and he forbade the pope's taxes to be paid. To facilitate assessment of taxes and obtain general support for his great attack on the papacy, he called together for the first time the *États Généraux* (1302). He then joined the Conciliar movement, sent to Pope Boniface VIII. messengers who insulted him and caused his death, and secured the appointment of the Abp. of Bordeaux as Pope Clement V., whose residence he fixed at Avignon. He brought about the dissolution of the Templars, the Temple in Paris and their wide lands in F. coming to the crown. The three sons of Philip *le Bel*, LOUIS X., PHILIP V., and CHARLES IV., reigned in turn. They had no son, and as it was decreed by the old Frankish *Loi Salique* that women must not inherit the throne, after the death of Charles IV. *le Bel* (1322–28), Edward III. of England vainly claimed the throne as nearest heir by his grandmother Isabelle. The *loi salique* was enforced for the third time, and PHILIP OF VALOIS (1328–50), cousin of the last three kings, succeeded.

House of Valois (1328–1589).—The rivalry between the kings of England and F. had long been felt; F. was jealous of England's power, and the Eng. kings resented the allegiance they had to pay to F. for their continental possessions. Besides, the Flemings revolted against F., sought help from England, with whom their commercial interests were bound up. Hostilities began at *Cassel*, 1328, after which England openly took the part of Flanders; war was declared (1336); F. was defeated on sea at *Sluys* (1340), crushed on land at *Crécy* (1346), and in 1347 the English took Calais, which they kept until 1558. The plague forced suspension of hostilities for a few years. JOHN II. *le Bon* (1350–64) was the first to bear the name of *Dauphin* (q.v.), from the province of Dauphiné now acquired by the crown. In 1355 the war began again. John was badly beaten at *Poitiers* (1356); his s., Charles, taken prisoner to England, fled back to F., but John himself was captured. He signed the Treaty of London, which the dauphin would not accept, and war continued, until the Treaty of Bretigny (1360). F. was also torn by the strife between the *bourgeoisie*, headed by Étienne Marcel, and *la Jacquerie*, of peasants.

CHARLES V. (1364–80), with the help of the Breton Du Guesclin, beat the army of Navarre at *Cocherel*. In Brittany Du Guesclin was taken prisoner by Chandos, but by the Treaty of Guérande Brittany acknowledged the suzerainty of the king of F. Du Guesclin took the *Grandes Compagnies* of mercenaries to Spain, was again taken prisoner by Chandos at *Navarette*, but set free by the Black Prince on promise of a heavy ransom. In 1375 at the Truce of Bruges the English only possessed Calais, Bayonne, and Bordeaux. CHARLES V., *the Wise*, a good administrator, first instituted a permanent professional army. When he died, his s., CHARLES VI. (1380–1422), being only twelve, his uncles, the Dukes of Anjou, Berry, Bourgogne, and Bourbon, squandered the riches of the kingdom. The people (*Maillotins* in Paris, *Harelles* in Rouen, etc.) revolted against the heavy taxation. The king, declared of age at twenty, called back his f.'s ministers and at first showed some firmness, but two accidents affected his brain, whereupon the uncles threw the ministers, whom they scornfully called *Marmousets*, into the Bastille. The king's mother, Isabeau de Bavière, and his bro., the Duke of Orléans, also took part in affairs; and in 1407 Jean *sans Peur*, Duke of Burgundy, killed the Duke of Orléans. Bernard d'Armagnac, father-in-law of the new duke, took his part and began the civil war of the *Armagnacs* and the *Bourgnignons*, who both wanted governorship of the king and realm (1411). The Armagnacs were defeated by the English at *Agincourt* (1415); Jean *sans Peur* was murdered, and the queen made the king sign the Treaty of Troyes (1420), by which he left his throne to Henry V. of England. Both kings died in the same year.

By this time the English ruled the whole country north of the Loire. CHARLES VII. (1422–61), called derisively 'the little king of Bourges,' abandoned by his mother and without means, was thinking of retiring abroad, when the English, after the victories of *Cravant* and *Verneuil* came to besiege Orléans. The town was exhausted and F. nearly lost, when JEANNE D'ARC appeared, took Orléans, and went with the king to Reims, where he was anointed. At her death patriotic feeling was restored; Paris (1436), Rouen (1449), Bordeaux (1453) recovered their independence. Charles VII. behaved in a kingly way: he made peace with Burgundy by the Treaty of Arras (1435), reorganised his army, and by the victories of *Formigny* (1450) and *Castillon* (1453) ended the Hundred Years War. He governed his kingdom wisely, but is accused of ingratitude to his servants.

Charles died of hunger for fear of being poisoned by his s., LOUIS XI. (1461–83), a clever and cunning prince, who contributed more than any king towards F.'s greatness and royal authority, though his means were not always straight and he was feared rather than loved. He began his reign by putting down the so-called League of the Public Welfare, in which he had against him the clergy and the lords, especially Charles the Bold, Duke of Burgundy. He met them at *Montlhéry*, where the battle was indecisive. Unfulfilled promises of the king brought a new league. He went to Péronne to appease Charles the Bold, and accompanied him to Liége to put down a revolt which he had himself raised against the duke (1468). He signed the Treaty of Péronne to which he adhered no more than to others. The duke then invaded several towns of the Somme, and besieged Beauvais, but a woman,

Jeanne Hachette, headed the inhabitants and drove him away. Charles the Bold was killed before Nancy (1477); whereupon the king added Burgundy, Maine, Anjou, Provence, Guyenne, etc., to the crown and ruled them with an iron hand. Louis' s., CHARLES VIII. (1483–98), was thirteen when he ascended the throne. His eldest sister, Anne de Beaujeu, for eight years directed affairs. She put down the *Guerre Folle* (Mad War) waged by the lords and Maximilian of Austria. In 1498 the king married Anne of Brittany, heiress of that province. By the Treaty of Étaples he bought off invasion by Henry VIII. of England. With Aragon and Austria he made the Treaties of Narbonne and Senlis, by which F. lost several provinces. Finally he made an epoch in history by setting off to the conquest of Naples, which he claimed as heir of the House of Anjou. This was the beginning of the Italian wars (1494–1544). On his return Naples shook off Fr. domination.

Charles left no children; his cousin, the Duke of Orleans of the *Valois-Orléans* branch, who had taken a prominent part in the *Guerre Folle*, became king, as LOUIS XII. (1498–1515). After divorce he married the queen, Anne de Bretagne, in order to secure that province to the crown. The new 'father of his people' enforced the *Ordonnance de Blois*, by which the *baillis*, *prévôts*, and *sénéchaux* had to have a degree in law, instituted *Parlements* in Provence and Normandy, diminished the taxes, and yet increased the finances. The peasant's property was protected; agriculture and commerce prospered. Unfortunately, the king resumed the Ital. wars, and besides Naples claimed the *Milanais* through his grandmother, Valentine Visconti. Milan was conquered twice, and La Trémouille left to govern it. Naples was subjugated with help of Ferdinand of Aragon, but French and Spanish disagreed, France was defeated at *Seminara* and at *Cerignola* (1503), and Naples was lost again. Louis XII. foolishly joined the League of Cambrai against the Venetians. The battle of *Agnadello* was won (1509), but the Allies, Pope Julius II., the Swiss, Ferdinand of Aragon, Henry VIII., and Maximilian formed the Holy League (1511), against him. Louis XII. was victorious at *Ravenna* (1512), but was again forced to make great concessions to his neighbours. The kingdom was at last at peace when he died without sons.

His cousin and son-in-law, of the branch of *Valois-Angoulême*, became king under the name of FRANCIS I. (1515–47). The Holy League had formed again, and the king commenced his reign by the victory of *Marignano* (1515). He received knighthood there at the hands of Bayard (*q.v.*). The coronation of Charles V. of Austria as emperor, a dignity which Francis I. also coveted, was the signal of a long European war, the field of battle being again Italy. Both sought the alliance of Henry VIII., who met the king of France at the Field of the Cloth of Gold (1520), but by Cardinal Wolsey's advice supported Charles V. War was declared in 1521; the chief battles were *La Bicoque*, *Biagrasso*, *Rebecco*, *Romagnano*. Finally the king himself was beaten and taken prisoner at *Pavia* (1525) by Charles V. Meanwhile the queen regent, Louise of Savoy, mother of Francis I., kept order, and on his return after signing the humiliating Treaty of Madrid (1526) the king found his kingdom peaceful. The Treaty of Cambrai (1529), negotiated between Louise of Savoy and Margaret of Austria, gave Europe a few years' peace during which Francis I. gave his mind to art and the organisation of his kingdom. When war began again, for the fourth time, he made alliance with Soliman, emperor of the Turks (1541), and with the Protestants of Germany. He raised five armies, which were successful at *Cérisoles* in Italy and in different parts of F. Peace was made with Charles V. at Crespy-en-Laonnais (1544) and with Henry VIII. at Ardres (1546), but in 1551 war began again under Henry II. (1547–59), who also became the ally of the Turks and the Ger. Prot. princes. Francis of Guise conquered the three bishoprics of Metz, Toul, and Verdun, and won the battle of *Renty* over Charles V. After that emperor's abdication his s., Philip II., defeated the French at *St. Quentin* (1557), but Guise arrived in haste, took Calais (1558), and finally the Peace of Cateau-Cambrésis (1559) ended the first period of war with the house of Austria. Philip II. married Fleury II.'s dau. During the festivities the king was mortally wounded in a tournament. His s., FRANCIS II. (1559–60), who had married Mary Stewart, reigned only one year.

The Ital. wars helped greatly to extend the Renaissance (*q.v.*) from Italy to F. Francis I., surnamed 'the Father of Arts,' entrusted the artistic direction of his castle of Fontainebleau to Rosso (1496–1541); Chambord was raised by Primatice (1490–1570); the king bought works of Leonardo da Vinci (1452–1519) and others. F. itself produced artists, Jean Cousin (1501–90), Jean Goujon (1520–72), Pierre Lescot (1510–71), etc., as well as poets, writers, printers. The *Collège de France* was founded then. Francis I. also reformed the army and the navy. He sent out Jacques Cartier and Jean de la Roque, who established Fr. settlements at the mouth of the St. Lawrence.

Francis I. and Henry II. had been the allies of the Ger. Prot. princes against the emperor, but would not tolerate heresy at home. The Protestants, however, were getting numerous in France. At their head were Antoine de Bourbon, king of Navarre, his wife, Jeanne d'Albret, his bro., the Prince of Condé, and Admiral Coligny. At the head of the extreme Catholics were the Guises, the Marshal of St. André, the old Constable of Montmorency. Between these parties were the *Politiques*, among whom was the noble and wise Michel de l'Hôpital and Catherine de' Medici (widow of Henry II., mother of the three kings, Francis II., Charles IX., and Henry III.), who aided now one, now the other, as her interest lay. Under the young king, Francis II., the Guises governed. Condé, by the Conjuration d'Amboise, tried to kidnap the king, but the plot was discovered, and Condé had been condemned to be executed when the king died.

Catherine de' Medici, regent for her s., CHARLES IX. (1560–74), seemed in her ambition and cunning to favour all parties alike. She sent Mary Stewart back to Scotland and assembled the useless *Colloque de Poissy* in which Catholic and Prot. doctors were to discuss the different points of faith. It did not prevent eight sanguinary RELIGIOUS WARS (1562–94). The signal was the Massacre of Vassy (1562). In the first war Antoine de Bourbon died, leaving the kingdom of Navarre to his young s., Henry of Béarn (later Henry IV.); the Marshal of St. André died also at *Dreux*, and Francis of Guise was murdered. In the second, the Protestants tried, again in vain, to kidnap Charles IX. After the third, Condé having been treacherously killed at *Jarnac*, the young king of Navarre, his mother, Jeanne d'Albret, and Coligny were left chiefs of the Protestants. Catherine de' Medici had arranged Henry of Navarre's marriage with her dau., Marguerite, and when all the Protestants were in Paris for the marriage feast, the MASSACRE OF ST. BARTHOLOMEW (Aug. 23–24, 1572) took place; Coligny and many others were killed. Jeanne d'Albret had died before, probably poisoned. The massacres went on in the provinces, and the Protestants who had escaped began the fourth war. HENRY III. (1574–89) was little able to face the situation. Henry of Guise, bro. of Francis, defeated the Protestants headed by Henry of Navarre and the Duke of Alençon, the king's bro., at the battle of *Dormans*. The queen, nevertheless, signed the Treaty of Loches in favour of the Protestants. The Catholics, greatly incensed, formed *La Ligue*. After the sixth and seventh wars, ended by the Treaties of Bergerac (1577) and Pleix (1580), the Duke of Alençon died. Henry III. had no s., and the *Ligueurs* wished Henry of Guise to succeed. Henry III., disliking Guise as a rival, favoured Henry of Navarre, and the eighth war, named *Guerre des Trois Henris*, began. Henry of Navarre won at *Coutras*, Guise at

Vimory and *Auneau*, and besieged Paris; after the day of Barricades (1588) the king called the States-General at Blois. As they also were in favour of Guise, Henry III. caused him to be murdered. This act increased Henry's unpopularity; Paris and other towns shut their gates against him. He and Henry of Navarre had their camp at St. Cloud, and were besieging Paris when Henry III. was murdered.

The House of Bourbon (1589–1792).—Henry of Navarre, who became HENRY IV. (1589–1610), was abandoned by the royal army, and went to Dieppe to meet reinforcements sent by Queen Elizabeth of England. He won the battles of *Arques* (1589) against Mayenne, bro. of Henry of Guise, *Ivry* (1590) against the *Ligueurs*, and *Aumale* against the Spanish, who helped the *Ligueurs*. The people were utterly weary of civil war; the States-General were called and made apparent the self-seeking of adherents of the remaining Guises. A satiric pamphlet, the *Satire Ménippée*, did great service to Henry, who clinched matters by solemn acceptance of Rom. Catholicism in the basilica of St. Denis (1593). The *Ligue* was dissolved and the great Wars of Religion finished. The king signed the EDICT OF NANTES (1598) with the Protestants and the Peace of Vervins (1598) with the Spanish after his victory of *Fontaine-Française* over them and Mayenne. The territorial unity of F. was restored and absolute monarchy came to its climax. In 1600 the king obtained the annulment of the marriage he had been trapped into by Catherine de' Medici, and married the pope's niece, Marie de' Medici. The wounds of the country after forty years of civil war were healed. Sully, Henry IV.'s friend and chief minister, improved agriculture and finances, constructed canals and roads, protected labourers against tax collectors and nobles. After paying 235 million francs debt, Sully left 40 millions in the Bastille. The Gobelin factories were reorganised and others established for silk, glass, artistic earthenware, and other home industries. Henry was full of great schemes when he was murdered by François Ravaillac.

LOUIS XIII. (1610–43) was only nine years old. His mother, Marie de' Medici, regent, entrusted affairs to an Italian, Concini, whose wife, Eleonora Galigai, had great influence over him. Concini was killed by the king's orders, and Albert de Luynes did not fare better. The States-General of 1614 did little good except to bring under the queen's notice the young bp. of Luçon (later Cardinal RICHELIEU), whom she made chief minister. That eminent statesman had a threefold plan for putting down (1) the nobles, (2) the Protestants, (3) the house of Austria. (1) The religious wars had revived the centrifugal tendencies of feudalism and introduced an anti-national spirit. Richelieu ordered the Count of Chalais, the Maréchal de Marillac, the Duke of Montmorency, and other magnates to be beheaded because they had called in the Spanish. Marie de' Medici, who had joined in a conspiracy of the lords against her son and Richelieu, was exiled to Compiègne, where she died. The last to fall were Cinq Mars and his friend, De Thou, executed for not betraying the plot. (2) Richelieu took La Rochelle, the Prot. stronghold, by building a huge dyke round it and reducing the inhabitants to famine. The Peace of Alais, however, granted religious freedom. (3) The house of Austria was reigning over Spain, Italy, and Germany. Richelieu took Valtelina in 1624, and in 1629 secured the succession of the duchy of Mantua. He helped the Catholics diplomatically with money during the early periods of the Thirty Years War (1618–48), and in 1635 made France join openly in the 'French' or fourth period. He and Louis XIII. drove the Spanish from Picardy (1636) and took Arras, Artois, Alsace (minus Strassburg), the islands of St. Margaret and St. Honorat, St. Jean de Luz and Roussillon (1641–42). In 1643 Condé, Duke of Enghien (*le Grand Condé*), won the battle of *Rocroi* against the Spanish; he and Turenne were successful at *Freiburg* and *Nordlingen*, Condé again at *Lens*. Austria had to sign the Treaty of Westphalia (1648), which marked the first decline of the Span. empire. F. occupied Lorraine; her frontiers touched the Rhine. Richelieu, who, after Louis XI., contributed most to Fr. unity, did not enjoy the fruit of his work. He died in 1642, Louis XIII. next year. Louis had the great merit of bearing for eighteen years with a capable minister whom he disliked.

His s., LOUIS XIV. (1643–1715), succ. at the age of five. His mother, Anne of Austria, obtained the regency from the *Parlement* as Marie de' Medici had done. MAZARIN, who had succ. Richelieu, was unpopular as an Italian, and nobles and *Parlement* repressed by Richelieu, joined in the civil war of the *Fronde*. The queen had the leaders of the *Parlement* arrested, but the people rose and made barricades in Paris, and the queen was forced to fly to St. Germain with the young king (1649). Condé quelled Paris, but disagreed with Mazarin and joined the Spanish. Turenne besieged Paris in his turn, but 'The Great Mademoiselle,' dau. of Gaston d'Orléans, the king's uncle, compelled him to retire. However, the people of Paris begging for peace, the king proclaimed an amnesty (1653). The Frondeurs either flocked to the court and Mazarin or were exiled. During the Civil War Spain had again attacked the north and east of F. Turenne won the battle of the *Dunes*, and the Treaty of the Pyrenees was made (1659). Condé recovered his possessions and honours. Louis XIV. married the Infanta Maria Theresa, dau. of Philip IV. of Spain. After Mazarin's death (1661) he showed great activity, common sense, and dignity, and was fortunate in ministers and councillors. Colbert reorganised the finances and exposed the *sur-intendant* Fouquet. Louvois was minister of war. Condé, Turenne, Luxembourg, Catinat, Villars, etc., generals; D'Estrées, Duquesne, Tourville, Jean Bart, Duguay-Trouin, admirals, in Louis's four great wars. After the peace of the Pyrenees F. enjoyed six years' peace.

There followed (1) the War of DEVOLUTION (1667). At the death of Philip IV. of Spain, Louis XIV., according to the right of 'devolution,' claimed the Span. Netherlands for his wife, Maria Theresa. He was at first victorious, with the help of Condé, but the Dutch called England and Sweden into the Alliance of The Hague, and Louis XIV. was obliged to sign the Treaty of Aix-la-Chapelle (1668), which only left him Fr. Flanders. (2) War with Holland (1672–78). These constant wars by which F. became famous left her exhausted at the close of the 'grand monarque's' reign, and this exhaustion was one of the causes of the Fr. Revolution. The valiant resistance of William of Orange saved the Dutch Netherlands, and when the Peace of Nimeguen (1678) was signed, Spain paid for all. She conceded to F. towns in the east and north—Valenciennes, Cambrai, Maubeuge, etc., which Vauban fortified strongly as frontier fortresses. Ten years of peace followed for F.; arts and lit. flourished. Louis XIV. had reached the climax of his power and abused it. He assembled the *Chambres de Réunion*, tribunals which pronounced his all the towns and places attached to the territories he had gained by the last treaties. In 1685 he revoked the Edict of Nantes signed by his grandfather, Henry IV.; 100,000 Protestants went abroad with their money and industry. Others under Jean Cavalier (1701) went to the Cévennes and took arms. These *Camisards* were reduced by the *Dragonnades* and by Villars who was sent against them. This act strengthened Louis's enemies. William of Orange formed the League of Augsburg between Holland, Spain, the emperor, some Ger. princes, and, after the Revolution, England. (3) WAR OF THE LEAGUE OF AUGSBURG OR GRAND ALLIANCE (1688–97). James II. of England, whose cause Louis espoused, was beaten at *the Boyne*, and Tourville was defeated at *La Hogue*, but inland Luxembourg won the battles of *Fleurus* (1690), *Steinkerque* (1692), and *Neerwinden* (1693), taking so many flags from the enemy that he was surnamed 'the upholsterer of Notre-Dame.' The Palatinate was taken

by Louvois as belonging by right to the Princess Palatine, second wife of the Duke of Orléans, and burned and devastated. In Italy Catinat defeated Victor Amadeus of Savoy at *Staffarde* (1690) and *La Marsaille* (1693). When both sides were exhausted peace was signed at Ryswick (1697). Louis XIV. recognised William III. as king of England, allowed the Dutch to put garrisons in some towns of Flanders, and the Duke of Savoy received Fr. possessions beyond the Alps. (4) War of the SPANISH SUCCESSION (*q.v.*) (1700–13), in which Marlborough and Prince Eugene inflicted great defeats on the French. Nevertheless, by the Treaty of Utrecht (1713) the Bourbon candidate kept Spain on condition of renouncing the crown of F. F. kept her limits and colonies, except Nova Scotia, abandoned to Britain, who also received Gibraltar and Minorca. The country, however, was in a pitiful state. Louis XIV. died, preceded by the grand dauphin, the Dukes of Burgundy, Brittany, and Berry. His heir was his great-grandson, the Duke of Anjou, aged five. Louis had secretly married Madame de Maintenon (*q.v.*) in 1684. The 'Age of Louis XIV.' was a period rich in lit. and art.

During the minority of LOUIS XV. (1715–41) his uncle, Philip of Orléans, the notorious regent, governed and inaugurated a court reaction after Madame de Maintenon's severity. Licence and luxury prevailed. F. wanted money at all costs, and it was then that the Scot. banker, Law, proposed his system of paper money. The Royal Bank was established and its shares rose from 5000 to 25,000 francs. A new Indian Co., including that founded by Colbert, was created to capitalise the treasures of Louisiana and the Mississippi valley, and led to wild speculation. Bankruptcy followed, besides a war in which the regent, Britain, Holland, and Austria, now suddenly become allies, joined against Spain. The war was caused by Alberoni, Philip V.'s minister, who had utilised Span. discontent with the Treaty of Utrecht for his private purposes, and Spain was subdued. After the Regent's death, the Duke of Bourbon governed long enough to arrange the king's marriage with Maria, dau. of Stanislas Leczinski, king of Poland. In 1733 the aged Cardinal Fleury, the new minister, took the part of the king's father-in-law in the War of the Polish Succession, ended by the Treaty of Vienna (1738).

After a short peace, the War of the AUSTRIAN SUCCESSION (1741–48) broke out. F. took no active part until its later stages, but it cost her 1200 million francs. Louis XV. had quitted himself well on the battlefield, and become popular, but his education had been deplorable; he retired to Versailles and led an indolent life, ruled by Mme de Pompadour, Mme du Barry, and other mistresses whom he allowed to meddle in State affairs. His invaluable minister, Choiseul, tried to prevent the disasters of the SEVEN YEARS WAR (*q.v.*) (1756–63), but fell before a court intrigue. Choiseul worked the *pacte de famille* (1761) between the Bourbons of France, Spain, and the two Sicilies, but Louis XV. had to accept the disastrous Treaty of Paris (1763). F. recovered some of the West Indies and places in India, but gave up Louisiana to Spain (who ceded Florida to Britain), Canada (*q.v.*) to Britain, and promised to pull down the port of Dunkirk. Under the administration of Choiseul, Lorraine and Corsica were joined to F. (1768–69). His successors, engaged in struggles with the *Parlements*, did not interfere in the division of Poland between Austria, Prussia, and Russia. The *Jansenist* heresy was causing trouble also; the *Parlement* of Paris took part against the pope, who had issued the bull *Unigenitus*.

At his death Louis XV. left to his grandson, LOUIS XVI. (1774–92), a kingdom lowered in the eyes of Europe, with court intrigues, religious quarrels, increasing taxes, and parlements ready to oppose royalty. The philosophers were writing against institutions and abuses, and disturbing the people's minds. The new king was honest and patriotic, but had not strength for this crisis. There was no social equality in the division of land, taxes, trades, etc. The ministers, Turgot, Malesherbes, Necker, tried to improve matters, beginning with finances, but the nobles resented economic measures which touched themselves; the ministers were dismissed one after the other. In 1775 Louis XVI. very unwillingly was drawn into the Amer. War of Independence (1775–83) by the enthusiasm of his nobles. La Fayette and Rochambeau went to fight under Washington. The Fr. fleet won victories, and by Treaty of Versailles (1783) F. recovered her colonies of Senegal, West Indies, and India, and the freedom of others, and was allowed to rebuild Dunkirk's fortifications, while Britain lost Minorca; finances were in a worse state than before. Calonne, then Brienne, tried to raise new taxes, *Parlement* resisting. Queen MARIE-ANTOINETTE of Austria, dau. of Maria-Theresa, who was of Brienne's party, was publicly insulted. Louis XVI. recalled Necker, who assembled the States-General (1789), in which the people had double the number of representatives of the nobles or the clergy. In a preparatory meeting, the 'Principles of 1789' were drawn up, *i.e.* a new constitution for F.; the Fr. Revolution (*q.v.*) had come.

The **First Republic** (1792–1804) was proclaimed Sep. 22, 1792. Louis XVI. was guillotined in Jan. 1793, Marie Antoinette in Oct. The dauphin, LOUIS XVII., died June 8, 1795. At the news of Louis XVI.'s execution, nearly the whole of Europe had made the *First Coalition*, and marched to the Fr. frontiers. Carnot 'organised victory.' Hoche conquered on the Rhine (1793), Houchard was victorious against the British at *Hondschoote* and Dutch at *Menin*, Jourdan at *Wattignies* and *Fleurus* (1794), and Pichegru in Holland. On Jan. 20, 1795, the four N. armies entered Amsterdam, though in rags, without shoes, in the snow. In the south, Dumerbion, Masséna, and Bonaparte had taken the camp of Sorgio (1794); Dumouriez had entered Catalonia; Moncey and La Tour d'Auvergne occupied the Basque provinces. Spain, Prussia, and Holland drew out of the Coalition, and signed the Peace of Basel (1795), which gave F. the left bank of the Rhine. The Civil War of *Vendée* had been sustained after the king's death, but Hoche subdued the last signs of revolt at *Quiberon* (1795). The people of Paris rose for the last time against the Convention (Oct. 5, 1795), and were subdued by Barras and Bonaparte. The next government was the DIRECTORY (*Conseil des Anciens*, '*des Cinq-Cents*'), the five 'directors' being Barras, Rowbell, La Réveillière-Lépeaux, Le Tourneur, and Carnot (1795–99). It had to free F. from invasions. Bonaparte, with Masséna, Augereau, Sérurier, and Berthier, crossed the Alps, and won the victories of *Montenotte*, *Mondovi*, *Lodi*, *Castiglione*, *Arcole*, *Rivoli*, etc. Hoche, Moreau, and Desaix fought on the Danube. Bonaparte signed with Austria the Treaty of Campo-Formio (1797). Britain still remaining hostile, Bonaparte attacked her in Egypt. He went from Toulon (1798) to Alexandria, was victorious at the *Pyramids* and entered Cairo; but Nelson defeated Admiral Villeneuve. Bonaparte, inland, won at *Mont Thabor* and *Aboukir*. All the European Powers, except Spain, had now formed the *Second Coalition*. Bonaparte was recalled to Paris, and the *coup d'état* of '18 Brumaire' followed.

The Consulate (1799–1804) was formed, with Bonaparte as First Consul for ten years, and Cambacérès and Lebrun as colleagues. In less than two years Napoleon (*q.v.*) reformed the services, created the Bank of F., negotiated with Rome the *Concordat* (1801), which fixed the standing of the Church, began the *Code Napoléon*, and instituted the *Légion d'Honneur* (1802). To face the Second Coalition he crossed the Great St. Bernard and won the battle of *Marengo* (1800). An attempt in Paris to take his life, made by the Royalists through Georges Cadoudal, increased his popularity. Peace was signed with Austria at Luneville (1801), and with Britain (1802). **The First Empire.** After being elected consul for life (1802), and escaping a second attempt on his life by

the same conspirators, Bonaparte accepted the Senate and people's suffrage, and became Emperor. Pope Pius VII. came to Paris and crowned him and his wife, the Empress Josephine (May 18, 1804). Royalists came back in numbers and resumed their titles. The emperor adopted Josephine's children by a first marriage, Prince Eugène de Beauharnais and Hortense, who m. Louis Bonaparte, Napoleon I.'s bro., and was the mother of Napoleon III. Napoleon I. was deposed (April 1814), and Louis XVIII., Count of Provence, bro. of Louis XVI., was called to the throne. Napoleon abdicated in favour of his son (April 20). **The First Restoration** (1815) was maintained, the new king signing the 'Charter of 1814,' maintaining the institution of the Revolution. The Treaty of Paris, signed with the seven Powers who had been leagued against Napoleon, put back the limits of F. to what they were in 1790; foreign troops evacuated the country. The new king was not popular, and Napoleon, *au fait* with what was going on in F., escaped from Elba, and entered the Tuileries (March 20, 1815) as Louis XVIII. was leaving for Ghent. He reigned over F. for a Hundred Days (*Les Cent Jours*). The armies of the Allies returned; Napoleon faced them, but was defeated at *Waterloo* (June 18, 1815), and secluded at St. Helena, where he died, May 5, 1821. Louis XVIII. (1815–24) came back—**Second Restoration** (1815–30). By the Treaties of Vienna and Paris, F. lost some places in the north and east, and a new division of Europe was made. Louis XVIII. treated the Bonapartists with great severity, and the Royalists allowed massacres in F., called the *White Terror* (because of the Bourbons' white flag), in which Marshal Ney perished (Dec. 7, 1815). The king governed with ministers (Richelieu, Descazes, Villèle) and two Assemblies, the *Chambre des pairs* and the *Chambre des députés*; an electoral law and a conscription act were passed. An army was sent to Spain to put down a revolt and to restore Ferdinand VII. In 1820 Louvel, an enemy of the Bourbons, killed the Duke of Berry, second son of Louis XVIII.'s bro., the Count d'Artois (afterwards Charles X.); but the Duchess of Berry seven months after the assassination gave birth to a son, the Duke of Bordeaux (later Count of Chambord, d. 1883). Charles X. (1824–30) became very unpopular by granting an enormous indemnity to the *émigrés*. With his ministers, Martignac, Polignac, Bourdonnaie, and Bourmont, he made enactments doing away with the freedom of the press, and introducing a new mode of election. Paris revolted (July 27–29, 1830). The king abdicated in favour of his grandson, the Duke of Bordeaux, whom the people refused. Under Charles X., Britain, F., and Russia won the battle of *Navarino* (1827) over the Turks, and established the independence of Greece.

The Chamber of Deputies elected Louis-Philippe (1830–48), Duke of Orleans, who had fought for the Revolution at *Valmy* and *Jemmapes*. He took the name of 'King of the French,' accepted the Charter of 1814, and the three-coloured flag. The minister Casimir Périer kept the Austrians in check at *Ancona* and repressed the riots in Lyons, but unfortunately died of cholera (1832). Marshal Soult, Guizot, Thiers, and Broglie succeeded to power, and put down the *Vendée*, raised by the Duchess of Berry, who wanted to enthrone her s., the Duke of Bordeaux. Antwerp was taken by a Fr. army, establishing Belgian independence of Holland, Algeria was conquered (1834–47), Constantine was taken (1837), the battle of *Mazagran* won (1840); Marshal Bugeaud was victorious at *L'Isly* (1844); Abd-el-Kader surrendered to General Lamoricière (1847). Louis-Philippe escaped death several times, notably in 1835 in Fieschi's plot. In 1842 his eldest s., the Duke of Orleans, who was very popular, died. The king and Guizot having refused electoral reform, revolution broke out (Feb. 24). Louis-Philippe resigned in favour of his grandson, a child, the Count of Paris.

But the **Second Republic** (1848–52) was proclaimed. In 1833 primary schools had been organised. The Second Republic established universal male suffrage. Capital punishment for political offences was abolished. Louis Bonaparte, nephew of Napoleon I., was elected Pres. He sent an army to Rome to restore the Pope, and made the law of 1850 giving the direction of education to the clergy and congregations. On Dec. 2, 1851, he made a *coup d'état* and formed a new constitution which made him Pres. for ten years.

The Second Empire.—On Dec. 2, 1852, he was made Emperor as Napoleon III. (1852–70). He married (1855) Eugénie de Montijo, the Empress Eugénie, and had a s., the Prince Imperial, killed in Zululand (1879). Napoleon III. undertook several wars, beginning with the Crimean (*q.v.*) (1854–56), in alliance with Britain. Peace was signed at Paris, 1856. In 1859 Britain and F. made a campaign in China; Generals Grant and Cousin-Montauban took the forts of Pei-ho (Aug. 1860), and won the battles of *Tehang-Kia* and *Palikao*. In Italy (1859–60) the Count of Cavour, Victor Emmanuel's minister, induced Napoleon III., after the conspiracy of Orsini and Pietri, to help Italy against Austria. After the victories of *Montebello*, *Palestro*, *Magenta*, *Solferino*, the Treaty of Zürich was signed. Austria gave Lombardy to the emperor, who renounced Piedmont in exchange for Savoy and the county of Nice (1860). Later Napoleon III. helped Italy to get Venetia.

An Austrian prince was, with Napoleon's approval, made emperor of Mexico; the Mexicans revolted; F. had to call back her troops and Maximilian was killed at *Queretaro* (1867). Faidherbe also extended Fr. dominion in Senegal over Cayor, Bondo, and Bambouk. In 1853–57 Randon subdued Kabylie (Algeria). In Annam (Indo-China), after the war (1861–62), the Emperor Tu-Duc had to allow religious freedom and give up to France the provinces of Saigon, Bien-Hoa, and Mytho. Three more provinces were added in 1867.

The Franco-German War (see separate article under that heading) took place 1870–71. After the disaster of Sedan, the ministers, Jules Favre, Gambetta, and Trochu, proclaimed the **Third Republic** (Sep. 4, 1870). The Prussians besieged Paris (Sep. 19), which surrendered through famine (Jan. 28, 1871). By the Treaty of Frankfort (May 10, 1871) F. lost Alsace and half Lorraine, but kept Belfort. She had, besides, to pay 5 billion francs (£200,000,000) to Germany. In Paris the Royalist party under Thiers did not welcome the Republic; this incensed the people, who rose (March 18, 1871) and instituted the Commune, by which each local unit was to govern itself freely. The Assembly retired to Versailles, besieged and took Paris (May 28), and deported or killed the revolutionaries. But the factions were not satisfied. Thiers had to resign (May 24, 1873), after having, in two years, paid the heavy war indemnity, and sent the Germans out of the country. Marshal MacMahon was elected for seven years (1873–79). The Royalists would have triumphed had the Count of Chambord not insisted on bringing back the white flag of royalty (Aug. 27, 1873). The National Assembly retired (1875). The Senate and Chamber of Deputies governed under a Pres., elected for seven years at a congress of the two Chambers. MacMahon, too much inclined to the Royalists, resigned; Jules Grévy was elected Pres. (Jan. 30, 1879). After him came Sadi Carnot (Dec. 1887), murdered at Lyons by an Ital. anarchist (June 1894), Casimir-Périer (1894), Félix Faure (1895), Émile Loubet (1899), Armand Fallières (1906), Raymond Poincaré (Jan. 1913).

Carnot's presidency saw the Boulanger (*q.v.*) incident, Panama Canal (*q.v.*) scandals (see also Lesseps). Dreyfus case (see Anti-Semitism) occurred, 1898–99, and Fashoda incident, 1898. In 1904 F. recognised Britain's influence in Egypt, and Britain agreed to F.'s predominance in Morocco (*q.v.*). By Separation Law, 1905, official religion was abolished, and no

State salaries are paid to clerics, while religious instruction was to be gradually superseded. Socialism flourishes in F., strikes are common, and Syndicalism (*q.v.*) grows.

Under the Third Republic many railways, canals, and ports have been constructed. The Fr. colonies have been extended. In 1879 Savorgnan de Brazza established the Fr. Congo; a Fr. Protectorate was declared over Tunis (1881); a new expedition went to Tonkin and succeeded in taking of Son-Tay (Dec. 17, 1883), Bac-Ninh (March 12, 1884); Fr. Protectorate proclaimed over Annam; Treaty of Tien-Tsin (May 12, 1884) recognised Fr. establishment in Tonkin. In Sudan victories were won over Ahmadon (1890) and Samory, prisoner of F. (1899). In 1893 Bonnier took Timbuktu. In Dahomey General Dodds captured King Behanzin (1894) and established a Fr. Protectorate. Conquest of Madagascar: General Duchesne took Tananarivo (1895). On the Red Sea, establishment in Djibouti (1900). In 1900 F. took possession of In-Salah and In Bahr in the oases of Touat in S. Algeria. An alliance was made between F. and Russia (1897) to balance the Triple Alliance (Germany, Austria, and Italy) and maintain peace in Europe. An Anglo-Fr. *Entente* (1904) facilitated consolidation of Fr. power in Morocco. Fr. ministries follow each other in quick succession, but the Third Republic remains firmly established.

FRENCH LANGUAGE.

At the time of the Roman Conquest (58–50 B.C.) Gaul was inhabited by Iberian and Celtic peoples. They spoke Gallic, a language which was not written; the Druids maintained oral scholarship, and the language disappeared with them about three cent's after the Conquest (except in Brittany, which stood apart). The Gauls, less civilised than the Romans, adopted their language, the popular Latin, which became the Romance language (Autun, Bordeaux, and Lyons possessed celebrated schools where learned Latin was professed). The Franks conquered Gaul, IV.–V. cent.; they adopted the Romance language, but about 900 Germanic words, mostly of war, law, and titles, were introduced.

The oldest written documents in Romance language are the *Gloses de Reichenau* (748), a sort of glossary of the Bible; the *Serment de Strasbourg* (842), an agreement between the two grandsons of Charlemagne, which shows that the Romance tongue was sufficiently established to necessitate a copy in both Romance and German. The *Cantilene of St. Eulalia* (IX.–X. cent.) and a poem on *The Life of St. Léger of Autun* (X. cent.) are the oldest pieces of Fr. poetry known. By the XI. cent. the Fr. language was formed, Fr. lit. flourished and its influence was felt all over Europe, but there was no unity as yet in the tongue. Different dialects existed, due to differences of race—*Langue d'Oil* in the north and *Langue d'Oc* in the south, from *oil* (Lat. *hoc illud*) and *oc* (Lat. *hoc*) meaning 'yes' in the respective dialects. A line drawn from La Rochelle to Grenoble would make a fair division of the country as regards languages. For the Langue d'Oc, see PROVENCE.

The *Langue d'Oil* was subdivided into *Normand, Picard, Bourguignon, Lorrain*, and the dialect of Ile-de-France called *Français*. The official acts and literary works of each province were at first written in its own dialect. Roger Bacon, in his *Opus Majus* (*c.* 1286), mentions those dialects. The dialect of Ile-de-France prevailed for political reasons; in 987 Hugh Capet, Duke of France, usurped the throne and made Paris his capital; until the middle of the XIII. cent. the Capetians had little influence in the country, but thereafter the Fr. dialect extended with their rule, and in less than three cent's the other three dialects became *patois* which can still be found in provincial literary works of the Middle Ages. French was first used in the provinces for official acts, then in literary works; finally it was adopted by all educated people. The process was accomplished in XIV. and XV. cent's. The strong influence exercised by Ital. Renaissance led to ingress of Ital. words. Joachim du Bellay, in his *Défense et Illustration de la Langue française* (1548), and Ronsard (1524–85) and the other members of the *Pléiade* introduced Latin words. Malherbe (1555–1628), the *Hotel de Rambouillet*, and the *Dictionnaire de l'Académie* (1694) worked a purist reform which left the language poorer, but it developed again under the great writers of XVII., XVIII., and XIX. cent's; late additions (20,000 words and more) are due to struggle of the *Classiques* and *Romantiques*, progress of journalism, science, industry, and better knowledge of foreign lit.

As to construction, the *Langue d'Oil* had two cases (instead of six as in Latin); later French drops them all, but becomes analytic, *i.e.* employs different forms and prepositions to mark cases, and takes the article. Agreement of adjectives was retained but not always observed in old French. A new form of conjugation (the infinitive with an auxiliary) was used. About 800 doublets are to be found in French; they are words of learned Latin in which tonic accent has been misplaced, introduced again into the language, cf. *porte, portique*; *fraile, fragile*.

FRENCH LITERATURE.

French literature begins when the *Langue d'Oil* and the *Langue d'Oc* (see FR. LANGUAGE) are definitely shaped; latter was employed by *troubadours* in Provence (*q.v.*), former by northern *trouvères* in Fr. lit. proper. Political, legal, and religious documents are found in early times in prose in vernacular, but pure lit. commences and for long time continues in verse only.

Poetry in Middle Ages.—The earliest form, *cantilena* (*chant*), parent of the later *chanson*, is supposed to have existed in VII. cent., but first that remains is song of *Ste. Eulalie* (IX.–X. cent.); metrical lives of the saints followed, and led way to XI.-cent. lives of the heroes, or CHANSONS DE GESTE (*i.e.* of deed), which form a cycle of stories about Fr. heroes, chief of whom was Charlemagne; the glory of early Fr. lit., the *Chanson de Roland*, was first discovered at Oxford, 1837. ROMANCES followed as epic poems; romances of Arthurian cycle, which came into being in Brittany in XII. cent., were turned into prose at close of cent. by Chrestien de Troyes. The Cycle of Antiquity is name given to those of the *genre* of same period which took classic themes; Benoît de Ste.-More, who wrote the *Roman de Troie*, is supposed to have been also author of *romans* of Æneas and Thebes; *Alexandre*, by Lambert le Tors and Alexandre de Bernay, and *Julius Cæsar* are famous examples. Early chronicles also took form of poems; Wace wrote *Brut* (*Estoire des Bretons*) before 1155, and *Rou* (*Geste des Normans*), 1164–70; Jordan Fantosme's chronicle of war between Henry II. and his son was written 1173–74, the valuable *Thomas à Beckett* of Garnier de Pont Sainte-Maxence, 1177.

The FABLIAUX were a characteristic form of XII. and XIII. cent's; translations or imitations of Æsop's fables, they were the vehicle of worldly wisdom and humour of the time, and so parent of important forms of later literature; example, *Le Vair Palfroi*. Eastern stories were versified as in *Sept Sages*. The FOX CYCLE (*Roman de renart*) of XIII. cent. is an important body of poems of amusing and didactic nature; love of allegory, satire, and a frank naturalness are shown in great poem of early XIII. cent., the *Roman de la rose*, by Guillaume de Lorris, completed by Jean de Meung (1250–*c.* 1305); pre-Renaissance pagan spirit in *Aucassin et Nicolette* (XIII. cent., author unknown). Verse was to the Middle Ages the most obvious way of conveying instruction; *castoiements* (chastisements, principles) were drawn up for guidance of youth, while Robert de Blois penned *Le Chastiement des dames*. *Bestiaires, lapidaires*, and *volucraires* gave technical matters in form easy to

remember, and correspond to the weather folk-lore and other rhymes still handed down in England. Most important class of all is LYRIC POETRY, in its varieties of *sirventes, jeux-partis, motets, lais, virelais,* and *pastourelles*; Audefroi le Bastard and Marie de France (XII. cent.), Thibaut de Champagne, Rutebœuf, and Adam de la Halle (XIII. cent.) are chief early lyric poets. Guillaume de Machault (*c.* 1300–80) is one of earliest experimenters in metre; his pupil, Eustache Deschamps (*c.* 1340–*c.* 1410), evolved entire *art poëtique*; XIV. and XV. cent's saw rise of *rondeau, rondolet, ballade,* etc. Alain Chartier (1392–*c.* 1440) and Christine de Pisan (1363–1430) enjoyed great reputation at time, but names which have remained are those of Charles d'Orléans (1391–1465), and, supreme in Fr. mediæval lit., Villon (*q.v.*).

DRAMA.—*Miracle* plays commenced XII. cent.; poem of Adam de la Halle, *Robin et Marion,* pastourelle in dialogue, led later to genuine secular drama. The Miracles of Notre Dame (XIV. cent.) form forty-three plays; from 1450 the Miracles were called *Mystères,* and may be divided into three cycles: *Old Testament, New Testament* (arranged in three parts by Arnoul and Simon Greban about 1450), and *Saints.* In XV. cent. appeared the *Moralités, farces,* and *soties*; a masterpiece is farce of the *Avocat Patelin* (author unknown). The Miracles were acted in XV. cent. by the *Confrérie de la Passion,* and the secular plays by the *Clercs de la Basoche.* From 1548 the two societies joined.

Prose in Middle Ages.—Prose, used in earliest times for legal purposes, first commenced to be employed for *belles-lettres* in chronicles, usually written in verse or Lat. prose; Geoffrey de Villehardouin (1160–1213) wrote first Fr. history in vernacular in description of Fourth Crusade. Joinville (1224–1317) left a *History of St. Louis*; first manuscript was lost, but a learned editor, Natalis de Wailly, reconstituted it from his notes. *Les Grandes Chroniques de St. Denis,* begun in XIII. cent., under Mathieu de Vendôme, abbot of St. Denis, and continued by laymen, are annals of kings of France to crowning of Louis XI.—called later *Grandes Chroniques de France.* Froissart (1337–1410), the greatest historian of Middle Ages, dealt with period 1352–1410; Philippe de Comines (1445–1511) left admirable *Mémoires* of Louis XI.'s reign and Charles VIII.'s expeditions beyond the Alps. *Aucassin et Nicolette* is partly in verse, partly in prose; *Le Petit Jehan de Saintré,* by Antoine de la Salle (1398–1461), is an early prose novel. La Salle is the accredited compiler of the famous *Cent Nouvelles Nouvelles* and *Les Quinze Joies de Mariage,* first masterpieces of Fr. prose; sermons and translations of Bible and Latin authors loom large.

Renaissance.—One of greatest periods of Fr. lit. is that of the Renaissance (*q.v.*), which affected France long before England; Fr. period, indeed, came to an end soon after Eng. period, the age of Shakespeare, began; France at this time was literary leader of Europe.

POETRY.—The poetical movement was carried out by the *Pléiade,* seven literary stars—Ronsard (1524–85), Joachim du Bellay (1525–60), Jean Daurat (1508–88), tutor of Ronsard, Étienne Jodelle (1532–73), Rémy Belleau (1528–77), Jean Antoine de Baïf (1532–89), and Pontus de Tyard (d. 1605), who formulated a new poetical creed, and, while adopting much from the classics, tried every poetical experiment and obtained wonderful grace and ease of form. One of last of mediæval school was Pierre Gringoire (1475-1544), who continued to produce moralities and allegorical poems in the old forms; Clément Marot (1497–1544), who preceded the Ronsardists, introduced the sonnet and founded a school which prepared the humanistic outbreak, although at once pushed into the background when the classical movement began. The *Pléiade's* aims are set forth in Du Bellay's *Défense et illustration de la langue française* (1549); a vast classical importation of words and fancies constituted a permanent contribution to Fr. culture, although much of their coining was subsequently repudiated.

DRAMA.—Jodelle had the task of renovating drama; *Cléopâtre* (1552) and *Didon,* though of little value, had great influence on future tragedy through choice of subject, fewness of characters, and observation of three classical Unities. Jacques Grévin (*c.* 1540–70), Robert Garnier (1545–1601), Antoine de Montchrestien, and Pierre Larivey developed tragedy and comedy on classical lines.

PROSE.—The aims of the *Pléiade* were not accepted by the first great prose-writer of France (excepting La Salle), Rabelais (end of XV. cent.–1533), whose *Gargantua* (1535) and *Pantagruel* (1535–52) rank among the great comic masterpieces of lit., and burlesqued human society in general and that of XVI. cent. in particular. His mockery of the *latinisants* Ronsard never forgave, and retaliated by a farcical epitaph on Rabelais, which fixed his reputation for generations and was only corrected quite recently. Marguerite de Navarre (1492–1549) used her ascendancy over her bro., Francis I., to encourage the classical school; her *Heptaméron* imitated Boccaccio's *Decameron*; written with much freedom of language, it is one of chief productions of Fr. Renaissance. Memoirs and biographies figure prominently in XVI. cent. Marguerite de Valois, '*la Reine Margot*,' dau. of Henri II., wrote *Mémoires*; Brantôme (1527–1614) recounted the scandals of the most licentious court in history, and, with equal skill, lives of illustrious soldiers of his age; an unknown writer, signing himself '*Le Loyal Serviteur*,' wrote *Histoire du gentil seigneur de Bayart.* Blaise de Montluc (1501–77) dictated his *Commentaires* from memory, without notes, in conversational style, not always grammatical, but vigorous and graphic. John Calvin (1509–64) has often been called the father of Fr. prose; he set example of clearness, lightness, great result obtained with least means, and absolute absence of the forced note—qualities which have remained distinctions of his tongue; his *Institution of Christian Religion* (1536), then unparalleled in style, was less representative of the cent. than works of that great Fr. writer of its close, Montaigne (1533–92), the parent of much in Shakespeare, and still a mine for literary men and philosophers; his *Essais,* begun in 1572, treat of everything—God, religion, politics, poetry, manners, virtues, vices, dress, trade, his own life and travels, and especially his friendship with La Boëtie, with little arrangement or order. Saint François de Sales (1567–1622), bp. of Geneva, founded in Annecy, Savoy, the *Académie florimontane,* whose emblem, an orange tree in bloom, is applicable to his style, exquisitely flowery and graceful. Never since the *Imitation* had a devotional book become so popular as his *Introduction à la Vie dévote* (1608) and *Traité de l'Amour de Dieu* (1614). Translations of Amyot (1513–93), bp. of Auxerre (among them Plutarch's *Lives*), were and are considered models of style. Of great political importance in its time was the *Satire Ménippée* (1594), which ridiculed the Ligue and did much to secure the throne for Henry of Navarre. It is a pamphlet composed by six very grave and learned *bourgeois* of Paris: Jacques Gillot, Nicolas Rapin, Jean Passerat, Florent Chrestien, Pierre Pithou, and Gilles Durant; conceived and drafted by Pierre le Roy, canon of Rouen. Jean Bodin (1530–96) was a noted political theorist.

First half of the XVII. century.—The happy classical and romantic blend of XVI. cent. gave place to severer classicism under what is now felt to have been the evil influence of Malherbe (1555–1628), a reformer, who thought to reform Fr. language and versification vitiated by Ronsard. As a matter of fact, he merely made a choice amongst the forms left by Ronsard, omitting some excellent ones which have been taken up with success by modern poets, but he arrested poetical movement. Products of the early XVII. cent. are the drama, which commences its great

age, miscellaneous prose, beginnings of academy and *salon* movement.

The *Hôtel de Rambouillet*, the first Fr. salon, was for forty years the place where the art of conversation, language, wit, and manners were brought to perfection. The Marquise de Rambouillet (1588–1665) and her dau., Julie d'Angennes (afterwards Duchess of Montausier), welcomed all literary and high-born men. Voiture (1598–1648), for instance, the son of a wine merchant, and author of witty letters, epigrams, and quatrains, was there on equal footing with aristocrats. Other salons were opened in imitation; affectations which resulted from the institution deserved the severe censure of Molière in his *Précieuses ridicules*. The Académie française (1635), under the patronage of Richelieu, had for its object to fix the language; Conrart (1603–75) was its originator; the first edition of the *Dictionnaire de l'Académie* came out, 1694, the seventh, 1878; a grammar was written by Régnier Desmarais (1705). Vaugelas (1585–1650), the chief grammarian of the classical period, with Malherbe, the *Hôtel de Rambouillet*, the *Académie française*, and J. G. Balzac (1597–1654) did most towards forming the Fr. language of XVII. cent.; J. G. Balzac created *prose oratoire*, endowing the Academy with a prize for the subject.

Drama.—Pierre Corneille (1606–84) is father of Fr. tragedy; chief works, *Le Cid* (1636), *Horace* (1640), *Cinna* (1640), *Polyeucte* (1643), which met with great success, thanks to the good taste of the public; he and Rotrou (1609–50), his friend, inspired Racine, Molière, Quinault, Regnard, and others.

Prose.—Prose like the drama flourished as poetry decayed. Descartes (1596–1650) and Pascal (1623–62) were both masters of style and of metaphysics; Descartes' *Discourse on the method of using the Reason* (1637) introduced philosophy in the vernacular; it met with instant recognition; chief thinkers of time were the Cartesians; the *Académie des Sciences* (1666), Cartesian at its foundation, later became Newtonian. Pascal is intimately connected with *Port-Royal*, an abbey of Bernardines, near Paris, founded 1204 and reformed 1602 by the Abbess Angélique Arnauld, sister of Antoine Arnauld (1507–1619), *le grand Arnauld*. The religious house was removed to Paris (1626), and the original abbey, *Port-Royal-des-Champs*, became residence of learned men, mostly friends and relatives of Arnauld, all Jansenists; they formed a remarkable school. Pascal published his *Lettres provinciales* to defend the Port-Royal Jansenists against the Jesuits in French so that everybody might follow the debate; his *Pensées* is also a masterpiece of Fr. prose. Mézeray (1610–83), Mme de Soudéry (1607–1701), Cyrano de Bergerac (1620–55), and Sully (1560–1641) left much of interest in history, novels, and memoirs.

The Age of Louis XIV.—The period 1660–1715 is called *Le Siècle de Louis* XIV., because that king exercised an influence marked, though indirect, on contemporary writers; masterpieces crowded in during his reign.

Poetry and Drama.—Boileau (1636–1711), in his *Art Poétique* (1669–74), Satires, etc., laid down, in admirable style, laws of verse. Very different from his expressive classicism was the work of La Fontaine (1621–95), whose *Fables*, an 'ample comedy with a hundred different acts,' develop one of the best mediæval kinds of verse. Another comic spirit, of wider range, but tied in classical bonds, is Molière (1622–73), one of France's greatest names. His excellence is in width of view, tolerance of judgment, a great comic spirit, and pure sense of fun. It has been objected that *Les Précieuses ridicules* (1659), *Les Femmes savantes* (1672), *Le Bourgeois Gentilhomme* (1670), *Le Malade imaginaire* (1673), amusing as they are, are types, not people; but *Le Misanthrope* (1666), *Tartufe* (1667), and *L'Avare* (1668) are immortal portraits with no undue exaggeration. Racine (1639–99), the great tragic poet, introduced innovation of simple plot, in which the hearer's attention is kept only by interest of characters and beauty of verse, and enriched literary language by using common words. Among lesser dramatists is Thomas Corneille (1625–1709).

Prose.—Theologians and preachers held a prominent place in Louis XIV.'s time; of them Bossuet (1627–1704) was the greatest orator and most productive genius. His *Sermons* are monuments of eloquence, but he made a special art of the *Oraison funèbre*; his *Discours sur l'Histoire Universelle* (1681) and *Grandeur et Décadence des Romains* are in the grand style. Bourdaloue (1632–1704) made great use of images and symbols in his *Sermons*, an innovation followed by Massillon (1663–1742), and the XVIII. cent. Fénelon (1651–1715) is another great name in this kind, and made important contributions to criticism in *Lettre à M. Dacier sur les Occupations de l'Académie française*; his *Télémaque* is still used as a model of style. Among the many aphorists of the salons who aimed at brilliance, La Rochefoucauld (1613–80), with his *Maximes* (from 1665), was strikingly successful; La Bruyère (1645–96) left his *Caractères* (1688), miniatures which are, with the *Lettres* of Madame de Sévigné (1626–96), faithful pictures of the late XVII. cent. Two other women here deserve mention—Mme de la Fayette (1633–96) for her novel, *La Princesse de Clèves*, important as the beginning of modern writing, and Mme de Maintenon (1635–1719) whose *Correspondance* Napoleon I. preferred to that of Mme de Sévigné. *Mémoires* are represented by Cardinal de Retz (1614–89), and by Saint-Simon (1687–1755) whose *Mémoires*, only revealed at the time of the Revolution, are a vivid account of the court of Louis XIV., and provide the moralist with excellently expressed reflections. Charles Perrault (1628–1703) started the *Querelle des Anciens et des Modernes* (1670–1720) in a poem, *Le Siècle de Louis le Grand*, read before the Academy. He wrote exquisite *Contes* (1697), which include old fairy stories—Puss in Boots, Cinderella, etc.

XVIII. century.—The XVIII. cent. may be divided into four periods: (1) till the end of Louis XIV.'s reign; (2) 1715 to 1750; (3) 1750 to the Revolution; (4) the Revolution.

(1) The poetic output of XVIII. cent. is negligible, but the first years are a time of transition. Regnard (1655–1709), Fontenelle (1657–1757), Jean-Baptiste Rousseau (1670–1741), and others still write good poetry compared with that of their followers; Regnard's style may claim some of Molière's qualities; Fontenelle, a *moderne*, had the merit of making the Academy and its works known to the public in *Histoire de l'Académie des Sciences* (from 1697) and *Éloges des Académiciens* (1708), and inculcating necessity of good style in works of science. Le Sage (1668–1747) by *Gil Blas* (1715–35) attained very high rank amongst painters of character, observers, and analysts of manners and passions. Memoirs continued to be excellent throughout the cent.; among early ones are Souvenirs of Mme de Caylus (1673–1720), niece of Mme de Maintenon, and *Mémoires* of Mme de Staël-Delaunay.

(2) Time of strong reaction against the XVII. cent., though it respects its masterpieces. Voltaire (1694–1778) fills the whole of century, and was chief of the *Philosophes*. He attempted with success all kinds of prose and poetry; Diderot said that he only came second in each; his philosophy is out of date and he was a one-sided historian, but his qualities of elegance and wit retain their value; later generations have been more appreciative. He contributed several articles to the great *Encyclopédie* edited by Jean d'Alembert and Diderot; in this book the faith and style of the cent. may be best studied. Montesquieu (1689–1755) and Jean-Jacques Rousseau (1712–78) are the only two writers not put in the shade by Voltaire; Montesquieu after *Lettres Persanes* (1721), a satire on Fr. society during the regency, turned his mind towards history, and published (1734) eloquent and pithy *Considérations sur les Causes de la grandeur et de la décadence des Romains*, and in 1748 the more

famous *Esprit des Lois*, the work of twenty years; its epigrams and generalisations are among best literary contributions of the century; in eighteen months the *Esprit des Lois* went through twenty-two editions. Vauvenargues (1715–47) wrote *Réflexions et Maximes* (1746) as a counter-blast to La Rochefoucauld; his *Caractères* and *Dialogues* had merit and some vogue. Louis Racine (1693–1763) wrote poems which belong in kind to earlier period, and more valuable Memoirs of his famous father, Jean Racine. Some writers of comedies kept the XVII.-cent. manner; Marivaux (1688–1763) in amusing style called *Marivaudage*, produced original plays, e.g. *Feu de l'Amour et du Hasard* (1730), besides his delightful novels; Grosset (1709–77) wrote *Le Méchant* (1749) and *Ver-Vert* (1734), with some observation of character, but weak plots.

(3) The flourishing time of the *Philosophes* and *Encyclopédistes*, who attacked all preconceived notions of physics, metaphysics, politics, and religion, in spirit of what we should now call Nihilism, but they usually clung to creed they called Deism (*q.v.*). Jean-Jacques Rousseau (1712–78) contributed perhaps as much as Voltaire to overthrowing the old monarchy and bringing about the Revolution, and his doctrine of 'return to Nature,' one of main themes of Romantic movement, had great influence on subsequent lit.; his theories on education are expressed in *Émile* (1762), on politics in the *Contrat Social*. Diderot (1713–84), who founded the *Encyclopédie* (1751–80), and D'Alembert (1717–83), who aided in the production, exercised great influence on science, but the latter soon retired in fear of the authorities. Diderot's idea was to include all knowledge in his *Encyclopédie*, which pronounced authoritative modern free-thinking view on all subjects; most of the great Fr. contemporary writers collaborated, but there were gaps in the syllabus, unevenness in the articles, contradictions in the doctrines. Diderot was far from a mere *doctrinaire*, as later ages have opprobriously dubbed the *philosophes* who sought to remodel society on abstract plan; he tried to make the drama more natural in a way that was followed in the XIX. cent., and is the parent of art criticism. D'Alembert was above all a mathematician, inspired by Bacon. An example of the combined scientist and stylist is Buffon (1707–88), author of the saying, 'Style is the man'; he composed an encyclopædic *Natural History* (1749–1804); his *Discours sur le Style*, on being admitted to the Academy (1753), is both precept and example. Gilbert (1751–80), one of the few poets, wrote *Le Dix-huitième Siècle* (1775) and *Adieux à la Vie*, more poetical than anything his age had yet produced. Marmontel (1723–99) and La Harpe (1739–1803), inspired by Molière, show the faults of nearly all his followers. The *Salons* flourished under Mme de Lambert (1647–1733), Mme de Tencin (1681–1749), Mme du Deffand (1697–1780), Mme de Lespinasse (1731–76), Mme Geoffrin (1699–1777), and Mme Necker (1739–94).

(4) A great change came with the Revolution; poor in poetry, the XVIII. cent. had been a great period for prose, but now came time of silence, scarcely broken even by munificent State encouragement under the First Empire. There has always been a curious reflex action of Fr. and Eng. lit. The Eng. Renaissance owed an immense debt to Fr. Renaissance of XVI. cent.; Eng. philosophers of XVII. and XVIII. cent's were the parents of Fr. *philosophes* who did much to bring about Fr. Revolution; then France produced Rousseau, who was chief cause of Romantic movement, which gave to Germany and England some of their greatest literary masterpieces, but France herself gained nothing from the Romantic movement for generations; a Gothic and mediæval revival began in England, but Fr. Empire styles refined more and more on the classical forms; the Republic and Empire sought precedents not from Middle Ages but Imperial Rome; when the Fr. Romantic movement finally commenced it was under influence of England; there was, however, a feeble attempt at emancipation from the classics in the earlier period. Beaumarchais (1732–99) wrote *Mariage de Figaro* (1784), acted in spite of Louis XVI., and *Le Barbier de Seville* (acted 1775), which met with little success at the time.

Bernardin de St. Pierre (1737–1814), friend and follower of Rousseau, published the idyllic if now somewhat dull *Paul et Virginie* (1787). André Chénier (1762–94) wrote lyrics: *L'Aveugle*, *Le Mendicant*, *La Jeune*, *Tarentine*, *Élégies*, *Odes*, and *Iambes*, quite different from productions of Voltaire's school. Marie-Joseph Chénier (1764–1811), his less-talented brother, wrote *Epistles*, but the Revolution for a time killed poetry. The Empire, with its classical ideals, proved nearly as fatal, although Napoleon's restoration of religion acted to some extent as a classical antidote; first signs of coming Romantic movement are to be found in religious revival.

XIX. century. — Mme de Staël (1766–1817) applied the term ROMANTIC MOVEMENT to the anti-classical revolt which now ensued. Chateaubriand (1768–1848), pupil of Rousseau, in *Le Génie du Christianisme* (1802) attacked doctrines of the last hundred years, upheld Christianity as source of art and poetry, and did justice to the Middle Ages for first time since the Renaissance. *Atala* and *René* episodes in the book contain fine descriptions of the New World. *L'Itinéraire de Paris à Jérusalem* (1811) is first thing of its kind; *Les Martyrs* (1809) continued the *Génie du Christianisme*. Mme de Staël, author of the once famous *Corinne* (1807), clung to the old school but coquetted with the new; her *De l'Allemagne* (1810) helped the movement by describing Germany, and started modern hist. and literary criticism. Joseph de Maistre (1754–1821) was a mediævalist even more ardent than Chateaubriand, as he showed in *Considérations sur la France* (1796) and *Essai sur le Principe Générateur des Constitutions politiques* (1810). Joubert (1754–1824), Chateaubriand's friend and literary adviser, wrote polished *Maximes*, *Essais*, *Lettres*. The Abbé de Lamennais (1783–54), a leader in this religious revival, wrote fiery, eloquent *Essai sur l'indifférence en matière de religion* (1817); his opinions were censured by Rome (1832), and after leaving the Church he penned *Paroles d'un croyant* (1834). The Dominican, Lacordaire (1802–61), one of the greatest orators of the cent., left admirable *Conférences* (1835–50).

Poetry.—Lamartine (1790–1869), also deeply pious, was one of the first poets of Romanticism; in pure lyric gift he was far surpassed by Béranger (1780–1857) but neither of them really represent the new movement, of which Victor Hugo (1802–85) is the first great exponent; production of his play *Hernani* (1830) marked crisis of movement. Hugo (*q.v.*) is first of series of poets who restored Fr. poetic repute; since days of mediæval *Chansonnier* France had produced little pure poetry, though she had led the world in prose; now comes another great poetic epoch. The motto of the *Cénacle*, presided over by Hugo, was freedom of form for lit. Casimir Delavigne (1793–1843), a noteworthy poet and dramatist, inclines towards the old school. Alfred de Vigny (1797–1863), one of the leaders of the new school, has only recently received justice. Alfred de Musset (1810–57), the most classical poet in the early movement, was the poetical personality of his age. Auguste Barbier (1805–82) wrote *Iambes* which recall those of André Chénier. Brizeux (1806–58) and Victor de Laprade (1812–84) were minor members of the school. A younger school of romanticists, now growing up, was colder and subtler. Théophile Gautier (1811–72), the poet of the perfect ear, was a romantic and classicist blended, and his *L'Art* is a model of writing as well as much-quoted expression of poetic creed; same masterly style in stories, *Italie* (1852), *Voyage en Russie* (1866). Gautier, Banville, Leconte de Lisle, and Baudelaire (1821–67) (the moon

of the movement) were the elder members of the *Parnassiens*, one of first societies to branch off, under auspices of Ricard and Catulle Mendès (1841–1909), from the Romanticists; chief among the *Parnassiens* are Sully Prudhomme (1839–1907), Villiers de l'Isle-Adam (1840–89), François Coppée (1842–1908), Mallarmé (1842–98), Paul Verlaine (1844–96); later *Symbolists* include several of above names, that of the boy Rimbaud (1854–91), who started movement with *Le Bateau ivre* (1871), Hérédia (1842–1905), graceful poet, Léon Dierx (b. 1838), Paul Fort (b. 1872), etc.; although Jean Richepin (b. 1849) and others still keep poetry alive, signs now appear that the poetic outburst is over, and that France has once more entered on a great prose period.

Drama.—Victor Hugo laid down rules for Romantic drama in preface to *Cromwell* (1827), but did not observe them; his plays were not so well received as the *Othello* (1829) and *Chatterton* (1835) of Alfred de Vigny, or as hist. plays of Dumas *père* (1803–70), whose *Tour de Nesle* is a little masterpiece of horror of the kind dear to the school. On the whole, the Romantic hist. drama was a failure. Eugène Scribe (1791–1861) obtained success with light, amusing comedies cleverly staged. Among many dramatists may be mentioned Augier (1820–89), author of amusing comedies, Dumas *fils* (1824–95), writer of popular moralising dramas, Sardou (1831–1909), whose problem plays tend to sink by their own weight, Pailleron (1834–99), author of *Le Monde où l'on s'ennuie*, and Rostand (b. 1868), whose poetical dramas owe so much to the Coquelins; the hypercritical find Rostand rhetorical, and Paris was both bewildered and angered by *Chantecler*. See also DRAMA.

FICTION steadily developed throughout the cent. and has now become principal Fr. arm. Hugo, who led the way, Dumas, who has interest rather of plot than style, and George Sand, also a distinguished pioneer, have not the characteristics which are the chief ornaments of Fr. prose style; the best of them are poets writing in prose; nor has Balzac (1799–1850), though in some ways the greatest literary figure of the cent., those qualities, which appear, however, at that early date in Gautier and Prosper Mérimée (1803–70), who chained their imaginations to the rule of *chercher le mot*, as Maupassant and Anatole France have done later; authors of the next generation are Octave Feuillet (1827–90), who followed George Sand, Gustave Flaubert (1821–80), Edmond de Goncourt (1822–96), Jules de Goncourt (1830–70), all three 'precious' writers, Daudet (1840–97), who to real wit and pathos united emotionalism, Edmond About (1828–85), whose best works, such as *Le Roi des Montagnes*, are classics of comedy, the mighty figure of Zola (1840–1903), who threw needful ballast into the ship of fiction, his disciple Huysmans (b. 1848), a decadent realist, 'Pierre Loti' (b. 1850), who, again, sins on the emotional side, the Catholic and conservative Paul Bourget, whose *Le Disciple* is a triumph of the psychological novel, the witty, malicious Maupassant (1850–93), who reached the high-water mark of style, and his successor, Anatole 'France' (Thibault, b. 1844), the greatest living Fr. man-of-letters.

OTHER PROSE WRITERS.—The Restoration of 1815, which restored freedom of tribune, produced distinguished orators; under Louis Philippe, Guizot and Montalembert shone. Victor Cousin (1792–1867) represents philosophy, little treated, as such, during the cent., by his *Du vrai, du beau et du bien* (1853) and other works. History is strong, both in the old form of treatment as a branch of *belles-lettres* and in the new scientific method; important names are Guizot (1787–1874), eloquent in writing as in speech, his disciple, Tocqueville (1805–59), Thiers (1797–1856), the statesman, Mignet (1786–1884), Augustin Thierry (1775–1856), Michelet (1798–1874) who wrote one of best histories of the Revolution, and Henri Martin (1810–84), important member of the new school. Fustel de Coulanges (1830–89) won fame with *La Cité antique*; Renan (1823–92) employed an excellent style in the service of the Higher Criticism with strong anti-theological bias; Taine (1828–93) did brilliant work in study of history of institutions; followed by Lavisse (b. 1842), Broglie (1821–1901), Thureau-Dangin (b. 1837), Houssaye (b. 1848), Hanotaux (b. 1853); Gaston Boissier (1823–1908), holds prominent place as writer of Roman lives. Prominent among literary critics is Sainte-Beuve (1804–69), whose *Causeries du Lundi* are valuable.

Chief later literary critics are Ferdinand Brunetière (1849–1911), Emile Faguet (b. 1847), Jules Lemaître (b. 1853), and Francisque Sarcey (1828–99), themselves masters of style.

Most Belgian writers have used French since c. 1880; two schools: Parnassians—Arenberg, Giraud, etc., follow Fr. classical vogue; the mystics—Maeterlinck, Lemonnier, Rodenbach, Verhaeren, Eeckhout, etc.

Saintsbury, *Short History of F. L.*; Dowden, *History of F. L.*; Brunetière, *Manual of History of F. L.* (1898); Faguet, *Literary History of France* (1907); Lanson, *Histoire de la Littérature Française*; see also separate articles on various writers mentioned.

Education, Science, and Art.—The minister of Public Instruction is at the head of univ. and school education. For educational administration purposes F. is divided into 17 circumscriptions called *Académies* (one in Algeria), each under a rector, assisted by several inspectors. The Sorbonne in Paris is the seat of the Faculties of Literature and Sciences of the Univ. of Paris. It was founded under St. Louis by Robert de Sorbon (1211–74), and first intended for theol. The Collège de France, close to the Sorbonne, is independent of the Univ.; it was founded by Francis I., and is a public institution.

Primary education is compulsory between ages 6–13, free, secular.

Government and Administration.—CENTRAL.—The Third Republic dates from Sep. 4, 1870. The Legislature is bicameral. The Chamber of Deputies (597 paid members, elected by universal suffrage for 4 years) sits at the Palais-Bourbon, Paris; the Senate (300 paid members, over 40 years of age, elected for 9 years by Electoral Colleges, representing each *département* and Colonies), meets at the Palais du Luxembourg. The two Chambers, sitting together at Versailles, elect the Pres. of the Republic, the head of the Executive, every 7 years. He is assisted by responsible Ministers; there are 11 ministries (Interior, Foreign Affairs, Finance, War, Marine, Colonies, Justice, Public Instruction, Agriculture, Public Works, Commerce). The Prime Minister is the *Président du Conseil*; he is nominated by the Pres. and chooses his colleagues after consultation with the Pres. A *Conseil d'Etat* prepares Government Bills, decrees, etc., decides administrative difficulties, etc.

LOCAL.—F. was formerly divided into provinces, among which were Anjou, Auvergne, Brittany, Burgundy, Dauphiné, Gascony, Languedoc, Normandy, Provence, Touraine. Alsace belonged to F. until 1871, when most of it and part of Lorraine (in all 5604 sq. miles) were ceded to Germany. Since 1790 F. has been divided, for local administrative purposes, into 86 *départements*, viz.: Ain, Aisne, Allier, Alpes-Maritimes, Ardèche, Ardennes, Ariège, Aube, Aude, Aveyron, Basses-Alpes, Basses-Pyrénées, Bouches-du-Rhône, Calvados, Cantal, Charente, Charente-Inférieure, Cher, Corrèze, Corse (Corsica), Côte-d'Or, Côtes-du-Nord, Creuse, Dordogne, Doubs, Drôme, Eure, Eure-et-Loir, Finistère, Gard, Gers, Gironde, Haute-Garonne, Haute-Loire, Haute-Marne, Hautes-Alpes, Hautes-Pyrénées, Haute-Saône, Haute-Savoie, Haute-Vienne, Hérault, Ille-et-Vilaine, Indre, Indre-et-Loire, Isère, Jura, Landes, Loir-et-Cher, Loire, Loire-Inférieure, Loiret, Lot, Lot-et-Garonne, Lozère, Maine-et-Loire, Manche, Marne, Mayenne, Meurthe-et-Moselle, Meuse, Morbihan, Nièvre, Nord, Oise, Orne, Pas-de-Calais, Puy-de-Dôme, Pyrénées-Orientales, Rhône, Saône-et-Loire, Sarthe, Savoie, Seine, Seine-

Inférieure, Seine-et-Marne, Seine-et-Oise, Sèvres, Somme, Tarn, Tarn-et-Garonne, Var, Vaucluse, Vendée, Vienne, Vosges, Yonne; and there is also the territory of Belfort (*q.v.*). The largest towns are Paris, the capital, Marseilles, Lyons, and Bordeaux. Each department is under a *Préfet*, assisted by a *Conseil de Préfecture* and a *Conseil Général* (dealing with roads, public buildings, instruction, etc.). Each département has several *arrondissements* (each under a Sous-Préfet, app. by Central Government and assisted by a *Conseil d'Arrondissement*); each *arrondissement* has several *cantons* (with a justice of the peace), and each *Canton* several *Communes* (under a Mayor and elective *Conseil Municipal*).

Institutions. — LAW AND JUSTICE. — Legislative bodies are the Senate, Chamber of Deputies, and the *Conseil d'Etat*; laws have to be voted by the two chambers and (after two readings and two votes, unless there is 'urgence') pub. by the Pres. of the Republic, and executed. The *Conseil d'Etat* prepares laws, gives advice on contentious matters, and decides points of administration, justice, foreign affairs, etc. etc. Its pres. is the *Minister of Justice*, who cannot preside in administrative affairs by the Law of 1910; the real head is the vice-pres.; under him are 5 sectional presidents, 35 *Conseillers d'Etat*, 21 for extraordinary cases (directors of ministries having to do with the matter discussed), 37 *Maîtres des requêtes*, who prepare the deeds, and 50 *Auditeurs* of first and second class. The Senate acts as High Court of Justice. In case of high treason by the Pres. of the Republic or a Minister a commission is elected among the senators. The Pres. and Ministers may call the High Court, if the surety of the State is endangered.

In each canton there is a justice of the peace (cr. by the *Assemblée Constituante*, 1790), who has cognizance of suits under value of £8. In each important town there is a *tribunal de première instance* with at least three judges, one of whom is pres. The judges are app. by the State and cannot be removed. These tribunals have cognizance of cases of marriage, divorce, affiliation, contract, mortgages, etc. The debates must be public, except in exceptional cases when the verdict must be given publicly. Matters involving less than £60 are judged without appeal. Appeal may be made within two months of the first verdict. The *Cour d'appel* is constituted by a *quorum* of pres. and 4 councillors. There are 26 in F., with separate divisions for civil and criminal cases. Cases involving more than five years' imprisonment are judged at the *Cour d'Assises* by a jury of 12 citizens and 3 councillors chosen by a commission. In Paris the Assizes meet every fortnight; in the provinces there are 4 sittings a year. The jury gives the verdict in urgent questions only; usually the magistrates give the verdict. The cause may then be brought before the Supreme Court, the *Cour de Cassation* (cr. 1790). It sits in the *Palais de Justice*, Paris, and decides (1) if the procedure has been correct, (2) if the law has been correctly administered. If not, writs are issued for a second trial. If that again is unsatisfactory the three chambers of the *Cour de Cassation* formed into the *Conseil Supérieur de la Magistrature* judge the case, hearing the witnesses, etc. It is this council that judges magistrates for professional faults. In the chief departmental town there is also, if needed, a *Conseil de prud'hommes* (since 1907) to judge differences arising between employers and employees in matters not exceeding £12. It is elected for five years by employers and workpeople. Women may vote and may be elected since the Law of 1908. Cases above £12 are referred to a *Tribunal de Commerce* elected by tradesmen, employers, etc., elected for two years. Women may vote (since 1878), but not be elected. A jury *d'Expropriation* fixes indemnities paid to people dispossessed by the building of roads, railways, etc. The administrative tribunals judge questions of justice and administration. The *Conseils de Préfecture* assess local taxes. The *Cour des Comptes* (since law of 1807) controls the money matters of the State. It only judges as to facts, punishments being referred to criminal courts. Military cases are judged in the army by a Council of War of officers of a grade above that of the accused. Since 1906 appeal may be made to the *Cour de Cassation*, but a reform on that point has been proposed. The prisons are under the Ministry of the Interior. There are 24 *Maisons Centrales* for prisoners serving long terms. Political prisoners go to Maisons de Détention at Doullens and Belle-Île. Convicts are transported to Cayenne and New Caledonia.

Among the many specialising institutions are the National School of Beaux-Arts (founded, 1643), whose students compete for the *Grand Prix de Rome*; the *École des Chartes*, a school of hist. study; Schools of Agriculture at Grignon, Paris, Versailles, etc., Forestry School at Nancy. The *Conservatoire de Musique*, instituted in Paris, 1795, is a famous operatic school, free, for pupils from 9 to 22 who pass a preliminary examination. The Opéra, also called 'National Academy of Singing and Dancing,' Opéra Comique, Théâtre Français, and Odéon are theatres subsidised by the State; the *Institut Océanographique* and the *Institut Pasteur* are well-known establishments for acquisition of new knowledge. Among philanthropic institutions is the *Ecole Braille* for the blind; the Jardin des Plantes in Paris is one of the most complete botanical collections in the world. See EDUCATION, ACADEMY, UNIVERSITIES, and other separate articles.

ORDERS, CHARITIES, ETC.—The Order of the Legion of Honour is a knighthood instituted by Napoleon I. in 1802 to reward military and civil services. The *Hôtel des Invalides* was founded by Louis XIV. for old soldiers of all grades. HOSPITALS are under a commission of 6, nominated by the Prefect and the *Conseil Municipal*. There are in Paris 30 general, and 17 special, hospitals, besides hospices for the aged, lunatic asylums, *crêches*, all under the *Assistance publique*. *Bureaux de Bienfaisance* for the poor were instituted into the communes in 1796. The funds are provided by charities, legacies, taxes on theatre tickets, allowances from the communes, etc.

Savings Banks pay 3 %. Post Office Savings Banks were instituted on the same lines in 1881. A *Caisse de Retraite pour la Vieillesse* was founded, 1850. A law was passed in 1910 introducing a contributory system of Old Age Pensions.

Finance.—Revenue of Central Administration is derived from direct taxes or *contributions* (on lands, houses, doors, windows, patents, professions, trades, etc.); indirect, such as Customs duties (protective tariff), registration, stamp, and other duties; government monopolies (tobacco, matches, post-office, etc.); forests, and other sources. The National Debt is enormous—over £1,300,000,000 in 1911. The Local Authorities usually obtain supplies for local purposes by voting additions to State taxes, by *octroi* duties and certain special taxes. *Percepteurs* collect the taxes; each arrondissement has a *receveur particulier*, each department a *trésorier payeur général*; accounts are supervised by Inspectors-General and the *Cour des Comptes*. The Bank of France (founded 1799; definitely instituted, 1806) is under a gov. and two deputy gov's app. by Pres. of Republic.

Defence.—ARMY.—The Fr. Army comprises: (1) the 26 legions of *Gendarmerie* (police); (2) the *Armée Active* (Army proper), composed of infantry, cavalry, artillery, engineers; and divided into twenty corps, commanded by generals of brigade and generals of division. The Minister of War is assisted by two generals, a *chef d'état major*, a historiographer; above them is the Superior Council of War (the Pres. of the Republic, and *Président du Conseil*, or premier; Ministers of War and Navy and Army inspectors); (3) the territorial Army. Military service is compulsory. From 20 to 45, a Frenchman, except in case of ill-health, is under military authority. At

20 he is examined in his *commune* by the Council of Revision. Since 1905 the period of service is 2 years in the *Armée Active*. For the following 11 years he is in the reserve of the *Armée Active*, and serves twice (23 and 17 days); after that, 6 years in the territorial army or *territoriaux* (serving 9 days); finally 6 years in the reserve of the territorial army, only summoned in time of war. In consequence of Germany's increase of army (1913), France proposed to reintroduce 3 years' service, and to abolish all exemptions. Proposal was opposed by Socialists. The principal military schools are the *École Polytechnique* (engineers, etc.), St. Cyr (cavalry and infantry), Saint-Maixent (infantry), Saumur (cavalry), and Versailles. The soldiers of the Colonial Army are volunteers 21 years of age or more, and have served at least 6 months in F. This army includes the Artillerie de Marine, and is under the Ministry of War. See also ARMY.

NAVY.—The Fr. Navy, once second to that of Britain alone, has in recent years been outstripped by the fleets of Germany, U.S.A., and Japan. The coasts are divided into five *Arrondissements Maritimes* with the chief towns, military ports of Cherbourg, Brest, Lorient, Rochefort, and Toulon, under the supervision of a *préfet maritime*. The men are partly volunteers, partly *inscrits maritimes*, sailors engaged in mercantile marine, fishing, etc., being liable to serve in the Navy. The officers come from the Naval Schools or are promoted. According to the strategic requirements the Fr. fleet is sometimes concentrated in the Mediterranean (with Toulon as base), sometimes divided into two squadrons, one in Mediterranean, one on Atlantic seaboard (headquarters, Brest).

Religion.—A law of Dec. 9, 1905, annulled the Concordat (concluded between Napoleon I. and Pope Pius VII., July 15, 1801) and separated Church and State. There are 17 R.C. archbishoprics and 67 bishoprics in F. Protestants (in 1906) numbered about 650,000; Jews, *c.* 100,000; very many are free-thinkers; Roman Catholicism is still very strong in Brittany and certain other districts.

Colonies and Dependencies include: In AFRICA: Algeria, Tunis, Sahara, Fr. West Africa, Fr. Equatorial Africa, Mayotte and Comoro Islands, Madagascar, Réunion, Fr. Somali Coast, and virtual protectorate over Morocco. In ASIA: Fr. India, Fr. Indo-China. In OCEANIA: New Caledonia, with dependencies (Loyalty Is., etc.), New Hebrides (under joint Franco-Brit. administration), Society Is., Tahiti, and other Pacific islands. In AMERICA: S.—Fr. Guiana; N.—Guadeloupe, Martinique, Saint-Pierre and Miquelon. See separate articles.

Resources.—About 16 per cent. of whole area is under forest; about 70 per cent. under crops and grass, F. being pre-eminently an agricultural country, with many small farms and peasant proprietors; cereals include wheat, oats, rye, maize; excellent cider is made in Normandy, etc.; fruits and vegetables, and especially potatoes and beetroot, extensively grown; nursery and market-gardening are carried on; live stock raised; dairy-farming is an important industry. Wines are largely produced and world-famous; best-known wine districts are the S.W. for red Bordeaux wines (known in Britain as clarets); Côte d'Or and country to S. of it for red and white Burgundy; N.E., particularly Marne, for champagne; light red wines are produced along lower Loire.

There are a number of coal-fields, largest being the group in Pas-de-Calais and Nord, while others are round and across the central plateau. Iron ore is found in N.E. along Moselle, at E. end of Pyrenees, and along Rhône and Saône valleys; rock salt in N.E.; marble in Pyrenees, plaster in Paris district, building stone in Burgundy and elsewhere. Iron- and steel-founding are carried on chiefly in the N.E., Le Creusot in Meurthe-et-Moselle being the principal centre.

Textiles are manufactured chiefly in the coal districts; cottons and woollens in the N., where the weaving of linen, jute, and hemp is also carried on; silks in the Rhône valley, Lyons being the centre of silk trade; china and earthenware are made at Limoges, glass in N., paper at Angoulême and in the Isère valley at Grenoble; watches along the Swiss border. Aubusson and Gobelins are noted for carpets, Sèvres for china, and Baccarat for crystal. Fishing industry is of considerable importance.

Commerce is very active. Principal exports are silk, cotton, and woollen textiles, raw silk and wool, millinery, wine, leather, linens, metal goods, dairy produce, skins, furs, timber, sugar, pottery, glass, fruit. Largest import and export trade is with U.K.

Chief railways of F. (some State-owned) are the Chemins de Fer du Nord; de l'Est; Paris-Lyons-Méditerranée (P.L.M.); Paris-Orléans; l'État; du Midi, and de l'Ouest (which passed under State control, 1909); railway mileage in 1911 was 30,709. F. is well provided with canals and navigable rivers and good roads.

The Population is almost stationary, having increased from 38,961,945 in 1901 to only 39,252,267 in 1906, and 39,601,509 in 1911. About 2·8 per cent. of population are foreigners—Italians, Belgians, Germans, Spaniards, Swiss, British, Russians, Austrians, etc.

Betham-Edwards, *Home Life in F.* (1905), *Unfrequented F.* (1910); Dawbarn, *F. and the French* (1911); Hassall, *The French People* (1910); George, *F. in the XX. Cent.* (1908); Kitchin, *History of F.* (1903).

FRANCE, ABRAHAM, FRAUNCE (*c.* 1560–1633), Eng. poet; friend of Spenser and Sidney.

FRANCE, ANATOLE (1844–), pseudonym of ANATOLE THIBAULT; Fr. novelist, poet, and man of letters; member of Académie française; noted stylist; a master of irony and gifted story-teller, amongst his works are *Le Crime de Sylvestre Bonnard, Île des Pingouins, Thaïs, Le Livre de Mon Ami*, etc.

FRANCE, ÎLE DE, see ÎLE-DE-FRANCE.

FRANCESCHI, PIERO DE' (fl. 1439–92), Ital. artist; frescoes in church at Arezzo.

FRANCESCHINI, BALDASSARE (1611–89), Ital. artist; famed for frescoes.

FRANCHE-COMTÉ (47° N., 6° 20′ E.), old Fr. province in Rhône basin on Swiss frontier; ancient capital, Besançon; now comprised in departments of Doubs, Haute-Saône, and Jura; conquered by Cæsar; later part of Burgundy; split into four countships in Middle Ages; annexed to France, 1678.

FRANCHISE, a right or privilege; the right to exercise a parliamentary vote. See ELECTION.

FRANCIA, FRANCESCO DI MARCO DI GIACOMO RAIBOLINI (1450–1517), Ital. artist; his *Pieta* (in the National Gallery) one of the noblest in all the Italian achievement.

FRANCIA, JOSÉ GASPAR RODRIGUEZ (*c.* 1757–1840), Paraguayan statesman; became dictator of Paraguay, 1814, holding office till death.

FRANCIABIGIO (*c.* 1482–1525), Ital. artist; famed for frescoes.

FRANCIS I. (1708–65), Grand Duke of Tuscany and emperor of Holy Rom. Empire.

FRANCIS II. (1768–1835), last emperor of Holy Rom. Empire, first emperor of Austria (FRANCIS I. of Austria); in wars against Napoleon lost Netherlands, Lombardy, Venetia, and other provinces; became Austrian emperor, 1804; renounced Holy Rom. Empire, 1806; after battle of *Leipzig* regained Lombardy, Galicia, and Venetia, by Treaty of Vienna, 1815.

FRANCIS I. (1494–1547), king of France; conquered Milan by defeat of Swiss mercenaries at *Marignano*, 1515; unsuccessfully contested imperial crown; henceforth bitter rival of successful candidate, Charles V.; failed to gain England's support at Field of Cloth of Gold, 1520; defeated and taken prisoner at *Pavia*, 1525; resigned Ital. possessions by Treaty of Madrid, 1526; allied himself with Turks, 1534; finally made peace with Charles, 1544; promoted Renaissance, founded Collège de France. See FRANCE: *History*.

Pardoe, *Court and Reign of Francis I.*

FRANCIS II. (1544–60), king of France; m.

Mary Stewart, afterwards Queen of Scots; d. after reigning seventeen months.

FRANCIS I. (1777–1830), king of the Two Sicilies.

FRANCIS II. (1836–94), king of Naples and Sicily; defeated by Garibaldi in 1860–61, after which Naples was united to Italy.

FRANCIS IV. (1779–1846), Duke of Modena; reign marked by despotism and persecution of Liberals. Rebellion broke out in 1831, but was suppressed by F. with aid of Austrian arms.

FRANCIS V. (1819–75), Duke of Modena; dethroned.

FRANCIS, SIR PHILIP (1740–1818), Brit. politician and writer; first clerk in War Office, 1762; member of Council of Bengal, 1773; fought duel with Warren Hastings, 1780; M.P., 1784–1807; prominent in proceedings against Warren Hastings; supposed to have written *Letters of Junius*.

FRANCIS OF ASSISI, ST., FRANCIS BERNARDONE (*c.* 1181–1226), founder of Franciscan Order; b. Assisi; in youth was prominent among young men of fashion; was taken captive and imprisoned in war with Perugia, 1201; his spiritual experiences during a subsequent illness resulted in complete change of life; henceforth devoted himself to religion, and became beggar, taking 'Lady Poverty' as his spouse; joined by disciples, whom he formed into new order, 1210; went as pilgrim to Holy Land, 1219–20. His mysticism, poetry, simplicity, gaiety, and love of nature have won something of the same sympathy from the present generation that they won from his own. All things created are his 'brothers' or 'sisters,' and he exhorted them to praise God with him. In prayer on Mount Alverno (Sept. 14, 1224) he received in his own body the *Stigmata* (marks of the nails, etc.) of the crucified Christ. P. Sabatier, the Fr. Protestant critic, maintains the objectivity of this phenomenon. See FRANCISCANS.

Life, by Mrs. Oliphant (1871), Canon Knox Little (1877), Paul Sabatier (1894), Father Cuthbert (1912).

FRANCIS OF PAULA, ST. (1416–1507), Franciscan friar; founded *Order of Minims* (still existing), remarkable for its specially severe rule.

FRANCIS OF SALES, ST. (1567–1622), s. of a Savoyard noble, studied at Jesuit College at Paris; studied law at Padua, 1588; ordained, 1592, as provost of chapter of Geneva; preached in Chablais, 1589, converting Protestants; bp. of Geneva, 1602; most devoted in his duties; in Paris, 1618–19; d. much revered, and was 'beatified,' 1661, and canonised, 1665; wrote several religious works.

FRANCIS JOSEPH I. (1830–), emperor of Austria, king of Bohemia, king of Hungary. On accession, 1848, war broke out in Hungary, which he put down by aid of Russ. troops; present at *Solferino*, 1859, after which had to give up Lombardy; quarrelled with Prussia, 1864, which after *Sadowa* replaced Austria as leading Ger. power; ceded Venetia to Italy, 1866; crowned king of Hungary, 1867, taking oath to observe constitution; policy has been preservation of peace by alliance with Italy and Germany; annexed Bosnia and Herzegovina, 1908. Empress Elizabeth was assassinated, 1898; s., Rudolph, committed suicide, 1889; accordingly heir is nephew, Archduke Francis Ferdinand. See AUSTRIA-HUNGARY.

Mahaffy, *Francis Joseph I.*

FRANCISCANS, R.C. religious order, variously known as Grey Friars, Lesser Brethren, Friars Minor, Minorites, Seraphic Order. Divided into three bodies —First Order, including *Observantists* (the strictest, holding to the original poverty), *Conventuals* (who are allowed to hold property), and *Capuchins*; Second Order, or nuns, also known as *Poor Clares*; Third Order, or Tertiaries. Order was originally founded by St. Francis of Assisi (*q.v.*), about 1210, and was formally constituted by Pope Honorius III. in 1223. Leading idea, poverty—aim being to possess only irreducible minimum necessary to maintain life. The strictness and unworldliness of their lives did much to revive the fervour of the Church, and gained them great influence, especially among the common folk, whom their missionary zeal peculiarly embraced. After death of founder, various modifications occurred, resulting in many subdivisions, which were ultimately reduced by Leo XIII. into the three branches of First Order already mentioned.

Wadding, *Annales*; Little, *Grey Friars in Oxford* (Oxford Hist. Soc., 1892).

FRANCK, CÉSAR (1822–90), Fr. composer; b. Liége; studied at Paris; prof. of Organ, Paris Conservatoire, 1872; church, symphonic, and chamber music.

FRANCK, SEBASTIAN, FRANK, or FRANCUS (*c.* 1499–1543), Ger. writer; became priest, subsequently joined Reformed Church, finally becoming a freethinker; wrote *Chronica, Zeitbuch und Geschichtsbibel*, treating various aspects of Reformation, and other works.

FRANCKE, AUGUST HERMANN (1633–1727), Ger. pastor; b. Lübeck; lectured on Bible subjects at Leipzic from 1689; prof. of Gk., Halle, 1691, and later of Theology; pastor at Glaucha, 1691–1727; established free school, orphanage, and other institutions; wrote *Lectiones paræneticæ*.

FRANCKEN, JEROME (fl. *c.* 1574–1603), Flem. artist; employed by Henri III. of France; several other members of same family were distinguished artists.

FRANCO-GERMAN WAR (1870–71), between Fr. Empire and Prussia. France's alarm at growth of Hohenzollern power had been increased by disclosure of Prussia's military power in campaigns of 1866, and by formation of North Ger. Confederation. Question of cession of Luxemburg almost precipitated outbreak. Finally, a pretext was found in Hohenzollern candidature for Span. throne. Spaniards offered their throne to Prince Leopold of Hohenzollern-Sigmaringen, a distant relative of Prussian royal family. Napoleon III. resented affair as a Bismarckian intrigue to extend Pruss. power. Bismarck's manipulation of 'Ems incident' made war popular. France declared war (July 19, 1870). Confederation placed all its forces at disposal of Prussia and voted 120 million thalers for war expenses. A large army was placed in field, nominally commanded by king, but practically by Von Moltke. Crown Prince, Prince Frederick Charles, and Steinmetz commanded divisions.

War itself was short and sharp. Napoleon assumed command of Fr. army, aided by Marshals Bazaine, MacMahon, Canrobert, and Lebœuf. After action of Saarbrücken (Aug. 3), first of war, events moved rapidly. French fought courageously, but were badly organised and outnumbered; their delay allowed Germans to enter Alsace and continue war on Fr. soil. MacMahon was defeated at Weissenburg (Aug. 4) by Crown Prince, and more seriously at Wörth (Aug. 6), and retreated on Châlons. General Frossard was driven from heights of Spicheren (Aug. 6) by Prince Frederick Charles and Steinmetz. Main Fr. force was now concentrated near Metz, under Bazaine. Germans won decisive victory at Gravelotte (Aug. 18). Early on 19th, Bazaine's army in Metz was invested by Frederick Charles. Rest of Ger. army, under Crown Prince, advanced on Paris. MacMahon attempted relief of Metz, but was caught on way and completely defeated at Sedan (Sep. 1). Next day whole army capitulated. Napoleon himself became a prisoner and was sent to Wilhelmshöhe, near Cassel.

First phase of war (exactly a month in duration) was over. News of these great disasters overthrew Fr. Empire and a Republic was proclaimed (Sep. 4). Germans continued to advance. Paris was besieged by Crown Prince (Sep. 20). Strasburg surrendered (Sep. 28), and on Oct. 28, Bazaine capitulated at Metz, and 150,000 Fr. troops and immense army stores were delivered into enemies' hands. Gambetta had organised three new armies beyond Loire, which carried on desperate but hopeless resistance. Germans defeated army of Loire (Oct. 9), and occupied Orleans.

in provinces Germans repelled all attacks, and gradually closed in on Paris. Only place besides capital which held out was fortress of Belfort, in Alsace (surrendered, Feb. 16). Paris capitulated (Jan. 28). Preliminaries of Peace were arranged (Feb. 26), and ratified at Frankfort (May 10).

France ceded to Germany whole of Alsace (except Belfort) and E. Lorraine, including fortresses of Metz and Strasburg, and agreed to pay indemnity of five milliards of francs (£200,000,000) within three years. Ger. army of occupation was to be withdrawn gradually as each instalment of indemnity was paid. Results of war were far reaching. Second Empire was destroyed and Third Republic established in France. In Germany war completed Ger. unity under King William of Prussia, who accepted imperial crown at Versailles (Jan. 18, 1871). Italian unity was secured at same time, for, on Napoleon's fall, Rome was made capital of Victor Emmanuel's kingdom. Russia also took advantage of European situation to contravene Treaty of Paris of 1856, and thus reopened Eastern Question.

Von Moltke, *The F.-Ger. War of 1870–71* (Eng. trans., 1893).

FRANÇOIS DE NEUFCHÂTEAU, NICOLAS LOUIS, COUNT (1750–1828), Fr. statesman and poet; b. Lorraine; Minister of Interior (1797); pres. of Senate (1804–6); wrote many works on diverse subjects.

FRANCOLIN, genus of Oriental birds (*Francolinus*) of family Tetraonidæ; akin to partridge family.

FRANCONIA, Ger. FRANKEN (*c.* 49° 50′ N., 11° E.), ancient duchy of Germany; chiefly in valley of Main; afterwards one of the circles into which Germany was divided by Maximilian I., in 1501; now denotes the three N. divisions of Bavaria—Upper, Middle, and Lower F.

FRANCS-ARCHERS, regular Fr. foot-soldiers of XV. and XVI. cent's.

FRANCS-TIREURS, irregular Fr. infantry, chiefly peasants, who took part in Franco-German War (1870–71).

FRANEKER (53° 12′ N., 5° 32′ E.), town, Friesland, Holland; from 1585–1811 seat of univ.; silk and woollen goods. Pop. (1910) 7642.

FRANK, JAKOB (1726–91), Jewish divine; leader of mystic sect which merged in Christianity.

FRANK-ALMOIGN, system of land tenure held by a religious body in perpetuity.

FRANKEL, ZECHARIAS (1801–75), Jewish scholar and pioneer of hist. criticism.

FRANKENBERG (50° 53′ N., 13° 1′ E.), town, Saxony, Germany; textiles. Pop. (1910) 13,576.

FRANKENHAUSEN (51° 23′ N., 11° 5′ E.), town, Schwarzburg-Rudolstadt, Germany; brine-springs. Pop. (1910) 6566.

FRANKENSTEIN (50° 37′ N., 15° 50′ E.), town, Silesia, Germany; straw hat factories. Pop. (1910) 8737.

FRANKENTHAL (49° 32′ N., 8° 21′ E.), town, Bavarian Palatinate, Germany; ironworks. Pop. (1910) 18,779.

FRANKENWALD (50° 25′ N., 11° 30′ E.), mountainous region, Germany, connecting Fichtelgebirge with Thuringian Forest.

FRANKFORT (40° 17′ N., 86° 26′ W.), town, Indiana, U.S.A.; agricultural implements. Pop. (1910) 8634.

FRANKFORT (38° 9′ N., 84° 52′ W.), city, Kentucky, U.S.A.; contains State House, State Library, Penitentiary, and other institutions; sawmills, furniture factories. Pop. (1910) 10,465.

FRANKFORT-ON-MAIN (50° 6′ N., 8° 40′ E.), city, Hesse-Nassau, Prussia; wealthy and important commercially; great banking centre and leading Ger. railway junction; terminus of Rhine River traffic. F. has handsome modern streets (*e.g.* Zeil, Kaiserstrasse), squares, and suburbs with striking buildings and monuments. The cathedral (St. Bartholomew) was founded in IX. cent. by Lewis the German, rebuilt and extended, 1235 onwards; here, in terms of Golden Bull (1356) of Charles IV., Ger. emperors were elected; after 1562 coronation of emperors also took place in F. Other notable features are: Leonardskirche (begun, 1219), Nikolaikirche (XIII. cent.), Römer, and New Rathaus (the old and modern municipal offices), historical museum, Bethmann's Museum (with Dannecker's famous *Ariadne*), Städel Art Institute and other galleries, magnificent Schauspielhaus (theatre), library, Goethe House (where poet was born, 1749), Opera House, Central Railway station, Old Bridge (*c.* XIII. cent.), Eschenheimer Tor (1400–28) and other mediæval gateways, Palm garden, and Zoological garden. F. has long been the home of a large Jewish community, but the old house of the Rothschild family alone survives of the Judengasse. Industries are less prominent than trade, but include jewellery, soap, perfumery, chemicals, machinery, tapestry, waxcloth, carpets, tobacco, photographic and electrical apparatus. *Franconofurd* (ford of the Franks) first appears in hist. records, 793; became capital of E. Frankish Empire; many important diets and councils held here in Middle Ages; city attained autonomy under Empire and became 'free imperial town'; free city of Ger. confederation, 1815–66; annexed by Prussia, 1866; Peace of F. ended Franco-Prussian War, 1871. Pop. (1910) 414,600.

FRANKFORT-ON-ODER (52° 21′ N., 14° 32′ E.), town, Brandenburg, Prussia; important commercial centre; formerly seat of univ. now at Breslau; manufactures machinery, firearms, chemicals; taken by Gustavus Adolphus, 1631, by Russians, 1759. Pop. (1910) 68,230.

FRANKINCENSE, an aromatic gum resin, is obtained by incising the bark of certain trees (*Conifers*). The fluid hardens into irregular lumps covered with white dust. It has a yellow or yellowish-brown colour, a bitter aromatic taste, and a balsam-like odour. It is insoluble in water and burns with a white flame. As a drug it was widely used in all kinds of inflammatory diseases, but is little used now except for external application. It has been employed from the earliest times in incense.

FRANKING, right to send postal packets and letters without payment. Practice introduced (1660); greatly abused; abolished (1840).

FRANKL, LUDWIG AUGUST (1810–94), Austrian lyric and epic poet.

FRANKLAND, SIR EDWARD (1825–99), Eng. chemist; investigated organic metallic bodies, and introduced idea of valency and bonds from observation of saturation capacity of metallic bodies. He introduced the modern form of Bunsen's gas-analysis apparatus, making it less cumbersome and slow, and with others investigated contamination of water-supplies.

FRANKLIN (72° N., 95° W.), Arctic district of Canada, including Banks, Prince Albert, Victoria, Wollaston, King Edward and Baffin Lands, Melville, Bathurst, Prince of Wales, and Cockburn Islands, Baffin Land alone extending S. of Arctic Circle.

FRANKLIN.—(1) (43° 26′ N., 71° 39′ W.) city, Merrimack County, New Hampshire, U.S.A., at head Merrimack River; needles, woollen goods; birthplace of Daniel Webster. Pop. (1910) 6132. (2) (41° 22′ N., 79° 55′ W.) city, Pennsylvania, U.S.A., on Alleghany; oil region; oil refineries; machine-shops. Pop. (1910) 9767. (3) (35° 53′ N., 86° 55′ W.) town, Tennessee, U.S.A., on river Harpeth; flourmills; scene of defeat of Confederates by Federals, 1864. Pop. (1910) 2924. (4) (42° 5′ N., 71° 24′ W.) town, Massachusetts, U.S.A.; straw goods. Pop. (1910) 5641.

FRANKLIN, O.E. name for a small freeholder.

FRANKLIN, BENJAMIN (1706–90), Amer. statesman and scientist; one of the heroes of Amer. War of Independence; b. Boston, Massachusetts, of poor parents. F. began life as a working printer, setting up in business for himself at age of twenty-three; almost entirely self-taught; established in Philadelphia one

of earliest circulating libraries in America (1731); served as clerk of the Gen. Assembly (1736–51); appointed postmaster at Philadelphia (1737) and about same time organised first police force and fire company in the colonies. In 1749, in conjunction with other citizens of Philadelphia, he formed an association for purpose of establishing an academy which was opened (1751), chartered (1753), and eventually became Univ. of Pennsylvania. He also shared in several other projects for advancement of well-being and prosperity of Philadelphia; served as a member of Gen. Assembly of Pennsylvania for thirteen years. From 1753–74 he was in joint charge of post service of the colonies. His famous experiment proving the identity of lightning and electricity was made in June 1752.

Besides achieving a great reputation as a man of science, he did much for establishment of Amer. independence. He resided in England as agent for colonies of Pennsylvania, Massachusetts, Maryland, and Georgia from 1757–62, and from 1764–75, protested against claim of Britain to tax her colonies. In March 1775 he returned to Philadelphia and became a prominent member of insurrectionary government in America. He was immediately appointed a delegate by assembly of Pennsylvania to Continental Congress in Philadelphia. In 1776 he was sent on a mission to France, and in 1778 managed to induce the Fr. government to form an alliance with the revolted colonies. But before he left Paris in July 1785 he had made commercial treaties with Sweden (1783) and Prussia (1785). Returning to America, he was immediately elected a member of municipal council of Philadelphia, and pres. of Supreme Executive Council of Pennsylvania, and re-elected, 1786–87. His last public act was to address a petition to Congress for abolition of slavery (Feb. 12, 1790). During his lifetime he received many literary distinctions, and published several political pamphlets and writings on economics. His many-sided genius was eminently practical, and in science and politics he was an altruist.

Life, by himself (1883), Parton (1864), Morse (1889).

FRANKLIN, SIR JOHN (1786–1847), Eng. explorer; first discoverer of N.W. passage to Pacific; b. Spilsby, Lincolnshire; early resolved to be a sailor; served as midshipman in battle of Copenhagen, 1801; spent some time under training of Captain Flinders in exploration and mapping of Australian coasts; at Trafalgar was on board *Bellerophon*; became lieut., 1808; took part in blockade of Flushing, and distinguished himself in expedition against New Orleans, 1814. F. commanded overland expedition from Hudson Bay to Arctic Sea, 1819; became commander, 1821, and obtained post rank of captain, 1822; headed another overland expedition, 1826, and traced N. Amer. coast as far as 149° 37′ W. long.; knighted, 1829, and received other honours; was lieut.-gov. of Van Diemen's Land (Tasmania), 1836–43, fostering social and political advancement of colony; d. (June 1847) during ill-fated expedition for discovery of N.W. passage to Pacific. See POLAR REGIONS.

Life, by Traill (1896), Markham (1891).

FRANKLIN, WILLIAM BUEL (1823–1903), Amer. general; graduate, West Point, 1843; major-gen., 1862; for a time director of Panama Railway.

FRANK-MARRIAGE, obsolete O.E. law by which a landowner bestowed property on his dau. at marriage, and her husband and their heirs.

FRANK-PLEDGE (*Frithborh*), institution possibly introduced about Norman Conquest; association of ten men in common responsibility, having a headman, *borhs-ealdor* or *frithborge-head*; sometimes confused with local tithing, a territorial subdivision, with which it became connected.

FRANKS, SIR AUGUSTUS WOLLASTON (1826–97), Eng. antiquary; pres. Soc. of Antiquaries.

FRANKS, THE, a Germanic people who settled to the N. of the Western Goths, in the N. of France during the early part of the V. cent. A.D. Clovis, the first king of the Franks, drove the Goths out of France (481), the country taking its name from the conquerors, just as S. Britain (England) took its name from the invading Angles. Clovis became a Christian; was baptized at Reims (496); and was buried with his wife, Clotilda, in the Church of St. Geneviève, Paris, which she had built. This people was subsequently divided into the Austrasian and Neustrian Franks, betwixt whom there arose considerable hostility.

Sergeant, *The Franks* (1898).

FRANZ JOSEF LAND (82° 5′ N., 50° 70′ E.), archipelago in Arctic Ocean, consisting of Wilczek Land (E.), Zichy Land (W.), and many ice-covered islands with flat-topped hills. Arctic animals found, and water only open in summer. Discovered and partly explored in 1873–74 by Payer and Weyprecht; explored by Jackson-Harmsworth Expedition, 1894–97.

FRANZÉN, FRANS MIKAEL (1772–1847), Finnish (Swed.) poet.

FRANZENSBAD (50° 8′ N., 12° 20′ E.), watering-place, Bohemia, Austria; mineral springs.

FRANZOS, KARL EMIL (1848–1904), Russo-Ger. novelist.

FRASCATI (41° 48′ N., 12° 40′ E.), town, summer resort, prov. Rome, Italy; celebrated villas. Pop. 9915.

FRASER (50° N., 122° 30′ W.), river, British Colombia, Canada, formed by two branches uniting near Fort George; enters Gulf of Georgia; gold deposits; salmon-canning.

FRASER, ALEXANDER CAMPBELL (1819–), Scot. logician, metaphysician, and writer; b. Ardchattan, Argyllshire; ed. Edin. Univ.; editor, *North British Review*, 1850–57; prof. of Logic and Metaphysics at Edin. Univ., 1856–91; honoured by many universities; author of several books; authority on Berkleian philosophy.

FRASER, JAMES (1818–85), Anglican divine; ordained, 1846; bp. of Manchester, 1870; authority on education.

FRASER, JAMES BAILLIE (1783–1856), Scot. writer; travelled extensively in India and Asia Minor.

FRASER, SIR WILLIAM AUGUSTUS, Bart. (1826–98), Eng. politician; noted anecdotist, and author of interesting works on Wellington, Disraeli, and others.

FRASERBURGH (57° 41′ N., 2° W.,) seaport, Aberdeenshire, Scotland; herring fisheries. Pop. (1911) 10,574.

FRASERVILLE (47° 52′ N., 69° 35′ W.), watering-place, on St. Lawrence, Quebec, Canada.

FRATERNITIES, COLLEGE, see UNIVERSITIES.

FRATERY, the common eating-room of a friary.

FRATICELLI, name attached to certain rigorous groups of Franciscan order, who fl. XIII.–XV. cent's, and although condemned by John XXII. in 1318, founded ascetic colony in Sicily, exerting considerable influence there and in Italy; formed separate church, electing own popes; relentlessly persecuted in XV. cent., before end of which they finally disappeared.

FRATTAMAGGIORE (40° 55′ N., 14° 17′ E.), town, Naples, Italy; silkworms bred. Pop. *c.* 13,000.

FRAUD, act of imposture or deceit; defined by the jurist Pothier as 'Any kind of artifice by which one deceives another.'

FRAUENBURG (54° 21′ N., 19° 40′ E.), town, E. Prussia, Germany; has cathedral, and is seat of Catholic bp. of Ermeland.

FRAUENFELD (47° 33′ N., 8° 54′ E.), town, on Murg, Thurgau, Switzerland; machinery, textiles. Pop. (1910) 8377.

FRAUENLOB (XIII. cent.), pseudonym of Heinrich von Meissen, Ger. poet.

FRAUNHOFER, JOSEPH VON (1787–1826), Ger. optician; invented and improved many optical instruments, especially in regard to telescopic prisms and lenses; discovered the dark lines (which are called after him) in the spectrum of the sun.

FRAUSTADT (51° 47′ N., 16° 19′ E.), town, Posen, Germany; woollens, cottons. Pop. (1910) 7556.

FRÉCHETTE, LOUIS HONORÉ (1839–1908), Fr. Canadian poet and prose writer.

FRECKLES, small brown skin spots on exposed parts of the body; specially marked in summer; due to defective pigmentation.

FREDEGOND (d. 597), Frankish queen; an adventuress who became the wife of Chilperic I. By violent methods she removed all who stood in the way of her schemes, and eventually secured the throne for her s., Clotaire II.

FREDERIC, HAROLD (1856–98), Amer. novelist; author of *Illumination* and other stories.

FREDERICIA (55° 34′ N., 9° 45′ E.), seaport town, S.E. Jutland, Denmark, on Little Belt; formerly fortified; scene of defeat of Schleswig-Holsteiners by Danes, July 1849. Pop. 13,451.

FREDERICK (39° 23′ N., 77° 25′ W.), city, Maryland, U.S.A.; contains F. Coll.; flour-mills; canneries. Pop. (1910) 10,411.

FREDERICK I.-III., Holy Roman emperors.

FREDERICK I. (OF HOHENSTAUFEN), BARBAROSSA (*c.* 1123–90), emperor of Holy Rom. Empire (1152); endeavoured to appease territorial feuds in Germany; settled disputed succession to Denmark; undertook first Ital. expedition, 1154; received Lombard crown at Pavia; crowned emperor, 1155, by Adrian IV.; established Duchy of Austria, 1156; m. Beatrice of Burgundy, 1156; forced Boleslav IV. of Poland to recognise his overlordship. Diet at Besançon, 1157, saw rupture of momentary alliance between pope and emperor. During F.'s second Italian expedition, 1158–62, Milan was destroyed. After Adrian's death, 1159, F. set up anti-pope; Lombard League revived; F. captured Rome, but was defeated at Legnano, 1176; F. submitted to pope, 1177, and granted practical autonomy to Lombard cities, 1183; crushed Henry the Lion, 1180; secured union of Empire and Sicily by Treaty of Augsburg, 1184; drowned in Cilicia, 1190, while on Crusade. A brilliant statesman and brave general, F. was truly an 'imperialist Hildebrand.'

Testa, *History of War of Frederick I. against the Communes of Lombardy*; Prutz, *Kaiser Friedrich I.* (Danzig, 1871–74); Bryce, *Holy Roman Empire* (1907), chap. xi.

FREDERICK II. (1194–1250), emperor of Holy Rom. Empire; s. of Emperor Henry VI. by Constance of Sicily. After Henry's death, 1197, Sicilian and Ger. crowns were separated; Constance and Pope Innocent III. secured F.'s succession in Naples and Sicily; elected emperor, 1212, in opposition to Otto IV.; strove to make himself despotic in Sicily; founded Naples Univ., 1224. F. had promised Innocent III. to separate Sicily from Empire by investing his s. with it as a papal fief, and had also undertaken to go on a Crusade; delayed fulfilling these obligations, hence quarrel with Papacy; excommunicated, 1227; went on Crusade, 1228–29, and secured Jerusalem; made peace with pope at San Germano, 1230. F. made Sicily a centralised bureaucracy dependent upon himself, but left Germany to feudal anarchy; defeated revived Lombard League at Cortenuova, 1237; renewed breach with pope, 1239; Council of Lyons, 1245, deposed F., and hence war broke out; between 1245–50 F. strove to achieve ecclesiastical reform and establish a lay papacy. Brilliant, versatile, a shrewd, crafty statesman, but no warrior, F. was 'first of great modern kings.'

Huillard-Bréholle, *Historia Diplomatica Frederici Secundi* (Paris, 1852–61); T. L. Kington, *History of Frederick II.*

FREDERICK III. (1415–93), Duke of Styria and Carinthia; elected Emperor of Holy Rom. Empire, 1440; acquired Austria, 1463; driven from Vienna, 1485, by Hungarians; he was an inefficient ruler, and a cautious, timid diplomatist.

FREDERICK I.-VIII., kings of Denmark. F. I. reigned from 1523–33.

FREDERICK II. (1534–88), king of Denmark and Norway; b. Hadersleben; succ. to throne, 1536; m. Sophia of Mecklenburg, 1572; pursued policy of imperialism; ambitious, popular, able ruler.

FREDERICK III. (1609–70), king of Denmark; b. Hadersleben; m. Sophia Amelia of Brunswick-Lüneburg, 1643; succ. to Dan. throne, 1648; defeated by Charles X. of Sweden, 1658; by monarchical revolution, 1661, abolished privileges of nobles, made himself absolute and crown hereditary, and secured throne by professional army.

FREDERICK VIII. (1843–1912), king of Denmark; s. of Christian IX.; succ. 1906.

FREDERICK I.-III., kings of Prussia; F. III. became Ger. emperor.

FREDERICK I. (1657–1713), king of Prussia; became Elector F. III. of Brandenburg, 1688; founded Halle Univ., 1694; received title of king from Emperor Leopold, 1700; m. Sophia Charlotte of Hanover.

FREDERICK II., THE GREAT (1712–86), king of Prussia; s. of Fred. Wm. I., who conceived intense dislike for him and treated him harshly; betrothed to Elizabeth of Brunswick-Bevern, 1732; served in Polish Succession War; devoted himself largely to lit., 1735–40; succ. 1740; inherited a well-administered, skilfully organised despotism, a well-drilled army, and full treasury. F. developed his f.'s work; made Prussia a leading European power; from first showed spirit of liberalism. His two Silesian wars filled years 1740–4; Prussians invaded Silesia, 1740; F.'s aggression unjustifiable, but successful; Prussian infantry won Mollwitz, 1741; by Treaty of Berlin Austria yielded to Prussia Upper and Lower Silesia, and city and county of Glatz; in second war F. secured Silesia by Treaty of Dresden, 1745; by Convention of Westminster, 1756, F. became Britain's ally. F. overran Saxony, 1756, thus anticipating attack of his enemies, Austria and Russia, and beginning Seven Years War. F. fought tenaciously, despite great odds, and Peace of Hubertsburg, 1763, established Prussia's claim as a great power. In 1772 F. obtained Polish Prussia (except Danzig and Thorn) and part of Great Poland, which were rapidly assimilated with rest of monarchy. In Bavarian Succession War 1777–79, F. successfully contested Hapsburg claims; formed League of Princes, 1785. An opportunist, a philosopher despot, a great administrator, cynical, selfish, industrious, tolerant, F. left his country the first of Ger. States. But he had concentrated all government powers in himself, and thus hastened temporary decline of Prussia after his death.

Carlyle, *History of Frederick the Great* (1872); Reddaway, *F. the Great and Rise of Prussia* (1904).

FREDERICK III. (1831–88), king of Prussia and Ger. emperor; b. Potsdam; m. Princess Victoria of Great Britain, 1858; a strong Liberal; distinguished himself in war with Denmark and in wars of 1866 and 1870–71. F. acted as regent, 1878; succ. his f., March 1888, but, already smitten with a mortal disease, reigned only three months.

FREDERICK III. (1272–1337), king of Sicily; became regent, 1291; crowned king on renunciation of Sicily to the Church and Angevins by James of Aragon, 1296; fought against pope and Angevins throughout reign; courageous, capable administrator.

FREDERICK I. (d. 1440), Elector of Brandenburg; noted military leader and administrator.

FREDERICK I.-V., Electors Palatine of the Rhine.

FREDERICK I. (1425–76), Elector Palatine of the Rhine; famed for warlike qualities.

FREDERICK II. (1482–1556), Elector Palatine of the Rhine; patron of learning.

FREDERICK III., THE PIOUS (1515–76), succ. as Elector Palatine of Rhine, 1559; m. Maria of Bayreuth, 1537; championed cause of Protestantism.

FREDERICK IV. (1574–1610), Elector Palatine of the Rhine; noted for his encouragement of Protestantism.

FREDERICK V. (1596–1632), Elector Palatine of Rhine; m. Elizabeth, dau. of James I. of England; elected king of Bohemia, 1619; driven from Bohemia

and Palatinate, 1620; f. of Sophia, who m. Elector of Hanover and became mother of George I. of Britain. Cavalier leader, Prince Rupert, was his son.

FREDERICK I.-III., Electors of Saxony.

FREDERICK I., THE WARLIKE (1369–1428), Elector and Duke of Saxony; m. Catherine of Brunswick, 1402; founded Leipzig Univ., 1409; secured Duchy of Saxe-Wittenberg, 1423.

FREDERICK II. (1411–64), Elector and Duke of Saxony; known as 'the Mild'; succ. 1428; became, with his bro. William, joint-heir to kingdom of Thuringia, receiving Altenburg as his share; attempt made by Kaufungen, 1455, to abduct his two sons (*Prinzenraub*).

FREDERICK III., THE WISE (1463–1525), Elector of Saxony; founded Univ. of Wittenberg (1502), and was the patron and protector of Luther.

FREDERICK, THE HANDSOME, of Hapsburg (*c.* 1286–1330), Duke of Austria, 1306; defeated and captured by Louis the Bavarian at Mühldorf, 1322; claimed election as emperor of Holy Rom. Empire.

FREDERICK AUGUSTUS I. and II., kings of Saxony.

FREDERICK AUGUSTUS I. (1750–1827), Elector, afterwards (1806) king of Saxony; enlightened ruler; took part with Prussians in Jena campaign; subsequently faithful ally of Napoleon, who made him king and Grand Duke of Warsaw.

FREDERICK AUGUSTUS II. (1797–1854), became king of Saxony, 1836; m. (1) Caroline of Austria, 1819; (2) Maria of Bavaria, 1833; enlightened, liberal.

FREDERICK CHARLES, PRINCE (1828–85), Prussian soldier; grandson of Frederick William III.; present at battle of Schleswig, 1848; wounded at Wiesenthal; commander of 3rd army corps, 1860–70; won battle of Sadowa, 1866; displayed great tactical skill, though more often careless strategy, in Franco-Ger. War; reorganised Ger. cavalry.

FREDERICK HENRY (1584–1647), Prince of Orange; stadtholder; famous for soldierly and statesmanlike qualities.

FREDERICK, PRINCE OF WALES (1707–51), s. of George II.; m. Augusta of Saxe-Gotha, 1736; led opposition to government; pretentious, insincere.

FREDERICK WILLIAM I.-IV., kings of Prussia.

FREDERICK WILLIAM I. (1688–1740), king of Prussia; succ. 1713; gave Prussia a compact political organisation, efficient civil service, well-filled treasury, and well-drilled army; m. Sophia Dorothea of Hanover, 1706; obtained greater part of Gelderland, 1713, part of Pomerania, 1720, and struggled hard, though unsuccessfully, to secure Prussian succession to Berg and seigniory of Ravenstein; assisted Russia in Polish Succession War, 1734–35; encouraged colonisation. A keen politician, a conscientious, thrifty administrator, strong-willed, and passionate, F. W. founded Prussian greatness.

FREDERICK WILLIAM II. (1744–97), king of Prussia; succ. 1786; policy at first inspired chiefly by Wöllner, a Rosicrucian, who pursued obscurantist policy. F. W.'s foreign policy was not successful; intrigued with Turks against Austria; encouraged Belgian patriots, 1789; subsequently signed with Leopold the Declaration of Pillnitz, 1791, and took part in campaigns, 1792–93, but signed Treaty of Basel with Fr. Republic, 1795. Of feeble intellect and undecided nature, sensual, pleasure-loving; left State bankrupt and army decayed.

FREDERICK WILLIAM III. (1770–1840), king of Prussia; succ. 1797; m. Louise of Mecklenburg-Strelitz, 1793; defeated by Napoleon at Jena; had to surrender great part of his dominions by Treaty of Tilsit. 1807; compelled to join Napoleon in war against Russia; subsequently faithful ally of Emperor Alexander; weak, pious, good-hearted.

FREDERICK WILLIAM IV. (1795–1861), Prussian king; m. Elizabeth of Bavaria, 1823; succ. to throne, 1840; centralised government and pursued policy of religious toleration; behaved irresolutely in Berlin Revolution, 1848; refused to accept leadership of Federal Diet; his refusal of imperial crown, April 1849, postponed union of Germany. F. W. established Northern Confederacy; agreed to Olmütz Convention, 1850; attacked by paralysis, 1857, from which time his bro. was regent; romantic, idealistic, filled with notions of divine right.

FREDERICK WILLIAM, THE GREAT ELECTOR (1620–88); b. Berlin; succ. as Elector of Brandenburg, 1640; m. Louise Henriette of Orange, 1646; established personal government throughout his incongruous dominions; reorganised army and finances; definitely annexed Eastern Pomerania, 1653, and was acknowledged sovereign over Prussia by Treatics of Wehlau and Oliva, 1657, 1660; won battle of Fehrbellin, 1675, over Swedes. Brutal, unscrupulous, a skilful diplomatist and administrator, F. W. was real founder of Prussian State.

FREDERICKSBURG (38° 14′ N., 77° 33′ W.), city, Virginia, U.S.A.; contains Fredericksburg Coll. (1893); leather and woollen manufactures; scene of defeat of Federal forces by Confederates under Lee, 1862. Pop. (1910) 5874.

FREDERICTON (45° 58′ N., 66° 39′ N.), capital and port of New Brunswick, Canada, on St. John River; seat of Provincial Univ.; commercial centre; large lumber trade. Pop. (1911) 7208.

FREDERIKSHAVN (57° 26′ N., 10° 31′ E.), port, on Kattegat, Denmark; fish and dairy produce. Pop. 7000.

FREDONIA (42° 26′ N., 79° 20′ W.), village, New York, U.S.A.; wines, canned goods. Pop. (1910) 5285.

FREDRIKSHALD, FREDERIKSHALD (59° 8′ N., 11° 26′ E.), fortified seaport, Christiania, Norway, on Idde Fjord; near fortress Frederickstcen, at siege of which Charles XII. of Sweden was killed, 1718; timber, granite. Pop. (1910) 11,992.

FREDRIKSTAD, FREDERIKSTAD (59° 12′ N., 11° 15′ E.), seaport town, at mouth of river Glommen, Norway; timber; sawmills. Pop. (1910) 15,597.

FREE BAPTISTS, Amer. sect, founded *c.* 1779, under leadership of Benjamin Randall. Beliefs resemble those of Eng. Gen. Baptists.

FREE CHURCH FEDERATION, association of Nonconformist Churches in Britain, founded 1892; includes Methodists, Congregationalists, Presbyterians, Baptists, Friends, Free Episcopal Church of England. Objects: religious, social, and civil co-operation; advocacy of special interpretation of New Testament doctrine.

FREE CHURCH OF ENGLAND, founded 1844, with Prot. purpose; has two bp's.

FREE CHURCH OF SCOTLAND, became a separate religious body in 1843, when by DISRUPTION 396 ministers and prof's withdrew from Established Church of Scotland, number afterwards increasing to 474. Ultimate cause of secession was intrusion of State in ecclesiastical matters, especially in appointment of ministers, patronage having been revived in 1712, while right of rejection was in 1838 refused by Court of Session and House of Lords; civil courts had also power to reverse judgments and censures of ecclesiastical courts, to interfere with, or prevent, services, and generally to coerce them in many ways. Immediate cause was refusal of Commons to redress any grievances of Scot. Church in 1843. At following Assembly, protesting party retired, and marching to Tanfield Hall, Edinburgh, held there the first Assembly of F. C., under Dr. Chalmers as moderator. On May 23, Act of Separation was signed, by which all benefices were surrendered. Within four years F. C. had 700 churches and many schools. Sustentation fund was formed on system whereby each congregation helped in supporting whole body. Doctrines and constitution of Established Church were retained, except regarding State control, spiritual independence being asserted. A union was effected between United Presbyterians and majority of F. C. in 1900; henceforward known as

UNITED FREE CHURCH. Minority, who did not join union, retained name of Free Church; church property after legal proceedings, in which the House of Lords reversed the judgment given in favour of the U.F. Church by the Courts of Session, was allocated between the two bodies. The little Church retained old Presbyterian doctrines in original form, and has some 200 congregations, chiefly in Highlands.

Sydow, *The Scottish Church Question* (1845); Logan, *The United Free Church* (1681–1906); Innes, *Free Church Union Case*.

FREE CHURCHES, as historic societies, are offshoots of the Reformation. Under the title are grouped to-day all the Reformed Churches which are free from State establishment; they have arisen at different times, and represent the expression given in corporate action to spiritual movements, more especially among the English-speaking peoples. The 'Separatists' in the Elizabethan age, the Friends in the Commonwealth, the Methodists in the XVIII. cent., varying as they did in their doctrine and in the circumstances of their origin, are grouped together under this name. For long there was no effective co-operation between them, but their deepening fellowship is significant. They are alike in their freedom from State control, and in their denial of sacerdotalism they claim to reassert the original ideals of the Apostolic Church, and in their positive witness to preserve the spiritual principle from the bondage to machinery.

There are three main varieties—Episcopal, Presbyterian, Congregational. Of these **Presbyterianism** stands for 'the rule of an official aristocracy exercising collective control through an ascending series of ecclesiastical courts.' This form of government may be shared by Churches of different creeds; some Unitarian Churches, for example, are named Presbyterian, and Methodism in its ecclesiastical aspect comes under the same grouping. But the name is claimed for their distinctive title by a large number of Churches with a common confession as well as a common method of government. Such Churches are found in many countries. In 1899 at a conference held by the Reformed Churches holding the Presbyterian system sixty-four Churches were represented and sixteen others were known, not formally in the alliance. Of the Presbyterian Churches among the English-speaking peoples, all but the ESTABLISHED CHURCH OF SCOTLAND would be classified as 'Free.' Since 1899 rapid movements towards union among these Presbyterian Churches have taken place, and now it is claimed that in every country within the Brit. Empire, except in Scotland, there is a united Presbyterianism.

Before the Act of Uniformity (1662) the Presbyterians in England were not opposed to Establishment, but to Prelacy; during the Long Parliament, indeed, an attempt was made, though never completed, to establish Presbytery as the national system. The rigour of the Clarendon Code drove many known as Presbyterians, some of whom had been in favour of a moderate Episcopacy, into the ranks of Nonconformity, and the word became somewhat vague in its connotation. Of the Presbyterian Churches formed in the years following the eviction of the clergy in 1662 the greater part became Arian; and there are few Churches of the Presbyterian order in England to-day which date from that period. During the XIX. cent. many congregations were gathered throughout England into Churches, which in 1876 were united under the title of the PRESBYTERIAN CHURCH OF ENGLAND. They were composed at first chiefly of Scots resident in England, but they have grown rapidly in their influence upon Eng. thought and life.

Presbyterianism found a congenial soil in Scotland, where it has remained the chosen order of Church government since the Reformation. Presbyterian Nonconformity in Scotland was of comparatively late and slow growth. In the XVIII. cent. various movements of this nature are chronicled, as, for example, the Glasites and the Secession Church, divided into the Burgher and Anti-Burgher sections, afterwards reunited to form the United Secession Church. Side by side grew the Relief Church, and the two united in 1847 to form the UNITED PRESBYTERIAN CHURCH. In 1843 the FREE CHURCH OF SCOTLAND came into being, when 470 ministers, led by Dr. Chalmers, left the National Kirk in protest against its patronage system, and in defence of the voluntary principle. In 1900 the Free and the United Presbyterian Churches united to form the UNITED FREE CHURCH; a small body of dissentients retained the title Free Church. The ecclesiastical situation in Scotland has always had a character of its own. Latterly (1912) overtures have been made which give promise of an improved relationship between the Established and the United Free Churches.

In Wales the CALVINISTIC METHODIST CHURCH is Presbyterian, and is represented at the General Councils of the Churches of this order. In U.S.A. and the Dominions Presbyterianism has been a 'reproduction and further development' of Presbyterianism in Europe.

Presbytery as a method of government stands midway between Episcopacy and Congregationalism. It corresponds in things ecclesiastical to the republican order in things political. It has been defined as 'government by presbyters under Calvinistic and Puritan ideas, and for national ends.' 'Every congregation sends its ministers and one or two elders to the local presbytery. In the larger churches several presbyteries send representatives to a synod, and then there is a General Assembly.' This highest court, Synod or Assembly, decides finally all appeals, but it must keep in touch with the elders of the congregations and they with the members.

The doctrine of Presbyterianism is in line with the Calvinist tradition. The Westminster Confession of Faith is accepted still by the Presbyterian Church as its standard. The Confession is strictly Calvinistic in its doctrine of election and in its entire range of doctrine, but everywhere freedom to restate the intellectual content of the Faith is claimed, and not denied.

Congregationalism.—For their principle Congregationalists claim to return to the earliest days of the Church, and to find a sanction in the promise of Christ that He would be where two or three were gathered in His name. On the analogy of political institutions, Congregationalism corresponds to the pure democracy enjoyed by some Gk. cities.

As a modern hist. movement it dates back to the Elizabethan age, though there were isolated churches before that time. There were in England three strains of Puritans. One section was in favour of 'reformation without tarrying for any.' These were named *Separatists*, and their greatest preacher was Browne, after whom they were called *Brownists*. They were suppressed by Whitgift with great cruelty. Many took refuge in Holland, whence in James I.'s reign some returned to England, and others, the Pilgrim Fathers, sailed from Leiden for New England. Those who returned to England came to great power, though never numerous, during the Civil War; Cromwell and his army were 'Independent' in their sympathies, and during the Commonwealth the Congregationalists grew in influence and in numbers. But it is from 1662 that these Churches date their chief advance. By force of circumstances many, ejected through their refusal to accept the Act of Uniformity, were driven into Congregationalism. Since that time the Congregational Churches have had an acknowledged place in the national life, and have been pioneers in the struggle for religious equality. Till recently there has not been a close federation of these Churches, but now through the county unions and the CONGREGATIONAL UNION provision is made for a greater co-operation, and Congregationalism has also become conscious of its world-wide mission; and international Councils are held from time to time.

In Scotland the Congregational Churches owed much

to the preaching of the Haldanes, the fervent preachers, who were Free Church 'in practice rather than in theory' (Selbie); but it was Robert Haldane who, with his followers, founded the SCOT. CONGREGATIONAL UNION. This in 1897 united forces with the Evangelical Union.

It is impossible to overestimate the influence of Congregationalism in the history of U.S.A. through the refugees who carried the doctrine; in their zeal for education and their high standard for their age of toleration and their democratic creed they affected greatly the constitution and temper of the States. Throughout the world there are, roughly speaking, a million and a half communicants in these churches, but their influence has always gone much beyond their own borders; since they are the least denominational of all the Churches.

Each Congregational church is an autonomous and completely equipped Church. The decisive authority rests with the meeting of the church members, who elect the minister, and their executive, usually known as deacons or elders. They have no creeds binding upon the members, though many confessions of faith have been compiled to set forth the things held in common. It is not easy, therefore, to describe the theological position of Congregationalists. Historically their churches are in the Calvinist line; but they claim a wide latitude of opinion, and their general position is a broad evangelicalism.

Baptists are the Congregationalists who believe in the baptism of adult believers, and claim that in this they are loyal to the practice of the Apostolic Church. In their history as a community they are to be divided from the *Anabaptists*, the Reformers of the Reformation, from whom they were distinct both in origin and doctrine. There is evidence for the existence in England of those holding Baptist views in early XVI. cent. But the General Baptist Church begins with Thomas Helwys, who, returning from Amsterdam, formed a Church in Newgate Street in 1611 or 1612. The Baptists named 'Particular' trace their origin back to 1638. These two communions existed side by side till 1891, when the General Baptist Association resolved to amalgamate with the other Baptists. The GENERAL BAPTISTS were Arminian, the PARTICULAR BAPTISTS, who became the greater body, Calvinistic. There are to-day (1913) more than 7,000,000 adult members of Baptist churches; in 1905, the Baptist World Alliance was formed for mutual help and comfort. Among the Baptists in union with the Alliance are churches in many of the countries of Europe.

In America there are about 6,000,000 members, who trace their witness back to original emigrants. Of these one of the great figures was Roger Williams, founder of the colony of Rhode Island, 'the first government in Christendom to grant absolute religious equality to all its citizens.'

The emphasis laid upon adult baptism is not for the Baptists a little matter; it indicates their belief in the 'centrality of conversion.' 'The Baptist doctrine has always been not to exalt baptism, but to exalt conversion.' Among the honourable traditions of the Baptists are their early understanding of toleration and liberty of conscience, and their part in the foreign missionary enterprise. William Carey, the pioneer of modern missions in India, was a Baptist, and the inspiration of his work was felt in every Protestant Church.

There have been two streams of doctrine in the Baptist communion—the one Arminian, the other Calvinist. Many of the Arminian Baptists during the XVIII. cent. became Unitarians; and it is clear that the main stream has been Calvinistic. In their general position they occupy a more conservative position than the other wing of Congregationalism.

It is claimed by Baptist scholars that it is possible in the present day to see in various parts of Europe exactly those conditions and processes at work which we know at various periods obtained in this country. And an increasing sympathy is felt by other Baptists for their brethren in Russia and Austria and other countries.

Like the Congregationalists, the Baptist Churches have drawn nearer together in their Church order. And many also cherish the hope that a union may be possible between the two communions which are so near to each other.

The Society of Friends.—During the Commonwealth GEORGE FOX bore his witness to the truths in which he himself had found peace. It was a time when traditionalism prevailed in many of the churches, and FOX, in his own religious experience, had found none to speak to his condition, but was led to believe in the 'inner light,' and the presence of the Spirit of God. He was a great mystic, coming in a time when many were waiting for one to lead them into a spiritual faith. Wherever he preached, hearers were convinced. These were gathered after a time into societies, and were known as 'Friends.' The depth and the tenacity of their faith were proved by their endurance under persecution during the Commonwealth, and still more in the reign of Charles II.; Fox himself and Margaret Fell were themselves heroic sufferers.

In harmony with their cardinal belief they were led to dispense with the outward ordinances of the churches, such as the official ministry and the sacraments. In worship they met in simple dependence upon the Spirit. They also acted in literal obedience to the teaching of the Gospels, as they read it; they would not take oaths, and refused to enter military service. In their personal lives they practised a scrupulous speech and a simplicity of dress. They have been foremost from the first in all humanitarian movements.

The Society has not abandoned in any important way the ideal of George Fox. Its organisation is akin to that of the family rather than to any system of State government. It has never been a large body, but its intensive influence has been great both in England and in America.

The Society has been the pioneer in the Adult School movement. To many other educational movements it gives invaluable help, and in an age of unsettlement in religious thought the witness of the Friends to the inward work of the Spirit is most helpful, and their advocacy of international peace has power far beyond their borders.

Methodism.—In the early years of the XVIII. cent. religion was at a low ebb in England; materialism and rationalism were strong, both in the Establishment and among the Dissenters. The neglect of religion was found in every rank of society. In England a great revival was the result of the preaching of Wesley and Whitefield. WESLEY began his apostolic labours in 1738, after he had passed through many experiences, culminating in the meeting in which 'assurance was given him that Christ had taken away his sins.' From that time the evangelistic labours began which have led not only to Methodism, by which the direct results are called, but to a new warmth in all the Churches. Wesley and Whitefield were supremely practical; they preached to all men scriptural holiness and an experimental religion; they went to those who were forgotten and almost heathen, and found a ready response. Wesley was a Churchman, and never contemplated a separate Church, but rather the direction of the Church of England to her evangelistic mission. Methodism, both in its origin and its history, stands rather for an evangelistic passion than for any distinctive Church system, or even doctrine. WHITEFIELD, also in the days of the Revival, preached with amazing power both in England and America. These preachers were often bitterly opposed by the vicious section of the community and many of the clergy. But they helped to revive in England a living faith; they prepared the way for new movements in philanthropy, as well as for the foreign missionary work. They gave, moreover, a practical answer to many of the attacks made upon Christianity.

To-day there are nearly 9,000,000 Methodists; the

divisions among them are not important, and they are becoming fewer in number through the frequent union of Churches.

Wesleyan Methodists.—In 1743 Wesley drew up rules for the Societies gathered together as the result of the Great Revival. In 1784 he gave legal form to the constitution of the new society. The 'Legal Hundred' was formed, in which authority in discipline and administration was vested. But so long as Wesley lived there was no Methodist Church separated from the Established Church. After his death, slowly and reluctantly the Societies were driven to permit the sacrament to be administered in their buildings, and this meant their establishment as a Church. The Wesleyan Methodists have kept with close fidelity to the organisation prescribed by their founder; they still have their itinerant preachers, annual Conference, and class-meeting; and their standards are still Wesley's sermons and notes on the New Testament.

Calvinistic Methodists.—When Wesley and Whitefield were preaching in England, Howel Harris and others evangelised Wales. They were, like Wesley, members of the Established Church, but, failing to find an opening for their work, they formed the Methodist Association Meeting in 1743. In the Revival there was a sharp distinction between the Arminians, such as the Wesleys, and Calvinists, such as Whitefield. To distinguish the Meeting when the Wesleyan Methodists began their work in Wales, the title 'Calvinistic' was adopted. Not till 1811 were preachers ordained and the Church fully organised. Its stronghold is still among the Welsh. Its government is Presbyterian.

Primitive Methodists.—In 1807 two Methodist laymen, Bourne and Clowes, filled with evangelistic zeal, organised 'a camp-meeting' for open-air preaching. The Methodist Conference pronounced against this innovation; the two evangelists refused to give way, and were expelled from the Society. In 1811 the first meeting of the seceders was held, and the Primitive Methodists came into being. The movement grew rapidly, through the amazing devotion of its poor members. Its claim was not to depart from Methodism, whose standards it held, but to represent the true evangelistic spirit of Methodism. In its Conference the lay element out-numbers the ministerial by 2 to 1. Its work has been remarkable, especially in the rural and mining districts.

Unitarianism is a convenient name used to cover certain departures from the general view of the Church upon the Person of Jesus Christ. Though in its original use it defined the attitude of those who denied the Doctrine of the Trinity, to-day it is used more widely. Unitarians to-day hold for the most part a humanitarian view of Christ, but refuse to bind themselves, as the older Unitarians did, to dogmatic statements of belief; and membership in their churches does not involve the acceptance of any dogma, either Trinitarian or Antitrinitarian. There are many Unitarians in doctrine outside the Church of that name. It has been found necessary to organise Churches for this witness, chiefly in Poland, Transylvania, England, and U.S.A.

Modern Unitarianism is a development from Socinianism and Arianism. It was found in England long before the earliest Unitarian Church was formed by LINDSEY, in London, 1773; many of the Presbyterians, Independents, and General Baptists had adopted Arian views before that date, but Priestley and Lindsey were pioneers of the Church which took the name. In 1825 the Brit. and Foreign Unitarian Association was formed. In New England the Unitarians have a great tradition; and in the U.S.A., as a whole, their power is strong and recognised. Apart from their religious tenets they have taken a considerable part both in England and America in the struggle for civil and religious liberty.

Congregationalism* (1907); Townsend and Workman, *A New History of Methodism*; Macphail, *The Presbyterian Church* (1908); Turner, *The Quakers* (1912).

FREE IMPERIAL CITIES, see IMPERIAL CITIES.

FREE PORTS.—(1) Ports where no custom duties are charged; (2) ports with a 'zone' within which commerce is conducted without exaction of import or export duties; (3) in China, ports open to foreign trade, but not 'open' in fiscal sense. F. p's arose owing to desirability of having central markets on trade routes, and refuges from pirates; greatly diminished by unification of customs and raising of tariff walls in European countries. F. p. zones exist at Hamburg and Copenhagen among other places; among colonial f. p's are Hong Kong and Singapore.

FREE REED VIBRATOR, in musical instruments, a thin strip of metal fitting into a narrow slit, fixed at one end, and able to vibrate freely when driven by a current of air, thus producing musical sounds; used in harmonium, organ, concertina, accordion, etc.

FREE TRADE.—Name given to an economic principle, chief exponent of which is Great Britain. The term has passed through various meanings in economic history, at one time being identified with smuggling; but since the teaching of the Manchester school of economists (Cobden as chief) it has come to mean the opposite of Protection (*q.v.*), and is generally understood to be the policy which favours the abolition of any restrictions on international trade. The economic doctrine on which Free Trade is based is a root one of exchange. In exchange one person for the time being places more value on the article he seeks after than on the article he offers in exchange. Applied to its fullest in international trade, it is supposed that the greatest amount of wealth will only accrue to everybody concerned when there is the greatest possible freedom of trade. This position, it is claimed, applies with especial force to the economic position of Great Britain, chiefly dependent as she is for her corn-supply from trans-oceanic sources. Against Free Trade it is urged that the doctrines of the Manchester school have become obsolete, in view of the growth of foreign textile trades, and that only by protecting herself by tariffs against foreign competition will Brit. predominant trade supremacy be maintained. Federations like U.S.A., German Empire, Australia, etc., have Free Trade within the Federation, but have protective tariffs against the outside world.

FREEDMEN'S BUREAU, established by Act of U.S. Congress (1865–72) to deal with negro problem; by it North tried to educate and help blacks; management necessitated discontinuance of bureau.

FREEHOLD (40° 20′ N., 74° 28′ W.), town, New Jersey, U.S.A.; manufactures carriages; canneries; scene of indecisive battle between Washington and British, June 28, 1778. Pop. 3300.

FREEHOLD, system of land tenure by which the holder has the sole right of disposal, and which, if he dies intestate, descends to the heir-at-law.

FREELAND (41° 2′ N., 75° 55′ W.), town, Pennsylvania, U.S.A.; coal-fields. Pop. (1910) 6197.

FREEMAN, one who holds special privileges in a borough or livery company; one who is not a slave.

FREEMAN, EDWARD AUGUSTUS (1823–92), Eng. historian; b. Harborne, Staffordshire; elected Fellow of Trinity Coll., Oxford (1845); devoted his life to literary work; served on royal commission on ecclesiastical courts, app. 1881; regius prof. of Modern History, Oxford, 1884; spent much time abroad after 1886, owing to ill-health; d. of smallpox at Alicante. An indefatigable writer and great investigator, besides many other works he wrote *History of the Norman Conquest* (1867–76); *Historical Essays* (1872–79); *William Rufus* (1882); *History of Sicily* (unfinished; 1891–94).

FREEMASONRY, in its present form, is of English origin, and dates from the beginning of the XVIII. cent. All the stories and traditions of an

ancient f. have been investigated, and prove to be without evidence to justify belief. The old claim, that f. dates from the building of the Temple at Jerusalem, and that King Solomon was its first grand master, has been dismissed as being entirely without proof. The assemblies or lodges of masons included in the XVI. cent. members who were not operative, but speculative or theoretical, and the earlier records of masons' guilds are still extant. But f. proper, as it is known to-day throughout the world, dates from the inauguration of the mother Grand Lodge on June 24, 1717, in London. On that day, four old lodges of speculative, not operative, masons set up the Grand Lodge, which was to be the governing authority over all masonic bodies. Henceforth there was no shadow of connection between operative masons and f., and no masonic lodge was admitted to be in the fraternity which did not acknowledge the authority of the Grand Lodge. A Grand Lodge was set up in Ireland in 1725, and in Edinburgh in 1736, and from these three Grand Lodges all the lodges throughout the world are derived. The first 'regular' lodge in U.S.A. was that at Boston, Mass., in 1733; meetings had been held at Philadelphia earlier, but without a Grand Lodge authorisation. Nowhere outside Britain has f. thrown out such wide roots; there are now nearly 1½ million members in fifty Grand Lodges.

F. is secret, and its operations are largely of a friendly, benevolent nature. The promotion of social intercourse amongst its members, 'the practice of moral and social virtue,' and the exercise of charity are amongst the objects of f. By a peculiar grip of the hand and the exchange of certain passwords, members are enabled to recognise one another, and the existence of masonic lodges in every civilised land enables a travelling freemason to find social intercourse, and, possibly, assistance in all sorts of places. Three degrees of masonry — apprentice, craftsman, master-mason—are the rule of the English Rite, but the ancient Scottish Rite has thirty-three degrees, and the English Rite has been enlarged to thirteen degrees in America. As f. requires secrecy of its members, it is banned by the R.C. Church, and while the Grand Orient Lodge of France has struck out belief in God from the tests of membership, and has been the active centre of anti-clerical and anti-Christian propaganda on the Continent, British freemasons are strictly non-political and unsectarian, confining their energies to social intercourse and the exchange of friendly and benevolent services, and subscribing large sums of money to the various masonic charities. Women are not admitted to Masonic Lodges, but an Order of the Eastern Star, which includes men and women, and is akin to f. in its objects and its ritual, has been in existence since the middle of the XVIII. cent.

Baxter, *Text-Book of F.* (6th ed., 1910), *F., its History, Principles, and Objects* (4th ed., 1909).

FREEPORT (42° 17′ N., 89° 33′ W.), city, Illinois, U.S.A.; carriages, hardware. Pop. (1910) 17,567.

FREESOIL PARTY, political party, U.S.A., founded (1847) to oppose extension of slavery into the Territories; merged in new Republican Party (1856).

FREESTONE, composed of sand or grit, used in arch. for mouldings, etc., and so called because it can be easily worked.

FREETOWN (8° 29′ N., 13° 14′ W.), capital, Sierra Leone, Africa, on Sierra Leone R.; good harbour; Brit. coaling-station; contains governor's residence, barracks, and cathedral; exports palm-oil, rubber; unhealthy climate. Pop. 34,463.

FREGELLÆ (41° 40′ N., 13° 30′ E.), ancient town, Italy, on Liris, near Via Latina.

FREIBERG, FREYBERG (50° 55′ N., 13° 20′ E.), town, Saxony, Germany, near Mulde; centre of silver- and lead-mining district; seat of famous mining academy; has fine old cathedral, museum, antiquities; gold and silver work; chemicals; scene of victory of Prussians over Austrians, Oct. 1762. Pop. (1910) 36,237.

FREIBURG (50° 52′ N., 16° 20′ E.), town, on Polsnitz, Silesia, Germany; watch-making. Pop. (1900) 9759.

FREIBURG (Switzerland), see FRIBOURG.

FREIBURG IM BREISGAU (47° 59′ N., 7° 51′ E.), chief city of Baden, Germany; beautifully situated on Dreisam, 11 miles from Rhine, on western side of Black Forest. Notable features are magnificent Gothic cathedral (XII. cent.; with paintings by Holbein and Hans Baldung, fine stained-glass windows, and tower, 386 ft.); Rathaus (XVI. cent.); famous univ. (1457); Kaufhaus (Merchant's Hall); library, museums, theatre; grand-ducal and archiepiscopal palaces, and ruined castle of Zähringen in vicinity; chief industries—sewing-silk, cotton-thread, buttons, beads, bell-founding, machinery, paper; founded by Duke of Zähringen, 1091; passed to Austria, 1368; repeatedly taken by French; annexed to Baden, 1806. Pop. (1910) 83,324.

FREIDANK (XIII. cent.), Ger. didactic poet and strolling singer.

FREIENWALDE (52° 48′ N., 14° E.), watering-place, on Oder, Brandenburg, Prussia; mineral springs. Pop. (1910) 8635.

FREIGHT, see AFFREIGHTMENT.

FREILIGRATH, FERDINAND (1810–76), Ger. poet; a voluminous writer of political verse; also translated Eng. poetry.

FREIND, JOHN (1675–1728), Eng. physician; served in the army in Spain and Flanders, and afterwards practised medicine with much success in London; entered Parliament, but was imprisoned for a short time in the Tower for his supposed Stewart sympathies; author of works of travel and history of medicine.

FREINSHEIM, JOHANN (1608–60), Ger. scholar and critic.

FREISCHÜTZ (Freeshooter), legendary hunter who obtained from Devil magic bullets, six unerring, but the seventh guided by the Devil; opera by Weber.

FREISING (48° 25′ N., 11° 44′ E.), town, on Isar, Bavaria, Germany; XII.-cent. cathedral; with Munich gives title to R.C. abp.; breweries. Pop. (1910) 14,948.

FRÉJUS (43° 26′ N., 6° 45′ E.), town, ancient *Forum Julii*, Var, France; bp.'s see; founded by Julius Cæsar, 44 B.C. Pop. 4156.

FRELINGHUYSEN, FREDERICK THEODORE (1817–85), Amer. statesman; b. Millstone, New Jersey; grad. (1836) and studied law; Senator (1866); Sec. of State (1881).

FREMANTLE (32° 3′ S., 115° 45′ E.), seaport, at mouth Swan River, W. Australia; port of call for mail steamers; iron foundries; sawmills. Pop. (1911), including suburbs, 20,847.

FRÉMIET, EMMANUEL (1824–1910), Fr. sculptor.

FREMONT.—(1) (41° 28′ N., 96° 33′ W.) city, Nebraska, U.S.A., on Platte; grain. Pop. (1910) 8717. (2) (41° 21′ N., 83° 8′ W.) city, Ohio, U.S.A.; on Sandusky River; natural oil and gas fields; agricultural implements; canneries. Pop. (1910) 9939.

FRÉMONT, JOHN CHARLES (1813–90), Amer. explorer; b. Georgia; of Fr. and good Virginian descent; entered Charleston Coll. (1828), but expelled; July 1838 saw him assisting Nicollet, Fr. explorer, in survey of upper Mississippi and Missouri lands; surveyed lower Des Moines River, 1841; m. Senator's dau. and secured government influence; next work on frontier beyond Missouri, and later Pacific coast; served in U.S. Senate, 1849; governed Arizona, 1878–81.

FREMSTAD, OLIVE (c. 1870–), Swed.-Amer. soprano.

FRENCH, NICHOLAS (1604–78), bp. of Ferns, Ireland; owing to political troubles, in exile from 1651.

FRENCH CONGO, see FRENCH EQUATORIAL AFRICA.

FRENCH EQUATORIAL AFRICA, FR. CONGO, Fr. territory in W. Central Africa; enclosed by Gulf of Guinea, Ger. Kamerun, Sahara, Anglo-

Egyptian Sudan, Belgian Congo, and Portug. Kabinda; it consists of Gabun Colony, Middle Congo, and Ubangi-Shari-Chad Colony, including Wadai and Kanem; total area, 500,000 sq. miles; coast region swampy; climate unhealthy; immense forests with valuable wood; chief rivers — Gabun estuary, Ogowe, Ubangi, Congo, Mbomu, Shari, Kuilu; principal towns—Brazzaville (Middle Congo cap.), Libreville (Gabun cap.), Fort-de-Possel (Ubangi-Shari-Chad cap.), Loango (seaport), Franceville, Abeshr, Mão; communication mainly by rivers; principal products and exports—ivory, timber, palm oil, rubber, coffee, cocoa, vanilla, tobacco, gum, copal; gold, copper, and iron are found; administered by gov.-gen. and lieut.-gov's.

Gabun district discovered by Portuguese, 1470; first Fr. settlement, 1843; Libreville founded, 1849; Cape Lopez ceded to France, 1862; Fr. possessions gradually extended on coast and inland, especially after the explorations of Savorgnan de Brazza (*q.v.*), 1875–78, 1879–80; the name Fr. Congo was changed into Fr. Equatorial Africa, and in 1911, in return for practical admission of Fr. protectorate over Morocco, France ceded to Germany some 100,000 sq. miles of her Congo territory. Pop. *c.* 9,000,000.

Rouget, *L'expansion Coloniale au Congo français* (1906).

FRENCH GUIANA, see GUIANA.

FRENCH GUINEA (10° N., 15° W.), territory, West African coast, between Portuguese Guinea and Sierra Leone, including the inland territories of Dinguiray, Siguri, Kouroussa, Kankan, Kissidugo, and Beyla; area, 95,000 sq. miles; coast flat with unhealthy climate; Konakry capital and principal port; chief products and exports—india-rubber, palm oil, nuts, cattle; railway between Konakry and the Niger; regularly visited by Fr., Ger., and Brit. steamers; formerly the old colony of the Southern Rivers (Rivièrs du Sud); Futa Jallon with chief town, Timbo, annexed, 1891. Pop. (1911) 1,700,000.

Machat, *La Guinée française* (1905).

FRENCH INDIA, INDES FRANÇAISES, the remnant of Fr. possessions in India, consisting of five scattered *établissements* or provinces, viz. Pondicherry, Karikal, Mahé, Yanaon, and Chandernagore. F. I. sends 1 deputy and 1 senator to Paris; governor is stationed at Pondicherry. Area, *c.* 200 sq. miles. Pop. (1911) 282,000.

Malleson, *History of the French in India* (1893).

FRENCH INDO-CHINA, INDO-CHINE, embraces the five states — Annam, Cambodia, Cochin-China, Tongking, and Laos (*qq.v.*); gov.-gen. resides at Hanoi (*q.v.*). Kwang-Chau-Wan has been leased from China by France. Area, *c.* 310,000 sq. miles. Pop. (1911) 17,000,000.

Russier and Brenier, *L'Indo-Chine française* (1910).

FRENCH LANGUAGE and **LITERATURE**, see FRANCE.

FRENCH POLISH, a liquid polish for wood, made of shellac dissolved in methylated spirit; for red polish, Bismarck brown is added.

FRENCH REVOLUTION, THE, was an integral part of a process begun long before. Its origin may be traced back to Louis XIV.'s policy of centralisation. The nobility enjoyed privileges divorced from responsibility; the clergy also existed as a wealthy order, exempt from taxation, monopolising all high offices. But the privileged classes had grievances in their exclusion from government, local and central; politically, they were non-existent. The king and his officials governed. People were oppressed by unjust taxation; their misery was aggravated by recurrence of famine and bad manipulation of corn trade. But economic distress was not the sole cause of revolution. The Fr. peasant, though wretched, was less so than any other peasant of Europe, but he was intelligent and independent enough to resent traditional restrictions. The cleavage between classes was serious by the time of Louis XVI.'s accession (1774). The Fr. middle class, composed of educated people, smarted under the privileges of a nobility that did nothing to justify these privileges. The spirit of discontent found expression in materialistic and sceptical philosophy; Voltaire and Montesquieu gave forcible expression to the vague feelings of the people. The *Encyclopédistes* (Diderot, D'Alembert, etc.), popularised doctrines of scepticism and materialism, and Rousseau became the prophet of the proletariat. Contempt and hatred for established institutions of Church and State grew rapidly.

Fr. political economists taught similar doctrines. Blanqui declares that the F. R. was only the theory of physiocrats carried into action. A further cause of revolution was the establishment of the Amer. Republic, but political reasons played a prominent part. France in 1789 was very weak internally. Fr. people had outgrown the system of government; there was a chronic national deficit, and finances were hopelessly disordered. Louis XVI. (*q.v.*) was not the man for the hour, though he attempted some reforms. Turgot became Director of Finances, but his reforms, including of necessity retrenchment on part of court and taxation of privileged classes, roused opposition, and he was dismissed (1776). Necker, a Genevese banker, followed Turgot's method and had to resign (1781). A reaction followed and speedily led to revolution. The extravagance and interference in State affairs of Marie Antoinette (*q.v.*) accentuated government's difficulties, and the king stupidly embarked on Amer. War. Fr. finance became for a time irremediable. The privileged classes opposed all reform; in turn Fleury, D'Ormesson, Calonne retired discomfited; Assembly of Notables (summoned 1787) did nothing. The king had to recall Necker, who restored partial confidence in the government.

Assembly of States General (which had never met since 1614) met at Versailles, May 5, 1789, but, being mainly composed of amateurs, theorists, and radical innovators, failed in reconstruction. *Résultat du Conseil* (Dec. 1788) had allowed *Tiers État* double representation. The question of *vote par ordre* or *vote par tête* was ended by decision of Commons to constitute themselves the *National Assembly*. Oath of Tennis Court (June 20), by which NationalAssembly swore to frame a new constitution for France, began the F. R. The king attempted to assert himself by a *Séance Royale*, but found his authority defied, and, yielding to persuasion, he collected troops round Paris, dismissed Necker, and made Marshal de Broglie commander-in-chief. This drove Paris to insurrection. Riots occurred and National Guards were formed. The Bastille (*q.v.*) fell (July 14), and the king had to recall Necker and visit Paris. Although the aristocracy surrendered feudal privileges (Aug. 4), mistrust of Parisians deepened. A mob of women and National Guards marched to Versailles (Oct. 6), and, bringing royal family to Paris, practically imprisoned them in Tuileries.

Power had passed into hands of people, and many nobles emigrated. The National Assembly set to work to frame a new Constitution. France was divided into departments, property of Church nationalised, 'Civil Constitution of Clergy' established, and a paper currency issued. Central Authority became disorganised. Mirabeau, the greatest statesman of revolutionary crisis, tried to keep France from international complications, but he died (April 1791). Royal family fled from Paris (June 21), but was arrested at Varennes, and remained with suspended authority till Assembly resigned (Sept.). *Girondist* (q.v.) ministry declared war on Austria (April 1792). Loopold had issued Manifesto of Padua (July 6, 1791), the sequel to which was Declaration of Pilnitz (Aug. 27). Fr. attack on Belgium failed, and invasion of Tuileries (June 20, 1792) marked the final breach between king and people. *Jacobins* (q.v.), exasperated by Brunswick's threatening manifesto, and by the ill-success of the war, rebelled, Aug. 10, 1792. Power fell into the

hands of Jacobins and a revolutionary *commune*. Massacres of royalist prisoners (Sep.) followed on Prussian advance on Paris. On day of Cannonade of *Valmy* (Sep. 20) a National Democratic Convention superseded the Legislative Assembly. Its first act was to declare France a republic. Convention conducted the war successfully; Dumouriez defeated Austrians at *Jemmapes* (Nov.) and occupied Belgium. The war now went hand in hand with revolutionary propaganda. Louis XVI. was guillotined at Paris (Jan. 1793), and a great coalition of European countries declared war on the French, who were driven from Belgium. Results of these reverses were the formation of the first Committee of Public Safety and the insurrection of Vendée (*q.v.*). Revolutionary Tribunal of Paris was established (March 1793), Girondins were overthrown, and civil war raged. Republican constitution was promulgated, and, July 1793, Great Committee of Public Safety came into power.

Its rule was period of *Reign of Terror*. Marie Antoinette was guillotined (Oct. 1793). Robespierre's fall (July 1794) ended Reign of Terror, and the *Thermidorians* came into power. Insurrections of 12th *Germinal* (April 1, 1795), raised by Jacobins, and 1st *Prairial* (May 20) were followed by Constitution of the Year III. Treaties of Basel (1795) restored France to a recognised position amongst European nations. Insurrection of 13th *Vendémiaire* failed to dislodge an unpopular Convention, which, however, dissolved itself in Oct. The Directory and two Legislative Councils assumed power. Bonaparte became practically supreme by revolution of 18th *Brumaire* (1799), and he was proclaimed emperor (1804). Results of Revolution were recognition of equality, of liberty, maintenance of doctrine of popular sovereignty, and growth of spirit of nationality.

Carlyle, *The French Revolution* (1837); Michelet, *Histoire de la Révolution Française* (Paris, 1847–62); Morse Stephens, *History of the French Revolution* (1886, 1892); Sorel, *L'Europe et la Révolution Française* (Paris, 1885–1904); Johnston, *French Revolution* (1909).

FRENCH REVOLUTIONARY WARS, see PENINSULAR WAR, NAPOLEON, FRANCE, *History*.

FRENCH WEST AFRICA, AFRIQUE OCCIDENTALE FRANÇAISE, name given since 1895 to a general government uniting the Fr. possessions in N.W. Africa; includes Senegal, Mauretania Protectorate, territories of Senegambia and of the Niger, Fr. Guinea, Ivory Coast, and Dahomey; area, *c.* 1,500,000 sq. miles; pop. (1911) 11,500,000; capital, Dakar, seat of gov.-gen. Fr. Congo, formerly part of Fr. W. Africa, is now included in Fr. Equatorial Africa.

FREPPEL, CHARLES EMILE, Fr. R.C. prelate; bp. of Angers, 1870; prominent in Chamber of Deputies from 1880.

FRERE, SIR HENRY BARTLE EDWARD (1815–1884), Brit. administrator; joined Bombay Civil Service, 1834; private sec. to Gov. of Bombay, 1842; political resident at court of rajah of Satara, 1844; administrator, 1848; chief commissioner of Sind, 1850; won distinction during Mutiny; Gov. of Bombay, 1862. After work in Zanzibar over slave trade and a tour with Prince of Wales, 1875, F., now a baronet and G.C.B., went to S. Africa as High Commissioner; made premature attempt to unite S. Africa; failure culminated in Zulu War; recalled, 1880.

FRERE, JOHN HOOKHAM (1769–1846), Brit. diplomatist and author; b. London; ed. Eton and Caius Coll., Cambridge; Under-Sec. of State (1799); envoy at Lisbon (1800) and Madrid (1802); P.C. (1805); incurred censure over Moore's retreat to Corunna; best literary works verse translations of Aristophanes.

FRÈRE, PIERRE ÉDOUARD (1819–86), Fr. artist; *genre* subjects.

FRÈRE-ORBAN, HUBERT JOSEPH WALTHER (1812–96), Belgian statesman and writer; b. Liège; joined Liberals; finance minister (1848–52); pres. of council and foreign minister (1878).

FRÉRET, NICOLAS (1688–1749), Fr. scholar and critic.

FRÉRON, ÉLIE CATHERINE (1719–76), Fr. literary controversialist; satirised by Voltaire.

FRÉRON, LOUIS MARIE STANISLAS (1754–1802), Fr. revolutionist; s. of Elie F. (*q.v.*).

FRESCO, painting upon plaster walls, with such colours as resist the effects of lime. True f. is worked upon fresh-laid damp plaster, upon which the figure of the cartoon is traced and coloured.

FRESHWATER (50° 39′ N., 1° 30′ W.), watering-place, W. of Isle of Wight, England.

FRESHWATER SHRIMP, see under MALACOSTRACA.

FRESNEL, AUGUSTIN JEAN (1788–1827), Fr. scientist; introduced compound lenses as substitutes for mirrors in lighthouse work. He studied laws of aberration of light and polarised rays.

FRESNILLO (23° 10′ N., 102° 42′ W.), town, Zacatecas, Mexico, Central America; silver and copper mines. Pop. 6309.

FRESNO (36° 40′ N., 119° 50′ W.), city, California, U.S.A.; raisins, grain, and wine; chief industries, lumbering and mining. Pop. (1910) 24,892.

FRESNOY, CHARLES ALPHONSE DU (1611–65), Fr. artist and art writer.

FRET, heraldic term to denote a design formed of two crossed bars dexter and sinister with interlaced square or mascle.

FREUDENSTADT (48° 27′ N., 8° 25′ E.), town, summer resort, Württemberg, Germany; cloth manufacturers. Pop. (1910) 8462.

FREUND, WILHELM (1806–94), Ger. philologist.

FREWEN, ACCEPTED (1588–1664), Eng. cleric; bp. of Lichfield and Coventry, 1644; abp. of York, 1660.

FREY, FREYA (Norse myth.), goddess of love; dau. of Njorth and sister of Freyr; sometimes confused with Frigga.

FREYBURG (51° 13′ N., 11° 46′ E.), town, Prussian Saxony, Germany; vineyards. Pop. 3341.

FREYCINET, CHARLES LOUIS DE SAULCES DE (1828–), Fr. statesman and engineer; entered Senate, 1876; held ministerial rank (with short breaks), 1877–99; Premier, 1886; member of Fr. Academy since 1890.

FREYCINET, LOUIS CLAUDE DE (1779–1842), Fr. navigator; explored S.W. coast Australia; also neighbourhood of S. Pacific.

FREYJA, brother of Freyr; Norse goddess of love and spring.

FREYR, FREY (Norse myth.), god of love, peace, and fertility.

FREYTAG, GEORG WILHELM FRIEDRICH (1788–1861), Ger. philologist.

FREYTAG, GUSTAV (1816–95), Ger. novelist and dramatist; hist. studies and modern realistic stories.

FRIAR, member of a mendicant order such as the Dominicans, Franciscans, Austin Friars, and Carmelites, as distinct from the older monastic orders.

FRIAR'S BALSAM, see BENZOIN.

FRIBOURG, FREIBURG (46° 48′ N., 7° 9′ E.), canton, Switzerland; admitted into the confederation, 1481; surface hilly, traversed by river Saane; chief pursuit agriculture; prevailing religion, R.C.; language mostly Fr.; dairy-farming, watch-making, straw-plaiting. Area, 646 sq. miles. Pop. 139,654.

FRIBOURG (46° 48′ N., 7° 9′ E.), town, Switzerland, capital of canton F., on Saane; with narrow streets, numerous old houses and monasteries; St. Nicholas church (XIII.-cent.: famous organ), Rathaus, univ. (1889), and fine suspension bridge, 807 ft. long; chief industries—sewing-machines, agricultural implements; founded by Duke of Zähringen, 1178, as German city; passed to Austria, 1277, to Savoy, 1452; admitted to Swiss Confederation, 1481; became independent, 1477. Pop. (1910) 20,300.

FRICTION is the force called into play when the surface of one solid moves or tends to move

relatively to that of another solid when both are in contact. Suppose that a brick-shaped body is placed on a rough horizontal table and that a force is applied to it horizontally so that it tends to move as a whole in a certain direction; if the force is less than a certain amount, the body will not move owing to the f. between it and the table. Friction acts in a direction opposite to that in which motion tends, and up to a certain amount is sufficient to prevent one body's sliding over another; this amount is known as the *limiting f.* If now the force applied to the body be increased, motion ensues, but the f. called into play does not increase beyond the limiting f.

It has been proved (1) that the amount of f. in any case bears a certain proportion to the pressure exerted between the surfaces in contact, and that this proportion, termed the COEFFICIENT OF F., is constant for the same pair of surfaces; (2) that the amount of f. is independent of the extent of the surfaces in contact; and (3) that it is nearly independent of their relative speed. F. is less when the speed is greater, and this is ascribed to an increase in the thickness of the layer of air between the two surfaces. Consequently, the f. should be quite independent of the relative speed when the rubbing surfaces are in a vacuum, and experiment shows that this is the case. The reduction of f. in moving machinery is a matter of great practical importance. Generally speaking, it is effected by polishing and lubricating the surfaces. F. is also experienced by bodies moving through gases and liquids. See HYDROMECHANICS.

FRIDAY (Lat. *Dies Veneris*) derives its name from Scandinavian divinity, Frigga (*q.v.*); a day of abstinence from flesh meat (in R.C. Church), and (according to superstition) of ill-luck; day of Crucifixion; supposed day of Adam's Creation; Muhammadan Sunday.

FRIEDBERG.—(1) (48° 22′ N., 11° E.) town, Bavaria, Germany; scene of defeat of Austrians by Fr., Aug. 1796. Pop. 3150. (2) (50° 19′ N., 8° 43′ E.) town, Hesse-Darmstadt, Germany. Pop. (1910) 9520.

FRIEDEL, CHARLES (1832–99), Fr. chemist; synthesised benzene homologues, ketones, and aldehydes. He formed minerals artificially by damp and pressure, and wrote on crystallography.

FRIEDLAND.—(1) (50° 56′ N., 15° 3′ E.) walled town, Bohemia, Austria; ancient castle; textiles. Pop. (1910) 6892. (2) (53° 40′ N., 13° 33′ E.) town, grand-duchy Mecklenburg-Strelitz, Germany; cloth manufactures. Pop. (1910) 7872. (3) (54° 28′ N., 21° E.) town, E. Prussia, where Napoleon defeated Russians and Prussians, 1807. Pop. (1910) 3027.

FRIEDMANN, MEIR (1831–1908), Hungarian Rabbinical scholar.

FRIEDRICH, JOHANN (1836–), Ger. Catholic theologian; prof. at Munich; strongly opposed papal infallibility with much hist. and theol. learning; excommunicated, 1871.

FRIEDRICHRODA (50° 50′ N., 10° 33′ E.), town, summer resort, Saxe-Coburg-Gotha, Germany. Pop. (1910) 4714.

FRIEDRICHSDORF (50° 15′ N., 8° 38′ E.), town, Hesse-Nassau, Germany; tanneries; Huguenot settlement (1687).

FRIEDRICHSHAFEN (47° 39′ N., 9° 29′ E.), town, on Lake of Constance, Württemberg, Germany; summer residence of royal family. Pop. (1910) 7041.

FRIEDRICHSRUH (53° 32′ N., 10° 22′ E.), village, Holstein, Prussia; residence of Prince Bismarck.

FRIENDLY ISLANDS, see TONGA ISLANDS.

FRIENDLY SOCIETIES.—Societies existing for purpose of relieving sickness and its consequent distresses, providing proper burial, and insurance against accidents, death, etc. In the United Kingdom they are regulated by F. S. Act (1896), which limited their powers and scope. They exist chiefly for benefit of poorer classes, and probably originated in the burial club. In some cases they have become merged in trade unions, and their purely benevolent purposes are subservient to political propaganda. Historically in United Kingdom F. S. cannot be traced back to mediæval gilds, but that they originated as some form of reaction to the suppression of religious gilds and to Elizabethan Poor Law can hardly be doubted. Movement received fresh impetus from societies of foreign refugees (1703 and 1708). Example of thrift thus offered was recognised by Rose's Act (1793), and many societies date from that period. In 1819 an Act ensured greater financial stability than before. In 1829 another Act was passed, John Pratt (1797–1870), a barrister, was app. to regulate the F. S. He eliminated the unsound and did much to promote the genuine societies. Further Acts (1834, 1846, and 1850) were passed regulating and supervising, and again in 1855 legislation attempted to deal with problem of proper supervision combined with due latitude. By Acts of 1875 and 1896 societies are now under efficient registrars, who have powers of inspection, right of refusing registration, and power to call a general meeting of inquiry. Under these regulations F. S. have flourished. Societies were divided by Royal Commission into thirteen classes, ranging from a large premier society like Manchester Unity of Oddfellows down to local cattle insurance societies. Total membership of registered societies in U.K. is fourteen millions, with funds amounting to over £50,000,000. By the Insurance Act of 1912 'approved societies' were allowed to administer the benefits under the Act.

F. S. are also met with in many colonies, and are there under similar legislation. In European countries societies have developed on different lines. They have lost much of their original independence, and have in many cases become mere insurance societies under government security. In U.S.A. they are numerous, and are modelled closely on those of England.

G. F. Hardy, *Essay on Friendly Societies*; Gordon-Smith, *Progress and Position of Friendly Societies.*

FRIENDS, SOCIETY OF, see FREE CHURCHES.

FRIES, ELIAS MAGNUS (1794–1878), Swedish botanist, especially interested in cryptogamia.

FRIES, JAKOB FRIEDRICH (1773–1843), Ger. philosopher; prof., Heidelberg, Jena; connects Kantian and Scot. schools; world of sense the object of knowledge; supra-sensible, of rational faith; the manifestation of the supra-sensible in the sensible, of presentiment.

FRIES, JOHN (d. 1825), Amer. agitator; leader of the 'Fries Rebellion' (1798) against heavy taxation.

FRIESLAND, VRIESLAND, ancient *Frisia* (53° 5′ N., 5° 50′ E.), province, Netherlands, on N.E. side Zuider Zee; surface flat, part below level of sea; coasts protected by dikes; exports horses, cattle, dairy produce; capital, Leeuwarden. Area, 1278 sq. miles. Pop. 364,415. See FRISIANS.

FRIEZE.—(1) An Irish woollen cloth, with nap on outer side; (2) in arch., central portion of the entablature of a column.

FRIGATE, originally a swift Mediterranean craft, using sail and oar; name afterwards applied to swift full-rigged ships in Brit. navy carrying all guns on one deck.

FRIGATE BIRDS (*Fregata*, or *Tachypetes*), marine fowls which obtain most of their food by stealing the prey of other birds; strong, hooked beak, bifurcated wings, and slender body; *Fregatus aquila* found in northern temperate waters sometimes reaches 4 feet in length; *F. minor* inhabits the Indian and Pacific Oceans.

FRIGGA (Norse myth.), wife of Odin; goddess of sky, domesticity, and lower world; gave name to 'Friday'; sometimes confounded with Frey (*q.v.*).

FRIGIDARIUM, cooling apartment in ancient Roman baths.

FRIIS, JOHANN (1494–1570), Dan. statesman and patron of learning.

FRIMLEY (51° 18′ N., 0° 45′ W.), village, on Blackwater, Surrey, England; near Bisley.

FRIMONT, JOHANN MARIA PHILIPP, COUNT OF PALOTA (1759–1831), Austrian general.

FRISCHES HAFF (54° 25′ N., 19° 35′ E.), lagoon, E. and W. Prussia, Germany; separated by tongue of land from Baltic, but joined by channel.

FRISCHLIN, PHILIPP NIKODEMUS (1547–90), Ger. poet, dramatist, and scholar.

FRISI, PAOLO (1728–84), Ital. scientist; wrote treatise on figure of earth; held many professorships; introduced lightning conductors into Italy.

FRISIAN ISLANDS, a chain in North Sea off Dutch and Ger. coasts, between Zuider Zee and Jutland. *W. Frisian Islands* (Tessel, Vlieland, Terschelling, etc.), belonging to Holland; *E. Frisian Islands* (Borkum, Norderney, Juist, etc.), and *N. Frisian Islands* (Sylt, Heligoland, etc.), mostly Pruss.; gradually being submerged; dangerous to navigation.

FRISIANS, a Teutonic people akin to Angles and Saxons, dwelling on lowlands now covered by the Zuider Zee; joined in Anglo-Saxon invasion of Britain, and occupied district known as Mercia, between Humber and Thames. Of all Teutonic languages Frisian has always been most closely akin to English.

FRITH, or **FRYTH, JOHN** (*c.* 1503–33), English Prot. reformer; lived in Germany, but returned to England, 1532; arrested and burnt, 1533.

FRITH, WILLIAM POWELL, R.A. (1819–1909), Eng. artist; hist. and genre subjects and portraits; painter of 'The Derby Day'; wrote *Autobiography*.

FRITZLAR (51° 8′ N., 9° 17′ E.), town, on Eder, Hesse-Cassel, Germany; cathedral; first seat in Hesse of Christianity introduced by St. Boniface, 732.

FRIULI (46° 18′ N., 12° 45′ E.), district, ancient *Forum Julii*, N. Italy; formerly independent duchy, now included in modern Udine and part of Austrian districts Görz, Gradisca, and Idria.

FROBEN, JOANNES (d. 1527), Ger. scholar and printer.

FROBISHER, SIR MARTIN (*c.* 1535–94), Eng. admiral and explorer; conceived project of discovering a North-West passage to Cathay at early age; sailed in command of small expedition, 1576; reached Labrador; following years commanded larger expeditions under queen's patronage, but occupied himself with securing supposed gold ore, rather than attempting N.W. passage; knighted for services in Armada, 1588; d. from wound received at Fort Crozon.

FROEBEL, FRIEDRICH WILHELM AUGUST (1782–1852), Ger. educationist. See EDUCATION.

FROGS (*Ranidæ*), tailless Amphibians, including about 450 species found the world over. There is a metamorphosis in development, through gilled and tailed tadpole stages, which resemble newts, the tail being absorbed, the breathing changing from gill breathing to lung breathing, the blood circulation from fish-like to that of the adult, the so-called mouth 'sucker' and horny jaws being replaced by a well-developed mouth, and the four limbs pushing their way into prominence. F's are aquatic, arboreal, or purely terrestrial. Amongst the first are the EDIBLE F. (*Rana esculenta*) of Europe, the Brit. GRASS F. (*R. temporaria*), and the large N. Amer. BULL F. (*R. catesbiana*), while the FLYING F's of Malay (*Rhacophorus*) parachute from tree-tops with large webbed feet. From true f's the OBSTETRIC F's (*Alytes*), with eggs attached to limbs of male, and the Tree F's (*Hyla*) differ in breastbone structure.

FROGMORE, palace in Windsor Park, purchased by Queen Charlotte (1800). Adjacent is the Royal Mausoleum of Prince Consort and Queen Victoria.

FROG-SPIT, see CUCKOO-SPIT.

FRÖHLICH, ABRAHAM EMANUEL (1796–1865), Swiss poet and fabulist.

FROHSCHAMMER, JAKOB (1821–93), Ger. philosopher and theologian; b. at Illkofen; prof. of Philosophy, Munich, 1855; founded *Athenäum* newspaper, maintaining independence of science from religion; excommunicated, 1871. F. wrote *Über die Freiheit der Wissenschaft*, 1861, and other works.

FROISSART, JEAN (1338–*c.* 1410), Fr. chronicler; b. Valenciennes; s. of a painter of armorial bearings; visited England, 1356; Avignon, 1360; and in 1361 returned to England to push his fortunes at court of Queen Philippa, bringing with him a book of verse chronicles, his first attempt at hist. composition. F. enjoyed queen's bounty several years, his verses and romances being much applauded. During this time he wandered freely in Scotland, Brittany, France, Italy, gathering information for his chronicles. He far excelled older generation of historians in picturesque detail and literary genius, but lacked precision and exactness; recorded brilliant tournaments, fêtes, and banquets of Edward's court, and the exploits of Eng. knights, in courtly language, viewing nations and individuals from point of view of chivalry and glorifying chivalric ideals. After death of Philippa he found a patron in French-loving Wenceslaus of Brabant, and became curé of Lestines. Subsequently he became chaplain to Gui, Count of Blois, and Canon of Chimay. That he visited Flanders is clear from lengthy account of Flemish troubles in his chronicle. He visited S. France, 1389, and was welcomed as a chronicler by Count of Foix. After his return to Valenciennes, Count Robert of Namur became his patron. He revisited England, *c.* 1406. He is said to have died in poverty at Chimay.

As a critical historian F. stands condemned, but as a painter of the life and manners of his age he is unsurpassed.

Madame Darmesteter-Robinson, *Froissart* (Eng. trans., 1895).

FROME (51° 14′ N., 2° 19′ W.), market town, on Frome, Somersetshire, England; art metal works; woollen cloth. Pop. (1911) 10,901.

FROMENTIN, EUGÈNE (1820–76), Fr. artist and writer; excelled in N. African subjects; partly autobiographical novel, *Dominique*.

FROMMEL, GASTON (1862–1906), Swiss religious philosopher; prof. of Theol., Geneva, 1894–1906. Insisted on man's moral dependence on God.

FRONDE, THE, outbreak of constitutional factiousness and personal ambition, causing civil war in France (1648–52), and having as sequel war with Spain (1653–59); hatred to Mazarin, chief factor of revolution. Paris Parlement refused to register an *octroi* duty (1648), and demanded constitutional reform. Mazarin arrested leader, but infuriated Parisians compelled court to release him and accept charter of reform. Nobility took leadership of movement from Parlement; intrigues prevailed, and civil war devastated France; but divisions arose amongst Frondeurs. Condé was defeated (1652), and joined enemies of France. Failure of F. proved that the only practical party in France was the monarchical one.

FRONTENAC, LOUIS DE BUADE, COMTE DE (1620–98), Fr. colonial administrator; entered army, becoming colonel, 1643, and field-marshal, 1646; app. gov. of Canada (Sept. 1672); recalled in 1682, owing to quarrels with Intendant and Church, but sent back to Canada and warmly welcomed by colonists, 1689; repulsed attack on Quebec, 1690; conducted campaign against Iroquois, 1695; a brave, energetic administrator, choleric, but very capable. See CANADA: *History*.

FRONTINUS, SEXTUS JULIUS (*c.* 40–103 A.D.), gov. of Britain (76–8); wrote on aqueducts and fortification.

FRONTO, MARCUS CORNELIUS (II. cent. A.D.), Rom. rhetorician and grammarian; consul (143); tutor of Marcus Aurelius; disciples formed school of Frontoniani.

FROSINONE (41° 38′ N., 13° 22′ E.), town, ancient *Frusino*, Rome, Italy. Pop. 10,000.

FROSSARD, CHARLES AUGUSTE (1807–75), Fr. general; defeated at *Forbach* (1870).

FROST is the visible frozen vapour found on exposed surfaces. It can only occur when surface temperature falls below 32° F., the freezing-point of water.—**Frostbite**, gangrene, or death of a portion of the tissues of the body, due to severe cold stopping the circulation in a part, especially of the extremities, or to

inflammation through sudden thawing of a frozen part. The frozen parts are thawed very gradually, or, if gangrene has already occurred, the dead portion is kept free from organisms by weak carbolic dressings, till it separates and healing takes place.

FROST, WILLIAM EDWARD, R.A. (1810–77), Eng. artist.

FROSTBURG (39° 39′ N., 78° 56′ W.), town, Maryland, U.S.A.; coal-fields. Pop. (1910) 6028.

FROTH-FLY, see CUCKOO-SPIT.

FROTHINGHAM, OCTAVIUS BROOKS (1822–95), Amer. divine and writer; advocated abolition of slavery; radical in views; wrote *Beliefs of Unbelievers.*

FROUDE, JAMES ANTHONY (1818–94), Eng. historian; b. Dartington, Devon; ed. Westminster and Oriel Coll., Oxford; elected Fellow of Exeter Coll., 1842; came under influence of Tractarian movement of which his bro., Richard Hurrell F., was a leader; hence associated with Newman; religious opinions became shaken, and after publication of *Nemesis of Faith* (1848) was forced to resign fellowship; thereafter contributed largely to *Westminster Review* and *Frazer's Magazine*; edit. Mrs. Carlyle's *Letters*, and wrote *Life of Carlyle*; finished *History of England* in 1870; prof. of Modern History, Oxford, 1892; hist. work characterised by brilliant style, attractive narrative, but by partiality and inaccuracy. *Life*, by Herbert Paul (1906).

FRUCTOSE, see SUGAR.

FRUGONI, CARLO INNOCENZIO MARIA (1692–1768), Ital. lyric poet.

FRUIT.—When the female organs of a flower are fertilised the most important result of the process is the production of a seed; but usually the ovule from which the seed develops is not the only part of the flower to be affected: the seed vessel or ovary is frequently stimulated to fresh growth and modification, and even the part of the stalk—*receptacle*—on which are inserted the organs of the flower, may be caused to take on a new appearance or structure. The total result of all three processes is a *fruit.* This conception of the f. causes us to include under the term objects like the tomato and marrow, more generally regarded as vegetables, or like the grain of corn, usually termed a seed.

F's are classified in the first place according as they open at maturity to liberate the contained seeds or not. Those which open are variously termed *capsule*, e.g. of the foxglove; *legume*, e.g. of the pea; *silique*, e.g. of the mustard—the two latter being included in the term *pod*; the distinctions rest on the number of seed vessels in the fruit and the manner in which the latter opens. F's which do not open may be either dry or juicy. The dry f's are termed *nuts*, different types being recognised. But certain dry f's, although they do not open to liberate their seed, break up into distinct parts; such are the f's of the carrot family and of the mallow. The juicy f's are of very various structure. In the *berry* the whole of the wall of the seed vessel is fleshy, *e.g.* gooseberry, orange, tomato. In the *drupe* the inner layer of the f. wall is stone-like, *e.g.* plum, cherry. In the apple and pear the fleshy part is really the receptacle enclosing the root of the f.; while in the strawberry the fleshy part is again the swollen receptacle, this time bearing numerous small fruitlets on its surface. The fig is an example of an *aggregate f.*, developing not from a single flower but from an inflorescence. It must be mentioned that in some cases a f. is formed subsequent to fertilisation but without seeds—sultana raisins, bananas; while in the fig and seedless apples no fertilisation takes place.

Of great interest are the adaptations shown by the f. for securing dispersal of the seeds. F's which open frequently do so with considerable violence and scatter the seed. Examples are the whin and broom, the pods of which may be heard exploding on a warm summer day. Frequently the f. is provided with wings, by means of which it is kept floating in the air and may drift to a considerable distance—the ash, elm, and maple are good examples; while in the dandelion family the f. is provided with a tuft of hair which serves the same purpose. The burrs have hooked hairs which hang on to passing animals. Finally, we have those f's classed as fleshy which form the food of birds and other animals; the seed passes unscathed through the animal, and is deposited at a spot distant from the parent.

Fruit-Growing.—From these fleshy f's have arisen our cultivated f's by a process of selection aided by careful culture which has produced the enormous number of varieties at our disposal to-day. F.-farming is practised on an enormous scale in America, where very large areas of suitable land are treated uniformly with one or few species. In Britain and in Europe generally more variety is displayed. Fruit-growing in Britain is very largely of the market-garden type. Besides this, however, there are considerable orchards which, while they cannot compete with the Amer. growers, still provide many fine sorts which are much sought after. In particular, the Eng. apple orchards are able to produce the apples best adopted for the preparation of cider.

FRUIT BATS, see FLYING FOXES.

FRUIT-PIGEONS (*Carpophaginæ*), large sub-family of pigeons, chiefly found from India to New Zealand; damage fruit-crops.

FRUMENTIUS (c. 300–60), Abyssinian Christian missionary; consecrated bp., 326.

FRUNDSBERG, GEORG VON (1473–1528), Ger. soldier and imperialist leader; organised Landsknechte in Netherlands. Pavia (1525) was largely his victory.

FRUSTULE, see DIATOMACEÆ.

FRUYTIERS, PHILIP (1627–66), Flem. artist and engraver.

FRY, SIR EDWARD, G.C.B. (1827–), Eng. judge; s. of Joseph F.; judge of High Court (Chancery Division), 1877–83; Lord Justice of Appeal (1883–92); arbitrator in S. Wales colliery dispute (1898), Grimsby fishery dispute (1901), L. & N. W. Ry. employees' deadlock (1908); Ambassador Extraordinary to Hague Peace Conference (1907); has pub. *Treatise on Contracts, British Mosses, Studies by the Way.*

FRY, ELIZABETH (1780–1845), Eng. social reformer; promoted prison reform throughout Europe, and secured great improvements in Brit. hospital system and treatment of insane.

FRY, JOSEPH (1728–87), Eng. Quaker doctor; founder of the Bristol cocoa firm, J. S. Fry & Sons.

FRYING, see COOKERY.

FRYXELL, ANDERS (1795–1881), Swed. historian.

FUAD PASHA (1814–69), Turk. soldier and statesman.

FU-CHAU, FUCHOW, FOOCHOW (26° 7′ N., 119° 20′ E.), city, Fu-kien, China, on Min; was made free port in 1842; large transit trade with interior; exports tea, timber, textiles; contains arsenal; important mission station. Pop. *c.* 650,000.

FUCHS, LEONHARD (1501–66), Ger. physician; prof. of Medicine at Ingolstadt (1526), and afterwards at Tübingen (1535); author of several medical works and an important illustrated work on botany.

FUCHSIA, natural order *Onagraceæ*; native to Central and South Africa, was first grown in Kew Gardens in 1788. Forest plants with brightly coloured pendant and funnel-shaped flowers, they are called after Leonhard Fuchs (*q.v.*). The fruit is a berry. Many forms, cultivated by selection and hybridisation, exist. Most are dwarf shrubs, but some reach 12 ft. in height.

FUCHSINE, or **MAGENTA,** oxidation product of anilin oil; crystals with intense green metallic lustre, which dye wool and silk directly, and cotton after mordanting, a brilliant magenta.

FUCINO, LAGO DI, ancient *Lacus Fucinus* (42° N., 13° 35′ E.), former lake, Aquila, Italy; drained by Prince Torlonia (1862), and now under cultivation.

FUCUS, see ALGÆ.

FUEGO, see TIERRA DEL FUEGO.

FUEL, carbonaceous matter which, when burnt, gives off heat; may be gaseous, liquid, or solid.

Gaseous Fuel.—The most important, coal gas, gives a blue, smokeless flame if mixed with air just below the point of combustion. Gas fires are made by filling an ordinary grate with asbestos and placing the gas flames at the bottom, the asbestos soon becoming red-hot. Water gas, obtained by decomposing water, is sometimes used for industrial purposes.

Liquid Fuels are mainly animal, vegetable, or mineral oils. Of the mineral oils petroleum, shale oil, and creosote are most commonly used. Attempts have been made to heat steam boilers with liquid f., especially those in connection with naval vessels. Some systems use sprayed oil, others vitalise it by superheated steam. Petroleum is the most common oil used and gives a much greater heat than coal, bulk for bulk; but apart from this, liquid f. has many other advantages. In storing it occupies less space than coal; it is smokeless when burnt; it abolishes stoking. The troublesome labour of coaling would also be dispensed with, as the liquid fuel would simply be pumped into the vessel's reservoirs from barges alongside the ship. Liquid f. would also allow of a warship being equipped even though the sea were rough, a state of things which is impossible as long as coal is used.

Solid Fuels.—Peat, compressed masses of decayed vegetable matter, is largely used by peasants, but it does not give much heat. Sometimes it is compressed and soaked in tar or oil and used in the form of bricks. Wood is little used in Britain, but in France and Germany its use is more common. Wood of compact texture, *e.g.* oak, beech, or elm, burns slowly, while soft, light woods, as lime, pine, chestnut, or deal, burn quickly and give more heat. Wood charcoal is extensively used in metallurgy and in chemistry; it kindles rapidly, emits no vapours, and leaves only a few light ashes.

Coal is the most important of all f's, and is of vegetable origin (see COAL). A variety known as lignite, or brown coal, presents a woody appearance to the eye; it is neither peat nor coal, occurring in the later geological deposits. Coke is used for domestic purposes and for producing intense heats for melting metals. Anthracite coal is a smokeless variety and has 90 % carbon; it is very compact and brittle.

Artificial Fuels, such as 'briquettes,' are manufactured from coal dust and clay, lime or coal tar. Sometimes sawdust is used. The bricks are compressed into pieces about 6 in. square and used for domestic purposes. This form of fuel was manufactured by the Chinese ages ago from coal dust, clay, and bitumen. See ENGINE.

FUENTE OVEJUNA (38° 14′ N., 5° 31′ W.), walled town, Cordova, Spain; honey and fruit. Pop. 11,777.

FUENTERRABIA (43° 21′ N., 1° 45′ W.), town, Guipúzcoa, Spain, at mouth of Bidasso; formerly important frontier fortress; frequently besieged. Pop. 4345.

FUERO, word used in Spain in sense of right, privilege, or charter; derived from *fora*, by which established common law of occupied district was recognised by Romans. In X. cent. word *forum* emerges in sense of privilege. Earliest *fuero* extant is one granted to Leon by Alphonso V. (1020). Only *fueros* of Navarre and of the Basque survive till modern times.

FUERTEVENTURA (28° 25′ N., 14° W.), one of the Canary Islands, Atlantic Ocean. Area, 665 sq. miles. Pop. 11,669.

FUGGER, famous German family of merchants and bankers. Founded by John Fugger, a weaver of Graben, near Augsburg, whose son (d. 1408), became by marriage a citizen of Augsburg, and began a linen trade there. Business increased enormously during next generation of F's. They rendered great services to Hapsburgs; made large loans to Maximilian I., who pledged to them county of Kirchberg and lordship of Weissenhorn. Under Emperor Charles V. family reached zenith of its power and wealth.

FUGITIVE SLAVE LAWS, the laws passed by U.S. Congress between 1793 and 1850 to deal with escapes of slaves, especially with regard to their passage into non-slaving States. The owner could at first reclaim the fugitive, the decision in case of contested status of the slave being in the hands of any Federal or State magistrate. In 1824 Indiana passed a law giving right of jury trial to fugitive slaves, and this example was widely followed. The most drastic of these laws was the 1850 Compromise Measure, which led to much confusion and friction, and powerfully contributed to the outbreak of the Civil War.

FUGLEMAN, a guide; particularly a military drill guide, or file-leader.

FUGUE (Lat. *fuga*, flight), a musical composition of at least two voices in which 'subject' (principal melody) and 'answer' keep recurring, harmonised by laws of counterpoint. Greatest f. writers: Bach (instrumental), Handel (vocal). See Prout's *Fugue* (1891) and *Fugal Analysis* (1892).

FÜHRICH, JOSEPH VON (1800–76), Austrian artist.

FUJI-SAN, FUJI YAMA (35° 21′ N., 138° 43′ E.), loftiest mountain, Japan (12,400 ft.); dormant volcano; place of pilgrimage.

FU-KIEN, FO-KIEN (26° 30′ N., 118° E.), S.E. maritime province, China, bordering Che-Kiang, Kwang-tung, and Kiang-si; surface generally mountainous; chief river, the Min; principal products—tea, fruit, grain, sugar; ports, Fu-chau, Amoy, Funing. Area, 43,500 sq. miles. Pop. c. 22,000,000.

FUKUI (36° 10′ N., 136° 15′ E.), town, Nippon, Japan, paper. Pop. 50,396.

FUKUOKA (33° 36′ N., 130° 20′ E.), town, N.W. coast Kuishui, Japan; silk fabrics. Pop. 82,106.

FULAHS, native race inhabiting Nigeria, numbering several millions.

FULCHER OF CHARTRES (fl. *c.* 1090–1130), Fr. chronicler.

FULDA (50° 32′ N., 9° 40′ E.), town and episcopal see, on Fulda, Hesse-Nassau, Germany; has episcopal palace, several churches, seminaries; famous Benedictine abbey founded by St. Boniface, VIII. cent.; abbot in 968 made primate of all Teutonic abbeys; most ancient seat of ecclesiastical learning in Germany; seat of univ., 1734–1804; textiles. Pop. (1910) 22,488.

FULGENTIUS, FABIUS PLANCIADES (VI. cent. A.D.), Lat. grammarian.

FULGURITES, deposits of vitrified rock found on mountain-tops; films and tubes of glass found in sandhills; probably produced by lightning.

FULHAM, suburb, London, on Thames; palace and burying-place of bp's of London. Pop. (1911) 153,325.

FULIGO, see under MYCETOZOA.

FULIGULA, see DUCK FAMILY.

FULK (d. 900), abp. of Reims, 883; supported Charles the Simple; murdered at instigation of Baldwin, Count of Flanders.

FULK (1092–1142), s. of Fulk IV.; Count of Anjou, 1109–42; m. a dau. of Baldwin II. of Jerusalem in 1129; succ. to throne of Jerusalem, 1131.

FULK NERRA (fl. 987–1040), Count of Anjou; famous builder of castles and abbeys.

FULKE, WILLIAM (1538–89), Eng. Puritan theologian; lecturer at St. John's College, Cambridge; wrote controversial works.

FULLER, ANDREW (1754–1815), Eng. Baptist minister; opposed Calvinism and Deism; an able leader; sec. of Baptist Missionary Soc.

FULLER, GEORGE (1822–84), Amer. artist; painted chiefly portraits and nature fantasies.

FULLER, MARGARET, MARCHIONESS OSSOLI (1810–50), Amer. authoress; was associated with Emerson and the Transcendentalists, and edit. *The*

Dial; later with Mazzini and the cause of Ital. independence; wrote an *Autobiography* and other works; drowned at sea.

FULLER, MELVILLE WESTON (1833–1910), Amer. lawyer; Chief Justice U.S. Supreme Court, 1888.

FULLER, THOMAS (1608–61), Eng. cleric, wit, and historian; became rector of Broadwinsor, Dorset, 1634; pub. *History of the Holy War*, 1639; attained fame in London by lectures at the Savoy; during Civil War supported king, acting as chaplain to Sir Ralph Hopton's regiment; afterwards lived at Exeter, and in 1646 compounded with government for his presence among king's troops; perpetual curate of Waltham Abbey, 1648; app. royal chaplain at Restoration. F. wrote *Good Thoughts in Bad Times*, *Pisgah-Sight of Palestine*, *Worthies of England*, *Church History of Britain*. His style is full of wit and humour.

J. E. Bailey, *Life of Thomas Fuller* (1874).

FULLER, WILLIAM (d. *c.* 1718), Eng. impostor; frequently whipped, fined, and imprisoned for false accusations and writings relating to public characters.

FULLER'S EARTH, a greenish unctuous powder, usually consisting of hydrous aluminous silicate with some magnesia, iron oxide, and soda. S.G., 1·7–2·4; employed in filtering mineral and decolorising vegetable oils, and in dry cleaning as an absorbent of grease; found in Somersetshire and Surrey, England.

FULLERTON, LADY GEORGINA (1812–85), Eng. novelist and philanthropist; dau. of Earl Granville; joined R.C. Church, and gave much time to religious work.

FULMAR, see Shearwater Family.

FULMINIC ACID (HCNO) has same structure as cyanic and cyanuric acids; very explosive, with poisonous vapour. Its salts, especially fulminating mercury, are extremely explosive, and are used with potassium nitrate for filling percussion caps. **Fulminates**, explosive compounds such as mercury fulminate derived from f. a.; used in detonators.

FULTON.—(1) (38° 50′ N., 92° W.) City, Missouri, U.S.A.; fireclay manufactures. Pop. (1910) 5228. (2) (43° 20′ N., 76° 24′ W.) City, on Oswego, New York, U.S.A.; flour and paper mills. Pop. (1910) 10,480.

FULTON, ROBERT (1765–1815), Amer. engineer; began life as miniature portrait and landscape painter; came to England, 1787; took up steam navigation in Paris, 1797, and in 1807 invented and launched a steamship at New York—an epoch-marking event in steam navigation; improved dredging and flax-spinning machines, invented submarines, and constructed canals. See Mrs. Sutcliffe's *Fulton and the Clermont* (1909).

FUMARIACEÆ, genus of herbaceous dicotyledons, the commonest of which is *Fumaria officinalis*, which produces potash and is used in dyeing.

FUMARIC AND MALEIC ACIDS (COOH.CH:CH.COOH), unsaturated compounds of identical structure, with dissimilar actions explained by the relative positions of the atoms in space.

FUNCHAL (32° 37′ N., 16° 54′ W.), seaport town, capital of Madeira Islands, on S. coast Madeira; bp.'s see; residence of governor; commercial centre; port of call for steamers. Pop. 20,844.

FUNCTION.—Whenever two quantities are so related that any change made in one produces a corresponding change in the other, then the latter is said to be a *function* of the former. This relation is usually represented by the letters F, *f*, ϕ, ψ, etc. Thus $y=F(x)$, $u=f(x)$, $v=\phi(x)$, denote that y, u, v are functions of x, and their values are determined for any particular value of x when the form of the function in question is given. x is in this case the *independent variable*; y, u, v are *dependent variables*. By taking corresponding values of (say) x and y for co-ordinates, curves may be obtained representing graphically the function concerned.

Complex Quantities of the form $x=a+ib$, where $i=\sqrt{-1}$, may be represented graphically by measuring a horizontally from the origin and b vertically from the a-axis. The polar co-ordinates of the resulting point being r, θ, we have $a=r\cos\theta$, $b=r\sin\theta$, and hence $x=r(\cos\theta+i\sin\theta)$, which may be written $r\,\mathrm{cis}\,\theta$. The positive length r is called the absolute value of x, and $(\theta+2n\pi)$ the amplitude of x. By this graphic method complex quantities may be added and subtracted by the ordinary vector laws.

Real Functions of a Real Variable.—When one and only one real value y corresponds to each value of a real variable x, y is said to be a one-valued function of x. When two or more real values of y correspond to each x, y is said to be a many-valued function of x. The latter will not be considered here.

Continuity.—The function $f(x)$ is said to be continuous at $x=a$, when there exists an interval of the axis of x,—say the interval from $a-\delta$ to $a+\delta$, where δ is real,—such that at every point x of this interval, we have $|f(x)-f(a)|<\epsilon$, where ϵ is an arbitrarily small positive number chosen in advance. $|x|$ is the absolute value of x, and in the above it is assumed that $f(x)$ is defined for $x=a$.

Rational Algebraic Functions.—Rational integral function of complex variable x is

$$y=a_0+a_1x+a_2x^2+\ \ldots\ +a_nx^n.$$

This is evidently *one-valued*, since x^n is one-valued.

The definition of continuity requires modification and becomes: A function $f(x)$ of a complex variable x is said to be continuous at the point $x=a$, when there exists a circular region ($|x-a|\leq\delta$) such that at every point x of this region $|f(x)-f(a)|<\epsilon$ where ϵ is an arbitrarily small positive number chosen in advance. Again it is assumed that $f(x)$ is defined when $x=a$.

Limit.—Suppose $f(x)$ is a one-valued function of x, and ϵ as above, then if for every ϵ there is a corresponding positive number δ such that, when $|x-a|<\delta$ and $\neq 0$, $|f(x)-b|<\epsilon$, b is called the limit of $f(x)$ when x approaches a.

If for every ϵ there is a corresponding δ such that, when $|x|>\delta$, $|f(x)-b|<\epsilon$, then b is said to be the limit of $f(x)$ when x approaches infinity.

If when $|x-a|<\delta$ and $\neq 0$, $|f(x)|>1/\epsilon$, the limit of $f(x)$ is infinity when x approaches a.

If when $|x|>\delta$, $|f(x)|>1/\epsilon$, the limit of $f(x)$ is infinity as x approaches infinity. Hence for continuity of $f(x)$ at $x=a$, there must be one and only one limit as x approaches a, there must be a definite value $f(a)$ at $x=a$, and this value must equal the limit.

Derived Functions.—If $f(x)$ has a definite value $f(a)$ at $x=a$, then the limit, if existent, of $\{f(x)-f(a)\}/(x-a)$ for $x=a$ is called the first derived function of $f(x)$ at $x=a$. Putting h for $(x-a)$ this ratio becomes $\{f(a+h)-f(a)\}/h$, and the derived function is the limit of this as h approaches zero. It is often denoted by $f'(x)$ or by $\frac{df(x)}{dx}$.

In particular, if $f(x)=x^n$, then $f'(x)$ is the limit of $\{(a+h)^n-a^n\}/h$, which by use of the Binomial Theorem becomes

$$na^{n-1}+\frac{n(n-1)}{1.2}a^{n-2}h+\frac{n(n-1)(n-2)}{1.2.3}h^2+\ \ldots\ +h^n.$$

The difference between this and na^{n-1} can be made as small as we please by confining $h(\neq 0)$ to a suitably chosen small circle about the point where $h=0$.

$$\text{Hence}\ \operatorname*{Limit}_{x=a}\frac{x^n-a^n}{x-a}=na^{n-1}.$$

But a may be anywhere in the x-plane, and hence the first derived function, or *derivate*, of x^n at the point x is nx^{n-1}.

The method may obviously be applied to other functions.

Transcendental Functions are such as do not admit of being represented as ordinary algebraic expressions in a finite number of terms. Examples are exp x, sin x, log x, sinh x, etc. The simplest

is the *exponential*, defined by $y=\exp x=\sum_{n=0}^{n=\infty} x^n/n\,/$ where $\sum_{n=0}^{n=\infty} x^n/n\,/$ denotes the sum of all the terms like $x^n/n\,/$ obtained by giving n in succession all integral values from 0 to ∞. Investigation shows the series to be convergent (see SERIES). The *addition theorem* $\exp x_1 . \exp x_2=\exp(x_1+x_2)$ is obtained by direct multiplication, and can evidently be extended for any number n of arguments. If all these are equal to x we get $(\exp x)^n=\exp nx$.

The *Logarithm* of a complex quantity x cannot be defined simply as in the case of the logs of numbers used in calculation. If $x=\rho \operatorname{cis}\theta$, we have

$$dx=d\rho . \operatorname{cis}\theta+\rho . d\operatorname{cis}\theta=(d\rho+i\rho d\theta)\operatorname{cis}\theta.$$

Hence, if initially $x=1$, $\rho=1$, $\theta=0$, we obtain

$$\int_1^{x_1} dx/x=\int_1^{\rho_1} d\rho/\rho+i\int_0^{\theta_1} d\theta$$

i.e. $\log x_1=\log\rho_1+i\theta_1=\log|x_1|+i\operatorname{am}x_1$

where $\operatorname{am}x_1$ denotes the *amplitude* of x_1. The first term of this is the natural log of ρ_1, a real number, and depends only on the distance of the final x from the origin. The second term, $i\theta_1$, depends on the path of integration. So $\log x$ is many-valued just as its amplitude, and the general value of $\log x_1$ is found by adding $2n\pi i$ to any particular value. We define that value of $\log x$ for which $-\pi<\theta\leqq\pi$, as the *chief value* of the log, and denote it by $\log x$, so we have

$$\log x=\log\rho+i\operatorname{am}x$$

where $\operatorname{am}x$ is the chief amplitude of x.

If y is the log of x, $x=\exp y$ (by definition), and $y=\xi'+i\eta'=\log\rho+i\theta$; so x is determined from $\xi'=\log\rho$, or $\rho=\exp\xi$, and $\theta=\eta'$. Thus for a given y, x is single-valued, but one value of x will correspond both to y and to $y+2n\pi i$, and hence $\exp y$ is periodic, with the imaginary period $2\pi i$.

CIRCULAR FUNCTIONS.—When y is purely imaginary, *i.e.* $\xi'=0$, we have $\rho=1$ and $x=\operatorname{cis}\theta$, while $y=i\eta'$ or $i\theta$. Hence $\operatorname{cis}\theta$ is the same as $\exp i\theta$, or $\exp\theta=\cos\theta+i\sin\theta$, and we have $\cos\theta+i\sin\theta=1+i\theta+(i\theta)^2/2\,/+(i\theta)^3/3\,/+\ldots$

Equating real and imaginary parts of each side, we get the analytical expressions for $\cos\theta$ and $\sin\theta$:—

$$\cos\theta=1-\frac{\theta^2}{2\,/}+\frac{\theta^4}{4\,/}-\frac{\theta^6}{6\,/}+\ldots$$

$$\sin\theta=\theta-\frac{\theta^3}{3\,/}+\frac{\theta^5}{5\,/}-\frac{\theta^7}{7\,/}+\ldots$$

Thus $\cos x$ and $\sin x$ are transcendental integral functions. We have

$$\left.\begin{aligned}2\cos x&=\exp ix+\exp(-ix)\\ \text{and } 2i\sin x&=\exp ix-\exp(-ix)\end{aligned}\right\} \quad . \quad . \quad \text{(i.)}$$

and $\sin x$ will be zero when $e^{ix}=e^{-ix}$, *i.e.* $x=n\pi$ or 0; so the zeros are distributed along the real axis at intervals of π starting from the origin. In the same way the zeros of $\cos x$ are distributed at intervals of π, starting from $\pi/2$. The addition theorems

$$\cos(x_1+x_2)=\cos x_1\cos x_2-\sin x_1\sin x_2$$
$$\sin(x_1+x_2)=\sin x_1\cos x_2+\cos x_1\sin x_2$$

and others following from (i.) above, are true equally for complex arguments as for real angles (see TRIGONOMETRY). The other circular functions, which are transcendental fractional functions of x, are defined as the ratios $1/\cos x=\sec x$, $1/\sin x=\operatorname{cosec}x$, $\sin x/\cos x=\tan x$, $\cos x/\sin x=\cot x$. They have first order infinities for zeros of their denominators.

The *Hyperbolic Functions* for real arguments are defined by

$$\cos ix=\cosh x=\frac{1}{2}(e^x+e^{-x})$$

$$\sin ix=i\sinh x=\frac{i}{2}(e^x-e^{-x}).$$

From these we get a special case of the addition theorems:—

$$\sin(\xi+i\eta)=\sin\xi\cosh\eta+i\cos\xi\sinh\eta$$
$$\text{and } \cos(\xi+i\eta)=\cos\xi\cosh\eta-i\sin\xi\sinh\eta.$$

INTEGRALS.—The definite integral $\int_a^b f(\xi)d\xi$, where ξ is real, may be regarded in two ways, treating integration as (i.) the inverse of differentiation, (ii.) as a summation (see *Infinitesimal Calculus*). Both views may be generalised to apply to analytic functions of x, and lead to the same results.

EULERIAN INTEGRALS.—The definite integral $\int_0^1 x^{l-1}(1-x)^{m-1}dx$ is called the *first Eulerian integral*, or the *Beta* function, and is denoted by $\mathrm{B}(l, m)$. The integral $\int_0^\infty e^{-x}x^{n-1}dx$ is the *second Eulerian integral*, or the *Gamma* function, and is denoted by $\Gamma(n)$.

In the first integral put $x=1-z$ and it is found that $\mathrm{B}(l, m)=\mathrm{B}(m, l)$.

Integrating by parts $\int e^{-x}x^n dx$ we get

$$\int e^{-x}x^n dx=-e^{-x}x^n+n\int e^{-x}x^{n-1}dx.$$

But $e^{-x}x^n$ vanishes when $x=0$ and when $x=\infty$, and hence

$$\Gamma(n+1)=n\Gamma(n).$$

It is easy to see that $\Gamma(1)=1$, and so if n is an integer $\Gamma(n+1)=n\,/$.

Again, integrating first with respect to x we have

$$\int_0^\infty\int_0^\infty x^{l+m-1}y^{m-1}e^{-(1+y)x}dy\,dx=$$
$$\Gamma(l+m)\int_0^\infty \frac{y^{m-1}dy}{(1+y)^{l+m}}$$

Integrating first with respect to y we get for the same double integral:—

$$\Gamma(m)\int_0^\infty e^{-x}x^{l-1}dx, \text{ which is } \Gamma(m)\Gamma(l)$$

$$\text{Hence } \int_0^\infty \frac{y^{m-1}dy}{(1+y)^{l+m}}=\frac{\Gamma(l)\Gamma(m)}{\Gamma(l+m)} \quad . \quad . \quad . \quad \text{(A)}$$

By putting $x=\dfrac{1}{1+y}$ in $\mathrm{B}(l, m)$ it may be shown that $\mathrm{B}(l, m)$ is equal to the integral on the left of (A).

Thus $$\mathrm{B}(l, m)=\frac{\Gamma(l)\Gamma(m)}{\Gamma(l+m)}$$

If now $l+m=1$, m being less than unity, we get

$$\int_0^\infty \frac{y^{m-1}dy}{1+y}=\Gamma(m)\Gamma(1-m), \text{ since } \Gamma(1)=1.$$

This integral has the value $\pi/\sin m\pi$, and hence putting $m=1/2$ we get $\Gamma\left(\frac{1}{2}\right)\Gamma\left(\frac{1}{2}\right)=\pi$

$$\text{and } \therefore \Gamma\left(\frac{1}{2}\right)=\sqrt{\pi}.$$

Many definite integrals may be expressed in terms of the Gamma function.

e.g. $\int_0 e^{-a^2x^2}dx$ becomes, putting y for a^2x^2, $\int_0^\infty \frac{e^{-y}dy}{2a\sqrt{y}}$

i.e. $\frac{1}{2a}\Gamma\left(\frac{1}{2}\right)=\frac{\sqrt{\pi}}{2a}$.

ELLIPTIC INTEGRALS.—The integrals $\int_0^\theta \frac{d\theta}{\sqrt{1-c^2\sin^2\theta}}$

$\int_0^\theta \sqrt{1-c^2\sin^2\theta}\,d\theta$, and $\int_0^\theta \frac{d\theta}{(1+a\sin^2\theta)\sqrt{1-c^2\sin^2\theta}}$

are known as elliptic functions or integrals of the first, second, and third order respectively. They are denoted by the symbols $\mathrm{F}(c, \theta)$, $\mathrm{E}(c, \theta)$, and $\Pi(c, a, \theta)$.

θ is the *amplitude*; c, the *modulus*, is a constant less than unity; a is the *parameter* of the third function. Taken between the limits 0 and $\pi/2$ the functions

are called *complete* functions, so that the amplitude of a complete function is $\pi/2$. $E(c, \theta)$ is the length of a portion of the arc of an ellipse measured from an end of the minor axis, c being the eccentricity of the ellipse. From this fact and the connection between the integrals, the name elliptic integrals was given to them.

Functions of great importance in the higher developments of mathematical physics are the *Potential Function*, and the following, obtained as solutions of certain differential equations: *Legendre's Coefficients*, or *Zonal Harmonics*; *Laplace's Coefficients*, or *Spherical Harmonics*; *Bessel's Functions*, or *Cylindrical Harmonics*; *Lamé's Functions*, or *Ellipsoidal Harmonics*.

See Forsyth, *Theory of Functions*; Harkness and Morley, *Theory of Functions*; Appell and Lacour, *Elliptic Functions*; Todhunter, *Functions of Laplace, Lamé, and Bessel*; Byerly, *Fourier's Series and Spherical Harmonics*.

FUNDY, BAY OF (45° N., 66° W.), inlet, N. Atlantic Ocean, separating Nova Scotia from New Brunswick; remarkable for high tides.

FÜNEN, FYEN (55° 20′ N., 10° 20′ E.), Danish island in Baltic Sea, between Zealand and Jutland. Area, 1100 sq. miles. Pop. 280,000.

FUNERAL, see BURIAL.

FÜNFKIRCHEN, PÉCS (46° 6′ N., 18° 13′ E.), town, Baránya, Hungary; capital of province; leather, cloth, and earthenware. Pop. 45,000.

FUNG-HWANG, FENG-HWANG, a kind of phœnix of Chin. myth., and one of the supposed guardians of China.

FUNGI are flowerless plants devoid of chlorophyll, and therefore of necessity leading either a parasitic or a saprophytic (living upon dead plants) mode of life. They are usually divided into four main groups, the Schizomycetes or 'Fission F.,' the Myxomycetes or 'Slime F.,' the Phycomycetes or 'Alga-like F.,' and the Eumycetes or higher f., each of which is in turn again subdivided. The *Schizomycetes* include the various bacilli and bacteria, and play an important part in determining the balance of terrestrial life. They are minute unicellular or filamentous forms, often rodlike, and in many cases possess one or more cilia. Many are the cause of disease, as in cholera and phthysis, whilst others give rise to fermentation (*e.g.* the vinegar and lactic acid bacilli) and to the putrefaction and decay of animal and vegetable substances. They occur throughout the atmosphere and in water, and are usually only killed by rigid sterilisation. They multiply rapidly by binary fission under favourable conditions and by hard-walled resting-spores in adverse circumstances.

The *Slime F.* usually occur on rotten wood, dead leaves, and similar substrata as slimy naked protoplasmic masses termed 'plasmodia.' When threatened with drought or shortage of food material they form resistant fructifications containing highly protected spores. These liberate minute flagellate swarmers, which become amœboid and coalesce, forming plasmodia as before. One form, *Plasmodiophora brassicæ*, gives rise to the malformation of turnips and other root-crops known as 'Fingers and Toes.' The *Phycomycetes* contain two important orders—the Oomycetes and Zygomycetes respectively. Both consist of small filamentous forms, with a freely branched and usually non-septate, multinucleate mycelium. In the Oomycetes the sexual organs consist of globular oogonia and club-shaped antheridia, the sperms of the latter being non-motile and transferred to the ova passively by a fertilising tube. Each ovum on fertilisation gives rise to a thick-walled resting-spore. Asexual reproduction in the aerial species is by means of numerous conidia borne on branching upright hyphæ, and in the aquatic forms by motile zoospores. Among the economically important forms the following are perhaps the best known: *Saprolegnia ferox*, causing the salmon disease; *Pythium*, causing the 'damping off' of cress and other seedlings; *Phytophthora infestans*, giving rise to the potato disease; and *Plasmopara riticola*, producing the destructive 'false mildew' of the vine. In the Zygomycetes, of which the 'Black Mould' of bread (*Mucor*) is typical, the gametes are similar and produce a thick-walled zygospore, whilst the asexual spores are borne in globular sporangia. Generally speaking, asexual reproduction is in both groups utilised for rapid propagation under favourable conditions, whilst sexual reproduction only occurs in times of stress.

The *Eumycetes*, which are the dominant class, are divided into four main groups—the Ascomycetes, the Uredineæ, the Ustilagineæ, and the Basidiomycetes. The first group is characterised by the production of club-shaped reproductive structures termed asci, each usually containing eight spores. It includes a vast and very diverse assemblage of forms, among which the mildews attacking the hop, vine, gooseberry, etc., *Claviceps*, causing 'ergot' of rye and other cereals, and *Nectria ditissima*, causing apple canker, are some of the more important. In addition the cup fungi, the truffles, and morels belong to this group, whilst the blue and green moulds on bread and fruit are also included. The Uredineæ are parasitic on gramineous and other hosts causing 'rust.' Many are heteræcious, notably *Puccinia graminis*, the 'wheat rust,' which passes part of its life on the wheat plant, whilst the remainder is passed on the barberry, in the absence of which the full life cycle cannot be accomplished. Both the rusts, and to a larger extent the Ustilagineæ, which cause 'smut' and 'bunt' in wheat, oats, and similar crops, may be combated by suitable preliminary treatment of the seed. The Basidiomycetes include all mushrooms (*q.v.*) and toadstools as well as bracket fungi and puff balls. The spores are borne on gills or lamellæ, or in closed pear-shaped or globular fructifications. Whilst the majority are saprophytes, feeding on dead organic matter, others, notably the bracket fungi (Pdyporaceæ) and *Armillaria mellea*, cause immense damage to timber by attacking trees injured by wounding and causing their death. (For details with regard to treatment of various fungal plant diseases, see the leaflets of the Board of Agriculture and Fisheries.)

Cooke, *F., their Nature, Influence, and Usage* (1883); Swanton, *F., and how to know them* (1909).

FUNGUS-GNATS, or MIDGES (*Mycetophilidæ*), minute flies, the larvæ of which burrow in fungi or in decaying vegetation.

FUNJ, negroid people inhabiting parts of the eastern Sudan.

FUNKIÆ, PLANTAIN-LILIES, liliaceous plants common in gardens; noted for their flowers.

FUR, on animals, is a protection against cold, or as with the mole, against irritation by earth particles. Most f's come from N. America and Siberia; animals are killed when in winter coat. Most expensive f's are: Sea Otter, £20–£500; Silver Fox, £10–£500; Russ. Sable, £6–£44; Black Bear, 10s.–£12; Wolf, 5s.–£5; Seal, £2–£10. Cheaper f's are Skunk, Squirrel, Marten, Mink, Red Fox, Grey Fox, Beaver, Lamb, Hare, Rabbit, Opossum, Musk-Rat, Wild-Cat, Chinchilla (sometimes expensive), Ermine.

Manufacture is a trade secret. F's are first cleaned with soap, salt, and alum; sawdust and butter are used in 'dressing'; dyeing is a secret process. See, further, under HAIR.

FURETIÈRE, ANTOINE (1619–88), Fr. author; wrote *Roman Bourgeois* and compiled dictionary.

FURFOOZ (50° 13′ N., 4° 58′ E.), village, Belgium; notable for discovery of caves containing remains of prehistoric man (1872).

FURFURANE or **FURANE** (C_4H_4O), colourless liquid, B.P. 32°, with characteristic smell, found in distillation products of pine-wood. It does not react with sodium or phenylhydrazin, but forms dye-stuffs with isatin and phenanthene-quinone.

FURIES, THE, see ERINYES.

FURNACE.—A place where a fire is maintained so as to give out great heat.

Each type is made so as (1) to give out the greatest possible amount of heat, with a minimum expenditure of fuel, (2) to prevent the loss of heat thus given, (3) to concentrate the heat as desired, (4) to give the operator full control over the regulation of the heat. A f. must be constructed with due regard to the law of combustion; a certain proportion of air should be allowed to combine with the gases of the fire. Should the design of the furnace allow too much air to enter, the gases are chilled and diluted, while too little air causes them to escape unconsumed.

AIR FURNACES are those where only a natural draught is used. BLAST FURNACES, i.e. f's with forced draught made by fans, etc., are generally used in the melting of metal, and very high temperatures are obtained. REVERBERATING FURNACES are those in which the direction of the flames is changed by an arched roof. ELECTRIC FURNACES, capable of giving the highest known temperatures, are used mainly for laboratory experiments in chemistry, metallurgy, and mineralogy. See IRON.

FURNEAUX, TOBIAS (1735–81), Eng. navigator; commanded *Adventure* in Cook's 2nd voyage; charted Tasmania. F. Islands, between Tasmania and Victoria, Australia, are named after him.

FURNES (51° 4′ N., 2° 38′ E.), town, W. Flanders, Belgium; tanneries and linen works. Pop. 6200.

FURNESS (54° 15′ N., 3° 6′ W.), district, N.W. Lancashire, England, forming peninsula between Morecambe Bay and Irish Sea; rich in hematite iron-ore; chief town, Barrow-in-Furness; near Dalton are ruins of Furness Abbey, founded 1127.

FURNESS, HORACE HOWARD, Ph.D., LL.D. (1833–1912), Amer. Shakespearean scholar.

FURNISS, HARRY (1854–), Brit. caricaturist and book illustrator; on staff of *Punch* (1884–94).

FURNITURE, general name for tables, chairs, cabinets, beds, and other domestic objects of a like kind. Examples of Egyptian f., dating back to about fifteen cent's B.C., are still in existence. The ancients used very little f.—beds and couches, chiefly, and few chairs. Yet f. they did use was often very ornate. The Egyptians used wooden f., carved in fantastic animal shapes, and gilded. Other nations used cedar and ebony, and their f. was often inlaid with ivory and precious metals. Greek f. was simple; Roman ornate, but both nations used little. Eng. f., until after the Conquest, was of the rudest description, but a rapid change took place with the advent of the Normans. Yet throughout the feudal period such f. as was used was substantial rather than ornamental. Massiveness, too, was characteristic of most of the f. produced from the time of the Early Tudors to that of Queen Anne. The golden age of f.-making in Europe was the XVIII. cent., and in England work of the most elaborate and beautiful description was produced by such artists as Chippendale, Sheraton, Heppelwhite, Adams, and others. The Victorian period in f. was generally one of heaviness and ugliness; but since then there has been a marked revival of more tasteful designs and lightness of form.

Foley, *Decorative Furniture*, 2 vols. (Jack); Macquoid, *History of Eng. F.: the Age of Walnut* (1905); Morse, *F. of the Olden Time* (1903); Robinson, *Eng. F.* (1906); also works by Bumpus, Chippendale, Ince, Mayhew, Sheraton.

FURNIVALL, FREDERICK JAMES (1825–1910), Eng. scholar and philologist; founded the Early Eng. Text, Chaucer, Browning, and numerous other Societies.

FURSE, CHARLES WELLINGTON (1868–1904), Eng. artist; achieved eminence by his portraits and outdoor studies.

FÜRST, JULIUS (1805–73), Ger. Orientalist.

FÜRSTENBERG.—(1) Noble house in Swabia, dating back to XII. cent.; family played important part in Ger. political, military, and ecclesiastical history; Franz Egon (1625–82) and bro., Wilhelm Egon (1629–1704), both Counts of F. and Bp's of Strassburg, served Louis XIV.'s interests. (2) Family in Westphalian Rhine district, dating from XIII. cent., to which belonged Franz Friedrich Wilhelm (1728–1810), who promoted agriculture and education.

FURSTENWALDE (52° 23′ N., 14° 2′ E.), town, on Spree, Brandenburg, Prussia; machinery. Pop. (1910) 22,604.

FÜRTH (49° 29′ N., 10° 59′ E.), manufacturing town, Bavaria, Germany; population mainly Jews; mirrors, toys. Pop. (1910) 66,555.

FURZE, GORSE, or **WHIN** (*Ulex europæus*), a xerophytic shrub which grows abundantly on heaths and similar places; characterised by needle-shaped leaves and modification of branches to form spines.

FUSAN (35° 24′ N., 129° 26′ E.), port, Korea Bay, Korea; opened to foreigners, 1876; exports silk, rice, vegetables, and hides; terminus of Seoul-Fusan line. Pop. 60,000.

FUSARO, LAGO, (40° 50′ N., 14° 2′ E.), ancient *Acherusia*, small lake, Campania, Italy; oysters.

FUSELI, HENRY (1742–1825), Anglo-Swiss artist and art critic; b. Zurich; after studying in Italy he settled in England; elected R.A. (1790), and prof. of Painting at the Academy (1799). His paintings, including *The Nightmare* and numerous illustrations of Shakespeare and Milton, are distinguished by a weird and fantastic beauty; wrote extensively on art subjects, and his *Lectures on Painters* are of great critical value.

FUSEL-OIL, strong-smelling liquid formed in fermentation; contains large quantity of amylic alcohol ($C_5H_{12}O$); used in oils, varnishes, etc.; present in inferior spirits. See also SPIRITS.

FUSILIER, foot-soldier, formerly armed with *fusil*, a kind of musket.

FUSION, the melting of a substance. Most substances exist both as liquids and solids. When the solid passes into the liquid state it either does so abruptly at one definite temperature, called the *Melting or Fusion Point*, or it does so gradually, in which case there is no definite melting-point. Substances with a definite melting-point are said to be examples of crystalline fusion. They require a certain definite amount of heat to transform them into liquid (*latent heat of fusion*), and the process is accompanied by a change of volume. Thus water, bismuth, and iron expand on solidification, while paraffin contracts. With these substances there is a certain temperature and pressure at which both the liquid and solid exist side by side. Substances which do not change their state at a definite temperature, do not give evidence of any latent heat, show no change in volume, and cannot exist as liquid and solid at the same time. This is *amorphous* fusion.

But if two substances capable of existing as solid and liquid side by side are mixed together in the liquid state they may solidify in varying proportions at varying temperatures, so that a mechanical mixture of them in the solid state is obtained. For a given temperature and pressure the composition of the mixture is always the same. Such mixtures when composed of metals are termed alloys, and differ in properties from their constituents.

FÜSSEN (47° 34′ N., 10° 44′ E.), town, on Lech, Bavaria, Germany; rope-making.

FUST, JOHANN (d. *c.* 1466), Ger. printer of eminence; was sometime associated with Gutenberg. There has been considerable controversy as to which of the two was the actual inventor of printing. The facts seem to be that F. advanced capital to G. to develop his business, and, litigation ensuing, F. commenced a rival concern in partnership with another.

FUSTEL DE COULANGES, NUMA DENIS (1830–89), Fr. historian; b. Paris; grad. as doctor, 1858; prof. of History, Strassburg, 1860–70; lecturer at École Normale Supérieure, 1870; prof. at Paris, 1875; prof. of Mediæval History at Sorbonne, 1878;

director of École Normale, 1880; pub. several hist. works, including *La Cité Antique*, 1864. A systematic, conscientious historian.

FUSTIAN, kind of cotton cloth of heavy weaving, coarse in texture, mainly for labourers' wear.

FUTURES, DEALING IN, term used in produce and cotton-market speculations relating to future deliveries of goods not yet in the market. When persons deal in f's they are gambling on future fluctuations in prices, and to bring about the desired rise or fall to their own advantage they seek to influence the market in that direction. Thus the producer and consumer suffer, and the entire gain falls to the speculator.

FUZE, apparatus for igniting explosives; quick-burning f's consist of yarn and uncompressed gunpowder, or of fulminated cotton; slow-burning f's are made of yarn and compressed gunpowder; electrical f's have largely displaced other varieties.

FYNE, LOCH (56° N., 5° 20′ W.), inlet of sea, Argyllshire, Scotland; herring-fisheries.

FYRD, the army on a militia basis of the Anglo-Saxon kings in England; service when required was compulsory on all landholders.

FYT, JOHANNES (1609–61), Belg. artist; celebrated for his animal studies.

FYZABAD, FAIZABAD (26° 46′ N., 82° 11′ E.), city, district, and division in United Provinces, India. District: area, 1740 sq. miles; pop. 1,225,374. Division: area, 12,113 sq. miles; pop. 6,856,000. FYZABAD (town), on Gogra, near site of ancient Ajodhya; rice, cotton, sugar. Pop. 74,076.

G, seventh letter of Rom. alphabet; in Lat. always hard, so in Eng., except in Romance words, *e.g.* gentle. In O.E. *g* was soft in words *geong* (young), *sælig* (blessed).

GABBRO, important group of plutonic rocks of crystalline and coarse-grained structure, containing felspar and diallage; occasionally found in thick layers, brown or dark green in colour, and widely distributed in Scotland, Wales, Cornwall, Hartz Mountains, and the Black Forest.

GABELENTZ, HANS CONON VON DER (1807–74), Ger. ethnologist and linguist; distinguished for his extensive knowledge of ancient and modern languages and dialects; author of numerous text-books and grammars.

GABELLE, oppressive Fr. salt-tax; abolished latter part of XVIII. cent.

GABERDINE, loose, outer garment, once much worn by the Jews.

GABES (33° 53′ N., 10° 4′ E.), seaport town, on Gulf of Gabes, Tunis, Africa; dates. Pop. 12,000.

GABII, ancient hist. town, near Rome, Italy; according to legend was early home of Romulus.

GABINIUS, AULUS (d. 48 or 47 B.C.), Rom. general; enacted Gabinian Law, 67 B.C.; consul, 58 B.C.; Syrian proconsul, 57–4 B.C.; exiled for extortion; recalled, 49 B.C.

GABION, basket-shaped frame, with open ends, which is placed on end, and filled with earth; used in fortification.

GABLE, in arch. triangular part of the upper wall of a building enclosed by the slopes of the roof. The g. was a distinctive feature, and used with much decorative effect in half-timbered architecture. In parts of Germany, the Netherlands, and Scotland 'corbie-step' gables have been very popular. A small g., often decorated with a finial or other ornament, is known as a GABLET.

GABLER, JOHANN PHILIPP (1753–1826), Prot. theologian; prof. at Altdorf and Jena.

GABLONZ (50° 43′ N., 15° 6′ E.), town, on river Neisse, Bohemia, Austria; glass manufactures. Pop. (1910) 29,605.

GABOON, GABUN (*q.v.*).

GABORIAU, ÉMILE (1835–73), Fr. novelist; noted for his sensational detective and criminal stories —*Monsieur Lecoq* (1869), etc.

GABRIEL, in *Book of Enoch* and Christian Church one of four archangels, the others being Raphael, Michael, Uriel.

GABUN (0° 15′ N., 9° 20′ E.), district and river of Fr. Equatorial Africa (*q.v.*); G. estuary receives several rivers; on N. bank is settlement of Libreville; unhealthy climate. G. in 1886 was annexed to the Fr. Congo, now Fr. Equatorial Africa.

GACHARD, LOUIS PROSPER (1800–85), Belg. historian.

GAD.—(1) Jacob's seventh son, founder of Israelite tribe of G. (2) Seer, connected with David; occurs in *Samuel* and *Chronicles*.

GADAG, GARAG (15° 25′ N., 75° 40′ E.), town, Bombay, India; cotton and silk manufactures. Pop. 31,000.

GADARA, modern UM-KEIS (32° 37′ N., 35° 43′ E.), ancient town, Syria, in the Decapolis; famous hot springs; conquered by Antiochus the Great, 218 B.C.; besieged by Jannæus; rebuilt by Pompey.

GADDI, GADDO (*c.* 1239–1312), Ital. (Florentine) artist; famous as fresco painter and mosaicist. His s., TADDO G. (*c.* 1300–66), a pupil of Giotto, and his grandson, AGNOLO G. (*c.* 1350–96), were also greatly distinguished in the same kinds of art.

GAD-FLIES, BREEZE-FLIES, HORSE-FLIES, or CLEGGS (*Tabanidæ*), large flies, the females of which have piercing mouth-parts, and cause much irritation to man, horses, and cattle by blood-sucking.

GADSDEN, JAMES (1788–1858), Amer. soldier; app. minister to Mexico, where he negotiated 'G. Treaty,' 1853. His bro., CHRISTOPHER G. (1785–1852), was Prot. Episcopal bp. for S. Carolina, 1839–52.

GADWALL, see under DUCK FAMILY.

GAEKWAR, title of the Mahratta princes of Baroda, who, under Damaji I., secured supremacy in Gujarat during early part of XVIII. cent.

GAETA (41° 12′ N., 13° 35′ E.), fortified seaport, Caserta, Italy; ancient *Caieta*; cathedral; abp.'s see; resort of wealthy Romans in ancient times; frequently besieged; became refuge of Pius IX., 1848, of Francis II. of Naples, 1860; has active coasting trade. Pop. 5393.

GAETANI, CAETANI, noble Rom. family to which Pope Boniface VIII. (1294–1303) belonged; still holds distinguished place among Rom. nobility.

GÆTULIA (*c.* 33° N., 0°), ancient region, N. Africa, S. of Mauritania and Numidia, embracing N.W. part of Sahara; inhabited by warlike tribe called Gætuli, noted rearers of horses; conquered by Rome, 6 A.D.

GAGE, THOMAS (1721–87), Brit. general; served in Flanders, at Culloden, and under Braddock in America; became Gov. of Massachusetts.

GAGERN, HANS CHRISTOPHER ERNST, BARON VON (1766–1852), Ger. statesman and prime minister of Netherlands; b. near Worms; wrote on history and political science; also a valuable auto-biography.—**Gagern, Heinrich Wilhelm August, Freiherr von** (1799–1880), 3rd s.; b. Bayreuth; lawyer and soldier; first pres. of Ger. Parliament.—**Gagern, Maximilian, Freiherr von** (1810–89), youngest s.; b. Weilburg; Under-Sec. of State for Foreign Affairs in Ger. National Parliament.

GAIL, JEAN BAPTISTE (1755–1829), Fr. Gk. scholar; was a voluminous writer, and did much to promote the study of Gk. in France.

GAILLAC (43° 54′ N., 1° 54′ E.), town, Tarn, France; wines. Pop. 7700.

GAILLARD, GABRIEL HENRI (1726–1806), Fr. historian.

GAINESVILLE (29° 38′ N., 82° 20′ W.), city, Florida, U.S.A.; seat of State univ. Pop. (1910) 6183.

GAINESVILLE (33° 46′ N., 97° 23′ W.), city, Texas, U.S.A.; ironworks. Pop. (1910) 7624.

GAINSBOROUGH (53° 24′ N., 0° 45′ W.), town, on Trent, Lincolnshire, England; has an old Manor House, built by John of Gaunt; linseed cake and agricultural machinery manufactured. Pop. (1911) 20,589.

GAINSBOROUGH, THOMAS, R.A. (1727–88), Eng. artist; b. Sudbury (Suffolk); s. of a small tradesman; studied engraving, and afterwards set up as an artist, first at Ipswich, and afterwards at Bath and London. He was one of the greatest portrait-painters England has produced, and though his landscapes were not appreciated in his own day, they are now considered only less valuable than his portraits. The misadventures of his famous *Duchess of Devonshire* portrait are well known. The National Gallery contains his portrait of *Mrs. Siddons*, and some of his finest landscapes.

Gainsborough, by Sir W. Armstrong (1894), Gower (1903), Rothschild (Masterpieces in Colour).

GAIRDNER, JAMES, LL.D., C.B. (1828–1912),

Brit. historian; b. Edinburgh; wrote chiefly on Plantagenet and Tudor kings, and edited *The Paston Letters*.

GAIRDNER, SIR WILLIAM TENNENT (1824–1907), Scot. doctor; house physician, Edinburgh Royal Infirmary, fifteen years; prof. of Medicine, Glasgow Univ. (1862); honorary Physician in Ordinary for Scotland to Edward VII.; works: *The Physician as Naturalist, Clinical Medicine*.

GAIRLOCH (57° 43′ N., 5° 44′ W.), village and parish, at head of Gairloch, an inlet of sea, W. coast of Ross and Cromarty, Scotland.

GAISERIC, GENSERIC, first Vandal king of Africa (c. 390–477), conquered and ruled Africa (439–77); a crafty politician, noted general, and treacherous oppressive ruler.

GAISFORD, THOMAS (1779–1855), Eng. classical scholar.

GAIUS, Rom. jurist; author of the *Institutes*—a complete exposition of elements of Rom. law; a treatise on the Edicts of the Magistrates, and Commentaries on the Twelve Tables; written under influence of Traditionalists, between 130 and 180 A.D.

GAIUS CÆSAR, CALIGULA (A.D. 12–41), succ. Tiberius as Rom. emperor, 37 A.D.; a tyrannical, cruel, profligate ruler; assassinated.

GALABAT, GALLABAT (12° 58′ N., 36° 12′ E.), town, Anglo-Egyptian Sudan, on W. borders Abyssinia; trading centre.

GALACTODENDRON, see COW-TREE.

GALAGOS, AFRICAN LIONESS (*Galago*), a genus of Lemuroidea (*q.v.* under *Primates*), with large, hairless ears; the only long-tailed lemurs found widely distributed on the mainland of Africa.

GALAHAD, hero of Arthurian group of legends, s. of Lancelot; from secondary position in earlier legends became central figure as successor of Perceval (*q.v.*).

GALANGAL, drug prepared from the root of a plant, *Alpinia officinarum*, of natural order *Zingiberaceæ*, growing in southern China; still used in parts of Russia and China medicinally and as a flavouring agent, having a peppery taste, but is not now used except in the above places, although a favourite drug of mediæval physicians.

GALANTHUS, see SNOWDROP.

GALAPAGOS ISLANDS (c. 0° 30′ S., 90° 30′ W.), group of some thirteen islands, belonging to Ecuador, lying in Pacific Ocean. Total area, c. 2940 sq. miles. The largest island, Albemarle, is c. 60 miles long. Islands have dense vegetation in S. but covered with lava in N., resulting from numerous volcanoes—some still alive; chief crop, sugar. Pop. c. 400.

GALASHIELS (55° 37′ N., 2° 49′ W.), town, on Gala, Selkirkshire, Scotland; noted woollen manufactures; iron and brass foundries. Pop. (1911) 14,914.

GALATEA, personage in Gk. and Rom. mythology. (1) A nymph wooed by Cyclops Polyphemus, who crushed his rival Acis under a rock. (2) Shepherdess in third Eclogue of Vergil, typifies feminine coquetry. (3) Statue of ivory loved by Pygmalion, and endowed with life by Aphrodite.

GALATIA, an inland country of Asia Minor, chiefly remarkable as the home of a Christian colony to whom St. Paul addressed the *Epistle to the Galatians* (q.v.).

GALATIANS, EPISTLE TO THE.—This epistle of St. Paul, authenticity of which has scarcely been impugned, is the only one addressed by the apostle to a group of churches. Its exact date has not been established, though it was probably written in 57 or 58 A.D., between the writing of 2 *Corinthians* and *Romans*, and during Paul's third missionary journey, while he was at Ephesus or Corinth or on the way between the two. Its object was to counteract the Judaic teaching which for some time had been undermining Paul's work in the Galatian Church. May be divided into three parts, of which the first is a vindication of the author's independence as an apostle of Christ; second is doctrinal, showing that the Gospel dispensation is the fulfilment of the law; third is practical, showing that the believer's life should be the expression of his faith.

Dods, *Introduction to New Testament*; M'Clymont, *New Testament and its Writers*; Moffatt, *Introduction to Lit. of New Testament*.

GALATINA (40° 15′ N., 18° 10′ E.), town, Apulia, Italy. Pop. 12,912.

GALATZ, Rumanian GALÂȚI (45° 27′ N., 28° 3′ E.), city, port of entry, Rumania, on Danube; commercial centre; chief exports, grain and timber; iron and copper industries. Pop. 66,000.

GALAXY, in astron., the Milky Way, the belt of luminaries stretching across the heavens; hence, any splendid gathering.

GALBA, SERVIUS SULPICIUS (5 B.C.–69 A.D.), Rom. emperor; prætor (20); consul (33); gov. of Hispania Tarraconensis (61); emperor (June 68–Jan. 69 A.D.); assassinated by rebels.

GALBA, SERVIUS SULPICIUS (fl. 150), celebrated Rom. orator and general; consul (144).

GALBANUM, gum resin, yellowish brown, containing umbelliferone, derived from exotic plants (*ferulæ*); has bitter taste; used in medicine externally as irritant, internally as digestive; also to make varnish.

GALE, THEOPHILUS (1628–78), Eng. Nonconformist theologian; wrote *The Court of the Gentiles*.

GALE, THOMAS (d. 1702), Eng. antiquary and scholar.

GALEN, or CLAUDIUS GALENUS (130–c. 200 A.D.), physician; b. at Pergamos, Asia Minor; practised medicine with very great success, chiefly in Rome; author of many works on logic, ethics, and medicine, his writings on the latter being the guide for physicians for several cent's; one of the founders of science of anatomy (*q.v.*).

GALENA.—(1) (42° 23′ N., 90° 24′ W.) city, Illinois, U.S.A.; extensive lead and zinc mines. Pop. (1910) 4835. (2) (37° 5′ N., 94° 40′ W.) city, Kansas, U.S.A.; lead and zinc mines. Pop. (1910) 6096.

GALENA (PbS), sulphide of lead, possesses a light bluish white metallic lustre. Practically all the lead of commerce is made from this ore, which contains traces of silver.

GALEOPITHECUS, FLYING LEMUR, a vegetarian arboreal Insectivore, so peculiar that it is often placed in a separate order. Hind and fore limbs are connected by a fold of skin, so that the creature can parachute from one tree to another.

GALERITES, fossil sea urchin found widely in Cretaceous; shape conical; shell oval; base flat; mouth in middle of under surface.

GALERIUS, VALERIUS MAXIMIANUS (fl. 305–11), Rom. emperor; from common soldier rose to be Diocletian's son-in-law and successor.

GALESBURG (40° 54′ N., 90° 18′ W.), city, Illinois, U.S.A.; seat of Lombard Univ. and Knox Coll.; railway workshops; iron foundries. Pop. (1910) 22,089.

GALGACUS (I. cent. A.D.), famous Caledonian chieftain, routed by Agricola in Scotland at the battle of the *Grampians*.

GALIANI, FERDINANDO (1728–87), Ital. economist; b. Chieti; Neapolitan ambassador at Paris, 1759–69; his *Dialogues sur le commerce des blés* made his name in economic world; concerned mainly with question of freedom of corn trade.

GALICIA (42° 25′ N., 8° W.), ancient kingdom and province of Spain, now captaincy-general; divided into four provinces of Corunna, Lugo, Orense, and Pontevedra; surface generally mountainous and well watered; climate mild; coast-line much indented; has many good harbours, of which Ferrol is one of finest naval ports of Europe; principal river, Minho; minerals—lead, tin, copper, iron; inhabitants mostly agriculturists, but agriculture is backward; chief exports—timber, cattle, sardines;

capital, Corunna. Area, *c.* 11,250 sq. miles. Pop. *c.* 1,976,000. See SPAIN.

Meakin, *G., the Switzerland of Spain* (1909).

GALICIA, Austrian crown land; on N. slopes of Carpathians, comprising old kingdoms of Galicia and Lodomeria, duchies of Auschwitz and Zator, and grand-duchy of Cracow; area, *c.* 30,300 sq. miles; fine pasture, and arable land, and immense forests; chief rivers—Vistula, Dniester, Sereth, Pruth; Lemberg (capital). Rich in iron-ore, coal, salt, sulphur, lead, zinc, petroleum. East G. and Lodomeria taken from Poland (*q.v.*), 1772. Cracow (*q.v.*) finally annexed, 1846. Pop. (1910) 8,025,675.

GALIGNANI, GIOVANNI ANTONIO (1752–1821), Ital. publisher; founded an Eng. library and newspaper in Paris.

GALILEE, province of Palestine; bounded N. by Leontes, E. by Jordan, S. by Samaria and Carmel Mountains, W. by Phœnicia and Mediterranean. Greatest length, *c.* 60, breadth, 35 miles. Chief interest lies in its being cradle of Christianity, whose founder passed His youth and began ministry here, performing first miracle at Cana, raising the widow's son at Nain; while the Transfiguration occurred at Mt. Tabor in the N.E.

GALILEE, porch, or small outer chapel, for penitents, attached to churches and cathedrals; examples at Durham, Lincoln, and Ely.

GALILEE, SEA OF (32° 47′ N., 35° 38′ E.), SEA OF TIBERIAS, LAKE OF TABARIYEH or GENNESARET, lake in N. Palestine; length, *c.* 14 miles, and half as broad; lying almost 700 ft. below sea-level, and situated at bottom of volcanic basin. River Jordan enters from N.; W. side has good vegetation, but N. and E. sides are bare and rocky; figures largely in Bible as Sea of G.; formerly the ancient cities of Tiberias, Magdala, Capernaum, lay round it.

GALILEO GALILEI (1564–1642), Ital. astronomer; b. Pisa; his f., a nobleman of Florence, procured him an excellent education in lit. and the arts, and in 1581 he entered the Univ. of Pisa. When nineteen G. investigated the laws of the oscillation of the pendulum, which he subsequently applied in the measurement of time. In 1589 he was made prof. of Math's in the Univ. of Pisa, and three years later filled a similar office in Padua, where he continued eighteen years, his lectures gaining for him a European reputation. He invented the type of telescope known by his name, and with the aid of his later and much-improved instruments made many remarkable observations. He noted the irregularity of the moon's surface, and showed how the heights of the mountains could be determined from their shadows. From his resolution of certain nebulæ into individual stars he concluded that the *Milky Way* might be similarly resolved with a telescope of higher power. His most remarkable discovery was that of the four largest satellites of *Jupiter*. He detected sun-spots, and inferred from their motion the rotation of the sun and the inclination of its axis to the plane of the ecliptic.

In 1610 Cosimo II., Grand-Duke of Tuscany, app. him grand-ducal mathematician and philosopher. His increased leisure G. devoted to further investigations of natural phenomena and the publication of numerous treatises. He brought fresh evidence in support of the Copernican theory by the discovery of the varying phases of *Mercury*, *Venus*, and *Mars*. In his later years he became more and more involved in controversy. Twice he was compelled by the Church to renounce his views on the Copernican system and philosophy, and to abstain from defending or teaching it. Domestic troubles and disease marred the last years of his life. In 1637 he became quite blind, though just previously he had discovered the diurnal libration of the moon, and seems to have known something of the libration in longitude. He died the year Newton was born, and was buried in church of Santa Croce, Florence. Fahie, *Life* (1903).

GALION (40° 46′ N., 82° 46′ W.), city, Ohio, U.S.A.; machine shops. Pop. (1910) 7214.

GALIUM, genus of plants, order Rubiaceæ; common Brit. wild flowers are Lady's Bedstraw or Yellow Bedstraw (*G. verum*). Cleavers (*q.v.*) is of the genus.

GALL, a term for bile, which is stored up in the **gall-bladder** (see LIVER, DIGESTION); also a swelling on a horse, or a swelling formed on plants, *e.g.* oak trees, resulting from certain parasites. See GALLS.

GALL, FRANZ JOSEPH (1758–1828), Ger. physician; practised in Vienna; made researches in anatomy and physiology, and founded the science of phrenology, writing much and lecturing upon it throughout Germany and France, and also in London; author, in addition to phrenological works, of works on anatomy and physiology.

GALLA, a race, numbering several millions, occupying parts of Abyssinia and Brit. E. Africa. They are of a fine physical type, brown-skinned, and show little trace of negro blood.

GALLAIT, LOUIS (1810–87), Belg. artist.

GALLAND, ANTOINE (1646–1715), Fr. archæologist and Orientalist.

GALLARATE (45° 40′ N., 8° 48′ E.), town, Milan, Italy; textiles. Pop. 9647.

GALLAS, MATTHIAS, DUKE OF LUCERA (1584–1647), Austrian military commander; prominent in Thirty Years War.

GALLATIN, ALBERT (1761–1849), Amer. statesman; b. Geneva, of ancient and honourable family; ed. Geneva; graduated, 1779; went to Massachusetts (1780), made his way south, and entered politics. In view of 1787 Constitution, G. was one of founders of Anti-Federalist party (afterwards the Republican). Chosen a Senator (1793), but his election annulled (1794), partly because of unpopularity he incurred over Whisky Insurrection. Elected to House of Representatives (1795), and secured leadership of Republican party. After 1798 his career was a remarkable triumph. Became Sec. of Treasury (1801) under Jefferson's presidency. Became minister to France (1816). In 1826 he was in England over North-East boundary question. Retired, 1827. Wrote much and well. *Life*, by Stevens (1883), Lodge (1879).

GALLAUDET, THOMAS HOPKINS (1787–1851), Amer. deaf and dumb educationist; his sons, Thomas and Edward, were associated with similar work.

GALLE, POINT DE GALLE (6° N., 80° 15′ E.), fortified seaport town, S.W. coast Ceylon; formerly chief port of island; good harbour; exports tea, plumbago, and cocoa-nut oil. Pop. 37,316.

GALLENGA, ANTONIO CARLO NAPOLEONE (1810–95), Ital. patriot, author, and journalist; wrote in English.

GALLERY, kind of room or separate part of room, length largely exceeds breadth; underground passage, *e.g.* in mine; platform projecting from wall; place for exhibition pictures.

GALLEY, vessel of war and commerce, with oars (and also sails), rowed by slaves and condemned criminals; long swift rowing-boat; ship's kitchen.

GALL-FLIES (*Cynipidæ*), a widely distributed family of Hymenopterous insects, which pierce and lay eggs in plants, a gall afterwards forming at the place, *e.g.* the mossy bedeguar gall on wild rose-bushes, caused by *Rhodites rosæ*.

GALLIA CISALPINA (*c.* 45° N., 10° E.), ancient province, N. Italy; originally inhabited by Ligurian, Umbrian, Etruscan, and other races.

GALLIC ACID ($C_6H_2(OH)_3COOH$), produced by boiling tannin with dilute acid. Occurs in gall nuts, and with excess of ferric chloride forms dark green solution.

GALLICANISM, theory of comparative independence of Fr. Church and king towards pope; expressed in Bossuet's *Declaration of French Clergy*, 1682. See Galton's *Church and State in France* (1907).

GALLIENI, JOSEPH SIMON (1849–), Fr. colonial administrator; b. Saint-Béat, Haute-Garonne;

app. gov. of Upper Senegal, 1886; gov.-gen. of Madagascar, 1896–1905.

GALLIENUS, PUBLIUS LICINIUS EGNATIUS (fl. 260 A.D.), Rom. emperor; notorious for his debauchery and weak government; killed by his soldiers.

GALLIFFET, GASTON ALEXANDRE AUGUSTE, MARQUIS DE, Prince de Martignes (1830–1909); Fr. soldier; served in Crimea, 1855, Italy, 1859, Algeria, 1860, Mexico, 1863, and Franco-Ger. War; War Minister, 1899–1900; authority on cavalry questions.

GALLINACEOUS BIRDS, GALLINÆ, order of birds of ground habits; heavy and ill adapted for long flight, *e.g.* fowls, guineafowls, turkeys, pheasants, grouse, partridges.

GALLINAGO, SNIPE, see PLOVER FAMILY.

GALLIO, JUNIUS ANNÆUS (d. 65 A.D.), Rom. proconsul of Achæa; referred to in *Acts* 18.

GALLIPOLI.—(1) (40° 3′ N., 17° 58′ E.) seaport, ancient *Callipolis*, Apulia, Italy; on island in Gulf of Taranto; olive oil. Pop. 10,350. (2) (40° 25′ N., 26° 39′ E.) seaport, European Turkey, on Dardanelles; formerly important commercial centre; key of Dardanelles; seat of Gk. bishop; two harbours, good bazaars, some mosques, Rom. and Byzantine remains; taken by Turks, 1357; occupied by allied Fr. and Brit. armies, 1854; peninsula invaded in Turco-Balkan War (*q.v.*), 1912–13. Pop. 30,000.

GALLIPOLIS (38° 51′ N., 82° 14′ W.), city, Ohio, U.S.A., on Ohio; iron and lumber. Pop. (1910) 5560.

GALLITZEN, DEMETRIUS AUGUSTINE (1770–1840), Amer. priest; ordained 1795; founded R.C. settlement in Cambria county, Pennsylvania.

GALLIUM, grey metal of aluminium group, hardness 6, S.G. 5·9, M.P. 29·0 C., and remaining fluid below that; discovered by spectroscope, 1875.

GALLON, Eng. liquid and corn measure; comprises 4 quarts, or 277·274 cubic in.; instituted, 1824.

GALLOWAY (55° N., 4° 15′ W.), district, S.W. Scotland, comprising shires of Wigtown and Kirkcudbright.

GALLOWAY, JOSEPH (1731–1803), Amer. lawyer; pres. of Philadelphia Assembly, 1766–73; in Anglo-Amer. dispute advocated compromise, and wrote *Plan of a Proposed Union between Great Britain and the Colonies*, 1774; fought with Brit. army; retired to England, 1778, all his property being confiscated.

GALLOWAY, MULL OF, promontory in S.W. of Scotland, Wigtonshire.

GALLOWS, wooden erection for hanging criminals, now consisting of two uprights and a cross-bar, but formerly of a single upright and a cross-piece. The latter was often called 'gibbet.'

GALLS.—Certain insects deposit their eggs in the tissues of plants, injecting at the same time a drop of irritating fluid. This causes increased growth of the plant tissues, which cover the egg and provide shelter and sustenance for the larvæ, forming a gall. G's are found on oaks, willows, currants, and pears. Many are brightly coloured, but they vary in size, shape, and colour according to the insects and the part of the plant attached, leaf or bud. If one member alone of the plant is attacked, they are one-chambered, but if buds are attacked they have many chambers which simulate flower and leaf structure. G's usually contain in addition to the larvæ a certain number of insects which cause birds to prey on them. Hemipterous and homopterous insects form galls. Wasps are responsible for oak-apples, from certain kinds of which ink is manufactured. Many different galls, formed by Diptera, are found on willows. Mite-galls, consisting of little tufts of hair and hypertrophied cells, are found on the pear, plum, ash, and alder. They are caused by microscopic Acaridea.

GALL-STONES, lime concretions formed by bile in gall-bladder; brown to white, size from small gravel to goose egg; hot fomentations helpful; sometimes surgical operation necessary.

GALLUS, CORNELIUS (I. cent. B.C.), Rom. elegiac poet and politician; friend of Vergil.

GALSTON (55° 36′ N., 4° 23′ W.), town, Ayrshire, Scotland; coal mines, weaving. Pop. (1911) 5296.

GALT (43° 19′ N., 80° 25′ W.), town, Ontario, Canada, on Grand River; flour and iron manufactures. Pop. 7866.

GALT, SIR ALEXANDER TILLOCH (1817–93), Canadian statesman; s. of John Galt, the novelist; emigrated to Canada, 1835; reorganised Canadian finance and shared in federation of Brit. N. Amer. Provinces.

GALT, JOHN (1779–1839), Scot. novelist; b. Irvine; prolific writer of stories dealing with Scot. life and character, of which the best are *The Ayrshire Legatees*, *Annals of the Parish*, *The Entail*, and *Lawrie Todd*.

GALTON, SIR FRANCIS (1822–1911), Eng. scientist; grandson of Erasmus Darwin (*q.v.*); made explorations in S.W. Africa and other countries; investigated meteorological conditions, being the first to establish the theory of anti-cyclones; made important researches in anthropology and heredity, employing biometrical and statistical methods, and founded the science of Eugenics (*q.v.*), endowing a chair in London Univ.; inventor of many scientific methods and instruments, and author of many works on scientific subjects. See his *Memories of My Life* (1908).

GALVANI, LUIGI (1737–98), Ital. physiologist; lecturer on anatomy at Bologna (1762); made first investigations of action of electricity on muscles of animals.

GALVANOMETER, an instrument for detecting, or measuring the strength of, an electric current. There are various forms of instruments suitable for different purposes, the chief being the *sine*, *tangent*, *mirror*, *suspended coil*, and *ballistic* g's. The last is used for measuring the *quantity* of electricity that has passed in the case of a current of very short duration, while the mirror g. will detect and measure very weak currents. The construction of all g's depends on the observed fact that an electric current in a wire deflects a neighbouring magnetic needle in accordance with a known law. See ELECTRICITY (ELECTROKINETICS).

GALVESTON (29° 19′ N., 94° 48′ W.), prosperous seaport and city in Texas, U.S.A.; situated on G. Island, at corner of G. Bay and Gulf of Mexico; connected by railway and causeway with mainland; contains Catholic cathedral, a univ., and Texas medical coll.; has large foundries, mills, and machine shops; exports include cotton, grain, flour; visited by disastrous hurricane in 1900. Pop. (1910) 36,981.

GALWAY (53° 20′ N., 9° W.), second largest county in Ireland; in Connaught; coast-line broken; Area, *c.* 2370 sq. miles; includes Lough Corrib and part of Lough Mask; in W. lies famous district of Connemara—wild and mountainous; G. is flat and marshy in E. Chief rivers are Shannon (forming S.E. boundary), Black, and Suck. Slieve-Baughta Mts. in S.; Twelve Pins (*c.* 2400 ft.) in W. Valuable fisheries; has seven round towers and many monastic ruins. Pop. (1911) 181,686.

GALWAY (53° 17′ N., 9° 3′ W.), seaport, capital of County Galway, Ireland; seat of Catholic bp.; chief edifices, Episcopal church of St. Nicholas, St. Augustine's Catholic church, Univ. Coll.; has good harbour; salmon fishing; exports agricultural produce, wool, marble; surrendered to Ginkell in 1691. Pop. (1911) 13,249.

GAMA, DA, see DA GAMA.

GAMALIEL, a Pharisee mentioned in *Acts*; grandson of Hillel; rabbinical teacher, taught St. Paul; member of Sanhedrim. His grandson, GAMALIEL II., was prominent in war against Rome; helped to revive Judaism after fall of Temple; pres. of Sanhedrim, 90–110 A.D. GAMALIEL III. was patriarch, 193–220; completed his f.'s work of drawing up Mishna.

GAMBETTA, LÉON (1838–82), Fr. statesman; b. Cahors; educated Cahors and Paris. Made his name at the Bar over defence of Delescluze, 1868. Sat in Assembly (1869) as a republican. Supported Franco-Prussian War as a patriot, and after Sedan continued a wonderfully inspiring resistance. Chiefly responsible for securing constitution of Feb. 1875. Author of policy of opportunism, opponent of clericalism, and head of 'Le Grand Ministère' (Nov. 1881). Advocated co-operation with Britain in Egypt, but prevented from developing his views by his death.

P. B. Gheusi, *Life and Letters* (Eng. trans., 1910).

GAMBIA (*c.* 13° N., 14° W.), Brit. crown colony and protectorate, W. Africa; consists of a narrow strip of country on both banks of Gambia, from its mouth to Barroconda, about 220 miles inland; country flat and marshy; climate fairly healthy; river Gambia navigable to Barroconda; principal town, Bathurst; chief products and exports are ground nuts, india-rubber, bees-wax, hides, kernels, cotton (woven and dyed by natives). Cable communication from Bathurst to St. Vincent and Sierra Leone; no railways; total area of colony and protectorate about 3600 sq. miles; Eng. settlement dates from XVI. cent.; after being a dependency of Sierra Leone, and part of W. African settlements (1876), G. was made a separate colony (1888); administered by a governor, with executive and nominated legislative council. Pop. (1911) 138,401.

Archer, *Gambia Colony and Protectorate*, 1906 (official handbook); Reeve, *The Gambia* (1912).

GAMBIA (13° N., 15° W.), river, Senegambia, W. Africa; rises in Futa-Jallon, flows generally W. through Gambia, enters Atlantic at Bathurst, after course of *c.* 1000 miles; navigable to Barraconda rapids, *c.* 350 miles above mouth.

Reeve, *The Gambia* (1912).

GAMBIER (40° 24′ N., 82° 25′ W.), village, Ohio, U.S.A.; contains Kenyon Coll. (Prot. Episcopal) and Kenyon theological seminary. Pop. (1910) 537.

GAMBIER ISLANDS (23° 15′ S., 134° 55′ E.), small archipelago in Pacific, forming part Polynesia; three larger and seven small islands; Fr. colony. Area, 10 sq. miles. Pop. 500.

GAMBIER, JAMES GAMBIER, BARON (1756–1833), Brit. admiral; entered navy as midshipman, 1767; post-captain, 1778; rear-admiral and one of Admiralty Lords, 1795; commanded Channel Fleet, 1808–11; further services were diplomatic.

GAMBLING, see GAMING.

GAMBODGE, Indo-Chinese kingdom, under Fr. protectorate, on banks of Mè-Kong River; capital, Pnom Penh. Pop. 1,103,000.

GAME LAWS, a series of statutes relating to the killing and disposal of game. The term includes hares, rabbits, pheasants, partridges, grouse, heath or moor game, black game, bustards, snipe, woodcocks, and the eggs of pheasants, partridges, grouse, and black or moor game. The *close-time*, when game may not be killed or taken, is, for partridges, Feb. 1 to Sep. 1; pheasants, Feb. 1 to Oct. 1; black game, Dec. 10 to Aug. 20; grouse, Dec. 10 to Aug. 12; bustards, March 1 to Sep. 1. Christmas Day and all Sundays throughout the year are also close-days; penalty, £5. There is no close-time for hares except Sundays and Christmas Day; and rabbits may be killed all the year round. Hares, however, under the Hares Preservation Act (1892), may not be sold in March, April, May, June, or July. Rabbits and hares may not be killed on moorlands and unenclosed lands between March 31 and Dec. 11. This does not apply to arable lands.

Wild birds, other than game, are cared for under the Wild Birds Protection Acts. The unlawful killing of deer comes within the purview of the Larceny Act (1861); in Scotland such offences come under the heading of theft. Deer which have strayed on to a man's private lands may be killed by him. Night poaching is punishable by fine and imprisonment; the use of man-traps or spring-guns renders the person concerned liable to five years' penal servitude; and the laying of poison on any public ground or highway is punishable with a fine of £10. Inland Revenue licences must be taken out before game can be killed or sold. The taking of game-birds' eggs by unauthorised persons is subject to a fine of 5s. for each egg.

Oke, *Game Laws* (1897).

GAMES.—Athletic games were a marked feature of the lives of the Greeks from very early times, and are described in Homer. The principal g's were foot-racing, wrestling, boxing, and chariot-racing, and in their beginning were closely connected with religion. They were generally held near the shrine of some deity, to whom they were dedicated; but later they were celebrated because of some military victory, or in honour of some great person. The principal g's were the Olympic, the Pythian, the Nemean, and the Isthmian—held at different times and in different places, and dating from many cent's before Christ. Thus the Olympic g's were held at Olympia; the Pythian originally at Delphi; and the Isthmian in the Isthmus of Corinth. The earliest and most celebrated were the Olympic g's, which were abolished by the Christian Emperor, Theodosius (394 A.D.). They were revived in 1896, and are held every four years; thrown open to people of all nations; take place in Berlin, 1916. The Romans adopted the Gk. g's named, and also added others; but they were eventually supplanted by the gladiatorial and wild-beast combats of the later Cæsars.

For modern games, see ATHLETICS.

GAMING, the playing for stakes at games either of chance, or of mixed chance and skill. The keeper of a gaming-house may be fined up to £50 and costs, or in default may be sent to gaol for twelve months. It should be noted that gaming and wagering transactions are void in law, and no action can be brought to recover any money alleged to have been won in such transactions. See BETTING.

GAMMARUS, see under MALACOSTRACA.

GAMOPETALY, GAMOSEPALOUS, see FLOWER.

GAMUT (*gamma ut*), form of scale used in mediæval music; now applied to the scale or compass of wind instruments.

GAND, see GHENT.

GANDAK, GREAT (25° 45′ N., 85° 14′ E.), river, India; rises in Nepal, Himalayas; joins Ganges near Patna.

GANDAK, LITTLE (26° 4′ N., 84° 4′ E.), river, India; rises in Nepal hills; joins Gogra, a tributary of Ganges.

GANDAMAK (34° 18′ N., 70° 2′ E.), village, Afghanistan; scene of massacre of last survivors of Brit. force from Kabul, 1842.

GANDERSHEIM (51° 52′ N., 10° 1′ E.), town, Brunswick, Germany; seat of famous abbey, founded IX. cent.

GANDHARVA, deity in the Vedic myth.

GANDIA (39° N., 0° 10′ W.), town, Valencia, Spain; coasting trade. Pop. 10,026.

GANDO (11° N., 4° E.), state, W. Sudan, on Niger, N. of Borgu; chief town, Gando (pop. *c.* 12,000), on Sokoto; inhabited by Fulah and Hausa races. Area, *c.* 78,000 sq. miles. Pop. *c.* 5,000,000.

GANESA, Hindu god, patron of prudence; represented with elephant's head.

GANGES (23° N., 90° E.), the sacred river of India; rises in ranges of Himalayas under name of Bhagirathi, and at junction with Alaknanda takes name of Ganges; flows with generally S.E. course and enters Bay of Bengal by one of largest deltas in world; most important channels, Hugli on W., Meghua on E.; length of main stream, about 1500 miles, greater part of which is navigable; chief tributaries, Jumna, Son, Ramgunga, Gunti, Gogra, Gandak, Kusi, Jamuna, and Attri; on its banks are many great cities, including Calcutta, Monghyr, Patna, Benares, Allahabad, Cawnpore.

GANGI, town, Palermo province, Sicily; famous

as Enguium, temple of which Cicero accused Verres of having despoiled. Pop. 11,000.

GANGLION, nerve centre, oval swelling containing nerve cells. See NERVOUS SYSTEM.

GANGOTRI (31° N., 79° E.), celebrated place of Hindu pilgrimage, in Gharwal, N. India.

GANGPUR (22° 5′ N., 84° E.), native state, Bihar and Orissa, India. Area, 2518 sq. miles. Pop. 238,896.

GANGRENE, mortification (*q.v.*) of appreciable part of the body; due to devitalisation or disease (Bright's and diabetes); *dry* or *moist*, latter accompanied by putrefaction, high fever, and blood poisoning.

GANGUE, see MINERAL.

GAN-HWUY, see NGAN-HUI.

GANILH, CHARLES (1758–1836), Fr. politician and economist.

GANJAM (19° 22′ N., 85° 7′ E.), district, Madras Presidency, Brit. India, extending along Bay of Bengal; mountainous, interspersed with fertile plains and valleys; chief rivers, Rushikulya, Vamsadhara, and Languliya; produces grain and rice; capital, Berhampur. Area, 8372 sq. miles. Pop. 2,010,256.

GANKU (1749–1838), Jap. artist; founder of the Kishi school; famous as a painter of tigers.

GANNAT, town, Allier, France, on river Andelot; also district of same name, 66 parishes, pop. 60,000. Pop. (town) 5600.

GANNETS and BOOBIES (*Sulidæ*), a family of marine swimming and diving birds with four webbed toes; feed on fish, and nest on rocky cliffs; frequent all the great oceans; the SOLAN GOOSE (*Sula bassana*) is a Brit. species, found on the Bass Rock, and some western islands.

GANODONTA, order of mammals having bands of enamel on teeth; possibly related to Edentates (*q.v.*).

GANOIDS, term sometimes used for the orders Crossopterygii, Chondrostee, and Holostee. See FISHES.

GANS, EDUARD (1797–1839), Ger. jurist.

GANYMEDE (classical myth.), a beautiful Trojan boy who was taken to heaven by an eagle and made cupbearer to Zeus.

GAO, GARO, or GOGO (16° 10′ N., 0° 8′ E.), town, on Niger, Fr. W. Africa; ancient capital, Songhai Empire; military post.

GAP (44° 34′ N., 6° 4′ E.), town, ancient *Vapincum*, capital of Hautes-Alpes, France; has fine modern cathedral; silk and woollen manufactures. Pop. 11,000.

GAPAN (15° 24′ N., 120° 57′ E.), town, Luzon, Philippine Islands; rice, tobacco. Pop. 20,000.

GAR FISHES (*Belonidæ*), long-jawed, long, narrow-bodied, 'bony' fishes; exceedingly active and voracious; common in warm seas.

GARASHANIN, ILIYA (1812–74), Servian soldier and politician; commander of army (1836); minister of home and foreign affairs (1853–67).

GARAT, DOMINIQUE JOSEPH (1749–1833), Fr. politician, lawyer, and writer; made a senator and count by Napoleon; member of Institute of France, 1803–16.

GARAY, JÁNOS (1812–53), Hungarian poet and dramatist.

GARBLE, originally to sift; but now to mutilate a book or writing, for the purpose of distorting the author's meaning.

GARÇÃO, PEDRO ANTONIO (1724–72), Portug. poet.

GARCIA GUTIÉRREZ, ANTONIO (1812–84), Span. dramatist.

GARCIA MANOEL, DEL POPOLO VINCENTO (1775–1832), famous Span. teacher and composer; celebrated pupils, daughters, Marie (Mme Malibran) and Pauline, and s., MANOEL G. (1805–1906), who invented laryngoscope, wrote works on singing and human voice; prof., Royal Academy of Music, 1848–95.

GARCÍA DE LA HUERTA, VICENTE ANTONIO (1734–87), Span. dramatist.

GARCÍA DE PAREDES, DIEGO (1466–1534), Span. soldier of fortune; notorious for reckless bravery.

GARCILASO DE LA VEGA, see VEGA.

GARD (44° N., 4° 10′ E.), department, S. France, on Mediterranean; formed of part of ancient Languedoc; surface slopes towards Rhône and Mediterranean with numerous lakes and marshes on coast; chief rivers, Cèze, Gard, Vidroule, and Hérault; rich in coal, iron, lead; large quantities of salt manufactured; olives and chestnuts extensively grown; important vineyards; silkworm rearing; capital, Nîmes. Area, 2270 sq. miles. Pop. (1911) 413,458.

GARDA, LAKE OF (45° 40′ N., 10° 40′ E.), lake, N. Italy, between Lombardy and Venetia; receives Sarca at N. end; drained by Mincio at S.E. end into Po; surrounded by beautiful scenery; favourite health-resort.

GARDAIA, GHARDEIA, town, S.E. Algeria, occupied by Fr., 1857; caravan centre; also district of same name, pop. 15,000, including 1600 Europeans. Pop. (town) 52,000.

GARDANE, CLAUDE MATTHIEU, COUNT (1766–1818), Fr. general; rose rapidly in army, distinguishing himself at Barsiguana, 1799; A.D.C. to Napoleon, 1805; occupied in diplomatic negotiations; attached to army of Masséna in Portugal, 1810; blundered and fell into disfavour.

GARDELEGEN (52° 31′ N., 11° 23′ E.), town, on Muldo, Pruss. Saxony, Germany; agricultural implements manufactured. Pop. (1910) 8499.

GARDEN.—The Scripture story of man begins in G. of Eden, and the g. dates back to beginning of secular history; there were famous hanging g's at Babylon (*q.v.*) and irrigated g's in Egypt; Greeks sang of g. of the Hesperides (*q.v.*), and Horace rejoices over kitchen g. of his Sabine farm; potherbs and simples have, perhaps, been continuously cultivated, but history of mediæval flower-g. is obscure. By XIV. cent. it had become great feature of S. manor-houses, and, in XVI. cent., of Eng. towns, where flowers as well as rushes were strewn on floors, so that when trampled upon sweet odour would arise. The g. at Golder's Green, and other public g's containing every plant mentioned by Shakespeare, illustrate importance of flowers in his time. In XVI. cent., under influence of Renaissance (*q.v.*), the formal, classical ITAL. GARDEN began to be formed; fine examples at Versailles. In England terraces with balustrades and urns, symmetrical walks, statuary, sundials, clipped yews, and carefully shaped flower-beds superseded careless profusion of Old Eng. g's until, in XVIII. and early XIX. cent., the Romantic Movement resulted in a 'return to nature'; England and France vied with each other in LANDSCAPE GARDENING of which effects were, woodland streams dashing through grounds over rocky beds, waterfalls, grottos, hermitages concealed at point where fine view is obtained. Modern times have seen renaissance of all modes. Dutch have shown great enterprise in scientific gardening, and their bulbs are highly prized. The vegetable market of London is known as COVENT G.; Kent and the Riviera are called respectively the G. OF ENGLAND and the G. OF EUROPE; G. in philosophy means Epicurean sect, opposed to Stoics, called the Porch, named from respective meeting-places. See also BOTANY: *Botanic Gardens*.

Garden Planning.—It is impossible to lay down exact rules for planning a garden, because the plan should be made to follow the natural shape and lie of the ground. This is especially the case where there is the advantage of an uneven surface. If the ground is absolutely level it will usually be found necessary to undertake the raising of at least one corner or side, to give relief and to afford place to rock-plants. The house should be used as the base from which to start. It should be used to support such climbing plants as can be secured—*e.g.* rambler roses, tea roses, clematis, ampelopsis, tropæolum, and jasmine. Should the house possess a porch or verandah, then the effects which can be obtained may be greatly enhanced.

The bed in which these plants are rooted may well be extended to a distance of several feet from the wall, and used for herbaceous plants or small shrubs. These should be grown as far as possible in masses, and not singly or in regular rows. By this means we obtain a contour that is never to be found in a formal bed, and at the same time a massing and blending of colour effects to which the strips and spots of carefully selected colour cannot compare. Thus at one corner of the house might be planted a group of hollyhocks or larkspurs, followed by a mass of woodruff, then scattered clumps of campion, or poppies, spiræa, marguerites, or evening primrose, while the spaces might be filled in by a mass of small-flowered blue pansies, or rose-coloured maiden-pink. The edge of this border, and of borders in general, may be finished off in various ways. Something may be said for the old-fashioned low clipped box, which, despite its primness, has an undeniable charm. But it is often very difficult to grow, and only succeeds on light, warm, well-drained soils. Much easier and at the same time more generally beautiful is a simple row of low rough stones, over and between which such spreading plants as saxifrage, stonecrop, or the maiden-pinks and pansies already mentioned, may be grown.

Between this bed and the lawn may be placed a gravel walk, which will at the same time be continued from the house door to the garden gate; if possible, this approach should run down the side and not down the centre of the garden. In the former case, the wall along which it runs can be utilised for growing a variety of climbing plants—ivy is the best; a narrow bed along the foot would give room for roses and herbaceous plants; an unpointed wall is in all cases preferable, and may be greatly beautified by filling the interstices with stonecrops.

Between the approach walk and the lawn should be placed the principal flower bed, and in arranging it the same rules should be applied as to the bed in front of the house. Mass effects should be aimed at, and in general the highest plants kept to the back. In this bed roses may be grown, and it may be stated that it is far better to grow freely blooming kinds in a bed like this, intermingled with other flowers, than to aim at few and large blooms of showing sorts, which must often be grown by themselves and which present a very bare appearance in the garden.

A *rockery* should be a main feature in every garden, and should occupy by preference the shady side, and if possible the highest part of the ground. It should be made as 'knobby' as possible, and the stones used should be large and rough. Here, again, plants should be massed: Arenaria montana forms beautiful white cushions; periwinkle gives smooth sheets of dark green studded with blue flowers; saxifrages, stonecrops, gentians, pinks, veronicas, low-growing shrubs like the rock-roses (*cistus*), petty-whin, and heaths are only a few of the innumerable plants which may be obtained even for a small expenditure; and ferns can always be planted with great effect.

The *pergola* is another very beautiful device, and is best made of rough larch arches; iron and wire trellises are not to be recommended. The chief pergola plant should be the rambler rose, of which many beautiful varieties exist. The pergola can best be introduced if the approach walk cuts the garden in two, and can be made to cover it for most or all of its distance.

The proper plants to grow can only be found by trial in each particular locality. An attempt should be made to plant in the various parts of a garden a series of flowers which will come into bloom in succession, so that at no period of the flowering season will the garden be destitute of blossom; and a further point to be observed is, that in selecting plants none which, flowering together, will give a colour discord should be chosen. Thus crimson peonies and scarlet Oriental poppies should not be grown together. In *spring* the flowering plants will be largely bulbs—snowdrops and crocus, daffodils, winter aconite, etc.; closely following on these will come the primroses; then will come the great mass of *summer* plants, violas, stocks, phlox, forget-me-not, campions, campanulas, larkspurs, monkshood, columbines, corn-flowers, petunias, pentstemons, salvias, and innumerable others; while in *autumn* the garden may still be gay with chrysanthemums, Michaelmas daisies, anemones, colchicums, cyclamen, heaths, fuchsia, hollyhock, lavender, tuberose, and many others.

The **Vegetable Garden** is separated from the flower garden, and most conveniently by a hedge or fence on which climbers may be grown. A row of sweet peas is perhaps as good as anything; or the sweet peas may be grown in front of a hedge of hawthorn—the latter flowering early and the sweet peas later on. The vegetable garden is generally planned more with a view to utility than to beauty, but even in it the general appearance may be very greatly improved by edging the beds with culinary or aromatic herbs—parsley, balm, sweet basil, lavender. Salad vegetables should be given a prominent place, especially in small gardens, and a series of plantings of lettuce giving young plants all through the season should be attempted. The other vegetables grown must depend largely on the taste of the owner, but spinach, cauliflowers, and brussels sprouts are worth attention; cabbages, carrots, and potatoes may be left to the market gardener unless there is more ample space available. Here, too, the various fruits have their place—strawberries in a bed; while even a single row of gooseberries and currants will provide a good supply of fruit. Apples and pears may also be grown, more especially if a wall with a good—southern or western—exposure is available.

Digging and Tending.—If a new garden is being laid out on ground formerly used for agriculture, much attention must be paid to getting the soil into good condition. This is done by *trenching*: that is to say, the ground is dug over with a spade, the effect being to break up the soil into smaller particles to a considerable depth (about 9 in.), and thus to render it porous and light in texture. The trenching also affords opportunity for several other important operations, the removal of large stones, the removal of the roots of weeds, and the improvement of the soil by the addition of manures. If the soil be *stiff*—*i.e.* if it contain much clay—then sand should be dug into it; and it will always be necessary to add considerable quantities of leaf-mould and of farm dung. To give good results these should both be well rotted. If they are dug in in autumn then a further trenching in spring will secure efficient mixing of all the soil constituents. Beds, and especially those of the vegetable garden, must be periodically trenched or dug over, and supplied with dung and leaf-mould. It must not be imagined that the soil if once brought into good condition will remain so; on the contrary, constant attention is required to keep it porous and friable: for this purpose the *rake* and the *hoe* should be freely employed. The former tool also serves to remove rubbish and to give an even appearance to the surface; the latter may be used to loosen weeds and to keep the lower parts of plants well supplied with soil. Should the surface of the soil become caked and hard, not only is the water supply seriously affected, but also the aeration of the roots is endangered. The main object of a good gardener should be to keep the soil in condition and free of weeds; the latter object can only be accomplished by constant use of the hoe (or Dutch hoe) and by laborious hand-weeding.

Sowing and Planting.—The actual furnishing of the garden with plants is a very varied process. The lawn may be turfed with turf obtained from the seaside, but this is very expensive; it may also be sown with suitable mixtures of grass seed, which may be obtained from all seedsmen; sowing should be done in spring and the seed should be well rolled in; a lawn, no less than any other part of a garden, needs constant

weeding; and it must also be frequently rolled and mowed.

Flowers and vegetables may be obtained very often as rooted plants, or they may be raised from seed. In the former case they are simply planted in holes made with a *trowel* or *dibble* in the positions which they are to occupy. In planting care should be taken to place sufficiently deep in the ground, and to pack the roots thoroughly, but not too hard, with soil.

In the great majority of cases, however, the plants must be raised from seed, and the exact method of doing this varies with different plants; directions are commonly supplied by the seedsman. Seeds may be sown in the place which the plant is to occupy and allowed to develop where they come up. But in most cases the seed is sown in a special bed and the young plants when sufficiently large are *pricked off* and dibbled into their permanent positions. This has the effect of strengthening the roots and inducing a more vigorous growth. Sometimes it is necessary to transplant more than once. Or the seed may be sown in the permanent position and the crop improved by drastic thinning out.

Those plants which are termed *half-hardy* must be sown under glass, either in a hothouse or in a glass frame, when they are protected from the frost. Only when the season is somewhat advanced are they planted out in the open. Very frequently too it is advantageous to sow hardy plants under a glass frame, as they may thus be brought on much earlier and protected during the most susceptible period of their growth.

The spring will naturally be occupied by such operations as sowing and transplanting and getting the garden into good trim. Summer will provide occupation in keeping the ground clear of weeds, in watering, and in a thousand minor tidying and tending operations. In autumn annual plants are removed as they die off, pruning of roses and fruit trees is undertaken, cuttings are taken from such plants as can be propagated by this means, and as winter approaches digging operations may be commenced and bulbs and roses planted. Only a very short time, if any, will elapse between the last of the autumn work and the first of the spring. The garden provides perpetual employment, and it is only if it is continually attended to that really satisfactory results can be obtained.

* *Present-Day Gardening* (series, Jack); *Beautiful Flowers, and How to Grow Them* (2 vols., Jack). Amherst, *History of Gardening in England* (1896).

GARDEN CITY, name given to new suburbs, industrial villages planned on hygienic lines, *e.g.* Bournville, Port Sunlight, Letchworth, Rosyth naval base settlement. See Sennett's *Garden Cities in Theory and Practice* (1905).

GARDENIA, group of rubiaceous plants and trees; white or yellow funnelled flowers, 6 to 7 stamens; small berry, yields a yellow dye.

GARDIE, MAGNUS GABRIEL, COUNT DE LA (1622–86), Swed. statesman; supreme in court of Christina, and principal member of ill-famed regency of minority of Charles XI.

GARDINER (44° 11′ N., 69° 51′ W.), city, Maine, U.S.A.; machine shops. Pop. (1910) 5311.

GARDINER, JAMES (1688–1745), Scot. military adventurer; killed at *Prestonpans*.

GARDINER, SAMUEL RAWSON (1829–1902), Eng. historian; ed. Winchester and Christ Church, Oxford; Fellow of All Souls, 1884, and Merton, 1892; subsequently prof. of Modern History, King's Coll., London; declined regius professorship of Modern History, Oxford, 1894. Chiefly remembered as historian of Puritan Revolution.

GARDINER, STEPHEN (*c.* 1493–1555), lord chancellor and bp. of Winchester; b. at Bury St. Edmunds; became sec. to Cardinal Wolsey, whose embassy to France he accompanied in 1527. In 1528 was sent on diplomatic errand to Pope Clement VII. in connection with question of royal divorce, and obtained from him a decretal commission; app. sec. to king, 1529; bp. of Winchester, 1531; supported king's divorce, 1533; renounced allegiance to Rome, 1534, writing a famous treatise, *De Vera Obedientia*; was sent on various diplomatic missions to France and Germany; helped in translation of New Testament, 1535; chancellor of Cambridge, 1540. On accession of Edward VI., G. was deprived of bishopric and imprisoned in Fleet; was set free by Queen Mary, whom he crowned, and whose lord chancellor he became.

GARDNER (42° 33′ N., 72° W.), town, Massachusetts, U.S.A.; chairs and toys manufactured. Pop. (1910) 14,699.

GARDNER, PERCY (1846–), Eng. archæologist.

GARE-FOWL, see AUKS, GUILLEMOT AND AUK FAMILY.

GARFIELD, JAMES ABRAM (1831–81), 20th Pres., U.S.A.; b. Orange, Ohio; obtained employment on lake schooner, 1848; illness sent him home and he turned to study; grad. 1856; app. prof. at Hiram Institute, within a year pres.; elected to Ohio Senate, 1859. When Cotton States seceded, G. advocated coercion; in war he became colonel of 42nd Ohio Volunteers; major-general, 1863; Member of Congress, 1862; Republican candidate for speakership, 1877; Pres., 1881; shot by a disappointed office-seeker, July 1881; d. Sept. *Life*, by Ridpath (1881).

GARGANEY, see under DUCK FAMILY.

GARGANO (41° 49′ N., 16° 10′ E.), mountainous peninsula (ancient *Garganus*), Apulia, S. Italy; culminates in Monte Calvo, 3470 ft.

GARGANTUA, see RABELAIS.

GARGOYLE, in mediæval arch., fantastic carvings of heads and other objects for conveying rain-water from roofs.

GARHWAL, or TEHRI (31° N., 78° E.), native state, adjoining district of G., United Province, Brit. India, in Himalayas; capital, Tehri. Area, 4180 sq. miles. Pop. (1911) 299,853.

GARHWAL, or GURWAL (31° N., 79° E.), district, United Prov., Brit. India, on S. slope of Himalayas; whole surface mountainous; chief rivers, Alaknanda and other headstreams of Ganges; capital, Serinagaur. Area, 5629 sq. miles. Pop. 429,900.

GARIBALDI, GIUSEPPE (1807–82), Ital. patriot b. Nice; after many vicissitudes as a youth on the sea, he entered on his life-work by offering his services to Pius IX., whom he believed to be furthering the cause of national liberty; fought against Fr. (1848–49), in which campaign occurred the wonderful retreat through central Italy, pursued by the armies of four countries. He himself escaped to America; served in war of 1859. With Brit. support in 1860 he pursued scheme for liberating Naples and seizing Rome; accompanied Victor Emmanuel on his entry into Naples (1860); soon re-entered political life, quarrelled with Cavour, and attempted to seize Rome; fought against Austrians and papal troops (1866). After 1875, G. accepted a pension and worked loyally with the Parliament.

Autobiography (Eng. trans., 1889); Trevelyan, *G.'s Defence of Rom. Republic*, and *G. and the Thousand*.

GARLAND, HAMLIN (1860–) Amer. novelist.

GARLAND, JOHN (XIII. cent.), Anglo-Fr. Lat. poet and grammarian.

GARLIC, natural order *Liliaceæ*, bulbous perennial plant with long narrow green leaves and an umbel of whitish flowers. Bulb is eaten, especially in Southern Europe, and has strong acrid taste and odour.

GARNET, precious stone, found in mica slate, hornblende, gneiss, and granite; colour—red, brown, green, yellow, or black; varieties—pyrope, almandine, and common garnet. Pegu, in Syria, is the chief centre of the g. markets. G's were used as beads in ancient Egypt, and by the Greeks and Romans as engraved gems.

GARNET, or **GARNETT, HENRY** (1555–1606), Eng. Jesuit; b. Heanor, Derbyshire, and became Jesuit while in Italy, 1575; in 1586 was sent on Eng. mission, which he successfully promoted for eighteen

years, making many converts; came to know of Gunpowder Plot conspiracy under seal of confession, according to his own account, and apparently did not attempt to prevent it; suspicion falling on him, he was tried for complicity in the plot, and ultimately confessed his knowledge of it; found guilty of misprision of treason, and executed.

GARNETT, RICHARD (1789–1850), Eng. philologist; one of founders of Philological Soc.; keeper of printed books at Brit. Museum.

GARNETT, RICHARD (1835–1906), Eng. scholar; s. of Richard G. (*q.v.*); keeper of printed books, Brit. Museum, 1890–99; wrote numerous vol's of literary criticism and poetry.

GARNIER, CLÉMENT JOSEPH (1813–81), Fr. economist of Free Trade school.

GARNIER, GERMAIN, MARQUIS (1754–1821), Fr. politician; Minister of State under Restoration.

GARNIER, JEAN LOUIS CHARLES (1825–98), Fr. architect; designed Paris Opera-House and Monte Carlo Casino.

GARNIER, MARIE JOSEPH FRANÇOIS (1839–73), Fr. explorer; b. St. Étienne; travelled and killed in Indo-China.

GARNIER, ROBERT (fl. 1565–83), Fr. tragic dramatist.

GARNIER-PAGÈS, ÉTIENNE JOSEPH LOUIS (1801–41), Fr. politician; leader of Republican party under Louis Philippe.

GARNISHEE, see ATTACHMENT.

GARO HILLS (26° N., 90° E.), mountainous district, Assam, India.

GARONNE, ancient *Garumna* (44° 41′ N., 0° 20′ W.), river, S.W. France; rises in Pyrenees, flows N.N.W., enters Bay of Biscay; length, *c.* 350 miles; navigable to Toulouse; chief affluents, Tarn, Lot, Dordogne, Save, Gers, Baïse.

GAR-PIKES, BONY PIKES (*Lepidosteidæ*), long, slender, ganoid fishes with enamelled scales, armoured head, and skeleton well ossified. There are four or five species found only in the fresh waters of south-eastern N. America, Central America, and Cuba. They are extremely voracious and exceedingly destructive to young fishes, and hence are detested by fishermen. The best known is the long-nosed Gar Pike (*Lepidosteus osseus*). There are many fossil representatives of the family.

GARRETT, JOÃO BAPTISTA DA SILVA LEITÃO DE ALMEIDA (1799–1854), Portug. poet; wrote hist. and poetic dramas and lyrics of high merit; did much political and administrative work.

GARRICK, DAVID (1717–79), Eng. actor and dramatist; b. Hereford; s. of an army captain; ed. at Lichfield, where he met Samuel Johnson; accompanied the latter to London; set up in business as wine merchant, but to no purpose; turned actor, and achieved immediate success as Richard III., 1741. He later played at Covent Garden and Drury Lane Theatres, becoming, with Lacy, joint-proprietor of the latter house in 1747. He disposed of his share in the theatre for £35,000 in 1766, and retired from the stage. He died three years later and was buried in Westminster Abbey. G., who was below middle height, had a face of great mobility, and possessed wonderful powers of mimicry. He was probably the most versatile actor ever seen on the Eng. stage, and his range included all the leading Shakespearean parts, both tragic and comic, besides numerous character studies in his own plays and many of the older dramatists. His lasting vogue was due to the naturalness of his acting; and his vivacious style, in place of the stilted, declamatory manner of his predecessors, gave new life to Shakespeare as a stage dramatist.

Life, by Percy Fitzgerald (1868), Knight (1894).

GARRISON, WILLIAM LLOYD (1805–79), Amer. anti-slavery journalist; took up championship of emancipation and devoted life to this object, writing, lecturing, and agitating; uncompromising advocate of immediate liberation; imprisoned and pursued with incessant threats by slave-owners; with Knott he founded and edit. the *Liberator*, 1831, which ran for thirty-five years till abolition of slavery; pres. of Amer. Anti-Slavery Soc.; visited England several times on behalf of cause.

Life, by sons, W. P. and F. J. Garrison.

GARROTTE, Span. method of strangling criminals by means of a metal collar, fixed to an upright post, and a screw which enters the spinal column.—GAROTTING, system of partial strangulation, used by highway robbers in England, who seized their victims from behind.

GARRUCHA (37° 10′ N., 1° 52′ W.), seaport, on Mediterranean, Almeria, Spain; exports silver, copper, iron, fruit. Pop. 4661.

GARRULUS, a jay. See under CROW FAMILY.

GARSTON (53° 22′ N., 2° 54′ W.), town and port, on Mersey, Lancashire, England. Pop. 17,000.

GARTER, ORDER OF THE, see KNIGHTHOOD.

GARTH, SIR SAMUEL (1661–1719), Eng. physician, author of satirical and moral poems and of several translations.

GARTOK (31° 44′ N., 80° 23′ E.), town, W. Tibet; trading centre.

GARY (41° 36′ N., 87° 20′ W.), city, Indiana, U.S.A., on Lake Michigan. Pop. (1910) 16,802.

GAS is a state of matter which differs from a liquid and solid in that there is no cohesion or attractive force between its molecules at ordinary temperatures and pressures. The most characteristic property of a g. is its power of diffusion. If the concentration of the g. is greater at one point than at another, then the g. moves from the region of higher to the region of lower concentration until by this diffusion the concentration is everywhere the same. Diffusion is independent of the presence of another g., although the rate of diffusion is less rapid the greater the concentration of the other g. Both g's, however, distribute themselves equally over the whole space at their disposal. G's can be liquefied if they are cooled to a certain temperature (*critical temperature*). Above this temperature pressure will only compress the g., not liquefy it. The *critical pressure* is the minimum pressure which will condense the g. to a liquid at the critical temperature. Every known g. has now been obtained as a liquid simply by cooling it. The molecules of a g. exert a pressure on the walls of the vessel which contains it.

Very simple laws regulate the behaviour of g's. BOYLE'S LAW states that at any given temperature the volume of a g. varies inversely as the pressure upon it. GAY-LUSSAC'S LAW is that for any given pressure the vol. of a g. varies directly as the absolute temperature. From these two laws it is deduced that if the vol. of a g. remains constant the pressure of any given vol. varies directly as the absolute temperature. The amount of work done upon or by a g. when it changes its vol. under external pressure is equal to the product of the pressure into the change of vol. AVOGADRO'S HYPOTHESIS states that equal vol's of different g's under the same conditions of temperature and pressure contain the same number of molecules.

This hypothesis and the three laws mentioned above are supposed to be explained by the Kinetic theory of g's enunciated by Clausius and Maxwell. The molecules of a g. are supposed by it to be independent of one another and to move briskly in all directions in straight lines. The particles may hit each other and the walls of the vessel containing them; but as both they and the walls behave like perfectly elastic bodies there is no loss of their energy of motion in such collisions, their directions and relative velocities only being changed by the impact. This explains the slowing of the diffusion rate when two g's are mixed.

The g. laws do not apply without correction to vapours near the point of condensation or to g's under very great pressure. The explanation of this is that the g. molecules themselves occupy a considerable amount of space when the g. is confined in a small space,

and that therefore their range of movement is limited. The gram molecular weight of a g. is the weight of it which will occupy the same vol. as 2 grammes of hydrogen measured under the same conditions of temperature and pressure. The vol. which the gram molecular weight occupies is called the gram molecular volume. It is practically the same for all g's, and at 0° and 76 cm. pressure equals 22·38 litres.

G., the illuminating agent (*coal g.*), was discovered in 1792 and manufactured in 1802. It is manufactured by the destructive distillation of coal in special retorts under special temperature conditions. The g's evolved during this process belong to the saturated and unsaturated hydrocarbons. The chief constituent of coal g. is ethylene (C_2H_4), which burns with a very luminous flame, forming carbon dioxide and water. When burned with an insufficient supply of air for complete combustion *acetylene* (C_2H_2), a g. with an unpleasant odour, is formed. This is experienced in the 'back-burning' of Bunsen burners. G. contains variable quantities of hydrogen, oxides of nitrogen, and carbon dioxide mechanically mixed with it, and, owing to the carbon monoxide in it, is very poisonous. See LIGHTING.

Traver, *Study of Gases* (1901); Maxwell, *Heat*; Meyer, *Kinetic Theory of Gases*; Watson, *Kinetic Theory of Gases*; Butterfield, *Gas Manufacture*.

GAS ENGINE, see ENGINE.

GASCOIGNE, GEORGE (c. 1535–77), Eng. poet; s. of Sir John G.; disinherited because of youthful follies; m. a wealthy widow; served as soldier of fortune in Low Countries, and taken prisoner; associated with Leicester in entertainment of Elizabeth at Kenilworth; original works include *A Hundred Sundry Flowers* (1572), *The Glasse of Government* (1575), *The Steele Glass* (1576)—one of the earliest Eng. satires,—*Instructions Concerning the Making of Verse or Rhyme in England*, etc. His poetry is marked by considerable originality, and he was an apt experimentalist in prosody. *Life*, by Schiller (1893).

GASCOIGNE, SIR WILLIAM (d. 1419), Eng. chief justice; reputed to have committed Henry V. (when Prince of Wales) to prison.

GASCONY, old province of S.W. France; called after ancient Span. tribe Vascones; under counts of Aquitaine, XI. cent.; joined to France, 1137; passed to England, 1154–1451, through marriage of Duke William X.'s daughter to Henry of Anjou, afterwards Henry II. of England; inhabitants notorious for boastfulness.

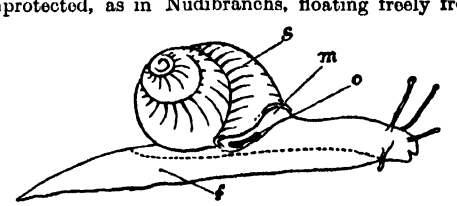
GASKELL, MRS. ELIZABETH CLEGHORN, *née* STEVENSON (1810–65), Eng. novelist; spent her early life at Knutsford, Cheshire, and her married life at Manchester, as the wife of the Rev. William G., a Unitarian minister. Her first long story, *Mary Barton*—dealing with the operative life of Manchester—was pub. anonymously in 1848, and met with instant success. It was followed at intervals by her other stories, *Lizzie Leigh*, *Cranford*, *Ruth*, *North and South*, *Sylvia's Lovers*, *Wives and Daughters*, etc. The perennial charm of Mrs. G.'s stories has given her a place amongst the classic writers of Eng. fiction; and her *Life of Charlotte Brontë* (1857) is recognised as one of the great biographies in the language.

GASOLENE, inflammable liquid distilled from crude petroleum; used for gas-engines. See PARAFFIN.

GASSENDI, or **GASSEND, PIERRE** (1592–1655), Fr. philosopher; b. Champtercier, Provence; prof. of Math's, Univ. of Paris; G. was in the front rank of the scientists of his time, and anticipated various modern doctrines, *e.g.* the fall of bodies due to gravity. He revolted against the scholastic philosophy then predominant, and applying Descartes' mathematical methods and Bacon's empiricism, revived the atomism of Epicurus and Lucretius. He held that the primal elements are atoms, generated and set in motion by God; from them everything else is formed by generation and destruction.

GASSNER, JEAN JOSEPH (1727–79), Swiss priest and thaumaturgist.

GASTEIN (47° 8′ N., 13° 8′ E.), Alpine valley, duchy Salzburg, Austria; picturesque scenery; contains several villages; Wildbad-Gastein has hot mineral springs; favourite resort of Emperor William I. of Prussia; Hof-Gastein is the capital; salt mines.



GASTEROPODA, UNIVALVE MOLLUSCS, a great class of Mollusca or Shell-Fish, with more than 17,000 species, found in all seas and on almost all lands. They include the mollusca best known on account of their abundance and the beauty of their shells, as well as on account of their destructive propensities in vegetable gardens.

G. are easily distinguished from other Mollusca on account of the univalve shell which the vast majority bear, but slugs and some marine forms have no apparent shell, and one group (*Isopleura*) has a series of shell-plates. Apart from this, they have distinct heads with radula or rasp, and tentacles, at the base or tip or middle of which simple eyes are placed. The muscular foot is well-developed, with a flat under-surface on which the creature creeps, its path being lubricated by slime secreted by glands in the foot, but its progress is proverbially slow. In most the viscera, which are packed away in the shell, have twisted on their axis in an extraordinary way, so that the body has become unsymmetrical.

The nervous system and senses of g. are wonderfully varied: they feel by means of their tentacles and by occasional outgrowths from other parts of the body; see moderately by eyes placed on their heads or tentacles, or on their backs; smell by sensitive projections or areas on their tentacles (*rhinophores*) and by one or two small organs (*osphradia*) placed within the mantle cavity near the gill; balance and perhaps hear by sac-shaped otocysts sunk in the foot. These senses are not present in all to the same degree, for eyes may be simple or complex or even absent in some deep-sea and burrowing forms.

The shells of g. are often of great beauty and are exceedingly varied in shape. Some are flattened and conical, as that of the Limpet, or flattened and whorled, as the finely iridescent Ear-Shell, or with a short close spire, as in PLANORBIS or the Whelk, or long close spire, as in Turreted or Tower Shells, or an open series of spiral curves, as in *Siliquaria* or *Cylindrella*. In Slugs and several other forms the shell is invisible, concealed under the mantle, but it is entirely absent in the Nudibranchs, the Aplacophora (see below), and a few others.

The habits of 'Univalves' exhibit much diversity. The majority are marine, and crawl leisurely upon the sea bottom in shallow water, but *Strombus* and others progress by jerks or jumps, and some are light, transparent-bodied creatures, such as the HETEROPODS and SEA BUTTERFLIES or PTEROPODS, and float or swim actively in the open sea. The marine forms breathe by means of gills usually contained in the mantle over the back, but sometimes the gills are placed in a furrow between mouth and foot, or they may be quite unprotected, as in Nudibranchs, floating freely from

SIDE VIEW OF A LIVING SNAIL AS AN EXAMPLE OF A GASTEROPOD. *f*, foot—the dotted line shows upper limit of the muscular portion; *m*, mantle; *o*, opening between mantle and body; *s*, shell.

the creature's back in the open water. Many species live in ponds or slow-running streams, and these too are gill-breathers. The aquatic forms are carnivorous

or vegetarian. The former, distinguished by a notch in the shell through which a breathing-tube or siphon projects, feed on such animals as worms, bivalve molluscs, often overcoming great difficulties in their search for a meal. Some, like the whelk, rasp through the shells of brother molluscs to obtain the soft flesh within, while others secrete acid substances which destroy the limy armour of their Echinoderm prey. The marine vegetarian feeders, such as the Periwinkles, confine their attacks to seaweeds.

Over 6000 species of g. slugs and snails live on land, and although some feed on worms and decaying matter, the majority are vegetable feeders, and, occurring sometimes in millions, as the gigantic *Achatina* in Ceylon in 1910, do considerable damage to plant life. These land forms differ from their aquatic relatives in breathing, not by gills, but by a long chamber to which the air enters by a hole on the side of the head, and also in their development. For while the young of land forms are born as miniatures of the adult, the marine forms lay eggs, in clumps or in protecting cases, and these develop into embryos, which, before the adult shape is assumed, pass through stages—trochosphere and veliger—very unlike the parent, the veliger stage being absent in most land forms. Most land g. hibernate during winter or cold weather, sealing the mouths of their shells with hardened mucus—an epiphragm—which prevents evaporation.

The place of g. in the life of the world is not of great interest. The open sea forms, especially the Pteropods, form the main food supply of many fishes and of whalebone whales; many land snails, *Helix*, *Achatina*, etc., and marine forms, such as Whelks, Periwinkles, etc., are common articles of food; and several are used as bait for fishing. From the juices of *Murex* and the Dog Whelk (*Purpura*) Tyrian purple dye was manufactured. The shells of Cowries are used as money, larger shells are made into utensils or carved into ornaments, and from the Helmet-Shells of *Cassis* shell-cameos are made. On the other hand, the vegetarian land forms cause considerable damage, especially in vegetable gardens.

The class GASTEROPODA falls into the following groups: Sub-Class I., ISOPLEURA or POLYPLACOPHORA, bilaterally symmetrical g., with shell composed of eight latitudinal plates, and numerous gills; example, *Chiton*, frequent on rocky coasts of British Isles, etc.

Sub-Class II., ANISOPLEURA, asymmetrical g. with shell of one piece and not more than two gills. There are four orders distributed in two sections (according to one of the many systems of classification).

Section A., *Streptoneura*, with visceral nerve loop twisted into 8-shape, and sexes separate, including: Order 1, *Zygobranchiata* or *Diotocardia*, with two gills or ctenidia, such as the EAR SHELL (*Haliotis*), the KEYHOLE LIMPET (*Fisurella*). The COMMON LIMPET (*Patella*) has plate-like structures instead of true ctenidia. Order 2, *Azygobranchiata* or *Monocardia*, with only one ctenidium retained—the left; examples: PERIWINKLE (*Littorina*), TOP-SHELL (*Turbo*), DOG WHELK (*Purpura*), COWRIES (*Cyprœa*), HELMET SHELLS (*Cassis*), *Cassidaria*, *Calyptrœa*, *Cancellaria*; and the pelagic HETEROPODS, e.g. *Carinaria*, with minute shell.

Section B., *Enthyneura*, with visceral nerve loop not twisted, individuals hermaphrodite, includes: Order 3, *Ophisthobranchiata*, with breathing organs behind the heart, and auricle of heart behind ventricle; examples: BULLA, SEA HARE (*Aplysia*), and the group of SEA BUTTERFLIES or WINGED SNAILS—the PTEROPODS—all of which have gills at least partially covered by mantle fold, and a more or less distinct shell. Whereas the NUDIBRANCHIATA or SEA SLUGS have no shell, and have, instead of true gills, branched processes or 'cerata' which float freely from the back in the water, others simply breathe through the skin. Common Brit. shore forms are *Doris* and *Eolis*.—Order 4, *Pulmonata*, include the land and fresh-water air-breathing g. furnished with a lung space, and generally with a shell. They include the terrestrial SNAILS (*Helix*), SLUGS (*Limax*, *Arion*, etc.), and gigantic ACHATINA; and the aquatic pond snails, as PLANORBIS and LIMNÆA.

GASTRÆA THEORY of animal ancestry, see under EMBRYOLOGY.

GASTRALGIA, pain or cramp in the stomach.

GASTRIC ULCER, disease occurring more often in women than men, especially in anæmic, under-fed, and overworked domestic servants, usually on the posterior surface of the stomach, due to the action of the digestive juices on a portion of the stomach wall, the nutrition of which is impaired, *e.g.* by a clot blocking the blood-vessel supplying the wall. The symptoms are often somewhat indefinite, resembling dyspepsia, and vary with the site of the ulcer; but there is usually severe pain, tenderness below the ribs, and vomiting soon after food is swallowed, which relieves the pain. Vomiting of blood is also common. The treatment consists in making the person affected lie down at once, and rest quietly, taking only milk and water until the symptoms improve, unless there has recently been vomiting of blood, when nothing at all must be taken. Medical care is necessary, as there may be serious complications. On improvement the diet is gradually advanced, beaten eggs, then nourishing broths, milk puddings, chicken, or white fish being given stage by stage, and under this treatment the ulcer usually heals. If perforation of the stomach wall takes place, there is sudden, very severe pain and collapse, the abdominal walls being rigid. This is a very serious condition, immediate surgical operation being necessary.

GASTRITIS, inflammation of the stomach, is usually due to irritation from food (*e.g.* tinned meats) which has begun to decompose, unripe fruit; or it may occur after diphtheria, typhoid, and other fevers. There is headache, sickness, severe pain, and tenderness over the abdomen, and often vomiting of blood-streaked food. An emetic (*q.v.*) or purgative is given to remove the irritation, ice to suck, and a hot fomentation over the stomach for the pain, and then bismuth, lime water, and other weak alkaline fluids, with a light milk diet. *Chronic G.* may arise from the acute, but is often caused by continual alcoholic excess. The diet, in this case, is carefully regulated, the stomach is washed out, and bismuth, or dilute hydrochloric acid in combination with other tonics, given.

GASTROPHILUS, see BOT FLIES.

GASTROTRICHA, group of small Infusorian-like animals found among weeds and débris in fresh water, moving by means of two ventral rows of cilia; related to Turbellarians, Nematodes, and Rotifers.

GASTRULA, see EMBRYOLOGY, REPRODUCTION.

GATAKER, THOMAS (1574–1654), Anglican theologian; wrote several works; opposed trial of Charles I.

GATCHINA (59° 32′ N., 30° 3′ E.), town, summer resort, Russia; contains one of imperial residences. Pop. 14,735.

GATE, Teutonic word meaning a passage or entrance (cf. Cowgate, Canongate, streets in Edinburgh). In fortifications it was surmounted by a crenellated gatehouse for the warden and flanked by towers, while a moat ran in front, only to be crossed by the drawbridge. It is an imposing architectural feature in Renaissance work, *e.g.* Wren's Middle Temple Gateway.

GATEHOUSE, building over the outer gate in mediæval and later castellated buildings and mansions. They were often of considerable size and strength. Town gates often had g's attached.

GATES, HORATIO (1728–1806), Amer. gen.; defeated Burgoyne at *Saratoga*.

GATESHEAD (54° 58′ N., 1° 36′ W.), town, Durham, England, on Tyne, opposite Newcastle, with which it is connected by several bridges; chief edifices, town hall, library, parish church, hospitals; locomotive dépôt; extensive ironworks; glass and chemical works; grindstone quarries. Pop. (1911) 116,928.

GATH (31° 41′ N., 34° 54′ E.), one of five chief cities of Philistines.

GATLING, RICHARD JORDAN (1818–1903), Amer. inventor of agricultural machinery and machine guns; though superseded by the Maxim and Hotchkiss and other makes in most leading armies, G. gun is still in use.

GATTY, MRS. ALFRED SCOTT (1809–73), Eng. writer for children; pub. *Parables from Nature*, *Aunt Judy* books.

GAU, JOHN (d. *c.* 1553), Scot. theol. and translator.

GAUDEN, JOHN (1605–62), Eng. bp. and author; vicar of Chippenham, 1630; rural dean of Bocking, 1641; bp. of Exeter, 1660; of Worcester, 1662; claimed to have written *Eikon Basilike*, originally pub. as work of Charles I.; authorship still doubtful.

GAUDICHAUD-BEAUPRÉ, CHARLES (1789–1854), French traveller and botanist.

GAUERMANN, FRIEDRICH (1807–62), Austrian artist; landscapes and animal studies.

GAUHATI (26° 11′ N., 91° 48′ E.), town, Assam, India, on Brahmaputra. Pop. 11,661.

GAUL, GALLIA, territory occupied by Gallic tribes (*Celti*, *Belgæ*, *Aquitani*, etc.); in ancient times consisted of—(1) GALLIA CISALPINA, *i.e.* N. Italy between Alps and Apennines; (2) GALLIA TRANSALPINA, modern France and Belgium, part of Germany and Switzerland. Cisalpine Gaul was conquered by Romans, *c.* 220 B.C., and afterwards joined to Italy. Transalpine Gaul was then invaded and ultimately subdued by Julius Cæsar in famous Gallic Wars, 58–50 B.C.; adopted Rom. civilisation and prospered (see PROVENCE); chief town, Lyons (*q.v.*); divided into provinces—*Narbonnensis*, *Aquitania*, *Lugdunensis*, *Belgica*; overrun by Franks, Vandals, Visigoths, and other barbarians, *c.* 400 A.D. See FRANCE.

GAULT, GOLT, GALT, marls and calcareous slates occurring between the lower and upper greensands of chalky formations, and belonging to the lower Cretaceous system; colour—light grey and dark blue; found at Folkestone and in Cambridgeshire. G. is also name for any kind of stiff blue clay.

GAULTHERIA PROCUMBENS, see WINTERGREEN.

GAUNTLET, a steel or leather glove; to 'run the gauntlet' was an old punishment by which persons were compelled to pass between a double line of their fellows, who struck at them with knotted ropes.

GAUR, see OX GROUP.

GAUR, LAKHNAUTI (24° 52′ N., 88° 10′ E.), ruined city, near Ganges, Bengal, India; said to have been founded XII. cent.; capital of Muhammadan viceroys and kings of Bengal from XIII. cent.; fell into decay after Mogul conquest, 157-.

GAUSS, KARL FRIEDRICH (1777–1855), Ger. mathematician and physicist; app. director Göttingen astronomical observatory, 1807, where with Weber he built a magnetic observatory, 1833; invented magnetometer, declination needle; made trigonometrical survey of Hanover.

GAUSSEN, FRANÇOIS SAMUEL ROBERT LOUIS (1790–1863), Swiss Prot. theologian; in trouble with ecclesiastical authorities at Geneva; formed *Société Evangélique*.

GAUTIER D'ARRAS, Fr. trouvère of XII. cent.

GAUTIER, ÉMILE THÉODORE LÉON (1832–97), Fr. scholar; edit. *Chanson de Roland*.

GAUTIER, THÉOPHILE (1811–72), Fr. poet and prose writer; disciple of Victor Hugo and Romantic school; began his career as poet with *Albertus* (1830), which was followed by the *Comédie de la Mort* (1832), but his best poetical work is contained in *Émaux et Camées* (1856). He achieved success with his realistic novel, *Mademoiselle de Maupin* (1835), and other works of fiction include *Le Capitaine Fracasse*, *La Belle Jenny*, *Militona*, etc. He was also a prolific writer of travel books, criticism and feuilletons, and was one of the greatest Fr. masters of the short story. All his writings are distinguished by a masterly sense of style.

See Du Camp's *Gautier* (Eng. trans., 1893).

GAVARNI, pseudonym of SULPICE CHEVALIER (1804–66), a noted Fr. caricaturist and book illustrator; took subjects from low life.

GAVAZZI, ALESSANDRO (1809–89), Ital. Prot.; preached in England; chaplain in Garibaldi's army.

GAVELKIND, general usage in England before the Conquest, by which if a man d. intestate his lands passed equally to all his sons, or, failing direct issue, to his bro's. The custom still survives in Kent.

GAVESTON, PIERS (d. 1312), Earl of Cornwall; favourite of Edward II.; executed by jealous barons.

GAWAIN, knight in Arthurian legend; s. of Loth, king of Orkney, and nephew to Arthur. Gawain was originally regarded as model of courtesy and gallantry. Malory and later writers make him base and immoral.

GAWLER (34° 35′ S., 138° 39′ E.), town, S. Australia; foundries, flour-mills. Pop. 11,000.

GAY, JOHN (1685–1732), Eng. poet, dramatist, and fabulist; his most successful works were his *Fables* (1727) and *The Beggar's Opera* (1728)—a Newgate pastoral. Other writings include *Rural Sports*, *Trivia*, *The Shepherd's Week*, also some plays and miscellaneous poems; lyrical gift shown in *Black-Eyed Susan* and other undying songs; helpless, lazy, easy-going nature; very popular in XVIII. cent.

GAY, MARIE FRANÇOISE SOPHIE (1776–1852), Fr. novelist (Directoire and Empire periods), playwright, song-writer, and musician; mother of Delphine G., Madame de Girardin (*q.v.*).

GAYA (24° 48′ N., 85° 3′ E.), district, Patna, Bihar and Orissa, India; consists of level and fertile plain; chief river, Son; abounds with holy places; capital, Gaya (pop. 71,000), where Buddha, under a pepal tree, is supposed to have attained all knowledge; centre of pilgrimage; silk and cotton manufactures. Area, 4712 sq. miles. Pop. 2,059,933.

GAYAL, see OX GROUP.

GAYARRÉ, CHARLES ÉTIENNE ARTHUR (1805–95), Amer. historian and novelist.

GAY-LUSSAC, JOSEPH LOUIS (1778–1850), Fr. physicist; prof. of Physics at the Sorbonne, and of Chem. at the Jardin des Plantes; was a rival of Davy, whose researches on iodine, chlorine, sodium, and potassium he tried to prove inaccurate. He investigated properties of gases, hygrometry, capillarity, and stated the law of volumes, and improved the processes for the manufacture of sulphuric and oxalic acids. Quantitative analysis and organic analysis were benefited by the accurate methods he introduced into such problems as the assay of silver.

GAZA (31° 30′ N., 34° 33′ E.), town, Palestine, on coast; commercial centre; seat of Gk. and Armenian bp's; was most southerly and important of five Philistine cities; taken by Alexander the Great, 332 B.C., and by Bonaparte, 1799. Pop. 40,000.

GAZA, THEODORUS (*c.* 1398–1478), Gk. scholar; one of the pioneers of the revival of Gk. learning; author of a Gk. grammar and other works.

GAZALAND (24° 30′ S., 34° 20′ E.), district, S.E. part of Portug. E. Africa.

GAZELLE (*Gazella*), antelope genus, of African, Arabian, and Indian deserts; distinguished by lyrate horns, sandy colour, with light and dark face markings. WALLER'S G. (*Lithocranius walleri*), or gerenuk, an E. African g., has hooked, massive horns in male and peculiar skull structure.

GAZETTE, a newspaper; the *London Gazette*, pub. twice weekly, is the Government organ for official announcements and appointments.

GEBER (X. cent.), reputed author of certain Lat. and Arabic writings on alchemy, etc. The works themselves are of considerable hist. value, but opinion differs regarding their authorship and date.

GEBHARD TRUCHSESS VON WALDBURG (1547–1601), abp. of Cologne; elector of Cologne, 1577; embraced reformed faith, 1582, and m.; deposed and excommunicated, 1583.

GEBWEILER (47° 55′ N., 7° 11′ E.), town, Alsace-Lorraine, Germany; textiles; wines. Pop. (1910) 12,900.

GECKOS, see under LIZARDS.

GED, WILLIAM (c. 1690–1749), Scot. inventor of stereotyping; first printed from casts in Edinburgh, 1725.

GEDDES, ALEXANDER (1737–1802), Scot. R.C. Bible critic; removed from Banffshire charge for sympathising with Protestants; trans. part of Old Testament.

GEDDES, ANDREW (1783–1844), Scot. artist; amongst his sitters was Sir Walter Scott.

GEDDES, JAMES LORRAINE (1827–87), Scot.-Amer. soldier and poet.

GEDDES, JENNY (XVII. cent.), Scot. historical character; caused riot by throwing stool at Bishop Lindsay's head in St. Giles', Edinburgh (July 23, 1637), on introduction of Laud's Prayer Book.

GEDDES, SIR WILLIAM DUGUID (1828–1900), Scot. educationist; his works include a *Greek Grammar* and a criticism of Homer.

GEDYMIN (fl. early XIV. cent.), grand-duke of Lithuania; s. of Lutuwer; ruler over large portion of Russia; warred against Teutonic and Livonian knights; was first to open up Russia to Western culture; founded dynasty and largely increased dominions; killed at siege of Wielowa (1342).

GEE, THOMAS (1815–98), Welsh Calvinist divine; devoted himself to itinerant preaching and religious journalism.

GEEL, JACOB (1789–1862), Dutch scholar.

GEELONG (38° 10′ S., 144° 21′ E.), seaport, Victoria, Australia; first woollen mill in colony established at G.; has extensive wool trade, flour-mills, and tanneries. Pop. (1910) 28,880.

GEESE, see under DUCK FAMILY.

GEESTEMÜNDE (53° 31′ N., 8° 34′ E.), fortified town, Hanover, Germany; principal port of Ger. deep-sea fisheries. Pop. (1910) 25,061.

GEFFCKEN, FRIEDRICH HEINRICH (1830–96), Ger. diplomatist and hist. and legal writer.

GEFFROY, MATHIEU AUGUSTE (1820–95), Fr. historian; b. Paris; pub. *Histoire des états scandinaves* (1851) and other hist. studies.

GEFLE (60° 38′ N., 17° 10′ E.), seaport, Sweden, on inlet of Gulf of Bothnia; manufactures textiles, machinery, and tobacco; timber, wood-pulp, iron, and steel exported. Pop. (1910) 35,203.

GEGENBAUR, CARL (1826–1903), Ger. anatomist; prof. of Anatomy at Jena (1855) and Heidelberg (1873); made important investigations in comparative anatomy; author of many scientific works.

GEHENNA (Heb. *Gē Hinnom*, valley of Hinnom), Heb. name for Hell. Hinnom, near Jerusalem, being the place where Israel sacrificed children to Moloch, came to be held in horror, and was used later for tipping refuse.

GEIBEL, EMANUEL (1815–84), Ger. lyric poet; prof. of Æsthetics, Munich (1852–68).

GEIGER, ABRAHAM (1810–74), Jewish scholar and theologian; rabbi at Wiesbaden, Breslau, Frankfort, Berlin; wrote *Urschrift und Übersetzungen der Bibel*, *Sadducäer und Pharisäer*, etc. His nephew, Lazarus G., wrote *Ursprung der Sprache*.

GEIJER, ERIK GUSTAF (1783–1847), Swed. historian and poet; grad. at Univ. of Upsala, 1806, becoming prof. of History there, 1817–46; pub. *History of the Swedes* (1832–36; Eng. trans., 1845), a masterpiece in history.

GEIKIE, SIR ARCHIBALD (1835–), Scot. geologist; b. Edinburgh; ed. Edinburgh Royal High School and Univ.; assistant of Geological Survey, 1855; director, Geological Survey for Scotland, 1867; prof. of Geology, Edinburgh Univ., 1871; director-gen. of Geological Survey of United Kingdom, 1881–1901. Author of many publications; made special study of microscopic petrography. His bro., JAMES (1839–), author of many works on geol., succ. him as prof. of Geol., Edinburgh Univ. (1882).

GEIKIE, WALTER (1795–1837), Scot. artist; noted for black-and-white illustrations of Scot. life.

GEILER VON KAISERSBERG, JOHANN (1445–1510), great Ger. pulpit orator; preached at Strassburg Cathedral, 1478–1510.

GEISHA, Jap. female singer and dancer.

GEISLINGEN (48° 37′ N., 9° 50′ E.), town, Württemberg, Germany; glass and iron works. Pop. (1910) 8671.

GELA (37° 10′ N., 14° 20′ E.), ancient city, Sicily; founded by Cretans and Rhodians, 688 B.C.

GELADA BABOON, see under CERCOPITHECIDÆ.

GELASIUS I., pope (492–96); banished Manichæans. GELASIUS II., pope (1118–19); expelled from Rome by Emperor Henry V., whom he afterwards excommunicated.

GELATI, monastery in Transcaucasia, founded by David, king of Georgia, 1109.

GELATIN, or **GELATINE**, nitrogenous substance obtained by digestion of bones, skin, and tendons with superheated steam. The cooled hot-water solution jellies, but after prolonged heating does not. With potassium bichromate it forms, when exposed to the light, an insoluble compound used in the carbon processes in photography. Bacteria are grown on gelatin cultures.

GELDERLAND (52° 5′ N., 6° E.), province, Netherlands, S.E. of Zuider Zee; surface more hilly than most of Dutch provinces; traversed by Waal, Rhine, Yssel, Maas; soil very fertile along river banks. Chief crops—cereals, flax, tobacco; cattle-rearing, brick-making, paper and cotton industries carried on; capital, Arnheim. Area, 1965 sq. miles. Pop. 639,602.

Old Countship of G. was raised to a DUCHY, 1338, under the Empire; thrived in commerce; seized by Maximilian of Austria, 1483; absorbed in Hapsburg Netherlands, 1543; north (present Dutch province) seceded, south adhered to Spain, 1579; divided between Holland and Prussia, 1814.

GELDERN (51° 31′ N., 6° 19′ E.), town, Germany, Pruss. Rhine province; formerly residence of Dukes of Gelderland. Pop. (1910) 6447.

GELLERT, faithful hound of the Welsh prince, Llewellyn, who slew him, thinking he had killed the child he had actually saved from a wolf.

GELLERT, CHRISTIAN FÜRCHTEGOTT (1715–69), Ger. religious poet, fabulist, and dramatist; prof. of Philosophy, Leipzig (1751).

GELLIUS, AULUS (II. cent. A.D.), Rom. grammarian, and author of *Noctes Atticæ*, a miscellany valuable for its extracts from ancient writings no longer extant.

GELLIVARA (67° 20′ N., 20° 50′ E.), town, Sweden; extensive iron-ore mines.

GELNHAUSEN (50° 13′ N., 9° 6′ E.), town, on Kinzig, Hesse-Nassau, Germany; rubber goods; wine. Pop. (1910) 4858.

GELSEMIUM, drug consisting of the dried root of a plant, *Gelsemium nitidum*, of natural order *Loganiaceæ*, growing chiefly in the south-eastern United States, its chief constituents being two alkaloids, *gelseminine* and *gelsemine*. Its action has been shown to be mainly on the anterior horns of the spinal cord grey matter, but owing to its uncertain action it is not much used now, except sometimes, in combination with other drugs, for neuralgia or migraine.

GELSENKIRCHEN (51° 32′ N., 7° 14′ E.), town, Westphalia, Prussia; collieries. Pop. (1910) 169,550.

GEM (Lat. *gemma*, 'precious stone'), term applied to certain rare minerals, valued for ornamental purposes, or to precious stones cut, polished, and engraved, which, when the engraving is sunk in the stone, are called *seals* or *signets*, and when engraving is raised, *cameos*.

The ancients had great belief in the medicinal powers of gems, and even at present day some people put faith in 'lucky stones.' The ancients, owing to the absence of chemical analysis, were only able to distinguish the different precious stones by colour

and density. The diamond, ruby, and sapphire were not much used, as their hardness prevented their being successfully engraved. Varieties of chalcedony quartz were more often employed, and the following were known: carnelian, sard, onyx and sardonyx, agate, plasma, jasper, garnet, hyacinth, emerald, beryl, chrysoberyl, topaz, chrysolite, opal, sapphire, tourmaline, amethyst, and turquoise.

The engravers of those times suited the colour of the stones to the subject of their engraving; *e.g.* beryl was used for marine pictures, green jasper for woodland scenes, etc. The range of subjects was wide, and included animals, battle scenes, portraits, fancy designs, mottoes, etc. Inscriptions varied—names of deities, the name of the engraver, a motto, a piece of poetry, or some words indicative of the virtue of the individual gem.

Artificial g., a precious stone formed by chemical means. The term should not be confused with 'artificial precious stones,' as an artificial gem is actually a real precious stone, which is chemically, physically, and optically identical with a natural gem, though produced by artificial means. Diamonds have been produced from carbon in molten iron under great pressures, and rubies and sapphires from fusion of barium fluoride with alumina and traces of potassium bichromate or cobalt.

The term a. gem may also be applied to cameos and intaglios, which are spurious imitations of some original and valued engraving.

The engraving of gems is of very ancient origin, and some of the early cameos are valued highly by collectors. This led to their being imitated and copied at the close of the XVIII. cent. by unscrupulous persons who found collectors only too willing to pay for imitations of valuable gems which they had not got in their collections. In modern times, too, a considerable trade is done in this line, and also in the manufacture of gems for ornamental purposes.

Paste copies of existing gems are obtained by making a mould from the original. This is covered with small pieces of glass and placed in a furnace, and the temperature raised to such a heat that the glass melts and fills the mould.

Streeter, *Precious Stones and Gems* (1898); Kirkpatrick, *Discrimination of Gems* (1895).

GEMBLOUX (50° 33′ N., 4° 42′ E.), town, Namur, Belgium; has extensive railway and engine works and is railway junction; scene of defeat of Dutch by John of Austria, 1578. Pop. 4664.

GEMINI, a zodiacal constellation.

GEMMI PASS (46° 25′ N., 7° 37′ E.), Alpine pass, connecting Swiss cantons Bern and Valais.

GEMSBOK, see Oryx.

GENAZZANO, small town, prov. of Rome, Italy; famous old castle of Colonnas and place of pilgrimage.

GENDARMERIE, name now given to the Fr. military police, but in mediæval times applied to select Fr. cavalry, organised by Charles VII.

GENEALOGY, a systematical account of origin, descent, and relations of families; a pedigree; founded on idea of a lineage or family. Ancient g's often supply information respecting tribal subdivision and interrelation. Study of g. is an aid to hist. science, but most old g's require interpretation and criticism of a close nature. Biblical g's, for instance, besides their complexity, often contain manifest improbabilities and inconsistencies. Similarly many g's of ancient Gk. and Rom. families are untrustworthy. Owing their origin often to a desire to trace divine descent, or to prove continuity of race, they are in some cases pure fabrication. Then again, the frequent resort to well-recognised practice of adoption amongst the ancients was an almost insuperable barrier to possibility of a correct g. Study of g. grew in importance in Middle Ages, when nobility was distinct from other classes and monopolised certain offices, eligibility for which depended largely on descent.

In modern times, importance of g. is largely due to laws of inheritance, and desire to assert privileges of a hereditary aristocracy. Private g's are a comparatively late development of the art of pedigree-making. Historically, g's came into prominence in England during time of Edward III.'s claim to Fr. crown, and during rivalry between Yorkists and Lancastrians. From XVI. cent. onwards g's are numerous. Work of genealogist is not always free from taint of inaccuracy and forgery, but is now largely in hands of antiquaries, whose researches are of enormous value to historian. Of late the study has made rapid strides, more material having been made available by publication of parish registers, marriage-licence allegations, monumental inscriptions, and publications of Public Record Office.

J. H. Round, *Peerage and Pedigree* (London, 1910); Stokvis's *Manuel d'histoire et de généalogie de tous les états du globe* (1888–93).

GENELLI, GIOVANNI BUONAVENTURA (1798–1868), Ger. artist; his work was much influenced by the older Ital. masters.

GENERAL, commander of an army, division, or brigade; chief of a religious order; added to official titles, term implies higher rank and authority (cf. Auditor-G.).

GENERATIONS, ALTERNATION OF, the occurrence of different kinds of individuals in successive generations, as in butterflies which have seasonal forms, or more usually the occurrence of different kinds of individuals differently produced, in a single life-history, *e.g.* where a sexual generation is succeeded by a vegetative generation which reproduces by budding, as in many Cœlenterates, Worms, and Tunicates.

GENERIC IMAGE, or **Recept**, an image of the common visible characters of a class, *e.g.* of cow or horse, but vague in details. Sometimes compared to a 'composite photograph.'

GENESIS, first book of Old Testament; name is of Gk. derivation, signifying the origin or generation of the world. G. forms introduction to history of Israel; naturally divided into two portions, of which the first (chaps. 1–11) gives account of early history of man, beginning with Creation and describing the Fall, the increase of sin, and the Deluge; the second (chaps. 12–50) gives history of the patriarchs, beginnings of the twelve tribes, the sojourn in Egypt, and death of Joseph. G. is said to be the oldest complete book in existence; it is now admitted to be a compilation from various sources; this is known from the double record of various events and from differences in style and language. According to Dr. Driver, the two earliest documents from which book was compiled are those known as J and E, from their respective use of the terms Jehovah and Elohim in speaking of the Creator; these two seem to have been combined by a third writer into a single story; they are not now easily distinguishable, and are generally referred to together as JE. The third principal source is generally known as P, or the Priests' Code; this in itself gives practically a complete story, and it is written with a certain precision which contrasts with the less studied style of the earlier sources; it is sometimes called the Elohistic narrative, from constant use of term Elohim. A later editor seems to have combined P with JE, using the former as a kind of groundwork into which he has introduced portions from the earlier documents.

W. H. Bennett, *Genesis* (Jack's Century Bible); S. R. Driver, *Introduction to Literature of Old Testament*; Robertson, *The Old Testament and its Contents*; Wright, *Introduction to Old Testament*.

GENET, a carnivore; see under Civet Family.

GENEVA (42° 52′ N., 77° 4′ W.), city, New York, U.S.A.; seat of state agricultural experiment station; extensive seed and plant nurseries; manufactures stoves, boilers. Pop. (1910) 12,446.

GENEVA (46° 11′ N., 6° 9′ E.), town, Switzerland, capital of G. canton, at S.W. end of Lake of G., overlooked by Jura and Alps. Rhône, issuing from lake, flows through city under handsome bridges. G. is a

great commercial, industrial, and educational centre and favourite resort of foreigners, and has striking modern buildings, broad quays, and fine boulevards. Among the few older buildings of interest are the Cathedral of St. Pierre (XII., XIII. cent's), Chapel of the Maccabees (XV. cent.), town hall (XV. cent.), arsenal containing historical museum; old tower (c. 1219) on the Île in Rhône. Notable modern features are Univ. (founded as Academy, 1559, by Calvin; became univ., 1873), Bâtiment Électoral, Conservatoire de Musique, Victoria Hall (concert hall), Theatre, Musée de Fol (fine collection of antiquities), Musée Rath (pictures, sculptures), Musée Ariana (art collection), Musée des Arts Décoratifs, statue to Duke of Brunswick (who left his fortune to G.), Rousseau Island, houses of Calvin and Rousseau, quai de Mont Blanc with splendid view of Mt. Blanc, grand quai du Lac, etc.; chief industries are watch-making, jewellery, diamond-cutting, musical-boxes, scientific instruments, cutlery. G. first appears in Cæsar's *Gallic War*; held by Burgundians and Franks, V. and VI. cent's; part of Ger. Empire, XI. cent.; Republic founded, 1512, allied to Swiss cantons, 1584; long resistance to house of Savoy ended successfully, 1603; annexed to France, 1798; admitted into Swiss Confederation, 1815. G. figured very prominently in the Reformation; Farel, famous Prot. preacher, settled there, 1533, Calvin in 1536. The same year G. finally espoused Prot. faith; Farel and Calvin were exiled, 1538; latter, recalled, 1541, was for the rest of his life the stern and severe ruler of G., even sending Gruet and Servetus to the stake, 1547, 1553. Pop. (1910) 125,500.

Lewis and Gribble, *Geneva* (1910).

Geneva Convention, an agreement relating to treatment of sick and wounded in war, was adopted at international conference, G., 1864, which originated in a book entitled *Un Souvenir de Solférino*, by Henri Dunant, a Genevese philanthropist. Sympathy following publication of this book was crystallised by M. Gustave Moynier. Convention was accepted by every civilised nation. There have since been supplementary conventions. The New G. C. (1906) was signed by thirty-five nations. The Hague Convention (1907) adopted terms of G. C. for maritime warfare.

GENEVA, LAKE OF, Lac Léman (46° 25′ N., 6° 30′ E.), largest lake, ancient *Lacus Lemannus*, Switzerland, bordering Haute-Savoie, France, and cantons Geneva, Vaud, and Valais; extends in crescent shape E. to W.; traversed by Rhône; length, 45 miles; greatest breadth, 9 miles; height above sea-level, 1230 ft.

GENEVIÈVE, a noble Brabantine lady who was falsely accused of wifely infidelity. The story is a common theme of mediæval romances.

GENEVIÈVE, ST. (c. 422–512), guardian saint of Paris, which she protected against Attila and Huns; what is now the Panthéon was erected as a church in her honour; her tomb was desecrated at the Revolution.

GENGHIZ KHAN, Jenghiz Khan (*q.v.*).

GENIUS, beneficent spirit who, in the belief of the ancient Romans, presided over the birth and career of every human being. The Greeks called such spirits *dæmones*.

GENLIS, STEPHANIE FÉLICITÉ, COUNTESS DE (1746–1830), Fr. authoress; works, *Mémoires*, romances, and comedies.

GENNADIUS II., Georgios Scholarios (d. c. 1468), patriarch of Constantinople; tried to unite Gk. and Lat. Christendom; a distinguished scholar.

GENNESARET, see Galilee, Sea of.

GENOA, Genova (44° 24′ N., 8° 53′ E.), strongly fortified seaport and chief commercial city of Italy, on Gulf of G. Its situation in midst of Riviera, its mediæval churches in black and white marble, XVI.-cent. palaces, steep irregular old lanes, and broad handsome modern streets justify G.'s title, *La Superba*. The magnificent harbour has been greatly extended. Among finest churches (XI., XII., and later cent's) are Santa Maria di Castello, San Lorenzo Cathedral, San Donato, Santo Stefano, San Giorgio, San Matteo, San Siro, Santa Maria di Carignano, L'Annunziata, and Sant' Ambrogio. Outstanding palaces (with art treasures) are Rosso, Bianco, Doria, Municipale, Balbi-Senárega, San Giorgio, Reale, Durazzo-Pallavicini, and Ducale (doges' residence); Univ. (founded, 1471), Art Academy (and Museo Chiossone), municipal library; Verdi Institute of Music; Teatro Carlo Felice; Porta Pilo, Lanterna, Romana (old gateways); Campo Santo (cemetery), beautiful parks, monuments. Chief industries are silk and velvet, cabinet-making, filigree work, marbles, damask, lace, embroidery, candied fruit, leather. In Middle Ages G.'s position made her the recognised leader in Liguria against Saracen and other invaders, and mistress of W. Mediterranean; Republic of G. crushed Pisa, XIII. cent., but was conquered by Venice, 1380. Family feuds continually disturbed G.; Dogos instated, XIV. cent.; embodied in Ligurian Republic, 1797; annexed to France, 1805, to Sardinia, 1815. Famous Genoese include Columbus, Admiral Andrea Doria, and Mazzini. Pop. (1911) 272,077.

GENOVESI, ANTONIO (1712–69), Ital. philosopher; first entered the Church, then took to law, finally to philosophy; prof. at Naples.

GENSERIC, Gaiseric (*q.v.*).

GENSHIN (942–1017), Jap. artist; known also as Yeshin Sodzu; his *Descending Buddha* and similar studies are amongst the greatest religious pictures of the world.

GENTIAN, natural order *Gentianaceæ*, herbaceous perennial plants (characterised by simple exstipulate leaves, the spiral [imbricate] arrangement of the petals in flower buds, and absence of latex in tissues), the majority of which have brilliant deep blue blossoms, and grow on hills. All possess an active bitter principle in the root, but medicinal g. is derived from *G. Lutea*. Its action is due to a glucoside which increases the tone of the alimentary canal.

GENTIANACEÆ, family of glabrous herbs, rich in bitter principles; chief genus, *Gentiana*, used in distilling liqueur Enzian.

GENTILES, Scriptural name for people other than Jews.

GENTILESCHI, ORAZIO DE' (d. 1646), and his dau., Artemisia G. (1590–1642), Ital. artists of eminence; both spent some time in England and were employed by Charles I.

GENTILI, ALBERICO (1552–1608), Ital. lawyer; prof. of Civil Law at Oxford Univ.; advocate of the king of Spain, 1605; works important in history of international law.

GENTLEMAN is a term which has undergone changes of meaning at different periods. Originally it was applied to a person of property, below the rank of a noble, who had received a coat-of-arms. Another distinction was the right to carry a sword. In the XVIII. cent. the term was additionally used for a g.'s footman or valet (called a 'gentleman's gentleman'). Of late years the term has three distinct applications: a man of good family; a man of independent means, who follows no regular occupation; and any man, whether well-born or otherwise, of refined manners and taste—one of 'Nature's gentlemen.'

GENTZ, FRIEDRICH VON (1764–1832), Ger. statesman; stirred up opposition to the Fr. Revolutionary government and sought to create a great European party against the Napoleonic empire. Prussia dared not countenance his attacks, but the good effect produced by his eloquence and wit secured him subsidies from Britain and the rank of imperial councillor; and after the fall of Napoleon he was the skilled adviser of the Holy Alliance and the draughter of most European treaties; denounced by Napoleon, with some justice, as a mercenary, but after the first ebullitions of youth worked consistently for conservation of institutions.

GEODESMUS, a Turbellarian worm (*q.v.*).

GEOFFREY (1158–86), Duke of Brittany; fourth

s. of Henry II. of England, and f. of the Prince Arthur of Shakespeare's *King John*.

GEOFFREY DE MONTBRAY (d. 1093), Eng. ecclesiastic; was bp. of Coutances; prominent military figure and administrator from Conquest onwards to death of William I.; took part in rising against William Rufus (1088).

GEOFFREY OF MONMOUTH (d. 1154), Welsh chronicler; bp. of St. Asaph, 1152; his *Historia Britonum*, a romance tracing descent of Britons from Brut, s. of Æneas, is source of Arthurian legends, prophecies of Merlin, and stories of Cymbeline and King Lear.

GEOFFREY PLANTAGENET (d. 1151), Count of Anjou, and (1144) Duke of Normandy; second husband of Matilda, dau. of Henry I., and f. of Henry II. of England.

GEOFFRIN, MARIE THÉRÈSE (1699–1777), Fr. authoress; associated with the Encyclopædists, and famed for brilliance of her literary and artistic gatherings.

GEOFFROY, ÉTIENNE FRANÇOIS (1672–1731), Fr. physician and chemist; prof. of Chemistry at Jardin du Roi, of Pharmacy and Medicine and dean of faculty of Medicine at Collège de France, Paris; author of works on chemistry. His bro., CLAUDE JOSEPH, chemist, made researches on essential oils in plants.

GEOFFROY SAINT-HILAIRE, ÉTIENNE (1772–1844), celebrated Fr. zoologist and comparative anatomist; famous for his contention of the homologies of parts in animals, and his general theories of anatomical relationships.

GEOFFROY SAINT-HILAIRE, ISIDORE (1805–61); Fr. zoologist; b. Paris; s. of above; doctor of med., 1829; assisted and finally succ. his f.; held various educational posts, including inspector-generalship of Paris Univ., 1844; founded Paris Acclimatisation Society, 1854; writings include *Histoire générale et particulière des anomalies de l'organization chez l'homme et les animaux* (1832–37).

GEOGRAPHY (Gk. *Ge*, the Earth; *graphein*, to describe) has been defined as 'the exact and organised knowledge of the distribution of phenomena on the surface of the Earth, culminating in the explanation of the interaction of Man with his terrestrial environment' (Dr. H. R. Mill). This most comprehensive science naturally divides itself into various branches, according to the different aspects of the earth's surface with which it is concerned. Thus *mathematical g.* deals with the earth as a planet—its figure, motions, and its place in the solar system (also known as *astronomical g.*); this branch also embraces the measurement of the earth and its representation on maps, charts, etc., *i.e.* geodesy, cartography, topography.

Mathematical g. is mainly the study of scientists and experts; *physical g.* is more familiar to the average man; it occupies itself with the earth's physical features — its soil and sea and air, its climate, and kindred subjects; it bears, therefore, on such sciences as geology, oceanography, meteorology (*qq.v.*). Still more familiar is *biography* or *biological g.*, which investigates the earth as a home of living things—*phytogeography* studies the distribution, etc., of plant-life, and is akin to botany; *zoogeography* studies in like manner the animal-life, and is related to zoology. Of still more human interest is *anthropogeography*, which treats of the distribution and conditions of mankind on the earth. This, again, may be subdivided into *political g.*, which considers states and their boundaries, races, governments, institutions, languages, and so forth; *economic* or *commercial g.*, which relates to products, industries, routes and means of transportation, and similar matters. Geography may also be *historical*, *applied*, or *practical*.

Exploration and Discovery.—From the earliest times four great factors have combined to advance g.—the scientific spirit, the missionary spirit, the commercial spirit, and the adventurous spirit. The scientist in the observatory or laboratory has, from the days of Anaximander, Aristotle, Strabo, and Ptolemy, worked out and handed down in the form of treatises and maps the great problems of mathematical g. and other branches of the science, securing an ever more and more correct and detailed knowledge of the earth as part of the Universe (see EARTH, MAP). The merchant seeking new markets and fresh sources of wealth has eagerly sought the remotest regions of the earth; and to aid him he has ever found bold mariners and intrepid explorers ready to traverse unknown seas and lands. To-day exploration is still a science, a mission, a speculation, or a sport, according to the character of the explorer.

Principal Dates.—A few of the more outstanding dates in the history of geography and exploration (radiating from the Mediterranean) may be given:—

	B.C.
Egyptian expedition to Punt (Somaliland)	*c.* 1600
Reputed Phœnician 'Periplus' or circumnavigation of Africa	600
Anaximander's invention of maps	580
Hecataeus writes *Tour of the World* (first Geography)	500
Hanno, the Phœnician, explores West African Coast	450
Pytheas of Marseilles reaches the British Isles	333
Alexander the Great enters India	327
Julius Cæsar traverses Europe	60–54
	A.D.
Strabo's Geography	18
Ptolemy's Geography and Maps	159
Missionary explorations of St. Patrick, St. Columba, and St. Brandan	V.–VI. cent.
Cosmas writes *Christian Topography*	VI. cent.
Norse vikings discover Iceland, 861; Greenland, 985; Newfoundland and N. America	1000
Othere explores the Baltic	890
Arabs visit China and East	IX. cent.
Marco Polo travels in East	1271–95
Portuguese mariners seek and find sea-route to India *via* Cape of Good Hope, XV. cent.; Diego Cam discovers Congo, 1484; Diaz rounds Cape, 1486; Da Gama reaches India	1497
Spanish mariners seek westward route to India, and Columbus discovers New World	1492
Cabot reaches Newfoundland	1497
Pacific Ocean sighted by Balboa	1513
First circumnavigation of World by Magellan's ship	1519–22
Spanish Conquistadores explore South America	XVI. cent.
French exploration of Canada (Cartier, 1534; Champlain, 1615)	XVI.–XVII. cent.
Search for North-East Passage begins (Willoughby finds Novaya Zemlya, 1553)	XVI. cent.
Search for North-West Passage begins (Frobisher discovers Frobisher Bay, 1576)	XVI. cent.
Drake sails round World	1577–80
Barents reaches Spitzbergen	1596
Davis Strait discovered, 1586; Hudson Bay, 1616; Baffin Bay	1616
Dutch discover Australia and colonise South Africa	XVII. cent.
Tasman discovers Tasmania	1642
Bering Strait discovered	1741
Cook discovers New Zealand	1769
Interior of Africa explored (Nile, by Bruce, 1770; Niger, by Park, 1796)	XVIII. cent.
N. America and Arctic regions explored by Mackenzie, Ross, Parry	1789–1829
North Magnetic Pole discovered	1830
Lake Tchad discovered, 1822; Timbuktu	1829
Landers finds Niger mouth	1830
Exploration of Australia by Bass, Flinders, Sturt	1797–1831

	A.D.
Livingstone, Burton, Speke, Grant, Baker, explore Central Africa and discover Great Lakes	1849–73
Burke and Wills cross Australia	1861
Stanley finds Congo mouth	1877
Nordenskiöld navigates North-East Passage	1879
Younghusband enters Lhasa, the Forbidden City	1904
North-West Passage first navigated by Amundsen	1906
Peary reaches North Pole, April 6	1909
Amundsen reaches South Pole, Dec. 14	1911
Scott reaches South Pole, Jan. 18	1912

(For other important names and dates in the history of exploration, see AFRICA, AMERICA, ASIA, ATLANTIC, AUSTRALIA, EUROPE, PACIFIC, POLAR REGIONS, and other articles on various countries of the world.)

Modern Geography.—Geography tends to become ever more and more a matter of science. Explorers are now scientists, and scientists are explorers, witness men like Humboldt and Darwin. During the XIX. cent. enormous progress was made, largely through the instrumentality of *Geographical Societies* (of Paris, founded 1821; Berlin, 1828; Royal Geographical Society, London, 1830; Royal Scot. Geographical Society, 1884), and of geographical writers, compilers, and publishers (like Reclus, Bartholomew, and Geographical Institute of Justus Perthes, at Gotha). The XX. cent. has seen Geography begin to take its proper place in Brit. Univ's, and more rational methods of teaching it applied in schools. Explorers have now solved most of the great problems which so long baffled man, but both in the Old and in the New World large fields still remain untouched. The days are long since gone when

> 'Geographers in Afric maps
> With savage pictures fill their gaps,
> And o'er unhabitable downs
> Place elephants for want of towns.'

But there is still unlimited work for the explorer and the geographer.

The International Geography, by Seventy Authors (1909); *A Book of Discovery: History of the World's Exploration*, by M. B. Synge (1912); *Physiography*, by Salisbury (1907); *Commercial Gazetteer*, by Melven (1905); *Guide to Geographical Books and Appliances*, edit. by H. R. Mill (1910).

GEOK-TEPE (38° 24′ N., 57° 48′ E.), fortified town, Transcaspia, Russia; taken by Skobeleff, 1881.

GEOLOGY (Gk. *ge*, 'the earth'; *logos*, 'doctrine'), the science dealing with the study of the structure of the earth in all its aspects, from its earliest existence down to the present time, but especially relating to the structure and composition of the earth's crust.

History.—In early times little, if any, attention was paid to g., as we know it at the present day, and therefore an account of the early history is of little interest, except in showing some of the incorrect and absurd beliefs of the ancients. In the early records of the Hindus, Chinese, and Egyptians, the more pronounced geological phenomena, such as earthquakes and volcanic eruptions, are recognised, but the first true treatise on g. is ascribed to Anaximander (610 B.C.); of this work there is now no trace. Strabo (b. 66 B.C.) and Pythagoras (580 B.C.) observed changes taking place on the earth's surface, and Strabo suggested that it was the land which changed its level and not the sea, but Pythagoras maintained that it was the sea which retired and left the land, and with this he coupled volcanic action to account for other changes.

Aristotle, Lucretius, and Anaximenes considered the relation of geological effects of the earth, while Seneca recorded particulars of the Naples earthquake of 63 A.D. To the X. cent. no real geological work was done, but at that time Avicenna, a physician, wrote a work on the 'Formation and Classification of Minerals.' Another blank occurred until the XVI. cent., when a revival of geological interest sprang up in Europe. Considerable discussion took place as to the nature and origin of fossils. One side contended they were terrestrial exhalations, or due to the influence of heavenly bodies; others held that they were animal remains. It was not until two cent's later that the latter (and correct) opinion was generally adopted.

Leibnitz (1680) seems to have been the first to suggest that the earth was originally in a molten state; that the primary rocks were formed by the cooling of the surface, and that sedimentary strata resulted from the subsiding of the waters. Hooke (1680) and Ray (1690) held the same views as Pythagoras, and were followed by a host of others. Werner (1780) drew attention to the importance of g. in connection with mining, and the practical value of the science gave it an impulse. Werner examined all the rocks he could in his own district (Freyberg, Saxony), and classified them according to their mineralogical character. Owing to his regarding all rocks as being deposited on the bed of a universal ocean originally, and holding that the ocean had since subsided, he gained for himself and his followers the name of *Neptunists*.

On the other hand, Desmarest and Dolomieu, two French geologists, in maintaining the volcanic origin of the rocks of S. Europe, were known as *Vulcanists*. In 1795 Hutton published his *Theory of the Earth*, which specially drew attention to the constant denudation of the earth's surface by running water and the deposition of débris on the floor of the ocean by this action. In 1797 Playfair published *Illustration of Hutton's Theory*, while the following year Sir James Hall proved that molten rock may form lava or basalt, according to the pressure it is subjected to in cooling. Wm. Smith, an English surveyor, established stratigraphical g., and in 1790 published his *Tabular View of British Strata*, and a geological map of England in 1815. He classified the strata of the Secondary or Mesozoic formations by their fossils, and Cuvier and Brongniart, two French naturalists, did the same with the Tertiary or Kainozoic formations.

The Geological Soc. of London was formed in 1807, and geological science became formally established from this time. During the XIX. cent. g. received a great impetus, and many famous scientists devoted their energies to it. Hugh Miller's *Old Red Sandstone* is world-famous, and Murchison's researches on the Silurian Rocks won for him everlasting fame. Students of g. are familiar with such names as Sedgwick, Elie de Beaumont, Lyell, and Geikie—all men who gave a great impetus to the science.

Practical.—The term g. is a wide one, embracing as it does not only study of the actual rocks constituting the earth's crust, but also the evolution of its surface features, the building up and destruction of continents, and the tracing of the changes in the evolution of plants, animals, and human races which have peopled the earth. This latter branch of g. can only be pursued by a study of the fossils found embedded in the various rocks and deposits. Since the introduction of life on the earth, each succeeding period in the earth's history is marked by some peculiar type of animal or vegetable life, and it is by the fossil remains of these characteristic types that geologists are able to determine to what particular period belong the rocks in which they are found.

G. calls to its aid almost all other branches of science: astronomy teaches something of the appearance and nature of the other planets, the telescope reveals nebulæ in various stages of condensation; and the spectroscope shows the exact composition of the heavenly bodies. Physics reveals data relating to the condition of matter and energy. The researches of the chemical laboratory simplify the complicated compositions of many rocks, while bot. and zool. enable fossil remains to be classified accurately. Much is, of course, to be learned from the actual arrangement of the rocks themselves, the oldest rocks being found at the greatest depth. In some cases, however, the arrangements are very complex, as, for instance, when the remains of an ancient marine bed are found covered

by a lake, overlying which again are proofs of another sea, on the floor of which lie volcanic ashes, thus indicating that the original sea, having receded, had its place taken by a lake, only in turn to give way to a return of the sea at some subsequent period, followed by volcanic activity, the whole series being again left high and dry embedded in rock and undisturbed for countless ages, until laid bare by the geologist who reads the riddle of their changes.

All rocks are either *sedimentary* or *igneous*—that is, arranged by mechanical or other processes, or due to the action of heat. Indeed, water and fire have played the principal parts in the earth's history. Water wears away existing rocks both chemically and mechanically, and in the form of rivers carries the débris long distances, finally depositing it on the floor of the ocean. Here these sediments form stratified deposits, which eventually solidify and become petrified by the pressure of the water above. Subsequent deposits form above, and thus a stratum is formed which is sometimes many thousands of feet thick. Disturbances in the earth's crust, due to earthquakes, shrinkage, etc., have caused strange changes among these strata, which are so contorted, tilted, dislocated, fractured, and changed that their original arrangements in most cases is entirely altered.

To fire and heat are due the formation of igneous rocks, which are an important factor in the formation of the earth's crust, though less numerous than sedimentary rocks. Volcanoes poured forth ashes and lavas, which formed beds of rock, while extreme pressure exerted on existing rocks would cause heat so intense as to render their matter molten, only to solidify again, perhaps, when they cooled. Some of these rocks, whilst in a molten state, would be forced, by enormous pressure, into existing and differently constituted rocks above, and thus we find intrusive masses, like the granites and gabbros, appearing among rocks of other kinds. The granites are regarded as the most important and widely distributed of all the igneous rocks, and are generally looked upon as rocks of fundamental importance in the construction of the earth's crust. (For a more detailed account of the structure, etc., of other rocks, see separate articles thereon.)

Classification of Rocks.—The different rocks are arranged in groups, commencing with the newest as being at the top, while the oldest are at the bottom of the table. Each group is subdivided into formations, and again into subdivisions, and in many cases minor subdivisions again. It is a peculiar fact that subdivisions, and even the minor subdivisions, are characterised and generally identified by their distinct fossil remains. The preceding table gives the chief groups of rocks recognised at the present time, together with their various divisions, the newest being at the top, the oldest at the bottom.

Period.	Groups.	Remarks.
Post-Tertiary or Quaternary.	Recent Post-Glacial or Human	Historic. Pre-historic. Neolithic. Palæolithic.
	Pleistocene or Glacial	Valley gravels. Boulder clays.
Kainozoic or Tertiary.	Pliocene	Newer. Older.
	Miocene	Subdivided into 5 groups: Pontian, Sarmatian, Tortonian, Helvetian, and Laughian.
	Oligocene	Subdivided into 3 groups: Aquitarian, Stampian, and Tongrian.
	Eocene	Barton sands and London clays.
Mesozoic or Secondary.	Cretaceous	Upper and Lower.
	Oolitic	Purbeck beds and Oxford clays.
	Liassic.	
	Triassic	Subdivided into 4 groups: Rhætic, Keuper, Muschelkalk, and Bunter.
Palæozoic or Primary.	Permian.	
	Carboniferous	Coal measures.
	Devonian	Upper, Middle, and Lower.
	Old Red Sandstone	Red sandstones and Caithness stones.
	Silurian	Upper and Lower.
	Cambrian	Upper, Middle, and Lower.
Archæan, Laurentian, or Eozoic	Pre-Cambrian. Oldest of all rocks, and consisting of fundamental gneiss.	

The origin of the earth is hidden in mystery, but the geologist commences his studies from the time of the nebula which, it is supposed, condensed down and ultimately formed the solar system. The oldest rocks have been observed by Logan in Canada, and to these he gave the name of the *Laurentians*. Similar strata to these were found existing in Scotland by Murchison and Geikie, but so altered have they been by heat and other forces that they are completely changed from their original state. Very few fossil remains indeed are found here, and this remark applies also to the *Cambrian Group*; what few there are are mostly crustaceans or zoophytes, while the rocks are mainly shales or slates. On the other hand, the next series in order of ascension (the *Silurian*) teems with fossils of marine deposits in some districts, but is quite barren in others. The *Old Red Sandstone* gives us numerous fish remains, and it is this series which points to the first dry land of the globe, by the fact that a few land plants and air-breathing animals are here found in the upper divisions.

The *Carboniferous strata* are the remains of land plants and trees, whilst a few fish remains of great size are also found. The *Permian strata* consist, for the most part, of sandstones, marls, and magnesian limestones, while their fossil remains are practically the same as those of the Carboniferous, though there are traces here of a few reptiles. With the Permians the group of rocks known as the *Primaries* terminate, and it is evident from a study of the structure of the rocks immediately following that a great disturbance took place between this and the following series; and not only so, but a change took place in the animal and vegetable life of the globe.

The oldest rocks of the *Secondary Epoch* are the *Triassic Group*, which in Britain consist chiefly of sandstones and marls, containing remains of marine organisms, plant life, and footprints, and remains of some reptiles. The *Lias* consists chiefly of clays, argillaceous limestones, and sandstones, containing fossils of insect life, plants and brachiopods and cephalopods. The *Oolites* are alternate beds of limestones and clays, and here appear mammalia fossil remains for the first time. The *Cretaceous* series are mainly immense thicknesses of chalk, as the name implies, and life was prolific, for the chalk itself is largely composed of shells of foraminifera and mollusca. Shells, fish, plants, and land and sea reptile remains are numerous.

The next series is the *Eocene*, belonging to the *Tertiary Group*, where again a striking change is found between the two periods. The fossils now begin to assume an appearance more resembling those of recent species. During, or about, the time of the *Oligocene* commenced the formation of the present-day continents, while no representatives of the *Miocene* period are to be found in Britain. Here are found molluscan remains, and also those of many mammalia. The *Pliocene Group* consists of marls, sands, and gravels, and contains a large number of present-day types of fossil remains. During the *Pleistocene Epoch* almost all the forms now alive are found, but as yet man had not made his appearance. The strata consist chiefly of sands and gravels of glacial origin. The *Recent strata* contain fossil remains of plants and animals of present-day types, and commences the Human period.

Geikie, *Text-Book of G.* (1903), *Class-Book of G.* (1907); Lyell, *The Students' Elements of G.* (1896); T. G. Bonney, *The Structure of the Earth* (Jack, 1912).

GEOMETRY is supposed to have had its origin in land-surveying. Some methods of surveying must have been practised in very early times, but ancient tradition said g. originated in Egypt, where, according to Herodotus, the periodical inundations of the Nile, by altering the course of the river and destroying landmarks in the valley, rendered a fairly accurate system of surveying necessary; hence the study of the subject by the priests. The Egyptians were familiar with the fact that a triangle with sides in the ratio 3 : 4 : 5 was right-angled, and used this in setting out an E. and W. line from a N. and S. line. Various mensuration formulæ were also known; the Rhind papyrus, from which most of our knowledge of Egyptian g. has come, gives, among other things, the formula $(d-\frac{1}{9}d)^2$ for the area of a circle of diameter d, which is equivalent to using the value 3·1604 for π.

Greek g. differed from the Egyptian g., of which we have knowledge, in that it was from the commencement a deductive science; the specimens of Egyptian g. only deal with particular numerical problems, not with general theorems. The foundations of the science were laid by the members of the Ionian and Pythagorean schools of philosophy, who discovered many well-known theorems subsequently included in Euclid's *Elements*. Thus Thales probably proved the angles at the base of an isosceles triangle are equal, that a triangle is determined by its base and base-angles, that the sides of similar triangles are proportionals, etc. Pythagoras proved the properties of right-angled triangles, different proofs of which are given in Euc. I. 47 and 48, besides numerous other theorems. The scholars of the Athenian school developed the science of g. very considerably. Hippocrates of Chios wrote the first elementary text-book of g., and on this Euclid's *Elements of G.* was probably founded. Most of the theorems in Book V. of Euclid were discovered by Eudoxus, a member of the Athenian school, and his proofs were much the same as those of Euclid. Euclid (*c.* 330–275 B.C.) is famous for his text-book of g., which has been the standard text-book for 2000 years, though parts of it are now superseded. Archimedes and Apollonius of Perga, two other members of the Alexandrian school, added considerably to the knowledge of g., especially of conic sections. From I. cent. B.C. to the Renaissance, g. made comparatively little progress, but the invention of analytical geometry by Descartes, in 1637, opened up vast new fields. The use of points and lines at infinity, which are not considered in Euclidean g., gave rise to modern projective g. In the last 300 years the science has developed on more and more specialised lines.

Geometry may be divided into several sections, not independent, but the division is convenient.

I. EUCLIDEAN G. deals with the metrical properties of space.

II. PROJECTIVE G. is similar to (1), but has wider scope, due to use of principle of geometrical continuity, *i.e.* points and lines at infinity are utilised.

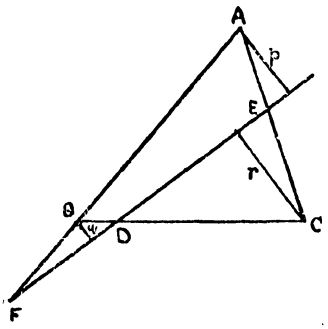
III. ANALYTICAL G. applies the methods of analysis to the study of both plane and solid g.

IV. DESCRIPTIVE G. deals with the representation of solids by plane figures.

I. Euclidean g. starts with various definitions, postulates, and axioms, from which proofs of the theorems considered are developed in a systematic manner. All modern text-books are primarily based on Euclid's *Elements*. This was divided into 13 books. Of these, Books I. to IV. and Book VI. deal with plane g.; Book V. deals with proportion, and Books XI. and XII. with solid g.; Book XIII. contains theorems both on plane and solid g. The other books deal with the theory of numbers.

DEFINITIONS.—A *point* has position, but no magnitude; a *line* has length, but no breadth. A *surface* has length and breadth, but no thickness; and a *solid* has length, breadth, and thickness. From these ideas are derived the definitions of all other terms used. Euclid assumed the following POSTULATES: (1) That a straight line may be drawn between any two points; (2) that a finite line may be produced to any length; and (3) that a circle may be described with any point as centre and radius of any length. AXIOMS.—(1) Things equal to the same thing are equal to one another; (2, 3) if equals be {added to / taken from} equals the {wholes / remainders} are equal; (4, 5) if equals be {added to / taken from} unequals the {wholes / remainders} are unequal; (6, 7) things which are {double / halves} of the same thing or of equal things, are equal to one another; (9) the whole is greater than its part. The above are *general* axioms. The rest are purely *geometrical*. (8) Magnitudes which can be made to coincide with one another are equal; (10) two straight lines cannot enclose a space; (11) all right angles are equal; (12) if two straight lines are met by a third so as to make the interior angles on one side of it together less than two right angles, these two straight lines will meet, if produced, on the side of the third line where the angles are together less than two right angles.

It should be noted that the last 'axiom,' which is certainly neither simple nor self-evident, was placed by Euclid among the postulates. It does not admit of proof, though its converse can be proved easily. Many substitutes have been proposed. Probably the best of these is *Playfair's axiom*: Two intersecting straight lines cannot both be parallel to a third straight line.



Important theorems of the first book are those relating to the equality of triangles (Props. 4, 8, 26). In these it is proved that if two triangles have (i) two sides and the included angle (ii) three sides, (iii) one side and two angles of the one equal to those of the other, then the triangles are equal in all respects. The first of these is proved by the 'method of superposition,' use being made of axiom 8. The second is also proved by the same method. The last is obtained by the method known as 'reductio ad absurdum.' A supposition is made, and arguing from the construction made on this supposition, a result is finally reached which is contrary to known facts. Hence the supposition must have been wrong, and in this way, by exhausting the possible assumptions which may be made, the truth of the original theorem may be deduced. In Props. 9, 10, 11, 12 constructions are given for bisecting an angle and a straight line, also for drawing a perpendicular to a given straight line from a point either in or outside the line. Important theorems relative to triangles are: The three angles of every triangle are together equal to two right angles (Prop. 32); and, in a right-angled triangle, the square described on the hypotenuse is equal to the sum of the squares on the other two sides. Props. 35 to 42 deal with the areas of parallelograms and triangles between the same two parallel lines. Book II. deals with the areas of rectangles and squares, and is more conveniently dealt with by analytical methods. Props. 12 and 13 are important and may be thus stated: If a, b, c are the lengths of the sides of a triangle ABC, having an obtuse angle at A, and d is the distance from A to the foot of the perpendicular from B on the side CA, then $a^2=b^2+c^2+2bd$ . . . (Prop. 12); also if the triangle is acute-angled at A, then $a^2=b^2+c^2-2bd$ . . . (Prop. 13).

Book III. deals with the properties of circles. The most important theorems are the following: *Prop. 20.* The angle at the centre of a circle is double of an angle at the circumference standing on the same arc. *Prop. 21.* Angles in the same segment of a circle are equal. *Prop. 31.* The angle in a semicircle is a right angle. *Prop. 32.* The angles made by a tangent to a circle with a chord drawn from the point of contact

are respectively equal to the angles in the alternate segments of the circle. *Prop. 35.* If two chords of a circle cut one another, the rectangle contained by the segments of one equals that contained by the segments of the other. *Prop. 37.* If from a point outside a circle a tangent and a secant be drawn, then the rectangle contained by the whole secant and the part of it outside the circle is equal to the square on the tangent. Book IV. consists entirely of problems dealing with triangles, squares, and polygons, and the circles through their angular points or touching their sides. Book VI. deals with proportion as applied to lines and areas of figures. Important theorems are: If the interior or exterior vertical angle of a triangle be bisected by a straight line which also cuts the base, the base is divided internally or externally into segments which have the same ratio as the sides of the triangle (Props. 3 and 3A). If two triangles are equiangular to one another, their corresponding sides are proportional (Prop. 4). Books XI. and XII. treat of solid geometry, and the 5 regular solids are discussed in the last 6 props. of Book XIII.

II. **Modern Plane Geometry.**—The convention of signs adopted in trigonometry and analytical geometry is also used here. Thus, if ABC are three points in a straight line (hereafter called simply a line), then, in whatever order the points occur in the line, we have $AB+BC=AC$ or $BC=AC-AB$. A number of collinear points are said to form a *range*.

(1) If ABCD be a range of four points, then $AB.CD+BC.AD+CA.BD=0$. For we have $AB(AD-AC)+(AC-AB)AD-AC.(AD-AB)=0$. As regards areas, these are to be reckoned positive or negative according as the figure is to the left or right as the contour is traversed. (2) *Menelaus' theorem.*—If D, E, F are points on the sides of a triangle ABC opposite to the vertices A, B, C respectively, then the necessary and sufficient condition that D, E, F should be collinear is $AF.BD.CE=AE.CD.BF$, these lines all having their appropriate signs, positive or negative according as the triangle is to the left or right as the line is traversed.

Let p, q, r be the perpendiculars from A, B, C on the line DEF, and let these be positive or negative according as they are on one or the other side of DEF.

Then $\frac{AF}{BF}=\frac{p}{q}$, $\frac{BD}{CD}=\frac{q}{r}$, $\frac{CE}{AE}=\frac{r}{p}$.

Hence $\frac{AF.BD.CE}{BF.CD.AE}=1$ and the theorem follows, since it is easy to show that if the above equation holds, then D, E, F are collinear.

(3) *Ceva's theorem*, that if AD, BE, CF are concurrent, then $AF.BD.CE=-AE.CD.BF$, is proved in a similar manner. For if the lines intersect in the point P, it is easy to show that $\frac{AF}{BF}=\frac{\Delta APC}{\Delta BPC}$, $\frac{BD}{CD}=\frac{\Delta BPA}{\Delta CPA}$, $\frac{CE}{AE}=\frac{\Delta CPB}{\Delta APB}$. Hence $\frac{AF.BD.CE}{AE.CD.BF}=\frac{\Delta APC}{\Delta CPA}\cdot\frac{\Delta BPA}{\Delta APB}\cdot\frac{\Delta CPB}{\Delta BPC}=(-1)(-1)(-1)=-1$, and the result follows.

(4) If D, E, F be three points on the sides of a triangle ABC opposite to A, B, C respectively, then $\frac{AF.BD.CE}{AE.CD.BF}=\frac{\sin ACF.\sin BAD.\sin CBE}{\sin ABE.\sin CAD.\sin BCF}$.

For $\frac{BD}{CD}=\frac{\Delta BAD}{\Delta CAD}=\frac{\frac{1}{2}AB.AD.\sin BAD}{\frac{1}{2}AC.AD.\sin CAD}=\frac{AB}{AC}\cdot\frac{\sin BAD}{\sin CAD}$,

with similar results for $\frac{AF}{BF}$ and $\frac{CE}{AE}$. The required result follows on multiplication. It follows at once from Ceva's theorem that if AD, BE, CF are concurrent in P, then $\frac{\sin ABP.\sin BCP.\sin CAP}{\sin BAP.\sin CBP.\sin ACP}=-1$.

(5) Two lines AD, AD′ through the vertex A of a triangle are called *isogonal conjugates* if $\angle BAD=\angle D'AC$. If AD, BE, CF be three concurrent lines through the vertices of a triangle ABC, then will also their isogonal conjugates AD′, BE′, CF′ be concurrent.

For $\frac{\sin BAD}{\sin CAD}=\frac{\sin CAD'}{\sin BAD'}$, $\frac{\sin CBE}{\sin ABE}=\frac{\sin ABE'}{\sin CBE'}$, $\frac{\sin ACF}{\sin BCF}=\frac{\sin BCF'}{\sin ACF'}$.

Hence, since the product of the three left-hand members of the above equations is equal to -1, that of the right-hand members is also, and AD′, BE′, CF′ are therefore concurrent.

PROJECTION.—If V be a fixed point and A any other point, and the line VA meet a given plane π in A′, A′ is called the projection of A on the plane π by means of the vertex V. The projection of a straight line on a plane π is necessarily another straight line, for it is simply the intersection of the plane containing V and the line with the plane π. If the plane through V and the line be parallel to the plane π, then the line will be projected to infinity on the π plane and is called the '*line at infinity*' in that plane. If we are projecting points and lines in a plane p from a vertex V on to the plane π, and if AB be the intersection of a plane through V parallel to π with the plane p, then obviously AB will project to infinity on the plane π, and is hence called the *vanishing line* on the plane p. Now, if E and F be two points in the vanishing line AB, it is easy to see that any angle EDF in the p plane will project into an angle of magnitude EVF in the π plane. Hence we may show that by a proper choice of vertex and of the plane of projection, any given line in the plane p may be projected to infinity, while at the same time any two given angles are projected into angles of given magnitude. Thus any triangle can be projected into an equilateral one, and any quadrilateral into a square.

Again, since a tangent to any curve is the line through two coincident points on the curve, such a line will project into the tangent to the curve which is the projection of the first curve. Any conic can be projected into a circle having the projection of any given point for centre. For, if O is the point whose projection is to be the centre of the projected curve, let P be any point on the polar of O, and let OQ be the polar of P, so that OP, OQ are conjugate lines. Take OP′, OQ′ another pair of conjugate lines. Then, if we project the polar of O to infinity and at the same time the angles POQ, P′OQ′ into right angles, we then have a conic whose centre is the projection of O, and since two pairs of conjugate diameters are at right angles, the conic is a circle.

CROSS-RATIOS.—If A, B, C, D be a range of four points, the ratio $\frac{AB.CD}{AD.BC}$ is called the *anharmonic* or *cross-ratio* of the four points, and is denoted symbolically by (ABCD). The range is said to be a *harmonic* one if $(ABCD)=-1$. A number of lines in a plane meeting in a point V form a *pencil*, each line being a *ray*. Any line in the plane of the pencil cutting the rays is called a *transversal*. The cross-ratio of the pencil is conveniently represented by V (ABCD), and can be shown to be the same as that of *any* transversal. Hence cross-ratios are unaltered by projection. Two ranges or pencils are said to be *homographic* when every four constituents of the one, and the four corresponding constituents of the other, have equal cross ratios, and any two homographic pencils are mutually projective.

The methods of projection are extremely useful in higher geometry, for, by suitable projection, pro-

perties of circles or conic sections which admit of easy proof may be made to give proofs of theorems relating to other conic sections.

The following are examples :—

(i) Given three concentric circles, any tangent to one is cut by the other two in four points whose cross-ratio is constant.	Given three conics all touching each other in the same two points, any tangent to one is cut by the other two in four points whose cross-ratio is constant.
(ii) The tangent to a circle is at right angles to the radius.	Any chord of a conic is cut harmonically by any tangent, and by the line joining the point of contact of that tangent to the pole of the given chord.

For the chord of the conic is the projection of the line at infinity in the plane of the circle; the points where the chord meets the conic are the projections of the imaginary points at infinity on the circle, and the pole of the chord is the projection of the centre of the circle.

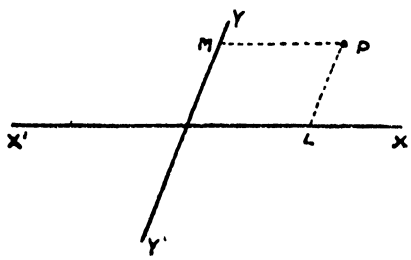
(iii) If from any point on a conic two lines at right angles to each other be drawn, the chord joining their extremities passes through a fixed point.	If a harmonic pencil be drawn through any point on a conic, two legs of which are fixed, the chord joining the extremities of the other legs will pass through a fixed point.

(iv) *Pascal's theorem*, that the three intersections of the opposite sides of any hexagon ABCDEF inscribed in a conic section are in one straight line, only needs proving for the case of a circle, and may be made still simpler by supposing the line joining the intersection of AB, DE, to that of BC, EF, to pass to infinity, when we have only to show that if a hexagon inscribed in a circle has AB, DE parallel and also BC, EF parallel, then CD is parallel to AF.

RECIPROCATION.—If we have any figure consisting of any number of points and straight lines in a plane, and we take the *polars* of those points and the *poles* of the lines with respect to some fixed conic C, we obtain another figure called the *polar reciprocal* of the former with respect to the conic C. When a point in one figure and a line in the reciprocal figure are respectively pole and polar with respect to the conic C, they are said to *correspond* to one another.

It is easily seen that (i) the line joining two points in one figure corresponds to the point of intersection of the corresponding lines in the other figure. (ii) The tangent to any curve in one figure corresponds to a point on the corresponding curve in the other. (iii) If two curves touch, the reciprocal curves have two common tangents and must therefore also touch. (iv) The pole of any line through the centre of the auxiliary conic being at infinity, it follows that the points at infinity on the reciprocal curve correspond to the tangents to the original curve from the centre of the auxiliary conic. Hence the reciprocal of a conic is an hyperbola, parabola, or ellipse, according as the tangents to it from the centre of the auxiliary conic are real, coincident, or imaginary, *i.e.* as the centre of the auxiliary conic is outside, upon, or within the curve.

The following are examples of reciprocal theorems :—



(i) The three intersections of opposite sides of a hexagon inscribed in a conic lie on a straight line (Pascal's theorem).	The three lines joining opposite angular points of a hexagon described about a conic meet in a point (Brianchon's theorem).
(ii) Given four points on a conic, the locus of the pole of a fixed straight line is a conic section.	Given four tangents to a conic, the envelope of the polar of a fixed point is a conic section.

It is usual to take for the auxiliary conic a circle, and then it is possible to reciprocate not only theorems of position, but also theorems involving the magnitude of lines and angles.

INVOLUTION.—If O be a point on a line on which pairs of points A, A′; B, B′; C, C′; etc., lie such that $OA \cdot OA' = OB \cdot OB' = OC \cdot OC' = \ldots = k$, the pairs of points are said to be in involution. Any two associated points P, P′ are called *conjugates*, and the point O is the *centre* of involution. A range of points in involution projects into another range in involution and reciprocates into an involution pencil. The following theorem is easily proved: Any transversal cuts the pairs of opposite sides of a quadrangle in pairs of points which are in involution. On reciprocation this gives: The lines joining any point to the pairs of opposite vertices of a complete quadrilateral form a pencil in involution. [*Note.*—A system of four points connected by six lines is a *quadrangle*; a system of four lines intersecting in six points, a *quadrilateral.*]

INVERSION.—If O is the centre of a circle, P and P′ are inverse points if they lie on the same radius and $OP \cdot OP' =$ the square of the radius. If P describes a curve, P′ describes the inverse curve. More generally, if P moves in space, P′ will move correspondingly, and we get inversion with respect to the sphere whose centre is at O. The inverse of a circle with respect to a point in its plane is a straight line if the point is on the circle, a circle otherwise. Various interesting theorems result from the use of the principles of inversion; *e.g.* it can be shown that the nine-points circle of a triangle touches the inscribed and the three escribed circles (Feuerbach's theorem).

III. **Analytical Geometry.**—If two intersecting *axes* in a plane be considered, the position of any point in the plane is determined when its distances from these axes along lines parallel to them are known.

The lengths MP, LP or OL, OM are called the *co-ordinates* of the point P. O is called the origin, and, as in trigonometry, distances measured parallel to OY′ and below X′OX, also parallel to OX′ and to the left of YOY′ are considered as negative. OL is the *abscissa* of P, OM the *ordinate*. Hence we develop a system in which lines are represented by equations, those of the first degree representing straight lines, those of the second some conic section, and those of higher degree curves of corresponding degree (See CURVE). Usually the axes OX, OY are at right angles, when we have rectangular co-ordinates, with equations usually simpler than for oblique axes. The analytical g. of solids is based on the fact that the position of a point in space is fixed by reference to three mutually intersecting planes. A brief discussion of the results of analytical g. is impossible, but it should be noted that by its means problems may be solved that otherwise could never be successfully dealt with.

In *Line Geometry* the line replaces the point as element.

IV. **Descriptive Geometry** utilises the methods of orthographic projection on two planes at right angles to each other—is much used in building, engineering, etc., to give graphical representations of proposed constructions.

V. For discussion of axioms on which g. is based, see *Principles of Mathematics*, Bertrand Russell.

Geometrical Continuity.—In Euclidean geometry all points, lines, etc., dealt with are real and finite.

In modern geometry we use the principle of geometrical continuity whereby we pass from real and finite to imaginary points and lines and to infinities. We assume theorems true when these ideas are introduced, and greatly extend their application.

Jessop; *Geometrie der Berührungstransformationen*, Lie.

GEOMYS, see POCKET GOPHERS.

GEONEMERTES, see under NEMERTINE WORMS.

GEOPHILUS, a genus of Centipedes. See MYRIAPODA.

GEORGE I. (1660–1727), Elector of Hanover and king of Britain; succ. to Brit. throne, 1714, as grandson of Elizabeth, dau. of James I., on whom (and her heirs) the succession was fixed by *Act of Settlement*, 1701. With his accession began predominance of Parliament in Brit. constitution. Intensely Ger. in sentiment, he regarded England as a means for the aggrandisement of Hanover and a fruitful soil for his Hanoverian friends. His reign was marked by gross corruption and venality in public and private life; m. Sophia Dorothea of Brunswick-Celle (1682), but divorced her on charge of unfaithfulness (1694).

Morris's *Early Hanoverians* (London, 1899); Justin M'Carthy's *The Four Georges*; Carlyle's *Four Georges*.

GEORGE II. (1683–1760) succ. to Brit. throne, 1727; m. Caroline of Brandenburg-Anspach, who kept Walpole in power, despite G.'s aversion to him. Walpole ruled country till 1742, aiming rather at good administration than brilliant legislation; sluggish conduct of Span. War occasioned his downfall. War of Austrian Succession (1740–48) and Jacobite rebellion (1745–46) occurred in this reign, which also saw beginnings of Methodist movement. G. was thoroughly Ger. in habits, vain and consequential, but prudent and business-like.

Horace Walpole's *Memoirs . . . George II.*; Ward's *Great Britain and Hanover* (London, 1899); M'Carthy's and Carlisle's *Four Georges*.

GEORGE III. (1738–1820), king of Great Britain and Ireland; succ. 1760; m. Sophia Charlotte of Mecklenburg-Strelitz, 1761. His accession interrupted continuity of politics of time. His chief adviser was Earl of Bute, who was inexperienced in politics. From first G. resolved to destroy Whig oligarchy. By bribery and corruption he constructed a party for himself, 'King's Friends.' Bute and G. thwarted Pitt's war-policy. Pitt resigned (1761). Bute's unpopular ministry (1762–63) was followed by Grenville-Bedford ministry (1763–65), famous for Wilkes's prosecution and Stamp Act. Official Whigs succeeded under Rockingham and repealed Stamp Act, but were overthrown (1766) by 'King's Friends.' Pitt-Grafton ministry followed, but Pitt's ill-health prevented achievement of his cherished schemes, and Grafton controlled Cabinet. Struggle with America was renewed. From 1770–82 North was First Lord of Treasury, and during this time G. ruled according to his own ideas. He persisted obstinately in Amer. War of Independence (1775–82), despite great difficulties. Second Rockingham administration (1782) conceded legislative independence to Ireland. Shelburne signed Peace of Versailles (1783), but his ministry soon fell before hostility of opposition. Fox formed a coalition with North, and forced on king a ministry nominally headed by Portland (1783). G., however, unconstitutionally secured rejection of Fox's India Bill; coalition resigned, and Pitt became Prime Minister.

In Nov. 1788 the king went mad. After his recovery, he united closely with Pitt. Both struggled against Fr. Revolution. France declared war (1793), which lasted with two short breaks till 1815. G. again became insane, 1801, after Pitt's resignation. Addington ministry succeeded (1801–4). Pitt died, 1806, and 'Ministry of all the Talents' (1806–7) resigned on the Catholic question. Tories were in power from 1807–30. Failure of his armies and death of Princess Amelia, Nov. 1810, caused G.'s madness to return permanently. Regency Bill (1811) made Prince of Wales practically king. G. died Jan. 29, 1820, blind, deaf, mad, having outlived his triumphs.

Horace Walpole's *Memoirs of the Reign of G. III.* (latest edit., London, 1894); M'Carthy's and Carlyle's *Four Georges*; B. Willson's *George III.* (London, 1907).

GEORGE IV. (1762–1830), king of Great Britain and Ireland; became prince-regent, 1811, owing to George III.'s insanity; succ. as king, 1820. He kept Tories in office; m. Caroline of Brunswick-Wolfenbüttel, 1795, but soon separated from her; her trial, 1820, increased G.'s unpopularity. Soon afterwards he withdrew from public observation, becoming a peevish recluse. Ministers were unpopular between 1820–22, cf. Cato Street conspiracy (1820). Liberal Tories joined ministry, 1822. G. had to receive Canning as Foreign Sec. and Leader of House of Commons. Canning freed Britain from Holy Alliance; Peel, as Home Sec., reformed Criminal Law. Huskisson, Pres. of Board of Trade, effected reforms which prepared way for Free Trade. Canning's ministry (1827) was followed by Goderich's failure, and Wellington-Peel ministry (1828–30) was marked by question of Catholic Emancipation. G. was a selfish voluptuary, vacillating and unprincipled.

L. Melville's *First Gentleman of Europe* (London, 1906); and M'Carthy's and Carlyle's *Four Georges*.

GEORGE V. (1865–), by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the Brit. Dominions beyond the Seas, King, Defender of the Faith, Emperor of India; George Frederick Ernest Albert, second son of Edward VII.; b. Marlborough House, June 3. On death of his elder bro. Duke of Clarence, he became heir-apparent, 1892; entered navy as cadet, 1877; served on *Britannia* training-ship 2 years; then went 3 years' trip round world on *Bacchante*; midshipman on *Canada*, 1883; lieutenant, 1885; commander of gunboat *Thrush*, 1890. As Duke of York he entered House of Lords, 1893, and on July 6, 1893, he married Princess Victoria Mary of Teck (now QUEEN MARY); their children are: (1) EDWARD ALBERT (now Prince of Wales), b. June 23, 1894; (2) ALBERT FREDERICK, b. Dec. 14, 1895; (3) VICTORIA ALEXANDRA ('Princess Mary'), b. April 25, 1897; (4) HENRY WILLIAM, b. March 31, 1900; (5) GEORGE EDWARD, b. Dec. 20, 1902; (6) JOHN CHARLES, b. July 12, 1905. In 1901 the Duke of York, now rear-admiral, became Duke of Cornwall (on his father's accession); set out (March 16) on the *Ophir* to make a colonial tour and open the first Commonwealth Parliament; created Prince of Wales (Nov. 9); in 1905–6 he visited India. On May 6, 1910, King George ascended the throne; Coronation, June 22, 1911. On Dec. 12, 1911, His Majesty was proclaimed Emperor of India in person at Delhi Durbar, during what constituted the first visit of a Brit. monarch to his overseas dominions.

Knight's *With the Royal Tour* (London, 1902); Abbott's *Through India with the Prince* (London, 1906).

GEORGE I. (1845–1913), king of Greece; s. of Christian IX. (Denmark); elected in succession to Otho I., 1863; m. Grand Duchess Olga; five sons, one dau.; assassinated, 1913. See GREECE.

GEORGE V. (1819–78), king of Hanover; became blind; succ. his f., 1851; deposed, 1866, when Prussia absorbed Hanover.

GEORGE (1832–1904), king of Saxony; s. of King John; succ. his bro., King Albert (1902); distinguished for military abilities.

GEORGE, HENRY (1839–97), Amer. political economist; b. Philadelphia, Pennsylvania, U.S.A.; pub. *Progress and Poverty* (1879), *Protection or Free*

Trade (1886), *Political Economy* (1898), etc.; advocate of the 'Single Tax' on land.

GEORGE JUNIOR REPUBLIC, an institution, founded (1895) at Freeville (New York), by W. R. George, for the reclaiming of youths and girls of the slums. Both sexes are compelled to work at useful employments.

GEORGE, LAKE (43° 40′ N., 73° 32′ W.), lake, E. part of New York State, U.S.A.; extends N.E. to S.W. for over 30 miles; discharges by narrow channel into Lake Champlain; enclosed by mountains, and contains hundreds of islands; favourite summer resort; scene of series of engagements in Fr. and Indian War, 1755–59.

GEORGE, ST., patron saint of England and Portugal; feast day, April 23. Historically, St. G. is a matter of some controversy; probably came from Asia Minor; lived in Nicodemia; arrested as a Christian under anti-Christian laws of Diocletian, confessed his faith, and was tortured, 303 A.D. The dragon usually associated with him is a later legendary embellishment. Canonised, 1222, and finally recognised as patron of England by Edward III. in 1349.

See Bulley's *St. George for Merry England* (London, 1908).

GEORGE, THE, see KNIGHTHOOD.

GEORGE THE CAPPADOCIAN (fl. 360 A.D.), abp. of Alexandria; notorious for tyranny; murdered by populace.

GEORGE THE SYNCELLUS (VIII. cent.), Byzantine historian; wrote a chroniole from early times to reign of Diocletian.

GEORGETOWN.—(1) (6° 46′ N., 58° 8′ W.) capital of Brit. Guiana, near mouth of Demerara, S. America; contains government buildings, Anglican and R.C. cathedrals, coll's, museum, botanical gardens; good harbour; several factories; exports sugar, coffee, timber. Pop. (1910) 53,000. (2) (38° 12′ N., 84° 32′ W.) city, Kentucky, U.S.A.; agricultural and stock-raising region; has large oil-refineries. Pop. 4533. (3) (33° 23′ N., 79° 16′ W.) seaport city, S. Carolina, U.S.A., on Winyah Bay; lumber manufactures. Pop. (1910) 5530. (4) (39° N., 77° 5′ W.) port of entry, forming part city of Washington, U.S.A., on Potomac; seat of G. Coll. (1842) and several other collegiate institutions; flour-mills. Pop. 15,000. (5) (30° 39′ N., 97° 40′ W.) town, Texas, U.S.A.; cotton manufactures. Pop. 3096.

GEORGIA (33° N., 83° W.), one of the most southerly of the United States; bounded by Tennessee and N. Carolina on N.; S. Carolina and Atlantic Ocean on E.; Florida on S.; and Alabama on W.; length, *c.* 320 miles; breadth, *c.* 250 miles; total area, *c.* 59,475 sq. miles, of which almost 500 are water. Capital is Atlanta, in N.W. interior. G. is divided, naturally, into five regions: the sea-islands—the home of the famous sea-island cotton—lying along the coast, with sand, marshes, and woods—oak, palmetto, magnolia, cedar, etc.; the mainland is low and level for some 60 miles inland—with a salt marsh, near the sea—rich in soil and semi-tropical vegetation; beyond are the pine-barrens, with great forests of pitch-pine, but with numerous swamps; then come the sand-hills and fertile tracts with forests and yielding fruit, cotton, Indian corn, oats, and other cereals; the country then becomes mountainous, with fertile valleys. In N. and W. lie the Appalachian Mts. (rising sometimes to *c.* 5000 ft.); principal rivers are the Chattahoochee (part of W. boundary), along with the Flint, constituting the Apalachicola (navigable *c.* 300 miles), which flows into the Gulf of Mexico; the Savannah and Altamaha (navigable *c.* 300 miles), flow into the Atlantic. Climate is mild and, except in lowlands and swamp regions in S., agreeable and healthy; mean temperature is 78° in summer and 47° in winter. Game is plentiful, and alligators are numerous in the rivers.

G., which is named after George II., was founded by James Oglethorpe (*c.* 1733) as a place of refuge for poor debtors and religious refugees, but failed in this object; it succeeded, however, in its aim of protecting N. and S. Carolina from the Spaniards and French. G. adopted the Constitution of U.S. in 1788. Before Civil War G. joined S. Confederacy; rejoined Union, 1868.

About 70 % of the country is farmland, largely worked by negroes. G. is the second largest producer of cotton in U.S.A.; it is also the greatest grower of sea-island cotton; cereals are cultivated in N. regions, the chief being corn and wheat; rice is grown near the coast; the cultivation of sugar-cane is increasing; tobacco is grown; much fruit—oranges, melons, grapes, pine-apples, peaches, and bananas—is grown, and, along with market vegetables, exported to the N.; large pine forests cover *c.* 42,000 sq. miles of land; and fisheries—belonging to the State—are of importance, especially oysters and shads. G. is rich in minerals, including gold, silver, coal, iron, and manganese ores; marble and other quarries are worked, and mineral springs occur.

Chief manufactures and industries are extensive cotton and woollen manufactures; iron and steel trades; lumber, timber-planing, flour and grist milling. Lumber and naval stores are shipped from Savannah, Darien, Brunswick, and St. Mary. Savannah (with a population of 65,064) is the chief port; other cities are Atlanta (154,839), Augusta (41,040), Macon (40,665), Columbus (20,554), Athens, and Brunswick. G. is divided into 146 counties; and is represented in Congress by two senators and eleven representatives. There are many schools and academies in G. and a Univ. of G. at Athens. In religion Baptists and Methodists predominate. The State Militia have their headquarters at Atlanta. Pop. (1910) 2,609,121.

Phillips, *Georgia* (Boston, 1907).

GEORGIA, large portion of Transcaucasia, with own language and literature; annexed Russia (1802). Pop. 400,000.

GEORGIAN BAY (45° 25′ N., 81° W.), N.E. portion of Lake Huron, separated from main body of lake by Manitoulin Island and Cabot's Head.

GEORGIOS MONACHOS, GEORGE THE MONK (IX. cent.). Byzantine writer; compiled a chronicle dating from the earliest times to his own period.

GEORGSWALDE (51° 1′ N., 14° 35′ E.), town, Bohemia, Austria; centre of linen industry. Pop. (1910) 8836.

GERA (50° 52′ N., 12° 5′ E.), town, Reuss (the Younger), Germany, on White Elster; textile industries. Pop. (1910) 49,283.

GERALDTON (28° 46′ S., 114° 36′ E.), seaport town, on Champion Bay, W. Australia; lead and copper mines.

GERANDO, MARIE JOSEPH DE, DEGÉRANDO (1772–1842), Fr. philosopher; b. Lyons; teacher at law school of Paris; opposed all doctrines of primary ideas; held that knowledge is the result of experience; reflection the source of our ideas of substance, unity, identity.

GERANIACEÆ, in bot., dicotyledonous natural order, mostly herbaceous, and hairy with entirely pentamerous flowers. The fruit is explosive, and often has a hygroscopic appendage. The commonest of the eleven genera are *Geranium*, *Erodium* (stork's-bill), and *Pelargonium*.

GERANIUM, largest genus of natural order *Geraniaceæ*, annual and perennial herbs found throughout the temperate regions. In Brit. Isles eleven species known as *crane's-bill* are found. The commonest is Herb Robert, *G. Robertianum* of the hedgerows. Leaves are palmately lobed, flowers regular, 5 sepals, 5 imbricating petals, 10 stamens, and a beaked ovary. Many handsome garden plants exist, but the commonest 'geraniums' are really pelargoniums.

GERARD (fl. XI. cent.), organiser of KNIGHTS OF ST. JOHN OF JERUSALEM. G. was the administrator of the Hospital of St. John at Jerusalem and was first Grand Master. See HOSPITALLERS.

GÉRARD, ÉTIENNE MAURICE, Count (1773–1852), distinguished Fr. soldier; Minister of War and a marshal of France after 1830.

GÉRARD, FRANÇOIS PASCAL, Baron (1770–1837), Fr. artist; famous for portraits and hist. subjects.

GÉRARD, JEAN ISIDORE (1803-47), Fr. caricaturist (pseudonym, *Grandville*); famous for political caricatures and book illustrations.

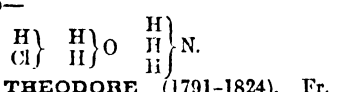
GERARD, JOHN (1545–1612), Eng. herbalist; keeper of the gardens of Lord Burghley in London, and at Theobalds (Herts); practised as barber-surgeon in London; author of well-known *Herball*, an early illustrated pharmacological work.

GÉRARDMER (48° 3′ N., 6° 53′ E.), town, summer resort, Vosges, France; textile weaving. Pop. 9000.

GERASA, modern Jerash (32° 17′ N., 35° 57′ E.), ancient city, Palestine; important place, II. and III. cent's.

GERBERT, see Silvester II.

GERBERT, MARTIN (1720-93), Ger. writer and theologian; prince-abbot of St. Blasien, 1764; wrote *Scriptores ecclesiastici de musica sacra.*



GERBILS, members of Mouse Family (*q.v.*).

GERENUK, see Gazelle.

GERGOVIA, modern Gergovie (*c.* 45° 40′ N., 3° 10′ E.), ancient town, Auvergne, France; besieged by Cæsar, 52 B.C.

GERHARD, JOHANN (1582–1637), Ger. Prot. theologian; prof. of Theology, Jena, 1616; wrote *Loci communes theologici, Meditationes sacræ.*

GERHARDT, CHARLES FRÉDÉRIC (1816–56), Fr. chemist; contributed to the molecular theory, and elucidated constitution of organic compounds by his 'types,' which were—

GÉRICAULT, THEODORE (1791–1824), Fr. artist; one of the early Romanticists, and famed for military and equine studies.

GERIZIM (31° 12′ N., 35° 16′ E.), hill, Samaria; alt., 2850 ft.; Joshua's Mountain of Blessing; Samarian chief temple.

GERMAN BRETHREN, German Baptist Brethren, an Amer. sect, found in Pennsylvania, Maryland, and other states; first established in Germany in 1708 by Andrew Mack and several of his disciples; owing to persecution, members fled to Netherlands, afterwards sailing to Pennsylvania; first Amer. congregation at Germantown, Penn., 1723. Sect has been much subdivided.

GERMAN CATHOLICS, religious denomination, seceded from Rome, 1844, led by Czerski and Ronge; subsequently banished from Austria, while they suffered from various restrictions in Saxony, Prussia, and Baden. About 1859 many united with 'Free Congregations,' others having already returned to Rome. G. C. are now found only in Saxony.

GERMAN EAST AFRICA (7° S., 35° E.), Ger. Protectorate bounded by Brit. East Africa and Victoria Nyanza on N., Belg. Congo, Lake Tanganyika, Rhodesia, Nyasaland, and Lake Nyasa on W., and Portug. East Africa on S.; coast-line about 600 miles; total area, 384,070 sq. miles; traversed by mountain ranges, many of which are densely forested; mount Kilimanjaro in N.E., 19,300 ft.; highest peak in S.W. about 9000 ft.; climate tropical; unhealthy on coast; healthier in highlands of interior; sleeping sickness prevalent in some districts owing to tsetse fly; many rivers, including Rovuma (southern boundary), Pangani, Ulanga, and Rufiji-Ruaha (all partly navigable); principal seaports, Dar-es-Salaam (capital), Bagamoyo, Tanga, Kilwa, Kisiwani, Mikindani, and Lindi; inland stations include Ujiji on Tanganyika, Bukoba on Victoria, and Kilimatindi; native tribes are mostly Bantu; Suahilis on the coast. Chief products—cattle, rice, cotton, agave, ground-nuts, rubber, coffee, maize, copra, sugar, tobacco, hemp, ivory; gold, coal, copper, garnets, salt also found; railways inland from Dar-es-Salaam and Tanga. E. African coast was taken by Portuguese, 1498; retaken by native tribes and Arabs, 1729; Deutsch-Ostafrikanische Gesellschaft (private company) acquired the country from native chiefs, 1884; boundaries settled by Anglo-Ger. agreement, 1890; native rebellion, 1905–6; colony administered by imperial governor. Pop. (1911) 10,000,000.

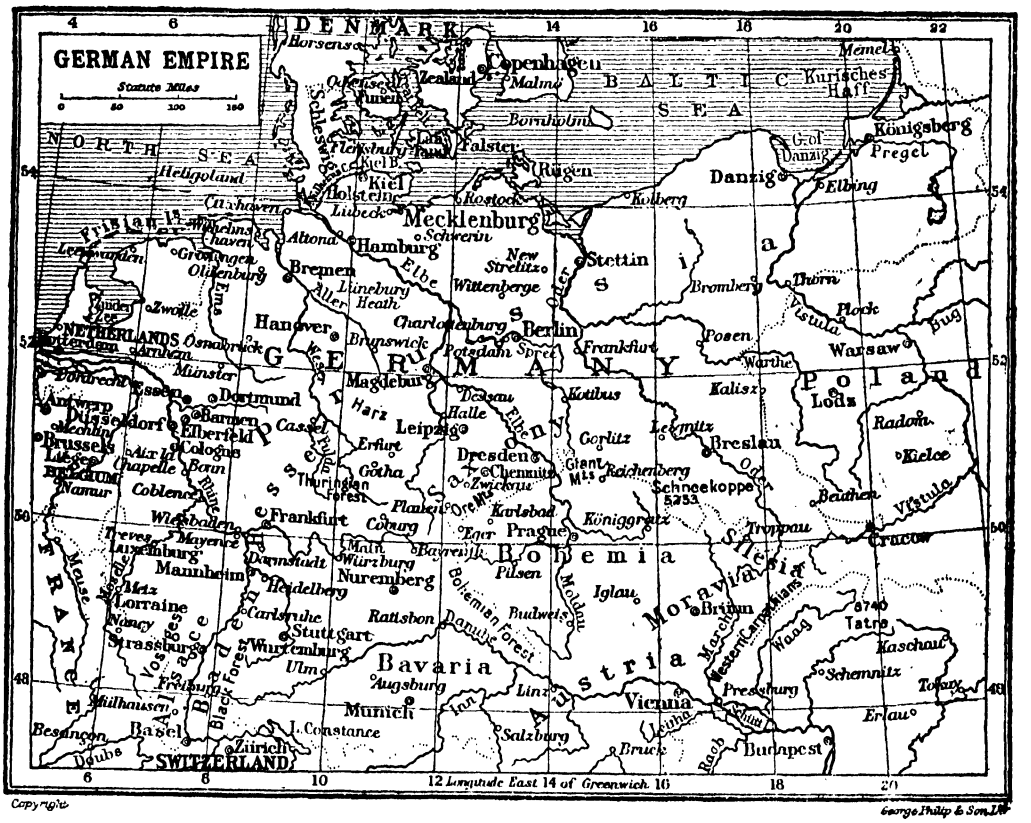
Brode, *Brit. and Ger. East Africa* (1911).

GERMAN EMPIRE, Germany, Deutsches Reich, Central European Federation comprising kingdoms of Prussia, Bavaria, Saxony, Württemberg; grand-duchies of Baden, Hesse, Mecklenburg-Schwerin, Oldenburg, Saxe-Weimar, Mecklenburg-Strelitz; duchies of Brunswick, Anhalt, Saxe-Meiningen, Saxe-Coburg-Gotha, Saxe-Altenburg; principalities of Reuss (younger line), Lippe, Schwarzburg-Rudolstadt, Schwartzburg-Sondershausen, Reuss (elder line), Waldeck, Schaumburg-Lippe; free Hansa towns of Hamburg, Bremen, Lübeck; and the 'Reichsland' (imperial territory) of Alsace-Lorraine; extreme length from N. to S., *c.* 600 miles; extreme breadth, E. to W., 750 miles; total area, 208,770 sq. miles (of which Prussia accounts for 134,629 sq. miles).

G. is bounded on N. by North Sea, Denmark, and, Baltic, W. by Holland, Belgium, France, S. by Switzerland, Austria, and E. by Russia. The coast-line, *c.* 1000 miles, is generally flat and has a few large indentations, viz. Gulf of Danzig, Pomeranian Bay, Lübeck Bay, Kiel Bay, Heligoland Bay, and the three vast lagoons, Stettiner Haff, Kurische Haff, Frische Haff. The largest islands in the Baltic are Rügen, Fehmarn, and Usedom; in North Sea are Frisian Islands (*q.v.*). The central and southern parts of Germany consist of large plateaus traversed by numerous Mountain Ranges; viz. Bavarian Alps (with Zugspitze, 9738 ft., highest peak in the Empire), in southern Bavaria; Bayrischer Wald (*c.* 4000 ft.), in east Bavaria, Fichtelgebirge in N.-eastern Bavaria, Schwarzwald (Black Forest, with Feldberg, 4898 ft.), in Baden; Vosges Mountains (with Sulzer Belchen, 4669 ft.), in Alsace-Lorraine; Thüringerwald (Thuringian Forest), over 3000 ft.; Riesengebirge (with Schneekoppe, 5266 ft.), on the borders of Silesia and Bohemia; Hartz Mountains (with Brocken, 3747 ft.), in province of Saxony; Erzgebirge, in kingdom of Saxony; Vogelsberg, *c.* 2536 ft., in Hesse; Taunus, Westerwald, Hunsrück, in Rheinland, etc.

The northern region of the Empire consists of an immense level plain known as the Great North Ger. Plain, with large stretches of moorland (Lüneburger Heide, Geest), and fertile tracts in Holstein, and northern parts of Oldenburg, Hanover, and East Frisia.

Principal Rivers are Vistula, Oder, Pregel, Memel, flowing into Baltic; Elbe, Weser, Ems, Rhine, flowing into North Sea; Danube, flowing into Black Sea; their chief tributaries are Main, Neckar, Lahn, Mosel, Lippe, Elster, Mulde, Saale, Warthe, Bartsch, Neisse, Isar, Inn, Iller, Lech, Regen, and Altmühl, many of which are navigable.



Lakes are found mainly in N. and S.; viz. Lake of Constance, Königsee, Starnbergersee, Ammersee, Tegernsee, Chiemsee, in S.; generally surrounded by mountains, and all famed for fine scenery. In the N. are Spirding and Mauersee (East Prussia), Plönersee (Holstein), Schwerinersee, Müritzsee, Plauensee (Mecklenburg). Germany has many important Canals, viz. Kaiser Wilhelm Canal (connecting North Sea and Baltic), Elbe-Trave Canal, Dortmund-Ems Canal, Ludwig's Canal (between Danube and Main), Finow and Müllros (connecting Oder and Havel-Elbe), Teltower Canal, etc.

Geology.—Almost all geological formations are represented in Germany. Rocks belonging to Archæan system (schist, gneiss, granite, etc.) occur in Silesia, Erzgebirge, Thüringerwald, Fichtelgebirge, Schwarzwald, Vosges, etc. Of the Palæozoic formations, Cambrian and Silurian occur in Vogtland, Fichtelgebirge, Thüringerwald, Eozgebirge, Silesia, etc.;

Devonian in Taunus, Hunsrück, Westerfeld, Eifel, Harz, Westphalia, etc.; Carboniferous regions are Aachen, Westphalia, Silesia, Nassau, etc. Jurassic rocks are found in central Germany, Lorraine, Alps, etc. Large area of Triassic beds in west and central Germany. Extensive Tertiary and Quaternary deposits, especially in N. Germany.

CLIMATE is generally healthy; warmest in northern Rhine districts and valleys of Main, Neckar, and Mosel; coldest on Baltic coast and in E.; average summer temperature is *c.* 60° to 62°; rain falls at all seasons; mean annual rainfall, *c.* 20 in.; greatest in west and Bavarian highlands.

FLORA includes over 2000 species of vascular plants; extensive forests (chiefly fir, pine, oak, beech, larch, chestnut); largest forest area in central and southern regions, *c.* 20 % is pasture land and 49 % under cultivation. FAUNA includes fox, boar, martin, weasel, otter, chamois, stag, elk, marmot, roe; few reptiles.

crowned him Emperor of the Romans. Charlemagne died in 814 A.D., and was succeeded by Louis, his son. The great empire now began to totter. By the *Treaty of Verdun* in 843 A.D. France and Germany became separate kingdoms, ruled respectively by Charles and Louis, the sons of Louis le Debonnaire, the Rhine forming the rough line of division between the two political entities. The Norsemen swooped down upon the newly formed kingdom, and neither Louis nor his son Charles was strong enough to resist them effectually. For sixty-eight years after the Treaty of Verdun the Carlovingians continued to rule the territory east of the Rhine, but proved degenerate and effete. In 911, Conrad, Duke of Franconia, was elected ruler of the Germans, and in 918 the ruler, Henry the Fowler, was elected. Henry was a capable and powerful ruler. His great policy was to unite all the German-speaking tribes. He conquered the Dukes of Alemannia and Bavaria, and mastered Lorraine. But his most redoubtable foes were the Hungarians. In order to fortify his eastern frontiers against them he planted *burgs* along his marches—the germs of the famous German cities—and, to cope with the Magyars, whose strength lay in horsemanship, he founded a strong cavalry of nobles. Hence he is called 'the founder of knighthood.' In 936 Henry was succeeded by his son Otto. The grand-dukes rose in insurrection, but Otto quelled them, and similar disturbances were obviated by a powerful organisation of margraves.

But his great object was to regain the imperial crown, and so he turned his attention to Italy. His opportunity came when Adelaide, widow of Lothaire, king of Italy, implored his aid. He speedily subdued Lombardy and married Adelaide. In 961 he was crowned king of Lombardy, and in 962 Pope John XII. granted him the imperial crown of the Western Empire, a distinction previously conferred upon Charlemagne. Otto improved the whole constitution of Italy, and his domestic policy was equally salutary. Otto was thus one of the great builders of the German Empire, and he made it the foremost power in Europe. By making himself champion of the Holy Roman Empire he resuscitated its supremacy in Europe. But his great imperial policy did not maintain its tradition in the reigns of his later successors.

Empire and Papacy.—Germany's hold in Italy [illegible] iritual powers. The traditional elective system of German monarchy, too, fostered an independent spirit among the nobles, and favoured the subsequent disintegration of the empire into states, *i.e.* of the Saxons, Thuringians, Franconians, Suabians, and Bavarians. Otto II. (973–83) felt his position almost untenable. Otto III. (983–1002) came into conflict with the princes and the Church. Henry II. (1002–24) loosened his hold on Italy and concentrated his attention on his domestic affairs. Conrad II. (1024–39) was more successful than his immediate predecessors, and to a considerable extent consolidated anew the reaches of the empire. He successfully balanced the interest of his dominions in Germany and in Italy. He acquired the kingdom of Arles in 1032. His son, Henry III. (1039–56), succeeded him, and gained Bohemia, Hungary, and Poland as federal states. Under Henry Germany's imperial power was at the zenith.

He was succeeded by Henry IV., who came into direct collision with the pope on the subject of investiture. The event of the First Crusade towards the end of his reign aggravated the rupture. From the marshalling of the Christian army Henry held aloof, refusing to arm at the call of his acknowledged enemy. Henry V. (1106–25) ameliorated matters by his concessions at the *Concordat of Worms* (1122), but the imperial power of Germany was losing prestige, while the spiritual supremacy of Rome was becoming more widely acknowledged. Lothair II. (1125–37) did not find the difficulties of his position so insurmountable, and lived on amicable terms with Innocent II. His successor, Conrad III., felt the stress of his situation bitterly. St. Bernard enlisted his services for the Second Crusade. Combining with Louis VII. of France he marched to the Holy Land through Constantinople, but his supplies were cut off by Manuel, emperor of the East, and he was defeated by the Saracens in Cappadocia. Conrad retreated to Constantinople, but rejoined Louis on his victory over the Saracens. The two kings entered Jerusalem, but their attempt to take Damascus was an utter failure. Conrad's dominion in Italy was fatally weakened by the rapid growth of autonomous cities. Conrad was succeeded by Frederick Barbarossa (1152–90), who endeavoured to shatter the autonomy of the Lombard cities, but his schemes proved abortive.

The feud in Italy between the Ghibellines (or upholders of the emperors) and the Guelphs (or upholders of Italian freedom) became intense. Milan led the opposition to the German supremacy, but fell in 1162. Frederick then attempted to bolster up his position by stationing *Podestas* or governors in the cities, but this only incensed revolt. In 1167 the League of Lombardy was formed in order to assert the freedom of the federal cities. Frederick then tried to form a counter-league of Ghibelline cities. Protracted warfare ensued, until the decisive battle was fought at *Legnano*, near Milan. The turning-point of the battle was when the 'company of death'—900 exiles of Milan, sworn to die or gain the victory—saved the sacred standard of Milan from the German cavalry. Frederick barely escaped from the scene of defeat. In 1183 Frederick, by the *Peace of Constance*, agreed that the young Italian Republics should govern themselves, and levy their own defensive forces. The Peace of Constance brought the real dominion of Germany over Italy to an end, and reduced her transalpine claims to a purely nominal footing. Frederick had some measure of success against the encroachments in Bavaria and Saxony of Prince Henry the Lion. But when the tidings came of the capture of Jerusalem by Saladin, and Richard I. of England and Philip Augustus of France were mustering their forces for the Third Crusade, Frederick promptly advanced from Ratisbon, following the route *via* Adrianople to the Hellespont, and marched victoriously through Asia Minor. He conquered Iconium, but died while bathing in the river Selef, in Cilicia. Only a remnant of his army made its way to the camp of the Christians before Acre.

Henry VI. (1190–97), a man of unbounded ambitions, succeeded Frederick. He aimed at the conquest of the Byzantine Empire, and sought to realise his projects by planting his foot in Sicily and working under cover of a Fourth Crusade. He married Constance, the heiress of Sicily, with a view to securing his position. His forces he divided into three divisions: one division he himself commanded in Sicily, another he dispatched from Constantinople to Acre, and the remaining body he shipped to Palestine from the Baltic ports. Henry's forces united with the Syrian Christians, besieged and captured Berytus, and set free the Christians therein imprisoned. Henry had now secured his position in Sicily, and dispatched his remaining forces to the Holy Land. Hopes were entertained of taking Jerusalem. The German forces turned to the *Siege of Thoron*. Just as the ramparts were falling, tidings came of the advance of a Saracen relief force. The German army was scattered, and the early death of Henry brought the Fourth Crusade to an end. At Henry's death a rivalry arose between Otto, son of Prince Henry the Lion, and Frederick, son of Henry VI. Otto was crowned as Otto IV. in 1209, but was excommunicated by Innocent III., and Frederick II. was crowned in 1212. Otto was defeated at Bouvines in 1214 by Philip Augustus, and Frederick now had no rival to his title. Frederick was a man of high intellectual standing, but he lacked that keen and practical insight that was necessary in order to maintain a balance of the German powers, and he

is to a large extent responsible for the disintegration of the early German Empire. In order to devote his full attention to the opposition of the Papacy, he left the government of domestic affairs in the hands of the princes, and thus abolished the successful policy of the Hohenstaufen kings, who had striven to check the independence of the nobles. The towns, too, began to assert their autonomy, a fatal sign of disintegration. In the south, Ulm, Nuremberg, Augsburg, and Ratisbon were developing to an alarming degree. In the north, the Baltic towns were soon by the *Hanseatic League* to defy the central power.

Frederick II. was succeeded in 1250 by his son, Conrad IV. (1250–54), the last of the Hohenstaufens. From his death in 1254 to the election of Rudolf in 1273 was the period of the GREAT INTERREGNUM. When Rudolf of Hapsburg came to the throne the domestic situation had undergone a fundamental change—a change brought to pass by the two fatal forces of disintegration, viz. the opposition of the Papacy and the opposition of the nobles. Powerful principalities weakened the central power. The house of Ascania ruled Brandenburg and Saxony, the house of Welf ruled Brunswick, the house of the Wittelsbachs ruled Bavaria and the Palatinate, and the house of Wettin ruled Meissen and Thuringia. The power of the archbishops also, whose chief sees were in Mainz, Köln, and Trier, began to be asserted. Rudolf of Hapsburg was succeeded by Rudolf of Nassau (1292–98), but he was deposed and slain by the princes, thus proving that the combination of an elective monarchy and a system of powerful principalities was self-destructive. The fate of Adolf's successors confirms the truth of this statement. The reigns of Albert of Austria (1298–1308), the son of Rudolf, and Henry of Luxemburg (1308–13) were syncopated by a similar opposition. Ludwig IV. of Bavaria successfully combated the claims of Frederick, son of Albert, at Mühldorf in 1322, and occupied the throne till 1346. During his reign a decisive step was taken against papal interference. In 1338 the convention of the electors at Rhense declared the German sovereign independent of the pope. Ludwig was succeeded by Charles IV. (1346–78), son of John of Bohemia. The most important event of this reign was the issue of the *Golden Bull* (1356). By this edict the system of imperial election was defined. Seven electors were recognised, viz. the king of Bohemia, the Count Palatine of the Rhine, the Duke of Saxony, the Margrave of Brandenburg, and the archbishops of Mainz, Cologne, and Trier. The emperor was to be elected at Frankfort-on-Main and crowned at Aix-la-Chapelle. The new system continued to operate for four and a half centuries. Wenceslaus, the son and successor of Charles, was deposed in 1400. He was succeeded by Rupert, who ruled till 1410. Albert II. of Austria succeeded Rupert, and was himself succeeded by Frederick III., Duke of Styria (1440–93). He was succeeded by his son, Maximilian I. (1493–1519), who, by his marriage with Mary of Burgundy, acquired new territory.

The Reformation.—Maximilian recognised that the three chambers which composed the Diet were inadequately organised, but he failed to carry out his scheme of reform. In 1512 the empire was divided into ten departments for administrative purposes. Charles of Spain was elected emperor as Charles V. (1519–56), and widely extended the imperial supremacy, but his policy was frustrated by the great Reformation movement. Charles was the grandson of Maximilian. He succeeded Ferdinand as king of Spain in 1516. On the death of Maximilian he had a rival in his claims to the throne in Francis I. of France. The inroads of the Turks prompted the electors to choose Charles, whose dominions now extended over Austria, the Netherlands, Naples, Spain, and large tracts in America. The great struggle of the reign of Charles V. was against Francis of France. Italy was the theatre of the war. In 1525 the decisive battle of *Pavia* was fought, in which Francis was worsted and taken prisoner. After a year's imprisonment Francis was released, after signing a treaty by which he renounced his claims in Italy and ceded the duchy of Burgundy to Charles. Hostilities broke out afresh. Francis formed a league with the pope, but the army of Charles marched against Rome, sacked it, and took the pope prisoner (1527). A new treaty was struck (1529) by which Francis agreed to pay a heavy indemnity, ceded Flanders and Artois, and renounced his claims in Italy. Charles agreed to waive his claims on Burgundy.

The Reformation in Germany was now at a white heat. At the Diet of Worms in 1521 Charles had pronounced Luther a heretic. In 1530, at the *Diet of Augsburg* was read the Confession of the Protestant Faith. The Confession was condemned by the Diet, but the Protestants only gathered strength. The emperor was desirous of mustering all his forces against the inroads of the Turks, and could not afford to estrange so vast a portion of his people. He therefore annulled his decrees at the previous Diets, and Protestantism won the day. The great ambition of Charles was to turn the tide of Moslem supremacy which threatened Europe on the east, but his protracted wars with Francis spent his strength and rendered his attack on Algiers disastrous. In 1545 Protestantism met a redoubtable foe in the Jesuits, and was denounced by the Council of Trent. In 1546 Francis and Luther both died, and Charles resolved to trample out the hold of the Reformed Faith, but a temporary victory was followed in 1552 by the Peace of Religion—a treaty by which he secured the claims of the Protestants. Charles V. was succeeded by his brother Ferdinand, during whose reign the rupture between the Protestants and Romanists was keenly felt. The conflict grew keener in the reigns of the succeeding monarchs—Maximilian II. and Rudolph II.

In the reign of Matthias the crisis came, and the THIRTY YEARS WAR commenced. The war originated in a contest for the throne of Bohemia between the Protestant Frederick and the Catholic Ferdinand. The Protestants were at first worsted, and Christian IV. of Denmark, who championed the cause of Frederick, was no match for the military genius of the Bohemian General Wallenstein, who assisted Ferdinand. Richelieu's influence secured the recall of Wallenstein. But the advent of Gustavus Adolphus of Sweden, the great Protestant champion, turned the tide of battle. The battle of *Leipzig* in 1631 was a decisive victory for Protestantism. Ferdinand in desperation recalled Wallenstein. In 1632 the forces of Wallenstein and Gustavus Adolphus met at *Lutzen*. The battle ended with the victory of the Protestants, but a heavy price was paid by the death of the noble king of Sweden. The war ended with the *Peace of Westphalia* in 1648, by which France retained Metz, Toul, Verdun, and Alsace (except Strasburg), with the fortresses of Breisach and Philippsburg; Holland was made a free state; the Swiss Cantons were made free; Sweden was awarded a large indemnity and received important ports on the Baltic. Germany thus lost the absolute navigation of the Rhine, the greater part of her empire, and was confronted with the independence of the principalities. During the reign of Leopold (1658–1705) Germany recovered to some extent from her abject state. Louis XIV. of France aimed at the supremacy of Europe, and this drew Germany closer to England, and forced the German princes to stand by the central power. In 1714 the Peace of Baden settled the relations between Germany and France.

Rise of Prussia.—In the first year of the XVIII. century a momentous change was made among European powers by the creation of the Prussian kingdom, with Frederick the Great on the throne. The first decisive action of the new monarch was to seize from Maria Theresa the realm of Silesia. Peace was secured by the *Treaty of Dresden*, by which Frederick acknowledged the election of Francis I., husband of Maria Theresa, to the imperial throne. During the

eight subsequent years of peace, Frederick reconstructed the constitution of Prussia. Then followed the SEVEN YEARS WAR, involving untold bloodshed, and ending with the *Peace of Hubertsburg*. By this peace Frederick retained Silesia—the bone of contention. In 1772 Frederick seized on Polish Prussia. But the conquest of Napoleon made a temporary upheaval of the European countries. The fall of Napoleon again altered the face of things; the ferment was followed by clarification. One great lesson the Germanic states learned from the disasters of the French Revolution and the rise of Napoleon was the expediency of union. A step was taken in 1834 by the formation of a Customs Union (*Zollverein*), headed by Prussia. But it was left to Bismarck to decide between Austria and Prussia as the leading states of Germany. The war of spoliation against Denmark fanned the fire of jealousy between Austria and Prussia. The war of 1866 culminated in the defeat of Austria at *Sadowa*; Austria was humiliated, and Prussia became the dominant power.

Bismarck formed the NORTH GERMAN CONFEDERATION, of which he became Chancellor. In 1870 the *Franco-Prussian War* broke out, and on the surrender of Paris Bismarck decided the conditions of peace. During the war the states of South Germany had united with Prussia and the North German Confederation. This Confederation was changed into the German Confederation, and in 1871 William, king of Prussia, was crowned as **German Emperor** at Versailles. Bismarck took the title of Prince and now became Chancellor of the German Empire. Bismarck's policy was anti-democratic. He aimed at checking the power of France, pacifying Russia, and confirming an alliance between Germany, Austria, and Italy. His *Falk laws* were directed mercilessly against the Roman Catholics. His great ideas of colonial expansion have not been realised. Bismarck, nevertheless, was the founder of one of the greatest empires of the world.

On the accession of William II. in 1888 the authority of Bismarck waned. He was requested to resign his chancellorship, and an open feud arose between the young monarch and the old chancellor. The ill-feeling, however, abated during the last few years of Bismarck's life. William II. is a staunch believer in the divine right of kings, and his autocratic views have brought him into collision on several occasions with his councils. On the subject of the British occupation of South Africa the Kaiser was very bitter, and his somewhat rash speeches were the cause of deep-seated ill-feeling between the two countries, which has taken long to be eradicated. Russia was for long a thorn in the flesh of the German Empire, but fear of an invasion abated until the beginning of 1913, owing to the disastrous effects on Russia of the Russo-Japanese War. During the reign of William the progress in the country has been little short of miraculous. The commerce of the country has made vast strides, and the military organisation of the country has been put on a new basis. But perhaps the Kaiser's greatest work is the creation of a great Navy second only to that of Britain. But the stress of the upkeep of these great military forces and the rigorous protectionist system has aggravated social discontent in Germany, and the growth of the Social-Democratic party is a serious menace to the entire prevailing policy.

LANGUAGE.

German is spoken by some 60 millions (*c.* 92 % of inhabitants)—besides 10 millions in Austria and 2½ millions in Switzerland. French is spoken by *c.* 250,000 (chiefly Alsace-Lorraine). Masurian, Danish, Czech, Lithuanian, and other tongues are also spoken in different regions. German belongs to Teutonic branch of Indo-European languages. West Teutonic group included (1) OLD HIGH GERMAN (700–1100), which became MIDDLE HIGH GERMAN (1100–1500), and thereafter MODERN HIGH GERMAN—*Hoch-deutsch* or standard German of to-day. (2) Old Saxon (800–1100), from which sprang MIDDLE LOW GERMAN (1100–1600), and thereafter MODERN LOW GERMAN, or *Plat-deutsch* patois; (3) Low Franconian, ancestor of modern Dutch; (4) Old English or Anglo-Saxon; (5) Frisian. Low German was spoken in low-lying, High German in upland districts of S. Germany. Middle Low German had no lit. to speak of, but in recent times Plat-deutsch has been used by dialectal writers like Fritz Reuter. Old High German was marked by a second sound shifting (*c.* 600), which distinguished it not only from E. Teutonic, but from other West Teutonic speeches; thus *t* became *z*, *tz*, *s*, *ss*; *p* became *pf*, *f*, *ff*; *k* became *ch*; *d* became *t*. Old High German had various dialects of its own—still traceable. Upper German (*Oberdeutsch*) was spoken in Switzerland, Bavaria, etc.; Franconian in Rhineland, etc. Upper and Middle German (spoken in Middle Germany; comprising Franconian, Thüringian, etc.) are together called High German.

Absence of national union retarded the evolution of a uniform national speech. Luther and his Bible (1531) established High German as modern standard German; Old Prussian, akin to Lithuanian, was supplanted by German in XVII. cent. Adoption of German in place of Latin as academic tongue in univ's gave great impetus to native language; growth of national lit. and national feeling gave it definite form and ensured unity for written and cultured German. The purest German, it is said, is spoken in Hanover. Recent tendency is to expel foreign (especially French) words in favour of Teutonic; e.g. *trottoir* being replaced by *Burger-steig*, *billet* by *Fahrkarte*. German has retained power of compounding words largely lost by its cousin English.

Loewe, *German Philology* (trans. by Jones, 1913); Strong and Meyer, *History of Ger. Language* (1886).

Government.—The present constitution of the Ger. Empire (*Deutsches Reich*) dates from 1871. At the head of the State is the Ger. Emperor, 'Deutscher Kaiser' (there is no 'Emperor of Germany'), who must always be the ruling king of Prussia. The Kaiser has the power of declaring defensive war, of making peace, concluding alliances and treaties with

STATES OF THE EMPIRE.	Area.	Pop. (1910).	Bundesrat & Reichstag Representatives.

foreign States, and other matters relating to international law; also of convoking, closing, and adjourning the Reichstag. The Chancellor, the chief officer of state, is chosen by the Kaiser, and supervises 7 Secretaries (Foreign Affairs, Interior, Navy, Justice, Treasury, Post Office, Colonies), who do not form a collective Cabinet, and are not responsible to Parliament. There are two legislative bodies, the *Bundesrat* (Federal Council) and the *Reichstag* (Imperial Parliament). The Bundesrat has 58 members, representing the individual states of the Empire, app. each session by the governments thereof. The Reichstag consists of 397 members, elected by universal (male) suffrage for five years. The Bundesrat and Reichstag must meet annually; all laws must receive votes of an absolute majority of both houses. The Bundesrat is presided over by *Reichskanzler*, or Chancellor of the Empire, and the President of the Reichstag is elected by deputies. Bundesrat members may attend Reichstag sittings. Initiative in legislation lies mainly with Reichstag; legislation is restricted to matters within jurisdiction of the Empire, *e.g.* defence, finance, communication, commerce and customs, justice, etc. The constituent states of the Empire are sovereign, self-governing states as regards education, religion, and all save purely imperial affairs. A dozen parties are represented in Reichstag, chief being (1913) Conservatives (43), Free Conservatives (14), Clerical Centre (90), National Liberals (44), Progressive People's Party (42), Social Democrats (110).

GERMAN LITERATURE.

German literature began to take definite shape at the commencement of the X. cent., but had two distinct tendencies. There was a body of alliterative heroic songs and ballads in vernacular German, and also a body of Christian poetry composed in rhymed Latin verse. Both tendencies prevailed, and in the later literature met. The spirit and language of the old German heroic literature were an inexhaustible source of rejuvenescence which saved the verse of a maturer epoch from formalism, but the stanzaic and rhyming system of the Latin hymns were victorious over the alliterative system of the heathen poetry of German vernacular. This early literature is the product of the populace and the monasteries, and thus stands in contrast to a species of poetry that arose in the XII. and XIII. cent's, the offspring of court life and manners. This is the chivalric poetry of the *Minnesänger*, akin in spirit to the Troubadour verse of S. France, Spain, and Italy. The *Minnesänger* (poets of love) travelled from court to court and from country to country, and thus the sphere of their influence was wide. Their style tended to become stereotyped and artificial, but still it had a refining and ennobling influence on both the form and content of verse. Famous among *Minnesänger* were Hartmann von der Rue, author of *Der arme Heinrich*, Gottfried von Strassburg, author of *Tristan und Isolde*, and Wolfram von Eschenbach, author of *Parzival*. These poets were all of high rank. The *Nibelungenlied* and *Gudrun*, the great ballad epics, also belong to this period. Their Gothic grandeur, depth of feeling, and wealth of imagination make a vivid contrast to the limited appeal, forced sentimentality, and restricted vision of the court school.

But in the XIV. and XV. cent's the Minnesänger traditions became vulgarised, and there arose the famous guilds of the *Meistersänger*, recruited mainly from the artisan classes. Poetry then became a source of profit as well as of pleasure. The chief guild centres of the Meistersänger were in Nuremberg and Ulm. The verse of the Meistersänger lacked spontaneity and was shaped according to rule rather than by inspiration. The most original poet of the school was Hans Sach (1494–1576), the cobbler of Nuremberg. In the XIV. and XV. cent's literary prose also began to develop. The *Volksbücher* in particular reached a high degree of excellence. Notable among them are *Die Haimonskinder*, *Doktor Faust*, *Die Schildbürger*, and *Reineke Fuchs*. A new creative impulse was given to the literature with the classicism of Ulrich von Hutten (1488–1523). But the most influential figure in German letters is perhaps Luther—he is in fact the father of modern German literature. His translation of the Bible not only stirred new depths of feeling, but finally fixed the form of Ger. speech. The hymns of Luther are unsurpassed in sweetness and fervour.

But the poetic zeal of the country was quenched by the Thirty Years War, and the XVII. cent. proved to be the most sterile period of German literature. It does, indeed, embrace the two Silesian schools. The first was originated by Martin Ogritz (1597–1639), and was essentially didactic. The greatest follower of the second Silesian school was Paul Fleming (1597–1639). Philosophy, however, produced some brilliant thinkers, *e.g.* Leibniz, Wolf, and Thomasius. At the beginning of the XVIII. cent. a new school of poetry arose at Leipzig. This school was led by Gottsched (1700–66), a formalist and disciple of Boileau and Racine. About the same time arose the Swiss or Zürich school, led by Bodmer (1698–1783) and Breitinger (1701–76), and in spirit directly opposed to the Leipzig school. This school drew its inspiration from the rich and natural ballads and folk-songs of bygone ages, and paved the way for the revolution effected in letters by Klopstock, Lessing, Wieland, and Herder. Klopstock's great work is the *Messiah*, an epic modelled after Milton's masterpiece, and in genuine feeling and religious inspiration recalling the spirit of Luther and the Reformation. But Lessing's was the master spirit of the time, and his *Hamburgische Dramaturgie* and *Laokoon* were epoch-making works in the history of German criticism. His comedy, *Minna von Barnhelm*, and his drama, *Nathan der Weise*, revived dramatic art in Germany. Wieland succeeded best in the romance—witness *Agathon*, *Oberon*, *Musarion*, and *Aristipp*. He added a lightness of touch to the language, of which it had never before been capable, but beauty with him often degenerates into sensuousness and animalism.

The spirit of Rousseau and the French Revolution was perhaps assimilated by no other as sanely as by Herder. He drew his inspiration from the evergreen *Volkslieder*. But his theories and style were exaggerated and travestied by the writers of the *Sturm und Drang* (storm and passion) school, whose name is derived from a play of Klinger's. The early works of Goethe and Schiller show traces of this unlicensed and Rousseauesque exuberance, but both in the period of their poetic maturity tempered this emotional abandon with a Greek sense of moderation, restraint, and repose. Goethe's multifarious genius is exhibited in such works as *Iphigeneia*, *Egmont*, *Wilhelm Meister*, *Hermann und Dorothea*, and *Faust*. Schiller found most perfect expression in the ballad. His works encompass dramatic poems (*Wilhelm Tell*, *Wallenstein*, *Maria Stuart*), lyrics, and writings on æsthetics and history. Philosophy also produced a magnificent assemblage of great names—witness Kant, Fichte, Schelling, and Hegel. Other great names in German philosophy are Fries, Jacobi, Herbart, Schopenhauer, Zeller, von Hartmann, Lotze, Haeckel.

The names which rank next to Goethe and Schiller in the generation which followed are those of Heine, Gutzkow, and Fritz Reuter. Heine succeeds best in lyric verses, e.g. *Buch der Lieder*, *Nordseebilder*. Gutzkow (1811–78) was the great leader of the 'Young Germany school'—a school obsessed with social problems. Fritz Reuter (1810–74) was pre-eminently a humorist and writer of narratives. In the latter half of the XIX. cent. in few departments of German literature have there been any names of really outstanding genius. With the rise of the naturalistic drama are connected Sudermann (author of *Die Ehre*, *Heimat*, etc.) and Hauptmann (author of *Die Weber*, *Fuhrmann Henschel*, etc.), both writers of great merit.

In philosophy the writings of Nietzsche (1844–1900) have had a great influence on the writers and philosophers of modern Europe.

Bayard Taylor, *Studies in Ger. Lit.* (1879); *History of Ger. Lit.*, by Hosmer (1892), Priest (1910), Robertson (1902), Scherer (1886), Thomas (1909).

Colonies.—As a colonising power Germany was late in entering the field (1884); consequently her over-sea possessions are mostly tropical and unsuited for white settlers. Ger. colonies are administered by imperial governors. In Africa: Ger. E. Africa, Ger. S.W. Africa, Kamerun, Togoland. In Asia: Kiaochau. In Pacific: New Guinea and dependency islands; Samoan islands. Total area of colonies, *c.* 1,134,239 sq. miles.

Towns.—Berlin is the capital of the Ger. Empire. Other leading towns are Hamburg, Munich, Leipzig, Dresden, Cologne, Breslau, Frankfort-on-Main, Düsseldorf, Nürnberg, Hanover, Essen, Chemnitz, Stuttgart; principal ports are Hamburg, Bremen, Stettin, Königsberg, Danzig, Memel, Swinemünde, Emden, Geestemünde.

Religion.—Protestants form 62 % of entire population, Catholics 36 %, Jews 1 %. Catholics are chiefly centred in Bavaria (70 %), Alsace-Lorraine (76 %), Baden (59 %); in Prussia they form 36 % (predominating in Rhenish Prussia, Silesia, Posen, Westphalia, West Prussia, and Hohenzollern); in Württemberg, 30 %; Hesse, 31 %, Oldenburg, 22 %. In Saxony and the remaining states Protestants constitute over 90 %.

Education is compulsory and free from 6–14, and almost uniform throughout the Empire; and is of very high standard. Elementary schools (*Volksschulen*) are maintained by local taxation with State aid. Secondary schools include *Fortbildungsschulen* (evening continuation classes), *Bürger-* and *Höhere-Bürgerschulen* (intermediate schools), and various *Gymnasien* (preparing for univ. and learned professions). In *Realschulen* modern languages take the first place; there are 21 State univ's (see UNIVERSITIES); numerous special schools and colleges (some degree-granting); Polytechnica (notably at Charlottenburg, Karlsruhe, Munich, Hanover, Stuttgart, etc.); forestry schools (*Forstakademien*) at Eberswalde, Hohenheim, Münden, Tharandt, etc.; mining schools (*Bergakademien*), Berlin, Freiberg, Klausthal; schools of commerce (*Handelshochschulen*), Aachen, Leipzig, Frankfort, Berlin, etc. agricultural colleges (*Landwirtschaftliche Hochschulen*), Berlin, Göttingen, Halle, Jena, etc.; art schools (*Hunst-Akademien*), Berlin, München, Düsseldorf, Dresden, Weimar, Karlsruhe; music schools (*Konservatorien*), Berlin, Leipzig, Dresden, Munich, Cologne, etc.; also numerous learned societies, such as Academies (*Akademien der Wissenschaften*) of Berlin, Munich, etc. The largest libraries are at Berlin and Munich (over 1,000,000 vols., MSS., etc.); Strassburg, Hamburg, Heidelberg, Göttingen, etc., over 500,000.

Justice.—The Imperial Supreme Court is the *Reichsgericht* (sitting at Leipzig). There are 29 State appellate courts (*Oberlandesgericht*; an *Oberste Landesgericht* in Bavaria); courts of first instance are *Schwurgerichte* (periodical jury courts), *Landgerichte*, and subordinate *Amtsgerichte* (magistrates' courts). The system of law courts and *burgerliches Recht* (civil law) are uniform throughout the Empire. Imperial laws within limits of constitution override State laws.

Defence.—Military service is compulsory and universal; at 17 every German becomes liable for service, at 20 his service (*Heerpflicht*) begins. Recruits serve (1) 2 years in active army, followed by (2) 5 in the reserve (for cavalry and horse artillery, 3 years active, 4 years reserve); reservists are called out twice for several weeks' training, followed by (3) 12 years in *Landwehr* (5 years in first 'ban,' with 2 periods of training, and 7 years in second 'ban' without training). Till 45 all belong to the *Landsturm* (mobilised when necessary). Those attaining certain educational standards and paying own expenses need serve only one year in active army (*Einjährige Freiwillige*, or Volunteers). Total peace strength (1912), 531,000 men, 125,000 officers, non-com., etc. In 1915 there will be 560,000 men, or even more if Government proposals (1913) are adopted. The army (which includes automobile and aerostatic detachments) comprises 25 *corps d'armée*, of which Bavaria furnishes 3, Saxony 2, Württemberg 1, Prussia, etc., 19. The Kaiser is Federal Commander-in-Chief; but in peace-time kings of Bavaria, Saxony, and Württemberg are sovereign heads of their respective forces. Chief fortresses are Cologne, Metz, Coblenz, Strassburg, Ingolstadt, Ulm, Mainz, Spandau, Königsberg, Posen, Magdeburg.

NAVY.—The Ger. Imperial navy has increased enormously since 1900, and ranks second in power in the world (see SEA POWER). Successive navy laws (1900, 1906, 1912) automatically regulate its growth; by 1920 it will consist of 41 battleships, 20 large and 40 small cruisers, 144 torpedo boats, 72 submarines, and 101,500 men, at an estimated annual maintenance cost of £23,000,000; old and small ships are systematically replaced by large new ships. The navy is recruited by obligatory service of the maritime population at age of 20, and by volunteers, age 15 upwards. Important coast fortresses are Kiel, Danzig, Wilhelmshaven, Cuxhaven, Memel, Swinemünde, Pillau. G. has naval academy school at Kiel, military academies (*Kriegsakadamien*) at Berlin and Munich; besides several schools of navigation, military schools, and cadet institutions.

Resources and Industries.—There are (1913) some 39,000 miles of RAILWAY in Germany, of which 36,000 are State-owned. The *Zollverein* or Customs Union embraces almost all Germany, together with Luxemburg and Austrian communes of Jungholz and Mittelberg; outside the union are the free-port territories of Hamburg, Bremen, Geestemünde, part of Cuxhaven, several districts in Baden adjoining Switzerland, and Heligoland. Within the Zollverein there is complete free trade. Germany's tariff is protectionist. Within recent years G. has become an important industrial as well as agricultural country; about one-third of the population are engaged in agriculture, over one-third in manufacture and mining industries. Poverty and distress are provided against by a compulsory poor relief system, compulsory (contributory) insurance of work people against illness, and by old age pensions acts and other measures.

Principal products are wheat, rye, oats, hay, barley, hops, potatoes, tobacco, fruit (chiefly apples, pears, cherries, plums), vegetables, valuable timber and live stock. Important industries are iron and steel goods, textiles, wooden ware, chemicals, musical and scientific instruments, glass, porcelain, leather, india-rubber, sugar, beer, etc.; famous wines made in Rhine provinces. Chief mining centres are Rhenish Prussia, Westphalia, Silesia, Saxony, Hartz Mountains, where iron ore, coal, lignite, zinc, lead, copper, silver, antimony, bismuth, cobalt, and various salts, etc., are mined; total mineral produce (1910), 263,167,300 Eng. tons, valued at *c.* £100,400,000; iron ore, 29,399,000 tons.

G. has numerous medicinal and mineral springs, viz. Ems, Schlangenbad, Wiesbaden, Kissingen, Nauheim, Aachen, etc. There are extensive deep-sea and fresh-water fisheries. In 1911 imports (special trade) exceeded £490,500,000; exports totalled £411,000,000. Pop. (1871) 41,058,000, (1885) 46,855,000, (1900) 56,367,000, (1910) 64,925,993.

Barker, *Modern Germany* (1907); Dawson, *Germany and the Germans* (2 vols., 1894); *The Growth of Modern Germany* (1909); Eltzbacher, *Modern Germany* (1905); Howard, *Ger. Empire* (1906).

GERMAN EVANGELICAL SYNOD OF NORTH AMERICA, widespread combination of Ger. Prot. bodies, distinguished by broad religious views.

GERMAN SILVER, see ALLOY.

GERMAN SOUTH-WEST AFRICA (*c.* 25° S., 17° E.), Ger. Protectorate bounded by Portug. West Africa (on N.), Cape of Good Hope (S.), Bechuanaland

Protectorate (E.); belongs to western part of the Kalahari plateau. In N. is Ovampoland, in centre Damaraland, in S. Great Namaqualand; coast-line about 800 miles. Southern regions are traversed N. and S. by mountains; highest peaks between 6000 and 8000 ft.; large tracts of desert on coast and inland; total area, 322,450 sq. miles; climate very hot, but fairly healthy; annual rainfall less than ½ in.; few running rivers (Orange River forms southern boundary), but water generally found in sand of river-beds; many hot springs and extensive water-boring; chief native races, Hereros, Bantus, and Ovampos; also Hottentots, Bushmen, etc.; principal towns, Windhoek (capital), Swakopmund and Lüderitzbucht (harbours), Keetmannshoop, Warmbad, Omaruru, Otavi, Grootfontein; principal industries, pastoral and mining; chief exports, cattle, guano, copper-ore, ostrich feathers, diamonds, and hides; railways inland from Swakopmund and Lüderitzbucht.

Angra Pequena (Lüderitzbucht) discovered by Diaz, 1486; part of coast bought from natives by Lüderitz (firm in Bremen), 1883; became Ger. possession as Lüderitzland, 1884; dangerous Herero rising, 1903; rebels surrendered, 1906; important discovery of diamonds at Lüderitzbucht, 1909.

Administered by imperial governor. Walfisch Bay (in centre) and Guano Islands off S. coast are Brit. Pop. *c.* 100,000 (including *c.* 14,000 whites).

Dove, *Deutsch-Südwest Afrika*, 1903; Leutwein, *Elf Jahre Gouverneur in Deutsch-Südwest Afrika* (3rd ed., 1908).

GERMANDER, general name for menthaceous plant of *Teucrium* genus, order *Labiatæ*.

GERMANICUS CÆSAR (15 B.C.–19 A.D.), Rom. gen.; s. of Claudius Drusus Nero; adopted by, and served under, Tiberius; became consul, 12 A.D.; subsequently commanded eight legions on Rhine, distinguishing himself against Germans; rousing Tiberius' jealousy, was sent to E. to settle disputed succession in Parthia and Armenia; death probably due to poisoning.

GERMANIUM, rare metal, similar to the series carbon, lead, silicon, and tin; discovered (1886) by Winkler in argyrodite at Freyberg, Saxony. G. has been shown to be the hypothetical element *ekasilicon*.

GERMANTOWN (40° 6′ N., 75° 16′ W.), former borough of Pennsylvania, now N. suburb of Philadelphia, U.S.A.; founded by Germans, XVII. cent.; here (1690) was established first paper-mill in America, and in 1743 first Amer. edition of Bible (Ger.) was printed; scene of Brit. victory over Americans, Oct. 4, 1777; cotton and woollen manufactures.

GERMERSHEIM, ancient *Vicus Julius* (49° 14′ N., 8° 21′ E.), fortified town, on Rhine, Bavarian Palatinate, Germany; scene of defeat of Fr. by Austrians, 1793. Pop. 6000.

GERMISTON, town adjoining Johannesburg; railway junction. Pop. 54,327, of whom 15,589 are whites.

GEROLSTEIN (50° 14′ N., 6° 39′ E.), watering-place, Rhine province, Germany; mineral baths.

GÉRÔME, JEAN LÉON (1824–1904), Fr. artist and sculptor; highly successful as a painter of hist., classical, and Eastern subjects.

GERONA.—(1) (42° N., 2° 35′ E.) maritime province, N.E. Spain, forming part of Catalonia; generally mountainous; rich in minerals and timber; numerous mineral springs; extensive fisheries; textile industries. Area, 2264 sq. miles. Pop. (1910) 318,626. (2) (42° N., 2° 50′ E.) capital, prov. Gerona, Spain; remains of ancient walls and ruined fortifications; bp.'s see; XV.-cent. Gothic cathedral; paper and textile manufactures; besieged by Fr., 1809. Pop. 15,787.

GERONTIUS, COUNT (360–413), Byzantine general; dethroned Constantine III., and besieged Byzantium; his troops mutinied; committed suicide.

GERRESHEIM (51° 16′ N., 6° 59′ E.), town, Rhineland, Prussia; incorporated with Düsseldorf; glass and wire manufactures. Pop. 14,434.

GERRHA (26° N., 49° 40′ E.), ancient city, Arabia, on Persian Gulf.

GERRÛS (36° N., 48° E.), small province, Persia.

GERRY, ELBRIDGE (1744–1814), Amer. politician; b. Marblehead, Massachusetts; grad. Harvard (1762); member of Massachusetts gen. court (1772, 1773); of Continental Congress (1776–81, 1783–85); hostile to Britain; anti-Federalist in national House of Representatives (1789–93); Gov. of Massachusetts (1810–12); Vice-Pres., U.S.A. (1812).

GERRYMANDER, a device to gain political advantage by arranging electoral districts; word coined during Gerry's administration of Massachusetts.

GERS (43° 40′ N., 0° 30′ E.), department, S.W. France; formed part of ancient Gascony; surface hilly, partly covered wood and heath; soil moderately fertile; chief rivers, Gers, Save, Baïse, and Ardour; many sheep and poultry reared; extensive vineyards; brandy. Area, 2428 sq. miles. Pop. (1911) 221,994.

GERSON, JOHN (1363–1429), Fr. cleric and scholar; proper name, Jean Charlier de G.; b. G., France; chancellor of Paris Univ., 1395; endeavoured to reform Church, and to replace scholastic theology by simpler mode of thought; influential in ending papal schism, writing many pamphlets for guidance of Council of Pisa; on failure of which to restore unity, he used his influence in formation of Council of Constance, 1414; having incurred enmity of Duke of Burgundy, he spent several years in exile in Tyrol, where he wrote *De Consolatione Theologiæ*.

GERSONIDES, LEVI (1288–1344), Jewish scholar; wrote a work on the 'Wars of God,' part of which Pope Clement VI. ordered to be translated into Lat.

GERSOPPA, FALLS OF (14° 12′ N., 74° 40′ E.), a cataract on Sharavati River, N. Kanara district, Bombay, India.

GERSTÄCKER, FRIEDRICH (1816–72), Ger. novelist; also author of travel-books descriptive of journeys in N. and S. America, Tahiti, etc.

GERSTENBERG, HEINRICH WILHELM VON (1737–1823), Ger. poet; wrote *Ugolino*, and was a pioneer of the *Sturm und Drang* school.

GÉRUZEZ, EUGÈNE (1799–1865), Fr. critic; pub. *Histoire de l'éloquence politique et religieuse* (1837–38), *Histoire de la littérature française* (1852–59).

GERVASE OF CANTERBURY (*c.* 1140–1210), Eng. Benedictine monk; wrote two Eng. chronicles, one of which, the *Gesta Regum*, included his own period; also wrote a topographical description of England (*Mappa Mundi*).

GERVASE OF TILBURY (fl. 1220), Eng. hist. writer; author of *Otia Imperialia* (history and legend) and *Liber Facetiarum* (anecdotes).

GERVEX, HENRI (1852–), Fr. artist; his earlier works were classic studies, of which *Bacchantes and Satyr* (Luxembourg Gallery) is a notable example; his later pictures include *The Coronation of Nicholas II.*, *Communion at Trinity Church*, *Job*, *Return from the Ball*.

GERVINUS, GEORG GOTTFRIED (1805–71), Ger. historian and critic; b. Darmstadt; became Privatdozent at Heidelberg (1830), then prof. of History and Lit. at Göttingen; honorary prof. at Heidelberg (1844); pub. *Geschichte der poetischen Nationalliteratur der Deutschen* (1835–42) and a study of Shakespeare.

GERYON (classical myth.), a triple-bodied giant, s. of Chrysaor. He possessed a splendid herd of red cattle, which it was the tenth labour of Heracles to carry off. This he did, and the monster perished at his hands.

GERYONE, see under HYDROMEDUSÆ.

GESENIUS, HEINRICH FRIEDRICH WILHELM (1786–1842), Ger. scholar; a distinguished Biblical critic and writer on Oriental subjects.

GESNER, JOHANN MATTHIAS (1691–1761), Ger. classical scholar; prof. of Poetry at Göttingen; pub. *Novus Linguæ et Eruditionis Romanæ Thesaurus* (1749); also compiled classical anthologies; edit. works by Horace and Quintilian.

GESNER, KONRAD VON (1516–65), Swiss naturalist; prof. of Greek at Lausanne, 1537; of Natural History at Zürich, 1541; wrote *Bibliotheca Universalis*, *Historia Animalium*, and other works.

GESSNER, SALOMON (1730–88), Swiss poet engraver, and artist; originally Zürich bookseller; his poems were insipid, but won popularity; his pastoral canvases were undistinguished; but he achieved some eminence as engraver.

GESSO, a gypsum or 'plaster of Paris' preparation for painting upon or modelling in.

GESTA ROMANORUM ('Deeds of the Romans'), collection of stories in Lat., from various sources, probably compiled about the early part of the XIV. cent., and drawn upon by Chaucer and later poets.

GESTATION, see under OBSTETRICS.

GETA, PUBLIUS SEPTIMIUS (189–212 A.D.), Rom. emperor; 2nd s. of Septimius Severus; became joint ruler with his elder bro., Caracalla, by whom he was murdered.

GETÆ (called by Romans *Daci*), ancient Thracian tribe, noted for valour and culture; conquered by Trajan (106 A.D.).

GETHSEMANE, garden on the Mount of Olives, near Jerusalem, where Jesus spent the night previous to His crucifixion.

GETTYSBURG (39° 47′ N., 77° 18′ W.), borough, county seat of Adams County, Pennsylvania, U.S.A.; situated in valley amid beautiful surroundings; contains Pennsylvania Coll. (Lutheran) and Lutheran Theological Seminary; site of famous and decisive battle during Amer. Civil War, between Confederates under Lee and Federals under Meade; after heavy losses on both sides Confederates forced to retire from Pennsylvania and Maryland (1863). Battlefield is now laid out as public park with monuments, tablets, etc. Pop. (1910) 4000.

GEULINCX, ARNOLD (1624–69), Dutch philosopher; b. Antwerp; prof. of Philosophy, Leyden; held the doctrine of Occasionalism (*q.v.*). See DESCARTES.

GEUM, genus of rosaceous herbs; hardy perennial, over 40 species; flowers white, yellow, purple.

GEVELSBERG (51° 18′ N., 7° 23′ E.), town, Rhine province, Prussia; cutlery. Pop. (1910) 18,942.

GEX (46° 20′ N., 6° 3′ E.), town, Ain, France (gives name to old district Pays de Gex, included in department Ain).

GEYSER, GEISER, GEISIR, natural fountain of boiling water found especially in Iceland, but also N. America, New Zealand, Tibet, and the Azores; in Iceland they number *c.* 100, and are all in a plain some 30 miles N.W. of Mount Hecla. In the Yellowstone regions of Wyoming (U.S.A.) the jets rise to a height of 90–250 ft., while in Auckland (N.Z.) three kinds are known—the intermittent, steam, and hot-water cisterns. G's occur only in regions where recent volcanic activity has been in evidence, and are caused by the filtration of water on to some heated centre, probably a lava bed.

GEZER (*c.* 31° 55′ N., 35° 5′ E.), ancient Canaanite city, modern TEL JEZAR, on S.W. border Ephraim; important stronghold.

GFRÖRER, AUGUST FRIEDRICH (1803–61), Ger. historian; valuable works on Gustavus Adolphus, Church history, etc.

GHADAMES, GADAMES, or RHADAMES, ancient *Cydamus* (30° 5′ N., 9° 14′ E), town and oasis, trading centre, in Sahara, N. Africa; formerly important; many ancient ruins; inhabitants chiefly Berbers and Arabs; dependency of Tripoli. Pop. *c.* 7000.

GHAT, RHAT (25° N., 10° 15′ E.), town and oasis, Sahara, Tripoli; trading centre. Pop. 4000.

GHATS, EASTERN G. (18° N., 82° 40′ E.), WESTERN G. (16° N., 74° E.), two mountain ranges bordering E. and W. shores of India, uniting near Cape Comorin; E. G. extend N. to Balasore; average elevation, 1500 ft.; W. G., N. to valley of Tapti; average elevation, 3000 ft.; highest summit of the Nilgiris (W. G.) is Dodabetta, 8700 ft.

GHAZALI, MUHAMMAD IBN MUHAMMAD ABU HAMID, AL- (1058–1111), Muslim critical philosopher; wrote *The Overthrow of the Philosophers*.

GHAZI, Muhammadan title given to zealots who have taken prominent part in the destruction of unbelievers.

GHAZIABAD (28° 40′ N., 77° 28′ E.), town, Meerut, United Provinces, Brit. India; railway junction. Pop. 11,000.

GHAZIPUR (25° 35′ N., 83° 38′ E.), town and district, Benares, United Provinces, India; scent distilleries; opium. Pop. 39,186.

GHAZNI (33° 34′ N., 68° 17′ E.), famous city in Afghanistan, situated on high tableland on direct road between Kabul and Kandahar; town consists of dirty streets surrounded by fortified walls. Ancient city of G. probably occupied site some distance away, where there is large extent covered with ruins; only preserved remains, two towers, erected by Conqueror Mahmud and his son; under Ghaznevid dynasty G. became city of great wealth and importance, and capital of empire. At village of Ranzah, in vicinity, is Mahmud's tomb; many holy shrines around city where pilgrims come yearly. In 1839 G. was captured by British; taken by Afghans, 1842, but forced to surrender to Nott same year.

GHEE, highly refined butter, largely used by natives in India.

GHEEL, GEEL (51° 9′ N., 4° 59′ E.), town, Antwerp, Belgium; colony for the insane. Pop. 14,087.

GHENT, GAND (51° 2′ N., 3° 44′ E.), city, Belgium; at confluence of Lys and Scheldt; capital of East Flanders; important trading and manufacturing centre; intersected by canals forming numerous islands. Notable features are: Cathedral of St. Bavon (X. cent.), with fine paintings; Church of St. Michael; Gothic cloth-hall (1325); town hall (1518); Château des Comtes (1180); Palais de Justice, State univ.; Béguinage (nunnery) and quaint old houses; chief industries—cotton, linen, lace, leather, machinery, paper; as capital of Flanders (*q.v.*), G. flourished XIII.–XV. cent. (great weaving centre); passed to Burgundy, 1384; Pacification of G. (league against Span. tyranny), 1576. Pop. (1910) 165,000.

GHERARDESCA, UGOLINO DELLA, see UGOLINO DELLA GHERARDESCA.

GHETTO, Jewish quarter in a city; sometimes called the 'Jewry.'

GHIBELLINES, see GUELPHS AND GHIBELLINES.

GHIBERTI, LORENZO (*c.* 1378–1455), Ital. sculptor and metal-worker; his masterpiece consists of the bronze doors of the Baptistery, Florence.

GHIKA, GHYKA, GIICA, family important in Rumanian history; apparently of humble origin, coming from Albania; founder was George, Prince of Moldavia and Walachia (1659–64), from whom are derived various branches.

GHILAN, GILAN, or GUILAN (37° 30′ N., 49° E.), province, N. Persia, bordering Caspian Sea; vast forests; swampy and unhealthy on coast; soil fertile, well-watered, and cultivated; produces rice, wheat, and fruit; silk-culture an important industry; good fisheries; capital, Resht. Pop. *c.* 200,000.

GHILZAI, powerful Afghan tribe, noted for military qualities.

GHIRLANDAJO, DOMENICO DEL (1449–94), Ital. fresco painter; s. of Tomasso Bigardi; apprenticed to goldsmith, and from making *ghirlande* earned name, his best work being the scenes, which he painted with his bro. David, from the lives of St. John the Baptist and the Virgin Mary in Santa Maria Novella, Florence; had as pupil Michael Angelo; his portrait of Giovanna Tornabuon one of the supreme achievements in whole portraiture of Italian Renaissance. His bro. Benedetto was also a distinguished artist.

GHIRLANDAJO, RIDOLFO (1483–1560), Ital. artist; s. of Domenico G.

GHOR, GHUR (*c.* 33° 2′ N., 63° 12′ E.), ancient kingdom of Afghanistan, constituting mountainous

district E. of Herat; little known of history of G. except when interwoven with that of Ghazni; capital in XII. cent., Firoz Koh; extensive ruins found in Murghab valley, at Taiwara, and elsewhere. Besides other streams, the Hari-rud, Farah-rud, and Khash-rud originate in G.; valleys generally well cultivated.

GHOST, see APPARITION, SPIRITUALISM.

GHŪR, see GHOR.

GIACOMETTI, PAOLO (1816–82), Ital. dramatist.

GIANNONE, PIETRO (1676–1748), Neapolitan historian.

GIANNUTRI (42° 15′ N., 11° 5′ E.), small island (ancient *Dianium*) in Mediterranean, off S.W. coast Tuscany, Italy.

GIANT CRAB OF JAPAN, see under MALACOSTRACA.

GIANTS, the Titans and Cyclopes of classical myth., ogres of fairy tales, etc. 'Giantism' is abnormal development, and may be regarded as a disease. Modern g's are often delicate, in many ways defective, and usually die young. A Russ. g. of modern times was 9 ft. 3 in. in height, and there have been several g's upwards of 8 ft.

GIANT'S CAUSEWAY (55° 14′ N., 6° 13′ W.), group of columnar basaltic rocks on N. coast of Antrim, Ireland.

GIANTS' KETTLES, geological phenomena; also called *moulins*; pot-shaped holes in rock due to action of glacier streams.

GIAOUR, Turk. name for infidel, *i.e.* person not of their religion.

GIB, ADAM (1714–88), Scot. minister; opposed the Jacobite rising (1745); and became leader of Anti-Burgher party in the division of the Secession Church (1747).

GIBARA, JIBARA (21° 4′ N., 76° 20′ W.), city, Cuba, on N. coast; exports woods, tobacco, sugar. Pop. 6841.

GIBBON, EDWARD (1737–94), Eng. historian; b. Putney, Surrey, of good and rather wealthy family; suffered from weak health until 1752; went to school at Kingston-upon-Thames, 1746; returned home, 1747, on mother's death, and continued to develop a love of wide reading; went to Westminster School, 1749. In 1751 G. first started his interest in Rom. history by casually picking up a continuation of Echard's Rom. history; matriculated as gentleman commoner at Magdalen Coll., Oxford (April 1752); arrived at the univ. 'with a stock of information which might have puzzled a doctor, and a degree of ignorance of which a schoolboy might be ashamed.' At Oxford he was temporarily converted to the Church of Rome, but the system not suiting him, and his conversion offending his f., he left Oxford and was placed under the tutelage of M. Pavilliard, a Calvinist minister of Lausanne. Here he read systematically and wisely under shrewd guidance. In 1754 he returned to Protestantism. During his stay at Lausanne he fell in love, and, at his f.'s command, out of it, with Mlle Suzanne Curchod, the future Madame Necker. G. returned to England in 1758, writing French nearly as well as English.

In 1761 he published *Essai sur l'étude de la littérature*. He became a captain in the Hampshire Militia (June 1759), and from 1760 to 1762 was in 'Military Servitude.' During the years 1763–65 he toured the Continent; at Rome he first conceived his immortal work, the *Decline and Fall of the Roman Empire*, 1764. In 1767 he joined with a young Swiss friend in writing a literary journal entitled *Mémoires littéraires de la Grande-Bretagne*. In 1770 he wrote *Critical Observations*, an attack on a theory of Warburton's. The first vol. of the *Decline and Fall* appeared Feb. 1776. The famous chapters (15 and 16) produced a great clamour and a library of controversy. Gibbon wrote his *Vindication* (Feb. 1779). Meanwhile he had been elected M.P. for Liskeard (1774). For some services to the Government he received (1779–80) a seat at the Board of Trade and Plantations, with a sinecure salary of £800 a year. He lost his seat for Liskeard (1780), but was elected subsequently for Lymington. In April 1781 the second and third quartos of his history were issued. G.'s salary disappeared after abolition of Board of Trade by Burke's Bill in 1782. He retired to Lausanne (Sept. 1783), and the History progressed. Volume iv. was completed in June 1784. Volume v. took less than two years. Volume vi. (begun May 1786) was finished in thirteen months. G. returned to London (1787), and in 1788 last three volumes of the history were published. In July he went to Switzerland. His *Memoirs* came out in 1789. He returned to England in June 1793, and died at London after a painful illness. G.'s work has permanent value. His style is gorgeous and his prose stately and artificial. A great historian and man of letters, he possessed the faculty of hist. 'architectonic.' Almost his only drawback was his sceptical belittlement of all forms of enthusiastic religion, especially Christianity.

Morison, *Gibbon* (1887).

GIBBONS, see CERCOPITHECIDÆ, PRIMATES.

GIBBONS, GRINLING (1648–1721), Anglo-Dutch wood-carver and sculptor; executed the Whitehall statue of James II.; chiefly celebrated for extreme beauty and delicacy of his wood-carving.

GIBBONS, JAMES, CARDINAL (1834–), R.C. abp. of Baltimore, U.S.A., and religious writer.

GIBBONS, ORLANDO (1583–1625), Eng. musician and composer; organist, Chapel Royal; excellent chamber music and anthems.

GIBBS, JOSIAH WILLARD (1839–1903), distinguished Amer. physicist; b. New Haven; grad. and taught at Yale; honoured by London Royal Soc.

GIBEON, modern EL-JIB (31° 51′ N., 35° 12′ E.), ancient town, Palestine.

GIBEONITES, people of Gibeon, Hivite town, Palestine, c. 6 miles N.W. of Jerusalem; deceived Joshua, and were made helots.

GIBRALTAR (36° 6′ N., 5° 21′ W.), rocky peninsula and Brit. crown colony, at most southerly point of Andalusia, commanding the Mediterranean gateway; connected with Spain by a sandy isthmus (about 1¾ mile long and ¼ mile wide), the middle part being neutral ground between Span. and Brit. frontiers; c. 16 miles from African coast. G. rises almost precipitously 1400 ft., with exception of western side on Bay of G.; length, 3 miles from N. to S.; breadth, ¾ mile; area, 1¾ sq. mile. Town lies on west side, and consists of N. and S. town, with several churches, ruined Moorish castle (X. cent.), old Franciscan convent, governor's residence, extensive barracks, Alameda Gardens, cable-station; powerful light-house on Europa Point (southern extremity), and large harbour. G. is a naval base, strongly fortified, a good coaling-station, and a place of great strategic importance; climate hot, but not unhealthy; industries unimportant.

Many interesting large caverns (*e.g.* Hall of St. Michael) with stalactite pillars; G. is the only part of Europe where a species of monkey (Barbary apes) is found.

G. was known to Greeks as *Calpe*, one of the pillars of Hercules (*q.v.*); strongly fortified by Târik-ben-Zaid at Moorish invasion of Spain, 711 A.D., and called Jebel-al-Târik (hill of T.); name gradually degenerated into G.; finally taken from Moors by Spain, 1462; captured by Brit. fleet under Admiral George Rooke during war of Span. Succession, 1704; several attempts made by Spain and France to retake G., the last great siege being 1779–82, when G. was heroically defended by Sir George Eliott (afterwards Lord Heathfield). Since *Peace of Versailles*, 1783, Britain's claim to G. has been unchallenged. Administered by a governor. Pop. (1911) 19,120 civilians.

Lucas, *Historical Geography of Brit. Colonies* (2nd ed., 1906).

GIBSON, CHARLES DANA (1867–), Amer. black-and-white artist and book illustrator; creator of the feminine type known as the 'Gibson girl.'

GIBSON, EDMUND (1669–1748), Eng. ecclesiastical jurist; bp. of Lincoln, 1716; of London, 1720; wrote *Codex juris ecclesiastici Anglicani*.

GIBSON, JOHN (1790–1866), Brit. sculptor; s. of a Welsh market-gardener; befriended by Roscoe, the historian; went to Rome, where he studied under Canova. His classical studies are distinguished by great beauty of form; he sometimes used colour in his statuary, and 'The Tinted Venus' is one of his best-known works. He was very successful in modern statues of Queen Victoria and others.

Life, by Lady Eastlake (1870).

GIBSON, THOMAS MILNER (1806–84), Brit. statesman; supporter of Cobden, and advocate of free trade: Pres., Board of Trade (1859–66).

GIBSON, WILLIAM HAMILTON (1850–96), Amer. artist and author; illustrated natural history works.

GICHTEL, JOHANN GEORG (1638–1710), Ger. mystic; banished for his attack on doctrine of Justification by Faith (1665); founder, at Amsterdam, of the *Gichtelians*, or Angelic Brethren, who endeavoured to live by the divine inspiration, as 'angels' by chastity, and as expiators by vicarious suffering.

GIDDINGS, JOSHUA REED (1795–1864), Amer. politician; entered Congress, 1838; advocated abolition of slavery; consul-gen. in Canada, 1861–64; wrote *History of Rebellion*.

GIDEON, judge of Israel; destroyed Baal altar at Ophrah, and was called Jerubbaal; summoned by Jehovah to free Israelites from oppression of Midianites, whom he defeated with a small force.

GIEN (47° 41′ N., 2° 39′ E.), town, Loiret, France; porcelain. Pop. 8500.

GIERS, NICHOLAS KARLOVICH DE (1820–95), Russ. politician; minister plenipotentiary in Persia, 1863; foreign minister, 1882–94; cultivated friendship of Germany, Austria, Italy.

GIESEBRECHT, WILHELM VON (1814–89), Ger. hist. writer; wrote *Geschichte der deutschen Kaiserzeit* and other works.

GIESELER, JOHANN KARL LUDWIG (1793–1854), Ger. ecclesiastical historian; famed for monumental *Kirchengeschichte* (Church History).

GIESSEN (50° 34′ N., 8° 41′ E.), town, on Lahn, Hesse-Darmstadt, Germany; seat of univ., founded 1607; tobacco, cotton, and woollen manufactures. Pop. (1910) 31,047.

GIFFEN, SIR ROBERT (1837–1910), Brit. statistician; after experience as financial edit. of *The Times* and other journals, he entered the Board of Trade, becoming Controller-Gen. (1892); pub. *Essays on Finance*, *The Case against Bimetallism*, *The Growth of Capital*.

GIFFORD, ROBERT SWAIN (1840–1905), Amer. artist; painter of landscapes and etcher.

GIFFORD, WILLIAM (1756–1826), Eng. journalist; first edit. of *Quarterly Review* (1809–24); notorious for severe criticisms of Keats, Hazlitt, Shelley, Wordsworth, and other writers; edited Jonson and other Elizabethans.

GIFT, legal term; necessary elements, clear intention to give and actual transfer of subject to donee; written deed advisable.

GIFU (35° 12′ N., 136° 45′ E.), town, Central Nippon, Japan; silk and paper manufactures. Pop. 40,168.

GIGLIO, ancient *Igilium* (42° 22′ N., 10° 53′ E.), island, off S.W. coast of Italy.

GIJÓN (43° 35′ N., 5° 44′ W.), seaport, Oviedo, Spain, on Bay of Biscay; one of best roadsteads on Span. coast; has some fine buildings; manufactures tobacco, earthenware, glass; exports minerals and fruit; favourite sea-bathing resort. Pop. (1910) 52,226.

GIL BLAS, see LE SAGE.

GILBART, JAMES WILLIAM (1794–1863), Eng. author; wrote *Practical Treatise on Banking* (1827), *History and Principles of Banking* (1834).

GILBERT, ALFRED (1854–), Eng. sculptor and metal-worker; amongst his principal works are the Shaftesbury Memorial Fountain, London; Duke of Clarence Memorial, Windsor; the Queen Victoria Memorial, Winchester, and many busts.

GILBERT DE LA PORRÉE, GILBERTUS PORRETANUS (1070–1154), Fr. theologian and scholastic philosopher; famous dialectician; arraigned before the council by Bernard of Clairvaux and the pope.

GILBERT FOLIOT (d. 1187), Eng. bp.; supported Matilda against Stephen; rival to Becket; bp. of Hereford, 1148, of London, 1163.

GILBERT or **KINGSMILL ISLANDS** (0°, 175° E.), archipelago in Pacific; belongs to Britain.

GILBERT, MARIE DOLORES ELIZA ROSANNA, LOLA MONTEZ (1818–61), Irish adventuress; achieved fame as a 'Spanish' dancer; became mistress of Ludwig I. of Bavaria; banished; subsequently performed in America and Australia; devoted her last years to the care of female outcasts.

GILBERT OF SEMPRINGHAM, ST. (d. 1189), Eng. ecclesiastic; founder of the Gilbertine Order of canons regular and nuns.

GILBERT, SIR HUMPHREY (*c.* 1539–83), Eng. sailor; joined fruitless voyage of discovery, 1578; took Newfoundland, 1583; founded Eng. colony at St. John's, and was drowned on way home.

GILBERT, SIR JOHN (1817–97), Eng. painter of hist. pictures, including 'Joan of Arc,' 'Murder of Becket,' 'Agincourt,' etc., hence called 'the Scott of painting'; also celebrated for illustrations to Shakespeare.

GILBERT, SIR JOSEPH HENRY (1817–1901), Brit. chemist; valuable research in agricultural chemistry; instituted nitrogen treatment of soil.

GILBERT, SIR WILLIAM SCHWENCK (1836–1911), Eng. playwright and humorist; first achieved distinction with his *Bab Ballads* and such plays as *Pygmalion and Galatea*, *Sweethearts*, and *Dan'l Druce*; and subsequently, in conjunction with Sir Arthur Sullivan, as the librettist of the world-famous 'Savoy operas,' the first of which was produced in the early seventies; knighted, 1907.

GILBERT, or **GYLBERDE, WILLIAM** (1540–1603), physician to Queen Elizabeth, and a careful and accurate chemist. He studied terrestrial magnetism and wrote the earliest treatise on magnetism, a very valuable work.

GILBERTINES, see GILBERT OF SEMPRINGHAM, ST.

GILBEY, SIR WALTER, 1st Bart. (1831–), Eng. wine merchant; one of the founders of the firm of W. & A. G.; noted horse-breeder and agriculturist.

GILCHRIST, ALEXANDER (1828–61), Brit. biographer; wrote *Life of Etty*, *Life of Blake*.

GILDAS, GILDUS (*c.* 516–70), earliest Eng. historian; wrote *De excidio Britanniæ liber querulus*, history of Britain from Rom. invasion to VI. cent.

GILDER, RICHARD WATSON (1844–1909), sometime editor of *The Century Magazine*, and a voluminous writer of lyrical verse; *Collected Poems* (1908).

GILDERSLEEVE, BASIL LANNEAU (1831–), Amer. scholar; prof. of Gk., Johns Hopkins Univ., Baltimore; author of *Latin Grammar*, and *Syntax of Classical Greek*.

GILDING, the art of decorating objects with leaf or powdered gold, is of very early origin, and was practised by the Hebrews, Romans, and other ancient nations. The modern methods are of various kinds, but in the best gilt-work the surface is carefully prepared with adhesives and other substances, after which gold leaf is applied.

GILDS, see GUILDS.

GILEAD (*c.* 32° 25′ N., 35° 58′ E.), mountainous region, E. of Jordan, Palestine; general elevation, 2500 ft.; highest point, Ramoth-Gilead, 3597 ft.

GILES, ST., GIL or GILLES, abbot who founded hermitage of St. Gilles, France; lived about VII. cent.; festival, Sep. 1.

GILFILLAN, GEORGE (1813–78), Scot. author and lecturer; pub. *Gallery of Literary Portraits*; *Martyrs and Heroes of the Scottish Covenant.*

GILGAL, various places in Palestine. Most noted was sacred site near Jericho; another is in Sharon, a third near Bethel.

GILGAMESH, legendary regal hero of a Babylonian epic, who, stricken with disease, applies to Ut-napishtim, a survivor of the Deluge, for a cure. The latter refers him to a herb which gives immortality, but he is robbed of this by an evil spirit.

GILGIT (35° 54′ N., 74° 23′ E.), an outlying province in extreme N.W. of India, under sovereignty of Kashmir, and embracing part of basin of river Gilgit; mountainous country, intersected by narrow valleys and with numerous glaciers and ice-fields; separated from Chinese frontier by mountain range; station of Gilgit stands *c.* 4890 ft. above sea-level. G. forms a *wasarat* of Kashmir State; also headquarters of Brit. political agent, responsible to Ind. government for administration of outlying districts. People are a mixed race, speaking different languages, but generally classed under name of Dards. Pop. *c.* 17,000.

GILL, JOHN (1697–1771), Eng. Baptist preacher and author; noted Hebrew scholar and theologian.

GILLES DE ROYE (d. 1478), Flem. monk; author of valuable *Annales Belgici.*

GILLESPIE, GEORGE (1613–48), Scot. Presbyterian clergyman; protested against episcopal innovations in Scotland, and against king's interference in religious affairs; chosen Moderator of Gen. Assembly, 1648.

GILLESPIE, THOMAS (1708–74), Scot. preacher; deposed by Gen. Assembly, he founded the 'Relief Church' (1761), subsequently incorporated in the United Presbyterian Church.

GILLIE, Scot. Highlander, who serves as outdoor attendant.

GILLIES, JOHN (1747–1836), Scot. historian and scholar; trans. several of Aristotle's works; wrote *History of Ancient Greece* (1786).

GILLINGHAM.—(1) (51° 2′ N., 2° 17′ W.) market town, Dorsetshire, England. Pop. 3380. (2) (51° 18′ N., 0° 33′ E.) town, on Medway, Kent, England; brick and tile manufactures. Pop. (1911) 52,252.

GILLOTT, JOSEPH (1799–1873), Eng. manufacturer; founded (*c.* 1830) the famous steel-pen business which bears his name.

GILLRAY, JAMES (1757–1815), Eng. caricaturist; s. of a soldier; began life as engraver, and after hard struggles became noted as one of the greatest of Eng. comic artists. His works are remarkable for exquisite finish. The chief butts of his satire, apart from social follies, were George III. and Napoleon. He was intemperate in his habits, and d. insane.

GILLYFLOWER, originally meant the *clove, Dianthus caryophyllus,* used in spiced wine. *Stock* and many *Cruciferæ* are now called G's.

GILMAN, DANIEL COIT (1831–1908), Amer. scholar; first pres., Johns Hopkins Univ., Baltimore, U.S.A. (1875–1901), where the result of his labours was such as to exercise a marked influence on education; first pres., Carnegie Institution, Washington (1901–4).

GILPIN, BERNARD (1517–83), 'Apostle of the North,' was so called from his preaching excursions in the N. counties of England; rector of Houghton-le-Spring, Durham, where he founded and endowed grammar school; renowned for hospitality and benevolence; educated many poor children.

GIMBALS, two brass rings used to suspend a compass, so as to keep it horizontal.

GIMP, stiff embroidery in which cord, or metallic threads, are overlaid with silk, wool, or cotton.

GIN, see SPIRITS.

GINCKELL, see GINKEL, GODART VAN.

GINDELY, ANTON (1829–92), Ger. historian; notable for his writings on the Thirty Years War.

GINGER, the dried and scraped root of *Zingiber officinale,* natural order, *Scitamineæ,* comes from the E. and W. Indies in branched pieces 3 inches long, of pale buff, striated, fibrous appearance; has an agreeable aromatic odour and a strong pungent taste; is used as a *stomachic, carminative,* and flavouring agent.

GINGHAM, a variety of printed cotton cloth; colloquial name for umbrella.

GINGI, GINGEE (12° 16′ N., 79° 26′ E.), rock fortress, S. Arcot, Madras, India.

GINGUENÉ, PIERRE LOUIS (1748–1815), Fr. author; wrote an important *Histoire Littéraire d'Italie* (1811–24).

GINKEL, GODART VAN (1630–1703), 1st Earl of Athlone; Dutch soldier; came to England with William of Orange; reduced Ireland to submission, 1691; distinguished in wars of Grand Alliance and Span. Succession.

GINKGOALES, see GYMNOSPERMS.

GINSBURG, CHRISTIAN DAVID (1831–), Hebrew scholar; famed for critical studies on the Massorah.

GINSENG is the root of *Panax ginseng,* natural order, *Araliaceæ,* from Korea. Chinese believe it restores strength, but it has no pharmacological action.

GIOBERTI, VINCENZO (1801–1852), Ital. philosopher and statesman; accused of conspiracy, 1833, and exiled; returned, 1848; became pres. of Chamber of Deputies; Prime Minister, 1849. G. wrote *Introduzione allo Studio della Filosofia* and other philosophical works; may be called a neo-Platonist.

GIOJA, MELCHIORE (1767–1829), Ital. economist and philosopher; imprisoned on charge of political conspiracy; his work was largely statistical; wrote several books.

GIOJOSA (38° 18′ N., 16° 25′ E.), small town, Calabria, Italy; corn, wine, oil. Pop. 10,000.

GIOLITTI, GIOVANNI (1842–), Ital. politician; head of Treasury, 1889; Premier, 1892; compelled to resign because of bank scandals, 1893; again premier, 1903–5, 1906–9, 1911– .

GIORDANO, LUCA (1632–1705), Ital. artist; notorious for his rapidity with the brush; spent many years at the Span. court, where he acquired great wealth, which he afterwards distributed in charity.

GIORGIONE (*c.* 1477–1511), Ital. artist; b. Castelfranco; of obscure parentage; went to Venice in early youth, where he is said to have studied under Giovanni Bellini, and had Titian for a fellow-pupil; became one of the greatest masters of the Venetian school; besides devotional pictures, painted many others expressive of romantic feeling and the joy of life, and was celebrated for the splendour of his landscape backgrounds. Much of his work is in fresco, and many of his easel-pictures are in the galleries of Venice, Dresden, Berlin, and Paris. See PAINTING.

GIOTTO DI BONDONE (*c.* 1266–1337), Ital. artist and architect; b. Vespignano, near Florence; s. of a peasant; said to have been seen by Cimabue, drawing a sheep upon a stone whilst tending flocks, and taken to Florence to be trained in art. Under careful tuition his artistic genius rapidly developed, and he subsequently became one of the greatest of the early Ital. artists. His works are chiefly frescoes, and deal with allegorical subjects or incidents from the lives of the saints. Fine examples of his work are twenty-eight frescoes illustrating the life of St. Francis, at Assisi; and other famous works showing his later development are to be seen at Rome, Padua, and Florence. G. was also famous as an architect, and held an official appointment in Florence. He designed the world-famous Campanile there, which is associated with his name, but did not live to see it finished. It was completed, after his death, by Andrea Pisano and Francesco Talenti.

Giotto, by De Selincourt (1905), F. M. Perkins (1910).

GIOVINAZZO, town, Bari, Italy; harbour on Adriatic; trade, brandy and ropes. Pop. 12,000.

GIOZA DEL COLLE, town, Reggio di Calabria, Italy; trade, wine and oil. Pop. 11,0

GIPPSLAND, district, S.E. Victoria, Australia; area, *c.* 14,000 sq. miles; grazing and mining.

GIRAFFE FAMILY (*Giraffidæ*), group of ungulate, artiodactyle ruminants, comprising two African genera, giraffes (*Giraffa*) and okapi (*Ocapia*), which have three bony, skin-covered skull prominences, separated from the bony substratum, one in front and two behind; feet are two-hoofed; no upper canines or incisors. GIRAFFES have a long tongue, long legs and neck—tallest of mammals—and browse on tall trees. OKAPI have shorter necks and legs; male alone has horns, which at apex come through skin. *Palæotragus* (or *Samotherium*) and *Sivatherium* are extinct forms, found in Lower Pliocene deposits. See PECORA.

GIRALDI, GIGLIO GREGORIO (1479–1552), Ital. scholar; learned Gk. under Chalcondylas and wrote works on classical lit. and antiquities.

GIRALDI, GIOVANNI BATTISTA (1504–73), Ital. poet; author of *Ercole* (epic), *Orbecche* and other tragedies, and *Hecatommithi* (short stories), some of which served as the basis of plays by Shakespeare and others.

GIRALDUS CAMBRENSIS (*c.* 1146–1220), Welsh historian; his election to see of St. David's was never confirmed; wrote *Topographia Hibernica*, *Itinerarium Cambriæ*—works of considerable value, though marked partisanship.

GIRANDOLE, a table candelabrum with branching lights; usually of silver or other metal.

GIRARD, STEPHEN (1750–1831), Amer. philanthropist; b. Bordeaux, France; settled in Philadelphia, U.S.A., 1776; amassed fortune in commerce; founded a bank, 1812; lent government large sum, 1814; did great service during epidemics, 1793, 1797–98; left money to charities, founding orphan college.

GIRARDIN, DELPHINE DE (1804–55), Fr. poetess, novelist, and dramatist of some eminence. Her novels include *La Canne de Monsieur de Balzac*; and her plays, *Cléopâtre*, *Lady Tartufe*, and *Le Chapeau d'un horloger*.

GIRARDIN, ÉMILE DE (1802–81), Fr. journalist; wrote novel *Émile*, supporting cause of illegitimate children; founded popular periodicals; m. Delphine Gay, the authoress.

GIRARDON, FRANÇOIS (1628–1715), Fr. sculptor; decorated Versailles Palace; chief work is Richelieu's tomb in the Sorbonne, Paris.

GIRART DE ROUSSILLON (IX. cent.), Burgundian hero of a XII.-cent. romance; famed, like his wife, Bertha, for valour and piety.

GIRASOL, mineral; usually called fire-opal; dark red. See OPAL.

GIRGA, GIRGEH (28° 19′ N., 31° 59′ E.), town, on Nile, Upper Egypt; has very ancient R.C. monastery; pottery. Pop. 17,913.

GIRGENTI (37° 18′ N., 13° 23′ E.), town (ancient *Agrigentum*), Sicily; bp.'s see, cathedral; sulphur mines in vicinity. Pop. 25,024.

GIRISHK (31° 45′ N., 64° 22′ E.), village and fort, on river Helmund, Afghanistan.

GIRNAR (21° 30′ N., 74° 42′ E.), sacred hill, Kathiawar, W. India; numerous ruined Jain temples.

GIRODET DE ROUSSY, ANNE LOUIS (1767–1824), Fr. artist; pupil of David; pioneer of the romantic in Fr. art; amongst his best-known works are *Endymion*, *Danaë*, and *Atala au Tombeau*.

GIRONDE (44° 50′ N., 0° 30′ W.), maritime department, S.W. France, formed from part of old province Guyenne; chief rivers, Dordogne and Garonne; surface generally flat, W. portion along sea coast consisting of sandy dunes planted with pines, and interspersed with lagoons, from which large quantities of salt are obtained; extensive vineyards; some grain, vegetable, and fruit-growing; varied manufactures; chief product, wine; capital, Bordeaux. Area, 4140 sq. miles. Pop. (1911) 829,095.

GIRONDISTS, Fr. political party in Revolutionary times, so called because several leading members represented province of Gironde; guiding spirit was Madame Roland, wife of a deputy; among conspicuous members were Brissot, Vergniaud, Condorcet, Guadet, Isnard, Gensonné, Barbaroux. They formed ministry in 1792; consented to king's death, but had no part in Sep. massacres, and wished to establish orderly government. The invasion of France by Austrians and Prussians threw chief power into hands of extremists, and in Convention formed for government of nation no G. was a member; their moderation had excited suspicion, and they fell victims to fanaticism of Committee of Public Safety, over forty being guillotined.

Lamartine, *Histoire des Girondins* (Eng. trans.).

GIRTIN, THOMAS (1775–1802), Eng. artist; friend of Turner, and a pioneer of modern Eng. water-colour painting. His landscapes and etchings are valued by collectors.

GIRTON COLLEGE, college for women affiliated to Cambridge University; about 160 students; may attend University classes.

GIRVAN (55° 14′ N., 4° 51′ W.), market town, watering-place, Ayrshire, Scotland; herring fishing; weaving. Pop. (1911) 4467.

GIRY, ARTHUR (1848–99), Fr. writer; wrote *Manuel de diplomatique*, part of *Monumenta Germaniæ historica*; also produced new edit. of Theophilus's *Diversarum Artium Schedula*, and Carolingian chronicles.

GISBORNE (38° 45′ S., 178° 1′ E.), seaport, on Poverty Bay, New Zealand; landing-place of Captain Cook, 1769. Pop. 6000.

GISORS (49° 15′ N., 1° 53′ E.), town, France; cloth and leather manufactures. Pop. 4800.

GISSING, GEORGE ROBERT (1857–1903), Eng. novelist and critic; most of his novels deal with life's seamy side, but, in his later work, there was a brighter outlook. He also wrote a study of Dickens.

GITSCHIN (50° 27′ N., 15° 23′ E.), town, Bohemia, Austria; scene of defeat of Austrians by Prussians, 1866. Pop. (1911) 10,204.

GIUDICI, PAOLO EMILIANO (1812–72), Ital. author; wrote *History of Ital. Lit.*

GIUGLIANO, town, Naples, Italy. Pop. 15,000.

GIULIO ROMANO, GIULIO DI PIETRO FILIPPO DE' GIANNUZZI (*c.* 1492–1546), Ital. artist and architect; b. Rome; ed. under Raphael, and became, after his master, head of the Rom. school; assisted Raphael in many important works in the Vatican, and the 'Battle of Constantine' and 'The Apparition of the Cross' were entirely from his brush. Some of his greatest works were executed for the ducal palace at Mantua; he restored the Cathedral; and, being a prolific worker in several mediums, he lived in affluence.

GIUNTA PISANO (d. *c.* 1235), Ital. painter whose *Crucifix* (at Pisa) is treasure of archæology rather than art; lacked technique.

GIURGEVO, Rumanian GIURGIU (43° 53′ N., 25° 56′ E.), town, river port, on Danube, Rumania; exports timber, grain. Pop. 15,000.

GIUSTI, GIUSEPPE (1809–50), Ital. satirical poet; writer of remarkably original gifts; first won notoriety with *La Ghigliotteria* ('The Guillotine'). Other works include *Gingillino*, an attack upon the Treasury administration, and *Sant' Ambrogio*. Eng. trans. by W. D. Howells and Mrs. T. A. Trollope.

GIUSTINIANI, AGOSTINO (1470–1536), member of notable Ital. family; pub. polyglot edit. of Psalter; prof. of Arabic and Hebrew at Paris. BERNARDO G. (1408–89) wrote on Venetian history. LORENZO G. (1380–1465), patriarch in 1451. PAVLO G. (1444–1502) was famous preacher; wrote exegetical works. VINCENZO G. (XVII. cent.) formed art collection.

GIVET (50° 9′ N., 4° 49′ E.), town, on Meuse, Ardennes, France; formerly fortified; lead-pencils. Pop. 7000.

GIVORS (45° 35′ N., 4° 46′ E.), town, Rhône, S.E. France; iron and glass manufactures; coal mines.

GJALLAR (Scan. myth.), the horn which Heimdall blows to give notice to the gods of those arriving at the bridge, Bifröst.

GLACE BAY (46° 12′ N., 60° W.), city, port entry, Cape Breton Island, Nova Scotia, Canada; coal-fields. Pop. 7000.

GLACIAL PERIOD, Ice Age, sometimes called Pleistocene Period (*q.v.*), but this term is generally used only in connection with the flora and fauna of the period.

The G. P. refers to that epoch of the post-Tertiary system during which nearly all parts of the globe N. of lat. 50° were under ice. Traces of glacial action are found chiefly in the Highlands of Scotland, the Jura Mountains, Black Forest, Himalayas, and N. America. The most important member of the Glacial strata is the Boulder Clay (*q.v.*), an unstratified clay in which are embedded boulders marked by glacial action, which may also be seen on rock surfaces and Giants' Kettles (*q.v.*).

The Glacial Deposits are developed on a large scale in N. America where, as in Europe, the clays are separated by the interglacial deposits.

GLACIER is a large mass of snow which under pressure becomes granular and is finally transformed into dense clear ice, which still retains the granular crystalline structure. Snow collects above the snow-line, and when there is a certain weight moves downwards, reaching a point where the melting is not balanced by the *snow-fall*, *i.e.* below the *snow-line*. Here it is termed a g., its form depending on the shape of the ground over which it flows.—Valley Glaciers are long and narrow.—Piedmont Glacier is a lobulated mass made by the convergence of long, narrow processes.—Cliff Glacier is formed in a hollow on the edge of a snow-field. The g. is fed from the snow-field and ends when the waste of ice is greater than the supply. The material which the g. collects after it leaves the snow-field, *morainic material*, is distributed by the streams. It is this débris which polishes the rocks, and the fragments it grinds off are called *boulder-clay* or *tile*. A *V-shaped* valley cut out by streams is transformed into a *U-shaped* valley by ice action.—Ice-Tables consist of large stones which prevent the ice below melting and remain on the top of an ice pillar. Small stones absorb heat, melt the ice, and sink into the g. When a g. reaches the sea portions break off and form icebergs (*q.v.* under Ice).

Chamberlin, *Theory of Glacial Motion* (1910).

GLACIS, natural, or artificial, slope outside a fortification.

GLADBACH, or Bergisch-Gladbach (51° N., 7° 8′ E.), town, Rhenish Prussia, Germany; paper and metal industries. Pop. (1910) 15,213.

GLADBACH, or München-Gladbach (51° 33′ N., 6° 25′ E.), town, Rhenish Prussia, Germany; centre of cotton industry. Pop. (1910) 66,410.

GLADIATORS, professional combatants who fought in arena of Rom. theatres; practice began in 264 B.C. at Rome, and spread throughout Rom. Empire, until no town of any size was without its gladiatorial combats. G's were generally slaves, prisoners of war, or condemned criminals. When a g. was so wounded as to be unable to fight any longer, his antagonist stood over him with uplifted sword ready to slay him if the spectators willed his death, which they indicated by turning their thumbs inwards. Constantine issued a decree against the barbarous practice in 325, but it did not entirely cease until the time of the Emperor Theodoric, about 500 A.D.

GLADIOLUS, a genus of herbaceous monocotyledonous plants, natural order *Iridaceæ*, belonging to the mountains of the S. hemisphere. The *corm* is solid and fibrous, the leaves long and narrow, the flowers form a terminal *spike*, are funnel-shaped with the wide end upwards.

GLADSHEIM (Scandinavian myth.), the dwelling-place of Odin, which embraces also Valhalla.

GLADSTONE (23° 50′ S., 151° 15′ E.), seaport, Clinton Bay, Queensland, Australia; gold and manganese mines.

GLADSTONE, JOHN HALL (1827–1902), Eng. chemist; investigated various points in physical and electro-chem.; popularised the *spectroscope* and pub. researches on explosives, mass action, and phosphorus.

GLADSTONE, WILLIAM EWART (1809–98), Brit. statesman; b. Liverpool; ed. Eton and Oxford, where he was prominent debater at Union at time of Reform Bill. His strong churchmanship made him look to Tory party for safety from revolutionary measures, and in 1839 he was described by Macaulay as the 'rising hope of the stern unbending Tories.' He was M.P. for Newark, 1833; Junior Lord of Treasury under Peel, 1834; Under Colonial Sec., 1835. In Peel's second administration he became successively vice-pres. (1841) and pres. (1843) of Board of Trade; had considerable share in revising Customs tariff. Resigning office in 1845, G. was outside Parliament during great Corn Law movement, which, with Cobden's struggle for free trade, attracted his attention and probably initiated his gradual change from Toryism to Liberalism; M.P. for Oxford, 1847; first great speech delivered, 1852, in reply to scathing attack by Disraeli during debate on latter's Budget. Chancellor of Exchequer in 1853, he made first of his remarkable Budget speeches, and proved his financial genius; High Commissioner to Ionian Isles, 1859; again became Chancellor under Palmerston, 1859; abolished paper duty, 1861; became leader of Lower House, 1865; failed to carry Reform Bill. G. succeeded Lord Russell as Liberal leader in 1867; while in opposition carried bill for abolition of Church rates; became Prime Minister, 1868; disestablished Irish Church, 1869; passed Education and Irish Land Acts, 1870, and Ballot Act, 1872. In 1873 he failed to carry bill concerning Irish University Education, and in 1874 he dissolved Parliament and resigned Liberal leadership.

'Bulgarian Atrocities' in 1875 led him to attack Disraeli's foreign policy and defence of Turks. Again becoming Premier, 1880, he turned attention to Ireland, passed Coercion and Land Acts, 1881, Crimes Act, 1882. Khartum disaster of 1885 aroused hostility to government, on which votes of censure were moved by Opposition; defeated on Budget Bill, 1885, G.'s government resigned. He again became Premier, 1886; his introduction of Home Rule Bill caused split in Liberal party, and G. again resigned, and for six years remained in opposition, once more taking office as Premier in 1892; having failed to carry his Home Rule Bill in 1894, he retired to private life. One of the greatest of Parliamentary debaters, G. had great gift of eloquence, a genius for finance, a scholarly mind, and a deeply religious nature.

Morley, *Life of Gladstone* (1903).

GLAIR, glazing preparation, made with white of egg and other ingredients, used in bookbinding.

GLAISHER, JAMES (1809–1903), Brit. meteorologist; did balloon research on humidity of air; *Meteorology of England* (1860) and other works.

GLAMIS (56° 37′ N., 3° 1′ W.), village, Forfarshire, Scotland; castle associated with Shakespeare's *Macbeth*.

GLAMORGANSHIRE (51° 35′ N., 3° 30′ W.), most southerly county, Wales. Bounded N. by Brecknockshire, W. by Monmouth, S. by Bristol Channel, E. by Carmarthen. Area, 855 sq. miles. Most important county in Wales, owing to enormous mineral productions. N. is rugged mountainous region (highest point, Llangeinor) with rich coal-fields; in S. are fertile wooded valleys, finest being Vale of Glamorgan; beautiful waterfalls in valley of Neath, but much of beauty of county destroyed by industrial operations. Magnificent cliff scenery on coast; chief headlands, Nash and Lavernock Points, Worms and Mumble Heads, Whiteford Point; indentations, Swansea Bay, Burry estuary, mouths of Taff and Ogmore. Principal rivers, Rhymney, Taff, Tawe, Neath, flow into Bristol Channel. Chief towns include Cardiff, Swansea, Cowbridge, Merthyr-Tydvil, Neath, and Aberavon. Fertile soil, crops raised; sheep and ponies reared; dairy-farming, fishing.

Mining chief industry. Anthracite, coking-coal, ironstone, and limestone produced; tin, copper, and lead smelted; machines, chemicals, tools, paper, etc.; Manufactured iron and steel-works. Among many fine ruined castles are those of Caerphilly, Castell Coch, Coity, Llantrosant, Llanblethian, Newcastle, Swansea, and Pennard; castles of Cardiff, St. Donat's, St. Fagan's, Penrice, Dunraven, and Fonmon are restored; there are several interesting churches; large number of sculptured stones and some famous bone-caves in Gower. Pop. (1911) 1,130,818.

GLANDERS (FARCY), contagious disease occurring in horses, asses, and mules, and communicable by them to man, caused by a bacillus, the *Bacillus mallei*; in man it usually starts at the hands or face, swellings appear which break down and ulcerate, accompanied by fever and a feeling of general pain. The swellings and ulcerations may also occur later in internal organs, and blood-poisoning develops, usually leading to death. The treatment is to excise the affected part before the disease becomes generalised.

GLANVILL or **GLANVIL, JOSEPH** (1636–80), Eng. philosophic writer; wrote *The Vanity of Dogmatising, Philosophical Considerations concerning the Existence of Sorcerers and Sorcery.*

GLANVILL, RANULF DE (d. 1190), chief justiciary of England; author of the historically valuable legal work, *Tractatus de Legibus et Consuetudinibus Regni Angliæ*; Eng. trans by John Beames (1812).

GLAPTHORNE, HENRY (fl. 1635–47), Eng. poet and dramatist; author of *Whitehall* (1642) and other poems displaying Royalist sympathies, also some tragedies and comedies; *Plays and Poems* (1874).

GLARUS, GLARIS (47° 2′ N., 9° 4′ E.), canton, Switzerland, between Schwyz and St. Gall; surface almost entirely mountainous, rising in the Tödi to height of 11,887 ft.; traversed by Linth and affluents; severe climate; occupation chiefly pastoral; sheep and cattle-rearing, cheese-making; cotton manufactures; joined Swiss Confederation, 1352. Capital, GLARUS; textile manufactures. Pop. (1910), canton, 33,316; town, 5089.

GLAS, GEORGE (1725–65), Scot. merchant adventurer; founded Port Hillsborough, trading station on N.W. coast of Africa; murdered by mutinous sailors.

GLAS, JOHN (1695–1773), Scot. cleric; b. Auchtermuchty, Fife; ordained 1719; founded sect known as Glasites (*q.v.*); deposed from ministry for renouncing Presbyterian tenets in 1730; wrote *Testimony of King of Martyrs.*

GLASGOW (55° 51′ N., 4° 16′ W.), city, chief commercial and manufacturing centre of Scotland, situated on both sides of river Clyde, some 22 miles from estuary, in county of Lanark; second city in British Isles; incorporated Govan, Partick, Pollokshaws, and adjoining districts. G. is a well-built town, masonry solid and substantial; older parts squalid but newer districts pleasant; many streets are broad and open, the most important being Sauchiehall, Buchanan, Union, and Argyle Streets. Of the many squares, most important are: Glasgow Green (in S.E.), with Nelson's monument, People's Palace, museum, and art gallery; George Square, surrounded by handsome public and municipal buildings and statues; West End Park (crossed by Kelvin River), contains Stewart Memorial and magnificent Corporation Art Galleries; others are Queen's Park in S.W., and Alexandra Park. There are many handsome buildings, but the only one of any historical interest is the Cathedral, situated in N.E., built in Early Eng. Gothic style, and with beautiful crypt and stained-glass windows. G. University (now an imposing building on Gilmorehill) was founded *c.* 1451 by Bishop Turnbull. There are three terminal railway stations, and in every direction electric tramways extend long distances. G. has made rapid strides in municipal enterprise; the Town Council owns the tramways, electric light, gas, and water-supply (brought from Loch Katrine).

G. owes much of its prosperity and progress to its proximity to rich fields of coal and ironstone. The harbour extends from Glasgow Bridge to joining of Kelvin and Clyde, and there are six miles of quays. Both banks of the Clyde are lined for many miles with shipbuilding yards and engineering works. Shipbuilding is the great industry—vessels of every type being built, from liners and battleships downwards. Iron-founding is an industry of vast importance; manufactures of steam tubes—boilers, locomotives, machinery, etc.; muslin and other textiles; chemicals, paper, glass, and china works; spinning, dyeing, brewing, and many other industries.

Although only of much commercial importance since Union of Scotland and England, G. dates back to *c.* 560. Pop. (1911) 784,455; with extensions (1912), over 1,000,000.

Bell and Paton, *G., its Municipal Organisations*; Muir, *Glasgow in 1901*; Primrose, *Mediæval Glasgow.*

GLASGOW, ELLEN ANDERSON GHOLSON (1874–), Amer. novelist.

GLASITES, SANDEMANIANS, Prot. sect, originated (1725) in Scotland by John Glas (*q.v.*); aimed at independent church government and simple doctrine.

GLASS is a complex solution of many substances, chiefly *silicates* and *borates.* Solidification occurs without any change in structure, and g. is often spoken of as a 'congealed liquid.' G. is a typical vitreous body with an amorphous structure. Although a large number of bodies can be obtained in the vitreous state, very few are used in g., because with many the cooling of the molten solution cannot be carried out quickly enough to avoid a component crystallising out at its own freezing-point (*devitrification*). Cost, as well as the risk of *devitrification* and the temperature of the furnaces, also restricts the choice of the substances used in g. manufacture.

Industrially, therefore, g. is composed of mixed *silicates* of *bases*, those most in use being the *alkalies* (*Sodium* and *Potassium*), the *alkaline earths* (*Calcium, Magnesium, Strontium*, and *Barium*), and oxides of *Iron, Aluminium*, and *Lead.* The properties of the g. depend on the base chosen, as does also its behaviour during manufacture. *Lead* and *Barium* give weight and brilliancy, and increase the fusibility and softness during manufacture. *Magnesium* and *Aluminium* give a g. which stands red heat without softening. The *alkalies* increase the fusibility of g. and ensure its easy working, but reduce the chemical resistance of the finished article, which is hygroscopic and apt to decompose rapidly in a damp atmosphere. Even good g. —that is, g. containing less than 15 % alkali—is not stable. The prolonged action of water on the best g. extracts a small quantity of alkali, and steam actively corrodes it. Water and alkali remove silica. Water and acid tend to protect g., since it prevents the formation of *silicon hydrate*, which permits the water to dissolve out the alkali. *Phosphoric* and *Hydrofluoric Acids* both corrode g.; the latter is used to etch g. *Carbonic Acid* in the presence of water dissolves the surface of g., rendering it liable to decomposition by bacteria. G. is photo-sensitive. Light produces colour changes in it, bringing out a brown or purple tint in g. made with manganese. The *Tensile Strength* of g. is said to be about 2½ to 5 tons per sq. inch, and the *Crushing Strength* 3 to 8 tons per sq. inch. These two properties are both affected by rate of cooling. The hardness depends on the rate of cooling as well as on the constituents. G. is not a good conductor of heat, and the thicker it is, the more easily it is fractured, since the inner wall expands, while the outer wall, remaining stationary, suffers from this tension and fractures. This has to be overcome in the manufacture of boiler gauge glasses, glass and metal junctions, etc. The harder g. is, the better it acts as an electric insulator. Transparency is the most essential property of g., and it is estimated that over 90 % of it

is used for this. Even the best g. absorbs a certain amount of light.

The manufacture of g. is controlled by the above facts, and the constituents, melting, and rate of cooling are so chosen as to adapt the g. as nearly as possible to the required object. The quality of the g. decreases with the impurities in the raw material; therefore, the raw material should be pure and uniform. The *silica* is got from sand, which must be dry and of uniform grain. For the best g. it must contain less than ·05 % of *Iron* and not more than ·05 % of other impurities. Sandstone is difficult to grind to uniform grain, and therefore cannot be used. Felspar is too expensive. The *alkali* used in the best g. is obtained from the *Le Blanc* or *Ammonia Soda* process, while *salt-cake* is used in the manufacture of inferior g. The *calcium* used in *sheet-g.*, *pressed* and *blown g.* is obtained as the carbonate or as slaked lime. The *Lead* for *flint g.* is introduced as *red lead*. For the special scientific, optical, and technical glasses specially prepared salts of *Barium*, *Magnesium*, and *Zinc* are employed. *Aluminium* is added in the form of *felspar* or as *hydrate*. The *tanks* or *pots* used in the manufacture are made of *fireclay* if they have to resist heat and the solvent action of g., or of *silica brick* if they have only the latter to withstand.

The furnaces are fed by gas generated in gas producers. In the furnace the gas meets with hot air and the mixture burns rapidly, and if properly proportioned gives very high temperatures. The materials are mixed very carefully, and when the mixture is uniform in colour and material the heating commences. The *silica* is supposed to act as an acid; all the *carbon dioxide* is expelled, and *silicates* of *sodium* and *calcium* remain in combination and solution with one another, so that the contents of the furnace are a mass of transparent glass with many bubbles. The bubbles are disengaged by boiling, the g. then being '*fine*.' The surface is skimmed and the temperature reduced. The g. is now ready to be worked. If the g. is to be blown it is removed by *gathering*. A hot rod is dipped repeatedly into the mixture, and when some pounds have adhered the worker blows through the rod and a hollow sphere of g. is obtained. From this sphere articles are made by pressure, moulds or blocks with or without further blowing.

HAND-BLOWN G. has not the regularity of mould-made g., but contact deprives the latter of its brilliancy. PRESSED G. is made by pressing the g. into the mould by means of a metal plunger. The articles have to be made in pieces to allow of the extraction of the plunger. They lack brilliancy, and the joins can be detected. ROUGH PLATE G. is made by ladling the molten mass on to a table and rolling it with a roller, after which it is cooled by passing through a tunnel, the temperature of which decreases from one end to the other. POLISHED PLATE G. is cooled in special chambers very slowly, and the surface is then ground, smoothed, and polished. CROWN G. was gathered into a hollow sphere, which was flung on to a rotating plate. The disc thus obtained had a thick centre with wavy lines surrounding it, but lacked all surface marking, such as rolled g. has. It is now used only for microscope slides and cover-glasses, where its marked surface is valuable. OPTICAL G. is the only g. which is allowed to cool *in situ*. This secures perfect homogeneity. Transparency, absence of colour, chemical solubility, and special refractive index are other essential characters.

The usual method of colouring g. articles is to heat and apply small rods of coloured g. in the required quantity. *Copper* and *gold* in the reduced state colour g. ruby, that from gold being the lighter, more regular and uniform in tint. *Chromium* tints g. green; *uranium*, a fluorescent yellow; *manganese*, pinkish purple; *cobalt*, a deep blue. *Aluminium* imparts an opal effect. *Metallic lustres* are got by fusing a layer of particles of the metal on to the top of the g.

Shenstone, *Glass - Blowing Methods*; Rosenhain, *Glass Manufacture*.

Stained Glass is an art of N. Europe which arose in the XII. cent., and reached its turning-point in Tudor times. The development of mosaics and frescoes on the walls of Ital. churches rendered it an unnecessary art in that country, consequently the finest examples are to be found in the older cathedrals and churches of France and England. The best work is now done, as it was in the Middle Ages, by the method known as 'mosaic glass.' First a design is prepared representing the figures in the proposed picture; then the glazier works out the main portions in various kinds of coloured glass; after which the artist develops in pigment all the delicate shadings of draperies, the lines of the figures, etc., and when this is completed the colours are fixed by firing. 'Mosaic glass' may be distinguished by the characteristic way in which the leads, or *calms*, do not follow the outlines of the figures, but boldly intersect them, enclosing rich and variegated plots of colour. An inferior method, known as 'enamelled glass,' proceeds by painting entirely on white glass and fusing the pigments to fix them. The leads, in this case, follow the contours of the design, and are concealed; but transparency is lost and the effect is blurred.

L. F. Day, *A Book about Stained and Painted Glass* (1909); Eden, *Ancient Stained and Painted Glass* (1913).

GLASSBRENNER, ADOLF (1810–76), Ger. humorist; author of *Neuer Reineke Fuchs*, *Gedichte*, *Die verkehrte Welt*, etc.

GLASS-EELS, see EELS.

GLASSITES, see GLASITES.

GLASSIUS, SALOMO (1593–1656), Ger. Biblical commentator who took important part in religious organisation of Gotha.

GLASSWORT, genus of chenopodiaceous herbs, found on seashore; ash gives soda.

GLASTONBURY (51° 9′ N., 2° 33′ W.), municipal borough, Somersetshire, England. Tradition has it that Joseph of Arimathea brought here Holy Grail and founded first Christian Church in Britain. Abbey, erected VIII. cent., was destroyed by Danes and refounded by St. Dunstan (X. cent.); again destroyed (XII. cent.) and rebuilt. Other notable buildings are tower on Tor-Hill, Pilgrims' Inn (XV. cent.), Tribunal, and Abbots' Barn; quaint town, with many houses built of stones from cathedral. Manufactures include mats, gloves, pottery. Pop. (1911) 4251.

GLATIGNY, JOSEPH ALBERT ALEXANDRE (1839–73), Fr. poet; author of *Les Flèches d'or* and *Gilles et pasquins*.

GLATZ (50° 26′ N., 16° 39′ E.), fortified town, Silesia, Germany; machinery, textiles. Pop. (1910) 17,095.

GLAUBER'S SALTS, SODIUM SULPHATE (Na_2SO_4, $10H_2O$), a transparent, colourless, crystalline, prismatic substance, with a salt taste, obtained by the action of sulphuric acid on sodium chloride (common salt) and other sodium salts; first described by Johann Rudolf Glauber (1603–68); it occurs native in parts of Spain, western N. America, and the Russ. Caucasus, as well as in certain mineral waters (*e.g.* Frederickshall) and sea-water. It is used medicinally as a purgative, being safe and easily taken by children.

GLAUCHAU, town, Saxony, Germany; manufactures woollen materials, calicoes, and dyes. Pop. 25,194.

GLAUCOMA, see EYE.

GLAUCONITE, green crystalline mineral occurring in mud on floor of ocean and in greensands, in some Tertiary rocks and Eocene sands, and largely in Lower Cretaceous rocks; is hydrous silicate of iron and potassium; found generally in clusters of minute particles.

GLAUCUS (classical myth.).—(1) Son of Sisyphus, torn in pieces by his own horses; (2) Lycian prince, slain by Ajax in Trojan War; (3) s. of Minos, accidentally smothered in pot of honey, but miraculously restored

to life; (4) fisherman of Anthedon (Bœotia), afterwards changed into a sea-god.

GLAUX, genus of primulaceous plants, found on seashore; pink flower; common in Britain.

GLAZING, the craft of the skilled workman, known as a glazier, who fits panes of glass into window-sashes, doors, etc. Besides various measuring and other tools, including the diamond, for cutting purposes, putty-knife, etc., the chief materials used in fixing the glass are putty, or beading. Sometimes a bed of rubber or other material is used instead of putty.

GLAZUNOV, ALEXANDER CONSTANTINOVICH (1865–); Russ. musical composer; his symphonies include *The Kremlin*, *The Forest*, and *Stenka Razin*.

GLEBE, in England, land pertaining to an ecclesiastical benefice, from which the incumbent derives his income. In Scotland glebe is regulated by the Glebe Lands (Scotland) Act, 1866.

GLEE, an unaccompanied vocal composition for three or more voices; in vogue at the beginning of XVIII. cent.

GLEET, see GONORRHŒA.

GLEIG, GEORGE (1753–1840), Scot. episcopalian bp. of Brechin, 1808; primus of Scotland, 1816; a zealous and reforming prelate.

GLEIWITZ (50° 17′ N., 18° 40′ E.), town, Pruss. Silesia, Germany; iron foundries; glass-works. Pop. (1910) 66,910.

GLEN GREY (31° 30′ S., 27° E.), division of Cape province, S. Africa; native land settlement. Pop. (1911) 50,570 (whites, 773).

GLENALMOND (56° 27′ N., 3° 50′ W.), village, Perthshire, Scotland; seat of Trinity Coll. (Episcopal).

GLENCAIRN, EARLS OF.—William, 4th earl, supported Henry VIII.'s Scot. policy. Alexander, 5th earl, supported Reformation. William, 9th earl, aided Charles II.; Chancellor of Scotland, 1660. James, 14th earl, befriended Burns.

GLENCOE.—(1) (56° 38′ N., 4° 57′ W.) deep valley, N. Argyllshire, Scotland; scene of massacre of the MacDonalds, Feb. 1692. (2) town, Natal, S. Africa.

GLENDALOUGH (53° 1′ N., 6° 20′ W.), valley, Wicklow, Ireland; celebrated for picturesque scenery and ancient ecclesiastical ruins.

GLENDOWER, OWEN (*c.* 1359–1415), Welsh hero who opposed Henry IV., calling himself Prince of Wales; carried on harassing border warfare till 1403, when he joined the Percies, who were also in rebellion; defeated in 1405 by Prince Henry, whose capture of Harlech in 1409 ended war.

GLENELG (34° 59′ S., 138° 35′ E.), watering-place, on Holdfast Bay, Adelaide County, S. Australia. Pop. 4500.

GLENELG, CHARLES GRANT, LORD (1778–1866), Brit. statesman; as Sec. for War and the Colonies, 1835–39, he failed in treatment of Canadian difficulties; raised to peerage, 1835.

GLENFINNAN, Scot. valley, Inverness-shire; gathering-place of Prince Charlie's clans, 1745.

GLENGARIFF, or **GLENGARRIFF** (51° 44′ N., 9° 31′ W.), village, on Glengariff harbour, County Cork, Ireland; tourist resort.

GLENLIVET, Scot. valley, Banffshire; scene of Prot. victory (1574); famous manufacture, whisky.

GLENROY, Scot. valley, Inverness-shire; famous for three superimposed natural terraces, *parallel roads*, supposed shorelines of ancient lakes, different levels.

GLENS FALLS (43° 18′ N., 73° 38′ W.), village, New York, U.S.A., on Hudson River; lumber and paper manufactures. Pop. (1910) 15,243.

GLENTILT (56° 52′ N., 3° 46′ W.), Scot. valley, Perthshire; pass, Blair Athole to Braemar; geologically interesting evidence of denudation theory.

GLEYRE, MARC CHARLES GABRIEL (1806–74), Fr. artist; amongst his most notable canvases are *Evening*, *The Deluge*, *Ruth and Boaz*, *Minerva and the Nymphs*; a slow and careful painter, whose work is of high quality.

GLIDDON, GEORGE ROBINS (1809–57), Eng. antiquary; author of *Ancient Egypt* (1850) and other works.

GLINKA, FEDOR NIKOLAEVICH (1788–1849), Russ. author; famed for military songs, and his *Letters of a Russian Officer* (1815–16).

GLINKA, MICHAEL IVANOVICH (1803–57), Russ. composer; laid foundation of modern Russ. music; composed *A Life for the Tsar*, national opera.

GLOBE-FISHES, PUFFERS (*Tetraodontidæ*), prickly skinned, bony fishes which are capable of inflating their body to a globe shape; mostly inhabitants of tropical and temperate seas, though a few occur in large rivers.

GLOBIOCEPHALUS, see DOLPHIN FAMILY.

GLOGAU (51° 40′ N., 16° 3′ E.), fortified town, Germany, on Oder, Pruss. Silesia; centre of wool trade; various manufactures. Pop. 23,457.

GLOMERIS, a genus of Millipedes. See MYRIAPODA.

GLORIA, GLORY, first word of doxology, 'Glory be to the Father,' etc., *Gloria in excelsis* (Glory be to God on High).

GLORIOSA, genus of tropical, liliaceous, climbing plants; red or yellow flowers.

GLOSS (from Gk. *glōssa*, 'language').—The word 'gloss' means a comment or explanation of a word or passage, the writer of which is called a 'glossator'; '*glossary*' is a tabulated list of words requiring special explanation, and the maker is known as a 'glossarist.' During the Alexandrian period the glossing of the early Gk. poets became common, and amongst the notable writers engaged in the work were Philetus of Cos, Aristophanes of Byzantium, Apion, Suidas. Two famous glosses on the Lat. Vulgate are Walafrid Strabo's *Glossa Ordinaria* (IX. cent.) and the *Glossa Interlinearis* of Anselm of Laon (*c.* 1100). At a later period the glossing of works on civil and canon law was eagerly taken up by scholars, a notable example of the kind being *Corpus Juris Glossatum*, of a XIII.-cent. writer, Accursius. Subsequently the making of glosses upon a great variety of works became widespread amongst all cultured peoples. Tyrwhitt's *Glossary to Chaucer* (1775) may be referred to as an example of many modern works of the kind.

GLOSSINA, see under HOUSE-FLY.

GLOSSOP (53° 27′ N., 1° 58′ W.), market town, Derbyshire, England; cotton manufactures. Pop. (1911) 21,688.

GLOSSOTHERIUM, an extinct Edentate (*q.v.*).

GLOUCESTER.—(1) (51° 52′ N., 2° 15′ W.) city, capital of Gloucestershire, England; parliamentary and county borough and port, on Severn. Ancient historic town with beautiful cathedral, once Benedictine abbey; architecture chiefly Norman and Perpendicular; central tower, whispering gallery, and cloisters are particularly fine. Among other buildings are New Episcopal Palace, West Gate (XII. cent.), New Inn (*c.* 1450), and Guildhall. Connected with Sharpness by G. and Berkeley Canal. Shipbuilding, foundries, chemical works. Pop. (1911) 50,029. (2) (42° 34′ N., 70° 40′ W.) city and seaport, Massachusetts, U.S.A.; excellent harbour; chief seat of cod, mackerel, and halibut fisheries in U.S.; important granite quarries; settled by Eng. colonists, known as Dorchester adventurers, in 1623–25. Pop. (1910) 24,398. (3) (39° 52′ N., 75° 12′ W.) **G. City**, New Jersey, U.S.A., on Delaware, opposite Philadelphia; cotton and woollen manufactures. Pop. (1910) 9462.

GLOUCESTER, EARLDOM AND DUKEDOM OF, dukedom held by various royal princes; last duke d. 1834. Earldom was formerly held by Clares and Despensers.

GLOUCESTER, GILBERT DE CLARE, EARL OF (1243–95), Eng. soldier; prominent figure in the baronial wars of Henry III.'s time, and instrumental in securing the accession of Edward I. (1272).

GLOUCESTER, HUMPHREY, DUKE OF

(1391–1447), Eng. soldier; s. of Henry IV. and Mary de Bohun, present at Agincourt, 1415; acted as regent during Henry V.'s absence in France, 1421, 1422; Protector during Henry VI.'s minority, managing home affairs during Bedford's absence in France; patron of learning.

GLOUCESTER, RICHARD DE CLARE, EARL OF (1222–62), Eng. soldier; the most powerful peer of his day, and leader of the barons in their rising against Henry III.

GLOUCESTER, ROBERT, 1ST EARL OF (d. 1147), Eng. soldier; illegitimate s. of Henry I.; fought for Matilda against Stephen; won battle of Lincoln, 1141.

GLOUCESTER, THOMAS OF WOODSTOCK, 1ST DUKE OF (1355–97), Eng. statesman; s. of Edward III.; practically ruled England, 1386–89; arrested on charge of plotting against Richard II., 1397; soon afterwards died, or was killed, at Calais.

GLOUCESTERSHIRE (51° 45′ N., 2° 30′ W.), W. midland county, England, situated on estuary and lower course of Severn. Bounded N. by Herefordshire, Worcestershire, and Warwickshire, E. by Oxfordshire, S. by Berkshire, Wiltshire, Somerset, W. by estuary of Severn and Monmouthshire. Area, 1228 sq. miles. Chief towns: Gloucester (capital), Cheltenham, Tewkesbury, and part of Bristol. Surface is varied, with three distinct features: E., Cotswold Hills (highest, Cleeve Hill); centre, rich, fertile valleys of Severn and other rivers; W., Forest of Dean. Most important rivers include Avon, Lower Avon, Wye, and Thames. Sheep-farming is carried on in hills; in valleys pasture-land, orchards, woods, and dairy-farms where celebrated G. cheese is made. W. are coal-fields of Forest of Dean and Bristol. Other minerals include iron, ochre, building-stone, freestone, and quartz. Manufactures—woollens, cottons, silk, gloves, glass, hardware. Extensive canal system. Most noteworthy antiquities are: cath's of G. and Bristol; churches of Tewkesbury and Cirencester; many fine parish churches; remains of Hayles Abbey and castles of Berkeley, Thornbury, and Sudeley. Pop. (1911) 329,037.

Gloucestershire, in Victoria County Histories.

GLOVE, covering for the hand, usually made of fine dressed skins, silk, wool, or cotton. 'Kid' gloves, made from kid or sheep-skin, are largely made in Paris and other Fr. towns. The most delicate kinds are usually described as suède, in which the inner side of the skin is dressed; and glacé, the outer side. As regards the history of g's they appear to have been used from very early times, and are referred to in Homer's *Odyssey*. They probably reached their most decorative stage, in England, in the reign of Elizabeth, when they were often jewelled and otherwise ornamented. In mediæval times the throwing down of a glove was a symbol of defiance.

Beck, *Gloves, their Annals and Associations* (1883).

GLOVER, SIR JOHN HAWLEY (1829–85), Brit. administrator; was administrator of Lagos; served in the Ashanti War (1873); afterwards gov. of Newfoundland, and subsequently of Leeward Islands.

GLOVER, RICHARD (1712–85), Eng. poet; wrote two epics, *Leonidas* and *The Athenaid*; also two tragedies; best remembered by his ballad, *Hosier's Ghost*.

GLOVERSVILLE (43° 2′ N., 74° 20′ W.), city, New York, U.S.A.; large glove-making and leather-finishing factories. Pop. (1910) 20,642.

GLOW-WORMS, see under POLYMORPHA.

GLOXINIA, genus of tropical, gesneriaceous herbs; violet flowers; also greenhouse plant, genus *Sinningia*, especially *S. speciosa*.

GLUCINIUM, see BERYLLIUM.

GLUCK, CHRISTOPH WILLIBALD, or RITTER VON GLUCK (1714–87), Ger. composer; b. near Neumarkt; studied at Vienna and Milan, where first opera, *Artaserse*, was presented (1741), followed by *Demofoon*, *Artamene*, *Poro*, and others belonging to old school of Ital. opera; visited England, 1745; greatly impressed by Händel's works, and later in Paris by Rameau's operas; settled in Vienna, 1756. Between 1762 and 1769 G. produced first great operas of new type: *Orpheus and Euridice*, *Alceste* (with explanatory prefaces), and *Paris and Helena*; visited Paris, and successfully brought out a music drama, *Iphigénie en Aulide*, 1774, and *Armide*, 1777. His great work, *Iphigénie en Tauride*, 1779, secured him complete and permanent victory over Ital. rival, Piccini; returned to Vienna, 1780. Unlike vast majority of earlier composers G.'s works are still popular; like Wagner, one of the greatest opera reformers; style marked by simplicity, nobility, and naturalness; strove to abolish inferior libretto and subordination of composer to singer, thus giving proper proportion to opera as a whole.

Newman, *Gluck and the Opera* (1895); Tiersot, *Gluck* (1910).

GLÜCKSBURG (54° 49′ N., 9° 34′ E.), watering-place, Schleswig-Holstein, Germany.

GLÜCKSTADT (53° 47′ N., 9° 24′ E.), town, on Elbe, Schleswig-Holstein, Germany; fisheries, various manufactures. Pop. (1910) 6572.

GLUCOSIDES are substances yielding sugar, especially *glucose*, on fermentation or *hydrolysis*. For each group there is a special ferment. They are classified by the chemical constitution of the non-glucose part of the molecule into (1) *Ethylene Derivatives* (mustard oils), decomposed by ferment *myrosin*. (2) *Benzene Derivatives* (salicin), decomposed by *ptyalin* and *emulsin*. (3) *Styrolene* and *Anthracene Derivatives*.

Glucose, GRAPE-SUGAR, or DEXTROSE, $CH_2OH.(CH.OH)_4CHO$, is a carbohydrate regarded as an *aldehyde* of *sorbite*; glucose, M.P. 86° C.; very soluble in water, only slightly so in strong *alcohol*; reduces alkaline *copper* solutions, and is fermented by *yeast, lactic acid bacilli*. It causes specific rotation of the plane of polarised light 105° to right. Levo-rotatory (*fructose*) and inactive forms exist. Commercial glucose is a syrup containing a complex mixture of carbohydrates. See SUGAR.

GLUE is an impure gelatin with strong adhesive properties.—BONE GLUE is made by dissolving grease out of bones by *petroleum*. The *de-greased* bones are then steamed under pressure in cylinders with false bottoms. The glue-liquor collects below the false bottom, is clarified with alum, and concentrated *in vacuo* to 30 % dry glue. The liquor, bleached by *sulphur dioxide*, is allowed to cool to a jelly.—FISH GLUE has a disagreeable odour. Glue should be free from grit, and of uniform golden colour. Cold water should soften and swell it and hot water dissolve it.

Rideal, *Glue and Glue Testing* (1900).

GLUKHOV (51° 42′ N., 33° 54′ E.), town, Chernigov, S.W. Russia; kaolin mining. Pop. 15,000.

GLUTEN, adhesive substance derived from kneading wheat flour in water; composed of fibrin and gelatin; highly nutritious; best wheaten flour should contain 11 % gluten. Word also used generally of gum.

GLUTTON, see WEASEL FAMILY.

GLYCAS, MICHAEL (XII. cent.), Byzantine historian; author of a *Chronicle* from early times to his own period.

GLYCERIN, GLYCEROL, GLYCERINUM ($C_3H_5(OH)_3$), colourless, viscid liquid, with a sweetish taste; Sp. G., 1·265; when heated it decomposes, and it dissolves readily in water and alcohol. It is obtained from the action of alkalies or superheated steam on fats and fixed oils, and commercially it is mainly obtained from the spent lyes in soapmaking. It is used as a lubricating agent in the manufacture of nitro-glycerin; in the making of plasters, modelling clay, moist colours; as a preservative and slight antiseptic; as a solvent for colouring fluids and various drugs, *e.g.* iodine, tannic acid alkalies, alkaloids, and neutral salts; and medicinally as a purgative, either by the mouth or by the rectum.

GLYCEROL, see GLYCERIN.

GLYCOGEN ($C_6H_{10}O_5$), a carbohydrate, white, amorphous powder, found in liver; turns red with iodine.

GLYCOL, see ALCOHOLS.

GLYCONIC VERSE, metres used by Gk. lyric poet Glycon; logaœdic tripody or tetrapody, *i.e.* a spondee and two dactyls, three trochees and a dactyl, or dactyl and three trochees.

GLYPTODON, an extinct Edentate (*q.v.*).

GMÜND (48° 48′ N., 9° 48′ E.), town, Württemberg, Germany; gold and silver jewellery. Pop. (1910) 21,270.

GMUNDEN (47° 56′ N., 13° 48′ E.), town, summer resort on Lake Traun, Austria; centre of salt industry.

GNAWERS, see RODENTS.

GNEISENAU, AUGUST WILHELM ANTON, COUNT NEITHARDT VON (1760–1831), Prussian soldier; served in Amer. War of Independence, on Brit. side; present at Jena; defended Kolberg, 1807; became Blücher's chief of staff; distinguished in Waterloo campaign; gov. of Berlin, 1818; Field-Marshal, 1825.

GNEISS, mineral; name originally used by miners of the Hartz, but now used by geologists to describe certain metamorphic rocks composed generally of layers of quartz and felspar. Some g's are sedimentary, others igneous and differ from granite only by their foliated structure; contain no fossil remains; there are several varieties classed generally according to the distinct minerals they contain; they include muscovite-g., biotite-g., muscovite-biotite-g., mica-g., and syenitic-g. (containing hornblende).

GNEIST, HEINRICH RUDOLF HERMANN FRIEDRICH VON (1816–95), Ger. politician and jurist; prof. of Jurisprudence, Berlin, 1844; became a senior judge of Supreme Court of Prussia, 1875; wrote on constitutional and historical subjects, among his most important works being *History of English Constitution* and *Trial by Jury*.

GNESEN (52° 32′ N., 17° 33′ E.), town, Posen, Germany; old crowning-place of Polish kings. Pop. 25,340.

GNETALES, see GYMNOSPERMS.

GNOMES, legendary dwarfs, dwelling in the earth, and supposed to guard its treasures.

GNOMIC POEMS, versified maxims (*Gnomes*), much favoured by the ancient Gk. poets.

GNOSTICISM, the name given to a movement in early Christianity, especially in the II. cent. G. was not a definite creed, still less any one clearly defined organisation, though it gave rise to numerous sects. G. began outside Christianity and was a combination of Gk. speculation, Iranian dualism, and Babylonian mythology. Its root principle was not faith but knowledge, which was given to the initiated only. In its speculations it mixed up the Platonic theory of ideas (that everything has a spiritual archetype) with an Oriental dualism which made all matter evil. The supreme God was removed from the world and could only communicate with it by a number of æons, in which various principles and ideas were personified.

G. was antagonistic to Judaism, for it held the God of the Old Testament to be the *Demiurge*, a secondary and less good God. The opposition of spirit and matter is a Gk. idea, but into this is united the idea of a conflict in the present world between forces of good and evil, which is Zoroastrian. It is difficult to generalise about G., as most documents were destroyed by the orthodox, and quotations in the works of antagonists are what we have mostly to depend on, and also because the various sects differed from each other. Thus the Demiurge in the system of Valentinus is represented by seven World Powers (a Zoroastrian conception) elsewhere. The Great Mother of the Gods, worshipped in many Mediterranean lands, is taken over as Sophia (Wisdom), also the myth of the Primal Man appears—another close parallel with Zoroastrianism. Practically all the elements of G., therefore, were pre-Christian, and all that was done by some of the more Christian Gnostics (some were outside Christianity even in name) was to bring them into connection with the hist. figure of Christ by making Him an æon or emanation from God. Marcion, though a Gnostic, was different from others, and is important. G. was essentially mystical and also sacramental; many sacraments analogous to Christian rites were invented. Like other heretics, Gnostics were charged with immorality not without cause, as they tended to oscillate between asceticism and licentiousness. G. declined in the III. cent., giving place to Manichæism, but its ideas have considerably tended to reappear, and it is of profound significance in the history of thought and religion.

Mansel, *Gnostic Heretics*.

GOA (15° 20′ N., 74° E.), Portug. territory on W. coast of India, S. of Bombay; extends 60 miles along Ind. Ocean; area, *c.* 1400 sq. miles; immense forests and many rivers; chief exports—salt, spices, fruit, coco-nuts, copra, manganese, and iron. *Old G.* former flourishing capital, with remaining fine archiepiscopal cathedral and church of Bom Jesus. Numerous palaces and splendid churches in ruins. *Nova G.*, or *Panjim*, present capital, on Mandavi, with viceregal palace, barracks, technical school, harbour (1882), etc. Taken from Muhammadans by Albuquerque, 1510; Old G. was made capital and rose to great commercial prosperity under Portuguese. Administered by gov.-gen. Pop. 520,000.

GOALPARA (26° 11′ N., 90° 41′ E.), district, Assam, India; fertile, chief crop, rice; exports timber, cotton; subject to earthquakes; unhealthy climate. Area, 3961 sq. miles. Pop. 462,052. Capital, Goalpara, on Brahmaputra. Pop. 6000.

GOAT (*Capra*), an ungulate of the subfamily Caprinæ, which also includes the sheep and ibex. Both sexes are horned and bearded, but these structures are usually more prominent in the male than the female. The male is further distinguished by its strong odour. The genus is confined to the Old World and is mainly alpine and sub-alpine in distribution; Asia Minor is believed to be the home of the domesticated species. Many yield rich milk, and some (Angora and Cashmere goats) provide valuable hair. The goat is the *vacca pauperis* (the poor man's cow).

GOATSBEARD, popular name of cichoriaceous plant, genus *Tragepogon*, order *Compositæ*; also fungus of genus *Clavaria*.

GOATSRUE, popular name of two fabaceous plants; blue-flowering (*Galega officinalis*) and white (*G. alba*).

GOATSUCKER, or NIGHTJAR, is a bird of nocturnal habits, feeding on insects which it captures on the wing; beak short and broad, and mouth enormously wide, and fringed with highly modified, bristle-like feathers which prevent the escape of prey; plumage loose in texture, and dark, with exquisite mottling; eyes large, as in owls, to which nightjar is related; male produces a peculiar jarring or churring noise, hence the name *nightjar*; summer visitant to Britain, migrating from Africa. The belief expressed in the name g. is not authentic: the bird's object in flying at the udders of goats being simply to catch the flies found there.

GOBAT, SAMUEL (1799–1879), Prot. bp. of Jerusalem (1846–79); noted for his extensive missionary work in the Holy Land.

GOBELIN, a famous make of tapestries produced at a factory in Paris. The founder of the firm was Giles G., a XVI.-cent. wool-dyer.

GOBI (*c.* 43° N., 110° E.), Chin. name for extent of desert stretching from Pamirs to Great Kingan Mts. on borders of Manchuria, and from Altai, Sayan, and Yabloni Mts. on N. to most northerly ranges of Kuen-lun Mts. on S.; includes large portion of Mongolia; 450 to 600 miles from N. to S., and over 1000 miles from S.W. to N.E.; elevation between 3000 and 5000 ft. and sometimes higher; also called SHAMO (sandy desert), and HAN-HAI (dry sea). Almost whole surface is sandy or stony desert, without water or vegetation (except for oases) and with little animal life; in some parts are grassy steppes, masses of rocks and

crags, and salt lakes. Mountainous tracts, forests, good water, abundant vegetation, and more animal life are to be found in part known as Ordos. Climate has great extremes, with rapid changes. Shifting sands have buried large extents of once cultivated country and habitations, and many discoveries of buried towns and villages have been made; important explorations have been made by Przhevalsky, Sven Hedin, and others. Desert crossed by various caravan routes, some being thousands of years old; among principal routes are those leading from Kalgan (on Chinese frontier) to Urga, from Su-Chow to Hami, and from Hami to Peking.

GOBLET (Fr. *gobelet*), large drinking-cup, on stem, but without handles.

GOBLET, RENÉ (1828–1905), leader of Fr. Radical party; prime minister at close of 1886; unequal to facing Boulanger, and resigned, 1887.

GOCH (51° 40′ N., 6° 10′ E.), town, on Niers, Rhine province, Prussia; various small manufactures. Pop. (1910) 11,139.

GOD (O.E. *god*, Dutch *god*, Ger. *gott*), in heathen times an idol, or object of worship. Since the Teutonic acceptation of Christianity it is the name reserved to the Creator of the Universe.

GODALMING (51° 11′ N., 0° 37′ W.), market town, on Wey, Surrey, England; seat of Charterhouse School. Pop. (1911) 8847.

GODARD, BENJAMIN LOUIS PAUL (1849–95), Fr. composer; wrote the operas, *Dante*, *La Vivandière*, and *Jocelyn*; also numerous symphonies, songs, and other works.

GODAVARI (16° 30′ N., 82° 15′ E.), river, in Deccan, Brit. India; flows S.E.; discharges by seven mouths into Bay of Bengal; length, *c.* 900 miles; one of the twelve sacred rivers of India.

GODAVARI (17° N., 81° E.), district, Madras Presidency, Brit. India, in lower valley of Godavari; chief town, Cocanada. Area, 5634 sq. miles. Pop. 1,445,961.

GODEFROY, DENIS (1549–1622), member of notable Fr. family; prof. of Law at Geneva; was historiographer of France. JACQUES G. (1587–1652) pub. new edit. of *Codex Theodosianus*. THÉODORE G. (1580–1649) wrote *Le Cérémonial de France*.

GODESBERG (50° 41′ N., 7° 9′ E.), town, summer resort, Rhine province, Prussia; mineral springs. Pop. (1910) 15,820.

GODET, FRÉDÉRIC LOUIS (1812–90), Swiss Biblical commentator.

GODFREY OF BOUILLON (*c.* 1060–1100), Fr. crusader; led army in first crusade, 1096; took Antioch, 1097, Jerusalem, 1099; became ruler of Jerusalem, with title, 'Defender and Guardian of Holy Sepulchre'; great victory over Muslims at Ascalon, 1099, made him supreme in Palestine.

GODFREY OF VITERBO (fl. XII. cent.), author of *Memoria seculorum*, of which part entitled *Gesta Friderici* is important source for career of Emperor Frederick I.

GODFREY, SIR EDMUND BERRY (1621–78), London magistrate before whom Titus Oates made affidavit concerning Popish plot; subsequently murdered.

GODIN, JEAN BAPTISTE ANDRÉ (1817–88), Fr. socialist; author of *Solutions Sociales* (1871), *Mutualité Sociale*, and similar works.

GODIVA (XI. cent.), wife of Leofric, Earl of Mercia, who, at her husband's challenge, rode naked through the streets of Coventry, to secure the relief of the townspeople from the heavy taxation which the earl had imposed; subject of poem by Tennyson.

GODKIN, EDWIN LAWRENCE (1831–1902), Amer. publicist; founded *Nation*, New York weekly paper; advocated reform in currency and civil service.

GODMANCHESTER (52° 18′ N., 0° 12′ W.), town, on Ouse, Huntingdonshire, England.

GÖDÖLLÖ (47° 37′ N., 19° 21′ E.), market town, Hungary; scene of defeat of Austrians by Hungarians, April 6, 1848. Pop. 5893.

GODOLPHIN, SIDNEY, EARL OF G. (*c.* 1645–1712), Eng. politician; page in Charles II.'s household after Restoration; P.C. and Lord of Treasury, 1619; First Lord of Treasury under Charles II., James II., William III., and Anne; promoted Anglo-Scot. Union; dismissed from office, 1710.

GODOY, MANUEL DE (1767–1851), Duke of El Alcudia; Span. courtier and statesman; prime minister, 1792–98; negotiated Treaty of Basel; became Prince of the Peace, 1795; joined France against Britain; died in Paris.

GODRA, GODHRA (22° 46′ N., 73° 40′ E.), town, Bombay, India; trade in timber. Pop. 21,000.

GODWIN, FRANCIS (1562–1633), Eng. ecclesiastic; bp. of Hereford (1617); author of *Annales of England* (1630), and a fantastical story, *The Man in the Moone*, first pub. 1638.

GODWIN, MARY WOLLSTONECRAFT (1759–97), Eng. writer; was early employed in teaching and literary work, and, after a *liaison* with a Captain Imlay, she m. William Godwin (*q.v.*). Her works include *Vindication of the Rights of Women* and *Original Stories for Children*, the latter being illustrated by Blake.

GODWIN, WILLIAM (1756–1836), Eng. doctrinaire; b. at Wisbech; became Glasite minister, and held charges at Ware, Stowmarket, and Beaconsfield; subsequently settled in London, changing clerical for literary career; m. Mary Wollstonecraft; their dau., Mary Godwin, afterwards became wife of Shelley. G. was generally in money difficulties in spite of his success as a writer, and was bankrupt in 1822; he later obtained the post of yeoman usher of the Exchequer, which he held from 1833 till his death; wrote *Inquiry concerning Political Justice*, a philosophic work showing influence of Rousseau; *History of Commonwealth*; *Caleb Williams*, a novel; and other works.

GODWINE (d. 1053), Earl of Wessex; justiciar under Canute; assisted in restoration of Edward the Confessor, 1042; exiled, 1051; f. of last Saxon king, Harold.

GODWIT, a spring and autumn migrant, visiting marshy estuarine areas and accompanying sand-flats; long legs and beak, and reddish plumage, with barred tail; nests in Arctic regions.

GOEBEN, AUGUST KARL VON (1816–80), Prussian general; as lieut.-general won great victories over Austria in Seven Weeks War, 1866; commander of VIII. corps against France, 1870; head of First Army, which won St. Quentin, 1871.

GOES (51° 29′ N., 3° 53′ E.), chief town, island S. Beveland, Holland. Pop. (1910) 7620.

GOES, DAMIÃO DE (1502–74), Portug. historian; keeper of archives and royal chronicler, 1548; wrote history of reign of King Manuel, but owing to its truth work condemned and compulsorily revised; G. tried and imprisoned by Inquisition on slight charges; an able and honest historian.

GOES, HUGO VAN DER (*c.* 1420–82), Flem. artist; painter of a famous triptych now in the Uffizi Gallery, Florence.

GOETHE, JOHANN WOLFGANG VON (1749–1832), Ger. poet, dramatist, philosopher, and scientist; b. Frankfort-on-Main; at Leipzig G. studied law, 1765–68, and, inspired by Kätchen Schönkopf, wrote *Annette* (charming MS. volume of lyrics, pub. 1896), and play, *Die Laune des Verliebten*. Returning to Frankfort, 1768, an invalid, he wrote *Die Mitschuldigen* (comedy). G. graduated as Doctor of Law at Strasburg, 1771; also studied bot., anat., alchemy, etc. At Strassburg he was greatly influenced by his intimate friend, Herder. *Sesenheimer Lieder* (lyrics), inspired by Frederike Brion, were written, 1770. At Wetzler (1772) he became friends with Kestner, whose fiancée, Charlotte Buff, is immortalised in *Die Leiden des jungen Werthers* (1774), which made him world famous. In 1773 *Clavigo* and the hist. drama *Götz von Ber-*

lichingen (first really great work) appeared; also some dramatic satires (*Götter, Helden und Wieland, Pater Brey, Hanswursts Hochzeit*, etc.). At this time G. became engaged for a short while to Lili Schönemann.

In 1775 he wrote the *Faust* of the 'Sturm und Drang' period (pub. as a Fragment, 1790). From 1775 onwards G. lived in Weimar, holding several responsible government posts; formed intimate friendship with Frau von Stein; ennobled, 1782. To the Weimar period belong dramas, *Egmont* (pub. 1778), *Die Geschwister* (1776), *Iphigenie* (prose version, 1778), *Harzreise im Winter*, and *Briefe aus der Schweiz* (1779), etc. The spell of an Ital. visit (1786–88) is seen in *Die Italienische Reise* (pub. 1816–17). The dramas, *Iphigenie* (poetical version, 1787) and *Torquato Tasso* (1790), are by many reckoned his masterpieces.

G. accompanied the Duke of Weimar in Fr. campaign, 1792–93; formed deep and lasting friendship with Schiller, 1794; app. director of Weimar Court Theatre, 1791–1817; *Metamorphosen der Pflanzen* (1790), *Beiträge zur Optik* (1791, 1792), *Hermann und Dorothea* (narrative poem), and some of G.'s finest ballads appeared, 1789. In 1806 G. married his mistress, Christiane Vulpius. To his later years belong *Die natürliche Tochter* (drama, 1804), first part ('Erster Teil') of *Faust* (1808), the drama which established G.'s reputation as the greatest poet of his time. *Die Wahlverwandtschaften* (novel, 1809), autobiographical *Dichtung und Wahrheit* (1811), *Über Kunst und Alterthum* (1816–32), *Zur Morphologie* (1817–24), *Wilhelm Meister's Wanderjahre* (romance, 1821), and *Faust*, second part ('Zweiter Teil'), 1833.

Of handsome presence and amazing versatility G. ranks as the world's most universally gifted of writers. Distinguished in letters, philosophy, science, and politics, he summed up XVIII. cent., and launched XIX. cent.; dominated Romantic movement, then espoused classical principles; a profound thinker and a great lyric poet, he crowned Ger. lit.

Life, by Lewes (1875), Düntzer (Eng. trans., 1908); M'Cabe, *The Man and Character* (1912); Robertson, *Goethe in Twentieth Century* (1912).

GOETZ, HERMANN (1840–76), Ger. composer; works few but distinctive—opera, *Taming of the Shrew*, Symphony in F, chamber music, etc.

GOFFE, WILLIAM (1605–79), Eng. politician; one of judges of Charles I.; signed death warrant; excluded from Act of Indemnity; fled to America.

GOG AND MAGOG.—It is thought that Biblical characters bearing these names are symbolical for nations dwelling N. of Caucasus, and hostile to Jews.

GOGO, GOGHA (21° 39′ N., 72° 15′ E.), seaport, Bombay, Brit. India, on Gulf of Cambay. Pop. 9500.

GOGOL, NIKOLAI VASILIEVICH (1809–52), Russ. novelist, poet, and dramatist; famed for his Cossack tales and realistic novels exposing the abuses of officialdom. Amongst his principal works are the *Revizor*, a satirical comedy, and a powerful novel, *Mertvuiya Dushi* (Dead Souls).

GOGRA (25° 45′ N., 84° 30′ E.), sacred river, India, rises in Himalayas; flows S.E., joins Ganges at Chapra; length, 600 miles.

GÖHRDE (53° 7′ N., 10° 45′ E.), forest, Hanover, Prussia.

GOIL, LOCH, Scot. fjord, branching off Loch Long (Clyde), Argyllshire; length, 6 miles.

GOITO (45° 14′ N., 10° 42′ E.), village, Mantua, Italy; scene, in 1848, of defeat of Austrians by Piedmontese.

GOITRE, an endemic disease occurring in various districts, *e.g.* certain valleys of Switzerland and Derbyshire in England, characterised by enlargement of the thyroid gland in the neck, and believed to be caused by the drinking-water (containing lime and magnesium salts) of these districts. Distressful symptoms are due to pressure of the enlarged gland on the windpipe, certain nerves, and other structures in its neighbourhood. The treatment is a change of air, rest, and tonics; iron, iodine, or thyroid extract are administered, and if improvement does not take place an operation for removal of part of the gland is carried out. In *Exophthalmic G.*, palpitation of the heart, protrusion of the eyeballs, and anæmia accompany the enlargement of the gland; it is believed to be due either to nervous derangement or to excessive absorption of the secretion of the gland. The treatment is the same as that given above, but the disease, often accompanied by diarrhœa and much wasting, is more serious.

GOKAK (16° 10′ N., 74° 52′ E.), town, Bombay, India. Pop. 12,000.

GOKCHA, Armenian SEVANGA (40° 30′ N., 45° 10′ E.), lake, Russian Transcaucasia; outlet by Zanga into river Aras.

GOLCONDA (17° 22′ N., 78° 26′ E.), fortress and ruined city, Hyderabad, India; capital of a kingdom in XVI. and XVII. cent's; formerly centre of diamond cutting and polishing.

GOLD (Au=197·2), metallic element; known to and prized by the ancients and by the alchemists, who compared it with the sun, and strove to obtain it by the transmutation of base metals through the philosopher's stone. G. generally occurs native, though alloyed with silver, copper, etc., in quartz veins and alluvial deposits. Quartz may contain as much as 1 part of gold in 70,000; alluvium as little as 1 in 15 millions, though nuggets may occur. The chief gold-producing localities are Transvaal, Australia, Russia, and N. America from Mexico to Klondike. G. is widely diffused in minute quantities, and is profitably extracted from sea water.

G. is collected from alluvium by hand or hydraulic washing, mercury being sometimes used to amalgamate with and retain the g. To obtain g. from auriferous quartz the crushed ore is passed with water through a stamp-battery, where it is reduced to fine powder, which passes over amalgamated copper plates. Thus, much of the g. is obtained as amalgam, from which the mercury is distilled.

From 'tailings' from the above process, and poor ores, such as auriferous pyrites, the g. is extracted by (i.) chlorine, and (ii.) weak potassium cyanide solution (MacArthur-Forrest process).

From auric chloride g. is precipitated by ferrous sulphate, thus:

$$AuCl_3 + 3FeSO_4 = Au + FeCl_3 + Fe_2(SO_4)_3.$$

The cyanide reaction is

$$4Au + 8KCN + O_2 + 2H_2O = 4KAu(CN)_2 + 4KOH;$$

and from the aurocyanide g. is precipitated electrolytically (Siemens-Halske), or by zinc, thus:

$$2KAu(CN)_2 + Zn = K_2Zn(CN)_4 + 2Au.$$

G. is refined by heating in a graphite or clay crucible with borax or nitre, the oxidisable impurities being removed as dross; it is then 'parted' from silver by nitric acid, sulphuric acid, or chlorine.

PHYSICAL PROPERTIES.—Pure g. is bright yellow, and crystallises in the regular system; density, 19·4; M.P. 1064° C.; soft, very malleable, and ductile. One ounce of g. as leaf, $\frac{1}{282000}$th inch thick, will cover 189 sq. feet: one grain will gild 2 miles of silver wire; one grain will make 3240 metres of finest wire. G. leaf is green by transmitted light; finely divided g. colours glass ruby-red, and gives a purple tint to photographic prints (toning). Colloidal g. in water is blue, red, purple, or green.

G. is too soft for use, and is therefore alloyed with silver or copper; 24 carat is pure g. Eng. g. coinage is 22 carat—22 g. to 2 copper. Lower standards are 18, 15, 12, and 9 carat.

CHEMICAL PROPERTIES AND COMPOUNDS.—G. is the most electro-negative metal; it does not combine directly with oxygen, nor is it dissolved by any single acid. Chlorine dissolves g.; also *aqua regia* which contains free chlorine.

Aurous oxide, Au_2O, in which g. is monovalent, forms aurous salts, *e.g.* AuCl, Au_2S, $KAu(CN)_2$.

Auric oxide, Au_2O_3, in which g. is trivalent, and

chiefly acidic, forms auric compounds, *e.g.* $AuCl_3$, $KAuCl_4$, $KAuO_2+3H_2O$.

Fulminating g. is $Au\begin{matrix}NH\\ \diagup\diagdown\\ NH_2\end{matrix}$; purple of Cassius probably $[Au_2O+SuO_2]$.

Metallurgy of Gold, by Rose; by Eissler; *Cyanide Process for Extraction of Gold*, by Eissler (3rd ed., 1902).

Gold Beating.—Process of producing extremely thin leaves of gold. An ingot of gold, rolled into a thin strip about 1½ in. wide, is, after annealing, cut into squares. These are placed between pieces of tough paper, about 4 in. square, a square of vellum replacing the paper at intervals. The whole is then put in a bag of vellum and beaten with a heavy hammer till the squares of gold have the same area as the squares of paper. Each square of gold is then divided into four equal parts, and the beating is repeated, the paper and vellum being replaced by gold-beater's skin. The dividing and beating is again repeated, until the gold leaves have the thickness of about the $\frac{1}{282000}$th part of an inch.

Gold Thread, see EMBROIDERY.

Gold-Beater's Skin, the thin, tough, outer coat of the cæcum, part of the large intestine of the ox. This coat is cleansed and stretched, coated first with fish-glue and then with albumen. Often used as a plaster to stop bleeding of slight flesh wounds.

Output of g., 1908, was over 21,000,000 oz. (valued at *c.* £89,500,000), 60 % being produced in Brit. Empire. For g. as a standard, see MONEY.

GOLD COAST (5° N., 2° W.), Brit. crown colony and protectorate, including Ashanti and N. territories, on Gulf of Guinea, W. Africa; between Fr. Ivory Coast and Fr. Upper Senegal, and Niger on W. and N., and Ger. Togoland on E.; length of coast-line, 350 miles; area, *c.* 80,000 sq. miles. Climate is hot, damp, and unhealthy; country mostly flat and covered with immense forests and swamps; partly navigable rivers are Ankobra and Volta; principal towns are Accra (capital), Addah, Cape Coast Castle, Quittah, Salt-pond, Winneba, Axim, Akuse; chief products and exports are palm oil, kernels, timber, gold, india-rubber, cocoa, monkey skins; also ground-nuts, coffee, copra, ivory, etc.; output of gold, which gives its name to the colony, is rapidly increasing; was valued at £1,071,616 (1911); silver, copper, and iron also found; government railway from Sekondi on coast to Kumasi, 168 miles; lines between Accra and Mangoase (40 miles), and Tarkwa and Prestea (20 miles), under construction; cables to London and Cape Town; regular steamers from London, Southampton, Plymouth.

G. C. was discovered by Portug., Santander (1470); Diego d'Asambuja built the fort St. Gorge la Mina (present Elmina), 1481; Dutch obtained part of G. C., 1717; Royal African Co. established Dixcove, Winneba, and Accra, 1672; Britain obtained Christianbourg, Augustenbourg, and Fredensbourg from Danes, 1851; and bought Dutch part, 1871–72. Ashanti (*q.v.*), with chief town Kumasi, was placed under Brit. protection, 1896, and after a dangerous rising (1900) was definitely annexed (1901) with N. territories (which lie N. of 8° N.). G. C. is administered by gov.-gen., with executive and legislative council. Pop. (1911) 1,500,000.

Lucas, *West Africa* (2nd ed. vol. iii.); Macdonald, *G. C., Past and Present* (1898); Ellis, *History of G. C.* (1893).

GOLD LEAF, see GOLD.

GOLDBERG (51° 8′ N., 15° 56′ E.), town, on Katzbach, Silesia, Prussia; cloth manufactures. Pop. (1910) 6989.

GOLDEN (39° 46′ N., 105° 12′ W.), city, Colorado, U.S.A.; seat of Colorado School of Mines; potteries; rich mineral deposits.

GOLDEN BULL, an edict issued by Emperor Charles IV. in 1356, to regulate the proceedings at an imperial election; it provided that the election of Holy Rom. Emperor should take place at Frankfort, and the coronation at Aix-la-Chapelle; and that there should be seven electors, the result being decided by majority of votes; these regulations remained in force till close of Holy Rom. Empire in 1806. Name is applicable to any document with golden seal, but is usually confined to important political charters.

GOLDEN CALF, see AARON.

GOLDEN EYE, see under DUCK FAMILY.

GOLDEN FLEECE (classical myth.), the fleece of the winged ram on which Phryxus and his sister, Helle, the children of King Athamas of Thebes, escaped from the wrath of their stepmother, Ino. The recovery of the fleece was the object of the voyage of the Argonauts under Jason.

GOLDEN HORDE, name given to the Kipchaks, a Tartar race, which, about 1240, rose to power in E. Europe. Their leader was Bātū Khan, whose 'golden' pavilion was erected on the Volga bank.

GOLDEN LEGEND, collection of lives of saints (*c.* 1250) by Dominican Jacobus de Voragine; Caxton printed Eng. translation (1483).

GOLDEN NUMBER, see CALENDAR.

GOLDEN ROSE, ornament solemnly blessed by Pope on fourth Sunday in Lent, and sent annually to some prince or community he wishes specially to honour on account of services to Church.

GOLDEN RULE, name given to the precept of Christ in *Matthew* 8^{12}, *Luke* 6^{31}, 'Whatsoever ye would that men should do to you, do ye even so to them.'

GOLDEN-EYE FLIES, see LACEWING FLIES.

GOLDFIELD (37° 43′ N., 117° 15′ W.), town, Nevada, U.S.A.; goldfields. Pop. (1910) 4838.

GOLDFINCH (*Carduelis elegans*), Brit. cage bird. See FINCH FAMILY.

GOLDIE, SIR GEORGE DASHWOOD TAUBMAN (1846–), Eng. explorer and administrator; explored Niger district, Africa, 1877, and with object of uniting this region to Britain founded United African Company, afterwards called Royal Niger Company, of which he became gov., 1895; subdued Illorin and Nupé, 1897; pres., National Defence Association.

GOLDING, ARTHUR (*c.* 1536–1605), Eng. translator; noted for trans. of Cæsar's *Commentaries* (1565) and Ovid's *Metamorphoses* (1565–67); also theological works by Calvin and Beza.

GOLDINGEN, KULDIGA (56° 58′ N., 21° 57′ E.), town, Russia; needle and woollen factories. Pop. 9733.

GOLDMARK, KARL (1832–) Hungarian composer; wrote operas *Queen of Sheba, Merlin*; *Country Wedding* Symphony, etc.

GOLDONI, CARLO (1707–93), Ital. dramatist; founder of the modern school of Ital. comedy, which replaced earlier pantomimic buffoonery; plays deal with domesticity and contemporary manners; lively dialogue and humorous situations; wrote *Mémoires*.

GOLDSBORO (35° 42′ N., 77° 53′ W.), city, N. Carolina, U.S.A.; cotton goods; furniture. Pop. 6107.

GOLDSCHMIDT, see LIND, JENNY.

GOLDSMITH, OLIVER (1728–74), Brit. poet, dramatist, and man-of-letters; s. of an Irish clergyman; b. Pallas, Longford, Ireland; ed. at Trinity Coll., Dublin, and afterwards studied med. at Edinburgh and Leyden. Then he wandered on foot over Europe, and at length, having failed in everything he undertook, turned bookseller's hack in London. After severe struggles G. began to be known in literary society, and made the acquaintance of Johnson, Burke, Reynolds, Garrick, and others. He was plain looking, and marked with smallpox; generous to a fault; extremely foolish in most of his actions; lacking in the ability to make money systematically, or to take care of it when made; but he was beloved by everybody. His *Vicar of Wakefield* (1766) is one of the masterpieces of Eng. fiction, and his brilliant comedy, *She Stoops to Conquer* (1773), still maintains its popularity. His play, *The Good-Natured Man*, though little read now, was much esteemed during his lifetime. His poem, *The Deserted Village*, will not readily be

forgotten. G. wrote many other works—histories, biographies, essays, and poems. Johnson said of him that he 'left scarcely any style of writing untouched, and touched nothing that he did not adorn.'

Life, by Forster (1848), Black (1879), Dobson (1887).

GOLDSTÜCKER, THEODOR (1821–79), Ger. scholar; prof. of Sanskrit in Univ. Coll., London; author of *Sanskrit Dictionary* and other works.

GOLETTA (36° 48′ N., 10° 18′ E.), port, Tunisia, N. Africa; connected with Tunis (11 miles S.) by ship canal traversing shallow salt lake. Pop. 4000.

GOLF.—'The Royal and Ancient game' of golf is generally regarded as originally a Scot. pastime, but there is good reason for believing that it was first played in Holland. When it was introduced into Scotland is not known, but it was certainly highly popular there in the XV. cent. Clubs began to be established early in the XVIII. cent.; that at St. Andrews—the 'Mecca' of golfers—was founded in 1754. James I. instituted a club at Blackheath (1608); Charles I. was fond of the game, and is known to have played on the Links of Leith. The game did not find favour in England until the second half of the XIX. cent.

Golf is played under ideal conditions on the Scot. *links*, *i.e.* ground by the sea, with short, springy turf, diversified with sandholes called 'bunkers.' 'Inland' greens are hilly ground or flat meadows in which artificial 'bunkers' and 'hazards' have to be provided. A full-length course has eighteen 'holes,' placed at 150 to about 500 yards apart, according to the nature of the ground. Holes, about 4 in. in diameter, are placed in smooth 'putting' greens. The game is usually played by two persons, each provided with a small hard ball (of gutta and rubber), or by four persons, two players on each side, who strike the same ball alternately; the match is then called a 'four-some.' The object of each player is to get his ball from the 'teeing-ground' into the hole with the least number of strokes. The one who gains the greater number of holes in the fewest strokes wins the round. For the purpose of driving the ball from good or bad positions a variety of clubs are used. Some of these have wooden heads, others iron, the principal clubs being the driver, brassy, spoon (wood); the cleek, iron, mashie, niblick (iron); and the putter (iron, aluminium, or wood).

Works by Hutchinson, Braid, Taylor, Vardon.

GOLIAD (28° 40′ N., 97° 24′ W.), village, Texas, U.S.A., on San Antonio; cotton-gins, flour-mills.

GOLIARDS, riotous European students of the Middle Ages, whose songs were directed against the asceticism of the Church.

GOLIATH, famous giant of Gath, slain in single combat with David, who was armed only with a sling and stone (*1 Samuel* 17).

GOLITSUIN, VASILY VASILEVICH (1643–1715), Russ. statesman; was intimately associated with the fortunes of the Regent Sophia, and shared her fall.

GOLLNOW (53° 34′ N., 14° 50′ E.), town, Pruss. province of Pomerania, Germany. Pop. (1910) 10,280.

GOLOVIN, FEDOR ALEKSYEEVICH, COUNT (d. 1706), chief minister of Peter the Great of Russia.

GOLOVKIN, GAVRIIL IVANOVICH, COUNT (1660–1734), Russ. statesman; Grand-Chancellor under Peter the Great and Catherine I.; much esteemed by those rulers.

GOLOVNIN, VASILY MIKHAILOVICH (1776–1831), Russ. naval commander and navigator; sailed round the world (1817–19); wrote *My Captivity in Japan* (1811–13; Eng. trans., 1824).

GOLTZ, COLMAR, FREIHERR VON DER (1843–), Pruss. general and author; wrote *The Nation in Arms*, *Rossbach and Jena*, and other military works.

GOLTZIUS, HENDRIK (1558–1617), Dutch engraver; famed for portraits, and imitations of Michael Angelo.

GOLUCHOWSKI, AGENOR, COUNT (b. 1849), Austro-Hungarian statesman; app. Foreign Minister, 1895; possessed great influence with Russia, Germany, and Italy, and peacefully upheld Austrian rights; resigned because of unpopularity with Hungarians, 1906.

GOMAL, GUMAL (32° 10′ N., 69° 30′ E.), river and important pass, on borders of India and Afghanistan.

GOMARUS, FRANZ (1563–1641), Dutch Prot. minister; ed. Oxford, Cambridge, and Heidelberg; prof. at Leiden, Groningen, and Saumur; a good Hebrew scholar.

GOMBRUN, see BANDER ABBASI.

GOMEL, see HOMEL.

GOMERA (28° 8′ N., 17° 22′ W.), one of Canary Islands; chief town, San Sebastian. Area, 144 sq. miles. Pop. 15,385.

GOMEZ, DIOGO (DIEGO) (fl. 1460), Portug. sailor, explorer, and author; judge at Cintra, 1466; wrote chronicle in Latin on life of Prince Henry the Navigator.

GOMEZ DE AVELLANEDA, GERTRUDIS (1814–73), Span. dramatist and poet; her literary dramas include *Saul*, *Baltasar*, and *Alfonso Munio*.

GOMM, SIR WILLIAM MAYNARD (1784–1875), Brit. general; served with distinction in the Peninsula and at *Waterloo*; succ. Napier as commander-in-chief in India (1850).

GOMPERS, SAMUEL (1850–), Amer. politician and publicist; rose from humble position and first became known as prominent trade-unionist; for long pres. of Amer. Federation of Labour; editor of *American Federationist*.

GONCHAROV, IVAN ALEXANDROVICH (1812–91), Russ. novelist; author of *Oblomov*, and other novels valuable as pictures of Russ. society.

GONCOURT, EDMOND LOUIS ANTOINE HUOT DE (1822–96) and **JULES ALFRED HUOT DE** (1830–70), Fr. authors of early naturalist school; collaborated in writing histories and novels, including *Portraits intimes du XVIIIe siècle*, *L'Art du XVIIIe siècle*, *Sœur Philomène*, etc.

GONDA (27° 7′ N., 82° E.), town and district, Fyzabad division, United Provinces, India. District: area, 2813 sq. miles. Pop. 1,403,195. Town: pop. 17,000.

GONDAL (21° 55′ N., 70° 52′ E.), native state, in Kathiawar, Bombay, India.

GONDAR (12° 37′ N., 37° 29′ E.), town, Abyssinia, Africa; formerly capital; much decayed; numerous ruined castles, palaces, and churches; cotton, gold, silver, and fine leather manufactures; partly burned by Dervishes, 1889. Pop. 8000.

GONDIVES, town, W. Haiti; harbour; birthplace of Haitian independence, Jan. 1804. Pop. 13,000.

GONDOKORO (4° 54′ N., 31° 40′ E.), village, on Upper Nile, at frontier of Egyptian Sudan; trading centre.

GONDOLA, kind of boat; long, narrow, and flat-bottomed, high prow and bow, propelled by single oar; used on Venice canals.

GONDOMAR, DIEGO SARMIENTO DE ACUÑA, COUNT OF (1567–1626), Span. diplomat; ambassador to Eng. court, 1613–18 and 1619–22; prevented James I. from joining anti-Span. alliance.

GONDS, DRAVIDIANS (*q.v.*).

GONFALON, State banner of the Middle Ages, particularly that borne in procession by the magistrates (*gonfaloniers*) of the Ital. republics.

GONG (Malay *gong-gong*), instrument of call used by Malays, Chinese, etc.; made of alloy of bronze, tin, and copper, and emits when struck boom which was long a curiosity to Europeans.

GONGORA Y ARGOTE, LUIS DE (1561–1627), Span. poet; admired by Cervantes; affected style (cf. Euphuism) known as *estilo culto*, now called *gongorism*.

GONIOMETER in its simplest form, CONTACT *g.*, is a graduated semicircle of metal at the centre of which two rules are pivoted together. Between these the angles of large crystals with dull faces are

measured. The REFLECTING g., used for small bright crystals which reflect sharply defined images, measures the angle between the normals to two faces, *i.e.* the angle of rotation necessary to superpose the image reflected from the second face on that reflected from the first, while the crystal is rotated about an axis parallel to the edge between two faces. See CRYSTAL (CRYSTALLOGRAPHY).

GONORRHŒA, inflammatory condition of the mucous membrane of the urethra and other genito-urinary passages, caused by a specific organism, the *gonococcus*, and usually resulting from impure sexual intercourse. A purulent discharge commences from about two to eight days after infection, and under proper treatment recovery takes place in two or three weeks, although there is often considerable risk of infection, owing to the presence of gonococci in the urethra, long after that time. The treatment consists of the avoidance of all stimulating or irritating food, the patient drinking freely of barley-water and similar beverages to dilute the urine, while urotropin (10 gr. doses, three times a day) is taken internally as a urinary disinfectant. Copaiba and sandalwood-oil, which have a disinfectant and diuretic action, are used internally with benefit after irritation begins to disappear, and frequent injections should be made into the urethra of 1 % solution of argyrol or a weak solution of potassium permanganate. Chronic gonorrhœa, or *gleet*, and a gonorrhœal inflammation of joints which may result in permanent stiffness of the affected joint or joints, may follow the acute condition; and gonorrhœal discharges from the passages of the mother infecting the eyes of a newborn infant are the commonest cause of blindness (*q.v.*).

GONSALVO DI CORDOVA, see CORDOVA, GONZALO FERNANDEZ DE.

GONTAUT, MARIE JOSÉPHINE LOUISE, DUCHESSE DE (1773–1857), celebrated Frenchwoman, associated with court of Charles X.; her *Memoirs* give an interesting account of period (Eng. trans., 1894).

GONVILLE, EDMUND (d. 1351), Eng. ecclesiastic; part-founder of Gonville and Caius Coll., Cambridge.

GONZAGA, Ital. family, rulers of Mantua from 1328 to 1708; often at war with the Viscontis of Milan. Giovanni Francesco II. obtained marquisate for military services to Emperor Sigismund, 1432; and Federigo II. was cr. duke by Emperor Charles V. in 1530. Line became extinct, 1708.

GONZAGA, THOMAZ ANTONIO (1744–1809), Portug. poet; wrote a collection of love poems, entitled *Marilia*, which achieved great popularity.

GOOCH, SIR DANIEL, Bart. (1816–89), Eng. engineer; greatly advanced Great Western Ry. and laying of transatlantic cable ('Great Eastern').

GOOD FRIDAY, name given to the Friday before Easter, on which the Saviour was crucified. It is kept as a very solemn fast in the R.C. Church, increasingly so in the Anglican, not so much among Nonconformists.

GOOD, JOHN MASON (1764–1827), Eng. author; chiefly known for his *History of Medicine* (1795) and his trans. of Lucretius.

GOODENIACEÆ, genus of Australian herbs and plants, order *Campanulales*; favourite pot plants.

GOODRICH, SAMUEL GRISWOLD (1793–1860), Amer. writer; edit. *The Token* annual; as 'Peter Parley,' wrote chiefly for young people.

GOODRICH, THOMAS (d. 1554), bp. of Ely and Lord Chancellor of England (1551–52); assisted in compilation of the *Institution of a Christian Man*, and Cranmer's *Bible*, and *Book of Common Prayer*.

GOODSIR, JOHN (1814–67), Scot. anatomist; studied dentistry; became curator of museum of Royal Coll. of Surgeons at Edinburgh, and afterwards (1846) prof. of Anat. at Edinburgh Univ.; carried out valuable researches on minute structure of the tissues, being one of the first to recognise the importance of cell-life, and on various branches of anat. and zool.

GOODWIN SANDS (51° 19′ N., 1° 35′ E.), dangerous shoals, E. of Kent, England; separated from mainland by the Downs; shifting sands; scene of many wrecks; said to be submerged estate of Earl Godwin.

GOODWIN, THOMAS (1600–80), Eng. Puritan preacher; friend of Cromwell's; member of Westminster Assembly, 1643; pres. of Magdalen Coll., Oxford, 1650–60.

GOODWIN, WILLIAM WATSON (1831–), Amer. scholar; pub. noted *Greek Grammar*, *Syntax of Moods and Tenses of the Greek Verb*, etc.

GOODWOOD, seat of Duke of Richmond, near summit of S. Downs, 3½ miles from Chichester; noted racecourse.

GOODYEAR, CHARLES (1800–60), Amer. inventor; invented method of producing vulcanised rubber.

GOOGE, BARNABY (1540–94), Eng. pastoral poet; author of *Eglogs, Epytaphes, and Sonettes* (1563).

GOOLD-ADAMS, SIR HAMILTON JOHN (1858–), Brit. administrator; Lieut.-Gov. and Gov. of Orange River Colony, 1901–10; High Commissioner of Cyprus, 1911.

GOOLE (53° 42′ N., 0° 52′ W.), market town and port, West Riding, Yorkshire, England; extensive docks; iron foundries; manufactures sugar, agricultural implements. Pop. (1911) 20,334.

GOORKHAS, see GURKHAS.

GOOSE, a collective term for members of the *Anserinæ*. The group is largely Arctic in character, the only species breeding in Britain being the Grey Lag g. (*Anser cinereus*), although two other species, the *Brent* and the *Barnacle* g., are common winter visitors. The plumage is similar in both sexes; beak tapering and characterised by horny, knobbed tip. Geese are more terrestrial in character than either ducks or swans, and when on the wing travel in typical 'V'-shaped formation, termed by sportsmen a *skein*. The Grey Lag g. is believed to be the progenitor of the domestic species. G. liver has been considered a dainty from early times. In Holland and Germany enormous quantities of geese are reared for the market. Strassburg *pâté de foie gras* is obtained from geese confined in an apartment kept at a high temperature to produce morbid enlargement of liver.

GOOSEBERRY is the fruit of *Ribes grossularia*, natural order *Ribesaceæ*. The shrub has *spines* (modified leaf-bases) and alternate *crenated* three- or five-lobed leaves with dilated *petiole*. The flower has a *monosepalous* bell-shaped *calyx* with five divisions and a *corolla* of five free petals alternating with the divisions of the *calyx*. The five *perigynous* stamens are opposite the petals, and the inferior unilocular *ovary* has two short *styles*. The *ovules* are borne on two *placentas*. The fruit is a berry with a persistent *calyx* at the top, and contains sugar and malic acid. The best growth conditions are cool climate, rich loam, much manure.

GOOTY, GUTTI (15° 6′ N., 77° 33′ E.), town, hill fortress, Anantapur district, Madras, India.

GOPHERS, see POCKET GOPHERS.

GÖPPINGEN (48° 42′ N., 9° 40′ E.), town, on Fils, Württemberg, Germany; cotton and woollen goods. Pop. (1910) 22,362.

GORAKHPUR (26° 44′ N., 83° 23′ E.), district and division, United Provinces, India; district, flat, abounds in lakes and marshes; dense forests; chief rivers, Rapti, Gogra, Great and Little Gandak; products—timber and rice; area, 4535 sq. miles. Pop. 2,938,176. Chief town, GORAKHPUR, on Rapti; river trade, timber, grain. Pop. 64,000.

GORBERSDORF (50° 42′ N., 16° 15′ E.), village, health-resort, province Silesia, Germany.

GORBODUC, legendary Brit. king, subject of the earliest Eng. tragedy, *Gorboduc*, or *Ferrex and Porrex*, by Sackville and Norton, played before Queen Elizabeth (1561).

GORCHAKOV, ALEXANDER MIKHAILOVICH, GORTSCHAKOFF (1798–1883), most distinguished

member of Russ. princely family; ambassador to Württemburg and Austria; Foreign Minister, 1856; Chancellor, 1863; for some time most powerful minister in Europe. To same family belong ALEXANDER IVANOVICH (d. 1825), and ANDREAS IVANOVICH (1768–1855), who fought against Napoleon; MIKHAIL DMITRIEVICH (1795–1861), Russ. commander-in-chief at Crimea, who conducted defence of Sevastopol; and PETER DMITRIEVICH (1790–1868), who commanded division at *Alma* and *Inkermann*.

GORDIAN KNOT, inextricable knot fastened to wagon of Gordius; man who loosed it to rule world; Alexander the Great cut it with sword.

GORDIANUS, MARCUS ANTONIUS, Rom. emperor; devoted to study of letters and philosophy; emperor, 238, in 80th year, for a month, jointly with s., GORDIANUS (killed in battle, 238). His grandson, GORDIANUS, emperor, 238, inflicted great defeat on Persians; assassinated, 244.

GORDIUM (*c.* 40° N., 31° 35′ E.), ancient capital, Phrygia, on Sangarius; here Alexander the Great cut the Gordian knot.

GORDIUS, a Nematomorph worm (*q.v.*).

GORDON, Scot. family; lived in Berwickshire, XII. cent.; descended from Sir Adam G., lord of Huntly, Aberdeenshire, 1318; became Earls and Marquesses of Huntly and Dukes of G.; dukedom extinct, 1836; granted to Duke of Richmond, descendant in female line, 1876.

GORDON, ADAM LINDSAY (1833–70), Brit. poet; ed. Cheltenham and Oxford; afterwards went to Australia and pub. *Bush Ballads* and other vol's of lyrics; committed suicide.

GORDON, ALEXANDER (*c.* 1692–1754), Scot. antiquary; author of *Itinerarium Septentrionale*.

GORDON, CHARLES GEORGE (1833–85), Brit. general and administrator; b. Woolwich; served in Crimea, 1855–56; joined military expedition to China, 1860; present at capture of Peking. During Taiping rebellion he took command of some Chin. troops, trained by European and Amer. officers; relieved Chansu, 1863; reorganised his troops, rightly named 'Ever Victorious'; fought over thirty actions and seized several towns, including Suchow and Chanchufu; final suppression of rebellion largely due to his leadership; refused all pecuniary rewards from Chin. emperor. On returning home G. became Commanding Royal Engineer at Gravesend, and supervised construction of forts to defend Thames; devoted means and spare time to philanthropy; represented Britain in international commission concerning Danube navigation, 1871. Entering service of Khedive of Egypt in 1873, for nearly seven years (the last three as gov. of entire Sudan) he laboured indefatigably to establish law and order in Upper Nile district; resigned on failing to arrange peace between Egypt and Abyssinia, 1880; returned to Sudan at request of Brit. Government, 1884, to quell Mahdi's rebellion; shut up in Khartum by rebels; bravely defended city for a year, but was treacherously killed two days before the arrival of relief force under Wolseley. 'Chinese Gordon' lives as a national hero, thanks to his gallantry as soldier and explorer, his integrity as administrator, his piety as Christian, and his tragic fate.

Lord Cromer, *Modern Egypt* (1908); *Journals of Major-General Gordon at Khartoum* (1885); F. R. Wingate; *Mahdiism and the Egyptian Sudan* (1891); Boulger, *Life of Gordon* (1896).

GORDON, LORD GEORGE (1751–93), son of Duke of G., fanatical leader of GORDON RIOTS, 1780—a violent protest against removal of R.C. disabilities.

GORDON, PATRICK (1635–99), Russ. general; of Scot. birth, he entered the Russ. army, and rose to high rank under Peter the Great.

GORDON, SIR JOHN WATSON (1788–1864), Scot. artist; Pres., R.S.A.; famed for portraits of celebrities, including Scott, De Quincey, Lockhart, Prof. Wilson, Macaulay, and numerous others.

GORDON-CUMMING, ROUALEYN GEORGE (1820–66), Scot. traveller and hunter; wrote *The Lion Hunter of South Africa*.

GORE, CATHERINE GRACE FRANCES (1799–1861), Eng. novelist; author of *Cecil, or the Adventures of a Coxcomb*, *The Banker's Wife*.

GORE, CHARLES (1853–), Eng. theologian; Fellow of Trinity Coll., canon of Westminster, then bp. of Worcester, 1902–4, of Birmingham, 1905–11; since 1911, of Oxford; known particularly for his theological books and social work.

GORÉE (14° 39′ N., 17° 15′ W.), small island, Fr. Senegal, W. Africa, E. of Dakar; chief town, GORÉE; large harbour; formerly important commercial entrepôt.

GÖRGEI, ARTHUR (1818–), Hungarian patriot; fought for Hungarian revolution, 1848–49, winning great victory of *Ozora*, 1848, and numerous successes, 1849; minister of war of new Hungarian republic; became dictator on Kossuth's resignation, 1849; surrendered before combined Austrian and Prussian force at *Vilagos*, 1849.

GORGES, SIR FERDINANDO (*c.* 1566–1647), Eng. soldier and colonist; was prisoner in Spain; fought for Henry IV. of France; sometime gov. of Plymouth; later became founder and chartered proprietor of Maine, New England (1639).

GORGET, broad collar-piece, worn with suit-armour in England, XV.–XVII. cent's.

GORGIAS, see SOPHISTS.

GORGONS, THE (classical myth.), Medusa, Stheno, and Euryale, female monsters, dwelling beyond the Western ocean, who turned to stone any mortal who looked upon them. Medusa alone was mortal, and was slain by Perseus (*q.v.*).

GORGONZOLA (45° 32′ N., 9° 23′ E.), town, Milan, Italy; famous cheese. Pop. 4895.

GORHAM, GEORGE CORNELIUS (1787–1857), Eng. clergyman; central figure in ritual case about baptism, 1847; refused admission to benefice by bishop, but instituted by Privy Council.

GORI (42° N., 44° E.), town, on Kura, Tiflis, Russ. Transcaucasia; corn. Pop. 5100.

GORILLA, largest of anthropoid apes; confined to forest belt of western portion of African tropics. Though a vegetable feeder, it is of ferocious appearance and savage nature, possessing huge teeth; body covered with coarse brown hair, abdomen protruding, arms long, extending below knees, and used somewhat like crutches when walking.

GORINCHEM, GORKUM (51° 49′ N., 4° 59′ E.), fortified town, on Merwede, S. Holland, Netherlands; salmon fisheries; trade in grain, cattle. Pop. (1910) 12,200.

GORING, GEORGE, LORD GORING (1608–57), Eng. soldier; supported Charles I. in Civil War; defeated at *Langport*, 1645; spent rest of life abroad.

GORKI, MAXIM (1868–), pseudonym of Alexei Maximovich Pyeshkov; Russ. writer and revolutionary; in early life an ikon painter, pedlar, scullery boy, baker's apprentice, etc.; produces novels and plays of intense realism and of international repute; Eng. trans. have appeared of *The Orloff Couple and Malva*, *The Outcasts*, and other works; *The Lower Depths* was acted in London, 1903.

Dillon, *M. Gorki* (1902).

GORKUM, see GORINCHEM.

GORLITZ (51° 9′ N., 15° E.), town, Silesia, Prussia; important commercial centre; principal edifice, XV.-cent. Gothic church of St. Peter and St. Paul; cloth, machinery, and glass manufactures. Pop. (1910) 85,790.

GÖRRES, JOHANNES JOSEPH VON (1776–1848), Ger. author and publicist; prof. of Physics in Coblenz Univ. (1800–14); began to pub. his *Die teutschen Volksbücher* (1807), and became a leader of the Ultramontane party. His chief work was *Christliche Mystik* (1842).

GORSE, see FURZE.

GORST, SIR JOHN ELDON (1835–), Brit.

politician; Conserv. M.P., Cambridge (1866); Solicitor Gen. (1885); Under-Sec., India (1886), Treasury (1891), Education (1895); joined Liberal party, 1904.

GORST, SIR J. ELDON (1861–1911), succ. Lord Cromer as Agent and Consul-General in Egypt, 1907; e. s. of above.

GORTON (53° 28′ N., 2° 10′ W.), town, Lancashire, England, forming E. suburb of Manchester; iron works, cotton mills.

GORTSCHAKOFF, see GORCHAKOV.

GORTYNA (35° 10′ N., 25° E.), ancient city, Crete, on river Lathæus.

GORTZ, GEORG HEINRICH VON (1668–1719), Baron von Schlitz; Holstein politician; controlled Charles XII. of Sweden's foreign and financial affairs; executed after king's death.

GÖRZ, GORIZIA (45° 57′ N., 13° 58′ E.), town, Austria, on Isonzo; capital of Görz and Gradisca Crownland; seat of abp.; cathedral, ancient castle; favourite winter resort; silk mills. Pop. (1910) 30,995.

GÖRZ AND GRADISCA (45° 57′ N., 13° 38′ E.), county and crownland, Austria, between Carniola on E., Italy on W.; capital, Görz; surface very mountainous; principal river, Isonzo; extensive vineyards; exports wine and fruit; silk-culture an important industry; pop. mainly Slavic and Catholic; belongs to Austria since 1500. Area, 1127 sq. miles. Pop. (1910) 260,721.

GOSCHEN, GEORGE JOACHIM, VISCOUNT (1831–1907), Brit. statesman and financier; grandson of celebrated Leipzig bookseller (1752–1828) of same name; First Lord of Admiralty, 1871; ambassador to Constantinople, 1880; opposed Home Rule and joined Unionists; Chancellor of Exchequer, 1887–92; converted National Debt, 1888; again First Lord of Admiralty, 1895–1900; adhered to Free Trade.

GOSHAWK, a member of the HAWK FAMILY (*q.v.*).

GOSHEN (30° 18′ N., 32° E.), region, Lower Egypt; settled by Israelites before the Exodus.

GOSHUN, MATSUMURA (1752 – 1811), Jap. artist; founder of the Shijo school; work something akin to that of Okyo, but broader in general effect; used colour more sparingly, and built up his forms more simply. He was highly successful as a teacher, and his pupil, KEIBUN (1779–1843), carried the school to the height of its glory.

GOSLAR (51° 55′ N., 10° 25′ E.), town, Hanover, Prussia, on Gose; has numerous fine old churches and quaint buildings; imperial palace, recently restored, formerly favourite residence of Ger. emperors; silver, copper, lead, sulphur mines; passed from Hanover to Prussia, 1866. Pop. (1910) 18,909.

GOSNOLD, BARTHOLOMEW (d. 1607), Eng. navigator; intimately associated with the colonisation efforts of Sir Walter Raleigh and Capt. John Smith.

GOSPEL (literal meaning—good news) was originally applied to the proclamation by Christ of the kingdom of heaven. Canonical g's are first four books of New Testament, with which are associated names of Matthew, Mark, Luke, and John (*qq.v.*); these were probably written in second half of I. cent. A.D., when the spread of Christianity made written accounts of its origin necessary. First three are called the *Synoptic* g's because of their similarity of matter, method, and style; while St. John's account differs in all three respects. It is now generally believed that St. Mark's G. was written first, and was derived from, and practically identical with, an earlier document; and that Matthew and Luke wrote their accounts by combining this early document with another known as the *Logia*, a compilation of Christ's sayings.

Wright, *Composition of the Four Gospels* (1890).

GOSPORT (50° 48′ N., 1° 8′ W.), seaport, Hampshire, England, opposite Portsmouth, with which it is connected by floating bridge; contains Clarence victualling yard; yacht-building. Pop. (1911) 33,301.

GOSSAMER, fine threads, or webs, formed by spiders, generally attached to trees or plants; hence anything of a light, flimsy nature. See also SPIDERS.

GOSSE, EDMUND, C.B. (1849–), Eng. poet and critic; since 1904 librarian to the House of Lords; famed for his trans. and literary and biographical studies in English, Dutch, and Scandinavian lit.; also much graceful verse.

GOSSE, PHILIP HENRY (1810–88), Eng. naturalist; a careful observer of *marine fauna*; his *Actinologia Britannica* is a standard work on sea-anemones.

GOSSIP (Anglo-Saxon, *God* and *sib*), word meaning (1) sponsor or godparent, (2) friend, (3) idle tattler, (4) idle talk.

GOSSON, STEPHEN (1554–1624), Eng. satirist and ecclesiastic; originally an actor and dramatist, he subsequently took orders, and became Rector of St. Botolph's, London. His *School of Abuse* (1579) is a satire directed against poets, players, and others.

GOT, FRANÇOIS JULES EDMOND (1822–1901), Fr. actor; one of the principal figures of the modern Fr. stage.

GOTA (58° N., 12° 2′ E.), river, Sweden, flowing from Lake Vener into the Cattegat; length, 50 miles; navigable throughout. GOTA CANAL, connects Baltic and Cattegat by way of Lakes Vetter and Vener.

GOTAMA, see BUDDHA.

GOTHA (50° 57′ N., 10° 42′ E.), town, Germany; joint capital, with Coburg, of duchy of Saxe-Coburg-Gotha (*q.v.*); principal building—Friedenstein castle (1643), with library, cabinet of coins, museum of antiquities, and picture-gallery; contains famous geographical publishing house of Justus Perthes (who pub. well-known *Almanach de Gotha*); important industrial centre; manufactures sausages. Pop. (1910) 39,581.

GOTHAM, WISE MEN OF, old name given to the inhabitants of Gotham, a Nottinghamshire village, who were notorious for their stupidity.

GOTHENBURG (57° 39′ N., 11° 59′ E.), seaport, Sweden, on Göta-Elf; large commercial and industrial centre; traversed by numerous canals; consists of old and new town, with fine harbour (seldom blocked by ice); chief industries, shipbuilding, machinery, textiles, wood-pulp, sugar-refining, brewing; founded by Gustavus Adolphus, 1618; rose to commercial importance during continental blockade, 1806; gives name to famous licensing system. Pop. (1911) 167,813.

GOTHIC ARCHITECTURE, see ARCHITECTURE.

GOTHS, Teutonic race whose earliest-known home was the S. shores and islands of Baltic, where they are found in I. cent. A.D. They gradually migrated southwards through central Europe, and early in III. cent. settled in districts to N. of Danube and Black Sea. In this cent. they first came into contact with the Romans, whom they routed at *Abritta* in 251; thereafter for 20 years they ravaged Asia Minor and Balkan regions, and in 270 they obtained the concession of Dacia from Emperor Aurelian. By middle of IV. cent. they had become dominant race of non-Roman Europe, their kingdom stretching in broad band from Black Sea to Baltic. Principal subdivisions of nation are OSTROGOTHS, or East Goths, and VISIGOTHS, or West Goths. The Visigoths were driven across the Danube by invading Huns *c.* 375, and settled under Rom. rule; under Alaric (*q.v.*) they rose in rebellion, overran Greece and Italy, and captured Rome in 410; after Alaric's death they left Italy for Gaul, but were subsequently driven by Franks across Pyrenees, and established a kingdom in Spain which lasted until VIII. cent., when the country was subdued by Muslims. The Ostrogoths were conquered by Huns *c.* 376, when Ermanaric (*q.v.*), the most celebrated Gothic king, committed suicide; they remained in subjection until 451, when they regained independence; and under Theodoric they acquired most of Italy after the break up of Western Empire in 476. After wars with Romans they were eventually defeated by Justinian's general, Narses, and left Italy *c.* 552. Later history is unknown.

Bradley, *Goths* (1888); Hodgkin, *Italy and her Invaders* (1880–99).

GOTLAND (57° 30′ N., 18° 30′ E.), island, Baltic Sea, belonging to Sweden; forms *län* of G., together with several smaller islands. Chief town, Visby. Coast is steep; interior mostly level, with large extent of forest; cultivates barley, rye, wheat, oats, and beet-sugar; main industries are sheep- and cattle-raising, fishing, cement-making, and lime-burning; contains large number of ruined churches. Pop. (1910) 55,219.

GOTO, Goto Retto, Gotto (33° N., 129° E.), group of islands lying W. of Kiushiu, Japan.

GÖTTER, FRIEDRICH WILHELM (1746–97), Ger. poet and dramatist; friend of Goethe; his plays, in classical subjects, followed Fr. models; produced the first Ger. *Musenalmanach.*

GOTTFRIED VON STRASSBURG (XIII. cent.), Ger. epic poet; wrote *Tristan and Isolde,* which served as the foundation of Wagner's opera; Eng. trans. by Weston (1899).

GÖTTINGEN (51° 35′ N., 9° 56′ E.), town, Hanover, Prussia; seat of famous univ. (Georgia Augusta), founded by George II., 1734, with library of over 500,000 vol's; has also Royal academy of sciences, founded 1751; book trade; manufactures scientific and mathematical instruments. Pop. (1910) 37,531.

GÖTTLING, CARL WILHELM (1793–1869), Ger. scholar; edit. Hesiod, and Aristotle's *Politics* and *Economics*; Eng. trans. has appeared of his *Elements of Greek Accentuation* (1831).

GOTTSCHALK, Godescalus (808–67), Ger. thinker; author of several works viewed as heretical; a monk at Orbais, then in Italy; condemned at Council of Quierzy, finally excommunicated by Nicolas I.

GOTTSCHALK, LOUIS MOREAU (1829–69), Amer. pianist and composer.

GOTTSCHALL, RUDOLF VON (1823–1909), Ger. author; wrote epics, dramas, novels, and critical works; his plays include *Pitt and Fox, Amy Robsart, Mazeppa, Catherine Howard,* and others.

GOTTSCHED, JOHANN CHRISTOPH (1700–66), Ger. author; chiefly notable for his works of literary criticism and for his adaptations of Fr. plays.

GÖTZ VON BERLICHINGEN, see Berlichingen, Goetz.

GOUACHE, method of water-colour painting in which the colours are mixed with a preparation of gum.

GOUDA (52° 1′ N., 4° 42′ E.), town, on Yssel, S. Holland; Groote Kerch (1552) has fine stained glass; noted for cheese. Pop. (1910) 24,574.

GOUDIMEL, CLAUDE (1505–72), Fr. composer; set to music in four-part harmony Marot and Théodore de Bèze's trans. of Psalms.

GOUGH, HUGH, Viscount Gough (1779–1869), Brit. general; brought first Chinese War to successful conclusion, 1842; defeated Mahrattas, 1843; Sikhs, 1844, 1849. By final defeat of Sikhs at *Gujerat* added Punjab to Brit. Empire.

GOUGH, JOHN BARTHOLOMEW (1817–86), Anglo-Amer. temperance orator; reformed drunkard.

GOUGH, RICHARD (1735–1809), Eng. antiquary; wrote *Sepulchral Monuments of Great Britain,* etc.

GOUJON, JEAN (1515–66), Fr. sculptor and architect; founded Fr. neo-Greek school; designed *Fountain of the Innocents* and other Louvre decorations; though following antique models, his works are modern in sentiment.

GOULBURN (34° 36′ S., 149° 43′ E.), city, New S. Wales, Australia; seat of Catholic and Anglican bp's; tanneries, boots and shoes. Pop. 10,618.

GOULBURN, EDWARD MEYRICK (1818–97), Brit. clergyman; headmaster, Rugby, and dean, Norwich; theological works.

GOULD, BENJAMIN APTHORP (1824–96), Amer. meteorologist and astronomer; first to use photography in astronomy.

GOULD, JAY (1836–92), Amer. railway proprietor and speculator; built enormous Gould railway system. Son, George Jay (1864–), also railway proprietor and director. Dau., Helen Miller G. (1868–), has liberally endowed various public institutions; m. (1913) Finley Shepard.

GOULD, SIR FRANCIS CARRUTHERS (1844–), Eng. (Liberal) political cartoonist ('F. C. G.'); famous for his work in *Truth, Pall Mall Gazette,* and *Westminster Gazette.*

GOUNOD, CHARLES FRANÇOIS (1819–93), Fr. composer; b. Paris; won *Grand prix de Rome,* 1839; studied sacred music in Rome, especially Palestrina and Bach; first opera, *Sappho,* 1851; *Faust,* 1859, most popular work and long the standard type of Fr. opera; *Philémon et Baucis,* 1860; *La Reine de Saba,* 1862; *Mireille,* 1864; *Romeo and Juliet,* 1867. G. wrote sacred music during the latter part of his life, two oratorios, *The Redemption* and *Mors et Vita,* being among his best works; a master of orchestration; romantic in style, with great dramatic passion.

Tolhurst, *Gounod.*

GOURD, *monœcious* annual herbs, genus *Cucurbitæ,* natural order *Cucurbitacea,* which trail by tendrils; showy yellow flower and large juicy fruits. The *Melon, Cucumber,* and *Vegetable Marrow* are cultivated for table use, while the *Colocynth* yields a purgative. The seeds of all have a destructive action on intestinal parasites. The shell of g. fruits are used as bottles, dippers, etc.

GOURGAUD, GASPARD, BARON (1783–1852), Fr. general; distinguished for personal devotion to Napoleon in wars, and voluntarily shared exile at St. Helena till jealousy of fellow-attendants caused departure; wrote *Campagne de 1815, Journal inédit de Ste. Hélène,* etc.

GOURKO, JOSEPH VLADIMIROVICH, COUNT (1828–1901), Russ. gen.; served with distinction in Turk. War (1877).

GOUROCK (55° 57′ N., 4° 49′ W.), town, watering-place, Scotland, on Firth of Clyde. Pop. (1911) 7430.

GOURVILLE, JEAN HÉRAULT DE (1625–1703), Fr. speculator; condemned to death with Fouquet, but fled country; afterwards financial agent of Condé; wrote important *Mémoires.*

GOUT, constitutional disease characterised by inflammation of joints with deposition of biurate of soda and derangement of various internal organs, particularly the kidneys. The condition is due to excess of uric acid within the body, either through excessive consumption of nitrogenous matter or through deficient oxidation by the tissues and organs, accompanied by an obscure nervous disturbance. G. is hereditary and is influenced by over-indulgence in alcoholic beverages, particularly sweet wines and heavy malt liquors, or in rich foods, by sedentary occupations and overwork, by certain poisons, such as lead, or by a combination of insufficient nourishment and bad hygiene. An attack of g. usually commences with severe pain in the big toe, with perhaps some giddiness and mental depression a little before, the joint being at first red and tender, and later swollen and of a dark colour, an attack lasting about five to ten days, with intermissions of pain. There is constipation, the urine is diminished in quantity, and the appetite is poor. Chronic g. may develop, in which the joints of the toes and fingers are disfigured by so-called chalk-stones, composed of biurate of soda combined with calcium phosphate, under the skin, which may eventually ulcerate through, while there are important changes in the kidneys and other organs. The treatment of g. in the acute stage is rest; the affected limb is kept propped up, and hot fomentations are applied to it; a light milk diet is generally insisted upon, and a simple purgative at first; and then colchicum, which has a powerful effect in g., is administered along with potassium iodide. Massage of the joints is of benefit as the individual improves. In the chronic condition food and drink are carefully regulated, lithia water is of value, and regular exercise, baths, and massage are ordered.

W. Ewart, *Gout and Goutiness.*

GOUTHIÈRE, PIERRE (1740–1806), Fr. metal-worker; one of the greatest craftsmen of his day.

GOUVION SAINT-CYR, LAURENT, MARQUIS DE (1764–1830), Fr. soldier; distinguished in Napoleonic wars; War Minister, 1815, 1817.

GOVAN (55° 52′ N., 4° 19′ W.), town, Lanarkshire, Scotland, on Clyde; large shipbuilding yards; engineering works; locomotive manufactures; incorporated with Glasgow, 1912. Pop. (1911) 89,725.

GOVERNMENT, ruling authority in state; may also mean the person or persons to whom administration is entrusted, and whose duty it is to deal with public affairs at home and to control foreign policy of state. G. have been classified from ancient times as monarchic, aristocratic (or oligarchic), and democratic, according as power is held by one person, by the few, or by the many. In the modern world the principal forms of g. are constitutional monarchy, as in Great Britain, Spain, Austria, Prussia; the republic, as in the United States, France, Switzerland, Portugal; and the absolute monarchy, as in Russia. The last mentioned, however, may be said to be an autocracy only in name, the reality being that a system of officialdom prevails, most of the power being held by heads of various departments; but it is not impossible that a strong ruler might even now establish a despotism as great as that of Peter the Great.

The constitutional monarchies of Europe are of two different types; thus in Spain and Germany the sovereign may, within certain legally fixed limitations, act at his own discretion; and in the latter country at least it sometimes happens that the ruler acts or speaks in a manner condemned by the council of state, the press, and the nation as a whole. In Great Britain and other countries the constitutional monarchy approximates closely to the republican form of g., the sovereign acting only in accordance with the wishes, as expressed by Parliament, of the majority of his subjects. Most noticeable tendencies of Brit. g. are the increasing power of the Lower House as a whole, and the decreasing power of the private member. G. may also be classified, according to the solidification or dispersion of ruling power, as centralised, dual, federal, and confederate; in a centralised g., entire power is in hands of central administrative body; but in the other forms a considerable amount of authority is exercised by local governing bodies.

GOVERNOR, title of chief official of Brit. colony, generally also commander-in-chief; the g. represents Crown, and in colonies not possessing self-government has sole executive and sometimes sole legislative power. Canada, Australia, and South Africa have a governor-general; Australian states have gov's and lieut.-gov's; Canadian provinces have lieut.-gov's; S. African provinces have 'administrators.' In U.S.A. the g. is the chief magistrate of a State, and is elected.

GOW, NEIL (1727–1807), Scot. violinist and composer of dance music; did valuable work in preserving old Scot. melodies. Edited *Gow Collection.*

GOWER, GWYR (51° 36′ N., 4° 8′ W.), seignory and district in Glamorganshire, Wales; on peninsula in Bristol Channel. On coast are famous bone-caves where large deposits of animal remains and some traces of man are to be found. G. has many cairns and an important cromlech.

GOWER, JOHN (d. 1408), Eng. poet; was a person of means and influence; called by his friend, Chaucer, 'the moral Gower.' His Eng. poem, *Confessio Amantis,* consists of love stories and meditations. He also wrote in Latin, *Vox Clamantis,* dealing with the Peasants' revolt; and in Fr. *Speculum Meditantis,* a poem on married life. He was a liberal contributor to St. Saviour's Church, Southwark, where his tomb may be seen.

GOWN (O. Fr. *goun*), outer garment without division for legs; now, except for clerical and academic g., appropriated to use of women, and known as dress or frock.

GOWRIE, CARSE OF (56° 25′ N., 3° 15′ W.), fertile district, Perthshire, Scotland, between R. Tay and the Sidlaw Hills.

GOWRIE, JOHN RUTHVEN, 3RD EARL OF (1577–1600), Scot. noble; central figure of so-called **Gowrie Conspiracy,** a plot to seize and dethrone or assassinate James VI., who was lured to G.'s house in Perth on Aug. 5, 1600. G. and his younger bro., Alexander Ruthven, were seized by the king's followers and slain on the spot. Existence of plot has never been authoritatively established.

Lang, *James VI. and the Gowrie Conspiracy* (1902).

GOWRIE, WILLIAM, 4TH LORD RUTHVEN, EARL OF (c. 1545–84), Scot. noble; joined his f. in murder of Rizzio, 1566; cr. Earl of G., 1581; led party in 'Raid of Ruthven,' whereby king was seized, 1582; executed.

GOYA (29° 12′ S., 59° 14′ W.), town, on Parana, Corrientes, Argentine Republic, S. America; pastoral district; commercial centre. Pop. 7000.

GOYA Y LUCIENTES, FRANCISCO (1746–1828), Span. artist; famed for portraits, including several Span. kings; also distinguished for genre pictures and etchings.

GOYANA, GOYANNA (7° 25′ S., 34° 48′ W.), city, Pernambuco, Brazil, S. America; active trade in sugar, coffee, cotton. Pop. c. 16,000.

GOYAZ (13° S., 48° W.), town and state, Brazil, S. America; between Minas Geraes and Matto Grasso; mountainous; traversed N. to S. by river Tocantius, the Araguay forming W., and Paranahyba S., boundary; extensive forests; chief occupation, agriculture and stock-raising; some tobacco cultivated and gold mined. Area, 266,000 sq. miles. Pop. c. 290,000. Town: pop. 13,475.

GOYEN, JAN JOSEPHSZOON VAN (1596–1656), Dutch artist; a famous master of landscape, his favourite subjects being Dutch scenes and views of the Rhine.

GOZLAN, LÉON (1806–66), Fr. novelist and dramatist; his novels include *Aristide Froissart, Le Notaire de Chantilly,* etc.; plays, *La Pluie et le beau temps, Le Gâteau des reines,* and others.

GOZO (36° 3′ N., 14° 14′ E.), island, in Mediterranean, belonging to Britain; 4 m. N.W. of Malta; ancient *Gaulos.* Area, 20 sq. miles. Pop. 18,000.

GOZZI, CARLO, COUNT (1720–1806), Ital. dramatist; comedies and fairy plays, including *Turandot, Princess of China*; strongly opposed Goldoni's innovations.

GOZZI, GASPARO, COUNT (1713–86), Ital. essayist and poet; famed for his classic prose writings in Venetian journals; pub. *Il Mondo Morale,* etc.

GOZZOLI, BENOZZO (c. 1420–98), Ital. artist of vast industry; pupil of Fra Angelico; principal work consists of series of frescoes illustrating Old Testament history, in the Campo Santo (Pisa), which occupied him for sixteen years.

GRAAFF-REINET (32° 16′ S., 24° 53′ E.), town, Cape of Good Hope province, S. Africa; founded by Cape Dutch, 1786; vineyards and orchards. Pop. (1911) 8129 (including 3903 whites).

GRABBE, CHRISTIAN DIETRICH (1801–36), Ger. dramatist; his works include *Don Juan und Faust, Napoleon, Hannibal.*

GRACCHUS, plebeian Rom. family of *gens* Sempronia, of which most noted members were Tiberius Sempronius G. and Gaius Sempronius G., generally known as the *Gracchi,* sons of **TIBERIUS SEMPRONIUS GRACCHUS,** consul in 177 B.C., and his wife **CORNELIA** (*q.v.*). **TIBERIUS SEMPRONIUS** (163–133 B.C.) fought under Scipio against Carthaginians; became tribune, 133, when he passed agrarian law, allotting public lands to the poor; killed with number of followers, by patricians headed by Scipio Nasica. **GAIUS** (158–121 B.C.) became tribune, 123; introduced many reforms, passed corn law, and re-established agrarian law; while at Carthage, his reputation was undermined by enemies at home; on return, rejected

for tribunate; escaped from ensuing riots, but was found dead next day; like his bro., a lofty character, an ardent reformer, and a fine orator.

Holden, *Lives of the Gracchi.*

GRACE.—(1) The unmerited favour shown by God to man; (2) as means of salvation has become chief Christian symbol as opposed to works; (3) any favour or the disposition to favour; (4) permission; (5) a legal pardon; (6) attractiveness, virtue, charm; (7) musical: subsidiary embellishment, *e.g.* trills.

GRACE, WILLIAM GILBERT (1848–), Eng. cricketer; was for some forty years engaged in first-class cricket, and known as England's 'champion.' As a batsman and all-round cricketer 'W. G.' has never been equalled; a doctor by profession; recipient of a national testimonial (1896) of £10,000.

GRACES, THE (classical myth.), were Aglaia, Thalia, and Euphrosyne, dau's of Zeus. They personified grace, beauty, and mirth; represented as three beautiful maidens with hands and arms intertwined.

GRACIÁN Y MORALES, BALTASAR, Span. author; the style of his prose allegory, *El Criticon*, has been much admired; Eng. trans. of his *The Art of Worldly Wisdom*, by Jacobs (1892).

GRACKLE (*Eulabes*), a genus of starling-like birds, differing from true starlings in their arboreal habits, their spotted eggs, and rictal bristles; inhabitants of South-Eastern Asia.

GRADISCA (45° 53′ N., 13° 29′ E.), town, crown-land of Görz and Gradisca, Austria, on Isonzo; silk mills. Pop. 3881.

GRADO (43° 23′ N., 6° 8′ W.), town, Oviedo, Spain. Pop. 17,125.

GRADUAL, anthem or responsory chanted after Epistle at High Mass.

GRADUATE, one who has passed the examinations of a recognised university for the degree of doctor, bachelor, or master. Originally graduation was a licence to practise a profession. Term 'Graduation' at times applied to prize-giving day in schools and colleges. Graduation and payment of a fee admits to General Council or corresponding body.

GRADUATION is the division of circumferences, arcs, straight lines, cylinders, and cones into any required number of equal parts. Accurate g. is an essential in most scientific instruments. Geometrical methods of division are theoretically the most correct, but difficulties due to material, time, and labour arise in applying them. *Original* g. is the division of the actual article; if a straight line, it is graduated by continual bisection or by measuring off in a straight line lengths equal to the shortest lengths required, the latter method, *stepping*, makes the last divisions appreciably inaccurate. *Copying* g. consists in laying on the article a very accurately divided circle or straight line, called a *dividing plate.* A set square is placed against the pattern, and the required division is then made on the article by means of a knife held close to the square. *Machine* g. was introduced in 1740 to cut the teeth of clock wheels.

GRADUS AD PARNASSUM ('Steps to Parnassus'), dictionary of Latin prosody; an aid to Lat. verse-making.

GRAETZ, HEINRICH (1817–91), Jewish historian; wrote *Geschichte der Juden* (1853–75), best history of Jewish race; pioneer of higher criticism among Jews, but faithful to religion.

GRAEVIUS, JOHANN GEORG (1632–1703), Ger. scholar; Historiographer-Royal to William III. (of England); author of numerous works dealing with classical subjects.

GRAF, ARTURO (1848–), Ital. poet and scholar; prof. of Ital. Lit., Turin (1882); his works include *Poesie e Novelle, Medusa, Dopo il Tramonto*, and several critical writings.

GRAF, KARL HEINRICH (1815–69), Ger. scholar; a pioneer of Old Testament criticism, and wrote *Die geschichtlichen Bücher des Alten Testaments* (1866), etc.

GRÄFE, ALBRECHT VON (1828–70), Ger. oculist; prof. of Ophthalmology at Berlin (1858), and great authority on subject; introduced new treatments for cataract, glaucoma, etc.

GRÄFE, KARL FERDINAND VON (1787–1840), Ger. surgeon; prof. of Surgery at Berlin (1811), and head of military hospitals during Napoleonic wars; author of many surgical works, and made many advances in surgical treatment.

GRAFFITI, name given by archæologists to chalk writings and rough drawings made on ancient buildings at Pompeii and elsewhere.

GRÄFRATH (51° 13′ N., 7° 4′ E.), town, Rhineland, Prussia; steel and iron works. Pop. (1910) 10,062.

GRAFTING, inserting buds or cuts (scions) from one plant (stock) within bark of another so that they unite; used to propagate plants not easily reproducible by seed.

GRAFTON.—(1) (29° 39′ S., 152° 55′ E.) city, New South Wales, on Clarence; agricultural district; sugar-mills. Pop. 5150. (2) (42° 13′ N., 71° 36′ W.) town, Massachusetts, U.S.A.; boots and shoes. Pop. (1910) 5705. (3) (39° 20′ N., 80° W.) city, W. Virginia, U.S.A.; machinery shops; various mills. Pop. (1910) 7563.

GRAFTON, DUKEDOM OF, first conferred upon Henry Fitzroy (1663–90), s. of Charles II. and Barbara Villiers, Duchess of Cleveland.

GRAFTON, RICHARD (d. 1572), Brit. chronicler and printer; was king's printer; printed the 1549 Prayer Book; compiled *Abridgment of the Chronicles of England* (1562).

GRAGNANO, town, 20 miles S.E. Naples; trade in wine and macaroni. Pop. 10,000.

GRAHAM, JOHN, see DUNDEE, VISCOUNT.

GRAHAM, SIR GERALD (1831–99), Brit. gen.; distinguished himself in Crimean and China Wars (1860); commanded in Egyptian War at *Tel-el-Kebir*; wrote *Last Words with Gordon*, and other works.

GRAHAM, SIR JAMES ROBERT GEORGE, Bart. (1792–1861), Brit. statesman; an advanced Liberal, and supporter of the Reform Bill; Home Sec. under Sir Robert Peel (1841–46); First Lord of Admiralty under Aberdeen and Palmerston.

GRAHAM, SYLVESTER (1794–1851), Amer. food reformer; advocate of temperance reform and vegetarianism; introduced 'Graham bread,' made from unbolted flour, and drew up a dietarian and physiological regimen which had many supporters.

GRAHAM, THOMAS (1805–69), Brit. physicist and chemist; appointed Master of the Mint, 1855. His chief researches concerned molecular physics, the absorption of gases by liquids, and the diffusion of gases. He divided substances into crystalloids and colloids, and investigated their behaviour towards membranes. He discovered polybasic acids, and obtained three acids from phosphorous anhydride.

GRAHAME, JAMES (1765–1811), Scot. poet; author of two noteworthy poems—*The Sabbath* and *Mary, Queen of Scots.*

GRAHAM'S DYKE, Rom. fortification, crossing Scotland from Forth to Clyde, constructed in time of Antoninus Pius.

GRAHAM'S LAND, Antarctic district (56° to 57° W., 65° to 67° S.), discovered 1832.

GRAHAMSTOWN (33° 13′ S., 26° 32′ E.), city, Cape Province, S. Africa; educational centre; seat of Anglican and R.C. bp's; agricultural and pastoral district; wool industry. Pop. (1911) 13,803, including 7376 whites.

GRAIL, THE HOLY, a miraculous vessel, which formed subject of many mediæval romances; in most versions of the legend it was a cup sent from heaven, and used by Christ at Last Supper, afterwards coming to possession of Joseph of Arimathea, who collected the Lord's blood in it; on death of Joseph, the grail was taken back to heaven, to be kept there until a hero worthy of it should appear on earth. It enters into the legend of King Arthur and the knights of the Round

Table, many of whom, including Galahad, Perceval, and Gawain, set out in quest of it.

Nutt, *Legends of the Holy Grail* (1902).

GRAIN, see WEIGHTS AND MEASURES.

GRAIN AND GRANARIES.—Grain includes wheat, barley, oats, and various other cereal food-stuffs. Of these wheat is the most important, and its cultivation dates back to remote times. Oats, an important article of food for animals, are largely used in the form of oatmeal for human consumption; and barley, also a cattle-food, is extensively employed in manufactured products. Wheat is grown both in cold and hot climates: in Canada and Australia; in India and Russia. Excellent wheat crops are grown in the British Isles, but the country relies mainly upon imports from Russia, Australia, Canada, Argentina, India, and other countries.

Granaries are places for the storage of grain, which, in countries like Great Britain, depending largely on foreign supplies, are of prime importance. As grain depreciates in quality and condition under unfavourable atmospheric conditions, its proper storage is essential. In dry, equable climates the matter presents little difficulty, and even earth-pits have been used for storage purposes. In N. America, the provision for grain storage reaches its highest state of development; and the method which obtains there is also to a great extent followed in Great Britain and other countries. The Amer. *grain-elevators*, and their prototypes elsewhere, are vast buildings containing many chambers, called 'silos,' formed of wood, brick, iron, or other suitable material, where grain can be stored under the most favourable conditions. These warehouses, usually adjacent to some waterway, and connected with local railways, are fitted with the most improved appliances for clearing grain-ships at their wharves, and transferring stock to the railway trucks at the sidings.

It has been several times proposed that the Brit. State should hold a six or twelve months' supply of grain, in case of need during a great naval war. A Royal Commission considered this question (1903), but the result was unfavourable to the proposal.

Grain Elevators are used chiefly in U.S.A. for transferring grain from holds of ships to warehouses by means of a number of buckets or scoops arranged regularly on an endless chain or belt, which travels over drums and receives its power from an engine. The name grain elevator is also applied to buildings which store grain. The largest elevator buildings are found at Chicago and Buffalo.

GRAINS OF PARADISE, aromatic seeds of *Amomum melegueta* and *A. grana paradisi*; used as condiments and for embalming.

GRAM, or CHICK-PEA, an annual herb, natural order *Leguminosæ*, with bluish purple flowers, cultivated as a pulse-food in S. Europe, Egypt, and India.

GRAMMAR consists of a code of laws to which the usage of the best writers of an age and language conforms. G. is not a static thing. Speech varies in different areas and in different periods, and the only pattern or standard available is the usage of the best writers and speakers. One language may have very many dialects. Each *dialect* will have an independent g., but in such cases one dialect is usually preferred because it is employed at the court, or in the chief univ., or is represented by the finest body of lit. There is, however, a possibility and a probability that the usages of the other dialects may become standard, because it is from the so-called dialect sources that the approved speech is for the most part replenished and renewed. Such growth, therefore, implies various transition stages when alternative forms exist side by side, and time only (and not the grammarian) can choose between them.

Only by patient study of the evolution and development of forms can the seeming irregularities and anomalies of g. be understood. G. falls into two broad divisions—(1) MORPHOLOGY, which deals with the form, structure, and inflections of words; (2) SYNTAX, which deals with the arrangement of proper word-forms in groups and sentences. Morphology is concerned with the classification of stems and the classification of inflections. Inflections designate relations to other words in the group (*e.g.* case), or qualify and limit the meaning of the word (*e.g.* gender). Languages vary greatly in the number and kind of inflections. Inflections themselves belong to a more or less advanced stage in a language development. *Comparative* g. is necessary for the proper appreciation of the individual systems.

GRAMME, see WEIGHTS AND MEASURES.

GRAMMICHELE (37° 12′ N., 14° 39′ E.), town, Catania, Sicily. Pop. 15,075.

GRAMONT, ANTOINE AGÉNOR ALFRED, DUC DE (1818–80), Fr. statesman and diplomat; ambassador to Italy, 1857; Austria, 1861; Foreign Minister, 1870; had considerable share in causing outbreak of Franco-German War; wrote *La France et la Prusse avant la Guerre*.

GRAMONT, PHILIBERT, COMTE DE (1621–1707), Fr. courtier; famed for his handsome person, wit, and gallantries; served under Condé and Turenne; favourite of Louis XIV.; later exiled, he appeared at the court of Charles II. of England. His *Mémoires*, compiled by his bro.-in-law, Anthony Hamilton (*q.v.*), is a Fr. classic.

GRAMOPHONE, talking machine on similar principle to phonograph (*q.v.*), with flat disk instead of cylinder, with or without sound-trumpet; chief manufacturing centres, U.S.A. and England.

GRAMPIANS, THE (56° 50′ N., 4° W.), mountain range, Central Scotland, stretching N.E. to S.W. from counties of Banff and Aberdeen to Argyll and Dumbarton; highest summit, Ben Nevis, 4406 ft.

GRAMPOUND (50° 18′ N., 4° 54′ W.), small market town, on Fal, Cornwall, England.

GRAN, Ger. name of ESZTERGOM (*q.v.*).

GRAN CHACO, EL (25° S., 60° W.), extensive region, Argentine Republic, S. America, comprising Bolivia, Paraguay, Argentina, and Brazil; traversed by Pilcomayo, Bermejo, and other affluents of Paraguay; surface mostly flat, with sandy deserts and large tracts of forest; portions subject to periodical inundations; thinly populated by nomadic Indian tribes.

GRAN SASSO D'ITALIA, MONT CORNO (42° 27′ N., 13° 40′ E.), highest group of the Apennines; highest summit, 9585 ft.

GRANADA (12° N., 85° 56′ W.), city, Nicaragua, Cent. America, on Nicaragua Lake; manufactures gold-wire chains; exports indigo, hides, cocoa, coffee. Pop. 20,000.

GRANADA (37° 13′ N., 3° 41′ W.), town, Andalusia, Spain; capital of province G.; splendidly situated at base of Sierra Nevada on Darro and Genil. Outstanding features are the Alhambra (*q.v.*), Alcazabar (citadel), on strongly fortified eminence; Generalife (summer residence of Moorish kings); fine Gothic cathedral (1528), Segrario, with royal mausoleum; monastery of St. Jerome (1492), univ. (1531), and many old interesting houses. G. was founded VIII. cent.; capital of Moorish kingdom, and great trading and artistic centre in XIII. cent.; last Moorish stronghold in Spain; taken by Spaniards, 1492. Pop. (1910) 77,425.

GRANADA (37° 30′ N., 3° W.), maritime province, S. Spain, formed from part of ancient Moorish kingdom of Granada; generally mountainous, traversed by Sierra Nevada; fine fertile valleys and plains; rich in minerals; produces wheat, barley, wine, sugar, fruit; area, 4928 sq. miles. Pop. (1910) 503,898. Capital, Granada, has a univ. Pop. (1910) 77,425.

GRANADA, LUIS DE (1504–88), Span. theologian; provincial of Dominicans in Portugal; a mystical thinker, he was suspected by the Inquisition and his works put on the Index.

GRANBY, JOHN MANNERS, MARQUESS OF (1721–70), Eng. soldier; commanded Brit. troops in Germany, 1760–63; commander-in-chief, 1766.

GRAND ALLIANCE, WAR OF THE, see FRANCE.

GRAND CANYON (36° N., 114° W.), gorge in plateau region of Arizona, U.S.A., cut out by Colorado River, 200–300 miles long, 4½ to 12 miles wide, average depth 4000 ft., but in some parts even 6000 ft. Walls of gorge descend in series of shelves with detached pillars and masses of rock; magnificent rock-colouring and countless side gorges. Most important exploration by Powell (1869). Part of canyon now reached by branch of Atchison, Topeka, and Santa Fé railway from Williams Station (Arizona).

GRAND FORKS.—(1) (48° 50′ N., 117° 50′ W.) city and port, British Columbia. (2) (47° 59′ N., 97° 2′ W.) city, N. Dakota, U.S.A., on Red River; seat of univ. of N. Dakota; large lumber and flour mills; agricultural implements. Pop. (1910) 12,478.

GRAND HAVEN (43° 5′ N., 86° 15′ W.), city, port of entry, Michigan, U.S.A., on Lake Michigan, at mouth of Grand River; ships lumber, fruit, grain, celery; important fisheries; machinery shops; various manufactures. Pop. (1910) 5856.

GRAND ISLAND (40° 55′ N., 98° 20′ W.), city, Nebraska, U.S.A., on Platte; seat of Grand Island Coll. (1892); sugar industries. Pop. (1910) 10,326.

GRAND RAPIDS (42° 58′ N., 85° 41′ W.), city, Michigan, U.S.A., on Grand River; seat of Michigan Soldiers' Home and many other charitable institutions; R.C. and Prot. Epis. see; important commerce and manufactures; large lumber industry; furniture, wooden-ware, machinery, flour-mills; large gypsum quarries in vicinity. Pop. (1910) 112,571.

GRAND RAPIDS (44° 23′ N., 89° 41′ W.), town, Wisconsin, U.S.A., on Wisconsin River; large manufacturing centre. Pop. (1910) 6521.

GRAND-DUKE, title, dating from the XVI. cent., at present borne by several European rulers. It is also given to the nearest relatives and the children of the Tsar of Russia.

GRANDEE, title borne by Span. nobles of the highest rank. Formerly the title carried special privileges.

GRAND-JURY, see JURY.

GRANDMONTINES, order of hermits (living much like the Camaldolese, *q.v.*) founded by St. Stephen of Thiers (XI. cent.); named from Grandmont, near Muret, where large monastery was founded; order ceased XVIII. cent.

GRANDSON, GRANSON (46° 49′ N., 6° 38′ E.), town, Swiss canton Vaud, on Lake Neuchâtel; scene of defeat of Charles the Bold by Swiss, 1476.

GRANDVILLE, pseudonym of **GÉRARD, JEAN IGNACE ISIDORE** (*q.v.*).

GRANET, FRANÇOIS MARIUS (1777–1849), Fr. artist; famed for his painting of monastic scenes.

GRANGEMOUTH (56° 2′ N., 3° 45′ W.), seaport town, Stirlingshire, Scotland, on Firth of Forth; large docks; shipbuilding yards; exports coal, iron. Pop. (1911) 9480.

GRANGER, JAMES (1723–76), Eng. biographer; vicar of Shiplake (Oxon); wrote *Biographical History of England,* in which portraits were first introduced; hence 'to Grangerise' is to insert illustrations from other books.

GRANGERS or **GRANGES,** nickname of an agricultural association founded in America, 1867, for farmers' education and co-operation.

GRANIER DE CASSAGNAC, see CASSAGNAC.

GRANITE, unstratified rocks, composed of quartz, felspar, and mica, occurring in masses. G's are the most abundant of igneous rocks, and have been subjected to great pressure; they belong to various periods, ranging from the pre-Cambrian to Tertiary. They vary in hardness and colour according to their composition; Aberdeen g. is blue-grey, Peterhead g. is red, due to the felspar or orthoclase in its composition. G. containing hornblende is known as syenite. G's are much used for building and monumental purposes. Aberdeen is known as the *Granite City.*

GRANSON, see GRANDSON.

GRANT, legal term for transfer of property by deed; popularised by Real Property Act (1845).

GRANT, ANNE (1755–1838), Scot. authoress; wrote *Letters from the Mountains* and other works dealing with the Highlands.

GRANT, CHARLES (1778–1866), see GLENELG, LORD.

GRANT, GEORGE MUNRO (1835–1902), Canadian educationist; principal of Kingston Univ. (Ontario); author of *Ocean to Ocean, Our National Objects and Aims.*

GRANT, JAMES (1822–87), Scot. novelist; author of *The Romance of War* and other brisk hist. and military novels; also *British Battles on Sea and Land* and *Old and New Edinburgh.*

GRANT, JAMES AUGUSTUS (1827–92), Scot. soldier and explorer; served during Indian Mutiny; was associated with Speke in exploration of equatorial East Africa (1860–63).

GRANT, ROBERT (1814–92), Brit. astronomer; pub. *History of Physical Astronomy* (1852); *Glasgow Catalogue of 6415 Stars* (1883); *Glasgow Catalogue of 2156 Stars* (1892).

GRANT, ROBERT (1852–), Amer. lawyer and novelist; wrote *Face to Face* (1886), etc.

GRANT, SIR ALEXANDER, 8th Bart. (1826–84), Brit. educationist; principal of Edinburgh Univ. (1868–84); noted for warm advocacy of extended facilities for medical study.

GRANT, SIR FRANCIS (1803–78), Brit. artist; pres., R.A. (1866); chiefly notable for portraits of celebrities.

GRANT, SIR JAMES HOPE (1808–75), Brit. general; distinguished in Ind. Mutiny, 1857, and Chin. campaign, 1860; commander-in-chief of army of Madras, 1861; reorganised home army, 1865–70.

GRANT, SIR PATRICK (1804–95), Brit. general; performed useful service in India during Mutiny; gov. of Malta (1867–72); gov. of Chelsea Hospital (1874–95).

GRANT, ULYSSES SIMPSON (1822–85), Amer. soldier and statesman; pres. of U.S.; b. at Point Pleasant, Ohio; served in Mexican War, 1846–48. Soon after outbreak of Civil War, 1861, G. became brigadier-general; took Paducah, 1861; captured Fort Donelson, 1862, in which year he was victorious at Shiloh; successfully besieged Vicksburg and defeated Confederates at Chattanooga, 1863; app. commander-in-chief, 1864, and directed great number of severe actions in the Wilderness campaign and the long siege of Petersburg, 1864–5, which Federal army finally occupied as well as Richmond, April 1865. The surrender of Confederates at Appomattox ended the war. After Lincoln's assassination he became war secretary during Johnson's presidency; elected pres. in 1868, and re-elected in 1872. During his administration the national debt was reduced, and the *Alabama* dispute with Britain settled by *Treaty of Washington,* 1871; overtaken by financial misfortune in 1884, to remedy which he wrote his *Personal Memoirs*; d. of cancer.

Hamlin Garland, *Ulysses S. Grant* (New York, 1898); Grant's *Personal Memoirs* (New York, 1885–86).

GRANTH, sacred writings of Sikhs; name derived from Sanskrit word *grantha,* 'a fastening together'; originator of Sikh religious sect was Baba Nanak, a Hindu, whose writings are contained in the *Adi Granth Sahib,* a compilation made by Guru Arjan, and written in various dialects. A second collection made in 1734 is called the *G. of the 10th Guru,* but is not regarded with the same reverence.

GRANTHAM (52° 55′ N., 0° 39′ W.), market town, Lincolnshire, England, on Witham; fine XIII.-cent. church; in grammar school Newton was ed.; in vicinity, on May 13, 1643, Cromwell won his first victory over Royalists; iron manufactures. Pop. (1911) 20,074.

GRANTON, Scot. harbour, on Firth of Forth, near Edinburgh; fishing, coal, and timber trade.

GRANTOWN (57° 20′ N., 3° 36′ W.), market town, on Spey, Elginshire, Scotland; health-resort.

GRANULITE (Lat. *granulum*, a little grain), name of two classes of rocks of granite class and of same family as gneiss. Muscovite and biotite freely occur in g., but as a rule it is composed mostly of quartz felspar. G. often contains small garnets.

GRANVELLA, ANTOINE PERRENOT, CARDINAL DE (1517–86), ecclesiastic and politician: premier to regent in Netherlands, 1559; persecuted Protestants; abp. of Malines, 1560; cardinal, 1561; viceroy of Naples, 1570; abp. of Besançon, 1586.

GRANVILLE.—(1) (48° 51′ N., 1° 37′ W.) fortified seaport, seaside resort, Manche, France; deep-sea fisheries; shipbuilding; active trade; unsuccessfully besieged by the Vendeans in 1793; by British in 1803. Pop. 11,700. (2) (33° 50′ S., 151° 15′ E.) town, Cumberland County, N. S. Wales; flour-mills; tanneries. Pop. 5098. (3) (40° 5′ N., 82° 33′ W.) village, Ohio, U.S.A.; educational centre. Pop. (1910) 1394.

GRANVILLE, GEORGE LEVESON-GOWER, 2ND EARL (1815–91), Brit. politician; M.P. for Morpeth, 1836; Foreign Under-Sec., 1840; held office in all Liberal governments till 1886; promoted exhibition, 1851; Colonial Sec., 1868; Foreign Sec., 1870–74, 1880–85. Liberal leader in Upper House for many years.

GRANVILLE, JOHN CARTERET, EARL (1690–1763), Eng. politician; supported George I. against Jacobites; ambassador to Sweden, 1719; Sec. of State, 1721; Lord-Lieut. of Ireland, 1724–30; secured recall of patent for 'Wood's halfpence.' G. opposed Walpole's policy of peace with Spain; Sec. of State, 1742–44; formed ministry with Lord Bath, which lasted two days, 1746; Pres. of Council, 1751–63.

GRAO (39° 30′ N., 0° 19′ W.), town, Valencia, Spain. Pop. *c.* 6000.

GRAPE, see VINE.

GRAPE HYACINTH, popular name for various liliaceous plants of genus *Muscari*; most have small, blue flowers.

GRAPE-SUGAR, see SUGAR.

GRAPHITE, also called plumbago (Lat. *plumbum*, lead) and blacklead, a form of carbon and one of softest of minerals, occurring in older crystalline rocks such as gneiss and schist, and found in great purity in Burrowdale, Cumberland, also in Canada and Bohemia. Colour is iron grey. G. is used for pencils, giving a smooth surface to casting moulds and lubrication. See also CARBON.

GRAPHS, diagrams, generally drawn for convenience on squared paper, which are intended to illustrate or prove a calculation or an array of facts. For instance, if a table showing the average height of a number of men was required, the simplest form would be a g. with the number of men of similar height arranged in ascending order on the side line with a scale in inches marked along the base. G's of this kind take the form of a tall curve narrowing as it ascends and generally symmetrical; the normal variability curve is of this type. G's are also employed in marking contour lines, barometric conditions, and for temperature charts, while their service is widely employed in math's, especially in Algebra. See CURVE.

GRAPHICAL STATICS are employed in calculations of force-pressure, etc.; specially useful in building problems, *e.g.* in suspension bridges, roofs, etc.

Gibson, *An Elementary Treatise on Graphs* (1904).

GRAPTOLITES, an order of extinct *Hydromedusæ*, occurring in the Lower Palæozoic rocks; believed to be related to existing *Calyptoblasts*, though differing in important details. The harder parts alone remain to us, and these, when preserved in the original condition, are found to consist of *chitin*. Generally, however, they are replaced by iron pyrites, or have become carbonised. They consist of a series of small cup-shaped structures, termed *hydrothecæ*, arranged in close succession, in one or more series along a median rod or virgula. The hydrothecæ are connected by a common median canal, and each is believed to have contained a jelly-like polyp.

GRASLITZ (50° 21′ N., 12° 27′ E.), town, Bohemia, Austria; manufactures cottons and laces, upholstery. Pop. (1911) 13,825.

GRASMERE (54° 27′ N., 3° 1′ W.), lake, Westmoreland, England; 1 mile long; also village on lake, associated with Wordsworth, De Quincey, and Coleridge. Pop. (1911) 876.

GRASS.—The presence of grassland depends not so much on soil as on rainfall. Grasses have shallow roots and require frequent showers during their growing season. The earth is naturally divided into *woodland*, *desert*, and *grass-land*, but an increase of pasture at the expense of woodland may spoil the pastures of a locality. Nearly all pastures are sown with mixed grasses. Of these *Phleum pratense* (timothy grass) is cheap, and used for crops of more than one year's duration. *Lolium perenne* (perennial rye-grass) is cheap, and very popular. *Alopecurus pratensis* (meadow fox-tail) is expensive, and therefore often adulterated.

Grasses are herbaceous *monocotyledonous* plants with jointed stems, hollow except at the bases of the leaves. They belong to the natural order *Tramineæ*, which includes *cereals*, *grasses*, and *bamboos*. The *embryo* has one *cotyledon*, which remains behind in the seed-coat to absorb the *endosperm*. The primary root is soon replaced by other roots from the base of the stem. The long, narrow leaves are parallel-veined and have long membraneous sheaths, which enclose the stem, being split on the side opposite the leaf-blade. The leaves are arranged in two opposite series. In the buds the leaves may be rolled or folded. The flowers are arranged in *spikelets* (*i.e.* are borne on the axis without stalks). These may be grouped together in various ways. If the *spikelets* are borne on branches of the main axis the *inflorescence* is a *panicle*, which is loose as in the *oat*, or close and cylindrical as in the *fox-tail* grass. In the *wheat* the *spikelets* form a compound *spike*. The number and character of the flowers in a *spikelet* vary, and the sepals and petals are absent or scaly. The *spikelet* bears a number of scales in two rows; the two basal scales have no flowers, and are called *glumes*. The other scales represent *bracts* and carry flowers in their axils. They constitute the lower or outer *palæ* or *flowering glumes*. A long process, the *awn*, is sometimes carried by the lower *palæ*. Above the lower *palæ* is the flower, above which there is a scaly *bracteole* called the *upper* or *inner palæ*. The flower has three or two *stamens* inserted below the *pistil* and borne on long, slender filaments. The *anthers* are versatile. The *pistil* consists of one *carpel* bearing two feathery *stigmas*, and the *ovary* contains one *ovule*. The fruit is a *caryopsis*, *i.e.* has the seed-coats and fruit-wall fused together, while the seed is *albuminous*. Two little scales, *lodicules*, are found at the base of the ovary. The *stigma* ripens first and the wild grasses are cross-fertilised, but the cultivated *cereals* are self-pollinated. All are *wind-pollinated*. Perennial grass grows either by *rhizomes*, *runners*, or *suckers*, or by branching at the base form tufts.—CEREALS form a useful member of the series in the rotation of crops, for they absorb a large quantity of *silica* and take from the ground less than half as much nitrogen, lime, and potash as turnips or potatoes do. They are cultivated for their *seeds*, which contain large amounts of *carbohydrate* and fair amounts of *protein*. All contain more or less mineral matter, but a large quantity of the *silica* is stored in the leaves. Of the pasture grasses the *Poas* are much used in meadows. The *Fescues* are grown largely. *Dactylis glomerata* (cock's-foot) is too coarse for fields, and is usually restricted to waste places.

Percival, *Agricultural Botany* (1902); Marshall Ward, *Grasses* (1910).

GRASS OF PARNASSUS, name applied to various herbaceous plants of genus *Parnassia*, order *Saxifragaceæ*; particularly *P. palustris*.

GRASS PARRAKEET, see under PARROT TRIBE.

GRASSE (43° 39′ N., 6° 54′ E.), town, Alpes Maritimes, France; celebrated for manufacture of essences and perfumes. Pop. 16,000.

GRASSE, FRANÇOIS JOSEPH PAUL, COMTE DE (1722–88), Fr. naval leader; defeated and captured by Rodney (1782).

GRASSHOPPERS (*Locustidæ*) form a family of ORTHOPTERA (*q.v.*), differing from true locusts in possessing long, tapering antennæ and four-jointed terminal leg-segments. Many are green in colour, and all are herbivorous, and in the main nocturnal, when their chirping music is commonly heard. There are moderately few small species in temperate regions, but in the tropics there is great diversity in size, shape, and colour.

GRASS-TREE, popular name for Australian liliaceous plants of genus *Xanthorrhea*; yield resin.

GRATIAN, see CANON LAW.

GRATIANUS (375–80), Rom. emperor whose weakness led to revolts; rebellion of Maximus in Britain and Gaul ended in assassination of G.; ardent Christian.

GRATIANUS, FRANCISCUS (XI. cent.), Ital. monk; compiler of the *Decretum Gratiani*, first treatise on canon law (*q.v.*).

GRATIOLA, see HYSSOP.

GRATTAN, HENRY (1746–1820), Irish orator and statesman; b. Dublin; after studying law in London was called to Irish Bar; entered Irish Parliament, 1775; as leader of national party, advocated removal of authority exercised by Brit. Parliament over Irish Parliament, his attitude leading to enrolment of 80,000 Irish volunteers, ostensibly for defence of Ireland; Britain was compelled to yield to Irish demands, and Ireland obtained Home Rule; for this service G. received grant of £50,000. In 1800 he opposed bill for Union of Great Britain and Ireland, to which parliamentary corruption and the Irish rebellion of 1798 had led; but he afterwards sat in the United Parliament, and until his death worked incessantly for Catholic emancipation. As a statesman he was broad-minded, disinterested, and patriotic; as an orator, brilliant, witty, and eloquent.

Life, by his s., Henry G.; and by R. Dunlop.

GRATTIUS, FALISCUS, Rom. poet; author of *Cynegetica*, verse treatise on hunting, etc.; Eng. trans. by Wase (1654).

GRATZ, see GRAZ.

GRAUDENZ (53° 29′ N., 18° 43′ E.), fortified town, on Vistula, W. Prussia, Germany; has iron foundries and breweries; successfully defended against Fr. in 1807. Pop. (1910) 40,313.

GRAVEL, fragments of rock, worn round by the action of water. Shore g. is composed of small stones washed up by waves; river gravel, stones washed down by rivers to 'pockets'; includes stones varying in size from that of a pea to a hen's egg. Anything smaller than former is called 'sand'; larger, 'shingle.' G. may be composed of any kind of rock, and is used for covering walks or paths in gardens and parks.—**Gravel beds** occur in geological formations of all ages; mostly composed of quartz fragments.

GRAVEL (pathology), calculi or stones. See BLADDER.

GRAVELINES (51° N., 2° 6′ E.), fortified seaport, Nord, France, on Aa; fisheries, scene of victory of Spaniards over Fr., 1558. Pop. 6200.

GRAVELOTTE (49° 6′ N., 6° E.), village, Alsace-Lorraine, Germany; scene of Ger. victory over Fr., 1870.

GRAVES, ALFRED PERCEVAL (1846–), Irish writer; author of 'Father O'Flynn'; has edit. several collections of Irish songs.

GRAVES, CHARLES L. (1856–), bro. of above; author of *The Hawarden Horace* (parodies), etc.

GRAVESEND (51° 27′ N., 22° E.), market town and river port, Kent, England, on Thames; chief pilot station for river; favourite resort of Londoners; boat-building yards; iron foundries; extensive market gardens in vicinity. Pop. (1911) 28,117.

GRAVINA (40° 49′ N., 16° 24′ E.), town, on Gravina, Italy; bp.'s see; cathedral. Pop. 18,085.

GRAVING-DOCK, see DOCK.

GRAVITATION is the attraction which bodies have for one another due to their *mass*. Newton formulated the *Law of G.* thus: 'The force of the attraction which bodies have for one another is directly proportionate to their masses, and inversely proportionate to the square of their distances apart.' This is the most general property of matter, and no exceptions to Newton's Law are known. If a body is thrown up into the air, it falls to the earth after a longer or shorter time, depending upon the greatness of the force opposed to that of gravity. Such a body has a certain attraction for the earth, but since the mass of the earth must necessarily be larger than that of any body on it, the force with which the body attracts the earth must be negligible compared to that with which the earth attracts the body. When the force impelling the body to move upwards is expended, the pull of the earth on the body becomes evident. The value of gravity is 32·2 ft. per sec., and it is unaffected by the nature of the matter. The value of gravity is less at the equator than at the poles, but this does not affect ordinary calculations. By very exact experiment the force of attraction which a body exerts on the earth can be determined. Through the force of g. the sun and various other planets affect the earth, while the earth affects the moon, acting through a distance of 240,000 miles.

The mutual attraction between a body and the earth is represented by its *weight*. The presence of large masses, such as mountains, does not alter the weight of any substance for practical purposes. Weight always acts downwards through the *centre of gravity*, i.e. the point through which the *resultant* of all the forces due to gravity must pass. When a body is lifted a certain resistance is felt. This resistance is the force with which the body is attracted to the earth. Water flowing from a horizontal hose gradually curves towards the earth as the force by which it is expelled horizontally becomes exhausted, and gravity becomes noticeable. A drop of water as it falls towards the ground soon loses its spherical shape and becomes pointed, due to the attraction of the earth on the surface nearest it.

GRAY (47° 26′ N., 5° 35′ E.), town and port, Haute-Saône, France; large flour-mills; iron manufactures. Pop. 6700.

GRAY, ASA (1810–88), Amer. botanist; author of many popular works on bot.; wrote *Structural Bot.* and *Manual of Bot. of the Northern United States*. In the latter he described and systematised the flora of the region. He collected and arranged the Harvard Univ. herbarium.

GRAY, DAVID (1838–61), Scot. poet; author of *The Luggie* and some sonnets; accompanied Robert Buchanan (*q.v.*) to London; was befriended by Lord Houghton; d. of consumption.

GRAY, ELISHA (1835–1901), Amer. inventor and electrician; invented telautograph, and filed patent for telephone a few hours after Bell.

GRAY, JOHN DE (fl. 1200), Eng. bp. (of Norwich) and Irish justiciary; much favoured by King John.

GRAY, JOHN EDWARD (1800–75), Eng. geologist; made the Brit. Museum zoological collection the largest and most complete in the world. He wrote on zoophytes, shells, mollusca, and bot.

GRAY, PATRICK, 6TH BARON G. (d. 1612), Scot. statesman; intrigued against Mary, Queen of Scots; ambassador to England, 1584, 1587; imprisoned by James VI. for plotting, 1587; banished till 1589.

GRAY, ROBERT (1809–72), Eng. colonial bp. (first bp. of Cape Town), and a promoter of Church interests in South Africa.

GRAY, SIR THOMAS (d. c. 1369), Eng. chronicler; his *Scalacronica* deals with the period of the first three Edwards.

GRAY, THOMAS (1716–71), Eng. poet; b.

London; ed. Eton and Peterhouse, Cambridge; spent two years abroad, in company with Horace Walpole; and afterwards returned to Cambridge, where he spent the rest of his life. He declined the laureateship, on the death of Cibber; but in 1768 was app. prof. of Modern History at Cambridge. His poems include *Ode on a Distant Prospect of Eton College* (1747), which was followed by *Pindaric Odes, The Fatal Sisters, The Descent of Odin*, and in 1750 he completed, and sent to Walpole, the MS. of the *Elegy in a Country Churchyard*. He was a famous letter-writer, a sound scholar, and a slow and careful writer. Probably no Eng. poem has found wider acceptance than the *Elegy*, or has provided more quotable passages.

Life, by Mitford; by Gosse.

GRAYLING, general name for various trout-like Salmonidæ fish: genus *Thymallus*. See SALMON.

GRAY'S INN, see INNS OF COURT.

GRAYS THURROCK (51° 29′ N., 0° 23′ E.), town, on Thames, Essex, England; trade in lime, cement, bricks. Pop. (1911) 16,003.

GRAZ, GRATZ (47° 4′ N., 15° 26′ E.), cap. Styria, Austria-Hungary, on Mur; has interesting XV.-cent. cathedral; seat of univ. founded 1586; other features of interest are the Landhaus, Stadt-Park, ancient fortress of Schlossberg (destroyed by the Fr. in 1809), the Joanneum Museum, and the picture-gallery; bishop's see; active industrial centre; manufactures machinery, iron-ware, leather-ware, wine. Pop. (1911) 151,688.

GRAZZINI, ANTONIO FRANCESCO (1503–83), Ital. author; his *Le Cene* (1756), a volume of stories, is distinguished by elegance of style.

GREAT AUK, see AUKS, GUILLEMOT.

GREAT AWAKENING, religious revival which began in New England in 1740 under leadership of George Whitefield and subsequently spread over America.

GREAT BARRIER REEF, coral reefs off E. coast Queensland, Australia; length, 1300 miles; distance from coast, 15 to 155 miles; supposed form of old Australian coast-line; area, about 100,000 sq. miles; broken by several natural navigation channels.

GREAT BARRINGTON (42° 7′ N., 73° 25′ W.), town, summer resort, Massachusetts, U.S.A.; cotton and woollen goods; stone quarries. Pop. (1910) 5926.

GREAT BASIN (*c.* 32° to 45° N., 112° to 122° W.), area in W. Cordilleran region of U.S.A.; *c.* 200,000 sq. miles in extent; surface is varied, and includes mountain chain known as Basin Range, which has smooth valleys with shallow salt lakes; the largest is Great Salt Lake.

GREAT BEAR LAKE (66° N., 120° W.), lake, N.W. Canada; discharges through Great Bear River into the Mackenzie River.

GREAT BRITAIN (49° 57′ to 58° 40′ N., 1° 46′ E. to 6° 13′ W.), large island off W. coast of Europe, consisting of England, Scotland, and Wales. Name *Britannia* was first applied in Rom. times. Rom. Britain in time of Claudius consisted of country S. of Tyne and Solway, which formed a single province of Rom. Empire; Hadrian's famous wall between Tyne and Solway was built *c.* 122 A.D., and in following reign the conquerors extended their dominions to include S. of Scotland, the Wall of Antoninus between Forth and Clyde representing limit of Rom. control from *c.* 142 till *c.* 185, when the N. portion was lost to them. In the III. cent. Severus fixed the limit of his Brit. dominions at Hadrian's Wall, and divided country S. of this into the two provinces of *Britannia Superior* and *Britannia Inferior*. The name G. B. was first applied in 1603, on succession of James VI. of Scotland as James I. of England and Wales. The island has an extreme length of *c.* 605 miles; breadth, *c.* 320 miles; total area, *c.* 88,321 sq. miles; the most northerly point is Dunnet Head, in Caithness; most easterly, Lowestoft Ness, Suffolk; most southerly, Lizard Pt., Cornwall; most westerly, Ardnamurchan Pt., Argyll. Total pop. (1911) 40,935,610. See also UNITED KINGDOM, ENGLAND, SCOTLAND, WALES.

GREAT CIRCLE, any circle of longitude, or the meridian circle at the equator.

GREAT EASTERN, see SHIPS.

GREAT FALLS (47° 30′ N., 111° 20′ W.), city, Montana, U.S.A., on Missouri; rich mining region; large smelting works; flour-mills; ships wool, grain. Pop. (1910) 13,948.

GREAT GRIMSBY, see GRIMSBY.

GREAT HARWOOD (53° 46′ N., 2° 24 'W.), town, Lancashire, England; collieries; cotton mills. Pop. (1911: urban district) 13,817.

GREAT KANAWHA, KANAWHA, see OHIO RIVER.

GREAT LAKES OF NORTH AMERICA, THE.—Collective name for five freshwater lakes—Superior, Michigan, Huron, Erie, and Ontario—situated between Canada on N. and U.S.A. on S., and forming upper waters of St. Lawrence River. Superior, largest lake, is connected with Huron by St. Mary River; Michigan (lying wholly in U.S.A.) joins Huron at Straits of Mackinac; Huron empties itself into Erie by St. Clair River, and lakes, and Detroit River; between Erie and Ontario are Niagara River and Falls. Lakes opened up to navigation, and differences of levels overcome by system of canals with numerous locks. During winter months lakes never completely frozen, but canals and connecting waters closed to traffic. Some of largest and most important towns in N. America situated on shores of lakes. Chicago, on Michigan, and Buffalo, on Erie, share greater part of lake-traffic. Around lakes are extensive coal-fields, iron mines, and grain-growing regions.

GREAT MOTHER OF THE GODS, Phrygian deity in classical times, but the Phrygians may have taken over her worship from earlier peoples, as the worship of a native deity is found throughout Asia Minor. Her worship influenced the Greeks through more than one channel. The Romans identified her with *Ceres* and other goddesses. Under the Empire her worship, like that of Isis and Mithras, became very popular, and was sometimes attended by orgiastic rites. It rivalled Christianity, but in some way its rites prepared the way for it.

GREAT REBELLION, wars in Great Britain, 1642–52, between Royalists and Parliament. Beginning of Parliamentary independence was shown in resisting of monopolies in Elizabeth's reign; James I. showed a certain wisdom in giving way, but Charles I. made an attempt to revive despotism of Tudors; and in his reign the opposition to the Arminianism of the king and Laud by the strong Puritanical party in Parliament culminated in a war which is often called the Puritan Revolution. The king's rejection of the nineteen propositions addressed to him by Parliament in 1642 was immediately followed by raising of royal standard at Nottingham, Aug. 22; in September an encounter took place in which Prince Rupert defeated Essex, the Parliamentary general; battle of *Edgehill*, which followed, Oct. 23, was indecisive, although advantage rested with Charles, whose way to London was left open by Essex's withdrawal to Warwick. Prince Rupert's capture of Brentford, Nov. 12, was followed by meeting between the opposing armies at *Turnham Green*, when Charles, outnumbered, retreated and established his winter quarters at Oxford, which he proceeded to fortify. During winter months some successes were gained by Royalists in Yorkshire, by Roundheads in Midlands.

In April 1643 Roundheads were victorious at *Sourton Down*, captured Hereford, and successfully besieged Reading. In May a small force of Cornish Royalists under Greenvil gained a brilliant victory at *Stratton*, forced Roundheads under Stamford to retire to Exeter, and invaded Devonshire; other Royalist successes were at *Chalgrove Field*, June 18, when John Hampden was mortally wounded, and at *Adwalton Moor*, June 30, when Fairfax suffered severe defeat. The Cornish Royalists were again victorious

at *Lansdowne* in July, after which they were unsuccessfully besieged at Devizes by Roundheads under Waller, whom they repulsed and cut to pieces at *Roundway Down*, July 13; Royalists then seized Bristol, July 26, which made Charles master of the west.

The Eastern Association, of which Cromwell was a leading spirit, now began to attain prominence; Cromwell himself raised a cavalry troop, known from their severe discipline as *Ironsides*, whose quality was shown in defeat of Royalists at *Gainsborough*, July 25. Royalist siege of Gloucester, begun in Aug., was raised, Sept. 5, by Essex, whose subsequent return to London Charles vainly tried to prevent by intercepting him at *Newbury*, where an indecisive battle took place, Sept. 20. Charles then retired to Oxford to winter; and on Sept. 25 the *Solemn League and Covenant* was made between Parliament and Scots, whereby former pledged themselves to establish Presbyterian religion in return for Scot. aid. Siege of Hull by Newcastle, who was defeated by Roundheads at *Winceby*, was raised, Oct. 11; and Lincoln and Gainsborough were retaken by Parliamentary forces. In Dec. Royalists were defeated at *Alton*.

In Jan. 1644 Arundel was seized by Waller, and Roundheads were again victorious at *Nantwich*; while in Yorkshire rebellion broke out afresh and Roundheads laid siege to Newark, which was relieved by Prince Rupert in March. In same month, Royalists were defeated at *Cheriton*, and in April Roundheads laid siege to York. In June, Royalists gained victory at *Copredy Bridge*; but after Rupert's relief of York, were utterly defeated at *Marston Moor*, July 2, which gave mastery of the north to Parliament. In Sept. Charles defeated Essex at *Lostwithiel*; and in same month Royalists in Scotland under Montrose gained victories at *Tippermuir* and *How Burn*, seized Perth, and pillaged Aberdeen. An indecisive battle was fought at *Newbury*, Oct. 27, after which Charles withdrew to Oxford. During winter the Scots Royalists overran the West Highlands, and in Feb. 1645 they gained great victory at *Inverlochy*.

In April 1645, *Self-Denying Ordinance* was passed, and Parliamentary army, which since *Marston Moor* had been broken up by quarrels and mutinies, was reorganised, Fairfax becoming commander-in-chief, with Cromwell as lieut.-gen. *New Model Army* soon changed aspect of war. Defeats were inflicted by Cromwell on Royalist cavalry at *Islip* and *Bampton-in-the-Bush* in April, resulting in its utter disorganisation. Charles then concentrated his forces near Oxford, but subsequently, owing to fact that Committee of Both Kingdoms dispatched Fairfax to relieve Taunton, leaving only Cromwell's force to keep king in check, was able to leave the city and march towards north.

In Scotland, Montrose took Dundee in April, but was immediately compelled to retire; and on May 9 he won a brilliant victory at *Auldearn*. Towards end of May Charles marched to Derbyshire; Rupert captured and pillaged Leicester; and on June 14 battle of *Naseby* resulted in utter rout of Royalists by Roundheads under Fairfax. After this defeat Royalists never completely rallied, their arms meeting with a series of disasters; defeat at *Langport* was followed by fall of Bridgwater in July; in Aug., Bristol was surrendered by Rupert; and on Sept. 13, Montrose, who had previously won battles at *Alford* and *Kilsyth*, was vanquished at *Philiphaugh*. Royalists were also defeated at *Rowton Heath* and *Sherburn* in Oct.; Fairfax subdued Devon, Cromwell Hampshire; Hereford fell towards end of 1645, and king's last army capitulated at Stow-in-the-Wold in March 1646. Newark, Oxford, Raglan, and Harlech Castles fell in turn, and in May 1747 Charles surrendered to Scots at Southwell.

The Scots handed the king over to Parliament in Jan. 1647, and six months later he was seized by the army, from whom he escaped to Isle of Wight, where he publicly made treaty with Parliament and privately with Scots, to whom he promised establishment of Presbyterianism in return for restoration.

Second war broke out in April 1648; Fairfax defeated Royalists in Kent, and starved them into submission at Colchester. Cromwell put down insurrection in Wales, and cut the Scots to pieces in Lancashire, the Royalist cause being finally lost by the brilliant campaign of *Preston*. The king, seized at Carisbrooke, was tried, and beheaded, Jan. 30, 1649.

War was continued until 1652 by Charles II., who on execution of Montrose, May 1650, took the Covenant. Cromwell, on returning from reduction of Ireland, crossed Tweed, July 22; actions took place near Edinburgh in same month, and on Sept. 3 Cromwell annihilated Scots army at *Dunbar*. Finally, disastrous defeat of Charles at *Worcester*, Sept. 3, 1651, closed war, and surrender of Dunottar Castle in 1652 ended the Great Rebellion.

Clarendon, *History of Rebellion* (ed. Macray, 1888); *Fairfax Correspondence* (ed. Bell, 1849); Gardiner, *History of the Great Civil War* (1886–91).

GREAT SALT LAKE (41° N., 112° 30′ W.), shallow inland sea of concentrated brine in Utah, U.S.A., at base of Wasatch Mts. in N.E. portion of Great Basin; size varies greatly; has several islands, largest being Antelope Island; receives waters of Bear, Ogden, Jordan, and Weber; has no outlet but evaporation; contains insects and brine-shrimps, but no fish. Garfield Beach is a bathing-resort on S. coast. First explored by Fremont, 1843. Area, *c.* 1750 sq. miles.

GREAT SLAVE LAKE (62° N., 115° W.), lake, N.W. Canada; discharges by Mackenzie River into Arctic Ocean; *c.* 300 miles long; average breadth, 50 miles.

GREAT SOUTHERN OCEAN, narrow expanse of water encircling the globe almost completely, between parallels of 40° and 66½°.

GREBES (*Podicipedidæ*), a cosmopolitan family of swimming birds, with short, close plumage, brown on upper and white and very glossy on under surface.

GRECO, EL, Dominico Theotocopuli (d. 1614), Cretan artist; pupil of Titian; spent many years in Spain, under the patronage of Philip II.; was an artist of striking and original genius.

GRECO-TURKISH WAR, 1897, see Greece: *History*.

GREECE, a small kingdom of S. Europe, consisting of mainland at extremity of Balkan Peninsula, and numerous islands—Eubœa and Northern Sporades on N.E., Cyclades on S.E., Cerigo on S., Ionian Islands on W. G. is bounded N. by Servia and Bulgaria, E. by Ægean Sea, S. by Mediterranean, W. by Ionian Sea and Albania; area, *c.* 37,000 sq. miles. The mainland is almost bisected by Gulf of Ægina (entering on E.) and Gulfs of Corinth and Patras (entering on W.); the severance is completed by canal across the narrow Isthmus of Corinth. Southern portion is the Morea or Peloponnesus. Coasts are high, rocky, and much indented. Principal inlets (besides afore-mentioned) are Gulfs of Volo, Salonika, and Lamia on N.E.; of Nauplia or Argos, S.E. of Morea; of Laconia and Messenia, S. of Morea; of Arcadia, W. of Morea; of Arta in N.W. Cape Matapan, in S., is most southerly point on mainland of Europe.

Surface generally is mountainous, except for plains of Zituni and Bœotia in E., and that of Thessaly in N. The W. is occupied by Dinaric Mountains, of limestone formation, which continue in Ionian Islands and Morea, where they culminate in Mt. Taygetos (7890 ft.). Pindus Range runs across mainland from Turk. border to Gulf of Corinth, its continuation in Ætolia reaching height of 8236 ft. in Mt. Kiona (highest peak in G.). In N.E. are Mts. of Thessaly, of crystalline formation, which include, just beyond modern Gk. boundary, famous Mt. Olympus (9750 ft.). E. Central G. is crossed by various limestone chains, and includes celebrated Mt. Parnassus (8050 ft.) and Mt. Helicon; this formation also occurs in N.E. Morea and Eubœa, while mountains of crystalline structure appear in Cyclades. Chief rivers are Varna and Peneus, in N.E.; Archelous

or Aspro, in N.W.; Sperchius, entering Gulf of Lamia; Vasilo, S. of Morea; Rhouphia, W. of Morea; Morno, entering Gulf of Patras. Famed in history are Athenian rivers Cephissus and Ilissus, and in myth., Alpheus and Styx.

The cotton plant and madder grow wild; the currant-grape is extensively cultivated along the shores of the Gulf of Corinth and in the Ionian Islands. The vine, olive, citron, fig, orange, lemon, tobacco, and mulberry abound. Wolves and jackals are found, with several kinds of deer, bears in the higher ground, the lynx and badger. Vultures are included among the birds. Climate is subject to extremes of heat and cold; mean temperature, 60° Fahr.; in summer months there is almost no rain, but cool winds temper the otherwise excessive heat and render climate healthy.

GREEK HISTORY.

Prehistoric Times.—The term *Ægean Civilisation* is used to denote the culture of G. and the Ægean islands, with outposts both E. and W., before the coming of the historic Greeks. It is a civilisation whose discovery has only been made within the last generation by the unearthing of various archæological remains. It has no literary records except inscriptions, which are still undeciphered. It seems certain now that in primitive times these lands were inhabited by a long-skulled dark-skinned people to which the name Mediterranean race has been given. The Stone Age came to an end about 3000 B.C., and from that time civilisation greatly improved and a state of culture was reached unsurpassed till classical times. The centre of this was Crete, especially the capital, Knossos; recent excavations show the various stages of culture, sometimes called *Minoan* (from King Minos); and Dr. A. J. Evans divides it into Minoan I., II., and III., each in three subdivisions, coming to an end about 1000 B.C. The art is quite distinct from that of neighbouring races, though it shows affinities with Egypt and Phœnicia. The occurrence of Ægean objects in the tombs of Egyptian kings has enabled us approximately to date the civilisation to which they belong. Minoan civilisation reached a high pitch about 2000 B.C., then after a temporary decline its highest point about 1600, when the city was burnt. It revived somewhat, but was finally destroyed about 1000, when this civilisation in Crete came to an end, though it may have lingered a little in Cyprus and elsewhere. The destroyers were probably still uncivilised Greeks from the north. On the mainland the chief centres were Mycenæ (where it is sometimes called *Mycenæan*) and Tiryns. Ancient Ægean costume, curiously, resembled modern dress more than classical. Its religion was a form of nature worship. A goddess, who appears possibly in the Gk. Artemis and Aphrodite, and her divine son and partner were the chief deities. It is uncertain whether an Indo-European tongue was spoken or not.

Sergi, *The Mediterranean Race*; Evans, *Scripta Minoa*; Burrows, *Discoveries in Crete*.

Ancient History.—The Greek people are a branch of the great Aryan or Indo-European family. They came down from the mountain district that stretches from the Alps to the Himalayas, and dispossessed a people of advanced civilisation that held the lands round the Ægean Sea.

selves in some cities at various times between 700 and 500 B.C. Periander of Corinth, Cleisthenes of Sicyon, Thrasybulus of Miletus are the chief; their influence was largely for good, but no tyranny could long overcome the Gk. love of freedom.

ATHENS comes into prominence in the VI. cent.; her great lawgiver, Solon, set a high ideal, which the tryanny of Peisistratus did little to destroy. After the expulsion of the tyrants (510), the constitution was organised by Cleisthenes on a more democratic basis.

Persian Wars.—The Gk. cities of Asia Minor had first been attacked by Lydia, and all subdued except Miletus; in 546 Cyrus of Persia overthrew Crœsus of Lydia; all Ionia was reduced thereafter, except Miletus, which made a separate treaty. Darius (521–485) determined to extend his empire into Europe, but first had to deal with the Ionic Revolt, led by Miletus and Chios; the Athenians helped to burn Sardis, but the Revolt failed for lack of unity, and their defeat at *Lade* (494) destroyed the Ionians.

Thereafter Darius's general, Mardonius, secured Thrace and Macedonia (493), but failed to reach Greece. A second expedition under Datis and Artaphernes sailed across the Ægean, took Eretria, and landed at *Marathon* (490), but was defeated by the Athenians under Miltiades. The third expedition (480) was led by Darius's successor, Xerxes; Themistocles had organised the Athenian fleet in the interval, and Athens, Corinth, and Ægina were the protagonists in the decisive victory of *Salamis*, after Leonidas and the 300 Spartans had nobly died in defence of *Thermopylæ*; Xerxes fled, leaving Mardonius in Bœotia. A simultaneous attack on Sicily by Carthage was defeated by Gelo, tyrant of Syracuse, at *Himera*. Next year the Greeks under the Spartan Pausanias defeated Mardonius at *Platæa*; a victory by sea and land at *Mycale* finished the war, which determined the fate of Europe. The subject cities were gradually freed by the CONFEDERACY OF DELOS, a maritime league led by Athens.

This Confederacy developed into an Athenian Empire, and its members gradually became subjects. Cimon and Pericles successively developed Athenian strength, the former winning great victories at the *Eurymedon* (467) and in Cyprus (against Persia) in the east, while Pericles, the organiser of Athenian democracy, aimed at land-empire. Athens crushed Ægina, defeated Corinth, and established a short-lived supremacy in central Greece, ended by a defeat at *Coronea* (447) by Thebes.

Sparta had had trouble in the Peloponnese after the Persian Wars, but had recovered, and crushed a rising of the Helots (serfs); gradually the antipathy between the Empire and the League rose, fostered by Corinth, Athens' great trade rival, until it culminated in the *Peloponnesian War* (431–404): Athens *v.* Sparta, Ionian *v.* Dorian, democracy *v.* oligarchy. Athens met with success at *Sphacteria* (425), but was defeated by Thebes at *Delium* (424), and Brasidas the Spartan made havoc of their Thracian possessions. From 421 to 413 the Peace of Nicias closed open hostilities; Sparta defeated her old rival Argos at *Mantinea* (418), while Athens ambitiously tried to gain Sicily and attacked Syracuse (415), but the great SICILIAN EXPEDITION met with a memorable disaster. This led Sparta to renew the war; her capable admiral, Lysander, aided by Persian money, eventually defeated Athens at *Ægospotami* (405) and starved the city into surrender. During this time Athens' one capable man, Alcibiades, proved untrustworthy, and internal dissensions aided her fall; the conquerors granted easy terms.

Sparta now took over the Athenian Empire, but mismanaged it; her allies turned against her, and she began to fail, partly for lack of men, as shown by an attempt by Agesilaus to attack Persia. Athens revived somewhat; Thebes developed strength under Epaminondas, who defeated the Spartans at *Leuctra* (371), and organised Arcadia and Messenia against them; a further victory at *Mantinea* (362) ended Spartan power, but Epaminondas was killed—his work had been entirely destructive.

Macedonian Empire.—Worn out by their struggles,

the Greeks of central and southern Greece fell a prey to the semi-alien power of Macedon under Philip; the resistance of Thebes and Athens, led by the orator Demosthenes, ended at the battle of *Chæronea* (368). His son Alexander had larger schemes: in the name of Greece he attacked Persia; in the three great battles of the *Granicus* (334), *Issus* (333), and *Arbela* (331) he defeated the Persians by the famous Macedonian phalanx, and extended his sway to the Hindu-Kush and the Indus. He tried to hellenise the East, but his premature death (323) left his work half done. His generals divided his Empire: the western part of Asia Minor remained Greek for centuries, but beyond the Euphrates the Oriental element eventually triumphed.

In Greece proper Macedon resumed the position of a semi-alien but dominant state, and the chief feature is the rise of Federations, of which the chief were the ÆTOLIAN and ACHÆAN LEAGUES. In 198 Rome began to look eastwards, first to protect the Greeks

from Macedon, then, in their own interests, to govern them; eventually it became necessary to subdue them, and the destruction of Corinth (146) marked the end of Gk. independence.

The Greeks in Sicily, after the Athenian Expedition, found a strong enemy in Carthage, who took in succession Himera, Selinus, and Acragas, and threatened Syracuse, which was saved by the tyrant Dionysius; the struggle continued intermittently with varying fortunes till Rome intervened to help the Greeks, and the First Punic War (264–241) gave Sicily to Rome.

Greece came under Roman control in 146 B.C., when Mummius, the Rom. general sent to support Sparta, captured and ruined Corinth and defeated the Achæan League. Macedonia then became a province of Rome, and with Achæa was governed by a prætor. Many Gk. institutions were left unaltered, but the cities were deprived of all political importance. Country enjoyed considerable prosperity, which was interrupted by national rising led by Mithridates in I. cent. B.C.; this was suppressed by Rome with great severity by 84 B.C., after which country was in evil case for some time. It revived under the Empire, and was recognised as supreme in field of culture. Christianity was introduced in III. cent., and from this time old paganism gradually declined.

C. W. Oman, *History of Greece* (Longmans, 1901); J. P. Mahaffy, *Greek Life and Thought* (Macmillan, 1896).

Mediæval and Modern History.—G. suffered from invasions of Western Goths in III. cent., Vandals and Eastern Goths in V. cent., Slavs from VI. cent. onwards. After break-up of Rom. Empire, G. formed part of Byzantine dominions till 1204, when it was seized by Latins. During XIII. cent. it was subdivided into fiefs; greater part of country conquered by Turks by 1460; Venetians for some time retained several of the islands, and warred against Turks from time to time, but by 1718 whole country was under domination of Porte. Greeks, who remained in subjection till 1821, were allowed by their Turk. masters to acquire considerable wealth, and the increase of education and culture, which followed, resulted, early in XIX. cent., in a revival of national feeling. In 1821 open rebellion broke out, and the WAR OF GK. INDEPENDENCE began with a rising in Moldavia. The Turks vainly tried to suppress revolt by terrible cruelties and massacres, but within the year they were expelled, G. regained her freedom, and a national constitution was framed. Turkey, however, obtained reinforcements, under Ibrahim Pasha, from Egypt, and reconquered country in 1825. Gk. cause was then taken up by Britain, Russia, and France, whose combined forces destroyed the Turk. and Egyptian fleets at *Navarino*, 1827; further Russ. victories on land completed Turk. discomfiture, and in 1830 the independence of G. was declared by the London protocol.

In 1832 a monarchy under Otho of Bavaria was established; but his despotic rule proved so unpopular that a revolution occurred and he had to leave the country in 1862. Prince George of Denmark became king in 1863, with consent of Britain, France, and Russia. Under him the country enjoyed a fair degree of prosperity until the outbreak of war with Turkey, the king's unwillingness to engage in which made him somewhat unpopular. Dissatisfaction in Greece concerning possession of Crete and Greco-Turk. boundary resulted in GRECO-TURKISH WAR in spring, 1897. In Thessaly Greeks suffered series of defeats, Larissa, Pharsala, and Velestino being taken by Turks, who were also victorious in Epirus at *Homopulos* and at mouth of river *Luro*. Tsar intervened; armistice arranged which resulted in agreement whereby Greece paid large indemnity but lost little territory. Since then the principal events have been the outbreak of a military revolutionary movement in 1909–10; the rivalry with Rumania on the Macedonian question, which in 1905, 1906, and 1910 resulted in the breaking off of diplomatic relations between the countries; constant difficulties with European Powers on account of Crete (*q.v.*); declaration of war against Turkey by G., Oct. 18, 1912 (see TURCO-BALKAN WAR); assassination of king, March 18, 1913.

The **Greek Religion** was an important aspect of Gk. civilisation. Recent research into anthropology, comparative religion, and mythology has made it possible to view it in relation to other systems of belief. Though Gk. religion possessed no doctrinal system there are certain definite characteristics which marked it off from that of neighbouring peoples. It has been defined as 'anthropomorphic polytheism.' Some elements of it were brought in by the Greeks; others were taken over from the older non-Aryan peoples of the Mediterranean, of whose importance we have only lately come to know. One authority distinguishes two types: the *Olympic*, the joyous worship of the gods, and the *Chthonic*, the propitiation of malevolent deities. Certainly the Greeks conceived the gods to be like 'big men' with human passions, while to the Romans they were more shadowy. Gk. religion was profoundly influenced by the introduction of the cult of Dionysus, and by Orphism. These superimposed a mystery religion upon older cults. In the cent's immediately preceding the Christian era G. was more than ever influenced by Oriental worship and modes of thought, and thus the way was prepared for Christianity. See GREEK CHURCH.

GREEK LANGUAGE.

The Greek language belongs to the Indo-European group. Little is known of the pre-Hellenic population of Greece, and surviving elements of the language (chiefly in place-names) show no kinship with the Gk. tongue. But this evidence is not conclusive, and the eventual deciphering of Cretan records may prove an unexpected and uncontestable argument in favour of a close relationship. As it is, Prof. Ridgeway holds that the Achæans adopted the language of the Pelasgians they conquered.

The physical features of Greece and the adjacent islands fostered a diversity of DIALECTS. The country is broken and irregular, and mountain barriers separate state from state. Gk. dialects are usually classified into *Æolic*, *Doric*, *Ionic*, and *Attic*. It was not till the unification of Greece under Macedonian rule that the dialects broke down and a common dialect was established (*koinè dialektos*). Of this one of the best-known examples is the Gk. of the New Testament.

The Gk. alphabet differs from the Roman: Uncials—Α Β Γ Δ Ε Ζ Η Θ Ι Κ Λ Μ Ν Ξ Ο Π Ρ Σ Τ Υ Φ Χ Ψ Ω. Script—*α β γ δ ε ζ η θ ι κ λ μ ν ξ ο π ρ σ τ υ φ χ ψ ω*. Variants, ϑ for *θ*, *φ* for *φ*; obsolete letters, *F*, digamma (*q.v.*), and *ϕ*, koppa, which only survived in numerical calculations. The language is synthetic and inflectional. In Greek we find reduplication verbs. In nouns only five cases survive out of the original eight—nominative, vocative, accusative, genitive, and dative. Greek, like Sanskrit, has three numbers—singular, dual, and plural. The conjugation of the verb is extraordinarily fine and subtle, and is unparalleled in its power of expressing delicate shades of meaning. A fully conjugated verb has three voices and 507 forms.

The vowel-music of the Gk. language is extremely rich. Especially beautiful are the diphthongs, viz. *ai*, *au*, *ei*, *eu*, *oi*, *ou*, *ēi*, *ōi*, *ēu*, *ōu*, and *ui*. Gk. words terminate either in a vowel or in the consonants *n*, *r*, *s*, and *x* (the preposition *ek* alone excepted). This gives the language great flexibility, beauty, and grace. The vocabulary is very copious, and yet it retained perfect purity.

The ATTIC dialect, through the supremacy of Athens, became the dialect of refinement and culture, but the

others were adopted as literary dialects in various branches of poetic composition.

J. Peile, *Introduction to Greek Etymology* (Macmillan, 1875); Goodwin, *Greek Grammar*.

GREEK LITERATURE.

Greek literature falls into six divisions—(1) Early lit. (up to *c.* 475 B.C.), including epic and lyric; (2) Attic (up to *c.* 300 B.C.), including the drama and the development of prose; (3) Alexandrian period of the decadence (up to *c.* 146 A.D.); (4) the Græco-Rom. period (up to c. 529 A.D.); (5) the Byzantine period (up to 1453 A.D.—the date of the capture of Constantinople by the Turks); (6) Modern Gk. (up to the present day).

Ancient.—Gk. lit., as it was a spontaneous growth and uninfluenced by previous and extraneous models, affords a peculiarly instructive study of a natural evolution. The progress of Gk. letters is traced from impersonal epic to personal lyric, and from individualistic lyric to democratic drama. Prose developed later than poetry, and side by side with the drama. Ancient Gk. poetry commences with the *Iliad* and the *Odyssey*—the supposed work of HOMER. Sprung as these epics certainly were from a ballad epoch, in the shadowy times of unwritten lit., their construction is so artistic, and their unity (despite a few inconsistencies) so complete that they must have taken their final form from the genius of a great artist. The groundwork of the poems is a body of Achæan ballads transmuted by the Æolian bards in Asia Minor, and finally shaped by Ionic genius. Their dialect is Ionic, with an admixture of Æolic, and the metre is hexameter.

The epic tradition was continued by the so-called cyclic poems, which completed the tale of Troy divine. In the VIII. cent. B.C. arose the great poet, HESIOD. The keynote of the Homeric poems is joyousness unalloyed by stern reflection; the Hesiodic poems are essentially didactic; the gospel of the *Works and Days* is a gospel of toil unceasing. The didactic tradition was continued by the early cosmologists, *e.g.* Xenophanes and Parmenides. Attributed to Homer is a collection of hymns (the *Homeric Hymns*) addressed to various deities. These hymns really belong to the VI. cent. B.C., when a recitation of the poems of Homer was one of the competitions of the Panathenæa. The reciter was called a rhapsodist, and the hymns are the preludes sung to the presiding gods.

The epic period was succeeded by the LYRIC AGE. Lyric verse, like epic, had its origin among the Ionians, and is the outcome of the intellectual awakening that followed the great migratory enterprise. There are two broad divisions of lyric—elegiac and iambic. Elegiac metre consists of the smooth, flowing hexameter, followed by the broken flow of the pentameter, a metre peculiarly well adapted for meditation and reflection. Elegiac verse suits manifold subjects; Tyrtæus employed it for martial themes, Mimnermus for erotic, Solon for gnomic, and Simonides for commemorative. Subsequently elegiac and iambic verse lost their instrumental associations, and Greek melic poetry was confined to the Dorian and Æolian species. The Æolian was personal and monodic; the Dorian was civic and choral. Æolian verse had its most glorious representative in SAPPHO. The fragments of her poetry show deep passion and supreme beauty of form. PINDAR gave to the Dorian choral lyric the breadth of Panhellenic spirit.

Out of the dithyramb (triumphal song to Dionysus) was developed **Drama**. In the history of the early development of the dithyramb stand Arion and Stesichorus, but the real history of the drama commences with Thespis of Icaria, who introduced one actor, and so made dialogue possible with the leader of the chorus. To this stage belonged Phrynichus, the author of the historical drama, *The Capture of Miletus*. ÆSCHYLUS introduced the second actor, and reduced the importance of the chorus—an epoch-making advance. Thus dialogue became dominant, and three parts became possible, as an actor could take two rôles. Among the dramas of Æschylus that remain is the great trilogy on the house of Agamemnon. The *Agamemnon* tells of the murder of the king by Clytæmnestra, the *Choëphori* deals with the Nemesis that tracked the avenger Orestes, and the *Eumenides* shows the final reconciliation between the Furies and the avenger. The dramas of Æschylus are essentially idealistic. The laws of heaven fulfil their purpose, and that purpose is good, though attained at the cost of individual sacrifice. This is the dominant thought—the fathers sin, and their sins are visited upon the children unto the third and fourth generations.

SOPHOCLES is less universal in his themes. With him the psychological problem is supreme. Tragedy arises where there are duties in conflict, where the will is other than the deed. Thus Antigone has to choose between duty to the written law, or duty to the greater unwritten law. Œdipus had to front the awful consequences of a rash action.

With EURIPIDES we pass from idealistic to realistic drama. The hero, though he be demigod of story, becomes a man, and the conflict he has to face is some subtle, sophistical problem of contemporary Athenian life. Too frequent use is made of the *Deus ex machina*, and the chorus is made a mere embellishment with no vital connection with the story.

Gk. comedy, like tragedy, had its origin in the cult of Dionysus. It springs from the extempore banter of the harvest festivals. Old comedy is represented by Eupolis and ARISTOPHANES, with its fearless ridicule of contemporary events and personalities. The middle comedy criticises movements and not individuals. The new comedy, represented by MENANDER, deals with the humorous aspects of domestic life. See also DRAMA.

The earliest traces of Gk. **Prose** belong to the VI. cent. B.C., and these are mainly genealogies and cosmologies. HERODOTUS was the father of literary Gk. prose. His sentences follow the 'loose' construction. His history is intended to corroborate his theory of the conflict of the East and West.

THUCYDIDES is a much more critical historian. His sentences are periodic in structure, and his chief virtue is the revelation of character. His style is restrained and sterling. He is the most characteristically Greek prose writer. The work of Xenophon is less profound in character, less perfect in finish.

Gk. oratory vacillates between the plain and the ornate, the simple and the florid, till it culminates in the perfect balance of style attained by DEMOSTHENES.

The writings of PLATO cannot be overlooked. As a stylist he is almost as great as he is as a philosopher.

The poetry of Alexandria was not truly Greek in character. It was artificial and scholarly; its appeal was very limited. THEOCRITUS was the most natural poet of the **Alexandrian school**. Less spontaneous were Apollonius Rhodius, Bion, and Moschus.

The **Byzantine** lit., though it affords much invaluable information, has no permanent value for purely literary qualities.

Modern Gk. lit. has produced nothing that is really great. Some of the ballads, folk-songs, and pastorals are beautiful in sentiment and sweet in expression, but the glory of Gk. lit. is of the ancients.

F. B. Jevons, *History of Greek Literature*; Gilbert Murray, *History of Ancient Greek Literature* (London, 1897).

GREEK ART.

Gk. art may be conveniently classified under three heads—architecture, sculpture, and painting. From what survives of the architecture and sculpture, one can conjecture with some degree of certainty to what heights of perfection Gk. art developed in these two branches; but the remains of Gk. painting give us no adequate idea of what was the degree of development in that art.

Architecture.—Out of primitive or Mycenæan arch., which showed genius of a bold and virile type, the Doric, Ionic, and Corinthian orders were developed.

The column is the distinguishing feature of these three types, as it is perhaps the distinguishing feature of Gk. arch. in general. The column had its origin in the tree-trunk used as a prop in primitive dwellings. In Gk. the columns were fluted and slightly tapered. The *Doric* column is simplest and most impressive, being capped by a simple square abacus. Its development culminated in the exquisite proportions of the Parthenon. The distinguishing feature of the *Ionic* column is the volute and torus. The *Corinthian* pillar is more ornate, and belongs to a later age in the history of Gk. arch. Tradition states that its head, with the graceful leaf designs, was suggested to its inventor, Callimachus, by the twining of the leaves of the acanthus plant. The Corinthian pillar was susceptible to embellishment, and with the decay of the pure Gk. genius it degenerated into designs tawdry and trivial.

Gk. arch. at its best is marked by a noble and simple symmetry. That definiteness which is so characteristic of the Gk. genius is reflected in the exquisite precision of the temples and their chaste beauty. G. in the structure of her temples was true to her motto, that there ought to be 'Nothing in excess.' See ARCHITECTURE.

Sculpture.—To pass from Gk. arch. to Gk. sculpture is a natural step, because the metopes of the temples were adorned with the finest masterpieces of sculpture, and within the temples stood the statues of the gods. Gk. sculpture, like the other Gk. arts, is in spirit ethical and ideal. It is an exquisite mingling of the human and the divine. Inspiration was sought from the gods, on whom the Gk. mind loved to dwell, but the sculptor's material was found in the palæstra. It was the perfection of the human physique, produced by the system of Gk. physical culture, which produced the magnificent statuary which will ever be the glory of G. and a wonder of the world. The temple statue developed out of the rude image of a deity rough-hewn out of a tree-trunk. Up to classical times, such rude images survived in the ancient temples; and the Hermes busts that stood, in the time of the highest civilisation of G., at the cross-roads mark the transition from tree-trunk to marble statue. Moreover, just as the most perfect of Gk. columns, the Doric, was marked by a solemn simplicity of line, so the finest examples of Gk. statuary were marked by a sublime freedom from all traces of sentimentality. The pose, too, of the statue at first showed the obvious influence of the tree-trunk type. The members were arranged in rigid symmetry—the legs and arms being stiff and straight.

At the period of the perfection of Gk. sculpture—the period of PHEIDIAS and his school—the statue had lost its rigidity, but still retained a suggestion of calm and dignified composure. Gk. art was really on the decline when the sculptor sought to portray complex distortions of the frame, though the beauty of such a group as the *Laocoön* of the Rhodian school cannot be denied. Such distortions are conspicuous by their absence in the sculptures of the Parthenon, which, if they are not the actual work of the great Pheidias, belong to his school. The calm dignity of these works has fixed them for all time as the perfect types of classic beauty. Just as in lit. the noble grandeur of Æschylus and Sophocles was followed by the more human and sentimental dramas of Euripides, and just as in arch. the solemn severity of the Doric column was superseded by the ornate and more complex designs of the Corinthian order, so the sentimentality of the decline invaded Gk. sculpture. Thus, if Pheidias is the Æschylus of Gk. sculpture, PRAXITELES is the Euripides. As Euripides made his gods human, so Praxiteles made his statues human. His statue of Venus, coloured (as Gk. statues usually were), seemed the very incarnation of sensuous beauty; and if the exquisite tenderness of the famous statue of Hermes with the infant Dionysus (the best-preserved and most authentic masterpiece of Gk. sculpture) is a sign of the decay of the sublime in Gk. art, it is not a sign of the decay of its beauty.

Painting.—As no paintings of the classical age in G. survives, criticism on this art is reduced to conjecture. One can make deductions from Rom. wall-paintings excavated at Pompeii. Very probably Gk. painting was weak in regard to perspective. More valuable material is derived from Gk. *vase-painting*. The specimens which have survived of Mycenæan vase-painting reveal beauty of the bold and virile type, and stand comparison in some respects with the art of the best period. The Dorian conquest, as it temporarily threw back the progress of Gk. civilisation, seems to have had a similar influence on art. The art of vase-painting evolved from crude geometric designs and rigid figures arranged with laboured balance. The potter of the early ages set black figures on a light background. The result always tended to be ludicrous. Later, red figures on a dark background were introduced. Lines of expression and anatomy were applied in black glaze. Normally the vase was black and red. White and brown embellishments belong to a later age. The decline in Gk. vase-painting is traced by the growth of elaborate detail and ornament.

Gk. art borrowed from the art of the East, but what it borrowed it made its own, by infusing into it its characteristic spirit of beauty and idealism. While the art of the East distorts the human frame and degenerates into the quaint and the grotesque, Gk. art ennobles what is real and rises into beauty and sublimity. Moreover, there is a chastity in Gk. art which is unique in the history of the world. The Gk. artist knew that what is imperfect cannot be made perfect by elaboration and embellishment. The key to Gk. art is found in the method of the sculptor, who studied the perfect human physique of the wrestling-ground and, working by an inductive method, conceived hence his ideal of the divine nature. This conception gave birth to the beauty which is truth, for it was always faithful to what is. Gk. art, therefore, idealises the real rather than realises the ideal.

Tarbell, *History of Greek Art* (London, 1896); Walters, *Art of the Greeks* (London, 1906).

Greek Law.—We possess no systematic code of Greek law, and our knowledge is derived mainly from indirect sources. The earliest information is found in Homer; rough and ready oral law is in question here, and there appear, besides the death penalty, to have been fines or blood-money. The first mention of written law is in the VII. cent. B.C., Zaleucos of Locri being the first code compiler; Catana, Rhegium, Corynth, and Crete followed. The Athenians were the first to set up a regular magistrature, and in 621 *Draco* drew up a code. It was altered by *Solon* (594 B.C.), and again during the democratic revision of 411 B.C., but in its main lines, especially as regards criminal law, it preserved its essential character. Solon abolished slavery for debt, and gave every citizen a right to trial before a tribunal both in civil and in criminal cases. A jury of a large number of citizens judged questions of constitutional law. Solon also instituted a rough form of will, whereas previously no one had the right to dispose of his property. In the absence of male heirs to an intestate succession, the daughter inherited. In 508 Cleisthenes introduced the law of ostracism, and Ephialtes (462) and Pericles (453) limited the powers of the Areopagus. Pecuniary penalties could be inflicted both in civil and in criminal cases; personal penalties only in criminal cases. Slavery as a penalty could only be inflicted on foreigners. What is known of Athenian law has been collected in Telfy's *Corpus Juris Attici* (1867).

Government is a limited monarchy; legislative power is vested in chamber of representatives, called Bulé, and Council of State; former was only legislative chamber till 1911, when the Council was established among other modifications of the constitution. Deputies number 173, and are elected by popular vote. There are seven ministerial departments—War and Marine, Foreign Affairs, Home, Finance, Commerce and

Agriculture, Justice, Public Instruction. For purposes of local administration G. is divided into twenty-six departments or *nomes*. System of justice is somewhat unsatisfactory, partly owing to Minister's right to dislodge judges, which leads to political intrigue. Military service is obligatory. G. has a small navy which played no unimportant part in the Turko-Balkan War (*q.v.*).

Resources and Productions.—The chief towns are Athens (capital), Piræus, Patras, and Valo. The predominant industry is agriculture, which is still in a very backward condition. Chief products are grapes for currants (mostly from Ionian Islands and S. side of Gulfs of Corinth and Patras); olives, figs, wine, tobacco, silk cocoons, in Messenia district, S.W. Morea; wheat, barley, rye, maize, cotton. Oranges, lemons, and other fruits are also grown. Forests cover about 2,000,000 acres, the chief trees being oaks, firs, Aleppo pine, black pine. Manufactures, though still unimportant, are increasing, and include weaving of coarse textiles, silk-spinning, paper-making, manufacture of gunpowder and dynamite, soap-making, distilling. At Laurium there are valuable mines of lead, silver-lead, manganese, iron, zinc; iron, manganese and sulphur also occur in various districts. There are marble quarries at Larissa (verd antique), Skyros (alabaster, violet, yellow, and red and white), Styra, Pentelicon (blue and white), and Tinos. The Paros quarries are still worked. Chrome, copper, lignite, emery, and petroleum are also found. Exports include currants, ores, wine, tobacco, olive-oil, figs, silk, sponges, cognac; imports cereals, textiles, timber, coal, live stock. Railway mileage in 1911 was 850.

Population.—The inhabitants are mainly Greeks, with an admixture of Albanians, who are found in the east central districts and N.E. Morea, and some Rumanians in the N. Question whether modern Greeks are of Hellenic or Slavonic descent has been subject of discussion for many ethnologists; but it is now generally believed that although not pure-blooded descendants of the Greeks of classical times, they are yet mainly of Hellenic descent and represent the mixed race which inhabited the country when it came under Rom. control. The Slavs, who invaded the country from the V. cent. onwards, were gradually absorbed by this race, on which they have left little trace. The Albanians first settled in G. in the XIV. cent., and, like the Rumanians or Vlachs, still form a distinct section of the population. The peasants preserve many interesting customs and ceremonies, some of which date back to very early times; at funerals, farewell speeches are made, and dirges are sung. The old-style calendar is retained in G., Gk. Jan. 1 being Jan. 14 (new style). The national white kilt costume is not now much in evidence, except as the uniform of certain regiments.

Primary education is free, and nominally compulsory; secondary education is under State control, but in a backward condition. There are trade and agricultural schools, and Athens has a univ. (founded 1836). State religion is Gk. Orthodox Church, but there is complete religious toleration. See GREEK CHURCH.

The population in 1907 was 2,631,952.

Baedeker's *Greece* (1908); *Statesman's Year-Book*; L. Sargeant, *Greece* (1880); E. Abbot, *Hellenica* (1898).

GREEK CHURCH, ORTHODOX EASTERN CHURCH, is the name given to that group of Christian Churches in the East which, while not owing allegiance to Rome, has preserved an ecclesiastical and sacerdotal system much resembling hers, and has continued with but little internal change from primitive times. While in the West one see, the Roman, towered into pre-eminence, in the East there were several patriarchates of about equal standing—Jerusalem, Alexandria, Antioch, and Constantinople. Most of the Early Christian heresies broke out in the East, rather than the West, and in Egypt, Abyssinia, and Syria monophysite churches arose. The East has always been more metaphysical than the West, but the great point of theological dispute between the two was the addition of the word *Filioque* to the creed by the Rom. Church, thereby asserting the double procession of the Holy Ghost from the Father 'and from the Son.' Mutual excommunication followed, and though there have been various attempts at reunion, the breach has never been healed.

In doctrine the Eastern Church agrees on the whole with the Roman, in some things with Protestants. Its ultimate authority is a general synod; there is therefore nothing corresponding to the centralisation of the papal authority. Its sacerdotal and sacramental system is Catholic, but its priests may marry (and this in effect means that they *must*, as bishops prefer to ordain married deacons), though they may never marry a second time. Bishops must be unmarried, and are therefore chosen from the monastic orders. The Orthodox Eastern Church as at present constituted consists of the four ancient patriarchates mentioned above, and several national churches in communion with these, but independent in government. Most important of these are the Hellenic Church, the Russian Church (now the strongest of all, tending to encroach on the authority of the patriarchate of Constantinople), the Orthodox Church of the Austrian Empire, the national Churches of Servia, Bulgaria, and Montenegro, the Churches of Cyprus and Mount Sinai (under the jurisdiction of which is the great monastery of St. Catherine where valuable Early Christian manuscripts have been found). The Bulgarian Church split off from Constantinople, which regards it as schismatical. The Eastern Church has recently had friendly intercourse with the Anglican, and projects of reunion have been mooted, so far without definite result.

Stanley, *Eastern Church*; Adeney, *Greek and Eastern Churches*.

GREEK FIRE, liquid inflammable and explosive mixture, used in mediæval warfare.

GREELEY (40° 25′ N., 104° 45′ W.), city, Colorado, U.S.A.; seat of state Normal School; sugar industries. Pop. (1910) 8179.

GREELEY, HORACE (1811–72), Amer. politician and writer; b. Amherst, New Hampshire; started and edited *The New Yorker*, 1834; edited *The Jeffersonian*, 1838; began publication of *The Log Cabin*, 1840, afterwards united with *The New Yorker* as *The Weekly Tribune*. In 1841 G. started a daily paper, *The Tribune*, with which he was henceforth identified. His principal work was in connection with abolition of slavery; opposed Mexican War; was indicted in Virginia for publishing incendiary papers; addressed appeal called *Prayer of Twenty Millions* to Lincoln, one month after which emancipation was proclaimed. In politics, originally Whig, G. was subsequently a founder of Republican party; helped to secure Lincoln's election; at close of Civil War became unpopular through his advocacy of general amnesty and universal suffrage; unsuccessfully opposed Grant for presidency, 1872.

Biographies by James Parton (New York, 1855; Boston, 1872) and W. A. Lynn (New York, 1903).

GREEN BAY (45° N., 87° 30′ W.), city and port, Wisconsin, U.S.A., on Green Bay; large lumber trade, flour-mills, furniture, and machinery. Pop. (1910) 25,236.

GREEN EARTH, popular name for various soft minerals, specially *glauconite* (q.v.), celadonite, and chlorite.

GREEN HEART, term used for wood of Bibiri tree, Brit. Guiana and West Indies. See BIBIRINE.

GREEN, JOHN RICHARD (1837–83), Eng. historian; wrote *Short History of English People*, *Making of England*, *Conquest of England*.

GREEN MOUNTAINS, see APPALACHIAN MOUNTAINS.

GREEN RIBBON CLUB, Eng. Whig club (between 1675 and 1685), named from members' green

ribbon badge; associated chiefly with the Petitioners' Movement of 1679.

GREEN SICKNESS, Chlorosis, see Anæmia.

GREEN, THOMAS HILL (1836–82), Eng. philosopher; ed. Rugby and Balliol Coll., Oxford; elected fellow, 1860; prof. of Moral Philosophy, 1878. His *Prolegomena to Ethics* and lectures on the *Principles of Political Obligation* were pub. after his death. G. was perhaps the most important Eng. philosopher of his day, and led the reaction against Hume's empiricism and Herbert Spencer's teaching. He considered problems of ethics and philosophy in relation to social and political well-being. Nettleship edited his *Works*.

GREEN, VALENTINE (1739–1813), Eng. engraver; famed for mezzotint portraits after great Eng. and foreign masters.

GREEN, WILLIAM HENRY (1825–1900), Amer. Hebrew scholar; wrote a *Grammar of the Hebrew Language*, and numerous works of Biblical criticism.

GREENAWAY, KATE (1846–1901), Eng. artist; noted for her delightful drawings of children. She also wrote much of the verse and prose in some of the juvenile books which she illustrated.

GREENBACKS, U.S.A. treasury notes, with green printing on back; issued during Civil War, 1862–65; made convertible, 1879.

GREEN-BOTTLE FLIES, see under House Fly.

GREENCASTLE (39° 38′ N., 86° 50′ W.), city, Indiana, U.S.A.; lumber manufactures. Pop. 4000.

GREENE, GEORGE WASHINGTON (1811–83), Amer. historian; wrote *Historical View of the American Revolution* (1865).

GREENE, NATHANAEL (1742–86), Amer. soldier; brigadier-general of Rhode Island division of Boston forces, 1775; skilfully conducted retreat after disaster of *Brandywine*, 1777; quartermaster-general, 1778; superseded Gates in command of army of South, 1780, and reorganised force; chiefly due to him that Cornwallis was brought to a stop; by victory at *Eutaw Springs* secured independence of S. Carolina.

GREENE, ROBERT (*c.* 1560–92), Eng. dramatist; b. Norwich; ed. Oxford and Cambridge; before graduating, travelled in France, Germany, Italy, and other countries; subsequently settled in London; married, and became a dramatist, tale-writer, and pamphleteer. G. deserted his wife, after squandering her fortune; led a loose life and died as the result of a carouse. His plays include *Friar Bacon and Friar Bungay*, *Alphonsus, King of Aragon*, *Orlando Furioso*, and he was possibly the author of *George-a-Greene, the Pinner of Wakefield*. These works are distinguished by their humour, and are invaluable as pictures of Elizabethan life. His prose writings are innumerable, and upon one of these, *Pandosto, the Triumph of Time*, Shakespeare founded *The Winter's Tale*. He also wrote some delightful lyrics; and *A Groat's-worth of Wit*, written in his last hours, was the product of repentance.

Plays and Poems, edit. by Churton Collins (1905).

GREENFIELD (42° 35′ N., 72° 37′ W.), town, summer resort, Massachusetts, U.S.A., near Connecticut River; cutlery. Pop. (1910) 10,427.

GREENFINCH, see under Finch Family.

GREENLAND, Danish Grönland (70° N., 40° W.), large island belonging to Denmark; between Baffin Bay and Atlantic Ocean, N.E. of America; larger part in Arctic circle; stretches from 59° 45′ N. beyond 82°–83°; extreme length, about 1650 miles; greatest breadth, about 800 miles; area, 612,000 sq. miles; interior completely buried under ice with a thickness over some valleys of 6000–7000 ft. Surface generally is mountainous; several mountains on east coast between 5000 and 8000 ft.; highest peak, Petermann's Spitze, 9000 ft., near Franz Joseph Fjord; coast-line broken by numerous bays and fjords of great depth—Scoresby (180 miles long), South Ström, Petermann Fjords, Kane Basin, Inglefield Gulf, etc.; Disco, on west coast, is the largest of many islands; no large rivers; drainage mainly done by enormous glaciers, which move with surprising rapidity, and small streams of melted snow and ice; largest glaciers are Humboldt, Petowik, Jakobshaven, and Great Karaiak; part of north-east and north-west coasts still unexplored. Fauna includes lemming, musk-ox, white wolf, polar bear, reindeer, fox, and hare; numerous birds; copsewoods on coast; climate colder on east coast owing to north polar current; west coast washed by Atlantic water. Principal settlements are Julianehaab (most southerly station), Frederikshaab, Godthaab, Sukkertoppen, Godhaven, Egedesminde, Kristianshaab, Jakobshaven, Umanak, and Upernivik (most northern settlement).

G. was first discovered by Norse settlers from Iceland, X. cent.; the Norwegian, Erik the Red, established two colonies, *c.* 986; under Norwegian rule, 1261; western settlements destroyed by Eskimos, XIV. cent.; rediscovered by John Davis, 1585–87, followed by Hudson, 1610, Baffin, 1616; Egede established several Dan. missionary stations on W. coast, 1721; Julianehaab founded, 1775; E. coast explored by Scoresby, 1822, Graah, 1829–30, 2nd Ger. North Pole Expedition, 1869–70, Nathorst, 1899, Amdrup, 1900. G. first crossed by Nansen (E. to W.), 1888; northern limits traced by Peary, 1892; exploration of inland ice by Nordenskiold, 1883, Von Drygalski, 1892, Garde, 1893; Mylius Erichsen, 1906–8, followed by Mikkelsen, 1909–12, explored extreme N.E. Principal exports: whale and seal oil, eiderdown, fox and seal skins; cryolite mine at Tvigtut; copper, lead, iron, zinc, are found; large cod and haddock fisheries on W. coast; trade a monopoly of Dan. Government. Population on coast (1911), *c.* 13,000 (Eskimos and some 300 Danes). See Polar Regions.

Fischer, *The Discovery of Norsemen in America* (Eng. trans., 1903); Nordenskiold, *Greenland* (1886); Nansen, *First Crossing of Greenland* (1891). Recent works by Peary and Mikkelsen.

GREENLAW (55° 43′ N., 2° 27′ W.), town, on Blackadder, Berwickshire, Scotland; woollen mills.

GREENLEAF, SIMON (1783–1853), Amer. lawyer; author of a *Treatise on the Law of Evidence* (1842–53).

GREENOCK (55° 56′ N., 4° 45′ W.), burgh, prosperous seaport and manufacturing town, on Clyde estuary, Renfrewshire, Scotland; picturesquely situated; birthplace of James Watt; head of large fishery district; shipbuilding is largely carried on, also iron-working, especially construction of boilers and engines; sailcloth and woollen factories; sugar-refining; rope-works, tanneries, etc. Pop. (1911) 75,160.

GREENORE (54° 1′ N., 6° 9′ W.), watering-place, County Louth, Ireland, on Carlingford Lough.

GREENOUGH, HORATIO (1805–52), Amer. sculptor; executed the statue of Washington for the U.S.A. capital.

GREENSAND, Cretaceous deposits found in S.E. England and Isle of Wight, where they are over 800 ft. thick. Numerous tiny particles of glauconite are found in most deposits, hence the name. G. consists of clays, sands, and limestones, and is a marine deposit containing molluscan and other fossils. Between lower and upper g. is clay or gault (*q.v.*).

GREENSBORO (36° 5′ N., 79° 47′ W.), city, N. Carolina, U.S.A.; contains Greensboro Female Coll., Bennett Coll., State Agricultural and Mechanical Coll.; cotton and tobacco factories. Pop. (1910) 15,895.

GREENSBURG (40° 20′ N., 79° 30′ W.), town, Pennsylvania, U.S.A.; coal region; iron and brass manufactures. Pop. (1910) 13,012.

GREENSHANK, bird; popular name for two species of sandpipers, *Totanus nebularius* and *T. canescens*.

GREENVILLE (33° 24′ N., 91° 5′ W.), city, Mississippi, U.S.A., on Mississippi; important cotton trade. Pop. (1910) 9610.

GREENVILLE (40° 6′ N., 84° 33′ W.), city, Ohio, U.S.A.; agricultural region; foundries; tobacco trade. Pop. (1910) 6237.

GREENVILLE (34° 50′ N., 82° 12′ W.), city,

S. Carolina, U.S.A., on Reedy River; seat of several educational institutions; important cotton trade. Pop. (1910) 15,741.

GREENVILLE (33° 7′ N., 95° 55′ W.), city, Texas, U.S.A.; seat of Burleson Coll. and Holiness Coll.; cotton industries. Pop. (1910) 8850.

GREENWICH (41° 2′ N., 73° 35′ W.), town, summer resort, Connecticut, U.S.A., on Long Island Sound; residential suburb of New York. Pop. (1910) 16,463.

GREENWICH (51° 28′ N., 0°), parliamentary borough, county of London, England, on S. bank of Thames; has celebrated Royal Observatory in G. park. G. Hospital (handsome building on site of royal palace) was made hospital for seamen by William and Mary; now Royal Naval Coll. Other buildings are Seamen's Hospital, Royal Hospital School, Naval Museum. G. has engineering, telegraph, and chemical works. Pop. (1911) 95,977.

See TIME (*Time Standard*).

GREENWOOD, FREDERICK (1830–1909), Eng. journalist; editor of *Cornhill* (1864–68), later of *Pall Mall Gazette* and *St. James's Gazette*. One of greatest and most influential journalists of XIX. cent.

GREENWOOD, JOHN (d. 1593), Eng. Puritan; became a leading member of the Separatists; hanged for sedition.

GREG, WILLIAM RATHBONE (1809–81), Eng. agnostic author; wrote *The Creed of Christendom*, *Enigmas of Life*, and *Rocks Ahead*.

GREGARINES, a group of Sporozoa (*q.v.*).

GRÉGOIRE, HENRI (1750–1831), Fr. politician and ecclesiastic; sided with Third Estate, 1789; bp. of Blois, 1790; advocated destruction of royal authority, but tried to prevent king's execution; opposed Napoleon's religious and imperialist policies, wrote *Mémoires*, *Histoire des Sectes Religieuses*, and other works.

GREGORAS, NICEPHORUS (fl. 1300–60), Byzantine historian; his *Roman History* covers the period, 1204 to his death.

GREGOROVIUS, FERDINAND (1821–91), Ger. historian; principal work, *History of the City of Rome in the Middle Ages* (1859–72).

GREGORY, Scot. family. DAVID (1661–1708), prof. of Astron., Oxford; wrote on maths. JAMES (1638–75), wrote on math's; invented Gregorian telescope. JAMES (1753–1821), prof. of Med., Edinburgh; wrote essays on literary and philosophical subjects; invented *Gregory's powder*. JOHN (1724–73), prof. of Med., Aberdeen; wrote on physic. WILLIAM (1803–58), prof. of Chem.; wrote *Outlines of Chemistry*.

GREGORY, name borne by sixteen popes and one antipope. The most important were the following:—

Gregory I., SAINT, surnamed THE GREAT (*c.* 540–604), was b. at Rome; inherited great wealth, which he devoted chiefly to service of Church; became a monk in one of monasteries founded by himself. Elected pope in 590, G. became distinguished by his missionary zeal, and sent Augustine with forty monks to attempt Christianisation of England. His struggle for supremacy with the patriarch, John of Constantinople, tended to widen breach between Eastern and Western Churches. His *Liber Pastoralis* was one of the works trans. into Anglo-Saxon by order of Alfred the Great. His name is traditionally associated with *Gregorian chants*. G. was last Latin Father of Church.

J. Barmby, *Gregory the Great* (1892); F. Homes Dudden, *Gregory the Great* (1905).

Gregory II., SAINT (d. 731); b. Rome; when deacon accompanied Pope Constantine to Constantinople as canonist; became pope, 715; sent St. Boniface as missioner to Germany; opposed the Gk. emperor's (Leo III.'s) taxation and proscription of image-worship.

Gregory VI. (d. 1047); archpriest of San Giovanni by the Latin Gate, and godfather of the profligate Benedict IX., from whom in innocence bought Papacy, 1045; deposed, 1046, for simony, and exiled to Germany; man of great learning and uprightness.

Gregory VII., HILDEBRAND (*c.* 1020–85), was the pope who did most to establish ecclesiastical supremacy of the Papacy, and laid foundations of its temporal power. Before his election as pope in 1073, he had directed the policy of the four preceding popes, had managed to place their election entirely in hands of cardinals, and was in reality the most prominent and influential man in the Church. Entered service of Johannes Gratianus when in minor orders, and became his chaplain when Gratianus became pope as Gregory VI. He went with Gregory into exile, and stayed with him at Cologne until his death. He became pope with reluctance; a fearless man, he describes his trembling at the responsibility. But his action was prompt and bold. Simoniacal and incontinent priests he pronounced suspended, and though his action met with widespread hostility, he enforced it unswervingly. With Henry IV., Holy Rom. emperor, who took oath of obedience in 1074, and subsequently repudiated it, he took a high-handed course; he deposed the simoniacal prelates appointed by the emperor and cited him to appear at Rome. When Henry retorted by getting his supporters to pronounce Hildebrand deposed, the latter excommunicated Henry; and the emperor found it necessary, in order to avoid deposition, to do penance at Canossa in Italy in 1077. The dispute was subsequently renewed, and Henry caused a rival pope to be set up in 1084, and marched on Rome. He entered the city, 1084, but was driven out by the Normans, who were in turn expelled by the people, when G. retired to Salerno. G. was canonised by Benedict XIII. in 1728.

W. Martens, *Gregor VII.* (Leipzig, 1904); *Lives* by Delarc (1889–90), Vincent (1896), Mathew (1910).

GREGORY VIII. (d. 1121), antipope, 1118; banished from Rome in 1121.

GREGORY VIII. (d. 1187), was pope for short time in 1187; concluded treaty of peace with Emperor Henry VI., and began to make arrangements for a crusade, but died before these were completed.

Gregory IX. (d. 1241), was elected pope, 1227. His pontificate is marked by long struggle against Emperor Frederick II., whom he excommunicated (1227) for refusing to join crusade; by exciting revolt against him in Germany, compelled emperor to submit and petition for absolution. Dispute was afterwards renewed, and emperor again excommunicated in 1239. Frederick then prepared to besiege Rome, and was marching towards the city, when G. died.

GREGORY X. (1208–76) was member of Visconti family; went on crusade; elected pope, 1271; reunited Eastern and Western Churches.

GREGORY XI. (1330–78) was elected to Papacy in 1370; retransferred papal see to Rome in 1397; tried to suppress heresy and to reform religious orders.

GREGORY XIII. (1502–85) was elected pope, 1572; founded Jesuit College at Rome; reformed calendar (*q.v.*), 1582; strongly opposed heresy; built Gregorian Chapel at St. Peter's.

GREGORY XVI. (1765–1846) was elected pope, 1831; an autocrat, he discouraged democracy on principle, but encouraged learning and research in all directions; founded Etruscan and Egyptian museums at the Vatican; favoured Jesuits; wrote *Triumphs of the Papacy*.

GREGORY, EDWARD JOHN (1850–1909), Eng. artist; Pres., R.W.S. (1898); excellent technique.

GREGORY, ST. (*c.* 213–70), bp. of Neocæsarea from 240; an energetic prelate and theologian; much increased the Church's strength during his episcopate.

GREGORY, ST., OF NAZIANZUS (329–89), called (like St. John) 'the Theologian'; wrote five orations, delivered against Macedonians and Eunomians in 379: these contain best statement of doctrine of Trinity in Gk. orthodox theol. G. was scarcely an original thinker, but a graceful and powerful expounder; also wrote poems and letters to Basil, bp. of Cæsarea. These two, with Gregory of Nyssa, are known as *Cappadocian fathers*.

GREGORY, ST., OF NYSSA (*c.* 331–86), bp. of Nyssa; one of 'Cappadocian fathers'; wrote many works, perhaps best is his *Catechetical Oration*, where he summarises his theological system; a disciple of

Origen and constructive and original thinker; his style is often rhetorical and his thought speculative; anticipates doctrine of transubstantiation.

GREGORY, ST., OF TOURS (530–94), theologian and historian; ordained 563; chosen bp. of Tours by people, 573; took part in various political quarrels of Merovingian kings; wrote several theological works, but greatest work is *History of the Franks*. This for earlier books is based on other works (some now lost); for later books, on personal information, of great hist. value.

GREGORY, THE ILLUMINATOR (fl. 290), saint and abp. of Cæsarea; his history is partly legendary; said to have been brought up in Christian faith at Cæsarea; imprisoned for many years in Armenia, but, eventually released, established Christianity in that country; ordained at Cæsarea, *c.* 290.

GREIFENBERG (53° 55′ N., 15° 12′ E.), town, on Rega, Pomerania, Prussia; iron manufactures. Pop. (1910) 7770.

GREIFENHAGEN (53° 15′ N., 14° 29′ E.), town, Pomerania, Prussia; agricultural trade. Pop. (1910) 7259.

GREIFSWALD (54° 5′ N., 13° 21′ E.), town, Pomerania, Prussia, on Baltic; has univ. (founded 1456); manufactures machinery; fish-curing industries. Pop. (1910) 24,680.

GREISEN, rock consisting chiefly of quartz and white mica, with usually traces of topaz; abundant with tin ore, and supposed to be variety of granite (unlike which, has no felspar or biotite).

GREIZ (50° 39′ N., 12° 13′ E.), town, Germany, capital of Reuss (the Elder), on White Elster; woollen manufactures. Pop. (1910) 23,245.

GRENADA (12° 5′ N., 61° 40′ W.), one of Brit. W. India Islands, most southerly of Windward (*q.v.*) group; mountainous; several crater lakes and mineral springs; very fertile, good climate; chief products—cocoa, fruit, spices, wool; capital, St. George; colonised by French, 1650; taken by British, 1762; held by French, 1779–83, then ceded to Britain. Area, 133 sq. miles. Pop. (1911) 66,750.

Handbook by Colonial Sec. (1905).

GRENADE, earliest form of modern explosive shell. It was a ball of metal, or strong glass, filled with gunpowder, and exploded by a fuse; thrown by hand.

GRENADIER, originally the name applied to the soldiers of a company attached to each regiment, who led the assault on trenches and fortresses, and hurled hand *grenades*. The name is now applied to a foot regiment of the Household Brigade of Guards.

GRENADINES (12° 45′ N., 61° 15′ W.), group of small islands, Brit. West Indies, between islands of Grenada and St. Vincent, and forming dependency of these islands; exports corn and cattle. Pop. *c.* 7000.

GRENOBLE (45° 12′ N., 5° 42′ E.), town, France, on river Isère; capital of Isère department; ancient *Gratianopolis*; old capital of Dauphiné; ceded to France, 1349; a Prot. stronghold; beautiful situation among mountains, near famous Chartreuse Monastery (*q.v.*); first-class fortress; has univ. and cathedral; manufactures kid gloves, liqueur, cement, straw hats, etc. Pop. (1911) 77,500.

GRENVILLE, SIR BEVIL (1596–1643), Eng. Royalist; beloved leader of the Cornishmen; killed at *Lansdown*.

GRENVILLE, GEORGE (1712–70), Brit. prime minister (1763); attacked liberty of press in Wilkes' case, 1764; carried out imposition of Stamp Tax in colonies, 1765, the immediate cause of America's secession.

GRENVILLE, SIR RICHARD (*c.* 1541–91), Eng. mariner; commander of *Revenge* in expedition against Azores, 1591; had celebrated fight for fifteen hours against fifteen Span. ships; d. shortly after action.

GRENVILLE, SIR RICHARD, GRANVILLE (1600–58), Eng. Royalist; grandson of hero of *Revenge*; failed to capture Plymouth for king; took little further share in war, and followed Charles II. into exile.

GRENVILLE, WILLIAM WYNDHAM, BARON (1759–1834), Brit. politician; Speaker of Lower House, 1789; Home Sec., 1789; Foreign Sec., 1791; formed 'All the Talents' ministry, 1806, which abolished slave trade.

GRESHAM, SIR THOMAS (1519–79), Eng. merchant; helped to consolidate and improve Eng. trade by building the Royal Exchange, 1566–71; devoted much of his wealth to educational and charitable purposes.

GRESSET, JEAN BAPTISTE LOUIS (1709–77), Fr. poet and dramatist; famed chiefly for his humorous poem, *Vert Vert* (1734); *Œuvres Complètes* (1811).

GRETNA GREEN (55° N., 3° 3′ W.), village, Dumfriesshire, Scotland, near the Border; long famous for 'runaway' marriages—Eng. couples taking advantage of the greater ease with which the marriage ceremony could be performed in Scotland.

GRÉTRY, ANDRÉ ERNEST MODESTE (1741–1813), Belg. composer; b. Liége; lived in Paris; famous for comic opera; *Zémire et Azor*, and *Richard, Cœur de Lion*, best works.

GREUZE, JEAN BAPTISTE (1725–1805), Fr. artist; famed for his genre pictures and female studies. His works, as a rule, have a moral tendency; among best known are *The Broken Pitcher* (Louvre), *Girl with Doves* (Wallace Collection), and *Girl with Dead Canary* (Scot. National Gallery).

Macklin, *Greuze* (Jacks' Masterpieces in Colour Series).

GREVILLE, CHARLES CAVENDISH FULKE (1794–1865), Clerk of the Council in Ordinary (1821–65); is famed for his *Memoirs* (pub. 1875–87), valuable for sidelights on social and official life in the first half of XIX. cent.

GREVILLE, SIR FULKE, see **BROOKE, FULKE GREVILLE, 1ST BARON.**

GRÉVIN, JACQUES (*c.* 1539–70), Fr. dramatist; a pioneer of the Fr. classical school; his works include *Jules César* (tragedy) and some comedies.

GRÉVY, FRANÇOIS PAUL JULES (1807–91), Pres. of the Fr. Republic; succ. MacMahon, 1879. Without possessing brilliant talents he was noted for his sagacity and patriotism; resigned, 1887.

GREW, NEHEMIAH (1641–1712), Eng. physician and botanist, author of many scientific works, especially on the anatomy of plants.

GREY, CHARLES, 2ND EARL GREY (1764–1845), Brit. politician; b. at Falloden, Northumberland; took part in impeachment of Warren Hastings; moved Pitt's impeachment, and protested against his policy by seceding from House, 1797; First Lord of Admiralty, 1806; after Fox's death became Foreign Sec. in 'All the Talents' ministry; succ. to earldom, 1807; carried Act abolishing African slave trade. G. became Prime Minister in 1830; the Reform Bill was introduced by Lord John Russell (1831), and carried (1832) by G.'s obtaining royal permission to create sufficient peers to ensure its passing; retired, 1834.

Hon. C. Grey, *Life of Grey*.

GREY DE RUTHYN, Eng. barony, cr. 1324, now held by Clifton family.

GREY DE WILTON, Eng. barony, cr. 1295; 13th and 14th holders of this title were distinguished in Henry VIII.'s wars with Scotland and France; present holder belongs to Egerton family.

GREY FRIARS, Franciscans (*q.v.*).

GREY, HENRY, 3RD EARL GREY (1802–94), Brit. politician; M.P., 1826; Colonial Under-Sec., 1832; War Sec., 1835; Colonial Sec., 1846–52; advocated emancipation of slaves; established free trade between colonies and mother country; opposed Crimean War.

GREY, LADY JANE (1537–54), Eng. 'Nine days' Queen'; granddau. of Henry VIII.'s sister Mary; early acquired wide knowledge of classical and modern languages; m. Lord Guildford Dudley, whose f., Duke of Northumberland, proclaimed her queen in 1553; but on Mary's accession she was sent to Tower; beheaded, 1554.

Davey, *The Nine Days' Queen*.

GREY, SIR EDWARD, 3RD BART. (1862–), Brit. Liberal statesman; Under-Sec. for Foreign Affairs, 1892–95; an Imperialist and one of founders of Liberal League; Sec. for Foreign Affairs, 1905– ; signally honoured by Order of Garter, 1912; helped to maintain continuity of foreign policy under system of party government; authority on angling and ex-tennis champion.

GREY, SIR GEORGE (1812–98), Brit. Colonial administrator, politician, and bibliophile; led exploring expeditions in N.W. and Western Australia, 1837–38; gov. of S. Australia, 1841, of New Zealand, 1846, conciliating the Maoris; gov. of Cape Colony, 1854–61; tried to federate South African States; crushed Kaffir revolt; gov., New Zealand, 1861; ended Maori War, 1870; premier of New Zealand, 1877–84. *Life*, by Henderson.

GREY-HEN, the female of Black Grouse (*g.v.*).

GREYHOUND, dog of Eastern origin, thoroughbred racer; run in many coursing meetings in this country; Scotch, Italian, Irish, and English breeds.

GREYMOUTH (42° 25′ S., 171° 19′ E.), seaport, at mouth of Grey River, S. Island, New Zealand; coal and gold mines. Pop. (1911) 5469.

GREYTOWN, SAN JUAN DEL NORTE (10° 59′ N., 83° 42′ W.), chief seaport, Nicaragua, Central America, on E. coast; exports hides, fruit. Pop. 2500.

GRIBOYEDOV, ALEXANDER SERGIEVICH (1795–1829), Russ. dramatist; famed for satirical comedy, *Goré ot uma*, dealing with Moscow official life.

GRIEG, EDVARD HAGERUP (1843–1907), Nor. composer and pianist; of Scot. descent; b. Bergen; studied at Leipzig under Richter and Reinecke; Copenhagen, under Gade; excelled in shorter pianoforte pieces and songs; most popular work, *Peer Gynt* music.

Lee, *Grieg*; Finck, *Grieg and his Music*.

GRIESBACH (48° 26′ N., 8° 13′ E.), watering-place, Baden, Germany; mineral springs.

GRIESBACH, JOHANN JAKOB (1745–1812), Ger. theologian; prof. at Halle, and from 1775 at Jena; famous for his New Testament work.

GRIFFENFELDT, PEDER, COUNT (1635–99), Dan. politician; became imperial Chancellor, 1673, and until 1676 had entire control of Dan. foreign policy; tried to restore country's prestige by alliances with Sweden and France, but failed; charged with treason, 1676; imprisoned for life; wrote the *Kongelov*, which helped to make Denmark an absolute monarchy.

GRIFFIN (33° 11′ N., 84° 17′ W.), city, Georgia, U.S.A.; large cotton factories. Pop. (1910) 7478.

GRIFFIN, GRYPHON, mythical monster which was said to guard the earth's treasures. It is usually represented as having the body and hind legs of a lion and the wings and beak of an eagle; a figure in heraldry.

GRIFFIN, GERALD (1803–40), Irish novelist; author of *The Collegians* (1829), upon which Boucicault founded *The Colleen Bawn*; also other novels, plays, and lyrics.

GRIFFITH, SIR RICHARD JOHN (1784–1878), Irish geologist; carried out boundary survey of Ireland (completed, 1844); pub. geological map of Ireland, scale 4 miles to 1 inch.

GRILLE (Fr.), metal screen or grating; usually fitted into a door for purpose of observation.

GRILLING, see COOKERY.

GRILLPARZER, FRANZ (1791–1872), Austrian dramatist and poet; regarded as perhaps the greatest dramatic poet of his country; b. Vienna; his plays include *Sappho* (1819), and *Das Goldene Vlies* (1821), *König Ottokar's Glück und Ende* (1825), *Des Meeres und der Liebe Wellen* (1840), and others. His lyric poetry is of high literary quality, though coloured to some extent by the sadness and loneliness of his life. He wrote also a prose romance, *Der Arme Spielmann* (1848) and some literary criticisms. Eng. trans. of several of his plays have appeared.

Ehrhard, *Franz Grillparzer: Le Théâtre en Autriche* (1900).

GRILSE, see under SALMON FAMILY.

GRIMALD, NICHOLAS (1519–62), Eng. poet; contributed to Tottel's *Songs and Sonnets* (1557), and wrote two Latin dramas.

GRIMALDI, GIOVANNI FRANCESCO (1606–80), Ital. artist and architect; hist. subjects, portraits, and landscapes; architect to the popes.

GRIMALDI, JOSEPH (1779–1837), Eng. clown; one of the greatest drolls known to Eng. stage; *Memoirs* edit. by Charles Dickens (1838).

GRIMKÉ, SARAH MOORE (1792–1873) and **ANGELINA EMILY** (1805–79), Amer. reformers; took part in Anti-slavery movement; lectured on slavery; established school for blacks and whites.

GRIMM, FRIEDRICH MELCHIOR, BARON VON (1723–1807), Ger. author; famed for his *Correspondance Littéraire*, an invaluable commentary on contemporary events; lived mostly in Paris.

GRIMM, JAKOB LUDWIG KARL (1785–1863), Ger. philologist; b. at Hanau; first important appointment was that of librarian to King Jérôme at Wilhelmshöhe in 1806. In 1816 he joined his bro., **Wilhelm Karl** (1786–1859), at the Cassel library as sub-librarian. In 1829 the bro's went to Göttingen, Jakob being appointed librarian and Wilhelm sub-librarian; in 1841 they were called to the Univ. of Berlin. The lives of the bro's were devoted to a scientific study of the Ger. languages and folk-lores, and their researches were epoch-making. They collaborated in the famous collection of fairy-tales. Jakob wrote a *Deutsche Grammatik, Geschichte der Deutschen Sprache*, and a *Deutsche Mythologie*.—**Grimm's Law**, term loosely applied to rules regulating 'consonant-shift' in various Indo-European languages. The elder G. applied it to the change into Teutonic dialect, then into High German, *e.g.* Lat. *pater*, English (from Teuton dialect) *father*, German *vater*; Latin *tu*, English *thou*, German *du*. See Jesperson's *Growth and Structure of the English Language* (1912).

GRIMMA (51° 13′ N., 12° 43′ E.), town, Saxony, Germany, on Mulde; iron-founding; agricultural industries. Pop. (1910) 11,441.

GRIMMELSHAUSEN, HANS JAKOB CHRISTOFFEL VON (1625–76), Ger. novelist; wrote *Simplicius Simplicissimus* (1669), a military novel drawn from his own experiences of the Thirty Years War.

GRIMOARD, PHILIPPE HENRI, COMTE DE (1753–1815), Fr. military historian; *Lettres et Mémoires de Turenne* (1780), *Mémoires de Gustave-Adolphe* (1790), etc.

GRIMSBY, GREAT GRIMSBY (53° 34′ N., 0° 4′ W.), seaport, on Humber, Lincolnshire, England; important commerce; chief fishing port in country; has docks covering area of about 150 acres. Industries include shipbuilding, brewing, tanning, flax-dressing. Pop. (1911) 74,663.

GRIMSTON, SIR HARBOTTLE (1603–85), Eng. politician; member of Short and Long Parliaments; took little part in Civil War; imprisoned after Pride's Purge; speaker in Convention Parliament, 1660; Master of Rolls, 1660.

GRIMTHORPE, EDMUND BECKETT, 1ST BARON (1816–1905), Eng. authority on horology; associated with the restoration of St. Albans Abbey.

GRINDAL, EDMUND (*c.* 1519–83), Eng. abp.; engaged in religious disputation, 1549; was one of clerics who examined the Forty-two Articles, 1552; or. bp. of London, 1559; abp. of York, 1570; of Canterbury, 1575; sequestered from 1577 till 1582, when restored.

GRINDELWALD (46° 38′ N., 8° 2′ E.), village and mountain-valley, Swiss canton of Bern; tourist resort.

GRINDLE, see BOWFINS.

GRINGOIRE, PIERRE (*c.* 1480–1539), Fr. poet and dramatist; author of satirical comedies directed against Pope Julius II., the enemies of Louis XII., and

the vices of society; subject of play by T. de Banville.

GRINNELL (41° 45′ N., 92° 43′ W.), city, Iowa, U.S.A.; seat of Iowa Coll.; manufactures gloves, carriages. Pop. (1910) 5036.

GRIQUALAND EAST AND GRIQUALAND WEST, divisions of the Cape Province, Union of South Africa.

Griqualand East (31° S., 29° E.), part of Transkeian territories, surrounded by Natal, Basutoland, Cape Province (Proper), Tembuland, and Pondoland; area, 7594 sq. miles. Kokstadt chief town; named after Griqua settlers (mixture of white and Hottentot), 1862. Pop. *c.* 250,000.

Griqualand West (29° S., 23° E.), surrounded by Bechuanaland, Transvaal, Orange Free State, and Cape Province (Proper); area, 15,197 sq. miles; chief town, Kimberley, with famous diamond mines, discovered 1867; originally inhabited by Bushmen and Hottentots, then by Griquas; taken from Boers by British, 1871; annexed to Cape Colony, 1880.

GRISELDA, GRISELDIS, female character, immortalised by her patience and virtue, in Boccaccio's *Decameron*; derived thence by Chaucer (*Clerkes Tale*); subject of a ballad, *Patient Grissel* (1565).

GRISI, GIULIA (1811–69), Ital. prima donna; sang in Paris, London, and New York.

GRISONS (46° 40′ N., 9° 30′ E.), most easterly canton of Switzerland; largest, but most thinly populated; chief town, Coire or Chur. Surface is completely mountainous, with narrow valleys and forests; chief glacier groups are the Tödi and the Medels; magnificent mountain and gorge scenery. G. contains three sources of Rhine, upper course of Inn or Engadine, and tributaries of Adda and Po. Juf and St. Moritz are among highest villages in Alps. Principal industry, cattle breeding; maize and chestnuts grown; wine produced; mineral springs found; climate severe. Canton is visited yearly by great numbers of tourists, especially at Davos, Arosa, and Engadine; has few railways, but many fine roads. Ger., Ital., and Romansch dialects spoken. Pop. (1910) 117,069.

GRISWOLD, RUFUS WILMOT (1815–57), Amer. editor; pub. *Poets and Poetry of America* (1842), and other anthologies; also biographical and critical editions of Poe and other writers.

GROAT, mediæval, thick, silver coin, worth fourpence, first issued in England in XIV. cent., and in circulation until latter half of XVII. cent.

GROCYN, WILLIAM (*c.* 1446–1519), Eng. scholar and ecclesiastic; Gk. lecturer at Oxford; prebendary of Lincoln (1485); Rector of St. Lawrence, Jewry, London (1493–1517); friend of Erasmus; noted for generosity in the cause of learning.

GRODNO (53° N., 24° E.), government, W. Russia; generally flat, pine-covered, and swampy, with fertile tracts producing good crops, grain and flax; chief rivers, Nieman and Bug. Area, 14,896 sq. miles. Pop. (1910) 1,951,700. Capital, GRODNO, on Nieman; has two palaces of Polish kings; tobacco, machinery, soap. Pop. (1910) 53,340.

GROEN VAN PRINSTERER, GUILLAUME (1801–76), Dutch historian; edit. *Archives et Correspondance de la maison d'Orange* (12 vol's, 1835–45).

GROIN, in human anatomy the fold between the lower part of the abdomen and the thigh; in arch. the curve formed by the intersection of two arches.

GROLMANN, KARL WILHELM GEORG VON (1777–1843), Prussian general; aided in resuscitation of Prussia, 1809–12; commanded in many actions against Napoleon.

GROMATICI, Rom. land surveyors; great numbers employed under Empire; various books on the subject of land-surveying were written from I. cent. onwards.

GRONINGEN (53° 13′ N., 6° 35′ E.), province, N.E. Holland; low and flat; rich pastures; climate damp; chief occupation dairy-farming and grazing; some fishing and boat-building. Area, 909 sq. miles. Pop. 328,045.

GRONINGEN (53° 13′ N., 6° 34′ E.), town, Holland; capital of G. province, at junction of Drentsche Aa and Hunse; connected by canals with Dollart and Zuider Zee; chief town of northern Netherlands and great trading centre; Martini-kerk (1477), Brœder-kerk, town hall, antiquity museum, univ. (1614), fine art academy and many XVI.- and XVII.-cent. houses; manufactures of woollen and linen goods; boat-building, rope-making, sugar-refining, Dutch tiles, printing, machinery, pianos, etc. Pop. (1912) 78,100.

GRONLUND, LAURENCE (1846–99), Amer. socialistic writer; wrote *The Coming Revolution*, *An Exposition of Modern Socialism*, *The New Economy*, etc.

GRONOV, JOHANN FRIEDRICH, GRONOVIUS (1611–71), Ger. scholar; edit. various Latin authors and wrote critical books; his s., JAKOB (1645–1716), produced *Thesaurus antiquitatum græcarum*.

GROOT, GERHARD (1340–84), Dutch preacher; founder of 'Brethren of the Common Life'; had distinguished scholastic career at Paris, then canon and missionary at Utrecht; accused of heresy for denouncing worldliness of clergy, but d. soon after; not really a 'pre-Reformation Protestant.'

GROS, ANTOINE JEAN, BARON (1771–1835), Fr. artist; pupil of Louis David; chiefly famed for military pictures (Napoleonic), including *The Battle of Eylau*, *The Battle of Aboukir*, and others.

GROSART, ALEXANDER BALLOCH (1827–99), Scot. Presbyterian minister; student of Elizabethan and Jacobean lit.

GROSBEAK, see under FINCH FAMILY.

GROSE, FRANCIS (*c.* 1730–91), Eng. antiquary; wrote on the *Antiquities* of England, Wales, Scotland, and Ireland; also on arms and armour; subject of poems by Burns.

GROSSE, JULIUS WALDEMAR (1828–1902), Ger. author; his dramas include *Die Steinerne Braut*, *Johann von Schwaben*, and *Die Ynglinger*; his novels, *Sophie Monnier* and *Maria Mancini*; also several vol's of lyric poems.

GROSSENHAIN (51° 17′ N., 13° 32′ E.), fortified town, Saxony, Germany; woollens, cottons. Pop. (1910) 12,220.

GROSSETO (42° 45′ N., 11° 5′ E.), town (and province), Tuscany, Italy; cathedral. Pop. 6153.

GROSSI, TOMMASO (1791–1853), Ital. poet and novelist; his works include *Marco Visconti*, a hist. novel, and several epic and patriotic poems.

GROSSMITH, GEORGE (1847–1912), Eng. comedian; associated with the operas of Gilbert and Sullivan.

GROSSTESTE, ROBERT (1175–1253), Eng. scholar and theologian; teacher at Oxford and chancellor of Univ.; bp. of Lincoln, 1135; staunch defender of rights of Church against king, but after 1250 attacked policy of Papal Curia; somewhat violent as controversialist; greatest as mathematician and scientist and intellectually among ablest men of his day. G. knew some Gk. and Hebrew.

GROSSWARDEIN, see NAGY-VARAD.

GROTE, GEORGE (1794–1871), Eng. historian; b. at Clay Hill, Kent; M.P., 1832–41; began systematic study of Gk. history in 1822; pub. famous *History of Greece*, in 12 vol's (1846–56); also wrote *Plato and the other Companions of Socrates*, *Aristotle*, and some minor works. G. was prominent supporter of Univ. Coll., London, and of Univ. of London, becoming vice-chancellor in 1862; buried in Westminster Abbey. His democratic views well fitted him to interpret Athenian history and culture. *Life*, by Mrs. Grote (1873).

GROTEFEND, GEORG FRIEDRICH (1775–1853), Ger. scholar; famed for his successful deciphering of the Babylonian cuneiform writing.

GROTESQUE, extravagant style of ornament

containing unnatural forms of animals, the human figure, etc.

GROTH, KLAUS (1819–99), Ger. poet; prof. of German Lang. and Lit. at Kiel Univ.; chiefly known for his Low Ger. poems—*Quickborn* (1852; 25th ed., 1900).

GROTIUS, HUGO, Huig van Groot (1583–1645), Dutch politician and jurist; b. Delft; entered profession of law; wrote Latin plays and verses; app. historiographer to United Provinces, 1603; sent to England to make arrangements concerning Greenland whale fisheries, 1613. In the disputes in Holland between rigid Calvinists and the followers of Arminius, G. tried to restrain the Calvinist clergy by maintaining supremacy of State in Church affairs, and composed edict counselling toleration, the publication of which aroused popular resentment. G. was arrested and sentenced to lifelong confinement; but his wife, who shared his imprisonment, soon afterwards contrived his escape; going to Paris, G. later held the post of Swed. ambassador. His most celebrated works are *De Jure Belli et Pacis*, a treatise on jurisprudence, and *Annales et Historiæ de Rebus Belgicis*, an historical work.

Life, by Buller (1827); Lehmann, *Hugonis Grotii Manes vindicati* (1727).

GROUCHY, EMMANUEL, MARQUIS DE (1766–1847), Fr. soldier; supported Revolution and rose rapidly in republican army; distinguished at *Hohenlinden*, *Wagram*, and in Russia in 1812; marshal, 1814; defeated Blücher at *Ligny*; exiled from France after *Waterloo*, returning in 1821.

GROUND BEETLES, see Caraboidea.

GROUND-ICE is porous ice formed on rocks on the bottom of a stream when the temperature of the water is above *freezing-point*. Cold, clear nights when heat radiates rapidly from the bottom upwards produce it.

GROUND-IVY, popular name for *Nepetaglechoma*; hedgerow plant, purple flowers, aromatic leaves, common in Britain.

GROUNDLING, small freshwater fish, rare in Britain; *Cobitis tænia* (see Carps).

GROUND-NUT, general name for various nuts and roots, *e.g.* roots of dwarf ginseng and *Bunium Esculentum*, fruit of ground pea-nut.

GROUND-RENT, in Eng. law, is the rent paid to the owner of the freehold in the ground.

GROUNDSEL, popular name for *Senecio vulgaris*, herb of Compositæ family; yellow flowers; a troublesome weed.

GROUPS, THEORY OF, a branch of mathematics dealing with the sets of operations which may be performed on a given set of objects; has wide applications in higher mathematics, notably in the theory of invariants, of algebraic and especially of differential equations, of geometrical transformations, etc. An operation will, in general, have no meaning except in regard to a particular set of objects. Again, if two operations are so related that when performed on some object successively, the result is independent of the order of the operations, each operation is called a *definite* operation, and each is the *inverse* of the other. If S, T, U, . . . be a set of definite operations, which may be performed on a given object or set of objects, and if the set contain the operation PQ (P and Q being any two operations of the set), also the inverse operation of P ($\bar{P}$ being any operation of the set), then the set of operations is called a *group*. If the number (r) of operations in a group is finite, the group is a *group of finite order* and r is the order of the group. When r is infinite, three cases occur: when the group is represented by a set of geometrical operations, each operation will be defined in terms of a set of parameters. If none of these parameters is capable of continuous variation, we have then a *discontinuous group*. If all the parameters may vary continuously, the group is a *continuous group*. If some are capable of variation and the rest are not, the group is a *mixed group*.

If S and S^1 are inverse operations, SS^1 is called the *identical operation*, since it leaves the original object unchanged. S^1 is sometimes represented by S^{-1}, and the set of operations . . . S^{-2}, S^{-1}, I, S, S^2 . . . constitutes a cyclical group. The symbol I denotes the identical operation. S and T being two operations of a group G, the operations S and $T^{-1}ST$ are called *conjugate* operations. If $S=T^{-1}ST$, *i.e.* if T transforms S into itself, S and T are *permutable* operations. A group whose operations are all permutable with each other is called an *Abelian* group.

Theory of continuous groups has been developed largely by Sophus Lie, and applied to the theory of invariants, contact-transformations, curvature of curves and surface, systems of differential equations, etc. No general theory of discontinuous groups at present exists, though many large classes have been investigated. A large number of discontinuous groups are given by limiting the range of variation of the parameters of continuous groups. Another large class arises from the combination and repetition of a finite number of operations such as displacements, inversions, projections. Groups of finite order have special properties depending on the finite number of operations in the group. Thus, every group of finite order can be represented by a transitive group of permutations of N symbols. Also, if the order of a group G is N, which is a multiple of n, then the number of operations of G, whose orders are equal to, or are factors of, n, is a multiple of n. The chief application of this class of groups is to the theory of algebraic equations.

Campbell, *Lie's Theory of Finite Continuous Transformation Groups*; Burnside, *Theory of Groups of Finite Order*.

GROUSE include black g. (*Tetrao tetrix*) and red g. (*Lagopus scoticus*), so named from colour of male plumage. They inhabit moorland areas; birds of strong but heavy flight; cock is polygamous, fighting for mates; nest on ground, open, containing from six to ten eggs; males of the two species further distinguished by lyrate curvature of tail-feathers in black g.; strictly preserved under Game laws. The red g. is the species that attracts sportsmen to the Scot. and Yorkshire moors from Aug. 12 to Dec. 10.

The Grouse (Fur and Feather Series, 1893).

GROVE, SIR GEORGE (1820–1900), Brit. publicist; chiefly wrote about Palestine exploration and music; secretary, Crystal Palace (1852); director, Royal College of Music. *Dictionary of Music* and other works.

GROVE, SIR WILLIAM ROBERT (1811–96), Eng. judge and scientist; constructed *platinum-zinc voltaic cell* and first employed *incandescent* electric lamps. His great work is *Correlation of Physical Forces*.

GROZNYI (43° 20′ N., 45° 42′ E.), town, Terek, Russia; petroleum wells. Pop. 15,599.

GRUB, the larvæ of insects, or more particularly the underground larvæ of Crane Flies or Daddy-long-legs, known as 'the grub'—destructive to corn crops.

GRUB STREET, former name of Milton Street, near Moorfields, London, where in Dr. Johnson's time lived colony of needy hack-writers, penny-a-liners, 'whence any mean product is called G. S.'

GRUBER, JOHANN GOTTFRIED (1774–1851), Ger. author; wrote biographies of Klopstock and Wieland; and produced with Prof. Ersch an exhaustive *Encyclopædia of Science and Art*.

GRUMBACH, WILHELM VON (1503–67), Ger. military adventurer; was associated with the efforts of the Duke of Saxony to dethrone Frederick II. of Denmark.

GRUMENTUM (40° 20′ N., 16° 30′ E.), ancient town, Lucania, S. Italy, on Aciris.

GRÜN, HANS, see Baldung.

GRÜNBERG (51° 56′ N., 15° 31′ E.), town, Silesia, Germany; active industrial and wine-growing centre. Pop. (1910) 23,162.

GRUNDTVIG, NIKOLAI FREDERIK SEVERIN (1783–1872), Dan. author and theologian; Church reformer, and founder of the sect known as *Grundtvigians*; pub. *Sangverk til den Danske Kirke* (1837–42) and numerous books on literary subjects.

GRUNDY, MRS., character in Morton's play, *Speed the Plough* (1800), who does not appear, but whose opinion is much feared by a neighbouring farmer's wife; hence the Eng. archetype of puritanical prudery and straight-laced conventionality.

GRUNDY, SYDNEY (1848–), Eng. dramatist; author of numerous original plays and adaptations from the Fr., including *A Fool's Paradise*, *A Pair of Spectacles*, and *Sowing the Wind*.

GRUYÈRE (46° 35′ N., 7° 5′ E.), town, Fribourg, Switzerland; famous cheese.

GRYPHIUS, ANDREAS (1616–64), Ger. poet and dramatist; wrote lyric poetry of considerable merit, but melancholy in tone. His most distinctive work is contained in his comedies and tragedies; the former including *Peter Squenz*, *Horribilicribrifax*, etc.; the latter, *Carolus Stuardus*, *Katharina von Georgien*, and others.

GUACHARO, or OIL BIRD (*Steatornis*), a Picarian bird confined to Trinidad and the coastal region of the N.W. of South America; so called on account of the fat contained in the nestlings, which is used for lighting and as a butter-substitute by the natives; a twilight feeder, which nests in caves.

GUADALAJARA (40° 50′ N., 3° W.), province, Spain; generally level; fertile; traversed by Tagus; produce chiefly agricultural; area, 4676 sq. miles. Pop. (1910) 208,447. Capital, GUADALAJARA; has fine old ruined palace; cotton and woollen industries. Pop. 11,144.

GUADALAJARA (21° 9′ N., 103° 2′ W.), town, Mexico; capital of Jalisco State; contains cathedral, univ., art academy, mint; many interesting churches; various charitable institutions; important trade, cotton, woollen, iron, and steel manufactures, leather, pottery. Pop. (1910) 118,799.

GUADALQUIVIR (36° 47′ N., 6° 22′ W.), river, Spain; rises in Sierra de Cazorla; flows S.W. for 360 miles, into Atlantic; navigable to Seville; ancient *Bœtis*.

Gwynn, *Guadalquivir* (1912).

GUADALUPE HIDALGO, town, Mexico, near Mexico City; peace signed here between Mexico and U.S.A. (1848). Pop. 5000.

GUADELOUPE (16° 12′ N., 61° 40′ W.), island in Lesser Antilles (W. Indies), forming important Fr. colony with five island dependencies; capital, Basse Terre; climate hot, but healthy; soil fertile and well cultivated. Sugar, coffee, and rum are exported. G. was discovered by Columbus; acquired by France, 1634; taken by British, 1794, 1810; restored to France, 1814; sends 1 Senator and 2 Deputies to Fr. Parliament. Area, 687 sq. miles. Pop. (1906) 182,238.

GUADIANA (37° 10′ N., 7° 20′ W.), river, Spain and Portugal; rises in Span. province, Albaceté; flows through Ciudad Real, Badajoz, and Portug. province Alemtejo; separates Huelva from Portug. province Algarve; falls into Atlantic; length, 500 miles; navigable 40 miles above mouth; ancient *Anas*.

GUADIX (37° 19′ N., 3° 8′ W.), town, Granada, Spain. Pop. c. 12,000.

GUADUAS (c. 5° S., 74° 50′ W.), town, Colombia, S. America, near Magdalena River, 50 miles N.W. of Bogotá. Pop. 10,000.

GUAIACUM, genus of trees, natural order *Zygophylleæ*; dark greenish, dense, hard wood heavier than water. The heart wood and resin of *G. officinale* and of *G. sanctum* from the W. Indies have an acrid and aromatic taste and a balsamic odour. The resin on dry distillation yields *cresol* and *guaiacol*. It is a gastro-intestinal irritant.

GUAIRA, port of Caracas (*q.v.*).

GUALDO TADINO (43° 14′ N., 12° 45′ E.), town, Perugia, Italy; cathedral; ancient *Tadino*.

GUALEGUAY (33° 7′ S., 59° 14′ W.), town, river port, Argentina, S. America, on Gualeguay; meat factories; exports cattle, hides. Pop. 9000.

GUALEGUAYCHÚ (33° 2′ S., 58° 34′ W.), town, river port, Argentina, S. America, on Rio Gualeguaychú; meat products, hides. Pop. 13,282.

GUAM, GUAHAN (13° 26′ N., 144° 39′ E.), most southerly and largest of the Marianne (or Ladrone) Islands, Pacific Ocean; capital, Agaña; mountainous; well-watered, fertile; chief products—rice, cocoa-nuts, sugar; ceded by Spain to U.S.A., 1898; used as naval station. Area, 207 sq. miles. Pop. *c.* 12,000.

GUAN (*Penelope*), a native of tropical America, is a handsome relative of common poultry bird; of blackish-bronze colour, with naked throat furnished with large pendant scarlet wattle.

GUANABACOA (23° 7′ N., 82° 19′ W.), town, sea bathing resort, Cuba, West Indies; residential suburb, 5 miles E. of Havana. Pop. 14,000.

GUANACO, HUANACO, animal included in *Camelidæ*; native throughout southern half of S. America; smaller and thicker set than camel, and without hump. See CAMEL FAMILY.

GUANAJAY (22° 53′ N., 82° 40′ W.), town, health-resort, Cuba, W. Indies. Pop. 6000.

GUANAJUATO (21° N., 100° 48′ W.), inland state, Mexico; mountainous in N., the southern portion forming part of a fertile plain; chief river, Rio Grande de Lerma; very rich in minerals (gold, silver, lead, tin, iron); some cattle reared; cotton and woollen manufactures, tanneries. Area, 11,374 sq. miles. Pop. (1910) 1,075,270.

GUANAJUATO, SANTA FÉ DE GUANAJUATO (21° N., 100° 48′ W.), city, capital of G. State, Mexico; centre of large mining district; manufactures cotton, pottery; founded by Spaniards, 1554. Pop. (1910) 35,147.

GUANCHES, GUANCHOS, original inhabitants of the Canary Islands; supposed to have been of Berber stock, of fine physique, and a highly intelligent race. They embalmed the dead, and many mummies and skeletons have been brought to light. They offered a stubborn resistance to the Spaniards, but were finally reduced to subjection at the end of the XV. cent.; now practically extinct.

GUANO, valuable fertilising manure, consisting chiefly of the excrement of sea-birds that feed on fish. Deposits to a depth of 60 ft. have been found off the coast of Peru, Bolivia, and Chile. A good substitute has been found in fish g., obtained by grinding to powder the heads and bones of cod and herring. The chief constituents of g. are phosphoric acid and nitrogen (ammonia).

GUANTA (10° 6′ N., 64° 47′ W.), seaport town, Bermudez State, Venezuela, S. America; exports coffee, sugar.

GUANTÁNAMO (20° N., 75° 10′ W.), town, S.E. coast of Cuba, W. Indies, U.S.A.; naval station; exports coffee, sugar. Pop. 14,600.

GUARANIS, S. Amer. Indians inhabiting Paraguay and Uruguay.

GUARANTEE, a promise by one person to be answerable for the debt, default, or miscarriage of another. Originally at Common Law it need not be in writing, but the Statute of Frauds provided that 'no action shall be brought whereby to charge the defendant upon any special promise to answer for the debt, default, or miscarriages of another person, unless the agreement upon which such action shall be brought or such memorandum or note thereof shall be in writing and signed by the party to be charged therewith, or some other person thereunto lawfully authorised.' Upon this section, it was held for many years that the note or memorandum of the agreement, to comply with the Statute, must set forth the consideration for the contract, but eventually the Mercantile Law Amendment Act provided that such a memorandum was not to be considered invalid to support an action merely by reason that the consideration did not appear

in writing or by necessary inference from a written agreement.

After the debt has become due, the creditor may sue the guarantor without its being necessary to sue the principal debtor first. The surety, or guarantor, then has, as against the principal debtor, the same rights as the creditor had. A g. being a contract in which the surety is strictly held to the terms of his agreement, a corresponding strictness is exercised in his favour, and he may be released not only by the discharge of the debt, but in certain other ways. Amongst these may be named a change of parties, *i.e.* a change of partners in the debtor firm; or if the terms of the agreement under which the guarantor agreed to become liable are varied in any way he can claim discharge. Further, if a person has become guarantor for an employee's honesty, and the employee, having been found to be dishonest, is still retained in employment without the guarantor having been informed of the act of dishonesty, the latter can claim discharge from liability.

GUARATINGUETÁ (22° 45′ S., 45° 15′ W.), city, São Paulo, Brazil, S. America, on Parahiba; agricultural centre.

GUARDA (40° 35′ N., 7° 16′ W.), city, Portugal: ancient *Lancia Oppidana*; ruined castle; cathedral; woollen manufactures. Pop. 6092.

GUARDAFUI, CAPE (10° 50′ N., 51° 20′ E.), cape, N.E. of Abyssinia, Africa.

GUARDI, FRANCESCO (1712–93), Venetian artist; prolific painter, whose works are similar to those of his master, Canaletto; fine examples in Louvre and Manfrini Palace, Venice.

GUARDIAN, Eng. weekly periodical founded in 1846 by Gladstone and others as an Anglo-Catholic organ.

GUARDS, THE, military term applied to regiments that serve officially as bodyguard of sovereign. In Brit. army the regiments forming the Household Brigade of Guards are the 1st and 2nd *Life Guards*, the *Royal Horse Guards*, and four regiments of foot—the *Grenadier*, *Coldstream*, *Scots*, and *Irish Guards*. During times of peace they garrison the metropolis, and from them are chosen guards for Royal Palaces, and escorts for the sovereign on state occasions. The Life G., Grenadier G., and Scots G. were founded by Charles II.; Royal Horse G. and Coldstream G. by Cromwell; and the Irish G. were first formed in 1900. Also included in Brit. bodyguard corps are the non-combatant bodies of the *Yeomen of the Guard*, the Gentlemen-at-Arms, and, in Scotland, the Royal Company of Archers.

GUARD-SHIP, a depot warship in home ports, which lodges seamen until drafted into their appointed vessels.

GUÁRICO (8° 30′ N., 67° 30′ W.), state, Venezuela, S. America; Capital, Calabozo. Area, 25,631 sq. miles. Pop. 183,930.

GUARINI, GIOVANNI BATTISTA (1537–1612), Ital. poet; friend of Tasso, whom he succ. as court poet at Ferrara. His masterpiece is *Pastor Fido*, (1590), a pastoral drama, the scene of which is laid in Arcadia. The literary style is highly finished, and the work is invaluable as a picture of contemporary manners and vices.

GUARINO DA VERONA, GUARINUS (1374–1460), Ital. scholar; an important figure in connection with the revival of Gk. learning in Italy; translated and wrote commentaries on Gk. authors.

GUARNIERI, JOSEPH DEL GESU, GUARNERI (1687–1745), principal member of a Cremona family of famous violin-makers.

GUASTALLA (44° 55′ N., 10° 39′ E.), town, Emilia, Italy; cathedral.

GUATEMALA, republic in Central America; bounded by Mexico, Brit. Honduras, Gulf and Republic of Honduras, Salvador, and Pacific Ocean; capital, Guatemala la Nueva; area, 48,290 sq. miles. Surface consists of low-lying marshy plains along Pacific coast. N. and W. of these lies the Sierra Madre, the watershed between Pacific and Atlantic, with many volcanoes, including Tajamulco (*c.* 13,520 ft.), Acatenango (*c.* 13,615 ft.), Fuego (*c.* 12,075 ft.). Farther N. and E. extends mountainous country and great plain of Peten, mostly Indian pasture-land. Principal river is Montagua (*c.* 250 miles); lakes include Lake of Peten, Gulfo Dulce, Atlitan. There are vast forest lands.

G. was taken by Spaniards, 1524; independence declared, 1821, and G. joined Confederation of Central America; present republic established, 1847; San Salvador defeated, 1863; Carrera dictator (1845–65); constant strife with neighbouring states led to Central American Arbitration Treaty, 1907.

The most important crop is coffee; rubber, tobacco, sugar, wheat, fruit, and medicinal plants are also produced; gold, silver, lead, and salt mines are worked; timber is extensively exported. Prevailing religion is R.C. Majority of inhabitants are Indians; many half-castes, few Europeans. Pop. *c.* 2,000,000.

Niederlim, *The Republic of Guatemala* (1898); Brigham, *Guatemala* (1887).

GUATEMALA, GUATEMALA LA NUEVA (14° 36′ N., 90° 30′ W.), capital, Republic of Guatemala, Central America; on plain *c.* 5000 ft. above sea-level, and 70 miles from its port, San José, on Pacific. Among chief buildings are cathedral, government house, mint; numerous educational institutions, churches, hospitals; woollen and cotton industries. Pop. c. 90,000.

Old Guatemala, the original city (founded 1527), was destroyed by flood, 1541; destroyed by earthquake, 1773; the third capital was then removed to present site, about 30 miles N.E.

GUAVA, tropical American shrub (*Psidium Guayaba*) and its fruit, much used for jelly and preserves; family *Myrtaceæ*.

GUAYAMA (18° N., 66° 5′ W.), town, Porto Rico, W. Indies; exports sugar, rum, coffee. Pop. (1910) 8321.

GUAYAQUIL (2° 10′ S., 79° 56′ W.), city, chief port, Ecuador, S. America; built mainly of wood. Among principal structures are government buildings, town hall, cathedral, bp.'s palace, univ. G. exports cacao, coffee, rubber; has shipyards and various manufactures; hot and unhealthy. Pop. 60,000.

GUAYAS (2° 30′ S., 80° W.), maritime province, Ecuador; S. America; most important (industrially and commercially) of the republic; climate hot, humid, unhealthy; soil fertile; agriculture is chief pursuit; principal products—cacao, coffee, tobacco, sugar-cane; capital, Guayaquil. Area, 8300 sq. miles. Pop. *c.* 100,000.

GUAYMAS (28° 10′ N., 110° 50′ W.), seaport, Mexico, on Gulf of California; good harbour; exports metals, hides. Pop. 8648.

GUBBIO (43° 22′ N., 12° 34′ E.), city (ancient *Iguvium*, or *Eugubium*), Perugia, Italy, at foot of Monte Calvo; has a cathedral (XIII. cent.) and ducal palace (XIV. cent.); the famous Eugubine Tablets, discovered in the neighbourhood in 1446, are preserved in the museum; manufactures, majolica; was independent in Middle Ages. Pop. 26,718.

GUBEN (51° 58′ N., 14° 42′ E.), town, Brandenburg, Prussia, on Neisse; woollen cloth, yarn. Pop. (1910) 38,593.

GUBERNATIS, ANGELO DE, COUNT (1840–), Ital. author; his dramas include *Cato*, *Don Roderigo*, and *Romolo*; has written also on mythological and Oriental subjects.

GUDE, MARQUARD (1635–89), Ger. scholar; promoted classical knowledge by manuscript researches and copies of inscriptions.

GUDEMAN, ALFRED (1862–), Amer. scholar; author of a *History of Classical Philology* (1902), etc.

GUDGEON, small freshwater fish, genus *Gobio*, of carp family (see CARPS); common in European streams.

GUDRUN, legendary dau. of King Hettel, betrothed to King Herwig of Heligoland, but carried off by Hartmuth, king of Norway; famed for heroic fortitude and resignation.

GUÉBRIANT, JEAN BAPTISTE BUDES,

COMTE DE (1602–43), marshal of France; served with distinction in Thirty Years War.

GUELDERLAND, see GELDERLAND.

GUELPH (43° 30′ N., 80° 21′ W.), city, river port, Ontario, Canada; seat of Ontario Agric. Coll.; flour mills, woollen mills. Pop. 11,496.

GUELPHS AND GHIBELLINES, names of great conflicting parties into which Germany and Italy were divided in later Middle Ages (XII.–XV. cent.); names Italianised from German *Welf* and *Waiblingen*, warcries of Saxony and Empire respectively; Ghibellines were aristocratic party, supporting the emperor; Guelphs (or Guelfs) were democratic party, favouring the pope. Houses of Brunswick and Hanover are Guelphs by descent, whence British throne has been held by a Guelph since George I.

Browning, *Guelphs and Ghibellines* (1893).

GUENON MONKEYS, see under CERCOPITHECIDÆ.

GUÉRET (46° 10′ N., 1° 52′ E.), town, Creuse, France; breweries, tanneries. Pop. 8000.

GUERICKE, OTTO VON (1602–86), German physicist; invented air-pump.

GUÉRIDON, ornamental occasional table, generally supported by the carved figure of negro.

GUÉRIN, JEAN BATISTE PAULIN (1783–1855), Fr. artist; famed for portraits; works include *The Dead Christ, Cain and Abel, Anchises and Venus.*

GUÉRIN, MAURICE DE (1810–39), Fr. author; distinguished both as poet and prose writer; prose is marked by masterly style; shows remarkable sympathy with nature. His sister, EUGÉNIE (1805–48), whose *Journal* and *Lettres* are highly valued, was intimately associated with his work; see Arnold's *Essays in Criticism.*

GUÉRIN, PIERRE NARCISSE, BARON (1774–1833), Fr. artist; famed for paintings of classical and hist. subjects, including *Marcus Sextus, Phædra and Hippolytus, Andromache and Pyrrhus* (in the Louvre).

GUERNSEY (49° 27′ N., 2° 35′ W.), second largest of the Channel Islands, 30 miles W. of Normandy; surface undulating, sloping gradually N. to S.; climate mild; popular health resort; produces large quantities of fruit, flowers, and vegetables; famous breed of cattle; some granite quarried, and fishing carried on. Capital, St. Peter Port; good harbour; residence of lieut.-gov. Area, 25 sq. miles. Pop. (1911) 44,997. See CHANNEL ISLANDS.

GUERRAZZI, FRANCESCO DOMENICO (1804–73), Ital. author; wrote two hist. novels, *Battagli di Benevento* (1827) and *L'Assedio di Firenze* (1836); also an *Apologia* and works on Andrea Doria and Beatrice Cenci.

GUERRERO (17° 40′ N., 101° W.), Pacific state, Mexico; mountainous; rich in minerals; fertile; produces coffee, cereals, tobacco; capital, Chilpancingo; chief port, Acapulco. Area, 25,000 sq. miles. Pop. (1910) 605,437.

GUERRILLA, method of harassing an army by small bodies of irregulars. G. Span. troops, opposed to French, played a prominent part in the Peninsular War.

GUESDE, JULES BASILE (1845–), Fr. Socialist; editor of *L'Egalité* and other Socialist organs; pub. *Quatre ans de lutte de classe, 1893–98* (1901).

GUEST, EDWIN (1800–80), Eng. antiquary; author of a *History of English Rhythms* (1838).

GUEUX, LES ('the Beggars'), name given to the Netherlanders who, in the XVI. cent., revolted against the oppression of Philip II. The 'Beggars of the Sea' harassed the Span. navy.

GUEVARA, ANTONIO DE (*c.* 1490–1544), Span. author; wrote a moral story, *Reloj de Principes* (1529), which enjoyed great popularity; Eng. trans. by Bourchier (1546). Span. 'Guevarism' anticipated Eng. Euphuism (*q.v.*).

GUEVARA, LUIS VELEZ DE (1579–1644), Span. dramatist and novelist; wrote several hundred plays, including *La Luna de la Sierra*; and a popular story, *El Diablo Conjuelo* (1641).

GUIANA (4° N., 55° W.), part of S. America lying between Orinoco and Amazon Rivers, and consisting of Venezuelan, Brit., Dutch, Fr., and Brazilian Guianas (for Venezuelan and Brazilian G., see VENEZUELA and BRAZIL). Physical geography is much the same in all three colonies; along coast are flat, swampy tracts, with rich, fertile soil; beyond this, land rises to undulating savannahs, behind which are mountainous regions covered with almost impenetrable forest. G. contains innumerable rivers, which form chief means of communication; almost all larger streams are connected by creeks and channels, and are navigable up to rapids and falls. Vegetation is remarkably rich and luxuriant; sugar, coffee, rice, cacao, fruits cultivated; forests yield fine timbers, balata, rubber, oil, balsams, gums, tonka-beans, nuts, etc. Birds are particularly brilliant in plumage and include humming-birds, parrots, macaws, and orioles; tiger-cats, jaguars, tapirs, peccaries, manatees, capybaras, alligators, and great variety of insects to be found. Gold and diamonds are produced. Inhabitants are chiefly Europeans, Indians, and negroes. Climate not unhealthy though tropical; earthquakes and hurricanes practically unknown.

British Guiana, largest of three colonies, is bounded on W. by Venezuela, S. by Brazil, and E. by Dutch G.; area, *c.* 90,000 sq. miles. Chief towns are Georgetown, capital, on mouth of Demerara River, and New Amsterdam, on Berbice River; colony divided into counties of Berbice, Demerara, and Essequibo; in W. are Pacaraima Mts., culminating in Roraima, on Venezuelan boundary; principal rivers are Essequibo, Corentyn, Berbice, Demerara, Mazaruni, and Cuyuni; railways connect Georgetown with New Amsterdam, Demerara with Essequibo, and a line runs from Demerara a few miles along W. coast. Among principal exports are sugar, rum, rice, molasses, coffee, balata, timber, shingles, and gold. Administration is under governor, assisted by court of policy and combined court. Pop. 296,000.

Dutch Guiana, SURINAM, bounded on W. by Brit. G., S. by Brazil, and E. by Fr. G.; area, *c.* 50,000 sq. miles. Capital, Paramaribo, near mouth of Surinam River; contains great extent of dense forest and unexplored country; watered by Surinam, Saramacca, Coppename, and Nickerie Rivers. Exports embrace sugar, rum, balata, timber, and gold. Pop. 92,500, exclusive of negroes of forests.

French Guiana, CAYENNE, bounded on W. by Dutch G., S. by Tumac Humac Mts., and E. by Brazil; area, *c.* 51,000 sq. miles. Cayenne capital and chief centre of population; chief streams are Sinnamarie, Mana, and Oyapock. Fr. G. is penal settlement and least prosperous of three colonies; little agricultural industry; gold-mining principal occupation. Pop. *c.* 40,000.

G. was sighted by Columbus in 1498; later visited by adventurers in search of El Dorado; in 1595 and 1617 explored by Raleigh; first settlements made by Dutch in Demerara and Essequibo (*c.* 1613); English settled in Surinam and French in Cayenne; in 1616 English seized Dutch and Fr. G., but restored them (1617), and handed over Surinam to Netherlands in exchange for New York. By 1674 Dutch claimed all territory now known as Dutch and Brit. G.; after prolonged struggle British captured Berbice, Demerara, and Essequibo, and in 1831 formed colony of Brit. G. Venezuelan and Brit. G. boundaries fixed, 1899 (see SCHOMBURGK). Fr. and Brazilian boundary dispute settled, 1900.

Bayley, *Handbook of Brit. G.* (1909); Rodway, *Guiana, Brit., Dutch, and Fr.* (1912).

GUIART, GUILLAUME (fl. 1300), Fr. poet-chronicler; his *Branche des royaulx lignages*, dealing with the history of the Fr. kings, is valuable for the later period.

GUIBERT (WIBERT), **OF RAVENNA** (*c.* 1030–1100), antipope, as CLEMENT III., 1080; elected by Henry IV.; banished from Rome, 1097.

GUIBERT, JACQUES ANTOINE HIPPOLYTE, COMTE DE (1743–90), Fr. gen. and military authority; wrote *Essai général de tactique* (1770), *Défense du système de guerre moderne*, and other valuable military treatises.

GUIBERT OF NOGENT (1053–1124), Fr. historian; wrote *Gesta Dei per Francos*, an account of the First Crusade.

GUICCIARDINI, FRANCESCO (1483–1540), Ital. politician and historian; b. Florence; ambassador to Span. court, 1512; became papal ruler of Reggio and Modena, 1515; of Parma, 1521; of Romagna, 1523; of Bologna, 1531; supported the Medici at Florence, and successfully defended Duke Alexander from charges levelled against him at imperial court in 1535. Alexander's successor, Cosimo, dismissed G., who withdrew from public life. He wrote *Storia d'Italia* and other hist. and political works: *Storia d'Italia* is a masterly analysis of Ital. history between 1494 and 1532.

Agostino Rossi, *Francesco Guicciardini* (Bologna, 1896).

GUICHARD, KARL GOTTLIEB (1724–75), military historian and Prussian officer; of Fr. descent; fought for Prussia in Seven Years War, 1757–62; gazetted as *Quintus Icilius* by order of Frederick the Great, whom he corrected for so miscalling *Quintus Cœcilius*.

GUICHEN, LUC URBAIN DE BOUËXIC, COMTE DE (1712–90), Fr. admiral; served against Britain in W. Indies, 1780; defeated in Bay of Biscay by Kempenfelt, 1781.

GUIDI, CARLO ALESSANDRO (1650–1712), Ital. poet; wrote *Amalasunta in Italy*, and other poetic dramas; but chiefly famed for his fine lyrics.

GUIDO OF AREZZO, GUIDO ARETINUS (*c.* 995–1050), Fr. Benedictine monk and musician; birthplace uncertain; invented 'Harmonic' or 'Guidonian Hand' and was first to use stave with lines and spaces.

GUIDO RENI (1575–1642), Ital. artist; principal master of the Bolognese school; b. Bologna; studied first under Calvaert, and later under Caracci. Removing to Rome, he obtained the patronage of Pope Paul V. His best work in Rome is considered to be *Aurora and the Hours* (on the ceiling of the Rospigliosi Palace). After spending about twenty years in Rome he returned to Bologna, where he became a hack-worker for the dealers, thanks to his passion for gambling and other extravagances.

GUIENNE, GUYENNE (45° N., 1° E.), ancient province, S.W. France; now divided into departments of Gironde, Dordogne, Lot, Aveyron, Lot-et-Garonne, and Tarn-et-Garonne. G. belonged to England (1154) after marriage of Eleanor of Aquitaine to Henry II.; long disputed by English and French; annexed by French, 1453.

GUIGNES, JOSEPH DE (1721–1800), Fr. Orientalist; his chief work was a *History of the Huns, Mongols, and Turks* (1756–58).

GUILBERT, YVETTE (1869–), Fr. comedy artist; famed for her rendering of old and modern Fr. ballads.

GUILDFORD (51° 14′ N., 0° 34′ W.), market town, Surrey, England, on Wey; remains of ancient Norman castle; noted grain and live-stock markets; flour-mills. Pop. (1911) 23,823.

GUILDHALL, hall of London municipality; erected, 1411; destroyed, 1666; re-erected, 1669; restored, 1789; important library and art gallery.

GUILDS, GILDS, mediæval associations formed for the protection and development either of commerce or some particular trade. The earliest were of a semi-religious character, providing, amongst other things, for the payment for masses for souls of the departed, and some of them so remained until their suppression by Henry VIII. in 1547. The industrial g., however, was classed under two distinct heads—the 'gild merchant' (merchant g's), an organisation which came into existence in England soon after the Norman Conquest, and the 'trade' or 'craft' g., which first began to flourish during the XIV. cent. On the Continent the g. was of earlier origin. Members of the merchant g. enjoyed the privilege of regulating the trade of a borough. Their influence was very great, especially in freeing industrial cities and ports from the power of feudal lords. The trade g. was an association of craftsmen in the different branches of industry, to protect the common interests of the members. A subsequent development of the trade g's were the various *livery companies*, each of which followed its particular craft or 'mystery.' The word 'guild' is now generally used in connection with social or religious improvement societies, such as temperance g's, communicants' g's, etc.

J. T. Smith, *English Gilds* (1870); Gross, *The Gild Merchant* (1890).

GUILFORD (41° 18′ N., 72° 40′ W.), town, Connecticut, U.S.A., on Long Island Sound; iron foundries; wagon-wheel and canning factories. Pop. 3000.

GUILFORD, title of North family; barony granted in 1683 to Francis North, famous lawyer, whose grandson was raised to earldom, 1752. Second earl, more generally known as LORD NORTH, was prime minister, 1770–82, and by continuing policy of taxing colonies was largely responsible for outbreak of Amer. War of Independence; resigned, 1782; formed Coalition ministry with FOX, 1783; d. 1792.

GUILLAUME D'ORANGE (d. 812), hero of romantic cycle of poems of S. France, relating exploits of Charlemagne and his Twelve Peers. The *Geste* of G. consists of about twenty poems. G. was grandson of Charles Martel; captured Barcelona from Arabs, 803; retired to monastery of his own foundation, 806; called also G. *Fierabras*.

GUILLAUME DE PALERME, hero of a XIV.-cent. poem (derived from the French). He was a foundling who loved Melior, a princess, and the pair, fleeing to the woods, were befriended by a werewolf.

GUILLAUME, JEAN BAPTISTE CLAUDE EUGÈNE (1822–1905), Fr. sculptor and academician and writer on art; executed many public works in Paris and Fr. provinces.

GUILLEMOT AND AUK FAMILY (*Alcidæ*), a family of marine swimming birds confined to the colder regions of the northern hemisphere, characterised by short wings, heavy body, and fully webbed anterior toes, the first toe being absent. The most interesting and largest member of the family was the flightless Great Auk or Garefowl (*Alca impennis*), distinguished by its large, deep beak, equalling the head in length, black plumage on the upper surface and white on the under, as well as on a patch above the eyes. Confined to the North Atlantic, its chief breeding-places were rocky islands off Iceland and Newfoundland, where incessant slaughter for more than two centuries brought about its extinction in 1844. Its remains have been found in Orkney.

Inferior in size to the auk, and possessing well-developed wings, the shorter-beaked RAZOR-BILL (*Alca torda*) breeds in colonies on coasts and islands on both sides of the Atlantic. Closely allied are the more slender-billed GUILLEMOTS (*Uria*), of which three species occur in the North Atlantic and Pacific, while the smaller, short and thick-beaked LITTLE AUK or ROTCHE (*Mergulus alle*) breeds solely within the Arctic Circle. Most peculiar of all are the Arctic PUFFINS (*Fratercula*) or SEA PARROTS, with brilliantly coloured red or orange bills.

GUILLOTINE, machine used in France for decapitating criminals. Its chief feature, a heavy blade, with sharp oblique lower edge, can be made to fall by its own weight between two grooved upright posts, on to the neck of the victim fastened below; derives its present name from its reputed inventor, DR. GUILLOTIN (1792), but similar instruments had been in use before the Fr. Revolution.

Croker, *History of the Guillotine*.

GUIMARAES (41° 28′ N., 8° 11′ W.), fortified town, Portugal; cutlery, paper, leather; noted sulphur springs in vicinity. Pop. 8863.

GUINEA, Eng. gold coin, in circulation 1663–1817; so named because the gold of which it was first made came from the Guinea Coast; at first issue was worth 20s., in 1694 was 30s., by 1717 had become as now 21s.

GUINEA (12° N. to 16° S., 17° W. to 13° E.), district of West Africa, stretching along the shores of Gulf of G., between Senegal and Cape Negro; divided into Upper G. (E. and W.) and Lower G. (N. and S.). G. includes coast regions of Sierra Leone, Gold Coast, Lagos, Nigeria (Brit.); Fr. G., Ivory Coast, Dahomey, Fr. Equatorial Africa; Togo, Kamerun (Ger.); Portug. G. and Angola (Portug.); Span. G.; Belg. Congo; Liberian Republic; also G. Islands—Fernando Po, Annabom (Span.), Principe, São Thomé (Portug.).

GUINEA-FOWL (*Numida*), genus of Pheasants; Common G., or Pintado (*N. meleagris*) of W. Africa, is domesticated in Britain; head is naked, plumage is speckled with white. G's in wild state are gregarious.

GUINEA-PIG, see under CAVY FAMILY.

GUINEA-WORM (*Filaria medinensis*), a parasite of man common in tropical districts, particularly on the Guinea Coast, its habitat being the subcutaneous tissues of the back and legs, where it forms swellings which develop into abscesses. Its intermediate host is a water flea, *Cyclops*, and it appears to be introduced into man by swallowing infected water. The disease is cured by opening the abscesses and carefully extracting the parasite. See NEMATODA.

GUINES (22° 50′ N., 82° W.), town, Cuba, W. Indies; sugar-cane, tobacco. Pop. 8000.

GUINEVERE, see ARTHUR, KING.

GUINGAMP (48° 34′ N., 3° 9′ W.), town, France; church of Notre Dame, one of chief pilgrim resorts in Brittany; flour-mills, tanneries. Pop. 9300.

GUINNESS, family of Dublin Stout brewers, whose business dates from 1759; present representatives are Barons Ardilaun and Iveagh.

GUINOBATAN (12° 50′ N., 123° 43′ E.), town, Luzon, Philippine Islands; hemp. Pop. 21,000.

GUIPUZCOA (43° 6′ N., 2° 10′ W.), maritime province, N. Spain; surface mountainous; fruit, timber, cattle; rich in minerals (iron, lignite, copper); flourishing industries; good fisheries; climate mild, healthy; many mineral springs; capital, San Sebastian. Area, 728 sq. miles. Pop. (1910) 225,271.

GUISBOROUGH (54° 32′ N., 1° 4′ W.), town, Yorkshire, England; iron, steel, alum. Pop. (1911) 7062.

GUISCARD, ROBERT (1015–85), Norman conqueror of Sicily; Count of Apulia, 1057; reduced Sicily, 1061–72; conquered Bari, 1071; drove Henry IV. from Rome and restored pope, 1083–84. See ROGER I.

GUISE (49° 51′ N., 3° 40′ E.), town, health-resort, France, on Oise; iron industries. Pop. 7300.

GUISE, DUKEDOM OF, held by younger branch of family of Lorraine, founded by CLAUDE OF LORRAINE, 1st Duke of G., who served with distinction in Italy under Francis I., and later in Luxembourg, 1542; his dau. Mary m. James V. of Scotland, and his two eldest sons attained great importance. FRANCIS, 2nd duke, e. s. of Claude, acquired great military reputation by his defence of Metz against Charles V., 1552, and his conquest of Calais, 1558; he subsequently captured Guines and Arlon, and in 1562 defeated the Huguenots at *Dreux*; was for many years the most powerful personage in France; assassinated in 1563. His bro. CHARLES entered the Church, and became cardinal of Lorraine; he was prominent minister of Henry II., and introduced Inquisition in France. HENRY, 3rd duke (1550–88), is chiefly noted for his opposition to Huguenots, whom he defeated at *Jarnac* and *Moncontour*, 1568, and against whom he formed Catholic League, 1584; he also had considerable share in instigating the massacre of St. Bartholomew's Eve in 1572, and opposed Henry of Navarre; he was assassinated in 1588. HENRY, 5th duke, failed to secure crown of Naples, 1647, 1654. Title became extinct with death of Mary, Duchess of G., in 1688.

Forneron, *Les Guise et leur époque* (1887).

GUITAR, a stringed instrument of Oriental origin somewhat similar to the lute; popular in Spain and Italy. G. has a flat back with curved sides, large sound-hole, and six strings—the three highest of gut, the three lowest of silk, spun over with silver wire; sound is produced by plucking the strings with the fingers of right hand, while the left hand is used for altering the pitch by pressing a fretted finger-board; music is written in treble clef, but sounds an octave lower than written.

GUITRY, LUCIEN GERMAIN (1860–), Fr. actor; a leading exponent of contemporary Fr. drama.

GUIZOT, FRANÇOIS PIERRE GUILLAUME (1787–1874), Fr. politician and author; b. at Nîmes, of Huguenot stock; ed. at Geneva and Paris; early turned his attention to literature; appointed prof. of Modern History at Sorbonne, 1812, in which year he m. Pauline de Meulan, writer on educational subjects. In 1814 he was app. Sec. Gen. of Interior under Louis XVIII., but retired from office after Napoleon's escape from Elba in 1815. After final defeat of Napoleon, G. obtained office under Ministry of Justice; was conspicuous member of *Doctrinaire* party; dismissed from office, 1821, he devoted himself to historical research; entered Lower House in 1830; as Minister of Education, 1832–36, he had principal share in development of modern system of education in France. Ambassador to Britain, 1840, but was presently recalled to France to form cabinet; became Foreign Minister, and in 1847 succ. Soult as Premier. His attempts to foster friendly relations with Great Britain were at first crowned with success; but in 1846 the *entente* was broken by the discovery of the Span. marriage intrigues, which discredited both G. and the king. G. remained in office till Revolution of 1848, when with difficulty he escaped to England. G. wrote *Histoire de la Révolution d'Angleterre depuis Charles I. à Charles II.*, an important hist. work; also author of *Histoire de la Civilisation en France*, *Histoire de la Civilisation en Europe*, a biography of Washington, and other works.

Guizot, *Mémoires pour servir à l'histoire de mon temps* (1858–61).

GUJARAT, GUZERAT (22° N., 72° E.), region, Bombay Presidency, India; includes the N. districts of the presidency, the Gaekwar's territories, and numerous native states.

GUJARATI AND RAJASTHANI, two of the seven chief Aryan vernaculars of India; together with Punjabi they are known officially as the western subgroup of the Intermediate Group of Indo-Aryan tongues; they are spoken, as their name implies, in Gujarat and Rajputana (*Rajasthan*) by about 22,000,000 natives. The main dialects of R. (G. has few of importance) are Jaipuri and Marwari. They contain a small vocabulary of Arabic and Persian words. G. and R. have three genders, though the neuter is sparingly used in R.; nouns are inflected to form oblique cases; a locative case is present; in the verb finite tenses are derived from participles, while the infinitive is the neuter of the future participle passive; the system of phonetics is similar to that of Sanskrit (*q.v.*).

Both tongues have a rich store of songs and chronicles, but as yet no complete edition of either has been made.

Kellog, *Grammar of the Hindu Language* (1893); Taylor, *The Student's Gujarati Grammar* (1908).

GUJRANWALA (32° 10′ N., 74° 14′ E.), district, Lahore, Punjab, India; chief river, Chenab; manufactures brass-ware; area, 3198 sq. miles. Pop. 890,577. Capital, Gujranwala. Pop. 27,000.

GUJRAT (32° 47′ N., 74° 9′ E.), chief town, Gujrat district, Punjab, India; cotton goods; brass-ware; scene of defeat of Sikhs by Brit. under Gough, 1849. Pop. 19,048. District area, 2051 sq. miles. Pop. 750,548.

GULA, female Babylonian deity, 'the healer of pain'; wife of Ninib.

GULBARGA (17° 19′ N., 76° 54′ E.), town, Hyderabad State, India. Pop. 28,000.

GULF STREAM, a warm, slow-moving oceanic current, from 40 to 100 miles wide, and over 300 fathoms deep, issuing from Gulf of Mexico; flows N.E. along E. coast of N. America to near Newfoundland, where, turning E., it merges into a drift current; causes mildness of Brit. and Norwegian climate.

GULL FAMILY (*Laridæ*), a family of about 115 species of strong-flying and swimming birds with completely or partially webbed feet. They are mostly marine, and live upon fishes and crustacea, but some have taken to an inland life, breeding in marshy places and feeding on worms and insect grubs. They are found on all the oceans. Amongst them are the TERNS or SEA SWALLOWS (*Sterna*), so called because of their forked tails—active graceful birds which lay their eggs in depressions on sandy shores; with them are reckoned the tropical NODDIES (*Anous*). The SKIMMERS or SCISSOR-BILLS (*Rhynchops*), with long, scissor-like beak, the lower mandible of which protrudes far beyond the upper, occur in Africa, S.E. Asia, and America. Lastly, the GULLS and KITTIWAKES may be distinguished by possessing completely webbed feet, a beak shorter than the head, with the upper mandible shorter than the lower, and forming a slight hook at its tip.

GULL, SIR WILLIAM WITHEY, Bart. (1816–90), Eng. physician; physician to Guy's Hospital (1856), Fullerian prof. of Physiology for three years in Royal Institution (1847); famous as a clinical physician; he was the first to describe myxœdema, and he wrote on many other medical subjects.

GULLET, see DIGESTION.

GULLY, JOHN (1783–1863), Eng. sportsman and politician; s. of an innkeeper; in early life a pugilist; several times won the Derby; M.P. for Pontefract (1832–37).

GULLY, WILLIAM COURT, 1ST VISCOUNT SELBY (1835–1909), Brit. politician; Conserv. M.P., Carlisle, 1886; Speaker, House of Commons (1895–1905); peerage and pension (1905); member, Hague Arbitration Court (1907).

GULPAÏGAN (32° 25′ N., 50° 15′ E.), town, Central Persia.

GUM ($C_6H_{10}O_5$) is an amorphous *carbohydrate*, the watery solution of which is a jelly with adhesive properties. Gums are exudations from the stems of plants. *Tragacanth*, from *Astragalus gummifer*, yields two gums, *Tragancanthin* and *Arabin*. The oak and beech give *Xylan*, which on hydrolysis yields the sugar *Xylose*. The gum from *Acacia Senegal* is *Arabin*, used to suspend insoluble oils, powders, etc.

GUMBINNEN (54° 35′ N., 22° 9′ E.), town, on Pissa, E. Prussia, Germany; textiles, iron foundries. Pop. (1910) 14,539.

GUMBO, or OKRA, an annual African herb, natural order *Malvaceæ*, with edible fruit. The seeds are used for coffee: leaves for poultices.

GUMTI (25° 33′ N., 83° 20′ E.), river, India; joins Ganges, 17 miles N.E. of Benares, after S.E. course of 500 miles.

GÜMÜRDJINA, GUMULJINA (41° 15′ N., 25° 48′ E.), town, European Turkey; annual cattle fair; wine. Pop. 8000.

GUMUSH-KHANEH (40° 25′ N., 39° 25′ E.), town, vilayet Trebizond, Asiatic Turkey; silver and lead mines. Pop. 5000.

GUN, general name for firearms which discharge projectiles by means of an explosion. The earliest known was the 'hand-g.,' which was in use in Europe in the XIV. cent. This consisted of an iron tube, fixed in a piece of wood, with touch-hole at the top, and fired from a rest. Later, the touch-hole was placed at the side, and a pan was added for the reception of the priming-powder. This led to the development of the *match-lock*, in which the lighted match was fixed to a small cock, or *serpentine*, which caused it to fall, at the pull of the trigger, on to the priming-powder. A heavy match-lock weapon of the XVI. cent. was the *arquebus*; and of similar kind was the *musket*, used in England in the XVII. cent. Both these were heavy hand-guns fired from rests. An improvement on the match-lock gun was the *wheel-lock*, invented at Nuremberg in the early part of the XVI. cent. In this weapon a small grooved steel wheel revolved rapidly in contact with a piece of iron pyrites, fixed into a 'cock-head,' and the sparks thus produced fell into the pruning-pan. A later development was the *flint-lock* musket, which led to the many improved modern firearms. See ORDNANCE, and articles on particular weapons.

Greener, *The Gun and its Development.*

GUNA (24° 40′ N., 77° 20′ E.), town, Gwalior, Central India; military station. Pop. 12,000.

GUN-COTTON, explosive substance, is approximately $C_{12}H_{14}(NO_3)_6O_4$, *cellulose hexa-nitrate*, the washed and dried product obtained by soaking cotton-wool in a mixture of three parts of concentrated *sulphuric acid* and one part of *nitric acid* (Sp. Gr., 1·5) for twenty-four hours. It is insoluble in a mixture of alcohol and ether. When lighted, it burns quietly and quickly without smoke. When fused with a detonator it explodes with violence. Gun-cotton forms two non-explosive compounds, *colloidon* and *celluloid*.

GUNDULICH, IVAN (1588–1638), Servian poet; author of a political poem, *Osman*; and numerous translations of Ital. plays.

GUNNEL, see BLENNIES.

GUNNING, PETER (1614–84), Eng. ecclesiastic; supporter of Charles I.; subsequently bp. of Chichester and of Ely.

GUNNY, coarse jute cloth, extensively used in the making of bags to contain cotton, grain, etc.; the industry, carried on chiefly in and near Calcutta, employs many people of both sexes. This fabric is also made in Dundee.

GUNPOWDER, an *explosive* obtained by mixing *saltpetre*, *charcoal*, and *sulphur* together. Its discovery is attributed by some to Schwartz, a Ger. monk, and by others to Roger Bacon. It was known as an explosive, and used as a scientific amusement long before its propelling powers were known. It was probably first employed as a *propellant* by Edward III., since he possessed cannon. The chief combustible is charcoal, which is made from *dogwood*, *willow*, or *alder*. The charcoal must be free from grit and burn easily, leaving little ash. When made, the charcoal is ground, sifted, and carefully stored. The sulphur, after purification by distillation and melting, is cast in moulds and then ground and sifted. *Potassium nitrate* forms a very suitable source of oxygen as it does not become deliquescent. Each constituent is weighed carefully and passed through a sieve of known mesh. After moistening, the materials are *incorporated* or moved, twisted, and turned in every direction by iron rollers working on a circular bed. The whole apparatus can be douched with water if friction causes ignition. The product is '*mill-cake*.' The *mill-cake* is pressed and becomes *press-cake*. The higher the density the slower is the initial rate of burning. Excess of moisture reduces the explosiveness. The *press-cake* is broken up and granulated, the grains being afterwards separated and sorted by sieving. Final processes give different shapes (number of faces) to the grains to suit various requirements. The products of combustion should be *nitrogen* and *carbon dioxide* as gases, and *potassium sulphate* and *carbonate* as solids.

Hime, *Gunpowder and Explosives* (1904).

GUNPOWDER PLOT, conspiracy of Eng. Rom. Catholics (on account of James I.'s refusal to redress their grievances) to blow up with gunpowder the Houses of Parliament when the king and his ministers were there on Nov. 5, 1605. Originator of plot was Robert Catesby, the other conspirators including Thomas Percy, Sir Everard Digby, Francis Tresham, and Guy Fawkes. Barrels of gunpowder were secretly

lodged in coal cellar underneath House of Lords, and it was arranged that Fawkes should fire it at the appointed time. On Oct. 26 an anonymous letter, generally attributed to Tresham, was received by Lord Monteagle; this aroused suspicion and led to discovery of plot; cellars were searched on Nov. 4, and Fawkes was arrested; other conspirators took to flight, but were presently overtaken when some, including Catesby, were killed and others taken prisoner. Fawkes and others were executed, and Tresham died in captivity.

S. R. Gardiner, *What the G. P. was* (1897).

GUN-ROOM, mess-room of junior officers in warship; in aft lower deck, under care of gunner, in wooden men-of-war.

GUNTER, EDMUND (1581–1626), Eng. mathematician; ed. Oxford; became prof. of Astronomy, Gresham Coll., London, 1619; invented the *chain* for land measurement, also *Gunter's scale*, for working navigation problems.

GÜNTHER, JOHANN CHRISTIAN (1695–1723), Ger. lyrical poet of fine gifts, but drunken habits; praised by Goethe.

GUNTRAM (561–592), king of Burgundy; s. of Clotaire I., and inheritor, with his bro's, of the Frankish dominions; possessed some administrative ability, but few social virtues.

GUNTUR (16° 18′ N., 80° 29′ E.), town, Madras, India; trade in cotton and grain. Pop. 23,000.

GUPTA, Ind. dynasty, *c.* 320–480 A.D., founded by Chandragupta Maurya (*q.v.*); under Samudragupta, dominions comprised nearly whole of India; succumbed to Bengal.

GURDASPUR (32° 3′ N., 75° 27′ E.), district, Lahore, Punjab, India; area, 1889 sq. miles. Pop. 940,344. Chief town, Gurdaspur. Pop. 6000.

GURGAON (28° 37′ N., 77° 4′ E.), district, Delhi, Punjab, India; chief town, Gurgaon; trade in grain. Area, 1984 sq. miles. Pop. 746,208.

GURKHAS, or GOORKHAS, the principal race in Nepal (India). They are a sturdily built people, excellent soldiers; rendered valuable service in suppression of the Indian Mutiny.

GURNALL, WILLIAM (1617–79), Eng. author; wrote a notable collection of sermons, *The Christian in Compleat Armour* (1655–62).

GURNEY, EDMUND (1847–88), Eng. philosopher and scientist; ed. at Cambridge, studying classics and medicine, but best known for his pioneer work on psychical research; with Myers and Podmore edit. *Phantasms of the Living*; an acute, scientific thinker.

GURNEY, JOHN (1750–1809), Eng. banker; of a Norwich Quaker family; f. of Elizabeth Fry (*q.v.*); his s., SAMUEL G. (1786–1856), largely extended the banking business, and was a noted philanthropist.

GURWOOD, JOHN (1790–1845), Eng. military officer; served with distinction in Peninsula; became sec. to Wellington, and edit. of *Wellington's Dispatches*.

GUSTAVUS I., VASA (1496–1560), king of Sweden; b. at Lindholm, Upland; fought against Danes, 1517–18. His f. and other leaders of Swed. party were executed by Christian II. of Denmark, 1520; G. raised an army, and after various battles expelled Danes from Sweden; crowned king of Sweden, 1523. G. established Lutheran religion; excluded bp's from Senate; formed alliances with Denmark; put down peasant insurrections; Diet declared crown hereditary in his house, 1560.

GUSTAVUS II., ADOLPHUS (1594–1632), king of Sweden, hero of Thirty Years War; succeeded, 1611; warred against Denmark, 1611–13, Russia, 1614–17, and Poland, 1617–29; from Russia he acquired Karelia and Ingria, from Poland, Livonia, Courland, Esthonia. His objects in taking part in Thirty Years War were to defend and establish Swed. supremacy over Baltic Sea and shores, and to champion Ger. Protestantism. He landed in Germany with 13,000 troops in 1630; captured Stettin; failed to relieve Magdeburg, but inflicted severe defeat on Tilly at Breitenfeld, 1631; he attacked and defeated Wallenstein at Lützen, 1632, but was himself slain during the action. G. was a great soldier and leader of men, and will always live as a national hero.

C. R. L. Fletcher, *Gustavus Adolphus* (1892).

GUSTAVUS III. (1746–92), king of Sweden; succ. in 1771, when country was torn between rival factions of Hats and Caps; overthrew oligarchy by a successful revolution in 1772, and framed new constitution. He carried out various reforms, encouraged lit. and art, and developed trade of country; increased naval strength, established religious toleration. G. warred against Catharine II. of Russia, 1788–90, and at the naval engagement of Svensaksund inflicted a crushing defeat upon the Russians, who lost a great part of their fleet; concluded peace by Treaty of Värälä in 1790; tried to form league against Jacobins; assassinated, 1792.

Bain, *Gustavus III. and his Contemporaries* (1904).

GUSTAVUS IV. (1778–1837), king of Sweden; succ. 1792; joined European coalition against Napoleon; lost Pomerania and Finland; deposed as insane, 1809.

GUSTAVUS V. (1858–), king of Sweden; s. of Oscar II.; succ. 1907; m. (1881) Victoria, dau. of Grand-Duke of Baden.

GUSTAVUS ADOLPHUS UNION, German Evangelical Prot. Association, founded in 1832; aims at supporting needy Prot. communities.

GÜSTROW (53° 48′ N., 12° 11′ E.), town, on Nebel, Mecklenburg-Schwerin, Germany; has cathedral and ancient ducal castle; ironworks; active trade. Pop. (1910) 17,809.

GUTENBERG, JOHANNES (*c.* 1398–1468), Ger. printer; b. Mainz; followed various mechanical employments until 1450, when he entered into partnership with Johannes Fust (or Faust), a goldsmith, who furnished the capital to start a printing business. G. is credited with the invention of printing by movable blocks. The partnership was subsequently dissolved, Fust taking an action at law for the recovery of money advanced. G. afterwards started a rival press. See PRINTING.

GÜTERSLOH (51° 55′ N., 8° 20′ E.), town, Westphalia, Germany; famous for its 'pumpernickel' (rye-bread); exports hams and sausages; textile industries. Pop. (1910) 8334.

GUTHRIE (35° 59′ N., 97° 32′ W.), city, Oklahoma, U.S.A.; cotton industries. Pop. (1910) 11,654.

GUTHRIE, SIR JAMES (1859–), Scot. artist; R.S.A.; noted for portraits and genre subjects.

GUTHRIE, THOMAS (1803–73), Scot. preacher and philanthropist; minister successively of Old Greyfriars and St. John's, Edinburgh; seceded at Disruption, becoming minister of Free St. John's; wrote three *Pleas for Ragged Schools*; promoted establishment of Industrial Schools for destitute children.

GUTHRIE, THOMAS ANSTEY, see ANSTEY, F.

GUTS-MUTHS, JOHANN CHRISTOPH FRIEDRICH (1759–1839), Ger. educationist; did much to introduce improved methods of teaching geography and gymnastics in schools; wrote various handbooks on these subjects.

GUTTA-PERCHA is the evaporated milky *latex* of the trees *Dichopsis gutta* and *Dichopsis oblongifolia*, Natural Order *Sapotaceæ*. The trees, which are native to the Malay Peninsula, are felled, cut by a special method and the latex collected. Mature trees are the best. When felled during the wet season about 30 oz. per tree are obtained. After evaporation g.-p. is sent to the market as blocks of a dirty greyish appearance often with a reddish tinge. Chemically it consists of a *hydrocarbon* and two *oxygenated resins*. It is used to insulate cables and telegraph wires.

M'Intosh, *Gutta-Percha and India-Rubber*.

GUTZKOW, KARL FERDINAND (1811–78), Ger. novelist and dramatist; his successful plays include *Uriel Acosta*, *Richard Savage*, and *Zopf und Schwert*; his novels, *Die Ritter vom Geiste*, *Der Zauberer von*

Rom. In early life G. was a prominent figure in the 'Young Germany' movement.

GÜTZLAFF, KARL FRIEDRICH AUGUST (1803–51), Ger. missionary; from 1828 until his death was largely engaged in China; trans. the Bible into Chinese and Siamese; also wrote several works on China and its history.

GUY OF WARWICK, hero of a XIII.-cent. Eng. metrical romance, who traversed the world performing knightly deeds of valour to win the hand of Felice, dau. of the Earl of Warwick.

GUY, THOMAS (1644–1724), Eng. philanthropist; founded Guy's Hospital (1721), and subscribed to other charities.

GUYON, JEANNE MARIE BOUVIER DE LA MOTHE (1648–1717), Fr. mystic; disciple of the doctrine of quietism, or spiritual perfection; persecuted and imprisoned for her opinions, which were regarded as heretical; wrote *Autobiography* and numerous works.

GUYON, RICHARD DEBAUFRE (1803–56), Brit. soldier; settled in Austria; in Hungarian revolution, 1848, he was gen. in Austrian army and fought brilliantly; later entered service of Turkey, and became gov. of Damascus.

Kinglake, *General Guyon* (1856).

GUYOT, YVES (1843–), Fr. politician and economist; author of *La Tyrannie Socialiste*, *La Comédie protectionniste*; edit. *Le Siècle* (1892–1903) and *Journal des Économistes* (1909).

GUZERAT, see GUJARAT.

GUZMICS, IZIDOR (1786–1839), Hungarian writer; was a Benedictine abbot, and, besides writing theological works, trans. Theocritus and other Gk. classics; famed for social works.

GWADAR (25° 8′ N., 62° 7′ E.), seaport, on S.W. coast, Baluchistan.

GWALIOR (24° 30′ N., 77° 50′ E.), native state in Central India, consisting of several detached districts; situated partly in basin of river Jumna and partly in that of the Nerbudda; drains into Bay of Bengal and Arabian Sea; area, 29,047 sq. miles. Capital, Gwalior, in the N. The surface is generally level in N.; hilly in centre; and comprises, in S., part of the Vyndhya and Satpura Mts.; traversed by rivers Nerbudda, Chambal, Betowa, and Sind. Principal export is opium. G. is a Mahrattan principality under Brit. Protection; there are few Mahrattas, the inhabitants being mainly Hindus. At capital stands famous old citadel, on precipitous rock. Other towns are Dhar and Indore in the S. Pop. (1911) 3,092,639.

GWEEDORE (55° 4′ N., 8° 17′ W.), hamlet, on N.W. coast County Donegal, Ireland.

GWILT, JOSEPH (1784–1863), Eng. architect; author of *The Encyclopædia of Architecture* (1842), *Treatise on the Rudiments of Architecture*, and similar works.

GWYN, NELL, ELEANOR (1650–87), Eng. actress; originally an orange-seller; famed for her performances in comedy; mistress of Charles II.; had two sons, one of whom became Duke of St. Albans.

GYANGZE (29° N., 89° 30′ E.), city, Tibet; celebrated for manufacture of woollen cloth.

GYGES (687–54 B.C.), king of Lydia. Plato tells that he was a herdsman who discovered a magic ring which rendered the wearer invisible. With its aid he assassinated the king of Lydia and seized the throne.

GYLIPPUS (fl. V. cent. B.C.), Spartan general who rescued Syracuse from Athenians, 414 B.C.; Athenian captives were then slain, possibly by G.'s advice.

GYLLEMBOURG-EHRENSVÄRD, THOMASINE CHRISTINE, BARONESS (1773–1856), Dan. novelist; author of *An Everyday Story*, *The Cross Ways*, *Near and Far*, and numerous other stories of a domestic type.

GYMKHANA, sports of various kinds held at Indian military stations.

GYMNASIUM, a place used for the performance of athletic exercises; in ancient Greece it was an elaborate combination of halls and courts for exercises, wrestling, and running, with baths and porticoes, frequented by philosophers, who instructed the youths who took part in the exercises, *e.g.* the Academy, where Plato taught; in modern Germany the g. is an advanced school, preparing for the univ's, corresponding to the public schools and high schools of Britain and America.

GYMNASTICS, athletic exercises practised for improving the condition and development of the body, as opposed to athletic sports and games, *e.g.* running, jumping, football, golf, into which the competitive element enters. G. were practised by the Greeks as training for open-air sports and games, and recognised as of benefit to health, and a valuable adjunct to the moral and literary training carried on in the same buildings as the physical training. In mediæval times horsemanship, field sports, and exercises with arms took the place of the older and more systematic training of the body, and it was not until the second half of the XIX. cent. that the therapeutic value of g., as known to Hippocrates and Galen, was again recognised. Physical exercises are regularly taught in Britain in the elementary schools, while the higher schools and univ's have gymnasia fitted up with apparatus, which is less elaborate now than it was a few years ago. Clubs for gymnastic exercises are common everywhere, and g. play an important part in the training of the army. G. are practised with benefit for such conditions as digestive derangements and (under medical supervision) diseases of the lungs and heart. The dumb-bell, which has been employed since Elizabethan times, is the most generally popular gymnastic apparatus, its weight being easily proportioned to the person using it, and bar-bells, or two-handed dumb-bells, and Indian clubs are also much used. The vaulting-horse, parallel bars, trapeze, swinging rings, horizontal bar, and bridge ladder are more elaborate gymnastic apparatus on a larger scale, but, although these and similar apparatus have been very popular for many years, there is a tendency to-day to discard them in favour of free gymnastic exercises without any apparatus. In France, Germany, Sweden, Denmark, Switzerland, Italy, among other countries, g. are much practised and much esteemed for hygienic purposes, and many competitions of gymnastic teams are held, the Olympic Games even including such competitions among its events.

Wide, *Handbook of Medical Gymnastics.*

GYMNOBLASTEA, see under HYDROMEDUSÆ.

GYMNOSPERMS, naked-seeded plants in which the seed lies on the surface of the *carpel*, and is not enclosed in an *ovary*. They form the smaller, less developed and more ancient of the two divisions of the *Phanerogams* or *Spermaphyta* (seed-bearing plants). G's are divided into four classes, all trees or shrubs—(1) *Conifers*; (2) *Cycads*; (3) *Gnetales*; (4) *Ginkgoales*. These classes, although differing widely in appearance, have in common with each other and their fossil ancestors—(*a*) exposed *ovule* at which the pollen can get directly; (*b*) simplicity of wood structure; (*c*) formation of *endosperm* before fertilisation.

The CONIFERS, cone-bearing trees, arose in the Mesozoic period, and since then have varied little in structure or number, but the decline of the other g's has made them the dominant modern type. Over 2000 of the 2500 species of g. are Conifers. They include *Taxaceæ* and *Pinaceæ* (pines, firs, larches, yews, spruces, junipers, and araucarias). Except in the forests where *Pinaceæ* flourish, g. have been completely supplanted by *Angiosperms* (most highly developed *Spermaphyta*). Conifers are mostly evergreen with needle-shaped leaves, thick cuticle, sunken *stomata*, and other devices to lessen transpiration. The seedling has two or many *cotyledons* and a tap-root. There is no pith, and the stele is *diarch* or *triarch*. The stem shows no true vessels in the *xylem* (wood), which consists of *tracheids* (column of long cells placed on end) with bordered pits. The *cambium* is collateral and open, and therefore there is secondary growth in thick-

ness. Large resin passages occur in the cortex. The *medullary rays* are complex, consisting of cells containing starch and radially running *tracheids*. The venation of the leaves varies. Different leaves may occur on one plant, e.g. *cotyledons*, ordinary foliage leaves, *scale* leaves, and *acicular* leaves (needles). Some trees bear *dwarf* shoots (branches of limited growth), which with their leaves form *spurs*. Flowers are unisexual, and may be borne on the same tree (*monœcious*) or on different trees (*dicœcious*). Only essential flower-parts, *stamens* and *carpels*, are present. Usually they are wind-pollinated, and fertilisation takes place a year afterwards, followed by germination in the third year.

CYCADS are tropical plants. They include *Cycas* and *C. revoluta* (sago-palm). They were the predominant Mesozoic flora, and comprised many genera of world-wide distribution, of which nine only survive. The stem has a large pith, cf. Conifers. Fossil Cycads show highly specialised reproductive organs and exalbuminous seeds unknown in modern forms. Botanists think that an offshoot of these gave rise to *Dicotyledons*. Modern and primitive fossil Cycads show three fern-like characters: (1) the shape of the leaves; (2) their arrangement; (3) fertilisation by a motile male cell in presence of water. They are therefore considered to form a step in the evolution of *Pterydophyta* (ferns) into *Spermaphyta*.

GINKGOALES survive only as *Ginko biloba* (maiden-hair tree of Japan), called the 'living fossil,' with leaves like maiden-hair fern. Motile male cells fertilise ovum in presence of water, an animal characteristic not shown by any of the higher plants except Cycads and Ginko.

GNETALES show true vessels in secondary wood. They are the only living g. with any angiosperm characteristics.

GYMPIE (26° 15′ S., 152° 38′ E.), town, Queensland, Australia; gold-mining centre. Pop. 11,959.

GYNÆCEUM, the women's part in ancient Gk. houses.

GYNECOLOGY, GYNÆCOLOGY, the branch of medicine which deals with the diseases peculiar to women, a subject which has received much attention since ancient times, Egyptian and afterwards Gk. and Rom. physicians making a special study of it, while Galen gave it a place of some importance in his works. The rise and development of modern scientific g. began about the first half of the XIX. cent., when Récamier (1774–1852) began to advocate the use of the speculum and sound, and Simpson, Hughes Bennett, and others did much to advance its progress.

DISEASES OF UTERUS.—*Menstruation* is the normal flow of from 4 to 6 oz. of blood with mucus from the uterus, about every twenty-eight days, from about the age of fourteen or sixteen to forty-five or fifty, and derangements of menstruation are usually symptomatic of various physiological and pathological conditions of the uterus. The most usual cause of *amenorrhœa*, or cessation of menstrual flow, is pregnancy, while the flow stops altogether about the age of forty-five or fifty, an occurrence which is termed the climacteric; but the cessation may also be due to anæmia, phthisis, or local malformations. *Dysmenorrhœa*, or painful flow, may be due to displacements of the uterus, ovarian disease, chronic inflammation, or tumours of the uterus. *Menorrhagia*, or excessive flow, is usually due to inflammation or displacements of the uterus, and tumours; while *metrorrhagia*, or irregular flow, apart from menstruation, may be due to polypi, extra-uterine gestation, or new growths, and must be regarded seriously when occurring above the age of forty, as it is then often an early sign of malignant disease. The uterus may be affected by *cervicitis*, or inflammation of the cervix or entrance, treated by douching or scraping, and applying a caustic endometritus; inflammation of the lining mucous membrane of the uterus, treated by douching or curetting (removing the inflamed membrane); and it may be the site of various tumours, simple (including fibroid and polypus) or malignant (including cancer, sarcoma, and deciduoma), the former class being simply excised, while the latter requires very radical treatment. The uterus may also be displaced in various ways, the chief displacements being anteversion and anteflexion, displacements forwards; retroversion and retroflexion, displacements backwards; prolapse, in which the uterus descends through the floor of the pelvis; and inversion, in which the uterus is turned inside out. In slight degrees of displacement, the uterus can be replaced and kept in place by a bent ring-like apparatus called a pessary, but in more advanced degrees surgical operations are required to hold the uterus in place.

DISEASES OF FALLOPIAN TUBES.—The Fallopian tubes may be the site of inflammation, septic, gonorrhœal or tubercular, on one or both sides, the tubes being much swollen, and the treatment being fomentations, douching, plugging, and rest for slight, and removal by an abdominal incision for severe cases. An ovum may be fertilised and develop in the tube instead of in the uterus, which usually leads to serious complications, and has to be removed as soon as detected. If not removed, it usually bursts sooner or later, and peritonitis ensues.

DISEASES OF OVARY.—The ovaries may be displaced, usually prolapsing down to the pouch of Douglas behind the uterus, and causing pain, and may require a surgical operation before being replaced. *Ovaritis*, or inflammation of the ovary, is usually due to secondary infection from the Fallopian tube, and is treated by fomentations and douching. Tumours of the ovary may be solid (including fibroid, sarcoma, cancer) or cystic (simple, compound, malignant, dermoid), the treatment being removal by operation as soon as detected.

DISEASES OF THE VAGINA.—The opening of the vagina may be congenitally absent, a slight surgical operation being necessary to correct the abnormality, or it may be affected by spasm, usually due to chronic irritation, which should be removed. Inflammation may be septic, gonorrhœal, or diphtheritic, and it is treated by rest, swabbing with antiseptic and astringent, and douching.

DISEASES OF THE VULVA.—The vulva may be the site of inflammation, treated by antiseptic swabbing, and applying a dusting powder (*e.g.* zinc oxide and starch); or tumours may be present, fibroma, cancer, or cystic, which require to be excised, a somewhat more radical operation being necessary for cancer.

DISEASES OF URETHRA AND BLADDER may complicate conditions of the genital system.

Hart and Barbour's *Manual of G.*; Fothergill, *Gynæcology*; Kelly, *Operative G.*, and *Medical G.*

GYÖR (47° 41′ N., 17° 40′ E.), Hungarian name of Raab (*q.v.*), a town of Hungary.

GYP, pseudonym of GABRIELLE RIQUETTI DE MIRABEAU, COMTESSE DE MARTEL DE JANVILLE (1850–), Fr. novelist; her works deal freely with social conventions, and include *Chiffon's Marriage*, *Petit Bob*, *Mlle Eve*, *Elles et Lui*.

GYPAËTUS, member of VULTURE FAMILY (*q.v.*).

GYPS, member of VULTURE FAMILY (*q.v.*).

GYPSIES, Eng. name given to a nomadic race found all over Europe, great part of Asia, in N. and S. America, Africa, and Australia. They have also been known in England as 'Egyptians' (of which Gypsy is a diminutive), 'Greeks,' 'Heathens,' 'Bohemians,' etc. The g. calls himself *Romany* or 'Rómano'; and his language, which is practically the same in all countries, is *Rómani chiv*. Where the g. first came from is unknown. They are generally described by themselves as of *Little Egypt*, which some students have identified with Epirus. They probably first appeared in Europe in the early part of the XIV. cent., and seem to have reached England at about its close. It is recorded that certain g's danced before James V. of Scots at Holyrood; and,

in 1540, the same king granted permission to 'oure louit Johnne Faw, lord and erle of Litill Egipt,' to punish any offenders against the Romany laws. At first they seem to have been well received in Europe, and were known for skilled metal-workers, but subsequently charges of kidnapping and other crimes were brought against them, and in England and other places they were mercilessly hunted down and imprisoned or put to death. In past times these nomads used to be famed for their skill in music and dancing, besides metal-working. Now the chief male occupation is horse-dealing; the female, fortune-telling and basket-making. Amongst common surnames are Smith, Boswell, Stanley, Lee, and Lovell. The Eng. g's conform to no religion; and their moral code is far from strict. Amongst physical characteristics may be noted lithe figures, olive skin, dark, lustrous eyes, exceedingly fine teeth, and black or dark hair.

Works by George Borrow, Leland, Groome.

GYPSUM, $CaSO_4+2H_2O$, mineral composed of hydrated sulphate of lime; occurs abundantly in the more recent sedimentary rocks, although it may occur in any geological age. Varieties: *alabaster*, which is white and resembles marble; *selenite*, transparent and crystalline; *satin spar*, has pearl-like lustre. G. contains a large amount of water, and when this is evaporated off in kilns plaster of Paris is left. This, when mixed with water again, quickly sets, and is used for moulds, casts, etc. G. is also used in a powdered form as agricultural manure, and in the manufacture of porcelain.

GYRINIDÆ, see under POLYMORPHA.

GYROSCOPES and **GYROSTATS** are instruments by means of which the dynamics of a rotating body such as the earth or a spinning-top have been investigated. In the GYROSCOPE, invented towards the end of the XVIII. cent., the principal axis of rotation always passes through a fixed point, and accordingly the rotating wheel or disc is mounted in *gimbals*. GYROSTAT was invented by Kelvin to illustrate the movement of a rotating body left free to wander about on a horizontal plane. It illustrates the action of a top spun on a table. When the gyroscope is rotated at a very high speed it resists any forces coming from without and tending to change its axis of rotation. Hence it can be used to give stability to a moving body through its inertia. The *Moment of Inertia* can be calculated, and is equal to the product of the mass of each particle of the body into the square of its distance from the axis of rotation. It will, therefore, to some extent depend on the geometrical shape of the body.

The *Radius of gyration* of a rotating body is the distance from the axis of rotation at which, if the whole mass of the body were concentrated there, the energy of rotation of the body would be the same as it really is. The first practical application of the gyroscope was Sersen's apparatus for providing a false horizon at sea when the real one was obscured by fog. It consisted of a top with a highly polished upper plane surface. *Centrifugal machines, cream separators*, are really tops held in a frame and obliged to rotate about a vertical axis, *i.e.* they are an application of the gyrostatic principle in which one degree of freedom is suppressed. Other modifications of this principle are used on the platforms of quick-firing guns and for searchlights on board ships. A gyroscopic fly-wheel travels in its original direction only when it is perfectly free in all directions in space. In the form of a small heavy wheel fixed in gimbals rotating at at least 2000 revolutions per minute it is used to control the course of a torpedo or submarine.

The fly-wheel acts on a valve to which rudders are attached. The rolling of a ship can be neutralised by the presence of a gyrostat the movement of which is restrained in one direction, and the same principle can be used to give stability to a mono-rail car. In 1911 the gyroscopic compass was invented, and the gyroscope was used for steadying cinematograph cameras. Bicycle wheels are an instance of gyrostatic movement. Any deviations from the original direction of the movement can be corrected by forces of the required direction acting through the handlebars. Many complicated composite movements can be explained by the fact that, given forces acting in the proper direction, it is possible to overcome the inertia due to gyrostatic movement. The earth can be considered as a large top with a slow backward motion of the equinoctial points due to the attractive force by the sun, moon, and planets. The axis of the earth describes in space a conical motion in about 26,000 years. Various applications of the gyroscope have been used to demonstrate the inclination of the earth's axis.

Crabtree, *Theory of Spinning-Tops and Gyroscopic Motion*; Barnard, *The Gyroscope*.

GYTHIUM (36° 46′ N., 23° 34′ E.), seaport town of ancient Greece, on Gulf of Laconia; was Spartan naval station; now mostly submerged.

GYULA-FEHÉRVAR, Ger. KARLSBURG (46° 5′ N., 23° 34′ E.), town, Transylvania, Hungary, on Maros; bp.'s see; cathedral; museum of antiquities; trade in wine, cattle.

H, eighth letter of the Eng. alphabet; derived from the Phœnician, and originally consisted of two upright and three transverse bars. It is an aspirate, or simple breath sound, neither consonant nor vowel; sounded in words of native origin, but in a few words derived from the Latin, such as 'hour' and 'honour,' mute.

HAAG, CARL (1820–), Anglo-Bavarian artist; famed for water-colours of Eastern scenes.

HAAKON I. (c. 910–61), king of Norway; defeated Danes; murdered.

HAAKON IV. (1204–63), fought against Alexander III. at Largs.

HAAKON VII. (1872–), Charles, the second s. of Frederick VIII. of Denmark; m. (1896) princess Maud, dau. of late Edward VII.; received crown of Norway on its separation from Sweden in 1905.

HAARLEM (52° 22′ N., 4° 40′ E.), town, capital of N. Holland, Netherlands, on Spaarne; the Cathedral of St. Bavo (Groote Kerk) dates from XV. cent.; has collections in art and science, an academy of science, and several royal schools; trade in flower bulbs; surrendered to the Spaniards, 1573. Pop. 70,000.

HAARLEM LAKE (52° 20′ N., 4° 40′ E.), Dutch HARLEMMER MEER, a former shallow lake of the Netherlands, about 20 miles in length, 2 miles S.E. of Haarlem; drained in 1853.

HAASE, FRIEDRICH (1827–1911), Ger. actor; retired, 1898; one of the leading players of the modern Ger. stage.

HAASE, FRIEDRICH GOTTLOB (1808–67), Ger. classical scholar; distinguished edit. of Tacitus, Seneca, Thucydides, and other authors.

HABAKKUK, eighth minor prophet of Old Testament, of whom personally nothing is known, but probably a Levite. Book is dramatic in form, consisting of colloquy between prophet and Jehovah; former begins by lamenting surrounding violence and is told that God has raised up Chaldæans as instrument of judgment; prophet then complains of greater wickedness of Chaldæans, and is told that they shall perish after accomplishment of their task. Then follows a series of woes pronounced against Chaldæans; and in conclusion the prophet breaks into a sublime lyrical poem, describing a divine theophany. H. is quoted in *Acts, Romans, Galatians, Hebrews.*

Driver, *Introduction to Literature of Old Testament*; Robertson. *Old Testament.*

HABBERTON, JOHN (1842–), Amer. novelist and journalist; chief work, *Helen's Babies* (1876).

HABEAS CORPUS, in Eng. law, writ protecting personal liberty of the citizen. Where a person is detained on criminal charge without being brought to trial, or where he is unlawfully detained by private individuals, any one may on his behalf apply to judge of High Court for writ of H. C. commanding governor of gaol, or person detaining the individual on whose behalf the request is made, to bring him before the court in order that the reasons for his detention may be investigated; if there be no sufficient reason, the court will then order him to be set at liberty, or, if he is a child, will order him to be given up to his lawful guardians. Writ must be issued by judge on good reason being shown; and any judge who refuses to issue it forfeits £500 to the aggrieved person. The Act was passed in 1679, and can be suspended by Parliament at various times of national peril.

Short and Mellor, *Crown Practice* (1890).

HABERDASHER, retail dealer in small wares; the name is used by Chaucer; the H's' Company is an important Eng. livery company.

HABINGTON, WILLIAM (1605–54), Eng. poet; author of a poem, *Castara* (1634), in which he celebrated the virtues of his wife; also a tragi-comedy, *The Queen of Arragon,* and a *Historie of Edward IV.*

HABSBURG, see HAPSBURG.

HACHETTE, JEANNE, famous Frenchwoman who, when the Burgundians, in 1472, had practically reduced Beauvais, tore down their flag and reinspired the garrison to resistance.

HACHETTE, LOUIS CHRISTOPHE FRANÇOIS (1800–64), Fr. publisher, founder of firm, Hachette et Cie.

HACKENSACK (40° 53′ N., 74° 7′ W.), town, New Jersey, U.S.A., on Hackensack; chiefly residential; silk goods; wall-paper. Pop. (1910) 14,050.

HACKLÄNDER, FRIEDRICH WILHELM VON (1816–77), Ger. writer; his novels include *Eugen Stillfried* and *Krieg und Frieden*; and his comedies, *Magnetische Kuren* and *Der Geheime Agent.*

HACKNEY, metropolitan borough of London, England, 3 miles N.E. of St. Paul's. Pop. (1911) 222,587.

HACKNEY, horse for riding or driving as distinguished from finer breeds, such as hunters or race-horses; carriage for hire; 'to hackney' is to make common, by frequent use.

HACO V., HAAKON, see under NORWAY, *History.*

HADAD, name found in Bible, as Ben H. (s. of H.); kings of Damascus called Ben H. possibly assumed title from Syrian god H.

HADDINGTON (55° 57′ N., 2° 47′ W.), county town on Tyne, Haddingtonshire, Scotland; ancient royal burgh; among chief buildings are the XV.-cent. abbey church ('Lamp of Lothian'), Corn Exchange, and Knox Memorial Institute; important grain market; corn-mills. Alexander II., John Knox, Samuel Smiles, and Jane Welsh Carlyle were natives. Pop. (1911) 5424.

HADDINGTON, EARLDOM OF.—Thomas Hamilton, 1st earl, minister for Scotland, 1612; 6th earl was present at Sheriffmuir; 9th earl held office under Peel.

HADDINGTONSHIRE, or EAST LOTHIAN (55° 55′ N., 2° 45′ W.), maritime county in S.E. of Scotland, bounded by Firth of Forth, Ger. Ocean, Berwickshire, and Edinburghshire; total area, 280 sq. miles; county town, Haddington. Lammermuir Hills rise in S.; highest point, Lammer Law (1733 ft.); centre and N. mostly plain; considerable extent cultivated; higher regions pasturage. Of great historical interest, with numerous antiquities. Royal burghs are Haddington, Dunbar, and North Berwick. Pop. (1911) 43,253.

HADDOCK (*Gadus æglefinus*), fish found plentifully in N. hemisphere; belongs to Cod (*q.v.*) family; length of male, *c.* 2 ft., of female (which lays about one million pelagic eggs), *c.* 15 inches; h.-fishing is an important Brit. industry.

HADDON HALL, fine example of O.E. baronial mansion, on the Wye, near Bakewell; associated with Dorothy Vernon; owned by Duke of Rutland.

HADEN, SIR FRANCIS SEYMOUR (1818–1910), Eng. surgeon and artist; pres. and part founder of the Royal Society of Painter-Etchers; stands in the foremost rank of etchers, and author of numerous works on etching.

HADENDOA, tribe of African nomads of the Suakin district. Osman Digna belonged to the tribe.

HADERSLEBEN, Dan. HADERSLEV (55° 15′ N., 9° 10′ E.), seaport town, Schleswig-Holstein, Prussia,

on inlet of Little Belt; iron foundries. Pop. (1910) 13,050.

HADES, see HELL.

HADING, JANE (1859–), Fr. actress; has played with Coquelin; achieved great success in *Le Maître de forges*, *La Châtelaine*, *Le Demi-monde*, etc.

HADJ, HAJJ, Arabic name for the pilgrimage to Mecca, the person performing it being afterwards known as HADJI. Pilgrimages to Jerusalem are also so called.

HADLEIGH (52° 2′ N., 0° 58′ E.), market town, Suffolk, England; corn mills, malt-houses. Pop. (1911) 3201.

HADLEY (42° 22′ N., 72° 35′ W.), town, Massachusetts, U.S.A., on Connecticut; tobacco factories.

HADLEY, ARTHUR TWINING (1856–), Amer. pol. economist; pres., Yale University (1899); wrote *Railroad Transportation, its History and Laws* (1885).

HADLEY, JAMES (1821–72), Amer. scholar; author of a noted *Gk. Grammar* (1860), *Introduction to Roman Law*, etc.

HADRAMUT (18° N., 50° E.), district along S. coast of Arabia from Yemen on W. to Oman on E.; narrow belt of land, chiefly mountainous; many wadis, or valleys, without running water, except after rains; country irrigated by wells. Main productions are wheat, millet, indigo, dates, and tobacco. Chief towns—Shibam, Tarim, Keshin, and Makalla. Shrines of Kabr Salih and Kabr Hud visited by pilgrims. Pop. *c.* 150,000.

HADRIAN, PUBLIUS ÆLIUS HADRIANUS (76–138 A.D.), emperor of Rome. After distinguishing himself in wars in Dacia and holding various important offices of state, he succeeded Trajan as emperor in 117; soon afterwards he gave up his claim to Armenia, and made peace with Parthians, to whom he retransferred Assyria and Mesopotamia. He spent several years of his reign in visiting all the provinces of his empire, and in course of his first journey, which he began *c.* 119, he visited Britain, where he caused a wall, **Hadrian's Wall**, to be built between Bowness-on-Solway and Wallsend-on-Tyne, to secure Rom. provinces to the S. from incursions of Caledonians. The wall was repaired by Severus and considerable portions remain. He lived for some time at Athens, where he built magnificent temple; founded Ælia Capitolina on site of Jerusalem; put down Jewish insurrection, 134.

Bury, *Students' Roman Empire* (1893).

HADRUMETUM (*c.* 35° 50′ N., 10° 30′ E.), ancient city, N. Africa; on E. coast Tunisia; originally a Phœnician and later a Rom. colony; site now partly occupied by modern Susa.

HAECKEL, ERNST HEINRICH (1834–), Ger. biologist; prof. of Zool. at Jena. His biological achievements lie in two main directions: minute systematic classification, and general biological philosophy. In the first he has pub. masterly monographs on several divisions of protozoa, sponges, and cœlenterates; in the second are his 'gastræa,' theory of development, emphasis of zoological evolution, and support of a chemico-physical or mechanical explanation of the phenomena of life.

Life, by Bölsche (Eng. trans. by Joseph M'Cabe, 1906).

HÆDUI, ÆDUI, Gallic people dwelling between Saône and Loire; gave allegiance to Julius Cæsar.

HÆMATITE, or HEMATITE (Ger. *Hämin*, blood), a distinct iron ore of fibrous structure, consisting chiefly of peroxide iron, and found in Cumberland, Lancashire, in Spain, Scandinavia, and near Lake Superior. There are two varieties, red and brown, the former being variety of red oxide, and giving the name on account of its blood-like colour.

HÆMATOCELE, collection of blood in the tunica vaginalis of the testis or in the spermatic cord, due to injury or, rarely, to malignant disease; treatment is rest, cold wet dressings or ice-bag to promote absorption, or, in chronic cases, a slight operation to remove the clot may be necessary.

HÆMATOXYLIN, see LOGWOOD.

HEMATOZOA, parasites in blood, *e.g.* Gregarines, Bilharzia, Nematodes. See SPOROZOA, NEMATODA, BILHARZIOSIS.

HÆMATURIA, see KIDNEY, HÆMORRHAGE.

HÆMOGLOBIN, see BLOOD.

HÆMOPHILIA, hereditary condition, transmitted through the females, who are not subject to it, to the males of the next generation, characterised by a tendency to severe bleeding from very slight wounds or for no apparent reason at all, especially from the nose, mouth, or bowel. It is believed to be due to decrease of the coagulability of the blood, and is treated by internal administration of calcium chloride, and by applying suprarenal extract locally.

HÆMOPTYSIS, see HÆMORRHAGE.

HÆMORRHAGE, the escape of blood from a blood vessel; in bleeding from an *artery*, bright red blood spurts in jets, keeping time with the beating of the heart; in bleeding from a *vein*, dark blood flows steadily; and in *capillary* bleeding, the blood oozes from a raw-looking wound surface. Bleeding into the tissues is termed *extravasation*; bleeding from the nose, *epistaxis*; vomiting of blood, *hæmatemesis*; coughing up of blood from the air-passages, *hæmoptysis*; the presence of blood in the urine, *hæmaturia*; in the fæces, *melæna*. To arrest bleeding, pressure is applied to the bleeding point, or a tourniquet is tied round the limb between the bleeding point and the heart; the application of cold, especially for an oozing wound, hot water (130° F. and over), perchloride of iron, or suprarenal extract, are also found to be valuable remedies.

HÆMORRHOIDS, PILES, a dilated condition of the veins of the lowest part of the rectum and the anus; the former—*internal* piles—are covered with mucous membrane, the latter—*external* piles—are covered with skin. The causes are constipation, pregnancy, tumours of the pelvis or abdomen, or liver diseases obstructing the return of the venous blood. The treatment is to keep the bowels regular and open, rest, fomentations, astringent lotions, ointments, and injections; an operation may be necessary, especially for internal piles, in persistent cases.

HÆMOSPORIDIA, an order of Sporozoa which consists of highly specialised intracellular parasites living in the red blood corpuscles of vertebrates. The most important form economically is *Laverania malariæ*, causing the deadly malarial fever of the tropics. Its life-cycle falls into two phases, asexual, in the human host, and sexual, in the intermediate invertebrate host, a mosquito of the genus *Anopheles*. The parasite is introduced into the human subject by the 'bite' of an infected mosquito, which leaves a minute quantity of saliva in the wound. This saliva contains large numbers of minute sickle-shaped structures, the *sporozoites*, which enter the red blood corpuscles and become amœboid. Each is then termed a *trophozoite*, and feeds and grows until mature. The nucleus then divides into a varying number of daughter nuclei, each of which becomes surrounded by a portion of the parental protoplasm forming a *merozoite*. The merozoites are liberated into the blood plasma by the disintegration of the corpuscular host-cell, and repeat the stages initiated by the sporozoite. The result of continued repetition of this cycle is that the infected person soon becomes extremely feeble, and consequently the parasite prepares for its sexual phase by the formation of *gametocytes*, which are sausage-shaped structures termed crescents. If the patient is then bitten by an Anopheles the blood absorbed by the mosquito will contain all stages of the sporozoon. Of these only the gametocytes survive the action of the digestive juices, and they produce zygotes which bore through the wall of the gut. These subdivide, producing a fresh generation of sporozoites, which recommence the asexual part of the life-cycle if introduced into a second human host.

HAETZER, LUDWIG, HETZER (d. 1529), Swiss religious reformer; b. at Bischofzell, Switzerland;

repudiated the sacraments; executed for heresy, 1529; pub. Ger. translation of Hebrew Prophets.

HAFFKINE, WALDEMAR MORDECAI WOLFF (1860–), bacteriologist to Indian Government; b. Odessa; has done valuable original research in microbiology, cholera, and plague.

HÁFIZ (d. 1389), the greatest of Persian lyric poets. His real name was Muhammad Shams ed-Din; b. and d. at Shiraz, but little is known of his life. His book, or *Divan*, consists of *ghazals* (short odes), which, though sensuous in tone, are claimed to be mystical in meaning, and impregnated with Sufi philosophy. They are known by heart in Persia. Eng. trans. by McCarthy, Payne, and others.

HAGEDORN, FRIEDRICH VON (1708–54), Ger. poet; writer of lyrics and verse fables of high quality.

HAGEN (51° 22′ N., 7° 28′ E.), town, Westphalia, Prussia; ironworks; textile industries. Pop. (1910) 88,631.

HAGEN, FRIEDRICH HEINRICH VON DER (1780–1856), Ger. philologist; edit. the *Nibelungenlied* (1810), *Gottfried von Strassburg*, etc.

HAGENAU (48° 35′ N., 7° 48′ E.), town, on Moder, Alsace-Lorraine, Germany; cotton and woollen industries. Pop. (1910) 18,868.

HAGENBACH, KARL RUDOLF (1801–74), Ger. theologian; prof. at Basel.

HAGENBECK, CARL (1844–1913), Ger. naturalist; world-famous importer of wild animals, whose headquarters are at Stellingen, near Hamburg.

HAGERSTOWN (39° 36′ N., 77° 44′ W.), city, Maryland, U.S.A.; machine shops; flour-mills. Pop. (1910) 16,507.

HAGGADA, part of Talmud, which gives ethical and hist. commentary on and amplification of Bible; to it is joined the *halakha*, or legal exposition of the Scriptures; it is of great literary value.

HAGGAI, first Hebrew prophet after the return from Exile; contemporary of Zerubbabel and Joshua, whom he was inspired to support in rebuilding of Temple, the reconstruction having been suspended for fourteen years. His prophecy dates from 520 B.C., and consists of four parts: the first reproves apathy of the people in not carrying out the work; the second gives an assurance that the new temple shall equal the glory of the former one; the third promises blessing; and fourth contains message of encouragement for Zerubbabel. H. is quoted in *Hebrews* 12^{26}.

Minor Prophets, vol. ii., Driver (*The Century Bible*).

HAGGARD, SIR HENRY RIDER (1856–), Eng. novelist; author of *King Solomon's Mines* (1886), *She* (1887), and other highly popular stories; has also written on rural and agricultural questions.

HAGGIS, Scots pudding, consisting of sheep's lung, heart, and liver, chopped fine, and mixed with oatmeal, suet, and spices; boiled for three or more hours in a sheep's stomach.

HAGIOLOGY, as the critical study of lives of saints, has only existed for two cent's, but collections of lives were made from time of Eusebius; called *menologies* in Eastern and *legendaries* in Western Church: among important collections are *Sanctorum priscorum patrium vitæ* (pub. by Lippomano, 1560) and *Vitæ patrium* (by Rosweyde, 1615).

HAGIOSCOPE.—(1) Slit in church wall to give view of altar to worshippers in transepts. (2) Kind of magic lantern.

HAGONOY (14° 25′ N., 120° 45′ E.), town, Philippine Islands; fertile region; produces rice, Ind. corn, and sugar; woven fabrics. Pop. 20,000.

HAGUE, THE HAGUE, 'S GRAVENHAGE (52° 3′ N., 4° 18′ E.), capital of Netherlands; two miles from North Sea; traversed by numerous canals; royal palace, castle of Counts of Holland (Dutch Parliament House), famous picture-gallery, museums, Carnegie (*q.v.*) Palace of Peace, fine Bosch Park, etc.; originally a hunting lodge of Counts of Holland, XII. cent.; numerous Treaties arranged here; Triple Alliance between England, Sweden, and Netherlands, 1668; identified with peace movement (famous Peace Conferences, 1899, 1907) and seat of international arbitration courts; peace between Austria, Spain, and Savoy, 1717; chief industries, copper and lead smelting, iron-foundries, printing-works, carriages, gold and silver lace. Pop. (1911) 288,577.

HAHN, AUGUST (1792–1863), Ger. divine; author of *Lehrbuch des Christlichen Glaubens* (1828), and other works.

HAHNEMANN, SAMUEL CHRISTIAN FRIEDRICH (1755–1843), Ger. physician; made researches on drugs and their effects, and introduced the homeopathic method of treatment.

HAHN-HAHN, IDA, COUNTESS VON (1805–80), Ger. novelist; her stories are sentimental and deal chiefly with aristocratic life. The best are *Ulrich*, *Gräfin Faustine*, and *Eudoxia* (Eng. trans. of two last).

HAIBAK (36° 15′ N., 68° E.), town, Afghan-Turkestan.

HAIDA, small N. Amer. Indian tribe dwelling in Queen Charlotte Islands (British Columbia); skilled in various crafts.

HAIDARABAD, see HYDERABAD.

HAIDINGER, WILHELM KARL, RITTER VON (1795–1871), Austrian mineralogist and geologist; b. Vienna; came to live at Edinburgh, 1822; app. Counsellor of Nîmes, 1840, and lectured on mineralogy, 1843; discovered optical appearances known as 'H.'s brushes.'

HAIDUK.—(1) Hungarian infantry soldier; term applied in XVI. cent. to mercenary soldiers who protected frontiers against Turks, and received various privileges as reward. (2) Retainer.

HAIFA (32° 48′ N., 35° 1′ E.), seaport town, ancient *Sycaminum*, Syria, on Bay of Acre, at foot of Mt. Carmel. Pop. *c.* 12,000.

HAIL MARY, see AVE MARIA.

HAILES, DAVID DALRYMPLE, LORD (1726–92), Scot. historian; author of *The Annals of Scotland* (1776–79), *Antiquities of the Christian Church* (1783), and other works.

HAILEYBURY SCHOOL, see HERTFORD.

HAILSHAM (50° 52′ N., 0° 16′ E.), market town, Sussex, England. Pop. 4000.

HAILSTONES. — When water-drops, suspended in the air, are carried upward by air-currents there is a consequent fall in their temperature, and this may be so great as to cause them to freeze. While h's so formed are small they may still be carried upward, and more water will condense upon them until they are so large that they fall to the earth.

HAINAN, KIUNG-CHOW-FU (19°N.,109° 45′ E.), island in province of Kwang-tung, extreme S. of China, lying between China Sea and Gulf of Tong-king; extending *c.* 150 by *c.* 100 miles; capital, Kiung-chow (with port Hoi-how). Island is almost entirely agricultural; centre and S. are mountainous, and earthquakes and typhoons occur; there are good harbours; exports include timber, rice, and sugar. Pop. *c.* 2,500,000.

HAINAU (51° 18′ N., 15° 55′ E.), town, Silesia, Prussia; gloves; scene of defeat of French by Prussians, 1813. Pop. (1910) 10,459.

HAINAUT, HAINAULT (50° 30′ N., 4° E.), province, Belgium; surface generally level; traversed by the Sambre, Scheldt, Dender, and Haine; rich coal-fields; fertile soil; agriculture and mining chief pursuit of inhabitants; capital, Mons. Area, 1437 sq. miles. Pop. (1910) 1,232,867.

HAINBURG, HAIMBURG (48° 8′ N., 16° 57′ E.), town, on Danube, Austria-Hungary; tobacco, needles. Pop. (1910) 7304.

HAINICHEN (50° 58′ N., 13° 6′ E.), town, Saxony, Germany; centre of Ger. flannel manufacture. Pop. (1910) 7863.

HAI-PHONG (20° 52′ N., 106° 39′ E.), seaport, Tong-king, Fr. Indo-China, on branch of Red River delta; rice. Pop. 20,000.

HAIR, a characteristic of all mammals, even if in some it is reduced to a few bristles on the lips, as in

whales. It is a product of the superficial skin or epidermis, is nourished by blood-vessels, and consists of a spongy centre and a harder outer layer. In mammals, where to preserve life the temperature of the body must be kept at a constant high pitch, the primary value of an external coating of hair lies generally in its retaining in its interstices a non-conducting layer of air, which conserves the heat gained at the expense of energy and checks excessive dissipation of heat by radiation. Obviously, the longer the hair the thicker will be the non-conducting layer of air, and the less will the animal be influenced by changes of temperature. So it is that in the animals of cold regions a long and close coat is the rule. Another elemental function of hair lies in keeping the body dry; hence it is arranged in definite directions, so that the run of the hair will most readily conduct rain off the animal. In the sloths, for example, conforming with their upside-down mode of life, it flows from belly to back, instead of in the opposite direction as in other animals.

Hair simply as a warm coat occurs in many forms—sometimes as short, thick fur, as in seals, again as fine wool, as in sheep, or as a coarse, shaggy coat, as in goats, or still more coarsely, as bristles in pigs. Sometimes it almost disappears, as in whales and dolphins, where a thick layer of blubber below the skin takes on the function of retaining warmth.

Only one kind of hair may be present, as in the cat, but often the long, coarse, apparent over-hair is supplemented by a fine, soft, thick, under-fur, as in seals. It is this latter coat—the 'staple fur'—which renders its primary value to commercial fur, used for warm garments, rugs, or wraps; but the over-fur—or 'fancy fur'—adds to the pelt the charm of character and beauty. This double coat is best developed in animals exposed to cold temperatures. Favourite furs are those of Carnivores—the martens of Northern America and Europe, which include the most valuable Russ. sable, the Arctic and Antarctic foxes, the ermine from Asia and Europe, and the fur seal of the Pacific. Chinchilla from Peru and Chile and Persian lamb afford examples of well-known furs from tropical regions. Unfortunately the trade names of many furs give little clue to their real character, *e.g.* 'Baltic White Fox' and 'Baltic Lynx' are made from the Arctic hare, 'French Ermine' from selected French coney skins, and 'Iceland White Fox' from White Tibet lamb.

Hair, besides appearing in fur and wool, and as bristles, sometimes undergoes profound modifications. Thus in the hedgehog and porcupine, belonging to different orders, it develops into long, hard, and sharp spines, which are clearly specialised defensive structures.

It should be mentioned that hair, like feathers, is seasonably moulted, and that the winter coat, which is thickest and warmest, often changes in northern animals to a colour matching or approaching that of the snow amongst which they move.

Human Hair.—Human h. and beards are possibly sexual ornaments. Racial varieties are: curly or smooth, generally fair h. of Northern Europeans; crisp and short, woolly, very black h. of most negroes; black coarse straight h. of Mongols, Chinese, Amer. Indians; crinkly black h. of Australian Blacks. It was customary in the East to allow free growth to h. of the face, and Assyrian sculptures show long, elaborately curled beards. Egyptian faces were nearly clean shaved, with small, spade-like projection from foot of the chin. Greece and Rome set up ideal for men of classic head with short h., usually curly, and clean-shaven face, while their women's coiffures always showed shape of the skull, their long h. being bound to the head by fillets and gathered up behind in teapot-handle shape. Celtic and Teutonic men cultivated h. and beard. The Normans introduced into England the fashion of shaving the back of the head from ear to ear, besides clean-shaven face, but by beginning of XII. cent. h. and beard were grown to exaggerated length, while women wore long, thick plaits tied with ribbons and sometimes encased in coloured silks.

The clean-shaven face recurred under the early Lancastrian kings; Henry VII.'s reign was the time of the monstrous *periwig*, and at the close of the XVIII. cent. after the classical revival which came to its height in the First Fr. Empire; Early Victorian side-whiskers were introduced by the Count d'Orsay (*q.v.*). The beard was frequently dyed red in time of Henry VIII. Under Elizabeth the 'cathedral' beard marked out a prelate, the 'spade' or 'stiletto' beard, a soldier. In the modern Brit. army moustaches are *de rigueur*, while naval men are either clean shaven or wear beard and moustache. Short h. for men was introduced in 1521 by Francis I. of France, and h. continued to be fairly short throughout the century. At this time women ceased to wear their h. down their backs, and under Elizabeth the fashion set in of tier over tier of wired rolls, adorned with gems. Long, 'wanton' love-locks were fashionable for men in first half of XVII. cent., calling forth the Puritan Prynne's *Unloveliness of Love-Locks*; and powdered periwigs were worn.

Powder to conceal dust was a necessity of the elaborate modes, which obtained until the Fr. Revolution, when not only did simple head-dress become fashionable, but a powder tax (1795) put an end to this becoming but filthy custom. The 'Roundheads' were distinguishable by their cropped polls. At the Restoration the great periwig came in, and under William III. it culminated and was succeeded by the Ramilie wig (called after the battle of 1706) and the *pigtail* wig. In 1772 the Maccaroni Club was formed, and introduced the *toupée* (h. brushed straight up to great height) with curls at sides and tied with ribbon behind. Women meanwhile, who had cultivated graceful ringlets ('heart-breakers') in late XVII. cent., commenced in XVIII. cent. to use enormous quantities of false h. stuffed with greased wool, pomaded, curled, wired, powdered, sometimes not readjusted for months, and the height grew from beginning of the cent. to the close. Women imitated the masculine *toupée* after 1772, and placed on top plumes and flowers till several feet were added to the stature, while long curls or short puffs adorned the sides of the face. This was the period, too, when grotesque ornaments, carriages, tents, ships, were piled on the h.

Chin. men shave their heads with the exception of one long tuft, which descends from the crown in a pigtail, but since establishment of Chin. Republic pigtails are no longer fashionable. Chin. women plait their h. in pigtail, but Jap. women comb it high above the head and place combs, flowers, fans, etc., in the elaborate erection.

Human h. has high though varying commercial value for sale for wigs, etc. A good quality is obtained from the peasants of Switzerland, Bavaria, and Brittany, a cheaper kind in great quantity from Chin. convicts. Chairs are stuffed with short horse-h.; cloth is woven from long horse-h. and h. of goats, especially the Angora variety. Felt, for roofing and packing for pipes, is manufactured from cow-h. Artists' brushes are made from h. of camel and sable, clothes brushes from hog bristles. Its possession of h. is distinguishing mark of mammal. See also FUR and WOOL.

HAIR-TAIL, small, tapering, tropical fish, with one fin (dorsal); occasional visitor to Cornish coast; genus *Trichiurus*.

HAIR-WORMS, see NEMATODA and NEMATOMORPHA.

HAITI, HAYTI, HAÏTI (17° 37′ to 20° N., 68° 20′ to 74° 28′ W.), second largest island in W. Indies (area, *c.* 29,000 sq. miles), and separated from Cuba (the largest) by the Windward Passage and from Porto Rico by Mona Passage. Capital, Port-au-Prince. H. island is divided into two republics, H. in W. and Santo Domingo in E. REPUBLIC OF H., originally a Fr. colony, was formed, 1804. Language of whites is French; religion is R.C. In 1910 education was made compulsory. It

possesses a small fleet and army. Surface is mountainous, ranges running to both coasts. Highest pt. Loma Tina (*c.* 10,300 ft.). These mountains are covered with pine, oak, and other forests—much valuable timber being produced. Rivers are not navigable. There are many large lakes. Earthquakes are frequent and hurricanes common; climate is hot in low-lying parts. S. Domingo is an important town. Cotton, rice, maize, sugar, coffee are cultivated. H. is rich in minerals, gold, silver, iron, copper, etc., which are as yet undeveloped. H. was discovered by Columbus; aboriginals were speedily exterminated by Spaniards; negroes were introduced, many struggles between blacks and whites resulting.

Government is by Commons (99 members elected for 3 years by community) and Senate (39 members chosen for 6 years by Commons from list drawn up by electors and President). Both chambers choose president for 7 years. Payment of members obtains.

Pop. of republic, *c.* 2,030,000; of island, *c.* 2,500,000. See SANTO DOMINGO.

HAJIPUR (25° 41′ N., 85° 14′ E.), town, Muzaffarpur, Bihar and Orissa, India, on Gandak; has large river trade. Pop. 22,000.

HAJJ, see HADJ, MUHAMMADAN INSTITUTIONS.

HAKE (*Merluccius vulgaris*), fish common in Atlantic and Mediterranean; of predatory habits; member of Cod (*q.v.*) family.

HAKE, EDWARD (fl. 1579), Eng. satirist; author of *Newes out of Paules Churchyarde* (1567), a rhymed satire on social abuses of the time.

HAKE, THOMAS GORDON (1809–95), Eng. poet; sometime engaged in medical profession; associated with the Rossetti circle; his volumes include *New Day Sonnets, Madeline.*

HAKKAS, very ancient native race now dwelling in Formosa and parts of S.W. China.

HAKLUYT, RICHARD (*c.* 1553–1616), Eng. geographer and ecclesiastic; having taken orders, he held several livings and became archdeacon of Westminster (1602). He was early devoted to the study of navigation. He was the intimate friend of Drake, Raleigh, Gilbert, and others. His *Divers Voyages* appeared in 1582; and his monumental work, *The Principal Navigations*, was pub. 1589–1600. He also wrote and trans. several minor works, and his unpublished MSS. were afterwards used by Samuel Purchas in his *Pilgrims.*

HAKODATE (41° 47′ N., 140° 51′ E.), seaport, island Yezo, Japan, on Bay of Hakodate; exports sulphur, dried fish, rice. Pop. 87,875.

HAL (50° 43′ N., 4° 13′ E.), town, on Sienne, Brabant, Belgium; place of pilgrimage. Pop. 13,857.

HALA (25° 48′ N., 68° 27′ E.), town, Hyderabad district, Sind, India; pottery. Pop. 5000.

HALAESA (*c.* 38° N., 14° 15′ E.), ancient town, N. coast of Sicily.

HALBERSTADT (51° 54′ N., 11° 3′ E.), town, Saxony, Germany; XIV.-cent. cathedral; sugar, cigars, machinery. Pop. (1910) 46,397.

HALBERT, HALBERD, military weapon, consisting of an axe-like head, and spike, fixed on a long pole, being a combination of the bill and pike; first used in England in reign of Edward IV.; was commonly employed during reign of Henry VII.; did not fall into disuse until reign of George III.

HALDANE, JAMES ALEXANDER (1768–1851), Scot. preacher; b. Dundee; ed. Edinburgh; entered East India Co.'s service, and rose to be captain; left the sea about 1795 and became an itinerant preacher in Scotland; subsequently (1799) became head of a Congregational body in Edinburgh; in later years adopted Baptist doctrines.

HALDANE, RICHARD BURDON, VISCOUNT H. OF CLOAN (1856–), Brit. statesman; educated Edinburgh and Heidelberg Universities; barrister, (1879); Liberal M.P., East Lothian (1885); Secretary for War (1905–12); Viscount and Lord Chancellor (1912); reorganised army, and created Territorial Force; has written on philosophy; an authority on explosives.

HALDANE, ROBERT (1764–1842), Scot. theologian; served in navy during Fr. war, then devoted himself to religion; helped to form 'Soc. for the Propagation of the Gospel.'

HALDIMAND, SIR FREDERICK (1718–91), Brit. gen. of Swiss birth; entered Brit. military service and served with distinction in America; Gov.-Gen. of Canada (1778–85).

HALE, EDWARD EVERETT (1822–1909), Amer. author and journalist and Unitarian minister; used his realistic style in anti-slavery interest. Short tales, and *Ten Times One is Ten* (1870), *Philip Nolan's Friends* (1876), *Memories of 100 Years* (1902). Complete edit., 10 vols., 1899–1901.

HALE, JOHN PARKER (1806–73), Amer. statesman, Democrat, and pioneer Abolitionist; Free Soil candidate for presidency, 1852; faithfully supported Union and Lincoln.

HALE, SIR MATTHEW (1609–76), famous Eng. judge and chief justice; took no part in Civil War; justice of Common Pleas, 1653; chief baron of Exchequer, 1660; Chief Justice of England, 1671; wrote numerous works on law and history; many of his collected MSS. at Lincoln's Inn library.

HALE, NATHAN (1755–76), Amer. soldier; celebrated for his daring in the Amer. War of Independence; seized as a spy, and hanged.

HALE, WILLIAM GARDNER (1849–), Amer. scholar; author of *The Anticipatory Subjunctive in Greek and Latin, The Sequence of Tenses in Latin*, etc.

HALEBID (13° 13′ N., 76° 2′ E.), village, state of Mysore, S. India; on site of Dorasamudra, ancient Hoysala capital.

HALECIUM, see under HYDROMEDUSÆ.

HALES, JOHN (1584–1656), Eng. author; his political writings include *Declaration of the Succession of the Crowne Imperiall of Inglande, Discourse of the Common Weal*, etc.

HALES, STEPHEN (1677–1761), Eng. physiologist and inventor; curate of Teddington in Middlesex; made investigations in plant and animal physiology and on gases; on treatment of stone in bladder and kidneys; devised a ventilating machine, and a process for distilling sea-water.

HALESOWEN (52° 28′ N., 2° 3′ W.), market town, Worcestershire, England; large iron and steel works. Pop. 4057.

HALEVI, JUDAH BEN SAMUEL (d. 1140), Span.-Hebrew poet; famed for religious poems.

HALÉVY, JACQUES FRANÇOIS FROMENTAL ÉLIE (1799–1862), Fr. composer; real name, Levi; chief operas: *La Juive, Les Mousquetaires de la Reine.* Musical author.

HALÉVY, LUDOVIC (1834–1908), Fr. dramatist and novelist; chiefly associated with Henri Meilhac. They wrote the libretti for operas by Offenbach and Bizet (*La Belle Hélène, La Grande Duchesse de Gérolstein, Carmen*, etc.), *Froufrou*, and other plays. His successful novels include *L'Abbé Constantin* and *La Famille Cardinal.*

HALIAËTUS, SEA-EAGLE, see HAWK FAMILY.

HALIBURTON, THOMAS CHANDLER (1796–1865), Anglo-Canadian humorist; famed for his *Sam Slick* satirical stories; was a Nova Scotian judge; later M.P. for Launceston, England.

HALIBUT (*Hippoglossus vulgaris*), large flat fish of predatory habits, found in N. hemisphere; distinguished by large mouth, right-sided eyes, and narrowness of body; length, 2–5½ ft.; female lays up to five million pelagic eggs.

HALICARNASSUS, modern BUDRUN (37° N., 27° 20′ E.), ancient Gk. city, Caria, Asia Minor, on Ceramic Gulf; site of the world-famous mausoleum, built 352 B.C., fragments of the sculptured decoration of which are now in the Brit. Museum.

HALICHONDRIA, see under SPONGES.

HALICZ (49° 7′ N., 24° 43′ E.), town, on Dniester, Austria-Hungary; salt and soap. Pop. (1910) 4957.

HALIFAX.—(1) (53° 43′ N., 1° 52′ W.) town, on Calder, W. Riding, Yorkshire, England; chief industry is woollen; carpets, cotton, iron, steel are manufactured; good communication with ports at Hull and Liverpool; XII.-cent. church (St. John), Akroyd Museum, Cloth Hall. Pop. (1911) 101,556. (2) (44° 38′ N., 63° 36′ W.) capital, Nova Scotia; terminus of C.P.R. and Intercolonial Railway; machinery, boots and shoes, cotton, woollen goods; harbour one of greatest in the world; seat of Dalhousie Univ., R.C. abp., and Anglican bp.; large sea trade, especially in fish, apples, lumber; suburb, Dartmouth, stands on opposite side of harbour. Pop. (1911) 46,000.

HALIFAX, CHARLES MONTAGU, EARL OF (1661–1715), Eng. politician and poet. Lord of Treasury, 1692; raised loan of £1,000,000, creating National Debt; foundation of Bank of England due to him, 1694; Chancellor of Exchequer, 1694; reformed coinage, 1695; First Lord of Treasury, 1697; auditor of Exchequer, 1699; again First Lord of Treasury, 1714; collaborated with Prior in *Country Mouse and City Mouse.*

HALIFAX, GEORGE MONTAGUE DUNK, 2ND EARL OF (1716–71), Brit. administrator; pres., Board of Trade (1748); Lord-Lieut. of Ireland (1761); accused by H. Walpole of political jobbery.

HALIFAX, GEORGE SAVILE, 1ST MARQUESS OF (1633–95), Eng. politician and author; b. Thornhill, Yorkshire. M.P., 1660; cr. peer, 1667; P.C., 1672; supported Test Act, 1673, and Habeas Corpus Act, 1679; opposed bill excluding James, Duke of York, from succession, 1680; Lord Privy Seal, 1682. Under James II. he became pres. of council in 1685, but shortly afterwards was dismissed from office and from Privy Council; was one of the commissioners sent by James II. to arrange terms with William of Orange; but after king's flight he assumed control of public affairs and transferred his allegiance to the Prince, to whom he offered the crown; held office as Lord Privy Seal in early part of William's reign, but retired in 1690, and died five years later. H. was author of a famous pamphlet entitled *Letter to a Dissenter,* which he wrote in 1687; among his other works are his *Character of King Charles II.* and his *Character of a Trimmer*; in latter he defends and explains his policy of maintaining balance of power between the two political parties of the state, to which the apparent inconsistency of his conduct, and the consequent application to him of the name of trimmer, were due.

Foxcroft, *Life and Letters* (1898).

HALIOTIS, tropical and sub-tropical gasteropod with auricular shell, which is prized for its mother-of-pearl. See ABALONE, GASTEROPODA.

HALKETT, HUGH, FREIHERR VON (1783–1863), Brit. gen.; distinguished in Hanoverian army, in Peninsular War, at Waterloo, and in Dan. War, 1848. Bro., SIR COLIN HALKETT (1774–1856), Brit. gen., served in Hanoverian army.

HALL.—(1) SCHWÄBISCH-HALL (49° 6′ N., 9° 43′ E.), town, Württemberg, Germany; salt-works. Pop. (1910) 9321. (2) BAD-HALL (48° 2′ N., 14° 10′ E.), town, Upper Austria; mineral springs.

HALL, in modern usage is the name given to a mansion; large public building, such as 'Guildhall,' or 'town hall'; large room within a building, used for assemblies, etc.; and the entrance-room of a house. In earlier times it was the principal apartment in a castle, mansion, coll., etc. Fine examples are Westminster H., and Christ Ch., Oxford.

HALL, BASIL (1788–1844), Brit. naval officer; wrote *Voyages and Travels* (1831–40), and other works of travel.

HALL, CARL CHRISTIAN (1812–88), Dan. politician; b. Christianshavn, Denmark; entered Rigsforsamlung, 1848, and became Liberal leader; minister of public worship, 1854; pres. of council, 1857; foreign minister, 1858; failed to establish constitution; retired after succession of Christian IX.; minister of public worship, 1870.

HALL, CHARLES FRANCIS (1821–71), Amer. explorer; commanded the U.S. Polar Expedition (1871); spent several years among the Eskimos, and pub. *Arctic Researches* and *Life among the Esquimaux* (1864).

HALL, CHRISTOPHER NEWMAN (1816–1902), Eng. Nonconformist minister; was a popular preacher and temperance advocate; his *Come to Jesus, The Call of the Master,* and other works had a wide circulation.

HALL, EDWARD (*c.* 1498–1547), Eng. lawyer; wrote 'Hall's Chronicle,' or, more properly, *The Union of the Two Noble Families of Lancaster and York,* invaluable for information about Henry VIII.'s reign; it was completed by Grafton.

HALL, FITZEDWARD (1825–1901), Amer. Orientalist; prof. of Sanskrit, King's Coll., London; edit. the *Vishnupurâna.*

HALL, JAMES (1793–1868), Amer. judge and author; wrote *Legends of the West, The Wilderness and the War-Path, Sketches of the West,* etc.

HALL, JOSEPH (1574–1656), Eng. ecclesiastic and satirist; b. at Ashby-de-la-Zouch; dean of Worcester, 1616; deputy to Synod of Dort, 1627; bp. of Exeter, 1627; supported Laud's ecclesiastical policy; attacked by five Puritans, who wrote under name 'Smectymnuus'; and carried on dispute with Milton. Bp. of Norwich, 1641; imprisoned during Long Parliament, and was expelled from his see, 1643. H. wrote *Virgidemiarum* and other works.

HALL-MARKS, the mark placed on gold or silver articles to indicate the quality of the gold or silver; *e.g.* in the case of gold, a crown and the number 22 indicate that the article is of 22 carat gold, *i.e.* contains 22 parts of gold out of 24. On silver ware the marks of Britannia and a lion *passant* indicate respectively that the articles are of 11 oz. 10 dwt., and 11 oz. 2 dwt. fineness, showing the proportion of pure silver in 1 lb. (=12 oz.) of the metals thus marked. Hall-marks on silver plate were introduced in the XIII. cent. by the Eng. Gild of Gold- and Silversmiths; these were the king's mark, the maker's mark, and the year's mark. In addition, various provincial towns have their own assay marks. The lion *passant* was introduced in 1554; from 1784 to 1890 the sovereign's portrait was used.

HALL, MARSHALL (1790–1857), Eng. physician and physiologist; practised medicine in Nottingham, and later in London; carried out important experiments on nervous system, and introduced new method for resuscitation of the apparently drowned; author of many medical and scientific works.

HALL, ROBERT (1764–1831), Eng. Baptist minister; b. at Arnesby, Leicestershire; wrote *Christianity consistent with the Love of Freedom* (1791), *Apology for the Freedom of the Press* (1793); fine pulpit orator.

HALL, SAMUEL CARTER (1800–89), Eng. journalist; founded *The Art Journal*; his wife was a popular writer of fiction.

HALL, WILLIAM EDWARD (1835–94), Eng. legal writer; famed for his valuable *Treatise on International Law* (1880) and other legal works.

HALLAM, HENRY (1777–1859), great Eng. historian; b. at Windsor; ed. Eton and Oxford; wrote three great works, which are still standard authorities: *View of the State of Europe during the Middle Ages* (1818); *Constitutional History of England from Accession of Henry VII. to Death of George II.* (1827); *Introduction to the Literature of Europe in the XV., XVI., and XVII. Centuries* (1838–39). His s., Arthur Henry H., who d. in 1833, is subject of Tennyson's *In Memoriam.* H. advocated the abolition of slave trade; was elected Fellow of Royal Soc.

HALLAM, ROBERT (d. 1417), bp. of Salisbury, 1407; Eng. representative at Council of Constance,

1414, supporting Conciliar party, deposition of Pope John XXIII., and Church reform.

HALLE-AN-DER-SAALE (52° 5′ N., 8° 22′ E.), town, Prussian Saxony, Germany; cathedral and famous university, founded 1694, 2500 students; salt-works. Pop. (1910) 180,496.

HALLÉ, SIR CHARLES (1819–95), pianist and conductor; b. Hagen (Westphalia); settled in England, 1848; knighted, 1888; m. Norman Neruda, famous violinist.

HALLECK, HENRY WAGER (1815–72), Amer. general and lawyer, possessed brilliant administrative powers, and was a prominent figure during the period of the Civil War; pub. *Elements of Military Art and Science* (1846), *International Law* (1861), and other legal works.

HALLELUJAH, ALLELUIA (Heb. 'Praise the Lord'), exclamation of religious praise or exaltation; *Psalms* 113–118, called H., in R.C. Church, as song of gladness, not used throughout Lent.

HALLER, ALBRECHT VON (1708–77), Swiss anatomist, physiologist, pathologist, botanist, and poet; after wide course of study he practised as physician at Bern, and became prof. of Medicine, Anatomy, Bot., and Surgery at Göttingen (1736), establishing a botanic garden, anatomical museum, school of obstetrics, etc.; returned to Bern as a magistrate; his most valuable researches are in physiology and bot., and he took a prominent part in the literary movement of the time, writing three political romances and descriptive lyrical and other poems.

HALLEY, EDMUND (1656–1742), Eng. astronomer; ed. Queen's Coll., Oxford; stayed at St. Helena, 1676–78; made catalogue of stars of S. hemisphere and arranged them in constellations; discovered (1682) comet which bears his name, and correctly predicted its return in 1759; made astronomer-royal, 1719.

HALLGRÍMSSON, JÓNAS (1807–44), Icelandic lyrical poet; the most prominent figure in the modern lit. of his country.

HALLIDAY, ANDREW (pseudonym for ANDREW HALLIDAY DUFF) (1830–77), Eng. playwright and journalist; noted for Dickens adaptations and light essays.

HALLIWELL-PHILLIPPS, JAMES ORCHARD (1820–89), Eng. scholar; his works include an edit. of Shakespeare (1853–65), *Life of S.* (1848), *Dictionary of Old English Plays* (1860), etc.

HALLOWE'EN (Oct. 31), the Eve of All Saints' Day; usually devoted to merry-making and divination.

HALLSTATT (47° 34′ N., 13° 38′ E.), village, Upper Austria, Austria-Hungary; salt-mining centre.

HALLUCINATION, term applied to a false appreciation of sense impressions, the individual believing that a sense-organ has received an impression from some object which has in reality no physical existence; the h. may involve any of the senses, but most commonly it is auditory or visual, due to the more striking character of such impressions and to the more constant use of the ears and eyes; the h. may, in rare cases, involve two senses. H's may be experienced by certain individuals under conditions of quite normal health and sanity, to which no precise cause can be assigned; they may be experienced under conditions differing but slightly from the normal, as when one or other of the senses has been subjected to a strain, or when the body has been in want of food for a considerable period, or when an individual is under the influence of certain drugs, *e.g.* opium or Indian hemp, or in the transitional state between sleep and waking, or in a state of hypnosis (see HYPNOTISM), or under conditions of intense emotional excitement; they may be experienced when the body or mind is in a diseased condition, as in diseases of the heart, lungs, or abdominal organs, or in delirium tremens, hysteria, or epilepsy, as well as in conditions of more advanced mental disease, melancholia, mania, monomania, and other forms of insanity.

Normally the brain-cells register impressions of objects which they have received from the sense-organs, and these can be recalled by the memory and distinguished from new impressions on the sense-organs; the physiological explanation of h. is that, under the various conditions enumerated above, impressions are called up from the brain-cells where they have been registered, but the mind does not realise that they are old impressions, and they are experienced as new impressions upon the sense-organs. See INSANITY.

Podmore, *Modern Spiritualism* (1902).

HALLUIN (50° 47′ N., 3° 8′ W.), fortified town, Nord, France; textiles. Pop. 16,600.

HALM, CARL FELIX (1809–82), Ger. scholar; famed for critical editions of Cicero and other Lat. authors.

HALMAHERA (1° N., 128° E.), island of the Dutch East Indies, E. of Celebes; area, *c.* 6800 sq. miles; consists of four peninsulas, each traversed by a mountain chain from 3000 to 4000 ft. high, with several active volcanoes; produces sago, spices, cocoa-nuts; belongs in part to the sultanate of Ternate; chief town, Gilolo. Pop. *c.* 100,000.

HALMSTAD (56° 39′ N., 12° 49′ E.), seaport, Sweden, on Cattegat; breweries, cloth manufactures; exports granite. Pop. (1911) 18,297.

HALO, a luminous circle around sun or moon, caused by refraction of light passing through ice-crystals suspended in the atmosphere; true h's are large circles of definite diameters, 45° and 92°, which are seldom both seen together; usually whitish, but occasionally exhibit prismatic colours, red being on inside; smaller coloured circles sometimes seen round the moon are due to diffraction of light by cloud or mist.

HALO, originally a circular metal plate to preserve heads of statues; adopted by Christian artists as symbol of holiness; may be cruciform, square, or stellate, but generally takes form of circle or ring; found also in early Oriental paganism.

HALOGENS are Fluorine, Chlorine, Bromine, and Iodine (*q.v.*). Each forms monobasic gaseous acid.

HALS, FRANS (*c.* 1580–1666), Dutch artist; famed for portraits and genre subjects, in the latter of which he is one of the greatest of Dutch masters. He was particularly successful in dealing with scenes of carousal, depicting laughter, etc. (e.g. *The Laughing Cavalier*). Fine examples of his work are in the galleries of Amsterdam and Haarlem. He was notorious for his drunken and disorderly life. His bro., DIRK H., and his s., FRANS H., THE YOUNGER, were also artists of distinction.

Staley, *Franz Hals* (Masterpieces in Colour).

HALSBURY, HARDINGE STANLEY GIFFARD, 1ST EARL OF (1825–), Brit. Conservative statesman; Lord Chancellor, 1895–1905; M.P. for Launceston, 1877–85; Solicitor-Gen., 1875–80; cr. Baron H., 1885; Earl, 1898; formerly held large criminal practice; was engaged in Tichborne trial; gave judgment in House of Lords (1904) in the appeal of Scot. Free Church against the Scot. U.F. Church; led extreme 'Die-Hard' party in Lords against Parliament Bill.

HALSTEAD (51° 57′ N., 0° 39′ E.), market town, on Colne, Essex, England; silk and crape mill. Pop. (1911) 6265.

HAM (49° 45′ N., 3° 2′ E.), town, Somme, France; noted mediæval castle. Pop. 3300.

HAM, one of the sons of Noah (*Genesis*), founder of the Hamitic race, including the Ethiopians, Egyptians, and others.

HAMADAN (34° 55′ N., 48° 20′ E.), town, Persia, near foot of Mt. Elvend; important entrepôt of trade; extensive manufactures of leather; contains tomb of Avicenna, and another, said to be that of Mordecai and Esther; occupies site of ancient *Ecbatana.* Pop. *c.* 40,000.

HAMAH, or HAMATH, famous Hittite city, referred to in Bible, situated on the Orontes, about 100 miles from Damascus; conquered by the Assyrians, VIII. cent. B.C.

HAMANN, JOHANN GEORG (1730–88) Ger. philosopher, 'Wizard of the North'; friend of Kant, Herder, Jacobi; distinguished by originality of mysticism; defended specific dogmas of Christianity, which is not credible without its mysteries; held that Christian tenets are not to be proved, but inwardly experienced.

HAMAR (60° 44′ N., 11° 14′ E.), small town, on Lake Mjösen, S. Norway; breweries, iron foundries. Pop. 6046.

HAMĀSAH, a collection of brief Arabian poems, compiled by Abū Tammām (807–32). The poems, which deal with fortitude, valour, and other virtues, number about 880, and are taken from the works of native poets from the earliest times down to the compiler's own period. The literary value of the collection is considerable. Eng. trans. (selections) by Sir Charles Lyall (1885).

HAMBURG (53° 33′ N., 10° E.), free city and state, Germany, on north branch of Elbe; second largest city of Ger. Empire; greatest seaport and commercial town on Continent. The old town is intersected by canals (Fleete) and is surrounded by fine shaded promenades. To N. lie two wide sheets of water, the Binnen- and Aussen-Alster, separated by Lombard's Brücke; fashionable quarter surrounds Binnen-Alster. Docks on both sides of river cover huge area; part of harbour is a free port. H. trades chiefly with Britain and America, also with Scandinavian, Russ., S. Amer., Eastern, and other ports; chief imports are sugar, tea, coffee, chocolate, lard, rice, wine, herrings, skins, leather, wax, hemp, tobacco, jute, indigo, oils, rubber, coal; chief industries, food-stuffs, breweries, shipbuilding (including warships), ironworks, machinery, chemicals, furnitdre, musical and scientific instruments, and factories where above imports are treated. Little of mediæval H. survives owing to great fire, 1842. Among chief buildings are St. Peter's, St. Nicholas, St. Michael's churches, Rathaus, Kunst-halle, museums, etc. H. has important schools of navigation and commerce, and world-famous Zoological Garden. A Univ. is projected (1913). H. was founded by Charlemagne, 808; in mid-XIII. cent. formed Hanseatic League with Lübeck and Bremen; made free imperial city, 1510; joined Deutscher Bund, 1815; Nord-Deutscher Bund, 1866; Ger. Empire, 1871; and Zollverein, 1888; great cholera plague, 1892. H. State (area, 60,000 sq. miles) is a republic governed by Senate and House of Burgesses; sends one member to Bundesrat, three to Ger. Reichstag. Pop. (1910), city, 932,116; state, 1,014,664. Fulke, *Hamburg* (1908).

HAMDĀNĪ (d. X. cent.), Arabian geographer; wrote a *Geography of the Arabian Peninsula*.

HAMELIN, FRANÇOIS ALPHONSE (1796–1864), Fr. admiral and naval administrator; was engaged in bombardment of Sebastopol (1854); as Minister of Marine was responsible for construction of the first ironclad, *Gloire*, launched 1859.

HAMELN (52° 7′ N., 9° 21′ E.), town, Hanover, Prussia; formerly fortified; many quaint buildings associated with legend of the Pied Piper; iron- and paper-works. Pop. (1910) 22,054.

HAMERLING, ROBERT (1830–98), Austrian poet; wrote *Der König von Sion*; *Danton und Robespierre* (drama).

HAMERTON, PHILIP GILBERT (1834–94), Eng. artist and author; wrote *Etching and Etchers*, *The Intellectual Life*, and numerous other works of art criticism.

HAMI, KHAMIL, or KOMUL (42° 45′ N., 93° 30′ E.), town, Eastern Turkestan; important trading centre. Pop. 6000.

HAMILCAR BARCA (d. 228 B.C.), Carthaginian general; maintained Carthaginian rule against Romans in Sicily, 247–241; opposed Romans in Spain, *c.* 236–228; great military genius; f. of Hannibal.

HAMILTON (53° N., 60° W.), river, Labrador, Canada; flows into the Atlantic through Hamilton inlet.

HAMILTON.—(1) (43° 16′ N., 79° 57′ W.) city, port of entry, Ontario, Canada, on Burlington Bay, Lake Ontario; seat of an Anglican and of a R.C. bp.; various educational institutions; important railway centre and head of navigation; centre of fruit and grain-producing region; extensive manufactures of iron implements; cotton and woollen goods. Pop. (1911) 81,969. (2) (55° 47′ N., 4° 3′ W.) town, on Clyde, Lanarkshire, Scotland; near it is Hamilton Palace, a seat of the Duke of Hamilton; in neighbourhood are remains of ancient castle of Cadzow; chief industry, coal and iron mining. Pop. (1911) 38,644. (3) (37° 45′ S., 142° 1′ E.) town, Victoria, Australia; has fine racecourse; is centre of agricultural and pastoral district. Pop. (1911) 4900. (4) (39° 20′ N., 84° 12′ W.) city, Ohio, U.S.A., on Great Miami; paper and flour mills; iron foundries. Pop. (1910) 35,279. (5) (42° 48′ N., 75° 34′ W.) city, New York, U.S.A., on Chenango; seat of Colgate Univ. (Baptist); canneries, woollen industries. Pop. 4000. (6) (32° 10′ N., 64° 51′ W.) capital of the Bermudas.

HAMILTON, Scot. family, descended from Walter Fitz-Gilbert, a supporter of Bruce who was granted barony of Cadzow in return for his services; his s. David was captured at Neville's Cross, 1346, and was founder of chantry in Glasgow Cathedral, 1361. In 1445 Sir James H. of Cadzow became Lord H., and in 1503 his s. James was cr. Earl of Arran. The second Earl of Arran was tutor to Mary, Queen of Scots, for whom his eldest s. James was proposed as husband. James afterwards lost his reason, and his brother John, as head of family, became 1st Marquess of H. in 1599; he was accused of share in murder of Regents Lennox and Murray.

JAMES, 1ST DUKE OF HAMILTON (1606–49), 3rd marquess, obtained dukedom in 1643; served under Gustavus Adolphus, 1631; took part in disputes between Charles I. and Covenanters, and went to Scotland with the king in 1641; for a short time he deserted the Royalist cause and threw in his lot with Argyll, but was subsequently restored to favour. In 1648 he commanded Scots army in England in support of king, but was defeated and captured at Preston, and executed in the following year. WILLIAM, 2ND DUKE (1616–51), Royalist in Civil War, was mortally wounded at Worcester. JAMES, 4TH DUKE (1658–1712), opposed Union of Parliaments. JAMES, 6TH DUKE, m. Elizabeth Gunning. Present duke (13th) succ. 1895. Dukes of Abercorn are cadet branch of H. family, and Earls of Haddington also came from Walter FitzGilbert.

HAMILTON, ALEXANDER (1757–1804), Amer. statesman and writer; b. in Nevis Island, W. Indies; entered business, 1769, but afterwards went to coll. at New York; on outbreak of Amer. War of Independence he wrote under pseudonym two political pamphlets of extraordinary talent, and soon afterwards received commission as captain of artillery; acted as Washington's aide-de-camp, 1777–81; distinguished himself in field, 1781. Entering Congress, 1782, he took part in deliberations which culminated in the organisation of federal constitution. H. accepted office as Sec. of Treasury under Washington in 1789, and displayed great financial talent; established a National Bank and reorganised tariff on protective basis; retired from office in 1795. In 1798 H. was once more in the field, holding command, under Washington, of army, which had been called out from fear of Fr. invasion; after Washington's death in 1799 he became commander-in-chief of the army, and one of leaders of Federalist party. He subsequently quarrelled with the other leader, John Adams (*q.v.*), and their dispute contributed to the downfall of the party. In 1804, a duel was forced upon him by Aaron Burr; he was mortally wounded and died next day. H. was author of *The Federalist*, a series of brilliant essays on constitutional law of America; and *Report on Manufactures*, a celebrated economic treatise which is still quoted by advocates of protective tariff.

Oliver, *Alexander Hamilton* (1906).

HAMILTON, ANTHONY (1646–1720), Fr. author;

grandson of Earl of Abercorn; exile in France; famous for *Mémoires* of his bro.-in-law, Comte de Gramont.

HAMILTON, ELIZABETH (1758–1816), Brit. author; wrote *The Cottagers of Glenburnie* (1808), and several educational and hist. works.

HAMILTON, EMMA, LADY (c. 1765–1815), was the humbly born and beautiful wife of Sir William H., ambassador at Naples; principally remembered as mistress of Nelson; subject of many pictures by Romney; d. in poverty at Calais; *Life*, by Sichel.

HAMILTON, GAIL, pseudonym of MARY ABIGAIL DODGE (c. 1830–96), Amer. author; wrote *Woman's Wrongs* (1868), etc.

HAMILTON, SIR IAN STANDISH MONTEITH (1853–), Brit. soldier; General Officer Commanding-in-Chief Mediterranean and Inspector-General Oversea Forces since 1910.

HAMILTON, JAMES (1769–1831), Eng. teacher of languages; discarded grammar and used an interlinear word-for-word trans.; method is explained in his *Principles, Practices, and Results of the Hamilton System* (1829).

HAMILTON, JOHN (c. 1511–71), Scot. ecclesiastic; was abp. of St. Andrews; hanged, at Dumbarton, for complicity in the Darnley murder.

HAMILTON, PATRICK (1504–28), Scot. theologian; became Prot., meeting Luther and other reformers; on his return to Scotland burnt as a heretic.

HAMILTON, ROBERT (1743–1829), Scot. political economist, whose *National Debt* threw new light on problems of finance.

HAMILTON, THOMAS (1789–1842), Scot. author; wrote *Annals of the Peninsula Campaign* (1829).

HAMILTON, WILLIAM (1704–54), Scot. Jacobite and poet; wrote *The Braes of Yarrow*.

HAMILTON, SIR WILLIAM (1730–1803), Brit. diplomatist and antiquarian; envoy at Naples; his wife became the mistress of Lord Nelson.

HAMILTON, SIR WILLIAM, Bart. (1788–1856), Scot. philosopher; ed. Balliol Coll., Oxford; called to Scot. Bar, 1813, but devoted most of his time to learning and research; app. prof. of Civil History at Edinburgh, 1821, and of Logic and Metaphysics, 1836; pub. *Philosophy of the Unconditioned*, 1829; edit. Reid's works, 1846, and *Discussions in Philosophy, Lit., and Education*, 1852–53; thought Logic purely formal; a follower of Aristotle, and widely read in philosophy, lit., and science.

HAMILTON, SIR WILLIAM ROWAN (1805–65), Scot. mathematician; b. Dublin; brilliant linguist and mathematician. H. gained highest honours at Trinity Coll., Dublin, and was appointed (1827) prof. of Astronomy there, and astronomer-royal; knighted, 1835; pres. of Royal Irish Academy, 1837; made contributions to the higher branches of mathematics; famed chiefly for his invention of the calculus of quaternions; wrote *Lectures on Quaternions*, and *Elements of Quaternions*. Other works include *General Method in Dynamics, Algebra as the Science of Pure Time, Memoirs on Discontinuous Functions*.

HAMIRPUR (25° 58′ N., 80° 11′ E.), town, capital of H. district, Allahabad, Brit. India; at junction of Betwa and Jumna; cotton and grain. Pop. 7000.

HAMITIC LANGUAGES AND PEOPLES.—HAMITIC LANGUAGES are agglutinative or inflectional, and are generally grouped as the Ancient Egyptian, N. African, and Ethiopian or Cushite languages; of these the first are still represented by liturgy of Coptic Church, second by modern Berber dialects, and third by tongues spoken in Abyssinia and elsewhere.—HAMITIC PEOPLES are generally classed as belonging to Caucasian family; include Berbers of N. Africa, Ethiopians, Egyptians, and other races. They are generally dark in complexion and of fine physique. See RACES OF MANKIND.

HAMLET.—The story of Shakespeare's great tragedy is derived from the Lat. history of Denmark by Saxo Grammaticus (end of XII. cent.), first printed at Paris, 1514. It was subsequently included in François de Belleforest's *Histoires Tragiques* (1570). An Eng. trans. from this source later appeared under title of *The Historie of Hamblet*, and this served as foundation of a play which was popular on London stage c. 1589. Shakespeare's version was produced c. 1601–2.

HAMLEY, SIR EDWARD BRUCE (1824–93), Eng. gen. and author; served in Crimean and Egyptian Wars; pub. *The Operations of War* (1866), *The War in the Crimea* (1891), and some novels.

HAMLIN, HANNIBAL (1809–91), vice-pres. of U.S.A. during Civil War; took prominent part in Emancipation measures.

HAMM (51° 40′ N., 7° 50′ E.), town, Westphalia, Prussia, on Lippe; iron foundries, wire-works; thermal baths; ancient capital of Mark. Pop. (1910) 43,658.

HAMMĀD AR-RĀWIYA (fl. VIII. cent. A.D.), Asiatic who made collections of Arabian antiquities.

HAMMER, tool consisting of a steel head, fixed generally on a wooden shaft, and used for striking purposes. The powerful 'steam-hammer,' now largely used in engineering works, was invented by James Nasmyth, about 1840.

HAMMER, FRIEDRICH JULIUS (1810–62), Ger. author; wrote dramas, novels, and moral poems.

HAMMERBEAM, in arch. name given to short horizontal beam, or cantilever, projecting from wall, and serving as support to Gothic timber roof. The roof in Westminster Hall is fine example of h. roof.

HAMMERFEST (70° 40′ N., 23° 30′ E.), seaport town, Norway, on island of Klavö; the most northerly town in Europe; exports fish, fish-oil, hides, and down.

HAMMER-HEAD, see under SHARKS AND DOG FISHES.

HAMMER-PURGSTALL, JOSEPH, FREIHERR VON (1774–1856), Austrian Orientalist; voluminous translator and edit. of hist. and literary works from the Arabic, Turkish, and Persian.

HAMMERSMITH (51° 29′ N., 0° 14′ W.), borough, Middlesex, England; on N. side of Thames, forming part of W. London. Pop. (1911) 121,603.

HAMMER-THROWING, an athletic exercise which has been popular in England, Scotland, and Ireland from very early times. By modern rules a hammer weighing about 16 lb. is thrown from a restricted circle; greatest distances thrown range from about 120 to 176 ft.

HAMMER-TOE, condition in which a toe, usually the second, is bent so that the interphalangeal joint projects and is subjected to pressure by the boot, accompanied by considerable pain and corn forming. It is treated by excision of the joint, so that toe lies flat.

HAMMOND (41° 37′ N., 87° 30′ W.), city, Indiana, U.S.A., on Calumet; meat-packing and iron industries. Pop. (1910) 20,925.

HAMMOND, HENRY (1605–60), Eng. ecclesiastic; held various appointments during reign of Charles I., by whom he was greatly esteemed; author of a *Practical Catechism* (1644).

HAMMURABI, see BABYLONIA (LAW).

HAMON, JEAN LOUIS (1821–74), Fr. painter who revived Renaissance detail, etc., in painting.

HAMPDEN, JOHN (c. 1595–1643), Eng. politician; entered Parliament, 1621; chiefly famous for his refusal to pay ship-money (*q.v.*) in 1637; his trial before Court of Exchequer resulted in judgment against him, 1638. He was a determined opponent of Charles I., and a member of Short and Long Parliaments; had share in prosecution of Strafford; was one of five members impeached by Charles in 1642. On outbreak of Civil War he raised troops for Parliament; mortally wounded at Chalgrove Field, 1643.

HAMPDEN, RENN DICKSON (1793–1868), Eng. ecclesiastic; Bp. of Hereford (1847); author of *Christ and the Spirit, Fathers of Greek Philosophy*.

HAMPDEN, VISCOUNTY OF, ROBERT LORD TREVOR, great-great-grandson of John Hampden; cr. viscount, 1776; title extinct, 1824; HENRY BOUVERIE WILLIAM BRAND became 1st viscount of 2nd creation, 1884, after serving as speaker of House of Commons from 1872; first to use 'Closure'

(1881); grandson, Thomas Walter Brand, is 3rd viscount.

HAMPDEN-SYDNEY (37° 15′ N., 78° 28′ W.), village, Virginia, U.S.A.; seat of Hampden-Sydney Coll. (Presbyterian).

HAMPOLE, RICHARD ROLLE DE, see ROLLE.

HAMPSHIRE, SOUTHAMPTON, HANTS (51° N., 1° 30′ W.), county, S. England; bounded N. by Berkshire, W. by Dorset and Wiltshire, S. by Eng. Channel, E. by Surrey and Sussex. Isle of Wight, separated from mainland by Solent and Spithead, is included in county. On coast are Portsmouth Harbour, Southampton Water, Christchurch and Poole Bays; inland are fertile valleys, hills, and woods; crossed by Downs, highest points being Inkpen Beacon and Sidown Hill. W. of Southampton Water is New Forest; remains of forests also at Bere, Woolmer, and Waltham Chace. Principal rivers, Lymington, Test, and Itchen, abound in trout.

Chief towns: Southampton (one of chief ports in kingdom), Portsmouth, Winchester, Christchurch, Lymington, and Romsey; seaside resorts at Bournemouth, Milford, Southsea; and in Isle of Wight, Cowes, Ryde, Ventnor, and Newport; Aldershot, military training centre. Sheep, cattle, and horse-rearing, fishing, shipbuilding, brewing, tanning are carried on. Most notable places of interest are Winchester Cathedral, Netley and Beaulieu Abbeys, St. Denys Priory, castles of Hurst and Porchester, besides numerous beautiful mansions and many interesting churches. Isle of Wight contains Carisbrooke Castle and Quarr Abbey. Pop. 916,000.

Hampshire, in Victoria County Histories.

HAMPSTEAD (51° 33′ N., 0° 11′ W.), a N.W. district and residential suburb of London; associated with the names of Pope, Keats, Shelley, and many other men-of-letters; H. Heath is a popular pleasure-ground. Pop. (1911) 85,510.

HAMPTON.—(1) (37° N., 76° 26′ W.) city, Virginia, U.S.A., at mouth of James River; contains Hampton Normal and Agricultural Institute (for coloured pupils); ships fish and oysters. Pop. (1910) 5505. (2) (51° 25′ N., 0° 24′ W.) village, Middlesex, England, on Thames; *Hampton Court*, a former royal residence, contains a fine gallery of paintings. Pop. (1911) 9221.

HAMPTON ROADS (37° N., 77° W.), channel between Old Point Comfort and Sewell's Point, through which James, Nansemond, and Elizabeth Rivers enter Chesapeake Bay. Fortress Monroe and fortified island of Rip Raps guard entrance from bay. Important commercial highway and chief centre of U.S. navy. Scene of naval battle (1862) between Federal warship *Monitor* and Confederate *Virginia*; first encounter in history between ironclads.

HAMPTON, WADE (1818–1902), Amer. soldier; founder of 'Hampton's Legion,' which took part in the first battle of the *Bull Run* on Confederate side; served at *Gettysburg* and elsewhere; gov. of S. Carolina (1877–79).

HAMSTER, a member of MOUSE FAMILY (*q.v.*).

HANAPER, old name for wicker basket in which chancery documents were kept; the modern word 'hamper' is a corruption.

HANAU (50° 9′ N., 8° 55′ E.), town, Hesse-Nassau, Prussia, on Main; gold and silver work; diamond-cutting; scene of defeat of Bavarians by French, 1813. Pop. (1910) 34,411.

HANBAL, AHMED IBN (780–855), Eastern scholar and ascetic; writer on Koran; founded *Hanbalite* school, one of the four orthodox sects.

HANBURY, WILLIAMS, SIR CHARLES (1708–59), Brit. diplomatist; was a member of Parliament, and employed in various diplomatic missions abroad; celebrated as a wit and writer of light verse; committed suicide.

HANCOCK (47° 8′ N., 88° 34′ W.), city, Michigan, U.S.A., on Portage Lake; copper mines; machinery. Pop. (1910) 8981.

HANCOCK, JOHN (1737–93), Amer. statesman; leader in refusal of customs duties before Amer. revolution; took initiative in Massachusetts opposition to Britain.

HANCOCK, WINFIELD SCOTT (1824–86), Amer. soldier, distinguished in Civil War at Williamsburg, Antietam, Fredericksburg, Chancellorsville; rendered notable service at Gettysburg, receiving serious wound; outstanding in subsequent campaigns; major-general, 1866; commander of fifth division, 1867; unsuccessful as Democratic candidate for presidency, 1880.

HAND, see SKELETON.

HANDCUFFS, pair of articulated steel bracelets, self-locking, fastened to each other by a chain. Used to secure prisoner; not applicable to prisoner on suspicion unless he behaves violently or attempts escape.

HANDEL, GEORGE FREDERICK (1685–1759), Anglo-Ger. composer; b. Halle; showed musical precocity from earliest childhood; first teacher—Zachau, organist; app. organist at Schloss and Domkirche, and studied law at Univ. of Halle, 1695; joined opera orchestra, Hamburg, 1703; visited Italy, 1709, where he became friend of Scarlatti and Corelli; app. *capellmeister*, Hanover, 1710. H. twice visited England, 1711–15; offended Elector of Hanover, but on latter's accession as George I. became reconciled by writing *Water Music* in king's honour; director of music to Duke of Chandos, 1718; directed Ital. Opera for Royal Academy of Music, London, 1720, which eventually failed; settled in England, becoming naturalised, 1726; lost eyesight towards end of life.

H. was a man of independent and upright character and artistic temperament, loving pictures as well as music; a good friend, although possessed of violent temper. He was one of the finest organ and harpsichord players of his time. The energy and rapidity with which he worked was remarkable; one opera (*Rinaldo*) was written in fourteen days, and *The Messiah* in three weeks. His name will always be associated with oratorio, and he is the undisputed master of choral music. On England he exercised the greatest influence. H. founded no school. Among best works are: Operas—*Almira*, *Nero*, 1705; *Daphne*, *Florinda*, 1708; Latin Psalms—*Dixit Dominus* and *Laudate Pueri*; oratorios—*Resurrezione* and *Il Trionfo del Tempo*; *Utrecht Te Deum*, 1713; *Concerto in F*, 1715; *Passion* Oratorio, 1716. To Eng. period belong over forty operas no longer performed, and his greatest oratorios—*Chandos Anthems*, 1718–20; *Saul*, *Israel in Egypt*, 1738; *Samson*, *Messiah*, 1741; *Joseph*, 1743; *Judas Maccabæus*, 1746; *Joshua*, 1747; *Jephtha*, 1751.

Streatfeild, *Life* (1909).

HANDFASTING was in O.E. period a betrothal. Later, in Scotland, it was a loose marriage-contract lasting for a year and a day only.

HANDICAPPING, the putting of competitors in a game or contest upon an equality, by imposing penalties upon the more powerful or skilful. Time allowances, based upon tonnage and sail area, are granted in a yacht race, and in a motor-car speed trial upon weight and horse-power.

HANDSEL, term with three significations: a personal gift; part-payment; the first money of the week taken in the way of trade.

HANDSWORTH.—(1) (52° 30′ N., 1° 57′ W.) N.W. suburb of Birmingham, England. Pop. (1911) 68,618. (2) (53° 22′ N., 1° 23′ W.) urban district, Yorkshire, England; 4 miles S.E. of Sheffield; extensive collieries and quarries. Pop. (1911) 14,199.

HANDWRITING, see PALÆOGRAPHY and WRITING.

HANG-CHOW-FU (30° 20′ N., 120° 10′ E.), city, port, Che-Kiang, China, on Tsien-Tang River; centre of silk manufacture; opened to foreign commerce in 1896. Pop. *c.* 400,000.

HANGING, the method of execution employed in Great Britain and her colonies as punishment for capital offences. As the penalty for homicide it has been employed in England from very early times.

Thieves and pirates were hanged in chains, *i.e.* gibbeted —down to a comparatively recent period. The bodies were left hanging until they gradually decayed away. Hanging in chains was discontinued after 1832, and the last public execution took place in 1868. Executions are now carried out within prison walls, in the presence of the sheriff and other officials. After death, the body of the criminal is buried in quicklime.

HANGING GARDENS, see BABYLON, SEVEN WONDERS OF THE WORLD.

HANGO (59° 47′ N., 22° 59′ E.), seaport, Finland, on Gulf of Finland; exports wood and fish. Pop. 3600.

HANKOW (30° 30′ N., 114° 20′ E.), city, river-port, Hu-peh, China, on Han, at junction with Yang-tze-Kiang; harbour accessible to ocean steamers; large transit trade; chief export, tea. Pop. *c.* 900,000.

HANLEY (53° 2′ N., 2° 12′ W.), town, Staffordshire, England; extensive potteries; coal and iron mines; united to Stoke-on-Trent, 1910.

HANNA, MARCUS ALONZO (1837–1904), senator of U.S.A.; important financier; chief supporter of Republican party under M'Kinley; one of founders of National Civic Federation, 1901.

HANNAY, JAMES (1827–73), Scot. author; wrote *Satire and Satirists* (1854); two nautical novels, and other works.

HANNIBAL (*c.* 247–183 B.C.), great Carthaginian general, who provoked, controlled, and carried on the second Punic War, also known as Hannibalic War, against Rome; s. of Hamilcar Barca (*q.v.*). H. took Saguntum in 218, after which he marched from Spain across Pyrenees into Gaul, followed Rhône, and led his troops over Alps into Italy in space of five months; maintained war for fifteen years; won great victories at Trasimene Lake, 217, and Cannæ, 217; took Tarentum, 212; failed to capture Rome, 211; he was at last compelled to withdraw to Carthage, and was finally defeated by Scipio at Zama, 202 B.C. H. poisoned himself, 183 B.C., to prevent his being surrendered to Romans. See PUNIC WARS.

Morris, *Life.*

HANNIBAL (39° 40′ N., 91° 24′ W.), city, Missouri, U.S.A., on Mississippi; exports lumber, agricultural produce; flour-mills, tobacco factories. Pop. (1910) 18,341.

HANNINGTON, lake, Brit. East Africa; named after Bp. James Hannington.

HANNINGTON, JAMES (1847–85), Eng. missionary; first bp. of Equatorial East Africa. In 1885, whilst trying to discover a new route from Mombasa to Lake Victoria Nyanza, he was seized by Mwanga, king of Uganda, and murdered.

HANNO (V. cent. B.C.), Carthaginian navigator; author of *Periplus,* an account of his travels.

HANNO 'THE GREAT' (III. cent. B.C.), Carthaginian general, leader of the aristocrats, and opposed to Hamilcar.

HANOI, capital, Tonkin, Fr. colony (1873); native industries. Pop. *c.* 105,000.

HANOTAUX, ALBERT AUGUSTE GABRIEL (1853–), Fr. statesman and author; Foreign Minister, 1894–98; wrote *Histoire du Cardinal de Richelieu* (1893–1903); member of *Académie française.*

HANOVER (52° 30′ N., 9° E.), province of Prussia, surrounded by North Sea, Holstein, Mecklenburg-Schwerin, Saxony, Brunswick, Hesse-Nassau, Westphalia, Lippe, Pyrmont, and Netherlands; area, 148,338 sq. miles; traversed by Harz Mountains (*q.v.*) in S.E.; remainder forms part of great N. Ger. plain, covered with moor and immense stretches of heath, such as Lüneburger Heide; chief rivers, Elbe, Weser, Ems, Leine; traversed by numerous canals; principal towns, Hanover (capital), Hildesheim, Osnabrück, Göttingen (with univ.), Borkum, and Norderney (famous watering-places), rich agriculture; also coal, salt, silver, copper, iron-ore, lead, pottery, asphalt, flax, tobacco, etc., famous poultry-rearing (especially geese).

Ernst August of Brunswick became elector of H., 1692, and was succ. by his s. George Ludwig, who became George I. (*q.v.*) of England, 1714; the union of Britain and Hanover under the Guelphs lasted until Queen's Victoria's accession, 1834, when H. passed to Ernst August (Duke of Cumberland), bro. of William IV. H. sided with Austria during Austrian War of Succession (1727), with Prussia during Seven Years War, and against Fr. Republic, 1793. H. was made a kingdom by Congress of Vienna, 1814; joined Zollverein, 1854; sided with Austria against Prussia, 1866; Hanoverians forced to capitulate at Langensalza, and H. annexed to Prussia, 1866; purest German spoken in H. Pop. (1910) 2,942,436.

Ward, *Great Britain and Hanover.*

HANOVER, HANNOVER.—(1) (52° 22′ N., 9° 44′ E.) town, Prussia, capital of H. province, on Leine; fine parks and suburbs, picture galleries, museums, stately town hall, public and royal libraries, large theatre, state palace with magnificent internal decorations and valuable art collection; manufactures—hardware, chemicals, machinery, linen, cloth, pianos, tobacco; became ducal residence, 1641. Pop. (1910) 302,384. (2) (38° 44′ N., 85° 27′ W.) town, Indiana, U.S.A., on Ohio; seat of Hanover Coll. (Presbyterian), founded 1833. (3) (43° 43′ N., 72° 11′ E.) town, New Hampshire, U.S.A., on Connecticut River; seat of Dartmouth Coll. (1770), agricultural district. (4) (39° 50′ N., 77° W.) town, Pennsylvania, U.S.A.; manufactures machinery, wagons. Pop. (1910) 7057.

HANRIOT, FRANÇOIS (1761–94), Fr. revolutionist; commander of the Commune forces in Paris; associated with the fall of Robespierre, with whom he was guillotined.

HANSARD, LUKE (1752–1828), Eng. printer; printed the *Journals of the House of Commons* (1774–1828); highly esteemed by Burke and Johnson. Since his time the printed records of parliamentary debates, etc., have been known as 'Hansards.'

HANSEATIC LEAGUE, confederation of N. German towns, formed in XIII. cent. for mutual protection and for promotion of commercial privileges; exercised great influence in Europe for more than two cent's, and at one time included ninety free cities, of which most important were Lübeck, Hamburg, and Bremen, these three being still known as Hanse towns. The first confederation was formed early in XIII. cent. at Wisby, which for some years remained centre of Baltic trade, but was eventually superseded by Lübeck. Lübeck and Hamburg were united for trading and protective purposes from 1241 onwards; in 1252 they received certain privileges from Flanders, and in 1266–67 were allowed to establish their own associations in London. Early in XIV. cent. the confederation obtained important concessions from Bruges, and at later date from Bergen; in this cent. also it came into conflict with Waldemar of Denmark, who was defeated; war ended with treaty of Stralsund, 1370, by which League gained increase of power. Its importance began to decline in the XV. cent.; waged war against Holland without success in first half of this cent., hostilities ending with treaty of Copenhagen in 1441. In following cent. it waged unsuccessful war against Norway and Sweden, and by 1670 had ceased to exist.

Sartorius, *Geschichte des hanseatischen Bundes* (1802–8).

HANSEN, PETER ANDREAS (1795–1874), Dan. astronomer; Director of Seeberg observatory, Gotha; revised lunar theory; results embodied in *Nautical Almanac.*

HANSI (29° 6′ N., 76° E.), town, Hissar district, Punjab, India. Pop. 15,000.

HANSOM, JOSEPH ALOYSIUS (1803–82), Eng. inventor and architect; b. York; invented (1834) the Patent Safety Cab which bears his name; founded (1834) *The Builder* journal; was extensively employed throughout the kingdom as architect.

HANTHAWADDY (17° N., 96° E.), district, Lower Burma, India; constituted a separate district

in 1880; capital, Rangoon. Area, 3023 sq. miles. Pop. 484,811.

HANUMAN (Hindu myth.), monkey god who bridged the distance between India and Ceylon to aid Rama when searching for his wife, Sitá; hero of *Rámáyana*.

HANWAY, JONAS (1712–86), Eng. philanthropist; wrote account of his travels in the East (1753); introduced the umbrella into England; responsible for many social reforms.

HANWELL (51° 31′ N., 0° 20′ W.), parish, Middlesex, England. Pop. (1911) 19,131.

HAPARANDA (65° 52′ N., 24° 3′ E.), town, Norbotten, Sweden, at head of Gulf of Bothnia.

HAPLOCERUS, Rocky Mountain goat.

HAPLODRILI, a small group of regularly segmented marine worms, of extremely simple structure, occurring in coastal mud; larvæ free swimming and ciliated, and live at ocean surface; setæ or bristles, characterising the remaining *Chætopoda*, are entirely wanting in this group.

HAPSBURG, or HABSBURG, Ger. noble family, deriving name from castle of H. on Aar, built about 1020. Rudolph of H., who became Holy Rom. emperor in 1273, acquired Austria in XIII. cent.; his descendants held Empire at various times, and from 1438 the imperial title remained practically hereditary in House of H. Family was remarkable for its continuous acquisition of territories in the east; annexed Styria, Carinthia, Tyrol; and Bohemia and Hungary were both subject to it for some time. Practice of subdivision frequently weakened family, but all their dominions were reunited under Frederick III. and his s., Maximilian. Latter married Mary of Burgundy, 1477, and established his family as great European power. In reign of Charles V. Spain was united to Empire; when he abdicated, 1556, it was transferred to his s., Philip, while the Empire passed to his bro., Ferdinand. Family thus divided into Span. (elder) and Austrian (younger) branches. Span. line became extinct with death of Charles II. of Spain in 1700; Austrian H's claimed throne, but war with France resulted in its passing to Bourbons. Austrian H's were founded by Ferdinand I.; lands were divided among his sons at his death, but were reunited under Ferdinand II., 1619. Male line became extinct with death of Charles VI. in 1740; he had previously issued document known as Pragmatic Sanction, securing succession to his dau., Maria Theresa. She married Francis of Lorraine, who became emperor in 1745. Henceforth Hapsburg-Lorraine family were Holy Rom. emperors till 1806, since when they have been emperors of Austria.

Gilbert-Smith, *Cradle of Habsburgs* (1907).

HAPUR (28° 43′ N., 77° 50′ E.), town, Meerut, United Provinces, Brit. India; exports sugar, cotton, grain. Pop. 15,000.

HARA-KIRI, method of suicide by disembowelment, formerly common in Japan amongst the higher ranks. This was done by a self-inflicted cut across the abdomen with a dagger, followed by a sword stroke by another hand, which severed the head from the body. As an obligatory act it was abolished in 1868. On the day of the Jap. emperor's burial, 1912, General Nogi and his wife committed hara-kiri.

HARALD I., HAARFAGER (850–933), king of Norway; won battle of Hafrsfjord, 872, and conquered whole of Norway.

HARALD III., HAARDRAADA (1015–66), king of Norway; fought against Saracens; after succeeding to Norwegian throne he tried to conquer Denmark, but without success; invaded England, 1066; killed at Stamford Bridge.

HARAR, see HARRAR.

HARBIN, KHARBIN (45° 46′ N., 126° 35′ E.), town, on Sungari, Manchuria; railway workshops; breweries, flour-mills. Pop. 35,000.

HARBINGER, one who goes before; originally one whose business was to provide accommodation.

HARBOUR, a port or haven, which by its natural conformation or artificial construction affords safe refuge and anchorage to ships. A h. should be easily accessible in any weather, and should have a sufficient depth of water at all tides; the majority of h's, however, are tidal, and are provided with enclosed docks into which vessels enter at high tide. The dock gates are closed before the ebb, and a uniform level is thus maintained. Every effort is made to secure the utmost possible depth of water, as it has been calculated that the value of a h. increases as the cube of the depth. The entrance to the h. must be proportioned to the area, as upon this depends the tranquillity of the h. Portland Harbour is one of the finest artificial h's in the world, and it encloses 1500 acres of water with a depth of 30 ft. at low tide.

HARBURG (53° 28′ N., 9° 59′ E.), seaport, Hanover, Prussia, on Elbe; manufactures palm-oil, rubber goods, chemicals; active trade. Pop. (1910) 67,024.

HARCOURT (49° 8′ N., 0° 37′ E.), village, Eure, France.

HARCOURT, SIMON, 1ST VISCOUNT HARCOURT (*c.* 1661–1727), Eng. lord chancellor; called to Bar, 1683; solicitor-gen., 1702; helped to promote Union with Scotland; attorney-gen., 1707, 1710; defended Sacheverell, 1710; Lord Keeper of Great Seal, 1710; Lord Chancellor, 1713; P.C., 1721.

HARCOURT, SIR WILLIAM, GEORGE GRANVILLE VENABLES VERNON (1827–1904), Brit. statesman; P.C., 1866; knight and solicitor-gen., 1873; Sec. of State under Liberal government, 1880; Chancellor of Exchequer, 1886, 1892–95; reformed incidence of death duties, 1894. His Local Veto Bill was one of the causes of Liberal defeat, 1895; leader of Opposition, 1895–98, and continued to be prominent parliamentary figure; constant political writer.

HARCOURT, WILLIAM VERNON (1789–1871), Eng. ecclesiastic; canon of York, etc.; deeply interested in scientific subjects; founder and pres. of Brit. Association.

HARDANGER FJORD (60° 20′ N., 6° 10′ E.), inlet, on W. coast, Norway; magnificent scenery; tourist resort.

HARDEE, WILLIAM JOSEPH (1815–73), Amer. military commander; author of a noted drill manual; served with distinction in Confederate service.

HARDENBERG, KARL AUGUST VON, PRINCE (1750–1822), Pruss. politician; entered service of Hanover, 1770; Brunswick, 1782; Prussia, 1792; concluded Treaty of Basel, 1795; Minister of Foreign Affairs, 1804; twice dismissed from office through Napoleon's influence; Chancellor, 1810; carried out many social and educational reforms, and reorganised army; prominent in War of Liberation; signed first Treaty of Paris, 1814, and cr. prince; Minister of Interior, 1815–22.

HARDERWIJK (52° 22′ N., 5° 37′ E.), seaport, Netherlands, on Zuider Zee; chief exports, grain, fish. Pop. (1910) 7289.

HARDICANUTE, or HARDACNUT (*c.* 1019–42), king of England; s. of Canute; succ. his half-bro., Harold, 1040.

HARDING, JAMES DUFFIELD (1798–1863), Eng. artist; was a noted water-colour landscape painter; pub. several books on art subjects.

HARDING, SAINT STEPHEN (*c.* 1050–1134), third abbot of Citeaux; received St. Bernard into abbey and helped Cistercian reform.

HARDINGE, CHARLES, 1ST BARON H. OF PENSHURST (1858–), Viceroy of India since 1910; educated at Harrow and Cambridge; diplomatic service (1880), posts at Teheran, St. Petersburg; Assistant Under-Secretary for Foreign Affairs (1903–4), Ambassador, St. Petersburg (1904); Permanent Under-Secretary for Foreign Affairs (1906); cr. baron (1910); life attempted, Delhi (1912).

HARDINGE, HENRY, VISCOUNT H. (1785–1856),

Brit. gen. and Ind. gov.; distinguished in Napoleonic wars; Gov-Gen. of India, 1844–47; fought in second Sikh War, 1845–46; commander-in-chief of Brit. army, 1852–56; field-marshal, 1856.

HARDOI (27° 28′ N., 80° 15′ E.), district, United Provinces, India; area, 2331 sq. miles. Pop. 1,092,834. Capital, HARDOI; exports grain. Pop. 11,000.

HARDOUIN, JEAN (1646–1729), Fr. scholar; held that, with the exception of Homer and a few others, most of the classical works of antiquity were the invention of XIII.-cent. monks; edit. Pliny's *Natural History*.

HARDT MOUNTAINS (49° 18′ N., 7° 40′ E.), N. extension of Vosges mountains, in Bavarian Palatinate, Germany; average elevation, 1300 ft.

HARDWAR (29° 58′ N., 78° 13′ E.), town, on Ganges, United Provinces, Brit. India; place of pilgrimage; every twelfth year a sacred festival is held. Pop. 30,000.

HARDWICKE, PHILIP YORKE, 1ST EARL OF (1690–1764), Eng. Lord Chancellor; b. at Dover; called to Bar, 1715; M.P., 1719; Solicitor-Gen., 1720; Attorney-Gen., 1723; supported many of Walpole's measures and his policy of war with Spain; became P.C. and Chief Justice in 1733; Lord Chancellor in 1737. As chairman of council of regency in 1743–45, H. directed proceedings against Jacobites in rebellion of 1745; he subsequently effected legislative reforms in Scotland, and framed Marriage Act, which made Fleet marriages illegal; became 1st Earl of H., 1756; was member of government under Pitt in 1757.

George Harris, *Life* (1847).

HARDY, ALEXANDRE (c. 1569–1631), Fr. dramatist; prolific writer of tragedies, pastorals, histories, and tragi-comedies for his own troupe of actors. His plays, remarkable for effective stagecraft and vigorous action, represent the transition from mediævalism to classical style.

HARDY, THOMAS (1840–), Eng. novelist and poet; famed for his 'Wessex' novels, including *Far from the Madding Crowd* (1874), *Tess of the D'Urbervilles* (1891). Of late years he has devoted himself entirely to poetry, and has pub. *The Dynasts*, a Napoleonic drama, and several volumes of lyrical poems; O.M., 1910.

HARDY, SIR THOMAS DUFFUS (1804–78), Eng. antiquary; deputy-keeper of Record Office, 1861–78; an industrious edit. of the Roll Series of chronicles. His bro., Sir William H. (1807–87), succ. him at the Record Office.

HARDY, SIR THOMAS MASTERMAN, Bart. (1769–1839), Brit. vice-admiral; captain of the *Victory* at *Trafalgar*, and greatly esteemed by Nelson, who d. in his arms.

HARDYNG, JOHN (1378–1465), Eng. chronicler; after military service wrote an unreliable *Chronicle* (Eng. and Scot.), which was altered to suit different patrons.

HARE (*Lepus europæus*), rodent closely allied to rabbit, but larger and speedier owing to superior development of hind limbs; differs also from rabbit in solitary life, in not forming burrows, and in young being born fully furred and with open eyes. The pursuit of the h. with dogs is called coursing.

HARE, AUGUSTUS JOHN CUTHBERT (1834–1903), Eng. author; wrote *Memorials of a Quiet Life*, and numerous travel books.

HARE, JULIUS CHARLES (1795–1855), Eng. ecclesiastic; archdeacon of Lewes; chaplain to Queen Victoria; typical Broad Churchman; pub. numerous theological works.

HARE, SIR JOHN (1844–), Eng. actor and manager; probably the most finished of modern 'character' actors; famed for his performances in *Caste*, *A Pair of Spectacles*, *A Quiet Rubber*, etc.; knighted, 1907.

HAREBELL, Campanulaceous plant (*C. rotundifolia*) with blue flowers; popularly termed bluebell; name also applied to wild wood-hyacinth.

HARELIP, congenital vertical cleft in upper lip; may be *single* or *double*; often associated with cleft palate (*q.v.*); should be treated surgically during infancy.

HAREM, or SERAGLIO, name given in Muhammadan countries to the apartment in a palace or house set apart for the use of the wives and concubines of the owner. The name is also applied collectively to the women themselves. The law of the Koran only permits of a man having four wives, but he is not limited in the number of his concubines. Each wife has a separate establishment within the h., and is waited upon by a separate staff of servants. A woman must always appear veiled except before her husband or immediate male relatives. The h. is guarded by eunuchs. Death is the penalty for a woman who seeks to escape.

HARFLEUR (49° 29′ N., 0° 17′ E.), seaport town, Seine-Inférieure, France; potteries, distilleries; iron foundries. Pop. 3000.

HARGREAVES, JAMES, a Lancashire weaver, inventor of spinning-jenny, through which he suffered much persecution from fellow-workmen; died, 1778.

HARIANA (29° N., 76° E.), tract of country, Punjab, India; includes parts of Hissár and Rohtak districts.

HARI-KARI, see HARA-KIRI.

HARINGTON, SIR JOHN (1561–1612), Eng. author and translator; wrote *A Short View of the State of Ireland*, *Nugæ Antiquæ*—an interesting literary medley, and trans. Ariosto's *Orlando Furioso*.

HARĪRĪ, ABU MUHAMMAD QĀSSIM (1054–1122), Arab. author who wrote in verse valuable works on grammar and lit.

HARI-RUD, HERI-RUD (34° 40′ N., 61° E.), river, Afghanistan; rises in the chain of Koh-i-Baba, flows N. and W., and loses itself in the Tejend oasis.

HARKNESS, ALBERT (1822–1907), Amer. classical scholar; author of numerous extensively used textbooks, including *Complete Latin Grammar* (1898).

HARLAND, HENRY (1861–1905), Amer. novelist; edit. *The Yellow Book*; wrote *The Cardinal's Snuff-Box*, etc.

HARLAW, battlefield near Inverurie, Aberdeenshire, where Earl of Mar defeated Donald, Lord of the Isles, 1411.

HARLECH (52° 52′ N., 4° 7′ W.), town, Merionethshire, N. Wales, on Irish Sea; has ruined XIV.-cent. castle.

HARLEQUIN, familiar figure in the modern pantomime; supposed to be an invisible mischievous sprite; derived originally from early Ital. comedy.

HARLEY, see OXFORD, EARL OF.

HARLINGEN (53° 10′ N., 5° 24′ E.), seaport, Friesland, Netherlands, on Zuider Zee; various manufactures; exports dairy and farm produce. Pop. (1910) 10,209.

HARMODIUS, a young Athenian, who with his friend, Aristogeiton, was concerned in the assassination of the tyrant, Hipparchus. Both were slain, but after death were revered as heroes (514 B.C.).

HARMONIA (classical myth.), dau. of Ares and Aphrodite, and wife of Cadmus; was possessor of a necklace which brought woe to those who wore it.

HARMONIC ANALYSIS is a general mathematical method of investigating certain physical problems such as wave motion, pendulum motion, vibrations of strings and springs, etc. A particle is said to move with Simple Harmonic Motion if, starting from rest, it moves in a straight line with an acceleration always directed towards a fixed point C in the line and varying as the distance from C. The equation representing such motion is $\frac{d^2x}{dt^2} = -\mu x$ where x is the distance of the particle from C at any time t, and μ is a constant either known or to be found from another condition governing the motion.

HARMONICA, term applied to musical instruments consisting of glasses tuned with more or less water, and producing sound by friction, or bell instru-

ments of percussion; in vogue during XVIII. cent.; now a toy instrument.

HARMONIUM, a keyed instrument, somewhat resembling piano and organ, which produces sounds by means of 'free vibrating reeds'; used in churches, halls, etc., in place of the costlier organ. Although the guiding principle was then far from new, h's were first constructed in France by Grenié at the beginning of XIX. cent. and called *Orgue Expressif.* Various improvements were made in France and elsewhere (notably by Debain, Alexandre, and Mustel of Paris); but h.-construction was revolutionised by invention of *American organ.* Outstanding features of h. are keyboard of 5 octaves, stops (*Expression, Bourdon,* etc.), and treadles to supply wind which, by internal mechanism, acts upon rows of reed vibrators.

HARMONY is the combination of several sounds. These combinations are termed *Chords,* which in their formation and progression are determined by fixed laws. The union of any bass-note with its 3rd and 5th (for instance, C, E, G) is called a chord or *Triad*; it may be either 'Concord' or 'Discord,' and may be formed on any note of the major or minor scale. *Concords* or *Common Chords* are those which seem complete in themselves. *Discords* are incomplete in themselves, and must be resolved to a concord before the ear is satisfied. By the addition of the 7th to any triad the *Chord of the 7th* is formed, the principal one being the *Chord of the Dominant 7th,* which usually resolves to the tonic chord. All chords may be 'inverted,' *i.e.* the 3rd, 5th, or 7th may become the bass-note. If in 4-part writing the notes of each chord are placed so near one another that no note belonging to the chord can be inserted between them, we have 'Close' h.; if, on the other hand, the notes are placed at a wider distance, so that a note belonging to the chord can be again interposed, we have 'Extended' h. The conclusion of a musical phrase or of a composition is termed *Cadence.* Cadences may be Authentic, Plagal, Imperfect, Interrupted. *Modulation* is the change from one key to another. Besides the above h. deals with passing notes, suspensions, chromatic chords, chords of the 9th, 11th, 13th, etc.

HISTORY.—The history of h. really dates from the Middle Ages. In ancient times Gk. music consisted of melody; the limitations of their scales prevented their evolving h. The ecclesiastical scales, which took the place of the Gk. scales, prepared the way for h. and, gradually developing with the progress of h., eventually led to modern music. The most primitive form of h. (*Diaphony*) may be traced to the X. cent., and seems to have been the addition of an extra part to a Canto Fermo, generally in 4th or 5th and 8th. In XI. cent. an advance on diaphony was made in *Discantus* (the crude blending of two distinct melodies), which in its turn gave rise to *Counterpoint* (q.v.). Counterpoint engaged the close attention of the musicians of the following cent's, and its perfection at their hands was followed by a study of h. as the term is now understood. At the beginning of the XVII. cent. Monteverde revolutionised counterpoint by using 'unprepared discords,' and in other ways breaking away from the older school of Palestrina (d. 1594) and his predecessors. Rameau (1683–1764) pub. his famous *Traité de l'harmonie,* 1722, in which he points out that each individual tone comprises harmonic sounds. With Rameau and the contemporary Ital. theorist, Tartini, a new epoch was opened in the history of h. As music grew richer and fuller, old laws were superseded and new laws introduced, and the system of h. is continually changing its aspect from generation to generation, although the fundamental laws may remain the same. The musical genius of the XVIII. and XIX.-cent. masters, such as Bach, Händel, Beethoven, Schumann, Wagner, left its impress indelibly on h. and musical science. H., as has been well said, is the 'grammar of music.'

See manuals by Stainer, Prout, and Macfarren.

HARMSWORTH, SIR ALFRED CHARLES, see NORTHCLIFFE, LORD.

HARNACK, ADOLF (1851–), Ger. scholar; prof. at Leipzig, Giessen, Marburg, and since 1888 of Church History in Berlin; one of greatest living authorities on the New Testament and Early Church History; many of his works are translated into English.

HARO, Norman cry to a ruler for redress of wrong.

HAROLD I., HAREFOOT (d. 1040), king of England; succ. Canute as his elder s., though opposed by his bro. Harthacnut in Wessex.

HAROLD II. (c. 1022–66), Eng. king; Earl of Wessex, 1053; elected king, 1066; routed and killed his bro. Tostig and Hardrada, king of Norway, at Stamford Bridge, 1066; was defeated and slain at Hastings by William the Conqueror.

HAROLD HAARDRAADE, HARALD III. (*q.v.*).

HAROUN AL-RASCHID, see HARUN ER RASCHID.

HARP, largest and one of oldest instruments; played by plucking or striking strings with fingers or plectrum; has survived from earliest times in almost original form—triangular and remarkably graceful in line. H. was in common use in ancient Egypt, and held in highest honour by Celts, Franks, and Northmen. Old Brit. and continental bards accompanied their lays on h. The national symbol of Ireland is still the h. (*Clairseach*). Modern h. owes much to Hochbrucker and Erard; former (1720) invented pedal action method of retuning notes, thus freeing hands hitherto occupied with turning tuning pins; Erard (1810) invented *Double-action h.,* in which pedals raise strings one or two semitones. H. is now an orchestral rather than solo instrument; tuned in C flat, compass 6½ octaves; catgut strings, increasing in length and coloured for identification purposes, are stretched between 'neck' (top side) and sound-board (next to player), which, with 'pillar,' give h. its triangular form.

Armstrong, *Irish and Highland Harps* (1905).

HARPE, JEAN FRANÇOIS DE LA, see LA HARPE.

HARPENDEN (51° 49′ N., 0° 22′ W.), town, Hertfordshire, England. Pop. (1911) 6173.

HARPER, WILLIAM RAINEY (1856–1906), Amer. educationalist and scholar; first president of Chicago University.

HARPER'S FERRY (39° 17′ N., 77° 48′ W.), town, W. Virginia, U.S.A.; arsenal and armoury here were taken by John Brown in 1859; and burned, 1861, lest they should be seized by Confederates.

HARPIES, THE (classical myth.), monsters who served the gods; bird-like and horrible; best known from connection with the blind Phineus, whose food they kept defiling or carrying off; they were driven off by Argonauts (*q.v.*).

HARPIGNIES, HENRI (1819–), Fr. landscape painter, of great delicacy and finish.

HARPOCRATES, Gk. deity introduced from Egypt; a Hellenised form of Horus, the Egyptian sun god; and became god of silence.

HARPOCRATION, VALERIUS, Gk. literary critic of uncertain date, whose *Lexicon of the Ten Orators* is important source of literary history.

HARPOON, powerful dart used in whale-fishing; formerly thrown by hand, but now chiefly fired from a harpoon-gun in bows of vessel.

HARRAN, CHARRAN (33° 30′ N., 36° 35′ E.), town of Palestine; supposed dwelling-place of Laban in the Old Testament.

HARRAR, HARAR (9° 19′ N., 42° 6′ E.), town, Abyssinia, N.E. Africa; encircled by walls; trading centre; coffee, durra, tobacco. Pop. c. 39,000.

HARRADEN, BEATRICE (1864–), Eng. novelist; wrote *Ships that Pass in the Night,* etc.

HARRATIN, Berber tribes of Africa, thought to have negro blood in their veins.

HARRIER, breed of hounds, for hunting hares, like small foxhound.

HARRIER HAWK, member of HAWK FAMILY (*q.v.*).

HARRIMAN (35° 56′ N., 84° 32′ W.), town, Tennessee, U.S.A. Pop. (1910) 3061.

HARRIMAN, EDWARD HENRY (1848–1909), Amer. 'railroad king.'

HARRINGTON, EARLDOM OF.—William Stanhope, 1st earl, Sec. of State, 1730. 1744; Charles, 3rd earl, commander-in-chief in Ireland, 1805; Leicester, 5th earl, worked for Gk. Independence, 1823–24.

HARRINGTON, or **HARINGTON, JAMES** (1611–77), Eng. political theorist; wrote *Oceana*, 1656, describing ideal constitution on basis of land property, and a continually changing executive.

HARRIS, see LEWIS WITH HARRIS.

HARRIS, GEORGE, 1ST BARON (1746–1829), Brit. general, served in America and India. George (1851–), 4th baron, best known as cricketer.

HARRIS, JAMES (1709–80), Eng. philologist, politician, and essayist; father of 1st Earl of Malmesbury.

HARRIS, JOEL CHANDLER (1848–1908), Amer. writer; author of many amusing sketches, including the 'Uncle Remus' and 'Br'er Rabbit' stories.

HARRIS, JOHN (*c.* 1666–1719), Eng. divine; drew up *Collection of Voyages and Travels*, and valuable *Lexicon technicum*.

HARRIS, THOMAS LAKE (1823–1906), Amer. poet and founder of a new religion accepted by many prominent people; of great gifts, but practised black magic and probably fraud.

HARRIS, SIR WILLIAM SNOW (1791–1867), Eng. electrician; ed. Plymouth Grammar School and Edinburgh Univ. (Medicine). His ship's lightning conductor, invented 1820, was later adopted by Brit. and Russ. navies. Elected F.R.S., 1831; knighted, 1847.

HARRIS, WILLIAM TORREY (1835–1909), Amer. educational reformer and philosophical writer.

HARRISBURG (40° 15′ N., 76° 54′ W.), capital, Pennsylvania, U.S.A.; situated on Susquehanna River and surrounded by beautiful scenery. Has handsome capitol, court-house, arsenal, R.C. cathedral, etc.; manufactures machinery, boilers, and other steel and iron goods; flour, shoes, cigarettes, and cotton goods; contains several blast furnaces and rolling-mills. Pop. (1910) 64,186.

HARRISMITH (28° 24′ S., 28° 36′ E.), town, Orange Free State, S. Africa; exports wool and hides. Pop. (1911) 49,321.

HARRISON (40° 45′ N., 74° 10′ W.), town, New Jersey, U.S.A.; manufactures iron, steel, and brass goods, cotton thread. Pop. (1910) 14,498.

HARRISON, BENJAMIN (1833–1901), Amer. statesman; 23rd Pres. of U.S.; distinguished in Civil War; senator, 1881; served on various committees; pres., 1888; enlarged navy, developed civil service reforms, settled Bering Sea question with Great Britain; reduced national debt; encouraged commerce; defeated in presidential election, 1892.

Life, by Wallace (1888).

HARRISON, FREDERIC (1831–), Eng. writer and jurist; b. London; ed. Oxford; called to Bar, 1858; prof. of Jurisprudence, Inns of Court (1877–89); helped to codify Eng. Law; follower of Comte; studied labour problems; distinguished literary critic and historian. Chief works are *Oliver Cromwell* (1888), *Ruskin* (1902), *Chatham* (1905), *The Creed of a Layman* (1907).

HARRISON, JOHN (1693–1776), Eng. mechanician; received (1765) government grant of £20,000 for invention of chronometer for ascertaining longitude within error of 30 miles; invented gridiron pendulum.

HARRISON, THOMAS (1606–60), Eng. Roundhead; present at Marston Moor, Naseby, and siege of Oxford; signed king's death warrant; held military command during Cromwell's absence; instrumental in expelling Long Parliament; opposed Cromwell's protectorate; suspected of plots, he was twice imprisoned; executed at Restoration.

Life, by Simpkinson (1905).

HARRISON, THOMAS ALEXANDER (1853–), Amer. painter noted for representations of the sea; bro., **Birge H.** (1854–), is a well-known landscape painter.

HARRISON, WILLIAM (1534–93), Eng. ecclesiastic and antiquary; Canon of Windsor; his *Description of England* (1577) is invaluable for topography of the country and manners and customs of Elizabeth's reign.

HARRISON, WILLIAM HENRY (1773–1841), 9th Pres. of U.S.; entered army, 1791; commanded at Fort Washington, 1797; resigned from army, 1798; and became Sec. of North-West Territory; Gov. of Indiana, 1801; tried to secure better treatment of Indians, and to modify slavery legislation; defeated Indians at Tippecanoe River, 1811; fought against Britain, 1812–15; won battle of Thames, 1813; negotiated treaty with Indians, 1814. Member of Congress, 1816–19; of Ohio Senate, 1819–21; of U.S. Senate, 1825–28. First U.S. minister to Colombia, 1828. Pres. 1841.

Life, by Stoddard (1888).

HARRODSBURG (37° 43′ N., 84° 53′ W.), town, Kentucky, U.S.A.; sulphur springs. Pop. (1906) 3528.

HARROGATE (54° N., 1° 33′ W.), town, Yorkshire, England; health resort, noted for saline, chalybeate, and sulphur springs. Pop. (1911) 33,706.

HARROW, agricultural implement for breaking the soil into fine pieces after it has been ploughed, and for covering the seed sown; chief varieties are the straight-tooth and the spring-tooth.

HARROWBY, DUDLEY RYDER, 1ST EARL OF (1762–1847), Eng. politician; Foreign Sec., 1804; Pres. of Council, 1812–27.

HARROWING OF HELL, Eng. poem of XIII. cent.; its dialogue form was the initiation of the vernacular drama.

HARROW-ON-THE-HILL (51° 34′ N., 0° 20′ W.), town, Middlesex, England; famous for school founded by John Lyon, 1571. Pop. (1911) 17,076.

HARRY, blind minstrel of Scot. court in latter part of XV. cent.; wrote long epic poem called *William Wallace*, of importance in the formal history of verse, but of little value as hist. source or poem.

HARSHA, HARSHAVARDHANA, last native ruler of the whole of N. India (606–648 A.D.).

HARSNETT, SAMUEL (1561–1631), abp. of York (1629), repressed for Rom. Catholicism under Elizabeth, but great favourite of the Stewart kings.

HART, ALBERT BUSHNELL (1854–), prominent Amer. historico-political writer.

HART, CHARLES (fl. 1660), Eng. actor who played leading parts in Restoration tragedies; grandson of Shakespeare's sister Joan; d. 1683.

HART, ERNEST ABRAHAM (1835–98), Eng. medical journalist; practised as ophthalmic surgeon; became connected with *Lancet* (1857); appointed edit. of *British Medical Journal* (1866); took a leading part in public health and social reform, many Acts of Parliament dealing with those subjects being due largely or in part to his efforts; had a great share in the development of the Brit. Medical Association.

HART, SIR ROBERT (1835–1911), Anglo-Chinese official; entered Consular service, China, 1854; inspector-gen. of Chin. Customs department, 1863; greatly increased revenues; his house, containing valuable official documents, burnt down in Boxer rising, 1900; retired in 1907.

HART, WILLIAM (1823–94), Amer. artist; of Scot. birth; excelled as painter of animals and landscapes.

HARTE, FRANCIS BRET (1839–1902), Amer. novelist and poet; was a voluminous writer of fiction, his best-known works being *The Luck of Roaring Camp* and other sketches of Californian life, and *Condensed Novels* (parodies). Much of his verse won marked popularity. He was U.S. consul at Glasgow, and Crefeld, Germany.

Life, by Pemberton (1903); Boynton (1905).

HARTEBEEST, see ANTELOPES.

HARTFORD (41° 42′ N., 72° 42′ W.), capital of Connecticut, U.S.A.; situated on right bank of Connecticut River, *c.* 50 miles from mouth, and 112 miles by rail from New York city. Handsome city, well

laid out and compactly built; outstanding buildings include State Capitol (in white marble, with statues), arsenal, etc., with Trinity Coll. on outskirts; seat of R.C. bp.; manufactures—Colt's pistols, Gatling guns, engines, boilers, machines, hardware; trades in Connecticut tobacco. Site of Dutch fort (*c.* 1633) and colony of Dutch settlers; incorporated as city in 1784, and has since been capital of state; H. Convention (meeting of New England delegates) took place in 1814. Pop. (1910) 98,915.

HARTFORD CITY (40° 26′ N., 85° 17′ W.), town, Indiana, U.S.A.; oil and natural gas wells in vicinity. Pop. (1910) 6187.

HARTLEPOOL (54° 42′ N., 1° 11′ W.), seaport, Durhamshire, England; including municipal borough of H. and county borough of West H. H. is an old market town; West H. is modern, with municipal buildings, Athenæum, exchange, etc.; considered as one port which has large trade; engineering works, shipbuilding, iron and brass foundries, flour and paper mills. Pop. (1911) 20,618; W. Hartlepool (1911), 63,932.

HARTLEY, DAVID (1705–57), Eng. philosopher, physician, and psychologist; wrote *Observations on Man*; anticipated modern theories of close interdependence of the physical and mental; called founder of *Association* school of psychologists.

HARTLEY, JONATHAN SCOTT (1845–1912), Amer. sculptor, noted as portraitist.

HARTLIB, SAMUEL (*c.* 1599–*c.* 1670), Eng. economist and political philosopher; inspired Milton's *Tractate on Education*.

HARTMANN, KARL ROBERT EDUARD VON (1842–1906), Ger. philosopher; wrote *Philosophy of the Unconscious* (1869) and many other works; a pessimist, but believed that by social progress some happiness might be attained.

HARTMANN, MORITZ (1821–72), popular Ger. novelist and verse-writer.

HARTMANN VON AUE (*c.* 1170–1210), famous Middle High Ger. poet; b. Swabia; wrote excellent epics (*Erec*, *Iwein*, etc.); also lyrics.

HARTS-TONGUE (*Scolopendrium*), genus of ferns with undivided fronds.

HARTZENBUSCH, JUAN EUGENIO (1806–80), Span. playwright and scholar.

HĀRŪN-ER-RASHID (763–809), V. Abbasid Caliph of Bagdad; famed for the greatness of his empire, the splendour of his court, and his patronage of learning and letters; one of the greatest princes of his day; known to Eng. readers from his association with the *Arabian Nights*.

HARUSPICES, ARUSPICES (singular, **Haruspex**), Rom. prophets whose duty it was to explain omens, particularly to inspect entrails of offerings; probably Etruscan practice adopted by Rome.

HARVARD UNIVERSITY, the oldest, wealthiest, and most important of Amer. univ's, situated 3 miles W. of Boston. Named (1639) after Rev. John Harvard, a Cambridge graduate who died, 1638, leaving books, and money for its establishment; it was founded, 1636 (at place called Cambridge in honour of old Eng. Univ.), for the training of young men for the Puritan ministry. The constitution gradually changed in a liberal direction, and in 1866 it was freed from all sectarian tests by the abolition of compulsory attendance by the students at prayers. Unitarian and Transcendental teaching were the conspicuous notes of Harvard in the XIX. cent., and Channing, Theodore Parker, Emerson, Thoreau, Longfellow, Oliver Wendell Holmes, Lowell, were all H. men. There are now over 700 lecturers, tutors, and persons in authority, and over 5000 students. Radcliffe Coll., for women students, is essentially since 1894 a part of H. Univ., with the same regulations for admission and for degrees.

HARVEST (O.E. *hærfest*, autumn), the period of gathering in crops or fruit; also the crops or fruit so gathered. Religious festivals to celebrate the h. date back to remote times. Thus the custom of worshipping the Gk. goddess, *Demeter*, the 'corn-mother,' and her dau., *Persephone*, finds its survival in salutations paid to two small sheaves of corn, called 'the old woman' and 'the maiden,' which hang in some Scottish farm-kitchens from one harvest to another.

HARVEST-BUG, HARVEST-MITE, see under ARACHNIDA.

HARVEY (41° 38′ N., 87° 40′ W.), town, Illinois, U.S.A.; suburb of Chicago. Pop. (1910) 7228.

HARVEY, GABRIEL (*c.* 1545–1630), Eng. poet; wrote sonnets, satires, and controversial pamphlets; was the intimate friend of Spenser; and claimed to have introduced hexameter verse into Eng. lit.

HARVEY, SIR GEORGE (1806–76), Scot. historical and genre painter.

HARVEY, WILLIAM (1578–1657), Eng. physician, discoverer of the circulation of the blood; born at Folkestone, s. of a yeoman in good circumstances; ed. at the grammar school, Canterbury; at Caius College, Cambridge (B.A., 1597); and at Padua Univ. (M.D., 1602). Returning to England, he commenced to practise medicine in London, becoming a fellow of the Coll. of Physicians (1609), physician to St. Bartholomew's Hospital (1609), and Lumleian lecturer at the Coll. of Physicians (1615). He began to expound his theory of the movements of the heart and the circulation of the blood in his first course of lectures as Lumleian lecturer, but it was not until 1628, when he pub. his treatise, *Exercitatio Anatomica de Motu Cordis et Sanguinis*, that he made his great discovery. He showed that the blood was sent by the contractions of the heart from the right ventricle to the lungs, and returned by the pulmonary veins to the left ventricle, when it was sent into the arteries, carried to the tissues by the smaller arteries, then by the smaller veins to the *venæ cavæ*, and conveyed by them again to the heart. He also disproved the theories that had been held by former anatomists—for example, undulations of the blood in the veins, the presence of air in the arteries, and the idea that the liver was the centre of the circulatory system. His discovery was based upon a very complete knowledge of anatomy, gained from books, from the Ital. anatomists, and from extensive dissections, as well as upon observations on living animals. H. was appointed physician to James I. and to Charles I., having charge of the young royal princes at the battle of Edgehill; he lived at Oxford for some years, being elected warden of Merton College, but on the surrender of the city to the Parliamentarians he returned to London to live in retirement. He was elected pres. of the Coll. of Physicians (1654), but declined the position, and d., after being long affected by gout, in London, leaving his estate at Burwash, Sussex, to the Coll. of Physicians, with provision for the endowment of an annual oration.

Power, *Life* (1897).

HARWICH (51° 51′ N., 1° 17′ E.), port, Essex, England; packet station for Holland; fine harbour and docks; large export and import trade; strongly fortified. Pop. (1911) 13,623.

HARZ MOUNTAINS (51° 41′ N., 10° 37′ E.), a mountain range of N.W. Germany, extending through part of Prussia, Brunswick, and Anhalt, between Leine and Saale; divided into Ober, Unter, and Vorharz; highest peak, Brocken (*q.v.*), 3745 ft.; length, 57 miles; breadth, 20, and area, 784 sq. miles; rich in iron, copper, lead, silver, sulphur, zinc, granite, marble; large fir and pine forests; numerous mineral springs; figures prominently in Ger. legend and lit.

HARZBURG (51° 54′ N., 10° 32′ E.), town, Brunswick, Germany; saline springs; famous ruined castle. Pop. (1910) 4730.

HASA, EL (*c.* 27° 30′ N., 48° 20′ E.), E. coast district, Arabia; area, *c.* 30,000 sq. miles; produces rice, cotton, dates, pearls; under suzerainty of Turkey. Pop. *c.* 150,000.

HASAN (d. 669), Muhammadan caliph; s. of Ali and Fatima.

HASAN UL-BASRÍ (fl. VII.–VIII. cent.), prominent Arab. teacher.

HASBEYA, HASBEIYA (33° 25′ N., 35° 42′ E.), town, Syria, Asiatic Turkey. Pop. *c.* 5000.

HASDAI IBN SHAPRUT (fl. X. cent.), Span. Jew; patron of scholars.

HASDEU, or HAJDEU, BOGDAN PETRICEIOU (1836–1907), Rumanian scholar and nationalist.

HASDRUBAL (slain 221 B.C.), succ. his f.-in-law, Hamilcar Barca, as leader of the Carthaginians. **Hasdrubal**, Hamilcar's younger s., aided his bro. Hannibal (*q.v.*) in the Punic Wars against Rome.

HASE, CARL BENEDICT (1780–1864), distinguished archivist and Byzantine scholar.

HASE, KARL AUGUST VON (1800–90), Ger. ecclesiastical historian and scriptural apologist.

HASHISH, see ASSASSIN, HEMP.

HASLINGDEN (53° 43′ N., 2° 20′ W.), town, Lancashire, England. Pop. (1911) 18,723.

HASPE (51° 20′ N., 7° 20′ E.), town, Westphalia, Prussia; industries—iron-founding, iron, steel, and hardware. Pop. (1910) 23,480.

HASSAM, CHILDE (1859–), Amer. impressionist painter.

HASSAN (13° N., 76° 7′ E.), town, Mysore, India. Pop. *c.* 9000. District has area of 2546 sq. miles; produces coffee, cereals. Pop. *c.* 569,000.

HASSAN-IBN-SABAH, see ASSASSIN.

HASSANÍAS, Semitic people of the Sudan.

HASSE, JOHANN ADOLPH (1699–1783), Ger. composer; very popular in XVIII. cent.; composed innumerable operas, besides symphonies, masses, etc., with genuine pleasing melodies.

HASSELT (51° 56′ N., 5° 20′ E.), town, Limburg, Belgium. Pop. 16,179.

HASSELT, ANDRÉ HENRI CONSTANT VAN (1806–74), Belgian poet of Fr. Romantic school.

HASSENPFLUG, HANS DANIEL LUDWIG FRIEDRICH (1794–1862), Ger. politician; held state offices in Hesse-Cassel, 1832–37; in Hohenzollern Sigmaringen, 1838; Luxembourg, 1839; Prussia, 1841–50; head of Hesse government, 1850; tried to destroy constitution of Hesse; retired, 1855.

HASTINAPUR, capital of the Pandavas in the Hindu epic, *Mahabharata*; traces *c.* 20 miles N.E. of Meerut, United Provinces, India.

HASTINGS.—(1) (50° 52′ N., 0° 36′ E.) municipal, parliamentary, and county borough, Sussex, England; fashionable watering-place and one of Cinque Ports. Beautiful situation; has ancient castle, interesting churches of All Saints and St. Clement's, town hall, public library, museum, schools of art and science, grammar and technical schools; joined by terraces to St. Leonards. Small shipbuilding and fishing industry. Site of battle of H. (1066) is 6 miles inland. Pop. (1911) 61,146. (2) (40° 30′ N., 98° 25′ W.) town, Nebraska, U.S.A. Pop. (1910) 9340.

HASTINGS, Eng. family; descended from Sir Henry de H. (d. 1268), supporter of Montfort. Family held H. barony from *c.* 1290; earldom of Pembroke, 1339–89; extinct in XVI. cent. Barony is now held by Astley family. Another branch of family became barons, 1461; Earls of Huntingdon, 1529.

HASTINGS, FRANCIS RAWDON, 1st MARQUESS OF HASTINGS (1754–1826), Brit. soldier and administrator; served in Amer. War, 1775–82; gained victory at Hobkirk's Hill; led force to assist Duke of York in Flanders, 1794; master general of ordnance, 1806; Gov.-Gen. of Bengal and commander-in-chief in India, 1812; defeated Gurkhas; extended Brit. territories, 1816; crushed Pindaris and Mahrattas, 1817–18.

HASTINGS, FRANK ABNEY (1794–1828), Brit. naval commander; fought at *Trafalgar*, 1805; dismissed for insubordination, 1820; volunteer in Gk. War of Independence; won over public opinion to side of steam, and provided Gk. navy with steamer *Karteria*.

HASTINGS SANDS, lowest members of Wealden (*q.v.*); 500 to 1000 ft. thick.

HASTINGS, WARREN (1732–1818), Brit. administrator; b. at Churchill, Oxfordshire; entered East India Company's service, 1750; resident at court of Murshidabad, 1758; member of council, 1761; second in council at Madras, 1768; pres. of council and Gov. of Bengal, 1772. H. effected reforms in system of government; transferred centre of administration from Murshidabad to Calcutta; reformed military and police organisation; began settlement of land revenue on five-year leases.

The consolidation of Ind. Empire was largely due to his administrative genius. He became Gov.-Gen. of India, 1773. Members of council were inimical to him, and condemned all his measures. He was accused by Brahmin Nuncomar of receiving bribes; shortly afterwards Nuncomar was accused of forgery, found guilty, and hanged, a circumstance tending to alienate public sympathy from H. During these events H. sent in his resignation, but subsequently remained in office. Between 1777 and 1785 he conducted war against Mahrattas and against Hyder Ali; suppressed insurrection of Chait Sing, Rajah of Benares, and deposed him; caused begums of Oude to give up land and treasure, 1780, some of which he afterwards restored. He returned to England in 1785, and was impeached by Burke in a famous speech, 1786, for oppression, maladministration, and corruption. Trial lasted seven years, after which he was acquitted, 1795. Costs of trial swallowed up his entire fortune, but he subsequently obtained pension from East India Co.

G. B. Malleson, *Life of Warren Hastings* (1894).

HAT, name given to head-covering, with brim, the principal materials used being silk, fur, wool, merino, straw. The frame of a silk h. is composed of calico and other materials, stiffened in shellac, and is shaped on a block. The crown and brim are then sewn on, the silk covering and trimmings added, and the finished article is then polished for wear. Opera hats are covered with silk or merino, and a collapsible steel frame provides means of adjustment. Felt hats are made from fur, fur and wool, or wool alone, according to quality. Both silk or felt hats are extensively manufactured at Stockport (Cheshire) and Denton (Lancs). Straw hats are largely made at Luton (Beds). For history, see COSTUME.

HATCH, to incubate from eggs; to develop a hidden scheme; term used by surveyors for shading, and by engravers for similar lines; lower part of divided door.

HATCHMENT, diamond-shaped panel, enclosing arms of a deceased person, suspended on wall of his dwelling for short period after death.

HATFIELD (51° 47′ N., 0° 14′ W.), town, Hertfordshire, England; H. House is residence of Marquesses of Salisbury. Pop. (1911) 8592.

HATHERLEY, WILLIAM PAGE WOOD, 1st BARON (1801–81), Eng. Lord Chancellor.

HATHERTON, EDWARD JOHN LITTLETON, 1st BARON (1791–1863), Irish Sec. without brilliant success, 1833–35; but rewarded with peerage, 1835.

HATHOR, see EGYPT (*Ancient Religion*).

HATHRAS (27° 36′ N., 78° 11′ E.), town, United Provinces, Brit. India. Pop. *c.* 43,000.

HATS AND CAPS, parties in Sweden in XVIII. cent.; Hats was war party, Caps favoured peace and denounced royal autocracy.

HATTERAS, CAPE (35° 15′ N., 75° 31′ W.), cape, N. Carolina.

HATTIESBURG (31° 20′ N., 89° 17′ W.), town, Mississippi, U.S.A.; lumber trade. Pop. (1910) 11,733.

HATTINGEN.—(1) (51° 23′ N., 7° 11′ E.) town, Westphalia, Prussia. Pop. (1910) 12,760. (2) (47° 55′ N., 8° 47′ E.) town, Baden, Germany.

HATTO I. (*c.* 850–913), bp. of Mainz; alleged to have been eaten at Bingen (where the Mouse Tower is still shown) by rats as a punishment for his cruelty.

HATTON, SIR CHRISTOPHER (1540–91), Eng. lord chancellor; held various positions under Elizabeth; denounced Mary, Queen of Scots, in Parliament, 1587; Lord Chancellor, 1587; was favourite of Elizabeth; encouraged literature.

HATTON, JOHN LIPTROT (1809–86), Eng. composer; b. Liverpool; wrote over two hundred songs, many still popular; operas met with little success.

HATZFELD, ZSOMBOLYA (45° 48′ N., 20° 44′ E.), town, Hungary. Pop. *c.* 10,000.

HAUCH, JOHANNES CARSTEN (1790–1872), Dan. poet, novelist, and playwright of the romantic school.

HAUFF, WILHELM (1802–27), Ger. poet and novelist; b. Stuttgart; best works: *Lichtenstein* (novel), *Phantasien im Bremer Rathskeller*; *Reiter's Morgengesang* (poems).

HAUGE, HANS NIELSEN (1771–1824), Norwegian religious revivalist.

HAUGESUND (59° 28′ N., 5° 20′ E.), town, Norway; herrings exported. Pop. (1910) 9144.

HAUGHTON, SAMUEL (1821–94), Irish priest and prof. of Geol., Trinity Coll., Dublin; wrote on *Granite Cleavage*, *Frost Planes in Sandstone*, and *Geological Climates*.

HAUGHTON, WILLIAM (fl. late XVI. cent.), Eng. dramatist to whom *English-Men for My Money* and other old plays are ascribed.

HAUGWITZ, CHRISTIAN AUGUST HEINRICH KURT (1752–1831), Pruss. politician; ambassador to Vienna, 1792; entered Berlin cabinet, 1792; began negotiations resulting in treaty between Britain and Prussia, 1794; influenced treaty with France, 1795; as Foreign Minister signed treaty of Schönbrunn, 1805; retired after battle of Jena.

HAUNTING by spirits of the dead has been observed or credited in all ages. Until recently belief in ghosts was generally discredited, but owing to 'Psychical Research' and elaborate investigation of various phenomena many people believe there is some foundation for ghost stories in fact; possibly mysterious experiences are due only to telepathic suggestion.

HAUPT, MORITZ (1808–74), prominent Ger. classical scholar and philologist.

HAUPTMANN, GERHART (1862–), Ger. poet and dramatist; his plays include historical and realistic dramas and comedies: *Einsame Menschen* (1891), *Die Weber*, *Das Friedensfest*, *Kollege Crampton*, *Florian Geyer*, and others; his *Die Versunkene Glocke* (1897) and *Und Pippa Tanzt* (1905) are masterly fairy tales.

HAUPUR, see HAPUR.

HAURÉAU, JEAN BARTHÉLEMY (1812–96), Fr. writer; on staff of *Nationale*; director of national printing press, 1870; wrote *Histoire de la philosophie scolastique*.

HAUSAS, HOUSSAS, African race inhabiting W. Africa between Lake Tchad and the river Niger; busy traders; language spoken by over 15,000,000 people.

HAUSER, KASPAR (1812–33), mysterious youth appeared in Nuremberg, 1828, who could give no account of himself, and possessed no memory of his previous life. A letter in his possession stated that he was born in 1812. Earl Stanhope, and others, took charge of him, and he d. from a wound in his breast (December 1833). Nothing was discovered as to his origin.

HAUSRATH, ADOLPH (1837–1909), Ger. theological writer and novelist.

HÄUSSER, LUDWIG (1818–67), Ger. politician and author of a history of Germany, not superseded, from death of Frederick the Great to the formation of the *Bund*.

HAUSSMANN, GEORGES EUGÈNE, BARON (1809–91), Fr. administrator; as Préfet de la Seine (1853–69) greatly embellished Paris, by planning and opening new streets and boulevards.

HAUSSONVILLE, JOSEPH OTHENIN BERNARD DE CLÉRON, COMTE D' (1809–84), Fr. writer and politician who held various diplomatic appointments; wrote historical works; life-senator, 1878.

HAUTBOIS, see OBOE.

HAUTE-GARONNE (43° 20′ N., 1° E.), S.W. department, France; area, 2457 sq. miles; crossed by Garonne; produces timber, cereals, wine, fruit; chief town, Toulouse. Pop. (1911) 432,126.

HAUTE-LOIRE (45° 10′ N., 3° 50′ E.), department, central France; area, 1930 sq. miles; surface mountainous; crossed by Loire; coal, timber, cereals, lace; chief town, Le Puy. Pop. (1911) 303,838.

HAUTE-MARNE (48° 10′ N., 5° 10′ E.), N.E. department, France; area, *c.* 2420 sq. miles; surface slopes upwards from N. to S., where is plateau of Langres; crossed by Marne; cereals, vegetables, wine, iron; chief town, Chaumont. Pop. (1911) 214,765.

HAUTERIVE, ALEXANDRE MAURICE BLANC DE LANAUTTE, COMTE D' (1754–1830), influential Fr. minister under Napoleon.

HAUTES-ALPES (44° 40′ N., 6° 20′ E.), S.E. department, France; area, 2178 sq. miles; drained by Durance; sheep raised; chief town, Gap. Pop. (1911) 105,083.

HAUTE-SAÔNE (47° 40′ N., 6° 10′ E.), E. department, France; area, 2074 sq. miles; crossed by Saône; nearly half surface under cultivation; produces cereals, cherries; iron, steel, and copper works, cotton manufacture; chief town, Vesoul. Pop. (1911) 257,606.

HAUTE-SAVOIE (46° N., 6° 25′ E.), E. department, France; area, 1774 sq. miles; mountainous; beautiful scenery; produces wine; chief town, Annecy. Pop. (1911) 255,137.

HAUTES-PYRÉNÉES (43° N., 0° 10′ E.), department, S.W. France; bounded S. by Spain, W. by Basses-Pyrénées, N. by Gers, E. by Haute-Garonne. Chief towns, Tarbes, Lourdes, and Bagnères-de-Bigorre; principal rivers, Gave de Pau, Adour, and Neste. In N. are plains and hills, and in S. Fr. Pyrenees. Cattle- and sheep-rearing, horse-breeding, fruit-growing, and wine-making carried on. Pop. (1911) 206,105.

HAUTE-VIENNE (45° 50′ N., 1° 15′ E.), central department, France; area, 2119 sq. miles; crossed by Vienne, Isle; produces fruits, cereals, porcelain; chief town, Limoges. Pop. (1911) 384,736.

HAUT-RHIN (47° 50′ N., 7° 10′ E.), former department, France. See BELFORT.

HAÜY, RENÉ JUST (1743–1822), Fr. mineralogist; discovered geometrical law of crystallisation; his bro. VALENTIN (1745–1822) invented educational system for the blind.

HAVANA, HABANA (23° 10′ N., 82° 22′ W.), capital and seaport of Cuba, situated on S. side of island; chief commercial city of West Indies. H. consists of old or inner town, with narrow, dirty streets, and well-laid-out new part, with beautiful promenades and gardens. Notable features are the old Span. cathedral (1724, with bones of Columbus), governor's and bp.'s palaces; admiralty, State univ., library, museum, theatres, arsenal, bull-ring, and splendid harbour with strong fortifications (Punto and Murro Castles, Cabañas fort, etc.); chief industries—famous H. cigars; also sugar, chocolate, coffee, rum, molasses, woollen fabrics and straw hats.

Founded by Diego Velasques on S. coast, 1515, and removed to present position, 1519; captured by French, 1563, by English, 1762, and restored, 1763. In XVII. cent. chief naval station of Span. W. Indies fleet; blockaded by Amer. fleet, 1898, and made independent, 1902. See CUBA. Pop. (1910) 302,526.

HAVANT (50° 52′ N., 0° 59′ W.), town, Hampshire, England. Pop. (1911) 4093.

HAVEL (52° 43′ N., 12° 11′ E.), river, Prussia, Germany; unites with Elbe above Wittenberge.

HAVELBERG (52° 50′ N., 12° 4′ E.), town, Brandenburg, Prussia; has XII.-cent. cathedral. Pop. (1911) 6170.

HAVELOCK, SIR HENRY (1795–1857), Brit. soldier; served in Burma, 1825–26; Afghan wars, 1839; distinguished in Mahratta and Sikh campaigns,

1843, 1845; commanded division in Persia, 1857; sent to India during Mutiny; defeated rebels at Fatehpur, Cawnpore, and other places; relieved Lucknow, 1857.

HAVELOK THE DANE, hero of Anglo-Scandinavian romance, s. of Birkbagen, king of Denmark, who, by treachery, was set adrift on raft, which bore him to the Lincolnshire coast. He was befriended by a fisherman, Grim; subsequently m. a distressed Eng. princess, and became king of Denmark and part of England; Eng. versions of Middle Eng. poem by Skeat and others.

HAVERFORDWEST (51° 48′ N., 4° 58′ W.), town, Pembroke, S. Wales; parliamentary and municipal borough and county of itself; Flemings settled here, XII. cent.; picturesque town with ancient castles, priory, walls, fortifications, and other hist. buildings; exports coal and agricultural produce. Pop. (1911) 5920.

HAVERHILL.—(1) (42° 44′ N., 71° 8′ W.) town, Massachusetts, U.S.A.; industrial centre, manufactures leather, boots, shoes, woollens, bricks; has fine system of parks, finest being Winnikenni Park; many schools and charitable institutions. Pop. (1910) 44,115. (2) (52° 5′ N., 0° 27′ E.) town, Suffolk, England. Pop. (1911) 4749.

HAVERSACK, canvas bag to strap on shoulders; originally receptacle for oats (*haver*), which were the usual fare of soldiers on the march.

HAVERSTRAW (41° 10′ N., 74° W.), town, New York State, U.S.A.; brick-manufacturing centre. Pop. (1910) 5670.

HAVET, JULIEN (1853-93), Fr. writer; wrote *Du sens du mot 'romain' dans les lois franques*, and other critical historical works.

HAVRE, Le Havre de Grace (49° 29′ N., 0° 6′ E.), second greatest seaport of France; in Seine-Inférieure, on estuary of Seine; first-class fortress, with Church of Notre-Dame, town hall, museum, marine arsenal, etc.; large shipbuilding yards; cannon foundries, machinery, glassware, lace, cotton goods, etc. Pop. (1911) 136,159.

HAWAIIAN ISLANDS (20° N., 156° W.), called Sandwich Islands by Captain Cook, lie in midst of N. Pacific Ocean and form a territory of U.S.A.; total area, *c.* 6500 sq. miles. There are some twelve islands (eight inhabited), stretching *c.* 300 miles, E.S.E. to W.N.W.; a minor group, valuable only for shark-fishing and guano deposits, lies several hundred miles farther W.N.W. The inhabited islands are: Hawaii, the largest area, *c.* 4200 sq. miles, Maui, Oahu, Kauai, Molokai, Lanai, Niihau, and Kahulaui.

Hawaii has the largest volcano in the world—Mauna Loa (Great Mountain), still active and extending at sea-level about 75 miles by 50, and over 13,600 ft. in height; also Mauna Kea (White Mountain), *c.* 13,823 ft. The eruptions of Mauna Loa have consisted mainly of quiet discharges of enormous quantities of lava. About 16 miles S.E. lies hill called Kilauea, with largest active crater in world (over 8 miles in circumference). Maui (*c.* 750 sq. miles) has two large mts. Mauna Haleakla in E. (*c.* 10,030 ft.) has the largest (extinct) pit-crater in world (*c.* 19 sq. miles in area). Separated by low-lying sandy isthmus of Wailuku are the Western mts. Oahu (*c.* 600 sq. miles) is traversed by two parallel ranges of hills with a fertile plain of Ew-a between them. The coast is irregular and almost entirely surrounded with coral. Honolulu (*q.v.*), capital of the group, lies on S. coast. Pearl Harbour, near Honolulu, is being fortified, and a naval base is to be established by U.S.A. Kauai (*c.* 550 sq. miles) has precipitous coast-line in N.W. (over 2000 ft. in places), and is sometimes called the 'Garden Isle.' Molokai (*c.* 250 sq. miles), a small mountainous island, has a leper settlement. Lanai (*c.* 150 sq. miles) has considerable pasture-land for sheep on S. side. Niihau (*c.* 100 sq. miles) the most westerly, consists of low plains in W. and rises precipitously in E. Kahulaui (*c.* 70 sq. miles), which, like Lanai, is owned privately, is a small island—mountainous, bare, and rugged.

Climate is cool and healthy. There are large quantities of pumice, sandstone, sulphur, etc., and notwithstanding mts. and volcanoes, there are considerable forests and the soil is highly fertile and productive. Sugar and rice are most important products; coffee, honey, hides, fruit, tobacco, cotton, and rubber also exported; main industries are manufacture of sugar and cleaning of coffee and rice. History is obscure until discovery by Captain Cook in 1778; Cook killed by natives, 1779; kingdom established by Kamehmeha I. (d. 1819); Queen Liliukalani deposed, 1893; islands annexed by U.S.A., 1898; organised as U.S.A. territory, 1900. H. has a Gov., a House of Representatives, and Senate, and sends a delegate to U.S.A. Congress. The pop. is very mixed; half are Japanese and Chinese; pure Hawaiians form about one-eighth, and Portuguese another eighth. Japanese and Chinese immigration is now prohibited. Pop. (1910) 191,900.

Twombly, *Hawaii and its People* (London, 1900); Gordon Cumming, *Fire Mountains: The Kingdom of Hawaii* (2 vol's, 1883); Logan, *Hawaii: Its People, Climate, and Resources* (1903).

HAWARDEN (53° 11′ N., 3° 1′ W.), town, Flint, N. Wales. Hawarden Castle was Gladstone's seat. Pop. (1911) 26,912.

HAWAWIR, Semitic tribe of Sudan.

HAWEIS, HUGH REGINALD (1838-1901), Eng. author; incumbent of St. James's, Marylebone; famed as preacher and lecturer; author of *Music and Morals*, *Thoughts for the Times*, *Christ and Christianity*, etc.

HAWES, STEPHEN (d. *c.* 1523), Eng. poet; Groom of the Chamber to Henry VII.; his works include *Pastyme of Pleasure* (1509), *Convercyon of Swerers* (1509), *The Exemple of Vertu* (1512), etc. His works contributed to the formation of the Eng. literary language.

HAWFINCH, see under Finch Family.

HAWICK (55° 26′ N., 2° 48′ W.), burgh, Roxburghshire, Scotland, on both sides of Teviot; regular, well-built town; chief manufacturing town in S. Scotland; centre for hosiery, tweeds, blankets, etc.; also dye-works, tanneries; district rich in historic houses. Pop. (1911) 16,877.

HAWK FAMILY (*Falconidæ*), a large family of diurnal birds of prey (*Accipitrines*), comprising nearly 500 species found all the world over. They are distinguished from other birds of prey by the presence of a voice-box at base of windpipe, of a circlet of feathers surrounding the oil gland, of an aftershaft on the feathers, and by their feathered heads. The following are a few of the many types belonging to the Hawk family: the New World Caracaras (*Polyborinæ*) feed on living prey or on carrion, run rapidly, and nest on the ground. They differ from all other Hawks in having three toes instead of two, connected by a web. Long-legged Hawks, with the lower leg-joint or metatarsus at least equal to that above it, the tibia, form the group *Accipitrinæ*, found in all lands.

Among them are the active and destructive Sparrow Hawks (*Accipiter*), found in woods, where they feed on small mammals and birds; the larger Goshawks (*Astur*), used in hawking game-birds, hares, and rabbits; and the Harrier Hawks (*Circus*), found in marshy districts or on hillsides, roosting near the ground, and feeding on small mammals, birds, frogs, fishes, and even insects. The remaining 'Hawks' have the tibia longer than the metatarsus. The Buzzards (*Buteo*) generally frequent woods and have moderately long, square-cut tails and weak beaks. The Aquilinæ, with shorter tails, edges of beak straight or waved, and naked nostrils, include the Honey-Buzzard (*Pernis*), which feeds mainly on adult insects and the larvæ of bees; the Kites (*Milvus*) with partially forked tails, which feed on carrion and general refuse; the large fish-eating Sea-Eagles (*Haliaëtus*), with long wings, found nesting either on rocky headlands or in woods; and the true Eagles (*q.v.*) (*Aquila*), such

as the Golden Eagle, second in size only to the preceding. Lastly come the Hawks with notched beaks, among which are grouped the FALCONS (*Falco*)—the PEREGRINE (*F. peregrinus*), being specially noted for its speed and strength of flight, is on this account a favourite hawker, being flown at game and herons; it nests on seacoast cliffs. The HOBBY (*F. subbuteo*) is a harmless woodland inhabitant, while the MERLIN (*F. æsalon*) nests on the ground, and preys upon the smaller birds, in the latter respect resembling the KESTREL (*Cerchneis tinnunculus*), which, however, prefers trees or old buildings as a nesting site. All the above groups of hawks have resident or migratory representatives in Britain.

HAWKBIT, composite plant akin to dandelion (*q.v.*); leaves are strap-shaped; flowers in autumn.

HAWKE, EDWARD, BARON HAWKE (1705–81), Brit. admiral; b. London; entered navy at an early age and became commander when twenty-eight; served against Spain in W. Indies; rendered good service at Toulon, 1744; in 1747, off Belleisle, and in 1759, in Quiberon Bay, he inflicted ruinous defeats on Fr. fleets; also led an unsuccessful expedition against Rochefort in 1757; Admiral of the Fleet, 1768; First Lord of Admiralty, 1766–71; cr. peer, 1776.

HAWKER (*Hauker*, XVI. cent.), itinerant vendor; since 1888 distinguished from a 'pedlar' as travelling with a beast of burden.

HAWKER, ROBERT STEPHEN (1803–74), Eng. antiquary and poet; vicar of Morwenstow (Cornwall); famed for High Church views, strong personality, eccentricities; best known for ballad 'And shall Trelawny die?'; *Poetical Works* (1899).

HAWKESWORTH, JOHN (d. 1773), Eng. writer; edit. Captain Cook's *Journals* (1773); edit. Swift, and pub. much miscellaneous work.

HAWKHURST (51° 2′ N., 0° 31′ E.), town, Kent, England. Pop. (1911) 7296.

HAWKINS, CÆSAR HENRY (1798–1884), Eng. surgeon; surgeon to St. George's Hospital, London; pres. of Royal Coll. of Surgeons (1852 and 1861); introduced new operative methods, and author of several medical works. EDWARD, his bro., provost of Oriel Coll., Oxford, was a prominent figure in the Tractarian movement.

HAWKINS, HENRY, see BRAMPTON, BARON.

HAWKINS, SIR JOHN (1532–95), Eng. admiral; engaged in slave trade; defeated by Spanish, 1567; treasurer of navy, 1572; rear-admiral, 1588; fought against Armada; d. on voyage to West Indies.

HAWKINS, SIR JOHN (1719–89), Eng. author; chief work, *History of Music*.

HAWKINS, SIR RICHARD (1562–1622), Eng. admiral; s. of Sir John H.; commanded *Duck* galliot in Drake's raid on Span. Main (1585); captain of *Swallow* in attack on Great Armada (1588); sailed in the *Dainty* for the Pacific (1593), plundered Valparaiso, and, in San Mateo Bay, kept up a three days' fight with two Span. galleons; finally capitulated, and was for ten years prisoner; subsequently ransomed; knighted by James I.; and made vice-admiral of Devon.

HAWKMOTH, see LEPIDOPTERA.

HAWKS, FRANCIS LISTER (1798–1866), Amer. ecclesiastical historian.

HAWKSHAW, SIR JOHN (1811–91), Eng. engineer; chief engineer for many important undertakings, including Lancashire and Yorkshire Ry., East London Ry., Holyhead harbour, Penarth dock, Amsterdam Ship Canal, Inquiry on Suez Canal, Channel Tunnel Co., Severn Tunnel.

HAWKSMOOR, NICHOLAS (1661–1736), Eng. architect of school of Wren, whom he frequently assisted.

HAWKWEED (*Hieracium*), yellow-flowered plant of order *Compositæ* (q.v.).

HAWKWOOD, SIR JOHN, L'ACUTO (d. 1394), Eng. soldier-of-fortune; served under Black Prince in France; afterwards fought as mercenary in Italy, assisting Pisa against Florence, Milan against pope, pope against Milan, and finally entered Florentine service, 1378; see Ruskin's *Fors Clavigera*.

HAWLEY, HENRY (*c.* 1679–1759), Brit. general; commanded cavalry at *Culloden*, etc.

HAWLEY, JOSEPH ROSWELL (1826–1905), Amer. politician; served with distinction on Federal side in Civil War; Gov. of Connecticut (1866–67); subsequently member of Congress and Senator; leader of Republican party.

HAWORTH (53° 50′ N., 1° 57′ W.), town, Yorkshire, England; associated with the Brontës. Pop. (1911) 6505.

HAWTHORN (37° 49′ S., 145° E.), town, Victoria, Australia. Pop. 21,339.

HAWTHORN, a tree, *Cratægus oxyacantha*, natural order *Rosaceæ*, sub-order *Pomeæ*, with *polypetalous* white or red flowers and numerous *stamens* in whorls; the *stigma* ripens first, but *self-pollination* is possible. The fruit is a *pome*, the *carpels* of which are stony. H's are commonly used in Britain for hedges and for ornamental purposes.

HAWTHORNE, NATHANIEL (1804–64), Amer. author; b. Salem, Mass.; s. of a sea-captain; ed. Bowdoin Coll., where he had Longfellow as classmate; held positions in the Customs Service; was for a year associated with the transcendentalists at Brook Farm; Amer. Consul at Liverpool (1853–57); d. at Concord. He published *Twice-Told Tales* (1837), *Mosses from an Old Manse* (1846), *The Scarlet Letter* (1850), *The House of the Seven Gables* (1851), *The Snow Image*, and *The Blithedale Romance* (1852). Besides other novels, he wrote for children, *Tanglewood Tales* and *The Wonder Book*. H. ranks among the greatest of the imaginative writers that America has produced, and the high quality of his prose style has rarely been surpassed. He waited long for recognition in his own country, but *The Scarlet Letter* has long since achieved a world-wide popularity. His s., JULIAN (1846–), has written, among other works, *Nathaniel Hawthorne and his Wife* (2 vol's, 1883), *Nathaniel Hawthorne and his Circle* (1903).

Monographs by Henry James (1879), J. R. Lowell (1890), Woodberry (1902), Conway, Lathrop, Stearns.

HAWTREY, CHARLES HENRY (1858–), Eng. actor, manager, and playwright (light comedy).

HAWTREY, EDWARD CRAVEN (1789–1862), Eng. educationist; headmaster of Eton; responsible for many progressive reforms; famed for his classical scholarship.

HAXO, FRANÇOIS NICOLAS BENOÎT, BARON (1774–1838), Fr. general and most famous of Napoleon's engineers.

HAXTHAUSEN, AUGUST FRANZ LUDWIG MARIA, BARON VON (1792–1866), Ger. economist; author of valuable works on Prussian and Russ. land-laws.

HAY.—By the word hay we mean the dried stems and leaves of herbaceous plants which are used as fodder for domestic animals during periods when fresh food is not available. The methods of preparing hay vary considerably in details in different localities, but in principle they are the same. The herbage is first mown and then spread out in the fields to dry under the action of wind and sun. The more quickly this drying process is finished the finer is the aroma of the hay, and the more palatable is it to animals. It is next gathered into *coils* and finally stored in *hay-ricks*. The time of drying varies from two to ten days, and may be longer in unfavourable weather conditions. Insufficient drying may cause subsequent heating (due to bacterial action) in the rick, but this is sometimes held to improve the product. In England it is usual to cut natural pasture for hay; while in Scotland a special hay crop is generally grown. The chief hay plants are clover and the grasses—the most important being rye-grass, timothy, foxtail, and several species of fescue.

HAY (52° 4′ N., 3° 8′ W.), town, Brecknockshire, S. Wales; has castle, dating from Nor. times (twice burnt in XIII. cent.). Pop. (1911) 1603.

HAY (31° 27′ S., 152° 46′ E.), town, New South Wales, Australia. Pop. c. 3000.

HAY, GEORGE (1729–1811), Scot. R.C. theologian; restorer of Scot. R.C. hierarchy.

HAY, GILBERT DE LA, GILBERT HAY, Scot. poet of XV. cent., but chiefly interesting for his translations—early examples of vernacular prose.

HAY, JOHN (1838–1905), Amer. politician and writer; Assistant-Sec. of State, 1879; ambassador to England, 1897; Sec. of State, 1898–1905; wrote *Pike County Ballads.*

HAYASHI, TADASU, COUNT (1850–), Jap. statesman, who helped to bring about the alliance of Britain and Japan.

HAYDN, FRANZ JOSEPH (1732–1809), Austrian composer; b. Rohrau, near Vienna; a wheelwright's s.; joined St. Stephen's Cathedral choir, Vienna, 1740; app. conductor of Count Morzin's band, 1759; patronised by Esterhazy family; exceedingly popular in Vienna, then greatest European music centre. Among his pupils was Beethoven. H. greatly influenced his young friend, Mozart. H. was a slow but prolific composer; the first great writer of quartet and the 'Father of Symphony,' paving the way for Beethoven. Compositions: 118 symphonies, including *Farewell* (1772), *Toy*, and 12 written for Eng. visits (1791, 1794); 83 quartets, trios, operas, and oratorios—greatest, *The Creation* (1799) and *The Seasons* (1800).

Cuthbert Hadden, *Haydn* (1902); Cowen, *Haydn* (Masterpieces of Music, 1912).

HAYDON, BENJAMIN ROBERT (1786–1846), Eng. hist. painter; b. at Plymouth; studied at Royal Academy. Quarrels with the Academy and debt troubles made his life a burden, and he committed suicide. His best pictures are *The Judgment of Solomon* (1814), *Christ's Entry into Jerusalem*, and *The Resurrection of Lazarus.*

HAYES, RUTHERFORD BIRCHARD (1822–93), Amer. statesman; pres. of U.S.A.; b. at Delaware, Ohio; practised at Bar; served with distinction in Civil War; entered Congress, 1865; gov. of Ohio, 1867; nominated as Republican candidate for presidency, 1875, and elected, 1877. His term of office was marked by restoration of order in S. states, and introduction of civil service reforms.

HAY-FEVER, HAY ASTHMA, or SUMMER CATARRH, disease, often hereditary, occurring in the summer, which has been shown to be due to extreme sensibility to the pollen of grasses, at that time floating in the atmosphere; characterised by headache, swelling with watery discharge of the nasal mucous membrane, paroxysms of sneezing, and cough. Treatment is change of air, with avoidance of vegetation; cocaine or suprarenal extract applied to the mucous membrane, or destruction of the sensitive part of it by the cautery; and tonics, *e.g.* arsenic or quinine preparations, for the general system. A serum has been prepared, which is a very effective cure.

HAYLEY, WILLIAM (1745–1820), Eng. poet and biographer; his poetical works include *Triumphs of Temper, Essays and Epistles*, which were very popular; declined laureateship; also wrote *Lives* of Cowper (1803–4), Milton, and Romney.

HAYNAU, JULIUS JACOB (1786–1853), Austrian field-marshal; execrated in Liberal countries for his severity towards revolutionaries.

HAYNE, ROBERT YOUNG (1791–1839), Amer. politician; senator, 1823; advocated free trade; Gov. of S. Carolina, 1832; opposed Jackson.

HAYTER, SIR GEORGE (1792–1871), Eng. hist. painter and court painter to Queen Victoria.

HAYTI, see HAITI.

HAYTON (fl. 1250), king of Cilicia, 1224–69; allied himself with Mongols; travelled in W. Africa, Mongolia, and elsewhere, an account of his travels being written by Kirakos Gandsaketsi; abdicated, 1269, and entered monastery.

HAYWARD, ABRAHAM (1801–84), Eng. author; by profession a barrister, but became an extensive contributor to the *Quarterly Review* and other critical journals; pub. *Biographical and Critical Essays, Eminent Statesmen and Writers*, etc.; possessed a prodigious memory and exercised much influence on public opinion.

HAYWARD, SIR JOHN (*c.* 1560–1627), Eng. historian; pub. *The First Part of the Life and Raigne of King Henrie IV.* (1599), *Lives of the Three Norman Kings of England* (1613), *The Life and Raigne of King Edward VI.* (1630).

HAYWOOD, ELIZA (*c.* 1693–1756), Eng. novelist; wrote *Secret History of the Court of Caramania* (1727) and other novels.

HAZARA (34° N., 73° 5′ E.), district, Peshawar, India; surface is valley between mountain ranges; drained by affluents of Indus. Pop. 560,288.

HAZARAS, Mongolian people of Afghanistan.

HAZARD, Eng. game of dice, fashionable in the XVIII. cent.

HAZARIBAGH (23° 59′ N., 85° 20′ E.), town, Bihar and Orissa, India. Pop. 15,799. District has area of 7020 sq. miles. Pop. 1,177,961.

HAZEBROUCK (50° 44′ N., 2° 31′ E.), town, Nord, France. Pop. 12,819.

HAZEL, a shrub (*Corylus avellana*), natural order *Cupuliferæ*. It is *monœcious*, but the *stamens* and *carpels* do not occur in the same flowers. The *staminate* flowers hang in *pendulous inflorescences* named *catkins.* The small bud-like *carpellary inflorescences* are distinguished by the protruding tufts of red *stigmas.* These are borne on special *dwarf* shoots. The fruit is a one-seeded edible nut (cob or filbert), around which the *bracts* form a green cup.

HAZLETON (40° 53′ N., 76° 7′ W.), town, Pennsylvania, U.S.A.; centre of rich coal district. Pop. (1911) 25,452.

HAZLITT, WILLIAM (1778–1830), Eng. essayist and critic; b. Maidstone; s. of Unitarian minister; studied theol., and later, art, but subsequently took up journalistic work; formed friendships with Leigh Hunt and the Lake poets. He published *The Round Table* (1817), a vol. of literary sketches; *Characters of Shakespeare's Plays* (1817); *View of the English Stage* (1818); *Lectures on the English Poets* (1818); *English Comic Writers* (1819); *Dramatic Literature of the Age of Elizabeth* (1821); *Table Talk* (1821–22); *The Spirit of the Age* (1825); *Life of Napoleon Buonaparte* (1828–30), etc. H. stands in the front rank of Eng. essayists, and was one of the most penetrating of literary critics. His domestic life was unhappy, and his peculiar temper frequently involved him in quarrels with his contemporaries.

Birrell, *William Hazlitt* (Eng. Men of Letters Series).

HEAD, SIR EDMUND WALKER, Bart. (1805–68), Brit. administrator and writer; Gov. of Canada (1854–61).

HEAD, SIR FRANCIS BOND, Bart. (1793–1875), Brit. soldier, administrator, and writer; as Lieut-Gov. of Upper Canada put down revolt, 1837.

HEADON BEDS, see OLIGOCENE SYSTEM.

HEALTH, BILL OF, see under BILL.

HEALTH-RESORTS, see under MINERAL WATERS.

HEALY, GEORGE PETER ALEXANDER (1808–94), Amer. artist; excelled in portraits; painted several Amer. Presidents and other public men.

HEANOR (53° 1′ N., 1° 22′ W.), town, Derbyshire, England; coal, iron, hosiery. Pop. (1911) 19,851.

HEARING, see EAR.

HEARN, LAFCADIO (1850–1904), writer; b. in Ionian Islands, of Irish-Greek parentage; ed. in England; some years a journalist in America; subsequently naturalised in Japan, and turned Buddhist; author of *Glimpses of Unfamiliar Japan, Gleanings in Buddha Fields, In Ghostly Japan*, etc. His *Life and Letters* were pub. 1906.

HEARNE, SAMUEL (1745–92), Eng. Arctic

discoverer; found copper by Coppermine River, whose mouth he discovered.

HEARNE, THOMAS (1678–1735), Eng. antiquary; was assistant-keeper of the Bodleian Library, and later declined the chief librarianship; edit. Camden's *Annals*, Fordun's *Scotichronicon*, Leland's *Itinerary* and *Collectanea*, and numerous other antiquarian works.

HEARSAY EVIDENCE, see EVIDENCE.

HEARSE (Fr. *herse*, from Lat. *hirpex*, harrow), vehicle used to convey body to grave; usually black framework with glass sides. The framework resembles that of harrow-like candle-stands used in Rom. Catholic funeral ceremonies; formerly a funeral monument.

HEART, a cone-shaped, hollow, four-chambered, muscular organ, about the size of the closed fist, which acts as the central pump of the circulatory system, and is situated in the central part of the chest, resting upon the diaphragm, between the two lungs. It is held in place by the great vessels which leave or enter the organ, and by a serous membrane, the *pericardium*, in the form of a double bag, which ensheaths it completely, holding the h. in position by its attachment to the upper surface of the diaphragm. The two upper and posterior chambers of the h., or the *auricles*, are the receiving chambers for the blood; the right auricle receives the impure or venous blood conveyed to the h. by the superior and inferior *venæ cavæ*, carrying the blood from the upper and lower parts of the body, and the *coronary vein*, carrying the venous blood from the substance of the h. itself; the left auricle receives the purified blood from the lungs, conveyed to it by the pulmonary veins.

From the auricles the blood passes to the two lower and anterior chambers, or *ventricles*, which are larger than the auricles and have strong muscular walls; the right ventricle propels the impure blood to the lungs, where it is purified, while the left ventricle, which is the strongest and most muscular chamber, propels the purified blood throughout the body. The right auricle communicates with the right ventricle by an opening which is guarded by a valve, the *tricuspid*, opening towards the ventricle and composed of three triangular flaps which are attached by fibrous cords to muscular projections on the walls of the right ventricle. The opening by which the left auricle communicates with the left ventricle is guarded in the same way by a valve, the *mitral*, composed of two flaps. At the point where the pulmonary artery leaves the right ventricle, and similarly where the aorta leaves the left ventricle, there is a valve to prevent the flow of blood back to the respective chambers, composed in each case of three pocket-like cusps.

The action of the h. consists, first, of the simultaneous contraction of the auricles, which drives the blood into the flaccid ventricles, the quantity and weight of the blood in the large veins preventing any flow backwards into them; this is followed by the contraction of the ventricles, which drives the blood into the main arteries, the reflux of blood into the auricles being prevented by the closure of the tricuspid and mitral valves; after the contraction of the ventricles there is a pause, when the h. is at rest, then the contraction of the auricles recommences, and so on.

DISEASES OF THE H. may be divided into valvular disease, diseases of the various tissues, and diseases affecting the nervous control. Valvular *myocarditis* is inflammation of the myocardium, or h. muscle, which leaves the h. wall in a weakened state due to the pathological changes, fibrous tissue taking the place of muscle fibres, and often ends fatally in the acute stage; lesions result from inflammation of the valves, or *endocarditis*, which is a common sequel of acute rheumatism, especially in children, but may be due to other micro-organisms, such as those of pneumonia and influenza. The valve may become obstructed or may become incompetent and leak, so that extra work is thrown on one or more of the h. chambers, which in consequence enlarge and hypertrophy, and the effect of the valvular lesion is neutralised. So long as this compensation is efficient no treatment is necessary, except that violent exertion, excitement, alcohol, and tobacco should be avoided; but when the compensation fails there must be rest in bed until the h. recovers; digitalis and strychnine are administered as h. stimulants, and saline purgatives to relieve the circulation. Diseases of the various tissues of the h. include PERICARDITIS, or inflammation of the pericardium, the membranous sac surrounding the h., most commonly occurring after acute rheumatism; the h. muscle is also liable to be affected by *fatty degeneration*, occurring in anæmia, after acute fevers, or in such a condition as phosphorus poisoning; *cloudy swelling*, a swollen and granular condition of the muscle fibres, may take place, particularly in fevers; while great *hypertrophy* of the muscle fibres may take place in valvular lesions; ENDOCARDITIS, or inflammation of the lining membrane, is, as has been noted, a common complication of acute rheumatism, and most commonly affects the valves of the h.

ANGINA PECTORIS, a condition in which there are spasmodic attacks of pain, is due to disease of the coronary arteries, which supply the substance of the heart. *Palpitation* is often due to nervous derangement, resulting from over-indulgence in tobacco or alcohol or from fright or other emotional causes, and nervous conditions, affecting the nervous control of the h., may lead to irregularity, slowing, or rapidity of action.

HEARTH.—(1) Part of floor where fire is placed; (2) lowest part of blast-furnace above the crucible; (3) bottom of reverberatory or open-h. furnace; (4) brazier. H. MONEY (2s.) was levied 1662–89 on every house liable to poor-rates. H. PENNY was payment to Rome, dating from Saxon times.

HEARTS, Eng. card game for two or more players; each player tries to get rid of all hearts in his hand.

HEARTSEASE, see PANSY.

HEAT is that particular form of energy which consists in the kinetic and potential energy of the molecules of matter (see ENERGY). The ultimate particles of any mass are, at all temperatures above the lowest, in a state of agitation; each atom may be moving as a whole and it may have internal motions; the molecules (consisting of an assemblage of two or more atoms chemically alike or different) may have similar motions, and with them there may be associated potential energy due to the separation of their constituent atoms. All energy dependent on such motion or position is classed as heat, using the term in its strictest sense. The popular acceptation of the term is different and is associated with the relative hotness or coldness of a body as perceived by the senses, *i.e.* it is related to the *temperature* of the body, not to the heat-energy contained in the body.

The terms *latent* h. and *radiant* h. are also used. The former is applied to h. which when supplied to a body produces no change in temperature so as to be appreciated by a thermometer; *e.g.* if h. be supplied to a well-stirred mixture of ice and water, the temperature remains constant until the ice is completely melted. The h. so supplied is said to be *latent*. Correctly speaking, it has been transformed into potential energy due to the separation of the molecules of the ice during the passage of the substance into the liquid form. *Radiant* h. is not h. in the sense used above, but is energy of wave motion in the ether and only differs from light in the length of its waves (see RADIATION).

In ordinary circumstances, *i.e.* when no change of physical state takes place, any change in the heat-energy contained in a body produces a change in the state of hotness or coldness of the body, and to this state the name *temperature* is given. In order to give numerical expression to temperature, a scale is chosen. The common attribute of all temperature scales is that they have two definite points, fixed by reference to two definite conditions of a standard substance as regards its hotness or coldness, and this interval of temperature is divided into a certain

number of degrees. Any instrument which will indicate by means of such a scale the temperature of a body is termed a *thermometer* (q.v.).

Being one form of the objective reality which we term energy, h. must be capable of measurement. The unit of heat generally employed in scientific work is the *calorie*, which is the amount of h. required to raise the temperature of 1 gram of water 15° to 16° Cent. For engineering purposes the *Brit. thermal unit* is employed. It is the amount of h. required to raise the temperature of 1 lb. of water by 1° Fahr., and is equal to 252 calories. Another unit in practical use is the amount of h. required to evaporate 1 lb. of water at the boiling-point under standard atmospheric pressure, and is equal to 243,583 calories. The determination of a given quantity of h. in terms of these units is dealt with under CALORIMETRY. H. must also have quantitative relations with other forms of energy, and it is found that 1 calorie is equivalent to 42 million *ergs* (see ENERGY), and that the Brit. thermal unit is equivalent to 776 foot-pounds (see THERMODYNAMICS).

H. may be transferred from one body to another or from one part to another of the same body in three ways, viz. conduction (*q.v.*), convection, radiation (*q.v.*). In most cases all three modes of h. transference operate together. In *Convection*, h. is borne by moving masses of matter, such as steam in steam-heating apparatus (see HEATING). It is difficult to dissociate convection and conduction, but in the latter, h. is transferred by contact, and conduction is therefore more perfect just where convection is least perfect—in dense solids. H. has also very important effects when supplied to or withdrawn from a body. Indeed, there are few physical properties of matter which, otherwise constant, are not thus affected. The first effect is, in general, a change in temperature. The relation between the amount of h. added to a body and the consequent rise in temperature is expressed by the *specific* h. of the substance, and this is defined as the number of units of h. required to raise the temperature of unit mass of the substance by 1° Cent. Dulong and Petit showed that the product of the specific heat and atomic weight of elements in the solid state is approximately the same for all such elements, and to this product the term *atomic* h. is applied. It has also been proved that the product (known as the *molecular* h.) of the specific h. and molecular weight of a solid chemical compound is equal to the sum of the atomic h's of the elements contained in the compound. The complete generality of these statements is, however, qualified by the fact that specific h's rise with increasing temperature, and in all probability are, in the neighbourhood of the absolute zero of temperature (see THERMOMETERS), extremely low. The methods of determining specific h's is detailed under CALORIMETRY.

The next important effect of adding h. to a body is to change the volume, and in general all bodies increase in volume when heated. The increase is expressed numerically by the *coefficient of linear expansion*, which is the increase in length of unit length of a substance when heated by 1° Cent. The coefficient of cubical (or volume) expansion is correspondingly defined, and it is approximately thrice the linear coefficient. In gases, the coefficient of volume expansion is approximately ·00366. The expansion of bodies when heated and their contraction on cooling finds many useful applications in industry and in the arts. Obviously, there is need for a substance that will not be so affected, and this has been found in an alloy of steel and nickel, containing 36 % of nickel, known as *Invar*, which has the remarkably low coefficient of expansion of ·00000087, about thirteen times smaller than the coefficient of either of its constituents. It is now used for pendulum rods in clocks, and in various measuring instruments.

The third important effect of h. on matter is change of physical state. In general, the continuous addition of h. to a body causes it to pass from the solid to the liquid, and then to the gaseous (or vaporous) state. It is probable that if the means were available, all bodies could be made to assume any of these three states, provided that such assumption involves no chemical change (see FUSION, VAPORISATION). Changes of temperature also cause changes in the viscosity of fluids, electric resistance (see CONDUCTION, ELECTRIC), magnetic properties of matter, etc. Lastly, there must be noted the important fact that 'the velocity with which a chemical system strives to reach its state of equilibrium increases enormously with the temperature' (Nernst). Usually, the rate at which a chemical reaction takes place is doubled or trebled by a rise in temperature of 10° Cent.

Calorimetry is concerned with the measurement of quantities of heat. The apparatus used is termed a *calorimeter*. In the metric system the unit quantity of heat is the *calorie*, and *Great Calorie* = 1000 calories. Substances other than water, except liquid hydrogen, do not require so much heat for 1° rise, *e.g.* ice, mercury, copper, air, steam. Mercury absorbs about ·033, copper about ·091 calories. These numbers are the specific heats (S.H.), and increase with increase of temperature of measurement. Carbon, boron, and silicon show this increase remarkably, so that at high temperatures they tend to conform to *Dulong and Petit's Law*, specific heat × atomic weight = 6·4 nearly. A simple calorimeter may be made from a small sheet-copper vessel supported on corks and isolated from air currents by being placed inside a larger vessel. Such a vessel has a definite *water-equivalent*, which may be found by placing a given mass of heated water (A) at temperature t inside it and stirring it, when a rapid fall takes place, due to heat taken by the calorimeter and the stirrer. If tc is the original temperature of the calorimeter and tf the final temperature of the water and calorimeter, the water equivalent (W.E.) is $WE = A(t - tf)(tf - tc)$.

Once this is found, the specific heat of a body may be found where it is practicable to place such a body at a given temperature in a given mass of liquid in the calorimeter. If M be the mass of the substance heated to temperature ts, m the mass of the water (any substance of known specific gravity would do), to, the original temperature of the water, we, the water equivalent of the calorimeter, and tf the final temperature of the mixture, then the specific heat (S.H.) of the substance is given by $SH \cdot M(ts - tf) = (m + we)(tf - to)$, or if some other liquid of specific gravity sh be used, $SH \cdot M(ts - tf) = (sh \cdot m + we)(tf - to)$.

For any body the specific heat × mass gives the water equivalent or *thermal capacity*. A substance with a low specific heat like mercury comes rapidly to the temperature of its environment and is suited for thermometers. Water, again, stores much heat, is heated and cooled slowly, and is adapted for heating purposes. This property of water also causes certain meteorological effects. For gases and vapours, there exist a specific heat when the volume is kept constant, and a specific heat when the pressure is constant. The latter is greater than the former, owing to the work done in expansion against the pressure. The specific heats of steam in steam-engine theory and of air in gas- and oil-engine theory are of high importance.

Again, when a solid becomes liquid or a liquid a vapour, heat is absorbed in the change and is called latent. The one is latent heat of fusion; the other, of vaporisation. Engineers employ the *Brit. Thermal Unit* (B.Th.U.), the quantity of heat absorbed by 1 lb. of water in rising through 1° F. at 39° F.—more recently at 62° F. This equals about 252 calories, and, heat being a form of energy, is equivalent to 776 foot-pounds of work (Rowland and others).

Tait, *Heat*; Poynting and Thomson, *Heat* (1911); Soddy, *Matter and Energy* (1912); Preston, *Theory of Heat*; Nernst, *Theoretical Chemistry* (1911).

Animal Heat is the h. continuously produced in the body of an animal, depending on the activity of the disintegration and oxidation of protoplasm.

Both cold-blooded and warm-blooded animals are h.-producers to a very considerable extent, but the proportional loss of h. is greater in the cold-blooded. H. is produced by the muscles in working, by the secretory glands, particularly the liver, and by the brain. H. is lost from the skin, by respiration, and by the excretions.

HEATH, HEATHER, LING, comprises a group of woody, low-growing shrubs, natural order *Ericaceæ*. *Erica tetralix* (cross-leaved heath) and *E. cinerea* (bell-heather) are insect-pollinated and *gamopetalous*. *Calluna vulgaris*, *Erica vulgaris*, *Ling* or *Heather*, has sepals resembling petals, very small petals, and is wind-pollinated. All are moor-plants, mostly evergreen, with narrow rolled leaves to prevent excessive evaporation.

HEATH, BENJAMIN (1704–66), Eng. writer on classical and religious subjects; f. of BENJAMIN H. (1771–85), headmaster of Harrow, who formed the noted *Bibliotheca Heathiana*.

HEATH, NICHOLAS (1501–78), Eng. theologian; bp. of Rochester, then of Worcester; of Catholic belief, though not a persecutor; abp. of York, 1555; supported Elizabeth, but refusing to accept Protestantism retired into private life.

HEATH, WILLIAM (1737–1814), Amer. general; failed in attack on Fort Independence, 1777; member of Board of War, 1779; Senator, 1791.

HEATHCOTE, SIR GILBERT (c. 1651–1733), Lord Mayor of London; associated with foundation of Bank of England; Whig M.P. The holders of the earldom of Ancaster are descended from him.

HEATHEN, Teutonic word of doubtful derivation, applied after acceptance of Christianity to those who clung to the Teutonic deities.

HEATHER, see HEATH.

HEATHFIELD, GEORGE AUGUSTUS ELLIOTT, BARON (1717–90), Brit. general who as gov. of Gibraltar defended it against French and Spaniards, 1779–82.

HEATING is usually carried out in dwelling-houses by COAL or GAS FIRES. Although 75 to 90 % of heat is lost through the chimney, such fires are the cheapest heaters. They also provide an efficient system of ventilation. STOVES and FURNACES are neither economical nor efficient. STEAM is largely used in public buildings and is very efficient. In factories the waste steam is utilised for heating, but otherwise the steam is manufactured in a boiler in the basement. From this it is carried in pipes throughout the building, *radiators* being placed in each room. RADIATORS consist of short vertical lengths of pipe through which the steam passes. They are of many patterns, and aim at providing a large surface from which the heat can radiate. Their position requires careful study, as much of the success of the system depends on it. From the radiator the heated air ascends to the roof, then passes to an inside wall, and finally to the floor. The condensed steam returns to the boiler by its own gravity, and this is therefore called the *gravity system*, and is used for heating small buildings. Larger buildings are heated by steam under pressure. The HOT WATER SYSTEM of heating is more economical but less satisfactory. The hot water rises by convection into a pipe in the top of the boiler. After circulation through pipes, radiators, etc., it is returned cold to the bottom of the boiler. There is an *expansion tube* to prevent rupture. *Steam*, *water*, and *electricity* have the common disadvantage of requiring the installation of a ventilation system. *Electricity* is too expensive for general use.

HEAVEN, the firmament, or empyrean; the atmospheric region, and the space in which the sun, stars, and planets are seen; the abode of God; the dwelling-place of the blest; a state of supreme happiness, etc. See PARADISE, ESCHATOLOGY.

HEAVY SPAR, see BARYTES.

HEBBEL, CHRISTIAN FRIEDRICH (1813–63), Ger. dramatist; b. Wesselburen (Holstein); best works are: *Gyges und sein Ring*, *Herodes und Mariamne* (dramas), the trilogy *Die Nibelungen*, and *Neue Gedichte*.

HEBBURN (54° 58′ N., 1° 45′ W.), town, Durham, England; shipbuilding yards. Pop. (1911) 21,766.

HEBDEN BRIDGE (53° 45′ N., 2° W.), town, Yorkshire, England. Pop. (1911) 7170.

HEBE (classical myth.), dau. of Zeus and Hera; cup-bearer to the gods; subsequently became wife of Hercules; gave place to Ganymede. She is usually represented as a beautiful maiden, bearing wine-cup and pitcher.

HEBEL, JOHANN PETER (1760–1826), Ger. pastoral poet and writer of essays and stories.

HEBER, REGINALD (1783–1826), Eng. hymnologist; bp. of Calcutta (1822); a man of great learning and piety; now chiefly remembered by his hymns, *From Greenland's Icy Mountains*, etc.

HEBER, RICHARD (1773–1833), Eng. book-collector; possessed one of the largest private libraries in the country; M.P. for Oxford Univ. (1821–26), and D.C.L. of that foundation.

HEBERDEN, WILLIAM (1710–1801), Eng. physician; practised med. at Cambridge, where he lectured on materia medica, and afterwards at London; author of works on medical subjects.

HÉBERT, JACQUES RENÉ (1757–94), Fr. revolutionary; led sect of *Hébertistes* against the *Girondins*; edit. *Le Père Ducheene*; instigated September Massacres; guillotined.

HEBREW LANGUAGE belongs to the Canaanitish branch of the Semitic group of languages, and approximates closely to Phœnician and Moabite, with which it shares the following characteristics: two genders, three-consonant roots, an inability to form compounds except in the case of proper nouns, two tenses in verb, imperfect and perfect, changed by prefix *wĕ* into aorist and future. The ancient angular type of lettering was replaced by square characters written from left to right, while the vowels were—if indicated at all—represented by 'points,' a system now elaborated by scholars and called the *Massoretic* punctuation (see H. LITERATURE). Hebrew was after the Exile replaced as spoken language by Aramaic, but it still persists as literary and cultured tongue, while modern vernacular is called 'Yiddish.' The alphabet in square characters is: א (*aleph*, a breathing), ב (*beth*, b), ג (*ghimel*, g, gh), ד (*daleth*, d), ה (*he*, h), ו (*wau*, w), ז (*zayin*, z), ח (*heth*, ch), ט (*teth*, t), י (*yodh*, y), כ, final ך (*caph*, c, k), ל (*lamedh*, l), מ, final ם (*mem*, m), נ, final ן (*nun*, n), ס (*samech*, s), ע (*ayin*, guttural), פ, final ף (*pe*, p, ph), צ, final ץ (*tsade*, ts), ק (*qoph*, q), ר (*resh*, r), ש (*sin*, s), שׁ (*shin*, sh), ת (*tau*, t, th).

Literature.—Hebrew literature is almost entirely based on the Old Testament, which comprises the highest literary productions of the race for a period of about 800 years. There are exhibited in the course of it not only the normal changes which such a lapse of time always makes in a language, but deeper-cutting differences—*e.g.* in Daniel, Chronicles, Nehemiah, and Ecclesiastes there is a very large proportion of Persian words. Yet there is a distinctly unifying tendency noticeable over the whole, and this is especially true of the Psalms, which do not probably belong to any particular period, but are a collection of slow and gradual growth. The most recent portions of the Old Testament are those mentioned above (330–160 B.C.), the oldest being parts of the Pentateuch (c. 800 B.C.). The later form of the language, Aramaic, with its admixture of Persian elements, became the common language of the people, and the older portions were, about the III. cent. A.D., in great part translated into this vernacular for use in the synagogues. This forms the *Targum*. Another process came into being, of amplification, especially of the Mosaic Law, not only that given in the Pentateuch but of the Oral or Traditional Law, which had been handed down among the elders; this compilation formed the *Halakhah*, and was collected in written form by Judah-ha-Nasi in the *Mishnah*. Side by side with this there grew up

a mass of expository writings which received the name of *Midrash*, and the compiling of which went on till the VIII. cent. As time wore on, these explanatory works themselves became the subject of critical commentary out of which grew the *Talmud* (first edition, Venice, 1520). So far most of the work had been a mere collection of anonymous commentaries, but from the XV. cent. onwards Hebrew literature acquired a more personal character. The Hebrew historians and theologians began to publish—such as Elias Levita, Dei Rossi, Joseph ben Joshua, Moses Cordovero, and, in the XVII. cent., Leon di Modena and David Conforte. In addition to these works, which were mainly of a historical and scientific nature and possess no striking literary merit, the liturgical literature grew steadily in volume.

Moses Mendelssohn, at the close of the XVIII. cent., attempted to tear Hebrew literature out of its groove and infused it with a new and more practical spirit. His great work, the German translation of the Pentateuch, marked, however, in reality the end of purely Hebrew writings. Henceforth, though Hebrew thinkers and scholars were to contribute powerfully to modern culture, they used the various European languages as the vehicle of their thought.

Abraham's *Short History of Jewish Literature* (London, 1906), and Winter and Wünsche's *Jüdische Literatur* (Leipzig, 1895).

Hebrew Religion.—It is impossible in the present state of our knowledge to give a complete account of Hebrew religion, as the materials for it are not adequate, being many of them of uncertain, and all of comparatively late date. Something, however, is known of primitive H. r. by archæology, and something more may be learnt by the comparative method. The evidence of the Tell-el-Amarna tablets shows that from 2000–1400 B.C. the Hebrews were much under Babylonian influence, and until about 600 B.C. they were merely one of a congeries of Semitic tribes closely akin not only in blood and language, but also in religion. There were probably tribal deities, much as in Arabia before Muhammad. Little can be said with certainty of H. r. before Moses, but then there was at any rate some progress in the direction of monotheism, though as yet only monolatry was attained.

The cult of Jahweh, Israel's god, was, however, purer than that of other Semitic deities, though when the Hebrews entered Canaan they took over some religious ideas and practices from the peoples whose land they conquered. The impure rites against which the prophets inveighed were not a native Hebrew growth. But the conflict between Israel and the neighbouring peoples developed a new order—the prophets. At first they were only *seers*, those possessed of 'second sight'; then they became the witnesses and declarers of God's will to men. Prophecy was one of most remarkable developments of the Hebrew religious genius, and one which marked it off from other peoples, whose religion started similarly, but failed to rise to any great height. In the VIII. cent. Amos and Isaiah denounced a religion merely of rites and sacrifices, and preached gospel of righteousness—the idea of religion as something largely ethical was only just beginning to emerge. But higher spiritual results could not be attained before the national kingdoms of Israel and Judah had been overthrown and the people had endured the weary discipline of the Exile.

The religious teaching of Jeremiah and his career present, it has been said, as close a parallel to that of Christ as any in the Old Testament. Religion, too, became more individual, and the feeling of personal responsibility to God was realised; 'The soul that sinneth it shall die.' The conception of the 'suffering servant' (*i.e.* the Hebrew nation) was evolved. Meanwhile the turning-point in religious history was the reformation under King Josiah, 621 B.C., when was established the 'Law of the One Sanctuary.' Henceforward people had to come up to Jerusalem to sacrifice, and about this time the Book of *Deuteronomy* was produced. Though these tended in some ways to a too *legal* religion, it was probably only thus that monotheism could be safely secured. After the return from Exile the reconstruction of religion in the restored nation was largely due to Ezekiel, who with the functions of a prophet also combined those of a priest. The elaborate sacrificial system which was to last till the destruction of the Temple was organised, and during the V. cent. the so-called Priestly Code, the latest embodiment of Hebrew ritual, was evolved.

From this period until the time of Christ several important developments took place. H. r. became intensely legal, and its idea of God transcendent. The nation passed through the fiery trial of the conflict with debased Hellenism under the Seleucid kings, and was brought through by the energy and devotion of the Maccabees (to this date some would assign many portions of the Book of *Isaiah* often thought to be earlier). The Exile left its mark on Hebrew theology, particularly in angelology; eschatology (*q.v.*) became prominent, and various conceptions of a coming Messiah floated in men's minds. Each of these was destined to have enormous effect on early Christian theology; the genesis of these ideas is in some cases uncertain, but the ideas of angels and of a resurrection were due to Zoroastrian influence, and the various woes through which Israel had passed gave rise to the longing for a better age. In the *Book of Enoch* the Messiah is pre-existent—an important development. Hebrew thought also came into contact with Gk. philosophy, so the 'Wisdom' literature was written, and the curious tendency to personification or semi-personification of divine attributes and spiritual forces, 'half persons and half powers,' resulted from this or other causes. Thus H. r. at the time of Christ, while retaining its ancient sacrifices and traditions, was a complex thing, in which various elements were mingled.

Barney, *Theology of the Old Testament*; Addis, *Hebrew Religion*; Cook, *Religion of Ancient Palestine*; Davidson, *Old Testament Theology*.

HEBREWS, EPISTLE TO THE, stands quite by itself in the New Testament Canon. Although bearing in the title in the Eng. versions the name of St. Paul, this is wanting in the oldest MSS.; besides this the whole style, tone, and theol. is different from that of St. Paul. Its author is really unknown—possibly Apollos; one suggestion is Priscilla, in which case it would be the only New Testament writing by a woman. Its language is the finest and most polished Greek in the New Testament. Its theol. is distinct in some ways from the rest of the New Testament. Its central idea is the *high-priesthood* of Christ. The opening chapter declares the function of the Son in Creation, and His relation to the Father, the effulgence of His glory and the very image of His substance. Christ as high-priest offers Himself as a perfect sacrifice, of which the ancient Jewish sacrifices are the antitype. Chapter 2 on Faith is very remarkable. The Epistle is unsurpassed for its profundity of thought, spirituality, and beauty of expression.

Hebrews, A. S. Peake (*The Century Bible*).

HEBREWS, GOSPEL OF, see APOCRYPHA.

HEBREWS, NEW, see NEW HEBRIDES.

HEBRIDES, THE, or WESTERN ISLES (57° 45′ N., 6° 50′ W.), large group of islands extending over 200 miles along W. coast of Scotland; area, *c.* 2810 sq. miles; divided by Little Minch into OUTER HEBRIDES, consisting of, from N. to S., Lewis and Harris, N. and S. Uist, Benbecula, and numerous islets; and INNER HEBRIDES, consisting of Skye, Rum, Eigg, Canna, Coll, Tyree, Mull, Ulva, Staffa, Iona, Colonsay, Jura, and Islay. Scenery is wild and picturesque; climate mild and moist; industries—sheep-rearing, fishing, fowling, tweeds. The Hebrides were ceded by Norway to Scotland, 1266; subdued by Lord of the Isles (*q.v.*), 1346; annexed to Scot. Crown, 1540.

HEBRON (31° 31′ N., 35° 8′ E.), town, Palestine; has enclosure built over rock cave, which is traditional

tomb of Abraham and other patriarchs. Pop. c. 10,000.

HECATÆUS OF ABDERA (IV. cent. B.C.), Gk. philosopher; a source of Diodorus Siculus.

HECATÆUS OF MILETUS (*c.* 550–470 B.C.), Gk. historian and geographer; wrote *Travels about the Earth* and a hist. work in which he endeavoured to separate mythology from fact; latter contained in Müller's *Fragmenta Historicorum Græcorum*.

HECATE (classical myth.), dau. of Perses and Astræa, sometimes identified with Persephone; was the goddess of witchcraft and enchantments, also of fertility, her power extending over heaven, earth, and hell. She was sometimes represented as triple-bodied, at other times as a tall woman, with sword and torch. Dogs and black lambs were sacrificed to her.

HECATOMB, the sacrifice or slaughter of many victims; amongst the ancient Greeks and Romans, sacrifice of one hundred oxen.

HECKER, FRIEDRICH FRANZ KARL (1811–81), Ger. revolutionary; member of Baden Chamber of Deputies, 1842; with object of founding Ger. republic, raised military force against government, but was defeated, 1848; withdrew to Switzerland; subsequently served on Federalist side in Amer. Civil War.

HECKER, ISAAC THOMAS (1819–88), Amer. R.C. evangelist; of Ger. parentage; became R.C., 1844; entered Redemptorists; ordained priest, 1849; undertook evangelisation of America, realising it must be by Amer. methods; went to Europe, 1857, provoking hostility of anti-republicans and those who imagined he would 'liberalise' Church; but H. was a quite orthodox Catholic.

HECKMONDWIKE (53° 43′ N., 1° 40′ W.), town, Yorkshire, England. Pop. (1911) 9017.

HECLA, Hekla, see Volcanoes.

HECTOR (classical myth.), Trojan hero; s. of Priam and Hecuba, husband of Andromache, f. of Astyanax; killed Ajax in single combat, and slew Patroclus; was himself afterwards slain by Achilles.

HECUBA (classical myth.), wife of Priam, king of Troy; at the fall of the city became the spoil of Odysseus; subject of a tragedy by Euripides.

HEDGE, feature of Eng. agriculture now largely giving place to the fence. Hedging and ditching at the king's command were among the duties of the Anglo-Saxon thegn.

HEDGE SPARROW, see under Thrush Family.

HEDGE-ACCENTOR, see under Thrush Family.

HEDGEHOG or Urchin (*Erinaceus*), a short-snouted Insectivore characterised by spiny covering and short tail; nocturnal; feeds on worms, lizards, snakes, eggs, and even rats and mice; hibernates in winter.

HEDGE-MUSTARD (*Sisimbrium*), plant of *Cruciferæ* order (*q.v.*); 1–2 feet high; yellow flowers; common Brit. weed.

HEDJAZ, see Hejaz.

HEDON (53° 45′ N., 0° 13′ W.), town, Yorkshire, England; has fine cruciform church dedicated to St. Augustine; important port in XIV. cent. Pop. (1911) 2376.

HEDONISM, ethical theory which may be of two kinds—(1) that every man makes pleasure his goal; (2) that pleasure is the only ultimate good. The ancient Cyrenaics and (differently) Epicureans were hedonists.

HEDYMELES, grosbeak. See under Finch Family.

HEEK, ALEXANDER VON, Hegius (d. 1498), Ger. who founded or reformed school at Deventer, where Erasmus was a scholar.

HEEL, back division of foot; possibly regarded as hinge in walking, hence to h. over, to turn; anything that covers the h. Leavings of liquor in a glass are h. taps. See also Achilles.

HEEM, JAN DAVIDSZ VAN (fl. XVII. cent.), Dutch painter; chief painter of flowers, insects, glass, and similar still-life studies, of his school. His son, **Cornelius** (fl. XVII. cent.), was a lesser master in the same kind.

HEEMSKERK, MARTIN JACOBSZ (1498–1574), Dutch religious painter of Ital. school; many of his principal works were burned at Haarlem in 1572; those left are remarkable for sculpturesque figures.

HEEREN, ARNOLD HERMANN LUDWIG (1760–1842), Ger. historian of classical institutions.

HEFELE, KARL JOSEF VON (1809–93), Ger. R.C. theologian and ecclesiastical historian; bp. of Rottenburg, 1869.

HEGEL, GEORG WILHELM FRIEDRICH (1770–1831), Ger. philosopher, founder of Absolute Idealism; b. Stuttgart; ed. Tübingen Univ.; went to Jena, 1801, and app. prof., 1805. In 1808, app. rector at Nuremberg gymnasium; prof. at Heidelberg, 1816, and at Berlin, 1818. Henceforth the leading philosophic thinker in Germany. Chief works, *Phenomenology of Spirit* (1807), *Science of Logic*, *Encyc. of Philos. Sciences*, *Philosophy of Rights* (1821), and the posthumous lectures on *Æsthetics*, *Phil. of Religion*, and of *History*.

H. propounds absolute idealism, the highest point of the idealistic movement initiated by Kant. The dualisms of noumena and phenomena, rational form and sensuous matter, speculative and practical reason, are rejected. Reason becomes the essence of reality, no longer a human faculty. The identity of subject and object is accepted as indisputable, whence whatever is true of the idea is also true of the thing, i.e. ideas and objects are correlates. A basis for this position is found in the principle of the 'identity of contraries'—that contradictories do not mutually exclude each other. Nothing exists but 'relations' of subject and object; things we know are appearances both to us and in themselves; the real objectivity is that our Thoughts are at once Thoughts and the reality of Things. The universe is a process of the development of an Idea (Idee). Everything must be considered *per se*, then in its negation, as some other thing, and these contraries must be identified in a third thing, the Relation of the two. Hence, in order, logic, philosophy of nature, and philosophy of spirit.

Logic is an examination of Things, as well as of forms of Thought, since, as above, object and subject are identical. It therefore takes the place both of the ancient Logic and of Metaphysics. It contains the whole system of Science, and the other parts are but applications of it. Nature shows a development from the lowest to the highest, a struggle of the Idee to realise itself objectively. Every modification of the Idee in the realm of pure thought it attempts to express in that of Nature. Subjectively, the Idee realises itself first as Soul, then, returning upon itself, as Consciousness; finally it becomes self-conscious and is then Reason. Objectively, the Idee becomes Will, realising itself in History and Law.

There are four great 'moments' of History: (1) In the East, substantiality predominant; the rights of men unknown. (2) In Greece, individuality predominant, some men being free. (3) In Rome, an opposition between the subjective and objective; political universality and individual freedom both developed, yet not united. (4) In Teutonic nations, the unity of the contradictions; all men free.

In ethics, good conduct, as with Kant, is conscious realisation of the free reasonable will. But the universal will is conceived as objectively presented to each man in the institutions and customs of his community.

Caird, *Hegel* (1886); Macintosh, *H. and Hegelianism* (1903); M'Taggart, *A Commentary on Hegel's Logic* (1910); Hutchison Stirling, *The Secret of H.* (1898).

HEGEMON OF THASOS (V. cent. B.C.), Gk. comic writer; praised in Aristotle's *Poetics*.

HEGEMONY (Gk. *hegemonia*, leadership), primacy of one state in a federation, *e.g.* pre-eminence of Athens in the Delian Confederacy (*q.v.*).

HEGESIAS OF MAGNESIA (fl. III. cent. B.C. ?), Gk. orator; much condemned in the Augustan Age; author of life of Alexander the Great.

HEGESIPPUS (fl. IV. cent. B.C.), Athenian states-

man; probably author of speech, *De Halonneso*, ascribed to Demosthenes.

HEGESIPPUS (fl. II. cent.), patristic writer.

HEGESIPPUS, putative author of *De Bello Judaico*, IV.-cent. rendering of Josephus.

HEGIUS, see HEEK.

HEIBERG, JOHAN LUDWIG (1791–1860), Dan. poet and critic; wrote plays, vaudevilles, verse and literary criticism.

HEIDE (54° 12′ N., 9° 5′ E.), town, Schleswig-Holstein, Prussia. Pop. (1905) 8758.

HEIDEGGER, JOHANN HEINRICH (1633–98), Swiss scholar and controversialist.

HEIDELBERG (26° 30′ S., 28° 20′ E.), town, Transvaal, Brit. S. Africa. Pop. (1911) 38,580.

HEIDELBERG (49° 24′ N., 8° 42′ E.), city, Baden, Germany; beautifully situated on Neckar, near Rhine, surrounded by hills covered with forests and vineyards. St. Peters-Kirche (XV. cent.), Gothic Heilige-Geist-Kirche Jesuiten-Kirche; town hall; fine castle on hill, 330 ft. high, with great vat capable of holding 50,000 gallons of wine; celebrated univ. (1385); beer, wine, and book industry; residence of Counts Palatine, *c.* 1155–1721; great centre of Ger. Calvinism; sacked by French, 1688, 1693; annexed to Baden, 1803. Pop. (1910) 56,016.

HEIDELBERG CATECHISM, THE, Prot. catechism compiled by order of Elector Frederick III. in 1563, by Zacharias Ursinus and Caspar Olevianus; accepted by Heidelberg synod, but attacked by extreme Lutherans; on somewhat different lines from most catechisms, it possesses great spiritual beauty, and has been often translated.

HEIDELOFF, KARL ALEXANDER VON (1788–1865), Ger. architect; designed many celebrated castles, including Landsberg, Reinhardsbrunn, and Rosenburg.

HEIDENHEIM.—(1) (48° 40′ N., 10° 10′ E.) town, Württemberg, Germany. Pop. (1910) 17,780. (2) (49° 1′ N., 10° 45′ E.) town, Bavaria, Germany.

HEIGEL, KARL AUGUST VON (1835–1905), Ger. novelist; pub. *Der Roman einer Stadt*, *Die Dame ohne Herz*, *Die nervöse Frau*, etc.; also plays and short stories.

HEIJERMANS, HERMANN (1864–), prominent Dutch playwright and novelist.

HEIJN, PIET, see HEYN, PIETER PIETERZOON.

HEILBRONN (49° 8′ N., 9° 13′ E.), town, Württemberg, Germany; has XI.-cent. Gothic church and other interesting buildings; industrial centre. Pop. (1905) 40,026.

HEILIGENSTADT.—(1) (51° 23′ N., 10° 7′ E.) town, Pruss. Saxony, Germany. Pop. (1910) 8218. (2) (49° 51′ N., 11° 10′ E.) town, Bavaria, Germany.

HEILSBERG (54° 7′ N., 20° 35′ E.), town, E. Prussia, Germany. Pop. (1905) 6042.

HEILSBRONN (49° 20′ N., 10° 46′ E.), town, Bavaria, Germany. Pop. *c.* 1300.

HEIM, FRANÇOIS JOSEPH (1787–1865), Fr. historical painter.

HEIMDALL (Scand. myth.), s. of Odin; guardian of the rainbow bridge, Bifröst. He bore the horn, Gjallar; scarcely ever slept; could see vast distances; and could hear the grass grow.

HEIMSKRINGLA, see SNORRI STURLASON.

HEINE, HEINRICH (1797–1856), Ger. poet; b. Düsseldorf, of Jewish parents; studied law at Bonn, Göttingen, Berlin; adopted Christianity, 1825; pub. *Reisebilder* (1826), *Buch der Lieder* (1827), which made him the most popular poet of Germany; visited England, 1827; *Engliche Fragmente* appeared, 1831. H. settled in Paris, 1831, after unhappy love affairs with his cousins; to this period belong *Französische Zustände*, 1833, *Der Salon*, 1834, *Ludwig Börne*, 1840, *Die Romantische Schule*, 1836 (prose works); *Atta Troll*, 1847, *Romancero*, 1851, and *Letzte Gedichte und Gedanken*, 1853, 1855, rank among his finest poetical works; bedridden, 1848–56; d. Paris. H. ranks as perhaps the most cosmopolitan Ger. poet; belongs partly to Romantic movement, partly to 'Young Germany' revolt; great lyric and *spiritual* writer, marred at times by cynicism, sentimentality, and bad taste.

Life, by Stigand (1875), Sharp (1888).

HEINECCIUS, JOHANN GOTTLIEB (1681–1741), Ger. writer on Rom. jurisprudence. His bro., JOHANN MICHAEL (1674–1722), wrote *De veteribus . . . sigillis*.

HEINECKEN, CHRISTIAN HEINRICH (1721–25), 'the child of Lübeck'; Ger. child of marvellous learning and reasoning powers.

HEINICKE, SAMUEL (1727–90), Ger. deaf and dumb educationist.

HEINSE, JOHANN JAKOB WILHELM (1749–1803), prominent Ger. novelist.

HEINSIUS, DANIEL, HEINS (1580–1655), distinguished Dutch scholar who edit. classics, wrote Lat. poems, etc. His s. NIKOLAES (1620–81), equally famous on the same lines, left an illegitimate s. NIKOLAES, author of the romance *Mirandor* (1675).

HEIR, originally inheritor in fee (*h. at law*), afterwards inheritor, next of kin, or devisee. *H. apparent* is person who will inherit if he lives; *h. general* is h. at law; *h. presumptive*, person who will inherit if conditions remain the same; *right h.* is next of kin. See INHERITANCE.

HEJAZ (25° N., 40° E.), vilayet and province of Arabia, along shores of Red Sea; bounded N. by Syria, E. by Nafud desert and Nejd, S. by Asir. Contains Tehama range of mts., and is almost all stony desert; northern portion desolate and thinly populated; in S. more cultivation, dates, wheat, and barley being chief products. Chiefly interesting on account of sacred cities of Mecca and Medina, which it contains along with seaports Jiddah and Yambu; railway connecting cities of H. with Damascus under construction, and completed as far as Medina in 1908. Area, *c.* 97,000 sq. miles. Pop. 300,000.

HEJIRA, HIJRAT, see under MUHAMMADAN LAW.

HEKLA, see VOLCANOES.

HEL, HELA, the goddess of death in Scandinavian mythology; dau. of Loki and Angurboda; to her went all who died by disease; dwelt in Niflheim, place of eternal snow and darkness.

HELDENBUCH, DAS, Ger. poetic cycles of XIII. cent.; chief figures are Dietrich of Bern, Wolfdietrich, Hugdietrich, and Ortnit. The first printed edition appeared without date, the second 1491; many modern edit's.

HELDER, THE (52° 57′ N., 4° 45′ E.), port, Holland; strongly fortified. Pop. (1910) 27,358.

HELEN OF TROY (classical myth.), dau. of Zeus and Leda, wife of Tyndareus, king of Sparta; famed for her beauty; became the wife of Menelaus, but eloped with Paris, s. of Priam, king of Troy, which act led to the Trojan War.

HELENA (34° 30′ N., 90° 36′ W.), town, Arkansas, U.S.A.; cotton trade. Pop. (1910) 8770.

HELENA (46° 34′ N., 112° 3′ W.), capital, Montana, U.S.A.; has univ., cathedral; industrial centre. Pop. (1910) 12,515.

HELENA, ST. (*c.* 247–328), wife of Rom. emperor Constantius I., and mother of Constantine the Great; accepted Christianity and made pilgrimage to Jerusalem, where she is said to have discovered the Cross and built churches of the Holy Sepulchre and Nativity.

HELENSBURGH (56° N., 4° 43′ W.), town, watering-place, Dumbartonshire, Scotland. Pop. (1911) 8529.

HELENUS, s. of Priam; mentioned in the *Iliad*, and prominent character in later Gk. legend.

HELGAUD (fl. early XI. cent.), chaplain of Robert II. of France and author of *Epitoma vitæ Roberti regis*.

HELGESEN, POVL (fl. early XVI. cent.), Dan. political and religious controversialist.

'HELIAND' (the Saviour), Old Saxon poem of about 6000 lines on New Testament history by unknown author; written early in IX. cent.; four MS. *Codices* of it are extant.

HELIANTHUS, see SUN-FLOWER.

HELICON (38° 17′ N., 22° 53′ E.), mountain range, Bœotia, Greece; traditional home of Muses.

HELIGOLAND, HELGOLAND (54° 11′ N., 7° 53′ E.), small island and fortress in North Sea, about 28 miles from mainland, belonging to Germany; consists of Oberland and Unterland; famous seaside resort; once possessed by Schleswig-Holstein-Gottorp; taken by Danes, 1714; by British, 1807; ceded to Germany, 1890; area, ½ sq. mile. Pop. (1910) 3416.

HELIODORUS (fl. c. III. cent. A.D.), author of the *Æthiopica*, a Gk. story which had great influence on Renaissance writers.

HELIOGABALUS, ELAGABALUS (*c.* 205–22), Rom. emperor; became priest to sun-god Elagabal; emperor, 218; assassinated during army mutiny, 222.

HELIOGRAPH, signalling instrument that reflects sun's rays by mirrors; range of 190 miles has been reached.

HELIOMETER is an instrument used for measuring the sun's diameter and for micrometrical work on the stars. It is based on the fact that measures can be made by double images. Dollond in 1754 observed that although an object-glass be divided through its axis a single image is still produced if the optical centres of the segments coincide, *i.e.* if the segments are in the same relative position as before the glass was cut. When they are separated each forms its own image of the object. Since 1820, when Frauenhofer used *achromatic* glasses which concentrate all the rays at one focus and give a distinct image, the h. has consisted of an *achromatic* telescope with its object-glass divided (by a plane passing through the optic axis of the telescope) into two segments, one fixed in the telescope tube, the other mounted so that it can be moved in a plane perpendicular to the telescope's optic axis. The movement is obtained by the revolution of a screw connected with an apparatus for counting the revolutions.

In very recent h's this reading is checked independently by a *micrometer* which measures directly the separation of the segments. When the two halves of the glass are coincident a single image of the sun is obtained, because the separate images are superposed. If now the glasses be separated till two images just touching each other are obtained, the one image will have moved through a distance equal to the sun's apparent diameter. From a circle of known diameter at known distance from the telescope the angle which a diameter of the circle subtends at the object glass of the telescope is calculated. The value of a revolution of the micrometer screw is obtained by measuring a circle of known diameter through the h. From these two measurements the actual diameter can be calculated. Recent modifications of the apparatus aim at increasing facility of movement and avoiding the effects of temperature changes.

HELIOPOLIS (the ON of the Bible), city of Lower Egypt, near Cairo, slightly N. of the Nile Delta; was one of the principal centres of sun-worship and of Egyptian learning. Cleopatra's Needle (on Thames Embankment) came from here. H. was also the name of Baalbek (*q.v.*).

HELIOS, see under APOLLO.

HELIOSTAT, instrument for reflecting a beam of sunlight in a fixed direction. A mirror is mounted on a spindle driven by clockwork whose rate can be adjusted. The clockwork case is so arranged as to allow the initial adjustment to be made.

HELIOTROPE, a plant with a sweet scent, belonging to a genus of 200 species of the natural order *Boraginaceæ*. They are small hairy shrubs. HELIOTROPE (*Cherry-Pie*) has terminal *spikes* of lilac flowers.

HELIOTROPE, see BLOODSTONE.

HELIOTROPISM, turning of a plant towards light; stems curve towards sun (*positive h.*), roots and stems of certain climbers turn away from sun (*negative h.*).

HELIOZOA, unicellular organisms, uninucleate or multinucleate, popularly called *sun animalculæ*, from possession of close-set, radiating, protoplasmic processes, each with a median rod passing into the deeper-lying parts of the animal; protoplasm highly vacuolate; reproduction takes the form of simple fission or budding, under favourable conditions, or consists in the formation of cysts in adverse periods; typical forms—*Actinophrys sol* and *Actinosphærium eichornii*, both commonly occurring among weeds in fresh water.

HELIUM, a gaseous element abundant in radioactive minerals, especially *thorianite*. A.W., 4. B.P., 4°·3 absolute. No stable chemical compound of it can be obtained. Its presence in minerals is due to mechanical absorption. It occurs in springs and the atmosphere, and is produced by the disintegration or *radium* emanations. It has a distinct *spectrum*.

HELIX, term in architecture for volute of capital, in Ionic and Corinthian orders, or other spiral.

HELIX, snail. See under GASTEROPODA.

HELL, the abode of the dead; also the place of punishment of the wicked, numerous times mentioned in the New Testament. Alternative names are the Gk. *Hades*; Heb. *Gehenna*; Scand. *Hela*.

HELLANICUS OF LESBOS (V. cent. B.C.); Gk. historian; wrote history of Attica (683–404); a chronological work on the Carnean games; also histories of Troy and Persia.

HELLEBORE is a genus of herbs belonging to natural order *Ranunculaceæ*.—HELLEBORE (*Christmas Rose*) has five or more petaloid sepals. The 'petals' are slipper-shaped *nectaries*. The stigma ripens first (*protogynous*) and self-pollination is impossible. The fruit is an aggregation of three *follicles*. It illustrates the transition from foliage leaves to *bracts* and *sepals*. In ancient times h. was used as a drug to cure insanity.

HELLENISM, a type of culture peculiar to the ancient Greeks. The Gk. character as reflected in Hellenic religion, poetry, art, and philosophy makes for clearness, measure, and balance, and eschews the vague, the undefined, the excessive. The Gk. ideal is therefore the antithesis to the Gothic. In architecture the Gothic mind expressed itself in soaring arches and mysterious curves. The Gothic mythology deals with vast, titanic, cloud-like beings, neither human in character nor restricted in power. The Gk. mind is well illustrated by the motto of the ancient Delphic temple, 'Nothing in excess.' In Gk. mythology the outstanding characteristic is the extraordinary definiteness of the gods and goddesses. Each god has his peculiar attributes, his fixed bodily shape, and his allotted functions. Mystery has no place in the Gk. Pantheon. Similarly in philosophy the theory that virtue lies in preserving the 'mean' is characteristically Gk. Thus bravery is regarded as a mean between rashness on the one hand and cowardice on the other.

But it is in the Periclean age that we find H. in its most perfect expression. It is as though the conflict with so alien a people as the Persians had (by showing the contrast) helped the Greek to realise his own true being. Moreover, the common peril had united the Gk. states as they had never been united before, and forced them to realise their own kinship and ideals in common. In the age of Pericles, then, Gk. art and lit. reached the zenith, and true H. found its supreme expression.

The greatest and noblest architectural creation of the Periclean age was the Parthenon. The outstanding features of the Parthenon are nobility, sanity, and restraint. The temple is of the Doric order, and of the three great Gk. orders the Doric is the severest and yet the most sublime. The shaft of the Doric column springs straight from the step, and culminates in the simple square abacus. Adornment and elaboration there is none. Sublimity is reached through perfect symmetry and perfect balance. The Parthenon also contained the finest examples of Gk. sculpture—the work of Pheidias. Unfortunately time has not spared

us the masterpieces of Pheidias, but from the magnificent pediment figures, which are at least of his school, we can have some conception of their beauty and grandeur. The keynote in these figures is calm, symmetry, and repose.

In the dramas of Æschylus and Sophocles we see reflected the same spirit. Sentimentality has no place there; the emotion is vast, yet restrained and controlled. Even in *Prometheus Vinctus*, where the theme had a natural bias towards the Gothic ideal, we find the same perfect measure and completeness—the same obedience to the command that there be nothing in excess. H. set a limit to the infinite and crystallised the ideal.

HELLESPONT, ancient classical name of the Dardanelles (*q.v.*), the strait connecting the Sea of Marmora and the Ægean Sea; so called from Hellē, dau. of Athamas and Nephele, who, fleeing from the cruelty of her stepmother, Ino, fell from the air into the strait and was drowned.

HELLEVOETSLUIS, HELVOETSLUIS (51° 50′ N., 4° 7′ E.), port, S. Holland; fortified. Pop. (1910) 4518.

HELL-GATE, see under BLASTING.

HELLIN (38° 29′ N., 1° 38′ W.), town, S.E. Spain. Pop. 12,558.

HELLO, ERNEST (1828–85), author of *Physionomie de Saints* (Eng. trans., 1903).

HELMERS, JAN FREDERIK (1767–1813), Dutch political poet.

HELMET, headpiece in armour. Early h's were simply caps made of leather or metal, with attachments for protection of face and neck. In mediæval times some h's had a fixed nasal, while others had movable covers for protecting both upper and lower face, the whole head being covered during action. In XIV. cent. barred visors came into use. The *armet* first appears about 1443, and was a closed h., used only by horsemen. The XVI.-cent. *morion* had a projecting brim. Modern h's worn by policemen and firemen are made of metal, felt, leather, or cork.

HELMET SHELL, see GASTEROPODA.

HELMHOLTZ, HERMANN LUDWIG FERDINAND VON (1821–94), Ger. philosopher and physicist; prof. of Physiology in Heidelberg, and later of Physics in Berlin. He discovered nerve-cells in *ganglia*, invented the opthalmoscope, and measured the velocity of nervous impulse. It was by his inspiration Hertz commenced his work, which resulted in discovery of 'Hertzian' waves of wireless telegraphy. H. also perfected notion of electron.

Life, by M'Kendrick.

HELMOLD (fl. XII. cent.), Ger. chronicler; author of valuable *Chronica Slavorum*.

HELMOND (51° 28′ N., 5° 39′ E.), town, Holland. Pop. (1910) 14,767.

HELMONT, JEAN BAPTISTE VAN (1577–1644), Belg. physician, physiologist, and chemist; practised med. at Vilvorde, near Brussels; carried out experiments and propounded important theories regarding plant and human physiology, but value of his observations was marred by introduction of the supernatural to explain certain natural processes. His researches in chem., particularly regarding gases, are also valuable, but he was also an alchemist, believing in the philosopher's stone.

HELMSTEDT, HELMSTÄDT (52° 13′ N., 11° E.), town, Brunswick, Germany; ruined Benedictine abbey, fine churches; seat of univ. till 1809. Pop. (1910) 16,420.

HELM WIND, wind which succeeds cloud shaped like a helm on the Pennine Hills.

HELMUND (31° N., 61° 50′ E.), river, Afghanistan; has its source in Hindu Kush Mountains and flows to Lake of Hamun or Seistan.

HÉLOISE, see ABELARD.

HELOTS, the ancient serf population of Greece and the property of the Spartan State. They are supposed by some authorities to have been the original inhabitants of Laconia. They were employed in agricultural pursuits by the Spartans, and in war were required to perform military service. A revolt of the h's, in 464 B.C., was with difficulty suppressed.

HELPS, SIR ARTHUR (1813–75), Eng. essayist and historian; Clerk to Privy Council (1860–75); author of *Friends in Council*, *Companions of my Solitude*, *Conquerors of the New World*, etc.

HELSINGBORG (56° 2′ N., 12° 42′ E.), port, Sweden; fine harbour, docks; manufacturing centre. Pop. c. 32,000.

HELSINGFORS (60° 14′ N., 24° 57′ E.), capital of Finland (since 1819); strongly fortified; important naval station; has univ.; two cathedrals; excellent harbour; extensive Baltic trade. Pop. c. 169,500.

HELST, BARTHOLOMÆUS VAN DER (1613–70), Dutch artist; lived at Amsterdam; celebrated as portrait painter. One of his best pictures, *The Peace of Münster*, is in the Amsterdam Gallery.

HELSTON (50° 7′ N., 5° 16′ W.), town, Cornwall, England. Pop. (1911) 2938.

HELVETIC CONFESSIONS, ecclesiastical constitutions of Reformed Churches; drawn up in Switzerland; that of 1536 was prepared under influence of Bullinger and Bucer but was largely superseded by the second H.C., written by Bullinger in 1562.

HELVETIC REPUBLIC was established in Switzerland, 1798, after conquest by French.

HELVETII, inhabitants of S. Gaul (modern Switzerland). Cæsar praises their bravery. Their invasions of Italy were suppressed by Cæsar's victory at *Bibracte* and the establishment of Rom. colonies. They were separated from Gaul by Tiberius. The H. gave name HELVETIA to Switzerland.

HELVETIUS, CLAUDE ADRIEN (1715–71), Fr. philosopher; became farmer-general of taxes, 1738, gaining great wealth; retiring to country estate, wrote *De l'esprit*, which evoked storm of abuse. Many have denied its originality. Bentham was influenced by him. H.'s view of morals was utilitarian.

HELY-HUTCHINSON, JOHN (1724–94), Irish lawyer and politician; entered Irish Parliament, 1759; provost of Trinity Coll., Dublin, 1774; Sec. of State, 1777; advocated removal of Catholic disabilities, and free trade.

HELYOT, PIERRE (1660–1716), Fr. Franciscan historian; devoted many years to writing standard celebrated *Histoire des Ordres monastiques, religieux, et militaires*.

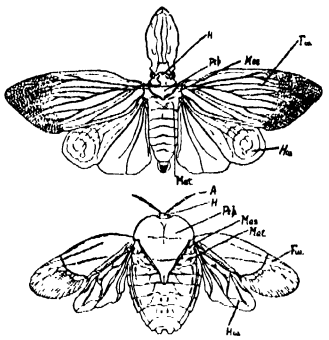
HEMANS, FELICIA DOROTHEA (1793–1835), Eng. poet; b. Liverpool; m. Captain H. (1812), but separated (1818). Her poetry is marked by excess of sentiment.

HEMATITE, see HÆMATITE.

HEMEL HEMPSTEAD (51° 46′ N., 0° 28′ W.), town, Hertfordshire, England; manufactures iron goods, paper. Pop. (1911) 12,888.

HEMEROBAPTISTS, Jewish sect (possibly Essene), whose members observed daily ablution.

HEMICHORDATA, primitive Chordate animals which have a 'notochord' only in the anterior end of the body.



HEMICYCLE, semicircular plan characteristic of Rom. architecture and readopted at the Renaissance.

HEMINGBURGH, WALTER DE (fl. early XIV. cent.), Eng. chronicler; canon of Guisborough, Yorks; trustworthy source.

HEMIPLEGIA, see PARALYSIS.

HEMIPTERA, or BUGS, are *Insecta* invariably characterised by modification of mouth organs to form a suctorial, jointed proboscis, generally flexed so as to occupy a position on under side of body. The wings are four in number as a rule, and are external growths developed in successive moults from the hinder dorsal portions of the middle and posterior body-segments. They differ considerably in character in the two great sub-orders, *Heteroptera* and *Homoptera*,

the pairs varying in texture and folding flat on the back in the former, and in the latter covering the abdomen. The two sub-orders are further distinguished by the extent of the flexure of the head, this being much less in the *Heter.* than in the *Homo.* The young resemble the adult in general features, the transition from the juvenile to the adult being gradual. Amongst the most interesting forms, from an economic standpoint, are the *Aphides* or *Plant Lice*, which often swarm in incredible numbers over the host plant, and the scale insects or *Mealy-bugs*, which form small hard scales on fruit, twigs, etc. The *Anopleura* (Lice, *q.v.*) are degenerate wingless members of this order.

Sketches show (above) HOMOPTERA, *Laternaria phosphorea* (Linn.), and (lower) HETEROPTERA, *Tessaratoma Javanica* (Thunb.). *H*, head; *Pth*, prothorax; *Mes*, mesothorax; *Met*, metathorax; *Fw*, fore-wing; *Hw*, hind-wing; *A*, antennæ.

HEMLOCK, a herbaceous plant, *Conium Maculatum*, natural order *Umbelliferæ*, with white *inflorescence* of compound umbels and purple-spotted fluted *glaucous* stem. The leaves and fruit have a disagreeable odour and contain *alkaloid* poisons.

HEMORRHAGE, see HÆMORRHAGE.

HEMP is an annual herb, *Cannabis sativa*, natural order *Cannabineæ*. Originally an inhabitant of Persia it is now grown in all parts of Europe, because its bast fibres are used in the rope industry. The plant is *diœcious* with opposite lower leaves and deeply *partite* strongly *dentate* rough alternate upper leaves, with two lateral *stipules*. The male *inflorescence* is a *raceme* and the female flowers occur in the axils of the leaves. Petals are absent. The fruit is one-seeded. Intoxicating preparations for drinking and smoking, *e.g.* Arab. *Hashish*, Indian *Bhang*, are made from the female flowers, resin, and leaves.

HEMS, see HOMS.

HEMY, CHARLES NAPIER (1841–), Eng. marine artist; famed for studies of London shipping, and later scenes associated with Falmouth.

HÉNAULT, CHARLES JEAN FRANÇOIS (1685–1770), Fr. historian; wrote *Abrégé chronologique de l'histoire de France*, down to year 1715.

HENBANE, a flowering biennial plant, *Hyoscyamus niger*, natural order *Solanaceæ*. It contains in its leaves and flowers two *alkaloid* poisons, *Hyoscyamine* and *Hyoscine*, and a poisonous oil.

HENDERSON (37° 52′ N., 87° 31′ W.), town, Kentucky, U.S.A.; manufactures textiles, tobacco. Pop. (1910) 11,452.

HENDERSON, ALEXANDER (1583–1646), Scot. Presbyterian divine; prof. at St. Andrews; protested against liturgy in Eng. model; helped to draw up *National Covenant*; one of commissioners to interview Charles I., who liked him; tried to mediate between Charles and Parliament, 1642; Moderator of General Assembly; commissioner to Westminster Assembly; has been called 'the second founder of the Reformed Church in Scotland.'

HENDERSON, EBENEZER (1784–1858), Scot. missionary; travelled in Scandinavia, Russia, and various other countries; returned to England, 1825; an accomplished Oriental linguist.

HENDERSON, GEORGE FRANCIS ROBERT (1854–1903), Brit. soldier and military author; served with distinction in Egyptian campaign; Director of Intelligence in Boer War (1900–1); prof. of Military Art, Staff Coll. (1892–99).

HENDERSON, JOHN (1747–85), Eng. actor; achieved great success in leading Shakespearean parts at Drury Lane and Covent Garden; rival of Garrick; buried, Westminster Abbey.

HENDIADYS (Lat. from Gk. *hen dia duoin*, one by two), term in rhetoric for connecting two equivalent nouns by 'and'; common Virgilian usage, *e.g.* '*Vinclis et carcere frenat*,' or '*Italiam Lavinaque litora*.'

HENDON (51° 36′ N., 0° 14′ W.), town, Middlesex, England; chief English flying ground. Pop. (1911) 38,806.

HENDRICKS, THOMAS ANDREWS (1819–85), Amer. Democratic statesman; vice-pres., 1885.

HENGELO, HENGELOO (52° 16′ N., 6° 47′ E.), town, Holland. Pop. (1910) 20,522.

HENGIST and **HORSA**, two bro. Jutes, the first of the Teutonic invaders, called in to aid the Brit. king, Vortigern (*c.* 450), against the Picts. Horsa was subsequently killed in battle, but Hengist made himself king of Kent (458).

HENGSTENBERG, ERNST WILHELM (1802–69), Lutheran ecclesiastic; studied at Bonn, specially devoting himself to Old Testament and Oriental languages; prof. at Berlin, 1826; vigorously defended conservative positions in Biblical criticism.

HENKE, HEINRICH PHILIPP KONRAD (1752–1809), and his s., **ERNST LUDWIG THEODOR** (1804–72), Ger. ecclesiastical historians.

HENLEY, JOHN (1692–1759), Anglican clergyman, from 1729, at Lincoln's Inn Fields; called 'Orator Henley'; attracted attention by absurd innovations as preacher.

HENLEY, WILLIAM ERNEST (1849–1903), Eng. poet; b. Gloucester; edit. successively *The Magazine of Art*, *National Observer*, and *New Review*; collaborated with R. L. Stevenson in several plays; part author of a Slang dictionary and a *Life* and edition of Burns; a trenchant and fearless critic; wrote some exquisite lyrics.

HENLEY-ON-THAMES (51° 36′ N., 0° 54′ W.), town, Oxfordshire, England; noted for yearly regatta in June. Pop. (1911) 6456.

HENNA, the powdered leaves of *Lawsonia inermis*. These contain a red stain used, in Persia and India, to dye the finger-nails, etc.

HENNEBONT (47° 50′ N., 3° 17′ W.), town, W. France; tin foundry. Pop. *c.* 7250.

HENNEQUIN, PHILIPPE AUGUSTE (1763–1833), Fr. hist. painter and engraver patronised by Napoleon. His grandson, ALFRED NÉOCLES (1842–87), was a prominent comic playwright.

HENNER, JEAN JACQUES (1829–1905), Fr. painter; noted for his figure drawing.

HENRIETTA MARIA (1609–66), consort of Charles I. of Great Britain; dau. of Henry IV. of France; raised money for king during Civil War; encouraged impeachment of five members; fled to France, 1644; twice visited England after Restoration.

HENRY I., BEAUCLERC (1068–1135), king of England; youngest s. of William the Conqueror; succ., 1100. Elder bro., Robert, claimed crown, but was defeated and imprisoned, his duchy of Normandy being added to H.'s dominions. Various conspiracies formed in Normandy in favour of Robert's s., William, were supported by Fr. king, whom H. defeated at *Brémule*, 1119. H.'s son William was drowned in *White Ship*, 1120. Exchequer was instituted in this reign.

HENRY II. (1133–89), king of England; s. of Matilda and Geoffrey Plantagenet; grandson of Henry I.; succ., 1154; revoked Stephen's grants of crown lands, and revived King's Court and Exchequer; at first supported by his minister, Becket, whom he cr. abp.; quarrelled with Church, issued Constitutions of Clarendon, 1164, which Becket opposed; after latter's murder, 1170, H. had to make various concessions to Church; conquered Ireland, 1172; crushed

barons' rebellion, 1173, and reduced their power by legal reforms; sons intrigued against H. towards end of reign. *Life*, by Green (1888).

HENRY III. (1207–72), king of England; succ. his f., King John, 1216; during minority French were expelled from England; assumed government, 1227; unsuccessfully invaded Poitou, 1230; defeated at *Taillebourg*, 1242; aimed at arbitrary power; left many important offices vacant; aroused hostility of barons, who compelled him to assent to Provisions of Oxford, 1258, subsequent annulment of which resulted in outbreak of Barons' War; H. defeated at *Lewes*, 1264; henceforth a cipher. See *Misrule of Henry III.*, edit. by Hutton.

HENRY IV. (1367–1413), king of England; s. of John of Gaunt; fought in East, 1392–96; helped to suppress Gloucester's rebellion, 1397; banished, 1398. On Richard II.'s seizing his estates, H. invaded England, defeated Richard, and became king, 1399; defeated Scots, 1402; defeated Percies, who had joined Glendower's revolt, at *Shrewsbury*, 1403; crushed Scrope's rebellion, 1405; subdued Percies, 1408, and ended Welsh rebellion; opposed Lollards. See *History of England under Henry IV.*, by Wyllie.

HENRY V. (1387–1422), king of England; s. of Henry IV.; succ., 1413; repressed Lollards; invaded France and won battle of *Agincourt*, 1415; successfully besieged Rouen, 1417–19; formed alliance with Philip of Burgundy, 1419; m. Princess Catherine of France; attained regency of France and succession to Fr. crown by Treaty of Troyes, 1420; spent remaining years in suppressing Fr. risings against Eng. rule; took Meaux, 1422.

Lives, by Church (1859); Kingsford (1902).

HENRY VI. (1421–71), king of England; s. of Henry V.; succ., 1422; minor till 1442; Cade's rebellion suppressed, 1450; Fr. possessions lost, 1453; insane in 1453, subsequently recovered. Wars of Roses began, 1455; ended in 1461 with H.'s defeat, when Edward IV. became king. H. was murdered in Tower, 1471. He founded Eton School, and King's Coll., Cambridge.

HENRY VII. (1457–1509), king of England; founder of Tudor line; half-bro. of Henry VI.; m. Edward IV.'s dau. Elizabeth; defeated Richard III. at *Bosworth Field* (1485), and became king; instituted Court of Star Chamber (*q.v.*), 1487; suppressed Lambert Simnel's rebellion by victory at *Stoke*, 1487; supported Brittany against France; formed alliance with Span. and Ger. kings, and invaded France, 1492; concluded commercial treaty with Flanders, 1496; overthrew Perkin Warbeck's insurrection, defeating his supporters at Blackheath, 1497; amassed large fortune; strengthened crown at expense of nobles.

Life, by Gardiner (1889).

HENRY VIII. (1491–1547), king of England and Ireland; second s. of Henry VII.; succ., 1509, and m. Catharine of Aragon, his bro.'s widow; invaded France, winning *Battle of Spurs*, 1514; held conclave with Francis I. at Field of Cloth of Gold, 1520, but sided with Francis's rival, Charles V.; made peace with France in 1527. Having no male heir, H. desired divorce; Wolsey's failure to obtain the necessary papal decree led to his downfall. H. disavowed papal supremacy in England, and, with Cromwell's aid, broke with Rome and established himself as head of Eng. Church; divorced Catharine, 1533, and m. Anne Boleyn, who was beheaded in 1536; dissolved monasteries, 1536, and put down Pilgrimage of Grace, 1537. After Anne Boleyn's execution, H. m. Jane Seymour, their son afterwards reigning as Edward VI.; subsequent wives were Anne of Cleves, Catharine Howard and Catharine Parr. Later years marked by wars with France and Scotland; led expedition to France; took Boulogne, 1544. See ENGLAND: *History*.

Pollard, *Henry the VIII.* (1905); Hume, *The Wives of Henry VIII.*

HENRY I., THE FOWLER (*c.* 876–936), Holy Rom. emperor; duke of Saxony, 912; elected king of Romans, 919; acquired Lorraine, 923; defeated Slavs, Danes, Hungarians.

HENRY II., THE SAINT (973–1024), Holy Rom. emperor; succ. Otto III., 1002; king of Italy, 1004; crowned emperor at Rome, 1014; waged intermittent war with Poland, 1002–18; liberated Bohemia from Polish yoke, 1004; concluded peace at Bautzen, 1018; supported Benedict VIII. against Greeks, 1021.

HENRY III., THE BLACK (1017–56), Holy Rom. emperor; s. of Conrad II.; Ger. king, 1028; emperor, 1039; waged war with Bretislaus of Bohemia, whom he finally forced to acknowledge his suzerainty, 1041; defeated Hungarians, 1045, and reinstated Peter of Hungary; crowned emperor by Clement II., whose election to papal chair he had obtained; put down rebellion in Lorraine, 1050; built Worms, Mainz, and Spires cathedrals.

HENRY IV. (1050–1106), Holy Rom. emperor; s. of Henry III. elected Ger. king, 1053; emperor, 1056; engaged in struggles with Swabia and Carinthia; deposed and defeated Otto of Bavaria, 1071; waged war against Saxony and Thuringia, 1073–88; came into conflict with Pope Gregory VII. (*q.v.*), who excommunicated him in 1076, and forced him to do penance at Canossa, 1077. H. subsequently repudiated his vow of obedience, deposed pope, and elected antipope, Clement III.; invaded Italy, 1081; took Rome, 1083; was crowned emperor, 1084. Ger. princes elected another king, but H. gradually overcame all opponents. Later years marked by further disputes with popes and Ger. princes; abdicated, 1105.

HENRY V. (1081–1125), Holy Rom. emperor; s. of Henry IV.; elected Ger. king, 1098; emperor, 1106; subdued Robert of Flanders, 1106; reign marked by dispute with pope concerning investitures. H. took Paschal II. prisoner, 1111; was excommunicated, 1112; ban removed and dispute settled by Concordat of Worms, 1122; waged intermittent war with Lothair of Saxony; later years marked by war in Holland and invasion of France.

HENRY VI. (1165–97), Holy Rom. emperor; s. of Frederick I.; elected Ger. king, 1169; m. Constance, heiress to throne of Sicily, 1186; crowned king of Italy, 1186; emperor, 1191; succession to Sicily opposed by Tancred, after whose death H. became king; coalition formed against him in Germany, 1191, but he put down all opponents both there and in Italy.

HENRY VII. (*c.* 1269–1313), Holy Rom. emperor; s. of Henry III., Count of Luxembourg; elected Ger. king, 1308; emperor, 1309; tried to unite Germany and Italy, and was crowned at Milan, 1311; revolts occurred, in dealing with which he met with little success; d. while marching to Naples.

HENRY I. (1008–60), king of France; waged war with Odo, Count of Blois, and William, Duke of Normandy.

HENRY II. (1519–59), king of France; persecuted Protestants; recovered Boulogne from England, 1550; took Metz, Toul, Verdun, from Emperor Charles V.; recovered Calais, 1558.

HENRY III. (1551–89), king of France; reign marked by war between Catholics and Huguenots; participated in massacre of St. Bartholomew, 1572; very dissolute; assassinated.

HENRY IV., HENRY OF NAVARRE (1553–1610), king of France; king of Navarre, 1562; leader of Huguenots; m. Margaret of Valois, sister of Charles IX., 1572; succ. to Fr. throne, 1589; had to fight Spain and the League; became Catholic, 1593; peace with Spain, 1598; passed Edict of Nantes in favour of Huguenots, 1598; developed agriculture and commerce; introduced silk industry; carried out financial reforms; directed influence against Hapsburgs; assassinated by Ravaillac. See FRANCE: *History*.

Henry of Navarre, Willert.

HENRY I. (*c.* 1210–74), king of Navarre; s. of Theobald I.; m. Blanche of Artois; his dau. Johanna

m. Philip IV., by which marriage the crowns of Navarre and France were united.

HENRY II. (1503–55), titular king of Navarre; s. of Jean d'Albret; his claim to the crown, in right of his wife Catherine of Navarre, was successfully disputed by Ferdinand I. of Spain. He m. Margaret, Duchess of Alençon, and had issue, Jeanne d'Albret, mother of Henry IV. of France.

HENRY VII. (1211–42), Ger. king; elected, 1220; led rebellion against f., Emperor Frederick II., 1233, but submitted, 1235; imprisoned.

HENRY RASPE (*c.* 1202–47), Ger. king; aided Emperor Frederick II.; Landgrave of Thuringia, 1242; Ger. king, 1246; defeated Conrad.

HENRY II. (1489–1568), duke of Brunswick-Wolfenbüttel; opposed Reformation; defeated by League of Schmalkalden, 1542; defeated Albert of Bayreuth, 1553.

HENRY I. (1512–80), king of Portugal; succ., 1578, and proved a feeble administrator. He had previously held the archbishopries of Braga, Lisbon, and Coimbra; was cr. cardinal, 1542.

HENRY, four kings of Castile.—HENRY I., reigned 1214–17.—HENRY II. (1333–79), became king, 1369, after killing bro., Peter the Cruel; supported France against England.—HENRY III. (1379–1406), succ., 1390; called Cortes to Madrid, 1394.—HENRY IV. (1425–74), succ., 1453; deposed, 1468.

HENRY (*c.* 1174–1216), emperor of Constantinople; s. of Baldwin, Count of Flanders; shared in Fourth Crusade; noted for bravery, toleration, and wise administration.

HENRY STEWART (1725–1807), Cardinal York, was younger son of James, the Old Pretender, bro. of Charles Edward, the Young Pretender; cr. cardinal, 1747; called himself 'Henry IX.' on death of his bro., 1788.

HENRY THE MINSTREL, see HARRY.

HENRY THE PROUD (*c.* 1108–39), duke of Saxony and Bavaria; put down revolt in Bavaria; supported Lothair against Hohenstaufens.

HENRY, PRINCE OF BATTENBERG (1858–96), s. of Prince Alexander of Hesse and Countess von Hauke; m. Princess Beatrice of England, 1885; engaged in Ashanti War; d. off Sierra Leone.

HENRY FITZ HENRY (1150–83), Eng. prince; 2nd s. of Henry II., and subsequently heir to the throne; was frequently at variance with his f.; famed for knightly accomplishments; d. of fever.

HENRY OF BLOIS (1101–71), bp. of Winchester (1129); nephew of Henry I. and bro. of King Stephen; papal legate, 1139–44; ardent ultramontanist; quarrelling with Stephen, proclaimed their cousin Matilda queen, 1141; reverted to Stephen's side; but never regained his favour.

HENRY OF HUNTINGDON (*c.* 1084–1155), Eng. chronicler; was archdeacon of Huntingdon; his *Historia Anglorum* extended to 1154, and was first pub. 1596.

HENRY OF GERMANY (1235–71), s. of Richard, Earl of Cornwall, bro. of Henry III.; murdered as a Royalist by Simon de Montfort's sons.

HENRY OF PORTUGAL, THE NAVIGATOR (1394–1460), Portug. prince; s. of John I. and Philippa, John of Gaunt's dau.; served with great distinction at siege of Ceuta, 1415; subsequently took great interest in navigation and discovery, and for years sent expeditions along W. coast of Africa at his own expense; among his discoveries were the Madeira Islands and Azores, where he established colonies; constructed observatory at Sagres, near Cape St. Vincent; in later years he again distinguished himself in the field in Morocco, and took Alcazar the Little in 1458; encouraged education.

Raymond Beazley, *Prince Henry the Navigator* (1895).

HENRY OF TOULOUSE, or DE BRUYS (fl. early XII. cent.), Fr. evangelist who influenced development of the Albigensian movement (*q.v.*); preached moral reformation rather than new tenets, but attacked the Church and caused the personal intervention of St. Benedict, who crushed the movement.

HENRY, EDWARD LAMSON (1841–), Amer. painter; noted for character studies.

HENRY, JOSEPH (1797–1878), Amer. physicist; prof. of Natural Philosophy at Princeton, and later sec. and director of Smithsonian Institution; introduced insulated or silk-covered wire for magnetic coils, and conducted researches on phosphorescence, solar spots, and heat radiation, and the acoustics of public buildings. His investigations on illuminants enabled him as a member of the Amer. Lighthouse Commission to provide America with very perfect beacons and fog-signals.

HENRY, MATTHEW (1662–1714), Welsh Presbyterian preacher; held charges at Chester and Hackney; famed as author of *Exposition of the Old and New Testaments*, a work of sincerity and charm, left unfinished at his death.

HENRY, PATRICK (1736–99), Amer. orator and politician; in Virginia legislature spoke against Stamp Act and drew up Virginia Resolutions, 1765; delegate to Continental Congress at Philadelphia, 1774; gov. of Virginia, 1776–79, 1784–86; supported Washington; retired, 1791.

HENRY, ROBERT (1718–90), Scot. historian and divine; author of widely read *History of Gt. Britain*.

HENRYSON, ROBERT (*c.* 1430–1506), Scot. poet; disciple of Chaucer; wrote in 'Middle Scots'; schoolmaster in Dunfermline; possessed of humour and descriptive powers; author of *Moral Fables of Esope*, *The Testament of Cresseide* (sequel to Chaucer's *Troilus and Cressida*), and the early pastoral, *Robene and Makyne*. *Works*, edit. by D. Laing (1865).

HENSLOW, JOHN STEVENS (1796–1861), Eng. scientist; prof. of Mineralogy, and later of Bot., at Cambridge. His discoveries established the *phosphate industry* in England.

HENSLOWE, PHILIP (d. 1616), Eng. theatre owner; built the 'Rose' and 'Fortune' theatres, and held shares in others, where many famous Elizabethan plays were performed. His *Diary* (MS. in Dulwich Coll.) contains valuable information relative to his period.

HENTY, GEORGE ALFRED (1832–1902), Eng. war correspondent and boys' author; served in purveyor's department in Crimea; acted as newspaper correspondent in Franco-Prussian and Turco-Servian Wars and other campaigns; wrote about eighty popular historical and military stories for boys.

HENZADA (17° 36′ N., 94° 27′ E.), town (and district), Brit. Burma, India. Pop. c. 25,000. District has area of 2871 sq. miles. Pop. 484,558.

HEPATICÆ, see BRYOPHYTA.

HEPATITIS, see LIVER.

HEPBURN, SIR JOHN (*c.* 1598–1636), Scot. soldier of fortune; commanded the Scot. brigade in army of Gustavus Adolphus; subsequently entered Fr. service, and performed many brilliant services; killed at siege of Zaberu.

HEPHÆSTION (d. 324 B.C.), Macedonian soldier who m. Drypetis, sister of wife of Alexander the Great, whose inseparable friend he was.

HEPHÆSTION (II. cent. A.D.), Gk. grammarian; wrote a valuable work on Gk. prosody; Eng. trans. by Barham (1843).

HEPHÆSTUS (classical myth.), the god of fire and metal-working (Roman **Vulcan**); s. of Zeus and Hera; lame from birth; was flung from Olympus by his f., whose anger he had incurred. He forged

the thunderbolts of Zeus, made the armour of Achilles, the crown of Ariadne, etc. The chief seat of his worship was the isle of Lemnos.

HEPPENHEIM (49° 39′ N., 8° 37′ E.), town, Hesse-Darmstadt, Germany. Pop. (1910) 7050.

HEPPLEWHITE, GEORGE, noted Eng. cabinet-maker, who fl. during latter portion of XVIII. cent.; contemporary of Chippendale, but his work was of a lighter and more elegant character. Painted designs upon satinwood were a feature of many of his productions.

HEPTAMERON, see MARGARET OF NAVARRE.

HEPTARCHY, condition of government by seven persons; generally applied to the 'Saxon H.' in Britain, dating from about the VI. cent., when the country was divided into seven kingdoms: Kent, Sussex, Wessex, Essex, Northumbria, East Anglia, and Mercia.

HEPTATEUCH, first 7 books of Old Testament.

HERA (classical myth.), known by the Romans as **Juno,** dau. of Cronus and Rhea; wife of Zeus; mother of Hephæstus, Ares (Mars), Hebe, and Eileithyia. As queen of heaven she participated in the supreme honours paid to Zeus; famed as the embodiment of wifely chastity; celebrated for her surpassing beauty, of which she was extremely vain. She was devoted to the Greeks and their country, and was principally worshipped at Argos and Samos.

HERACLEA, several ancient Gk. towns.—H. LUCANIA, where Pyrrhus defeated Romans, 280 B.C.; H. MINOA, Sicily, naval post of Carthaginians. H. PONTICA, Bithynia, destroyed by Romans, I. cent. B.C.

HERACLEON (fl. II. cent. A.D.), Gk. gnostic and Biblical commentator.

HERACLEONAS, Byzantine emperor for a short space in 641 A.D.

HERACLES, see HERCULES.

HERACLIDÆ, children of Heracles, who sought asylum in Athens from Eurystheus, king of Mycenæ. After several unsuccessful attempts they conquered the Peloponnesus and founded the kingdoms of Sparta, Messenia, and Argos.

HERACLIDES OF PONTUS (IV. cent. B.C.), Gk. philosopher.

HERACLITUS (*c.* 540–475 B.C.), Gk. philosopher; of aristocratic birth; called the *Weeping Philosopher*; did much for study of metaphysics; thought 'everything is and is not,' and that in diversity true unity was to be found; fire is the original principle, and out of it the soul was created.

HERACLIUS (*c.* 575–642); Byzantine emperor; beset by Avars from Danube, and by Persians in East; made Treaty with Avars, 620; defeated Persians, 627–28; lost Syria and Egypt to Arabs.

HERALD, originally an officer whose duty it was to convey messages from commander of force to his opponent; function afterwards included making military proclamations of all kinds, and, later, superintending public ceremonies and processions. About XIV. cent. colleges of h's were founded in most European countries to record armorial bearings of nobility and gentry.

HERALDRY, science of blazoning coats of arms. *Armorial bearings,* or devices blazoned on shields, were unknown in England at time of Norman Conquest; by XIII. cent. they were in general use throughout Europe, and a regular science of h. had been developed; probably largely influenced by the crusades, as in warfare, where closed helmets rendered recognition impossible, some bold representation on the shield, as mark of identity, became necessary to the leaders. These being of the upper class, armorial bearings came to be prerogative of that class, and were, and still remain, the outward sign of noble or gentle rank, the granting or creation of which rests with the sovereign.

In mediæval times the undifferenced arms belonged to a single holder, from whom it descended to his heirs, while cadet branches had to show their cadency by various marks of difference. Marks of difference are still in use, although not compulsory in England; the *label,* a file of three points placed across top of shield, is now properly used only by the eldest son, while the signs of younger sons are the crescent, mullet, martlet, amulet, etc.; these marks are quite small, and are generally placed in centre near top of shield. *Marshalling* arms is the disposition of several coats of arms on the same shield, to show descent, marriage, alliance, etc. In modern times, when a man marries an heiress the two coats of arms are generally marshalled by the wife's arms being shown on a small escutcheon superimposed on the husband's coat; and their children bear the two coats quarterly, the father's arms in the first and fourth quarters, the mother's in the second and third. When the wife is not an heiress the arms are marshalled by impalement, *i.e.* the shield is parted and the husband's arms are shown on right side, and wife's on left.

Technical name for whole device is *achievement,* which consists of arms (shield and device), helmet, mantling, wreath, crest, and motto. Other adjuncts are supporters, compartment, *cri-de-guerre,* standard, badge, augmentation, all of which may be possessed by commoners. Knights of any order may have circle and badge of order, and peers may add coronet of rank. *Shield* consists of coloured background called the field, and device thereon known as charge; it varies in shape. *Helmet,* placed above shield, may vary in shape, style, and design, but certain rules regulate its position and form. *Mantling* is cloth hanging from point on top of helmet; originally plain cloth to protect armour from weather. *Wreath* is used to attach crest to helmet; originally a fillet of silk twisted round it. *Crests* only came into general use in England in XVI. cent. and are now most important adjunct of armorial bearings. *Mottoes* are a late development and only appeared when standard was represented as a drawing and no longer carried in battle; they became usual in late XVII. cent. *Supporters* are granted to Knights of the Garter, Thistle, St. Patrick, and to Knights Grand Cross and Grand Commander of any order who petition and pay for them, and to peers. They are sometimes granted as mark of royal favour. The *compartment* is for the supporters to stand upon; generally a golden scroll. *Cri-de-guerre* is very exceptional; it was a family battle-cry and could be inserted on standard. *Badges,* simple devices used for purpose of speedy recognition, date from even earlier times than armorial bearings. *Standards* originally represented arms, like the shield, but were later charged with badge, as more easily recognisable. *Augmentations* are additions to existing arms granted by sovereign for services rendered; they may be supporters, additional crest, innerscocheon, etc. Peers' coronets, another accessory to shield, are gilt metal circlets varying in pattern according to rank.

Turning to details of shield, the *field* is the tincture of the background, which may be a colour, metal, or fur. Colours are *gules, azure, sable, vert, purpure* (red, blue, black, green, purple); metals, *or* and *argent* (gold, silver); principal furs, *ermine* (white, with black spots), *ermines* (black, with argent spots), *erminois* (gold, with black spots), *vair,* and *potent* (silver and blue in alternate divisions). The field may be of one or more tinctures, variously disposed. Partition lines are generally plain, but there are twelve varieties of such lines, named *engrailed, invected, embattled, indented, dancetty, wavy, nebuly, raguly, potenté, dovetailed, flory,* and *rayonné.*

The ordinary charges, called *ordinaries,* are nine in number. The *pale, fesse,* and *bend* are bands which respectively cross shield perpendicularly, horizontally, and diagonally. *Cross* is a common bearing from very early times and occurs in various forms, as *cross flory, cross pateé, cross botonny,* etc. *Saltire* is a diagonally set cross, in form of St. Andrew's cross.

Chevron, an early charge, resembles a gable. *Pile* is wedge-shaped device from chief to foot of shield. *Chief* is band at top of shield. *Quarter* is dexter top quarter of shield. Pale, bend, saltire, and chevron all have diminutives, respectively *pallet, bendlet, gyron, chevronel.* Diminutive of quarter is *canton*; of canton, *chequer. Fesse* duplicated becomes a *bar*; diminutive, *barrulet.* Other ordinary charges are the *lozenge*, diamond-shaped figure; *flaunches*, sides of shield cut off by curved lines; *innerscocheon*, small superimposed shield; *tressure*, inner border of shield decorated by fleur-de-lys; *mascle, voided lozenge*; *fret*, voided lozenge and saltire interlaced.

Principal animal used as heraldic charge is lion, whose position may be *rampant, passant, statant, sejant, sejant-erect, couchant, dormant*, or *salient.* A lion full faced is *guardant*; head looking backwards, *regardant.* These terms supposed to apply to all heraldic animals with few exceptions. Mythical animals represented are dragon (four-legged), wyvern (two-legged), griffin, unicorn, pegasus, and other winged animals. Other animals are given sea characteristics, series including mermaids, sea-wolves, sea-lions; etc. Eagle is most important bird represented in armoury, it is generally found *displayed* (with spread wings), and often double-headed. Other positions of birds are *close, volant;* and *rising.* Pelican resembles eagle. Peacock with spread tail is called 'peacock in his pride.' Fish are less frequent; positions are *hauriant* (erect) and *naiant* (swimming). Flowers and trees often occur; fleur-de-lys is generally considered a conventional iris; rose is represented without stalk or leaves; unless mentioned; trefoil, quatrefoil, and cinquefoil are conventional forms of leaves.

Fox-Davies, *The Art of Heraldry* and *A Complete Guide to Heraldry* (1910); Woodward, *Treatise on Heraldry*; Planché, *The Pursuivant of Arms.*

HERAT (34° 26′ N., 62° 8′ E.), city, in Afghanistan, situated on Hari-Rud, 2500 ft. above sea-level; owing to central position, of great hist. and political interest, and formerly of commercial importance. Once a large city with magnificent buildings, now a mass of ruins; strongly fortified by ditch, walls with 5 gates, and a citadel on N. side; built in form of quadrangle, with 4 principal streets (called Chahar-Suk) meeting in centre; other streets filthy and almost desolate. Great Mosque, or Mesjid-i-Juma, remains of mosque of Mosa-alla, tomb of Abdullah Ansari, ruined palaces of Bagh-i-Shah and Takhd-i-Sefer, marble mausoleums, and other ruins testify to former splendour.

H. was scene of struggles throughout history of Central Asia; date of foundation unknown; flourished under princes of house of Timur, when finest buildings were erected; captured by Shah (1856), but forced to surrender, 1863.

Surrounding country fertile and well irrigated; chief exports: dried fruits, rice, dyes, carpets, silk, wool, raw, hides, and leather-ware. Pop., including Persians, Tajiks, and Chahar-Aimaks, 12,000.

HÉRAULT (43° 30′ N., 3° 20′ E.), S. department, France; area, 2402 sq. miles; surface rises from S. coastal plain to Cévennes in N.W.; drained by Hérault, Orb; wine, fruits, coal; chief town, Montpellier. Pop. (1911) 480,484.

HÉRAULT DE SÉCHELLES, MARIE JEAN (1759–94), Fr. lawyer and politician; supported Revolution; Pres. of Legislative Assembly, 1792; of Convention, 1793; executed for treason.

HERBARIUM, or HORTUS SICCUS, a classified collection of plants which have been dried and preserved so that their characteristic features are illustrated as far as possible. The plants should be as perfect specimens as can be obtained, and should be accompanied by seeds and drawings or photographs illustrating such points as are lost in dried material. Each should be mounted on a sheet of stout paper ($16\frac{1}{2}'' \times 10\frac{1}{2}''$ is standard size) and should bear a label giving the genus and species, locality, collector, and other important details. Where the specimen is too large to be accommodated on the sheet, it should be marked in such a way as to indicate the parts originally joined. Specimens should be dried rapidly and poisoned by immersion in a weak alcoholic solution of corrosive sublimate before mounting.

HERBART, JOHANN FRIEDRICH (1776–1841), Ger. philosopher; studied at Jena; lecturer at Göttingen, 1805; prof. at Königsberg, 1809; prof. of Philosophy, Göttingen, 1833–41. The importance of H.'s work is largely in psychology, and he arrived at his results by a combination of metaphysics, mathematics, and experience. He believed the soul to be a simple being, having relations with other simple beings, which relations he called presentative activities. These may be either above the threshold (conscious) or below it (unconscious). They affect each other when they are together above the threshold. His theories and his applications of mathematical symbols to psychology have not won entire acceptance, but much of his work is of permanent value. He worked, too, at the application of psychology to pedagogy.

HERBELOT DE MOLAINVILLE, BARTHÉLEMY D' (1625–95), Fr. Orientalist, chiefly known for his monumental work, the *Bibliothèque Orientale*, completed by another hand after his death.

HERBERAY DES ESSARTS, NICOLAS DE (d. *c.* 1557), Fr. prose writer, chiefly noted for translation, *Amadis de Gaul.*

HERBERT, Eng. family. Sir William H. became 1st Earl of Pembroke, 1468; title extinct on death of 2nd earl, 1491, but was in 1551 granted to William H., s. of Richard, an illegitimate s. of 1st earl. To same family belong marquesses of Powis and earls of Carnarvon.

HERBERT, GEORGE (1593–1633), Eng. ecclesiastic and poet; after vainly seeking preferment at court, took orders, and was made rector of Bemerton, Wilts (1630); famed for piety and kindliness of disposition. In *The Temple: Sacred Poems and Private Ejaculations*, pub. the year after his death, are some of the finest religious poems in the language; d. of consumption. *Life*, by Izaak Walton.

HERBERT, HENRY WILLIAM (1807–58), Eng. novelist and sporting writer; wrote, under the name of 'Frank Forester,' *Field Sports of the United States, Young Sportsman's Complete Manual*; also historical works, including *The Chevaliers of France, The Captains of the Old World*, etc.

HERBERT, SIR THOMAS (1606–82), of York city, Eng. traveller in the East who wrote valuable travels.

HERBERT, VICTOR (1859–), Amer. musician and composer; b. Dublin; has pub. comic operas.

HERBERT OF CHERBURY, EDWARD, BARON (1583–1648), Eng. soldier, diplomat, and writer; b. at Eyton-on-Severn; fought in Netherlands, 1610, 1614; ambassador to France, 1619–21, 1622–24; having been imprisoned by Parliament in 1642, he took no part in Civil War. Author of *De Veritate*, an important metaphysical work, *De Religione Gentilium*, a comparative history of religion and other philosophical treatises. Hist. works are *Life and Raigne of Henry VIII.* and *Expeditio Buckinghami ducis.*

HERBERT OF LEA, BARONY OF, Sidney H., younger s. of Earl of Pembroke, was War Minister during Crimean War, and cr. Baron H. of Lea in 1861; his s. and heir succ. to Earldom of Pembroke, with which dignity this barony then coalesced.

HERBERTON (17° 22′ S., 145° 15′ E.), mining town, Queensland, Australia. Pop. 2806.

HERB-ROBERT, see GERANIUM.

HERBS, plants with no woody tissue in stems.

HERCULANEUM, ruined city of Italy, situated at eastern base of Mt. Vesuvius. In 79 A.D. it was annihilated by eruption, when a stream of lava and shower of ashes covered it so completely that it was lost sight of for cent's; since early XVIII. cent., however, excavations have been more or less constantly going on,

and now a good part of the city is open to view, including the theatre and two small temples; the discoveries render possible the reconstruction of domestic life of the ancients, and many beautiful wall-paintings and statues have been brought to light, as well as philosophical MSS., coins, mosaics, etc. City was traditionally connected with Hercules; taken by Romans in Samnite Wars, and again in Social War, 88 B.C.; an important town at time of its destruction.

Waldstein and Shoobridge, *Herculaneum Past, Present, and Future* (1908).

HERCULANO DE CARVALHO E ARAUJO, ALEXANDRE (1810–77), Portug. historian and poet; b. at Lisbon; lived in France and England, 1831–32; took part in occupation and defence of Oporto, 1832; author of *Historia de Portugal, History of Origin and Establishment of the Inquisition.*

HERCULES, HERACLES (classical myth.), s. of Zeus and Alcmene, wife of Amphitryon, king of Thebes. As he grew to manhood he became celebrated for his great stature, strength, and beauty. He performed many feats of valour. Subsequently he was driven mad by the enmity of Hera, and killed his own children. At a later date, Eurystheus, king of Mycene, imposed upon him the punishment of twelve great labours: to slay the Nemean lion; to destroy the Hydra; to capture the Arcadian stag; also the Erymantian boar; to cleanse the Augean stables; to slay the Stymphalian birds; to capture the Cretan bull; to capture the wild mares of Diomedes; to secure the girdle of Hippolyte, the Amazon; to capture the oxen of the giant, Geryon; to obtain the golden apples of the Hesperides; and to bring up Cerberus from the lower world.

Winter, *Myth of Hercules at Rome* (1910).

HERD, a company of animals, usually cattle, assembled or driven together.

HERDER, JOHANN GOTTFRIED VON (1744–1803), Ger. author; b. Mohrungen (East Prussia); studied med. and theology at Königsberg, 1762–64; greatly influenced by Kant and Hamann; teacher at Riga, 1764–69, where he wrote *Fragmente über die neue Deutsche Litteratur* and *Kritische Wälder* (prose works); visited France, 1769; intimate friends with Goethe at Strassburg, 1770; court preacher at Bückeburg, 1771–75; to this period belong *Über den Ursprung der Sprachen* (1772), *Von Deutscher Art und Kunst* (1773), *Auch eine Philosophie der Geschichte zur Bildung der Menschheit* (1774), prose works; app. court preacher at Weimar, 1776; *Volkslieder* (1778–79, songs and ballads), *Vom Geist der Hebräischen Poesie*, 1782, *Ideen zur Philosophie der Geschichte der Menschheit* (pub. 1785–94), prose works, and his famous translations of the *Span. Romances of the Cid* rank as his best works; exercised powerful influence on Romantic Movement.

HEREDIA, JOSÉ MARIA DE (1842–1905), Fr. poet, chief of the 'Parnassiens'; pub. *Les Trophées* (1893), a series of sonnets, a poetical history of humanity, the work of thirty years, perfect of their kind.

HEREDIA Y CAMPUZANO, JOSÉ MARIA (1803–39), of Cuba; one of greatest Span. poets of the cent.

HEREDITAMENT, legal term for hereditable possession; 'tenements and h's' is constant phrase of land conveyance.

HEREDITY is a term which expresses in a word the most obvious relationship in ancestry—that children resemble in general and even in particular their parents and forebears, that like begets like. The recognition of h. is an old story, but Darwin gave new life to the critical study of its significance, and as a result of innumerable researches the obscurity in which genetic relationship was shrouded has been partly dispelled.

The means of ancestral resemblance lies in the continuity of the germ plasm, in the fact that there are set aside definite cells which are handed down from generation to generation, and that from this continuous line of sexual cells each succeeding generation arises. Heredity is thus the total inheritance with which a new generation starts, before outside influences, 'nurture,' have played upon it. The inheritance obviously depends on both parents, but it may be expressed in various ways in the offspring. When parents derived from a long line of the same pure-bred stock are paired, the characters of the pure breed are as a rule obvious to the minutest detail in the progeny, as any breeder can testify; but the mating of non-selected parents gives different results. Thus the offspring may exclusively resemble in one or all of its characters only one of its parents (exclusive inheritance), or it may be a compound of its progenitors' characters, a piebald foal, let us say, resulting from diversely self-coloured parents (particulate inheritance). Again, a blending of features may take place, as when a tall pea is fertilised by pollen from a dwarf pea, and a pea of intermediate height results (blended inheritance); or the children may not resemble their parents at all, but may 'throw back' to some more distant ancestor, as when the indiscriminate interbreeding of domesticated rabbits of different colours finally results in the production of greys like the ancestral wild rabbit (reversion). Lastly, the offspring may break away from its ancestral line, and produce a new feature of its own, such an occurrence being known as a sport, freak, or discontinuous variation. See also MENDELISM, HYBRIDS, and EVOLUTION.

HEREFORD (52° 3′ N., 2° 43′ W.), city, municipal and parliamentary borough, Herefordshire, England, pleasantly situated on Wye; contains beautiful cathedral, with various styles of architecture from Norman to Perpendicular; chief features are central tower, north porch, bp.'s cloisters, and tower called Lady Arbour; other interesting buildings are: Coll. of Vicars Choral, churches of All Saints and St. Peter's, shire hall, town hall, and county coll.; in olden times frequently attacked by Welsh; trades chiefly in agricultural produce. Pop. (1911) 22,568.

HEREFORDSHIRE (52° 10′ N., 2° 45′ W.), county, England, on Welsh border; bounded N. by Shropshire, E. by Worcestershire, S. by Monmouth and Gloucestershire, W. by Radnor and Brecknock; area, 833 sq. miles; chief towns are Hereford (capital), Leominster, Ross, and Ledbury; rich, fertile county, well watered by Wye, celebrated for its beauty, and its tributaries, Lugg, Arrow, Frome, and Monnow; hills separate various valleys; in E. are Malvern Hills and in S.W. Black Mts. Soil produces fine wheat, barley, and hops; orchards occupy large area; celebrated cattle, sheep, and horses reared; cider-making main industry carried on; good salmon and trout fishing; limestone quarries at Ledbury; some iron foundries.

There are remains of border castles at Wilton, Goodrich, Pembridge, Kilpeck, Loughtown, and Wigmore; fine cathedral at Hereford; some beautiful half-timbered houses and mansions; many interesting churches, most notable being those at Ledbury, Leominster, Moccas, Abbey Dore, Madley, and Ross. Pop. (1911) 114,269.

HERENCIA (39° 20′ N., 3° 25′ W.), town, Ciudad Real, Spain; soap. Pop. 6000.

HERENTHALS (51° 11′ N., 4° 51′ E.), town, Anvers, Belgium; lace. Pop. *c.* 8000.

HERERO, OVAHERERO, Bantu race inhabiting Damaraland, Ger. South-West Africa.

HERESY (Gk. 'choice'), used classically of a sect. In New Testament used of Pharisees and Sadducees, and by St. Paul of parties within the Church. Gradually h. came to mean theological difference, and has generally denoted any departure from the recognised belief of the Church. It is often said that the growth of h. within the Church forced her to define dogmas, that is the contradiction of opposition to that which had always been accepted, but never defined. The first five cent's of Christianity saw a series of religious doctrines and movements developed, which were rejected by the Church as a whole, of which Gnosticism and Arianism were the chief. The Fathers denounce h. in un-

measured terms, few even admitting the honesty of the heretics. The Early Church had defended the rights of each man to choose his own religion, but when Christianity had become the religion of the Empire the Church sought the help of the state to suppress h. The Mediæval Church was ruthless, and sought by every possible means to crush it out, though recent research has shown there was more of it than is sometimes imagined. The Reformation did not involve either dogmatic freedom within the Church nor freedom from persecution by the state. Calvin was as severe as Laud. Many Christian Churches allow a certain latitude of dogmatic interpretation, particularly in modern times. Religious toleration has been gradual, in R.C. countries coming only in the XIX. cent., and it is only partial in Russia to-day. Laws against heretics date from 1400 (Statute *De Heretico Comburendo*). Episcopalian and Puritan harried one another by turns in the XVII. cent., since the end of which there has been practical toleration in England.

Harnack, *History of Dogma.*

HEREWARD 'THE WAKE,' Eng. patriot who, after the Norman Conquest, long defied the authority of William I., and dwelt secure in the morasses of the Isle of Ely. He was at length subdued, but escaped capture.

HERFORD (54° 7′ N., 8° 40′ E.), town, Westphalia, Prussia; formerly site of Benedictine abbey. Pop. (1910) 32,540.

HERGENRÖTHER, JOSEPH VON (1824–90), Ger. Catholic theologian; prof. at Munich, 1855; staunch defender of doctrine of Papal Infallibility; created cardinal-deacon, 1879.

HERGEST, RED BOOK OF, see CELTS (*Welsh Literature*).

HERINGSDORF (53° 57′ N., 14° 10′ E.), popular seaside resort, on Usedom island, Pomerania, Prussia.

HERIOT, in Eng. law, fine due on death of a person holding copyhold land of a manor; it consists of best beast or jewel of deceased.

HERIOT, GEORGE (1563–1623), Scot. goldsmith; known as 'Jingling Geordie'; acquired considerable wealth in the exercise of his calling, which, after his death, was devoted to the building and endowment of 'Heriot's Hospital,' Edinburgh.

HERISAU (47° 23′ N., 9° 17′ E.), town, Switzerland. Pop. (1910) 15,250.

HERISTALL, see HERSTAL.

HERITABLE AND MOVABLE, see INHERITANCE.

HERITABLE SECURITY, see INHERITANCE.

HERKIMER (42° 58′ N., 75° 3′ W.), town, New York State, U.S.A. Pop. (1910) 7500.

HERKOMER, SIR HUBERT VON (1849–), Eng. artist; of Bavarian birth; founded famous art school, at Bushey; celebrated as painter both in oils and water-colours; has painted many subject-pictures, but excels in portraiture. R.A. (1890); Slade prof. of Fine Arts, Oxford (1885–94).

HERLEN, or HERLIN, FRITZ (d. 1491), Ger. religious painter of Flemish school.

HERMÆ, architectural term for pillars with head, usually that of Hermes, at the top; large numbers found in Gk. towns where they were objects of worship; used as boundaries.

HERMAGORAS (fl. early I. cent. B.C.), Gk. who founded school of rhetoric at Rome.

HERMANDAD, private association for purposes of local government, common in mediæval Spain.

HERMAN DE VALENCIENNES (fl. late XII. cent.), Fr. poet; wrote *Histoire de la Bible*, a free rendering of the Scriptures.

HERMANN I. (d. 1217), landgrave of Thuringia; one of chief figures in Ger. history of his time.

HERMANN, COUNT OF WIED (1477–1552), elector and abp. of Cologne; deposed for introducing Reformation into his dominions.

HERMANN, FRIEDRICH BENEDICT WILHELM VON (1795–1868), Ger. prof.; student of economics, on which he wrote several works; held various academic and other appointments.

HERMANN, JOHANN GOTTFRIED JAKOB 1772–1848), Ger. editor of the classics and grammarian.

HERMANN, KARL FRIEDRICH (1804–55), Ger. prof. of Philology and author of works on classical antiquities.

HERMANN OF REICHENAU (1013–54), Ger. monk of Reichenau and author of *Chronicon ad annum, 054.*

HERMANNSTADT, see NAGY-SZEBEN.

HERMAPHRODITISM, see SEX.

HERMAPHRODITUS, deity of both sexes in Gk. mythology. H. in Ovid's *Metamorphoses* was s. of Hermes and Aphrodite, and united at her request to a nymph who had fallen in love with him.

HERMAS, 'THE SHEPHERD' OF, was written at Rome in the first half of the II. cent., traditionally by H., bro. of Pius, bp. of Rome. It enjoyed at first a high reputation, and was nearly included in the canonical Scriptures. H. was a prophet, and he represents the Church under the guise of a female figure. The work is arranged under Visions, Mandates, and Similitudes. H.'s function is to deliver a message of repentance, declared to him by an angel. It was probably written at different times; theologically it has Adoptionist tendencies.

The Apocryphal Books, Andrews (The Century Bible Handbooks).

HERMENEUTICS (Gk. *hermeneuein*, to explain, from Hermes, Zeus's messenger), art of interpreting the wisdom of the ancients, or divine law.

HERMES (classical myth.), known to the Romans as **Mercury,** the swift-footed messenger of the gods, who also conducted the dead to Hades. He was notorious for cunning and dissimulation, was the patron of commerce, and the god of Eloquence. His parents were Zeus and Maia. He is generally represented as a beautiful, naked youth, bearing a caduceus.

HERMES, GEORG (1775–1831), Ger. R.C. Neoplatonist whose theological books were condemned by the pope in 1835.

HERMES TRISMEGISTUS, name by which the Greeks denoted the Egyptian god Thoth, looked on as the originator of learning and culture; considered in the early centuries A.D. to be author of many occult treatises known as the HERMETIC BOOKS, an encyclopædia of Gk. learning.

HERMESIANAX (fl. IV. cent. B.C.), Gk. poet whose works were much read by the Romans.

HERMETIC BOOKS, see HERMES TRISMEGISTUS.

HERMIPPUS (fl. early V. cent. B.C.), Athenian poet who wrote satirical comedies.

HERMIT, one who lives apart from others, a frequent practice of Early Christian saints; Paul, the initiator of the practice, St. Anthony, and St. Jerome are well known. Founder of the pillar h's was Simeon Stylites.

HERMIT-CRAB, see CRAB, MALACOSTRACA, COMMENSALISM.

HERMON (33° 26′ N., 35° 50′ E.), or Jebel-es-Sheikh, highest peak of Anti-Lebanon range, Syria; height, *c.* 9150 ft.; on slopes are ruined temples.

HERMON, MOUNT, see LEBANON.

HERMOSILLO (22° 23′ N., 110° 58′ W.), city, capital of Sonora State, Mexico; distilleries, wine, silver; has a mint. Pop. 18,000.

HERMOUPOLIS, see SYRA.

HERMSDORF (54° 27′ N., 20° 11′ E.), town, Pruss. Silesia, Germany. Pop. (1910) 11,379.

HERNE (51° 34′ N., 7° 15′ E.), town, Westphalia, Prussia. Pop. (1910) 57,167.

HERNE BAY (51° 22′ N., 1° 8′ E.), watering-place, Kent, England. Pop. (1911) 7781.

HERNE, JAMES A. (1840–1901), Amer. actor and playwright; author of popular melodramas.

HERNE THE HUNTER, ghostly huntsman, said to haunt Windsor Great Park by night. He is referred to in Shakespeare's *Merry Wives of Windsor.*

HERNIA is the term in surgery applied to the protrusion of an organ, or part of an organ, through an opening in the wall of the cavity in which it is normally contained; most commonly denoting such a protrusion of an organ of the abdomen, popularly termed 'rupture.' The most common situations of abdominal h. are the groin (inguinal canal), the upper part of the thigh (crural canal), and the navel or umbilicus, and the cause may be either *congenital*, due to arrested development of certain parts, or to hereditary weakness of the abdominal wall, or *acquired*, from various causes which may weaken the abdominal walls or increase the internal pressure of the abdomen, *e.g.* pregnancy, hard coughing in chronic bronchitis, and similar violent efforts, or injury.

A h. consists of a sac of peritoneum, containing any abdominal organ, usually part of the intestine and omentum, covered by the structures lying over the protrusion. The symptoms are the presence of a rounded swelling, increased by coughing, which cannot be separated from the abdominal cavity, and which, in most cases, can be reduced by pressure. Treatment is either palliative, by means of trusses, or radical, in suitable cases, by a surgical operation. Various forms of trusses are employed, consisting of a steel spring which passes transversely round the body, holding a pad of cork and leather, or of other materials, in place, to prevent the hernia coming down. The truss must be carefully fitted to be of any value, and this cannot be done by inexperienced persons.

Irreducible h. is due to adhesions either between the sac and its contents, or between the contents themselves, but by keeping the person affected in bed, and by careful attempts from time to time at reduction by a medical man, the h. may become reducible. If it does not, an operation for radical cure is best performed.

Strangulated h. is the term applied to the case when the contents of the sac are so constricted that the circulation of blood is obstructed and may be arrested. Severe pain comes on suddenly at first in the umbilical region and then at the hernia, the pulse is weak, the skin cold, and vomiting occurs. If the pressure on the h. is allowed to go on, gangrene follows, and the individual dies of general peritonitis with toxæmia, or general blood-poisoning. The treatment is immediate operation to free the sac, which, if gangrenous, is removed, and either an artificial anus is made to the surface of the abdomen, or, if the patient can stand it, an end-to-end union of the healthy intestine is made.

Hernia cerebri is the term applied to protrusion of the brain, usually after injury; *hernia pulmonum*, to protrusion of part of the lung.

HERNÖSAND (62° 35′ N., 17° 49′ E.), port, Swedon. Pop. c. 10,000.

HERO AND LEANDER (classical myth.), two famous lovers of ancient times. H. was priestess of Aphrodite, at Sestos, and L. a handsome youth of Abydos, who nightly swam the Hellespont to visit his love, guided by a lamp; on a night of storm, the lamp was extinguished, and L. drowned. H., in despair, cast herself into the sea.

HERO OF ALEXANDRIA (I. or II. cent. B.C.), Gk. mathematician and writer on mechanical and physical subjects; invented, as toys, number of machines and automata; wrote *Catoptrica* (on reflecting surfaces), three books on *Mechanics*, *Pneumatica* (descriptions of his machines), *Automatopoietica*, and numerous treatises on *Geometry*.

HEROD, princes of Judæa. H. THE GREAT was appointed king of all Judæa in 40 B.C., and in 37 B.C. he took Jerusalem and deposed Antigonus, the last Asmonæan prince; he rebuilt Temple, and laid out a new palace on Zion; had great numbers of his relatives put to death, and ordered massacre of Innocents; d. in 4 B.C.—H. ANTIPAS, tetrarch of Galilee and Perœa; beheaded John the Baptist; deposed 40 A.D.—H. PHILIP, tetrarch of region beyond Jordan; founded Cæsarea Philippi; m. Salome; d. 33 A.D. H. AGRIPPA I. (d. 44 A.D.), king of Judæa; s. of Aristobulus; g.s. of H. the Great; Caligula showered honours and favours upon him, and he became one of the most powerful kings of the East; imprisoned St. Peter, and put James, bro. of John the Evangelist, to death; according to *Acts* 12, d. 'eaten of worms.' H. AGRIPPA II. (d. c. 100 A.D.), s. of H. Agrippa I., last king of H. the Great's line; appears in *Acts* 26.

HERODAS, HERONDAS (III. cent. B.C.), Gk. poet and writer of mimes; probably native of Cos. A papyrus with seven mimes of H. was discovered in 1890. The scenes are very lively and vivid.

HERODIANS, associated by Christ with the Pharisees for condemnation (*Mark* 8^{15}; cf. 3^{6}); supposed to have been a Jewish political party in favour of Herod, king of Judæa, 37–4 B.C.

HERODIANUS, Gk. historian; fl. during first half of III. cent. A.D., and wrote a valuable narrative of his period.

HERODIANUS, ÆLIUS (fl. II. cent. A.D.), Alexandrian scholar whose treatises on Gk. prosody and style are valuable.

HERODOTUS (c. 490–420 B.C.), early Gk. historian, generally regarded as the father of history; b. at Halicarnassus, Asia Minor; during his youth occurred the great uprising of Greeks against Persians; spent many years in travelling, visiting Egypt, Babylon, Greece, and other countries, and was thus able to give lifelike descriptions of the various peoples mentioned in his history. The latter is an account of the great victory of Greeks over Persians, and is also an epitome of the life and thought of the time; the main theme is preceded by a lengthy introduction which relates the earlier history of both nations, and gives incidentally long accounts of many other great nations with which they came in contact. The part dealing with his own times is of great hist. value, but much of his work on earlier periods is untrustworthy. His style is unstudied and harmonious, and is praised by both ancient and modern writers.

Bouhier, *Recherches sur Hérodote* (1746); J. B. Bury, *Ancient Greek Historians* (1908). Trans. by Rawlinson.

HEROIC, THE (Gk. *heros*, a superior being). Nearly every country has its h. age, in which men performed more than mortal feats. Historians have not yet decided whether the hero should be regarded as an original god or the god as a deified hero, but there is a strong current of opinion in favour of the latter view. Science has done much of late years in sifting the myths and obtaining a historical residuum, Niebuhr's treatment of early Rom. history marking an epoch in this process. The result has been, so far, to establish a line of demarcation, the h. being claimed for history, the mythical remaining among religions. Thus, so far, efforts to humanise Zeus and Woden have failed, but the heroes of Greece and Troy, whose deeds are sung in Homer, receive a place in modern accounts of Ægean civilisation, and the symbolism of the stories of regal Rome has been so plausibly explained as to be generally accepted as historical.

The h. in romance, again, is very valuable for history. Charlemagne is mentioned by name in the *Chanson de Roland*, but in many cases pseudonyms are given, sometimes well-known (for instance, Dietrich of Bern, hero of a cycle in the XIII. cent. *Heldenbuch*, is Theodoric). The love of the h. in literature is one of the most important characteristics of the Romantic as opposed to the Classical school; it was a favourite theme of the Middle Ages, went out of fashion at the Renaissance, and returned with the Romantic revival; it had, however, a brief renaissance in the early XVII. cent. in France. The Hôtel de Rambouillet resuscitated the noble and high-flown attitude towards life which Cervantes had just destroyed; the romances of the Scudéry had their fascination for an age which disliked simplicity, and

it was as part of the Cavalier revolt against Puritanism that they became the rage in England, where several of the same sort were written (*e.g.* Dryden's *Conquest of Granada*, a play full of excess and bombast). The mediæval h. is dead, but there remains an attitude towards life treated by many modern writers as hypocritical; hence the romance *v.* realism battle in XX. cent. lit.

HEROIC VERSE amongst the Greeks and Romans was the hexameter measure used by Homer and Virgil; synonymous term amongst the Fr. for Alexandrine verse; in Eng. verse it is the name given to two-rhymed iambic lines, each consisting of ten syllables. It was first popularised by Chaucer; was the favourite measure of Dryden and Pope; but sank into disfavour in the early part of the XIX. cent. See COUPLET.

HERON (*Ardea cinerea*), a large marsh bird with long legs and a stout, powerful beak; plumage slaty grey above, with pale breast and neck, whilst head is characterised by a dark crest. The h. is a voracious feeder, devouring eels, fish, worms, water-voles, field-mice, which it impales on its beak. The breeding haunts are termed heronries, and the nests are large, flat structures, built in groups in high trees. H.-hawking was a favourite sport in falconry.

HERONDAS, see HERODAS.

HEROPHILUS (fl. IV. and III. cent's B.C.), physician; b. Chalcedon. See MEDICINE.

HEROSTRATUS, see under EPHESUS.

HERPES, inflammation of the skin, accompanied by the appearance of vesicles on the surface, due to inflammation of the cutaneous nerve supplying the part; *herpes labialis* occurs about the lips in acute fevers, pneumonia, or even in a severe cold, soon passing away; *herpes zoster* usually occurs on the body along the course of an intercostal nerve, neuralgic pain usually preceding the eruption, and it is treated by applying a dusting powder, with potassium bromide or quinine internally.

HERPESTES, a carnivore; see under CIVET FAMILY.

HERRERA, FERNANDO DE (*c.* 1534–97), Span. poet who introduced Ital. Renaissance into Spain.

HERRERA, FRANCISCO (1576–1656), the elder, and his s., FRANCISCO H., the younger (1662–85), Span. painters; the former famous for depth in subject and treatment, and founder of a Span. school.

HERRERA Y TORDESILLAS, ANTONIO DE (1549–1625), Span. historiographer-royal; wrote history of early Span. colonies in America.

HERRICK, ROBERT (1591–1674), Eng. poet; s. of goldsmith, to which calling he was apprenticed; subsequently went to Cambridge, took orders, and became vicar of Dean Prior, Devon (1629); ejected (1648); but reinstated (1662); d. unmarried. His *Noble Numbers* was pub. (1647), and his *Hesperides* in 1648; prolific writer of lyrics dealing with love, country life, etc. Much of his work has little merit, but many of his lyrics are amongst the most exquisite things of their kind in Eng. lit.

F. W. Moorman, *Herrick* (1910).

HERRIES, JOHN CHARLES (1778–1855), Brit. Conservative statesman; Chancellor of the Exchequer, 1827; Pres. of Board of Trade, 1830.

HERRIES OF TERREGLES, BARONY OF, Scot. honour bestowed on HERBERT H. (d. *c.* 1500), *c.* 1490; the 3rd Lord H. left a dau., AGNES, who m. (1547), JOHN MAXWELL (*c.* 1512–83), 4TH LORD H., younger s. of Robert, Lord Maxwell; he was a prominent supporter of Mary, Queen of Scots. This honour merged with the Earldom of Nithsdale in 1667. The 5th earl was attainted for his share in the rebellion of 1715, but in 1858 the lordship of H. was restored to WILLIAM CONSTABLE-MAXWELL, whose s. MARMADUKE was cr. baron of the U.K., 1884.

HERRING FAMILY (*Clupeidæ*), the most valuable of all groups of fishes, on account of their importance as food fishes. They are marine and surface feeders and are taken in drift nets. Most are small fishes, with large, thin, silvery scales and without a lateral line, but the related Mexican Silver-King, or Tarpon, a favourite game-fish, may reach a length of 6 feet. The Menhaden (*Brevoortia tyrannus*) is one of the most valuable of Amer. fishes—the yield of oil extracted from it exceeding in value that of whale oil. Its young are preserved as 'sardines.' About half a dozen of the 200 members of the family (which is cosmopolitan) are found in Brit. seas, amongst them being the Herring (*Clupea harengus*),—the most valuable of food fishes,—whose migrating shoals are followed by vast fleets of fishing-boats. The egg of the herring is one of the few fish eggs that do not float. The smaller Sprat (*C. sprattus*), with serrated belly, the young of which, with those of the herring, are known as 'Whitebait'; the silver and green Pilchard (*C. pilchardus*), commonest on the S. coasts of Britain, the young of which are Sardines; the Shad, which may weigh 8 lb., and spawns, like the Salmon, in rivers; and the Anchovy (*q.v.*).

HERRING-BONE, term in masonry for arrangement of bricks in h.-b. pattern.

HERRINGS, BATTLE OF THE (Feb. 12, 1429), so called because the Eng. force, under Sir J. Fastolf, carrying provisions to Orleans, defended themselves behind barrels of herrings, and repulsed a Fr. attack under Comte de Clermont.

HERRNHUT (51° 1′ N., 14° 45′ E.), town, Saxony, Germany; Moravian sect established colony here, 1722. Pop. (1910) 1360.

HERSCHEL, SIR JOHN FREDERICK WILLIAM, Bart. (1792–1871), Eng. astronomer; only s. of Sir William H.; b. Slough (Bucks); grad. at Cambridge, 1813, and was Senior Wrangler and Smith's Prizeman; spent some time after his f.'s death reviewing the nebulæ and star clusters his f. had discovered; to these he added several hundreds more, and made observations on over 3000 double stars; set up at his own expense an observatory near Cape Town, 1834, and there completed his survey of the whole heavens, publishing his results in 1847; cr. baronet, 1837.

HERSCHEL, SIR WILLIAM (1738–1822), astronomer; b. Hanover; came to England, 1757, and held various musical appointments, studying maths. and astron. in spare time; began (1779) systematic survey of individual stars with a 7-ft. reflecting telescope constructed by himself; discovered, 1781, planet *Uranus* (being thereupon granted a pension of £400 a year), and later its satellites. He also discovered two of *Saturn's* satellites, and observed the phenomena of its rings. In 1787 he completed the erection of a 40-ft. reflector at Slough (Bucks), and continued his studies there; in 1802 presented to the Royal Society a catalogue of 5000 nebulæ and star clusters which he had discovered; knighted in 1816.

Sime, *Wm. Herschel and his Work* (1900).

HERSCHELL, FARRER, 1ST BARON HERSCHELL (1837–99), Eng. Lord Chancellor; b. at Brampton, Hants; called to Bar, 1860; app. Q.C., 1872; Recorder for Carlisle, 1873–80; M.P., 1874; Solicitor-Gen. under Gladstone, 1880; defeated for Londsale in general election of 1886, but in same year was app. Lord Chancellor and raised to the peerage; again sat on the Woolsack, 1892–95; Chancellor of London Univ., 1893; G.C.B., 1893. While in Washington, as pres. of Anglo-Amer. boundary commission, he met with accident which resulted in his death, 1899.

HERSENT, LOUIS (1777–1860), Fr. hist. and court painter.

HERSFELD (50° 52′ N., 9° 41′ E.), town, Hesse-Nassau, Germany; formerly site of Benedictine abbey. Pop. (1910) 9613.

HERSTAL, HERISTAL (50° 41′ N., 5° 38′ E.), town, Belgium; centre of iron and steel manufactures. Pop. 20,114.

HERTFORD (51° 48′ N., 0° 5′ W.), town, Hertfordshire, England; has castle originally built in X. cent.; in neighbourhood is Haileybury Coll. Pop. (1911) 10,384.

HERTFORD, EARLDOM AND MARQUISATE OF, titles held by Clares, Seymours, and Conways in succession; third marquess was prototype of Thackeray's 'Lord Steyne.'

HERTFORDSHIRE, Herts (51° 45′ N., 0° 15′ W.), county, England; bounded N. by Cambridge, E. by Essex, S. by Middlesex, S.W. by Buckingham, N.W. by Bedford; area, *c.* 634 sq. miles. Beautiful undulating county of hills, valleys, parks, and woods; in N. is branch of Chiltern Hills, highest being Kensworth Hill. Principal rivers are Lea, Stort, Colne, Maran, and artificial New River; chief towns, Hertford (capital), St. Albans, Hemel Hempstead, Watford, Hitchen, Bishop Stortford, and Ware. Wheat principal grain grown; water-cress, fruits, roses cultivated; stock raised; manufacturing industries small; brewing at Watford; straw-plaiting, paper-making, tanning, and brick-making carried on. Grand Junction Canal crosses S.W. part of county.

H. contains battlefields of St. Albans and Barnet; Waltham Cross; St. Albans Abbey; ruined priories at Ware and Hitchen; interesting churches at Abbots Langley, Baldock, Hemel Hempstead, Hatfield, and elsewhere; Hertford Castle, Hatfield Palace, and many notable mansions. Pop. (1911) 287,000.

HERTHA, Nerthus, in Teutonic myth. the personification of the Earth; worshipped by Norsemen, Germans, and A.-Saxons.

HERTOGENBOSCH, see 'S Hertogenbosch.

HERTZ, HEINDRICH RUDOLF (1857–94), Ger. physicist; was assistant to Helmholtz and later prof. of Physics at Carlsruhe Polytechnic. *Wireless telegraphy* is a practical application of one of his investigations. He demonstrated the similarity between *electromagnetic, light,* and *heat waves,* and worked at *electric discharges* in gases.

HERTZ, HENRIK (1798–1870), Dan. satirical and lyrical poet and dramatist; Sir Theodore Martin translated his poetical play, *King René's Daughter,* into English (1850), and it has found three other translators.

HERTZ, JOSEPH (1872–), Chief Rabbi of United Hebrew Congregations of Brit. Empire since 1912; b. Hungary; Rabbi at Johannesburg, and from 1910–12 of the Orooh Chaim congregation, New York.

HERTZBERG, EWALD FRIEDRICH, COUNT VON (1725–95), Pruss. lawyer and politician; after holding several posts in government service, he became chief minister in 1763; supported foreign policy of Frederick the Great, and for several years guided policy of Frederick William II.; dismissed from office for opposing the king in his dealings with Great Britain, Poland, and Russia, 1791; wrote on Ger. lit.

HERTZEN, ALEXANDER (1812–70), Russ. author; b. Moscow; banished as political offender, 1834; left Russia, 1847, and lived in Italy, Geneva, London, Paris, where he died; best works, *Kto Vinovat,* novel; political works, *Baptized Property, Kolokol, Golosa, iz Rossii* (Voices from Russia), etc.

HERTZOG, JAMES BARRY MUNNIK (1866–), Dutch leader in S. Africa; Free State general in Boer War; as Minister for Education urged rights of Dutch language in Orange Free State, hence term Hertzogism; member of first Union Cabinet, 1910–12.

HERULI, Teutonic people said to have been driven S. when the Danes settled in Denmark; allied with the Goths against the Rom. Empire.

HERVAS Y PANDURO, LORENZO (1735–1809), Span. author of famous book on equinoctial tongues.

HERVEY, JAMES (1714–58), Anglican clergyman who played part in Methodist revival; author of *Meditations among the Tombs* (1745).

HERVEY, JOHN, Baron H. of Ickworth (1696–1743), Brit. statesman and author; deserted Pulteney for Walpole when latter was about to retain power under George III.; suspected author of *Sedition and Defamation Display'd* (1831), which led to duel with Pulteney; crooked character, derided in writings of time as effeminate beau; wrote clever satirical *Memoirs of the Court of George II.*

HERVEY DE SAINT DENYS, MARIE JEAN LÉON, Marquis de (1823–92), Fr. writer on Chin. antiquities.

HERVEY ISLANDS, see Cook Islands.

HERVIEU, PAUL (1857–), Fr. psychological novelist and writer of successful plays dealing with sex problems.

HERWARTH VON BITTENFELD, KARL EBERHARD (1796–1884), Pruss. field-marshal; commanded right wing at Königgrätz and directed movements of 1870.

HERWEGH, GEORGE (1817–75), Ger. poet; b. Stuttgart; became famous through his political poems, *Gedichte eines Lebendigen* and *Neue Gedichte.*

HERZBERG (51° 43′ N., 13° 14′ E.), town, Saxony, Germany. Pop. 4043.

HERZBERG (51° 39′ N., 10° 20′ E.), town, Hanover, Prussia. Pop. 3896.

HERZEGOVINA, see Bosnia-Herzegovina.

HERZL, THEODOR (1860–1904), Jewish politician; b. at Budapest; founded Zionist movement, and in 1896 wrote *Der Judenstaat,* advocating the establishment of a Jewish autonomy in Palestine; to this end he organised a number of congresses at Basel.

HERZOG, HANS (1819–94), Swiss artillery general.

HERZOG, JOHANN JAKOB (1805–82), Ger. ecclesiastical historian; prof. of Theology at Halle, then at Erlangen.

HESEKIEL, JOHANN GEORG LUDWIG (1819–74), Ger. author; famed for his patriotic songs, pub. under title of *Preussenlieder* and *Neue Preussenlieder*; *Life of Bismarck,* etc.

HESILRIG, SIR ARTHUR (d. 1661), Eng. politician and soldier; Roundhead in Civil War; raised cavalry force for Parliament; conducted defence of Newcastle, 1647–48; imprisoned at Restoration, and d. in Tower.

HESIOD (*c.* VIII. cent. B.C.), one of the earliest Gk. poets; b. Ascra, in Bœotia. His poems are (1) *The Works and Days*—a didactic work on peasant life; (2) *The Theogony*—an account of the origin of the gods and heroes; (3) *The Shield of Heracles*—a description of the hero's shield, in imitation of Homer's account of the shield of Achilles; exemplar for Vergil.

HESPERIDES, THE (classical myth.), three maidens, Ægle, Arethusa, and Hesperia, dau's of Erebus (darkness) and Nox (night); guardians together with the hundred-headed dragon, Ladon, of the tree bearing golden apples, which was presented by Gæa (Earth) to Hera, on her marriage with Zeus.

HESPERORNIS, fossil bird. See under Odontornithes.

HESPERUS, Gk. name for planet Venus (*q.v.*) when seen as evening star.

HESS, HEINRICH HERMANN JOSEF, Baron von (1788–1870), Austrian field-marshal; won laurels as chief-of-staff to Radetzky in Italy.

HESS, KARL ERNST CHRISTOPH (1755–1828), Ger. engraver, whose three sons, **Peter** (1792–1871), **Heinrich Maria** (1798–1863), and **Karl** (1801–74), were prominent painters.

HESSE (50° 30′ N., 9° E.), grand-duchy and state of Ger. Empire; in S.W. of Prussia, comprising the provinces Oberhessen, Starkenberg, Rheinhessen, and 11 small enclaves; watered by Rhine, Lahn, Main, Fulda; chief towns—Darmstadt (capital), Giessen, Mainz, Wörms, Offenbach; famous mineral springs, iron, salt, manganese ore; numerous industries. H. ruled by landgraves from XIII. cent. till 1567; then divided into Hesse-Cassel, Hesse-Darmstadt, Hesse-Marburg, etc., which by 1866 were annexed by Prussia, with exception of Hesse-Darmstadt, from that date simply known as H. Area, 2968 sq. miles. Pop. (1910) 1,282,051.

HESSE-CASSEL (51° N., 9° 20′ E.), now part of Pruss. province of Hesse-Nassau; H.-C. was formed by the division of Hesse (*q.v.*) in 1567, and founded by William IV. (the Wise); ruled by landgraves until 1803; then landgrave William IX., having fought against French, received title of Elector; Elector

William I. having sided with Austria, H.-C. was annexed to Prussia, 1866.

HESSE-DARMSTADT (50° 15′ N., 9° E.), former grand-duchy of Germany, formed by division of Hesse, 1567; since 1866 known simply as HESSE (*q.v.*).

HESSE-HOMBURG, old landgraviate, Germany; incorporated with Prussia, 1866.

HESSE-NASSAU (*c.* 51° N., 9° E.), Pruss. province, Germany; area, 6062 sq. miles; magnificent forests; wine, fruits; mineral springs. Pop. (1910) 2,221,021.

HESSE-ROTENBURG, former landgraviate, Germany; partly incorporated with Hesse-Cassel, 1834.

HESSIAN, cloth made chiefly from jute; used for sacking and linings.

HESSUS, see EOBANUS.

HESTIA, Gk. goddess of the hearth. The hearth in the city prytaneum was sacred to H., and the fire never allowed to become extinct; brands were taken from it to light the city fire in a new colony.

HESYCHASTS (Gk. *hesychazein*, to be quiet), name given to a Greek sect which arose among monks of Mount Athos in XIV. cent.

HESYCHIUS (fl. IV. or V. cent. A.D.), Gk. philologist of Alexandria.

HESYCHUS OF MILETUS (fl. V. cent. A.D.), Byzantine historian.

HETÆRISM (Gk. *hetaira*, concubine), state of society before custom of marriage has been introduced.

HETEROCERA, see under LEPIDOPTERA.

HETEROMERA, a sub-order of Beetles, with five joints on tarsi of fore and middle legs and four on hind legs. It includes the *Tenebrionidæ*, with the common 'meal-worm,' the larva of *Tenebrio molitor*; the Churchyard Beetles (*Blaps*), whose funereal appearance, and habits of frequenting dark places and of feeding upon animal refuse, have gained them their name; the Blister- and Oil-Beetles (*Cantharidæ*), which often contain an irritant capable of blistering human skin.

HETEROPOD, see GASTEROPODA.

HETEROPTERA, see HEMIPTERA.

HETMAN, ATAMAN, commander of Russ. Cossack troops, and formerly title of Polish general.

HETTNER, HERMANN THEODOR (1821–82), Ger. literary historian; pub. *Literaturgeschichte des 18 Jahrhunderts*, *Die romantische Schule*, *Das moderne Drama*.

HETTSTEDT (51° 37′ N., 11° 30′ E.), town, Pruss. Saxony, Germany. Pop. (1910) 8857.

HEUGLIN, THEODOR VON (1824–76), Ger. traveller; was an authority on the zool. and ornithology of Egypt and Abyssinia.

HEULANDITE, mineral of Zeölite group, composed of hydrous calcium and aluminium silicate

HEUSCH, WILLEM DE (fl. XVII. cent.), Dutch landscape painter of school of Jan Both.

HEVELIUS, JOHANN (1611–87), Ger. astronomer; studied sun-spots; discovered four comets, and suggested revolution of such bodies round the sun; founded lunar topography.

HEWITT, ABRAM STEVENS (1822–1903), Amer. Democrat politician and manufacturer; helped to reconstitute Tammany, 1871; sat in Congress, 1875–86.

HEWLETT, MAURICE HENRY (1861–), Eng. novelist and poet; pub. *The Forest Lovers* (1898), *Richard Yea-and-Nay* (1900), *The Queen's Quair* (1904), and other novels; also poems, dramas, and miscellaneous works.

HEXACTINELLIDA, see under SPONGES.

HEXAMETER, dactylic measure, and the noblest of the Gk. and Roman verse measures, used by Homer and Vergil and other early poets. The form has been used in Ger. poetry and also in Eng. poetry, the best examples of the latter use being Kingsley's *Andromeda*, Clough's *Bothie*, and Longfellow's *Evangeline*.

HEXAPLA (the sixfold), an edit. of the Old Testament by Origen (fl. III. cent.), giving six versions.

HEXAPODA, see INSECTA.

HEXATEUCH, the Pentateuch (*q.v.*) and the Book of *Joshua*, joined to the Pentateuch as also treating of the conquest of Canaan.

HEXHAM (54° 58′ N., 2° 7′ W.), town, Northumberland, England, on Tyne; quaint old market town with narrow streets; most interesting feature is Abbey Church, with remains of ancient monastery; site of battle between Yorkists and Lancastrians, 1464; manufactures gloves and leather; coal and baryte mines near; trade chiefly agricultural. Pop. (1911) 8417.

HEYDEN, JAN VAN DER (1637–1712), Dutch painter who excelled in rendering architectural tones.

HEYLIN, or HEYLYN, PETER (1600–62), Eng. hist. writer; app. royal chaplain, 1630; treasurer of Westminster Abbey, 1637; suffered great hardships during Civil War; wrote great number of historical and controversial works, including *Cyprianus Anglicus*, a biography of Laud, and some lectures on cosmography.

HEYN, PIETER PIETERZOON (1578–1629), Dutch admiral; seized Span. bullion fleet, 1628; killed in action against Dunkirk pirates.

HEYNE, CHRISTIAN GOTTLOB (1729–1812), Ger. writer on classical antiquities.

HEYSE, PAUL JOHANN LUDWIG (1830–), Ger. novelist; b. Berlin; wrote excellent 'novellen' (short stories), *e.g. L'Arrabbiata*, fine lyrics, and *c.* 30 dramas; awarded Nobel prize, 1910.

HEYSHAM (54° 2′ N., 2° 54′ W.), port, Lancashire, England. Pop. (1911) 3350.

HEYWOOD (53° 35′ N., 2° 14′ W.), town, Lancashire, England. Pop. (1911) 26,698.

HEYWOOD, JOHN (*c.* 1497–1580), Eng. dramatist and epigrammatist; a distinguished writer of interludes, amongst which were *The Play of Love*, *The Pardoner and the Frere*, and *The Play of the Wether*. He was also author of many noted epigrams.

HEYWOOD, THOMAS (d. 1650), Eng. dramatist; very voluminous and popular writer of plays chiefly with a domestic interest; his best include *A Woman killed with Kindness* (1603), *Rape of Lucrece* (1608), *Fair Maid of the Exchange*, *Love's Mistress*; also wrote *An Apology for Actors*.

HEZEKIAH (fl. VIII. to VII. cent. B.C.), king of Judah; had great difficulty in putting down revolts of subject states; Bible relates how Sennacherib of Assyria invaded Judah and lost 180,000 men in single night by stroke of the 'angel of the Lord,' but episode is doubtful. H. was famous prophet and administrator; builder of aqueducts at Jerusalem.

HIATUS (Lat. gap), term in logic for break in chain of reasoning; generally, temporary pause.

HIAWATHA, mythical chief of the Iroquois Indians, who is said to have promoted the arts of peace and progress; taught medicine, navigation, etc.

HIBBING (47° 30′ N., 93° 20′ W.), small town, Minnesota, U.S.A. Pop. (1910) 8830.

HIBERNATION, the state of quiescence or torpor in which many organisms tide over natural conditions unfavourable to their active life. The state of h. has much resemblance to a deep and prolonged sleep, and indeed sleep is often the starting-point which leads to h.; but there are great differences between the two types of unconsciousness. In h. the functions of the body are so reduced that the animal becomes practically inanimate, nutrition ceases, respiration is almost stopped, and, most strange of all, the body temperature, which may have been anything from 35° to 40° C. in mammals, falls almost to that of the surrounding air, with the fluctuations of which it now fluctuates. Almost the first moment of awaking, however, restores the lowered temperature to its normal pitch.

The conditions unfavourable to life with which h. and its equivalent summer state—*æstivation*—are connected are mainly cold, associated with lack of food and the danger of starvation, and summer's drought, associated with the danger of drying up. The former, it is apparent, affects most intimately those creatures which depend solely upon food ac-

obtainable in winter, such as insects, and vegetation. At any rate, it is amongst the Bats, Insectivores, Reptiles and Amphibians, Rodents, Mollusca, and Insects that hibernation most provails. The majority seek a sheltered corner, some cranny or crevice in a tree or old building, or burrow in the earth, or in mud, or a shelter under dead leaves for their winter sleep. But its intensity varies much: amongst bats the noctule appears to hibernate continuously throughout autumn, winter and spring, while almost any mild evening during the year will bring the pipistrelle out on the wing. Intense hibernators include the hedgehog, the dormouse, the marmot, and almost all frogs in temperate and cold climates. Land molluscs, in drought as well as winter's cold, close the mouths of their shells with a calcareous plate—the epiphragm—and become quiescent; the bear stores fat in its tissues upon which it depends for sustenance; and the squirrel hides nuts to serve as food-supply during the feeding intervals which break its long fast. In the summer of tropical countries, when pools and rivers dry up, many fishes, snakes, crocodiles, and tortoises, in order to avoid desiccation, bury themselves in mud, tiding over the dry season unconsciously in the hard-baked ground.

HIBERNIA (also Ierne), ancient Rom. name for Ireland.

HIBISCUS, genus of plants of order *Malvaceæ* (q.v.). *H. syriacus* grows in Britain.

HICHENS, ROBERT SMYTHE (1864–), Eng. novelist; wrote *The Green Carnation* (1894), *Garden of Allah* (1904), etc.

HICKES, GEORGE (1642–1715), prominent Eng. nonjuror, but submitted; suffragan bp. of Thetford, 1694; chiefly noted for his *Linguarum veterum septentrionalium Thesaurus*.

HICKORY, an Amer. tree, genus *Carya*, with strong elastic wood, easily decayed by worms and moisture, but greatly valued as fuel; used for golf-clubs, hammer and tool handles.

HICKS, ELIAS (1748–1830), Amer. Quaker and anti-slavery agitator.

HICKS, WILLIAM (1830–83), Brit. general; entered Egyptian army, 1883; commander-in-chief against Mahdi, 1883; slain at Kashgil.

HICKS-BEACH, SIR MICHAEL, see ST. ALDWYN, VISCOUNT.

HIDALGO (Span. *hijo de algo*, son of something), Spaniard of gentle birth.

HIDALGO (c. 20° 30′ N., 98° 45 W.), state, Mexico; gold, silver, cereals, coffee. Pop. (1910) 641,895.

HIDALGO Y COSTILLO, MIGUEL (1753–1811), Mexican priest; led revolt against Spaniards; defeated at Calderon Bridge; put to death.

HIDE, the space that might be ploughed with a single plough, and would suffice to maintain a family or the household of a mansion-house. Authorities are not agreed upon the exact area. In Anglo-Saxon times and in Domesday Book the h. is given at 30, 40, 50, and 80 acres. It is estimated at anything from 30 to 40 acres by J. M. Kemble, and at 48 acres by R. W. Eyton. Prof. Maitland decided in favour of 120 acres. Prof. Vinogradoff has pointed out that its extent was determined by local usage—that it was 48 acres in Wilts and 40 acres in Dorset. Feudal aids were levied on the h. until the XII. cent.

HIDES, see SKINS, LEATHER.

HIEL, EMMANUEL (1834–99), Flem. patriotic poet.

HIEMPSAL II. (fl. I. cent. B.C.), king of Numidia; deposed, but reinstated by Romans under Pompey.

HIERAPOLIS.—(1) ancient ruined town in N.E. Syria, on high road from Antioch to Mesopotamia; possessed great temple, and was once one of the chief seats of worship of Astarte. (2) ancient city of Great Phrygia, lying between Lycus and Meander and near Laodicea and Colossæ; possessed temple to Cybele, and hot springs; early seat of Christianity, Church being founded by St. Paul.

HIERARCHY, government in sacred things; applied to varying ranks of Church officers.

HIERATIC, term given to a more cursive form of Egyptian hieroglyphics.

HIERAX (fl. c. 300), Egyptian Biblical commentator, who exercised strong influence for asceticism in the early Church.

HIERO, name of two tyrants of Syracuse.—H. I. defeated Etruscans, 474 B.C.—H. II. made treaty with Rome, 263 B.C.

HIEROCLES OF ALEXANDRIA (V. cent. B.C.), Gk. philosophical writer.

HIEROGLYPHICS, name given to figures sculptured or written on Egyptian monuments and papyri, and found on monuments of the Aztecs; translation found on the Rosetta Stone (1799).

HIERONYMITES, order of hermits whose rule was founded on the Augustinian; established in Italy and Spain, XIV.–XV. cent.

HIERONYMUS OF CARDIA (fl. IV. cent. B.C.), Gk. commander under Alexander the Great and his successors; his history is chief historical source of the period.

HIERRO, FERRO (27° 43′ N., 18° W.), island, Canary Isles (*q.v.*), Atlantic. Pop. 6508.

HIGDON (HIGDEN), RANULF (c. 1300–c. 1363), Eng. chronicler; monk of Chester and author of the excellent *Polychronicon*.

HIGGINS, MATTHEW JAMES (1810–68), Irish writer (pseudonym, JACOB OMNIUM); subject of one of Thackeray's ballads.

HIGGINSON, THOMAS WENTWORTH (1823–1911), Amer. soldier and writer; fought as volunteer in Civil War; wrote *Army Life in a Black Regiment*, etc.

HIGH COMMISSION COURT, established by Queen Elizabeth, 1559, dealt with ecclesiastical cases; members were Crown nominees; misused by Laud; abolished, 1689. Similar court in Scotland, 1606–38.

HIGH PLACE (Hebrew *Bāmāh*), often means place of worship (originally on hilltops); h. p's were the centre of religious worship among Canaanites; the rites associated with them drew down the fierce denunciations of the prophets; abolished in reformation of Josiah, 621 B.C., but restored later.

HIGH PRIEST, see under PRIEST.

HIGH RELIEF, relief work whose degree of projection is half natural circumference. See RELIEF.

HIGH SEAS, seas over which no individual sovereignty is recognised by international law.

HIGH TREASON, see TREASON.

HIGH WYCOMBE, see WYCOMBE.

HIGHAM FERRERS (52° 19′ N., 0° 36′ W.), town, Northamptonshire, England; has beautiful old church, Bede house, and school; manufactures boots and shoes. Pop. (1911) 2726.

HIGHGATE (51° 34′ N., 0° 8′ W.), N. suburb, London; has stone connected with Dick Whittington.

HIGHLAND DRESS.—Chief articles: kilt, pleated skirt worn knee-high, made of tartan (*q.v.*); sporran, fur or leather pouch worn in front of kilt; tartan plaid, depending from shoulder or wrapped diagonally over chest, secured with circular brooch; short jacket; Glengarry or Balmoral bonnet; tartan stockings; brogued shoes. In full evening H. d., lace ruffles replace collar and tie.

HIGHLANDS, THE, N. and N.W. districts of Scotland (*q.v.*).

HIGHNESS, title of honour, used in speaking of or to princes, grand-dukes, and minor royalties. Members of Imperial family addressed as 'Imperial H.'; of Royal family, 'Royal H.'

HIGHWAY, public road, which every one has right to use; generally created by Act of Parliament or by dedication, but uninterrupted use of any road for certain time may also establish right-of-way. Obligation to repair highway, in England, rests generally with parishes through which they pass, but may devolve upon owner of land the road passes through. In Scotland, highways are managed by county councils and burgh commissioners. See ROADS.

HIGINBOTHAM, GEORGE (1827–93), politician

and chief justice of Victoria, Australia; codified statutes of Victoria.

HILARION, ST. (291–372), abbot; after hermit's life in Egypt, introduced the monastic system into Palestine.

HILARIUS (fl. XII. cent.), mediæval goliardic poet, possibly of Eng. birth.

HILARY, ST. (d. 367), bp. of Poitiers who wrote learned theological books and treatises against Arians; his day is Jan. 13, and has given name Hilary to Eng. legal term between Michaelmas and Easter (these terms were abolished, 1873), and to Lent term at the Univ. of Oxford.

HILARY, ST. (*c.* 400–49), bp. of Arles, 429; the dispute as to his episcopal rights led to strengthening of papal influence over the Gallican Church; festival, May 5.

HILDA, ST. (614–80), Eng. abbess; took the veil about 647; became abbess of Hartlepool, and subsequently founded (658) Whitby Abbey for monks and nuns; exercised great influence on the religious life of her period.

HILDBURGHAUSEN (50° 26′ N., 10° 43′ E.), town, Saxe-Meiningen, Germany. Pop. (1910) 7700.

HILDEBERT OF LAVARDIN, GILDEBERT, ALDEBERT (*c.* 1050–1133), bp. of Le Mans, 1096; abp. of Tours, 1125; noted preacher and theological writer.

HILDEBRAND, see GREGORY VII.

HILDEBRAND, LAY OF, Ger. alliterative poem, (IX. cent.); variant of the Persian story of *Sohrab and Rustum*; a father, long absent from home, returns, and is challenged to single combat by a youth whom he, too late, discovers to be his son.

HILDEBRANDT, EDUARD (1818–68), Ger. court painter and academician.

HILDEBRANDT, THEODOR (1804–74), historical painter of Romantic school.

HILDEGARD, ST. (1098–1179), Ger. religious mystic; became abbess of Disibodenberg (Lorraine), and subsequently founded (1147) a nunnery near Bingen; famed for prophetic powers.

HILDEN (51° 7′ N., 6° 46′ E.), town, Rhenish Prussia, Germany. Pop. (1910) 16,900.

HILDESHEIM (52° 8′ N., 9° 58′ E.), town in Pruss. province of Hanover, at base of Harz Mountains, with fine cathedral (XI. cent.), St. Godehard Church (XII. cent.), St. Michael's; town hall, Carthusian monastery, Knochenhauer-Amtshaus, and many other old houses; chief industries—machinery, vehicles, church bells, bricks, sugar-refining, cigars. A free city of Empire in XIII. cent., H. joined Hanseatic League, 1249; annexed to Prussia, 1866. Pop. (1910) 54,850.

HILDRETH, RICHARD (1807–65), Amer. editor and writer on finance, slavery, etc.

HILGENFELD, ADOLF BERNHARD CHRISTOPH (1823–1907), Ger. theological prof. and author.

HILL, geographical term for height above a bank and below a mountain; bank is the only word for h. in certain N. of England dialects.

HILL, AARON (1685–1750), Eng. dramatist and poet; was a person of means, a considerable traveller, and unsuccessful speculator in commerce; wrote numerous pieces for the stage, of which *Zara*, his chief success, was derived from Voltaire.

HILL, AMBROSE POWELL (1825–65), Amer. general on Confederate side in Civil War.

HILL, DANIEL HARVEY (1821–89), Amer. general on Confederate side in Civil War.

HILL, DAVID BENNETT (1843–1910), Amer. lawyer and Democratic statesman; gov. of N.Y. State, 1885.

HILL, GEORGE BIRKBECK NORMAN (1835–1903), Eng. writer, especially noted for editions of Dr. Johnson's works.

HILL, JAMES J. (1838–), Amer. railway constructor and director.

HILL, JOHN (*c.* 1716–75), Eng. author; wrote *The Vegetable System* and other botanical works, also novels and miscellaneous works. He was frequently involved in literary quarrels with his contemporaries.

HILL, MATTHEW DAVENPORT (1792–1872), and his bro. FREDERICK (1803–96), bro's of Sir Rowland H., and criminal administration reformers.

HILL, MIRANDA (1836–1910), and her sister, OCTAVIA H. (*q.v.*), Eng. social reformers; chief interest, housing of poor.

HILL, OCTAVIA (1838–1912), Eng. philanthropist; with Ruskin improved working-class dwellings.

HILL, ROWLAND (1744–1833), famous Eng. preacher; s. of Sir R. H.

HILL, ROWLAND, 1ST VISCOUNT HILL, (1772–1842), Brit. general; distinguished in Egypt, 1801, and in Peninsular War; took forts of Almaraz, 1812; present at Waterloo.

HILL, SIR ROWLAND (1795–1879), Brit. statesman; originator of penny postage, 1840; induced government to undertake carriage of letters, irrespective of distance, within United Kingdom, at charge of one penny for maximum weight of ½ oz.; sec. to Postmaster-Gen., 1846; chief sec., 1854.

HILL TIPPERA, TRIPURA (23° 30′ N., 91° 40′ E.), native state, adjoining Bengal, India; area, 4086 sq. miles; rice, cotton. Pop. (1911) 229,613.

HILLAH (32° 28′ N., 44° 49′ E.), town, Turkey-in-Asia. Pop. *c.* 30,000.

HILLARD, GEORGE STILLMAN (1808–79), Amer. barrister and journalist.

HILLEBRAND, KARL (1829–84), Ger. critic and prose-writer.

HILLEL (*c.* 30 B.C.–*c.* 10 A.D.), famous Jewish Rabbi; his gentler view of the law was opposed to that of his sterner rival, Shammai; author of some very beautiful sayings proclaiming the duty of love to one's neighbour, and of others emphasising the value of learning.

HILLIARD, NICHOLAS (*c.* 1537–1619), Eng. craftsman and miniature painter, whose works are the treasures of collectors. His s. LAWRENCE (d. 1640) excelled him in the same field.

HILLSDALE (41° 53′ N., 84° 38′ W.), town, Michigan, U.S.A. Pop. (1910) 5000.

HILTON, JOHN (1804–78), Eng. surgeon; surgeon to Guy's Hospital, London; pres. of Royal Coll. of Surgeons, 1867; the greatest anatomist of his time, his chief investigations being on the brain and spinal cord; introduced new methods of surgical procedure, particularly in opening deep abscesses, the method for this being called after him.

HILTON, WILLIAM (1786–1839), Eng. artist; painter chiefly of historical and classical subjects; several examples in Nat. Gallery.

HILVERSUM (52° 13′ N., 5° 11′ E.), town, N. Holland. Pop. (1910) 31,792.

HIMALAYA (*c.* 31° to 34° 50′ N., 70° 30′ to 96° E.), the highest system of mountains in the world, stretching, in an irregular curve, almost 1500 miles along the N. boundary of India; with a varying breadth of 100 to 160 miles, they divide India from Tibet, and lie roughly between the Indus and the Brahmaputra. The H. consist of several ranges of peaks, separated by deep gorges through which rivers flow. Rising steeply from the plain of the Ganges stands a range (some 4000–5000 ft.) between which and the higher ranges lie the beautiful and fertile valleys of Nepal and Bhutan. The greater system, starting from the Pamir Plateau in the extreme N.W., is divided into two main parallel chains, one lying N. of the other. The N. chain, forming a watershed between India and Tibet, has been little explored; its only point under 16,000 ft. is called Drass Pass (*c.* 11,300 ft.), which leads to Kashmir; and the Niti Pass (*c.* 16,700 ft.) connects India with E. Turkestan. The S. chain, consisting of lofty snowclad peaks, includes many of the highest mountains in the world—many rising over 20,000 ft.; the highest, Mt. Everest (29,000 ft.), is the loftiest peak known in the world; other peaks are K2 or Godwin-Austen (*c.* 28,260 ft.); Kinchinjunga (*c.* 28,150 ft.); Dhawala-

giri (*c.* 26,280 ft.); Nanda-Devi (*c.* 25,700 ft.); Trisul (*c.* 23,400 ft.). From this chain flow the Ganges, Indus, Brahmaputra, and many other rivers; on its slopes also stand many sanatoria—Simla, Darjiling, Almora, etc.—which are taken advantage of during the hot seasons.

There are few lakes; but in E. are Yamdok-cho and Chomto-dong; in W. lie the holy Tibetan lakes of Manasarowar and Rakas Tal (whence flows the Sutlej River), and also Lake Kashmir. There are numerous glaciers, and the snow-line is higher on the Indian side than on the Tibetan; metal ores exist and gold is worked in Tibet. On the Indian side, most of the inhabitants are Hindus, the Tibetans being mostly of Turanian stock.

F. B. and W. H. Workman, *Ice-bound Heights of the Mustagh* (1908); Bruce, *Twenty Years in the Himalaya* (1910).

HIMANTOPUS, see PLOVER FAMILY.

HIMERA (37° 58′ N., 13° 40′ E.), ancient town, Sicily, modern THERMÆ HIMERÆÆ; ruined by Hannibal, 409 B.C.

HIMERIUS (315–86), Gk. philosopher; studied at Athens; wrote many speeches; his writings suffer from the over-elaboration fashionable in his day.

HIMLY, LOUIS AUGUSTE (1823–1906), Fr. scientific historian; chief work, *Histoire de la formation territoriale des États de l'Europe centrale.*

HIMYARS, SABÆANS (*q.v.*).

HINCKLEY (52° 33′ N., 1° 23′ W.), town, Leicestershire, England. Pop. (1911) 12,838.

HINCKS, EDWARD (1792–1866), Irish palæographical scholar.

HINCKS, SIR FRANCIS (1807–85), Irish-Canadian publicist; Premier of Canada, 1851; Finance Minister, 1869.

HINCMAR (*c.* 805–82), abp. of Reims; came to court of Louis the Pious, 844; abp., 845; had heresy of Gottschalk condemned; attacked Lothair II. of Lorraine for divorcing his queen; had various conflicts with other ecclesiastics and with Pope John VIII. over his metropolitan rights; wrote life of *St. Remigius.*

HINDERSIN, GUSTAV EDUARD VON (1804–72), Prussian soldier; reorganised Pruss. artillery; present at Sedan and siege of Paris.

HINDI, EASTERN AND WESTERN, Indo-Aryan tongues of district of India lying E. of the Punjab; Hindustani (*q.v.*) arose out of a W. H. dialect.

HINDKI, Hindu race of Afghanistan.

HINDLEY (53° 32′ N., 2° 34′ W.), town, Lancashire, England. Pop. (1911) 24,106.

HINDU CHRONOLOGY, see under CHRONOLOGY.

HINDU KUSH (35° 50′ N., 70° 30′ E.), range of mountains in Central Asia, stretching from Pamirs to Koh-i-Baba Mts. at Bamian Pass, *c.* 500 miles long; forms S. boundary of Afghanistan, and for some distance separates Badakhshan from Kafiristan and divides Kabul and Oxus basins. Contains sources of many important rivers; mts. crossed by many passes, most important being Khawak, leading from Badakhshan to Charikar and Kabul; Dorah, conducting to Chitral valley from Oxus; Barroghil, leading from Chitral and Kashmir to Upper Oxus and Yarkand; Lowarai, between valleys of Panjkora and Chitral.

HINDUISM, the name used for the religion of more than two hundred millions of the peoples of India. Hindus do not form one ecclesiastical organisation, nor do they all hold one creed. Yet this congeries of peoples is more or less loosely united by certain principles which are common to them all: (1) a rigid and elaborate *caste* system—so different from anything in Western religion; (2) a pessimistic view of life which makes it something on the whole evil, and is involved with the specially Oriental doctrine of reincarnation. The origin of H. dates back to before 1000 B.C., when the Aryan tribes invading from the N. were conquering the Dravidians of India. There was some intermingling of conquerors and conquered, but not enough to prevent a rigid caste system; the conquered people were secluded not only from social but from religious privileges. The primitive Vedic religion of the Aryan conquerors had many gods, but no elaborate worship. By about 800 B.C. the class of priests was developing into the Brahman caste. Four castes were evolved—the *Brahmans*, *Kshatriyas* (warriors), *Vaisyas* (traders), and *Sudras* (serfs). Not only does caste involve something of what we mean by 'class distinctions,' but a Brahman might not eat food prepared by any one but a Brahman. Certain trades became hereditary in certain castes, and those born into them had to remain at them. At the same time ritual became much more elaborate, and Brahmanism as a religion tended to be crushed under a weight of ritual.

The old gods that came to be worshipped most were *Vishnu* and *Siva*—the former, genial and protective; the latter, the god of change, death, and destruction. *Sakti*, the wife of Siva, is worshipped under various forms, among them that of *Kali*, of whom there are hideous images; her worship is accompanied with degrading rites and animal sacrifices. In the VI. cent. B.C. two new developments took place in *Buddhism* and *Jainism*, both growths from H. The two agreed in certain principles, particularly in their rejection of animal sacrifices; an instinctive dislike of shedding the blood of live creatures was helped by the belief in universal reincarnation. Buddhism, however, has now hardly any hold in India itself. *Baba Nanak* (1469–1539) was a religious reformer and believed in a Supreme Being to be worshipped by meditation. Though the *Vishnuite* sects often have a fairly high religious level, amongst some of them immoral rites are still practised. Hindu religious emotion has always had a strong tendency to become sensual. The *Sivaite* sects, however, have a generally lower tone, though among them there are some, *e.g.* the *Dandis*, which are better.

H. has several times produced religious reformers. In the IX. cent. *Sankara Acharya* thought the world unreal. His philosophic system was modified by *Ramanuja* in the XII. cent., who denied the identity of the Supreme with individuals. Further developments came in the XV. cent. from *Vallabhacharya*, a Brahman. He taught that any pleasure could be made sacred to religion, hence his followers have lapsed into immoral rites. In the XVI. cent. a further reformation took place under *Chaitanya*. *Krishna*, 'the Lord,' is the revelation of the Supreme in the Universe.

In the XIX. cent. there have been several religious movements starting from within H. in the direction of a pure and lofty monotheism. Muhammadanism had already exerted some influence in this direction. *Rammohan Ray* (1774–1833) studied Christianity and other religions, and founded the *Brahma-samaj*, which sought to combine everything that was best in the monotheistic faiths, and used concurrently various sacred scriptures. *Keśab Chandra Sen* was another leader of the Brahma-samaj. The *Prarthana-samaj* was on similar lines, but rejected the Christian element. Likewise the *Arya-samaj*, also somewhat anti-Christian. These theistic movements have not attained a very great influence, being naturally looked at askance both by Christians and Hindus.

The greatness of H. is not only in its long history, or the millions who in one form or another have professed it, but in the beauty of many of its ideas and the lofty heights to which it has risen. Its great limitation is that it has not been able to shake off crude forms.

Barnett, *Hinduism*; Arnold, *Hinduism* (1905).

HINDUR, NALAGARH (31° 0′ N., 76° 40′ E.), state, Punjab, India. Area, 2505 sq. miles. Pop. 52,551.

HINDUSTANI is merely a variety of Hindi, being derived from Braj Bhāsha dialect of Western Hindi. In India, where it has become *lingua franca*, it is better known as Urdu, a name derived from Turk. word meaning 'camp' (cp. English 'horde'); it arose out of necessities of intercourse between Persian-speaking Mughal conquerors and Hindi-speaking people of Hindustan. Many Persian, Arabic, and Turk. words

and forms of expression thus found their way into the Hindu of Delhi and surrounding districts, and the new mixed dialect acquired a richness, flexibility, and power of growth which soon enabled it to develop national lit. (see HINDUSTANI LIT.).

Although Muhammadan invasions of Hindi-speaking territories began in XII. cent. A.D., Urdu does not really begin till middle of XVI. cent., there being no difference between Hindi and Urdu. But it became the fashion for Urdu under Mughal rule to employ Persi-Arabic script, and to borrow Persian and Arabic words for literary purposes, while literary Hindi, always written in Devanāgari (Sanskrit) characters borrowed exclusively from classical Sanskrit. This is the only distinction between Urdu and Hindi, which, apart from the writing, differ chiefly in forms of prosody. But it is incorrect to speak of them as two different languages, merely because of the vocabulary of literary pedants. As Urdu employs Arabic alphabet, which is script of the Qur'ān, it has naturally become language of Ind. Muhammadans; and a religious element of divergence, which easily becomes exaggerated, is thus introduced into current controversies regarding adoption of a common national script. See INDO-ARYAN LANGUAGES.

Chapman, *How to learn H.* (1910); Pincott, *The Hindi Manual* (1882).

Hindustani Literature.—Bearing in mind that Urdu (called *Rekhta* by poets) really begins when Hindi poems were composed according to Persian forms of prosody, we may divide H. l. into four periods:—

Period I. EARLY HINDI, 1200–1550 A.D.—Language rude, but being fashioned for literary purposes. Represented by Rajput heroic ballads, and lit. of Vaishnava reformers. Oldest specimen: Chand's *Prithvirāj Rāsan.* Among reformers who influenced literary development, most famous is KABÍR.

Period II. MIDDLE HINDI, 1550 TO 1750 A.D.—Hindi poetry at its best, chiefly religious and philosophical, and attaining high degree of metrical perfection. Best specimen, Tulsi Das's *Rāmāyana,* celebrated throughout N. India.

Period III. RISE AND DEVELOPMENT OF LITERARY URDU, XVI.–XVIII. CENT. A.D.—Persian models were so closely followed in form and substance as to deprive Urdu of all claim to originality. To obtain variety, poets had recourse to metaphors, similes, alliteration, and other rhetorical devices. First Urdu poet was AMIR KHUSRAU, whose beautiful lyrics are still sung in N. India. It was under royal patronage that Urdu poetry found its best development. Earliest schools were at courts of Golconda and Bijapur, but later and most famous literary centres are Delhi and Lakhnau.

Names or pseudonyms of principal poets connected with each centre: 1. GOLCONDA. Nuri (earliest poet after Amir Khusrau); Nishāti; Tahsínuddin; and Qutb Shahi kings. 2. AURANGABAD. Valí (1680–1720 A.D.), 'Father of the Rekhta'; and Sirāj. 3. DELHI. Sauda, most distinguished poet and satirist of N. India; Khan Arzu (1689–1756), another master, whose pupil, Mir Taqi, lyric and narrative poet, d. 1810, ranks next to Sauda but surpasses him in style and purity of language; Yaqín, *c.* 1750; and Mir Dard. MODERN SCHOOL. Zauq; Zafar (pseudonym of last Emperor Bahadur Shah II.); Ghalib (d. 1869), most eminent modern Urdu poet; Sayyad Ahmad, Wahabi reformer, introduced lithographic printing and newspaper press, 1837. School ended with final establishment of Brit. rule, 1857. 4. LAKHNAU. Owing to Delhi having been frequently sacked between 1739 and 1760 A.D., centre was transferred to Lakhnau. Principal poets: Mir Hasan (d. 1786); Miskín, elegiac; Mir Sóz (d. 1800) and Jura't (d. 1810), somewhat licentious satirists. MODERN SCHOOL. Atash (d. 1847) and Nasikh (d. 1841), lyrical; Aris (d. 1875) and Dabír (d. 1876), elegiac. School ended with Brit. annexation of Oude, 1856.

Period IV. RISE OF URDU PROSE, chiefly under patronage of Fort William Coll., Calcutta, directed by Dr. Gilchrist. Best works: Mir Ammán's *Bagh o Bahár,* Nihal Chand's *Gul-i-Bakavali,* Ikram Ali's *Ikhwan-us-Safa.*

CONTEMPORARY LITERATURE.—Under national revival now taking place, interesting developments may be expected. Aligarh and Haidarabad are principal centres, former owing to Aligarh Coll., founded by Sayyad Ahmad, great prose writer and publicist; latter owing to patronage of Nizam's court, which attracts talented writers from N. India. Poetic expression more spontaneous; novel and drama being developed. Best modern writers: Afsós and Dágh, poets; Nazir Ahmad and Ratan Nath, novelists; Muhammad Hussain Azad, poet and critic; Altáf Hussain Háli, poet and greatest living prose writer.

HINGANGHAT (20° 33′ N., 78° 53′ E.), town, Central Provinces, India. Pop. 12,662.

HINGHAM (42° 13′ N., 6° 8′ E.), town, Massachusetts, U.S.A. Pop. (1910) 4963.

HINNOM, see GEHENNA.

HINOJOSA DEL DUQUE (38° 26′ N., 5° 8′ W.), town, Cordova, Spain; woollens, cottons, copper. Pop. *c.* 11,000.

HINSCHIUS, PAUL (1835–98), Ger. canonist; author of masterly treatise on the Pseudo-Isidor and of highly esteemed *Kirchenrecht.*

HINTERLAND, Ger. name for tract beyond district occupied by a colony, but claimed by the colony as territory which they will require for expansion.

HINTON, JAMES (1822–75), Eng. surgeon and author; aural surgeon to Guy's Hospital, and author of works on aural surgery and pathology; author of popular scientific works and of several works dealing with ethical and social problems.

HIOGO, HYOGO (34° 48′ N., 135° 14′ E.), town, Japan; has colossal statue of Buddha and temples; shipbuilding; textile manufactures. Pop. *c.* 300,000.

HIONG-NU, people who had a vast empire N. of China in the Early Christian era; possibly Turks.

HIP (O.E.), part of the human body called the haunch in cattle, being connection of legs and body; architectural term for meeting-place of sloping sides of roof, the finial on which is called the **Hip-knob.**

HIP-JOINT DISEASE, see JOINT, TUBERCULOSIS.

HIPPARCHUS (190–120 B.C.), Gk. astronomer; invented trigonometry; discovered precession of equinoxes; measured sun's distance from earth.

HIPPEASTRUM, a genus of plants, natural order *Amaryllidaceæ.* It comprises fifty species of showy tropical bulbous plants with funnel-shaped flowers.

HIPPEL, THEODOR GOTTLIEB VON (1741–96), Ger. author of light and learned narrative of the school of Sterne.

HIPPIAS OF ELIS (V. cent. B.C.), Gk. sophist, a rival of Protagoras; figures in Plato's *Hippias major* and *minor.*

HIPPOCRAS, old medicinal cordial composed of wine mixed with sugar and cinnamon, ginger, or other spices, and strained.

HIPPOCRATES (V. cent. B.C.), Gk. philosopher and physician; a descendant of Æsculapius; b. at Cos, 460 B.C.; called 'Father of Medicine,' and first to treat it scientifically; a firm believer in recuperative force of nature, which he endeavoured to stimulate and direct; wrote *Prognostics, Epidemics, Aphorisms.*

HIPPOCRENE (Gk. *hippou krene,* spring of the horse), fountain on Helicon supposed to have been formed by stroke of Pegasus's hoof; sacred to the Muses and source of inspiration to poets.

HIPPODAMUS OF MILETUS (fl. V. cent. B.C.), Gk. architect employed by Pericles at Athens.

HIPPODROME (Gk. *hippos,* horse; *dromos,* racecourse), Gk. racecourse, oblong, with semicircular end. The LONDON H. (opened 1900) is chiefly a music-hall.

HIPPOLYTA (classical myth.), queen of Amazons (*q.v.*); slain by Hercules; another version makes her marry Theseus, who conquered her forces in Attica.

HIPPOLYTUS (b. II. cent.), presbyter of Rom Church under bp. Zephyrinus; quarrelled with

Callixtus I.; martyred in persecution, *c.* 235; wrote numerous works, but all attributed to him are probably not his; some exist in translations only.

HIPPOLYTUS (classical myth.), s. of Theseus, king of Athens, by Antiope or Hippolyta, the Amazon queen. His stepmother, Phædra, conceived a passion for him, but, her advances being rejected, she accused him to her husband of having violated her chastity. Theseus laid a curse upon him, and he met with a violent end; but was restored to life by Æsculapius.

HIPPOLYTUS, CANONS OF, a work preserved only in an Arabic trans. of a Coptic trans. of the original Gk., written in the name of H., and dealing with Church order, ordination, sacraments, prayer, almsgiving, etc.; date and authorship are uncertain, but it probably appeared in Egypt in the IV. cent. Its exact connection with the *Egyptian Church Order*, *Apostolic Constitutions*, and *Testament of the Lord*, with which it undoubtedly has some relation, is a complicated literary problem. Probably the canons and the Egyptian Order are derived from the same source.

HIPPONAX (VI. cent. B.C.), Gk. satirical poet; inventor of parody and the choliambus metre.

HIPPOPOTAMUS (Gr. *hippos*, a horse; *potamos*, a river), a single genus of even-toed Ungulate Mammal, with two species, found in African lakes and rivers south of the Sahara. They are huge creatures, with thick, almost hairless skins, which lie concealed in their lakes and rivers during the day, but at night feed on grass and the reedy vegetation of the banks. Fossil remains of the Common H. have been found even in N. England.

HIPPOTHERIUM, see under HORSE FAMILY.

HIPPURIC ACID, $C_9H_9NO_3$, found in urine of horses and cows; colourless crystals; splits into glycocoll and benzoic acid.

HIPURINAS, Ind. tribe of Brazil, notorious for savagery before modern missionary efforts.

HIRA (32° N., 44° E.), ruined Arab city, formerly capital of a kingdom on the Persian Gulf.

HIRADO (33° 16′ N., 129° 26′ E.), mountainous island, lying off W. coast of Japan.

HIRE-PURCHASE, system of purchase by instalments, the payments being considered as payments for hire until the seller is completely satisfied.

HIRINGS, THE, Eng. fairs at which servants are engaged, now uncommon; held at Martinmas. At the Mop Fair, now obsolete, badges or 'mops' were worn as signs of occupation desired by the labourers who stood in the market-place to be hired.

HIROSAKI (40° 35′ N., 140° 30′ E.), town, Nippon, Japan. Pop. 37,487.

HIROSHIGE, adopted name of three Japanese artists of XIX. cent. whose prints are much valued. See Arthur Morrison's *The Painters of Japan*.

HIROSHIMA (34° 21′ N., 132° 33′ E.), port, Nippon, Japan. Pop. 142,763.

HIRPINI, Samnite race of Italy.

HIRSAU (48° 43′ N., 8° 43′ E.), village, Württemberg, Germany; formerly site of celebrated Benedictine monastery, of which beautiful ruins remain. Pop. *c.* 800.

HIRSCH, MAURICE DE, BARON (1831–96), Jewish capitalist and philanthropist; devoted much time and money to schemes for bettering condition of Jews; endowed the *Alliance Israélite Universelle*, 1889; gave £500,000 for establishment of schools in Galicia and Bukowina; founded Jewish Colonisation Association, to benefit persecuted Jews.

HIRSCH, SAMSON RAPHAEL (1808–88), Jewish theologian and Neoplatonist; his clever writings have had widespread influence.

HIRSCHBERG (50° 54′ N., 15° 40′ E.), town, Pruss. Silesia, Germany; textiles, chemicals, porcelain. Pop. (1910) 20,560.

HIRSON (49° 56′ N., 49° E.), town, Aisne, France. Pop. 8335.

HIRTIUS, AULUS (d. 43 B.C.), Rom. consul, 43; slain on Antony's side at Mutina; continued Cæsar's *Commentaries*.

HIRUDINEA, HIRUDO, see LEECHES.

HIRUNDINIDÆ, SWALLOWS (*q.v.*).

HISHAM IBN AL-KALBI (d. *c.* 819), Arab. antiquarian.

HISPELLUM, Ital. colony founded by Augustus; called Flavia Constans by Constantine; now *Spello*; important ruins.

HISSAR (38° N., 69° E.), district, Central Asia, between Oxus on S. and Hissar Mts. on N. Chief towns, Hissar and Kabadian. Soil fertile; rice and flax main products; towns celebrated for damascened swords and silks. Pop. 10,000.

HISSAR (29° 9′ N., 75° 44′ E.), capital, H. district, Punjab, India; horse and cattle fairs. Pop. 17,647. H. district has area *c.* 5000 miles. Pop. 781,717.

HISSARLIK, see under TROY.

HISTIÆUS (d. 494 B.C.), tyrant of Miletus, who at first Medised, but afterwards led the fruitless Ionian revolt against Darius; was captured and crucified.

HISTOLOGY, the study of microscopic physiology, dealing with cells and tissues of living things. See CELL, CYTOLOGY.

HISTORY is both the biography and unwritten events of the life of the human race. The beginnings of h. are to be seen in the rude weapons, bones, and barrows left by what used to be called 'prehistoric' man. It is impossible to decide how far back into this early period the myths and sagas go, and how far these are inventions, how far glorifications of actual events. Niebuhr's *Römische Geschichte* (1812–32) first turned attention to their possibly historical nature, and much history has since been read into the story of Romulus and myths in general. The reverse of the process which turned heroes into supernatural beings is also seen: the Wade who is a hero of some parts of the Eng. countryside, and is treated by Scott and others as a mediæval personage, is possibly Woden. The point is that h., even in the old-fashioned sense, may begin with Eolithic man.

Before the first Egyptian dynasty, dated by Mariette from 5004 B.C., there is a tradition of nearly 20,000 years of rule of gods, demi-gods, and shades; with the Memphite dynasties (*c.* 4000 B.C.) Egyptian monumental h. begins, and papyri, our first-written records, are found in the tombs. Inscriptions were for long the only h.; among them are the cuneiform writings of Assyria, perhaps contemporary with first Egyptian papyri; they recorded important events, names of rulers, etc.; similar but fuller accounts (*Annales*) of events of the years were afterwards kept by the Romans. The Greeks never cleared their early history from its encumbrance of myth, though sceptics arose like Hecatæus of Miletus (VI. cent. B.C.), and in Greece itself in age of Pericles; but Thucydides, Xenophon, and afterwards Polybius definitely set before themselves the ideal of historical veracity.

H. through Gk. example has, from Roman times to the present day, been taken to be an account of events truthfully but elegantly narrated; sometimes accuracy has impinged on elegance, sometimes everything is sacrificed to the love of literary effect; sometimes scrupulous intention of accuracy is to be found in masterpieces of style, as in Thucydides, Tacitus, Brantôme, Gibbon, Macaulay, and, as many people now think, Froude. The acceptance of Christianity had as enormous an effect on historical perspective and on the growth of the spirit of historical criticism as it had on h.; and a similar remark may be made about the Reformation. Discussion of questions, still unsettled, as to usages of Early Church trained men's minds to consider historical evidence, and from that time critical attention has been given to the past. The Fr. house of St. Maur started, in XVII. cent., the work of editing texts which is now being unintermittently carried out by Record Commissions and private initiative in every modern country. The

importance of the research element in modern hist. writing has led to system of specialists on minute points. See ANCIENT HISTORY. The bibliography of h. is wide subject in itself; for Eng. h. to 1485 Gross's *Sources and Lit. of Eng. H.* is essential; after 1485 there is no single guide. A general survey is Langlois, *Manuel de bibliographie historique.*

HIT (33° 39′ N., 42° 50′ E.), town, Turkey-in-Asia; produces naphtha, bitumen. Pop. *c.* 5000.

HITA, GINÉS PEREZ DE (*c.* 1540-*c.* 1604), Span. author; wrote well-known romance, *Guerras civiles de Granada.*

HITCHCOCK, EDWARD, Amer. geologist; b. Deerfield (Mass.), 1793; ordained pastor of Congregational Church, Conway (Mass.), 1821; surveyed the Western States and made speciality of study of footprints from Triassic sandstones of Connecticut Valley; pres. (1845–54) and prof. of Natural Science (1845–64), Amherst Coll.

HITCHIN (51° 57′ N., 0° 17′ W.), town, Hertfordshire, England. Pop. (1911) 11,905.

HITTITES.—The origin of the race is uncertain. Probably the H. came from Cappadocia, and poured south into Palestine, where to a large extent they lost their racial individuality by intermarriage with Semitic peoples, and by adopting the Babylonian religion and customs. From the XVI. cent. B.C. till 717 B.C. they occupied a territory of vague extent. For the country between the Lebanon and the Euphrates to the north of Palestine is described as 'the land of the H.' (*Joshua* 1^4); they are represented as dwelling in the mountains in the heart of Palestine (*Numbers* 13^{29}); and they are also identical with the 'children of Heth,' and are found by Abraham at Hebron (*Genesis* $23^{3\text{-}20}$ and 25^{10}). Usually in the Old Testament the H. are dwelling in the south-central part of Palestine, but they are certainly mentioned as also inhabiting the north, for the city of Luz is in the 'land of the H.' (*Judges* 1^{26}). There are many other references in the Old Testament, and their relations with the Hebrews were friendly.

Apart from Biblical data, all we know of the H. is derived from Egyptian and Assyrian monuments, and the cuneiform inscriptions of Van, in Armenia. According to the Egyptian inscriptions they had conquered Syria (1503–1449 B.C.), and were at war with Egypt, at intervals, till 1366 B.C. In the reign of Rameses III. (1180–50) they were amongst the invaders of Egypt, were repulsed, their country was laid waste, and they disappear from Egyptian history. From 1100 to 717 B.C. they are the enemies of Assyria, according to Assyrian inscriptions, and are finally defeated by Sargon. The Vannic inscriptions refer to several expeditions against the H. in the IX. and VIII. cent's B.C. Hittite monuments, revealing a marked Babylonian influence, are numerous, and have been discovered over a very wide area in Syria and Asia Minor, notably near Smyrna, in Galatia, in Isauria, at Ivris, and at Sipylus, and as far south as Hamath. The inscriptions are partly pictographic, and partly alphabetic and ideographic. The upturned snowshoe is common on these monuments, and the winged horse made its way into Europe through Hittite art. The chief Hittite god, according to Egyptian inscriptions, was Sutekh (or Atys), and the chief goddess Antarata.

Sayce, *The Hittites*; Messerschmidt, *The Hittites*; Wright, *Empire of the Hittites.*

HITTORFF, JACQUES IGNACE (1792–1867), Fr. architect who constructed many of the buildings of modern Paris and wrote architectural treatises.

HITZACKER (53° 9′ N., 11° 2′ E.), town, Hanover, Prussia. Pop. (1910) 976.

HITZIG, FERDINAND (1807–75), Ger. Biblical commentator and philologist, now largely superseded.

HIVITES, people of Palestine mentioned in the Bible; expelled by the Jews (*Exodus* 3^8).

HJÖRRING (57° 27′ N., 9° 59′ E.), ancient town, Denmark. Pop. *c.* 8000.

HKAMTI LONG (*c.* 27° 30′ N., 97° 30′ E.), district of India dependent on Burma; area, 900 sq. miles. Pop. *c.* 12,000.

HLOTHHERE, king of Kent (673–85); slain in battle by his nephew Eadric.

HOACTZIN, or HOATZIN (*Opisthocomus hoazin*), an interesting S. American bird, smaller than a pheasant, olive coloured, varied with white, with yellow crest. The young have a remarkable habit of climbing by means of claws on each wing. Anatomically peculiar, it is probably a survival of a primitive type.

HOADLY, BENJAMIN (1676–1761), Eng. bp., author of controversial works on relation of Church and State; himself latitudinarian, he hotly disputed with High Churchmen; successively bp. of Bangor, Hereford, Salisbury, and Winchester; in 1717 preached before king sermon on kingdom of Christ, the power of the Church, which gave rise to *Bangorian Controversy.*

HOANG HO, HWANG HO, YELLOW RIVER (37° 30′ N., 118° 20′ E.), one of the principal rivers of China; rises in the mountains of Tibet, and flowing N.E. traverses N.W. part of China and part of Mongolia; re-enters China, flowing S., E., and N.E.; enters Gulf of Pe-chi-li; length, 2500 miles; liable to floods.

HOAR, SAMUEL (1778–1856), Amer. politician; b. Lincoln, Massachusetts; State Senator, 1825; entered Congress, 1835; challenged certain laws concerning imprisonment of negroes in S. Carolina. His s's were Ebenezer and George; former was Attorney-Gen. in 1869; latter was Senator from 1877 till 1904.

HOARE, SIR RICHARD COLT, Bart. (1758–1838), Eng. antiquary; historian of Wiltshire; s. of Earl of Buckinghamshire.

HOBART (42° 56′ S., 147° 21′ E.), capital, Tasmania; fine harbour; has two cathedrals, Parliament Houses, Government House; iron foundries, breweries. Pop. (1911) 27,719.

HOBART, GARRET AUGUSTUS (1844–99), Vice-Pres. of U.S.A; leading Republican.

HOBART, JOHN HENRY (1775–1830), Amer. divine; assistant bp. of New York, 1811; bp. 1816; strong High Churchman, defender of Episcopacy, and keen controversialist.

HOBART PASHA, AUGUSTUS CHARLES HOBART-HAMPDEN (1822–86), distinguished Brit. admiral; became admiral in the Turkish navy.

HOBBEMA, MEYNDERT (*c.* 1638–1709), famous Dutch landscape painter; lived and died in poverty and obscurity; made unsurpassed studies of sober and peaceful landscapes, perfect in their kind; widely different manner from that of his contemporary Ruysdael, but their works often confused through dealers forging signatures.

HOBBES, JOHN OLIVER, see CRAIGIE, P. M. T.

HOBBES, THOMAS (1588–1679), Eng. philosopher; b. Malmesbury; ed. at Magdalen Hall, Oxford, and in 1608 became tutor to the s. of William Cavendish, 2nd Earl of Devonshire; remaining with this family, except for two short intervals, for the rest of his life. He travelled abroad with his pupil, who became an intimate personal friend. H. became imbued with the scientific rather than the philosophic spirit of his day. He then devoted himself to the study of the classics. Cavendish died in 1628, and H. became tutor to the s. of Sir Gervase Clifton, 1629, then to the Earl of Devonshire, s. of his former pupil, 1631. About this time he began to devote himself to philosophy. The years 1640–51 he spent abroad. The idea of his great book, *Leviathan,* was forming in his mind, and he devoted most of his attention to it. His ideas were certainly affected by the civil strife of the time. The *Leviathan* was a great monster made up of a mass of human beings. While he anticipated later thinkers in believing that government was for the benefit of the people as a whole, he believed that the civil power residing in the people was absolute, and that no internal organisations which might conflict with it should be allowed to exist.

The *Leviathan* was published in 1651 and provoked a storm of abuse on one side and of praise on the other.

Meanwhile, the political views therein expressed were thought dangerous both in England and France. H., after making his submission, contrived to live quietly in London. He then became involved in various controversies, one with Bramhall, another with John Wallis, Savilian prof. of Geometry at Oxford, which lasted on and off for many years. H. was not really a profound mathematician, hence he was often worsted, but would never allow himself beaten, and the two men furiously assailed each other by turns, the controversy often being most virulent and personal. Though he was now getting old H.'s energy was unwearied. In 1666 some believed that his 'atheistic' teaching had provoked the wrath of Heaven in the shape of the great plague, and H. was alarmed lest he might be tried for heresy. However, the king protected him, but H. was obliged to get his books printed out of England. His reputation abroad was very great. He worked on at translating Homer and other things till near the end, dying aged ninety-one. He has left the mark of his work on many subjects; in mathematics only was he thoroughly unsuccessful. He laid the foundation on which political philosophers of the XIX. cent. were to build.

Sir Leslie Stephen, *Hobbes*; G. Croom Robertson, *Hobbes*.

HOBBY.—(1) hob or hobgoblin; (2) a slow and steady horse; (3) an occupation followed as a pastime. Classical examples of riding a h. are to be found in Sterne's *Tristram Shandy*.

HOBBY, a member of HAWK FAMILY (*q.v.*).

HOBHOUSE, JOHN CAM, see BROUGHTON, LORD.

HOBOKEN (40° 44′ N., 74° 6′ W.), town, New Jersey, U.S.A.; shipping trade in coal; iron foundries; silk and lead pencil manufacturers. Pop. (1910) 70,324.

HOBOKEN (51° 11′ N., 4° 21′ E.), town, Belgium. Pop. 13,000.

HOBSON'S CHOICE, phrase derived from Thomas Hobson (*c.* 1544–1630), the Cambridge carrier, commemorated by Milton. He insisted on horses being taken from his stable only in their regular turn—hence meaning, 'this or none.'

HOBY, SIR THOMAS (1530–66), Eng. diplomat and writer; translated *The Courtyer of Count Baldessar Castilio* and other works.

HOCCLEVE, THOMAS, see OCCLEVE.

HOCHE, LAZARE (1768–97), Fr. soldier; commanded army of Moselle against Austrians, whom he defeated at Weissenburg; ended Vendée insurrection, and defeated Royalists at Quiberon and Penthièvre, 1795; obtained command of Sambre and Meuse force, 1796, and routed Austrians at Neuwied; War Minister, 1797; d. at Wetzlar.

HOCHHEIM (50° 2′ N., 8° 23′ E.), town, Hesse-Nassau, Germany. Pop. 4000.

HOCHST (50° 7′ N., 8° 30′ E.), town, Hesse-Nassau, Germany; machinery, dyes. Pop. (1910) 17,224.

HÖCHSTÄDT.—(1) (48° 36′ N., 10° 33′ E.) town, Bavaria, Germany. Pop. 2305. (2) (50° 8′ N., 11° 4′ E.) town, Bavaria, Germany. Pop. *c.* 2000.

HOCK, see WINE.

HOCKEY (cf. O.Fr. *hoquet*, shepherd's crook), Eng. game played by two teams of 11 players on ground 100 yds. by 50–60 yds.; the goal is 7 ft. high, 12 ft. broad; round the goal line is the striking circle 12 ft. long and 15 yds. from the goal; on each side 5 yds. of the breadth of the course is 'outside.' There are 5 forwards, 2 backs, 3 half-backs, and a goal-keeper on each side.

HOCK-TIDE, Eng. holiday observed XII. cent., and probably earlier, to XVIII. cent., on Monday and Tuesday after Easter Sunday.

HOCUS, or Hocus Pocus, a supposed corruption of *Hoc est corpus* used by priests in the Mass; was used (*temp.* James I.) as a cant-term for a juggler's trick. Its later meaning refers to a hoax with criminal intent.

HODDEN, rough grey cloth, formerly made from a combination of black and white undyed wool.

HODDESDON (51° 46′ N., 0° 2′ W.), town, Hertfordshire, England. Pop. (1911) 5196.

HODEDA (14° 36′ N., 43° 4′ E.), fortified town, Arabia; exports coffee, grain. Pop. *c.* 30,000.

HODENING, Eng. Christmas Eve mummery, in which a horse's head (model) is fixed on a draped pole, lighted from the interior and carried round from door to door for the purpose of collecting money.

HODGE, CHARLES (1797–1878), Amer. Presbyterian divine; studied in America and at Paris, Halle, and Berlin; prof. at Princeton Theological Seminary.

HODGKIN, THOMAS (1831–), Eng. historian; wrote *Theodoric the Goth*, *The Dynasty of Theodosius*, *Italy and her Invaders*.

HODGSON, BRIAN HOUGHTON (1800–94), Eng. administrator; Orientalist and naturalist; spent many years in the East Indian service, and was a noted authority on Buddhism and natural history; pub. *Literature and Religion of Buddhists* (1841).

HÓDMEZÖ-VÁSÁRHELY (46° 27′ N., 20° 20′ E.), town, Hungary. Pop. (1910) 62,445.

HODOGRAPH, curve obtained by joining ends of lines drawn from any point parallel and proportional to the velocity of a moving particle.

HODSON, WILLIAM STEPHEN RAIKES (1821–58), Brit. soldier; served against Sikhs; accused of misuse of regimental money, 1855; at outbreak of Indian Mutiny raised regiment of irregular horse, known as H.'s Horse; greatly distinguished himself during war, and at fall of Delhi took the old emperor prisoner and slew his sons; killed during attack on Lucknow.

G. H. Hodson, *Hodson of Hodson's Horse*; Trotter, *A Leader of Light Horse*.

HOE, ancient gardening tool, useful for making holes for planting; in XVII. cent. many h's commenced to be united in a HORSE HOE (grubber) for breaking up ground in fields.

HOEFNAGEL, JORIS (1545–1601), noted engraver and miniature painter.

HOF.—(1) (50° 19′ N., 11° 54′ E.) town, Bavaria, Germany; manufactures textiles. Pop. (1910) 41,120. (2) (60° 34′ N., 11° 59′ E.) town, Hedemarken, Norway. Pop. 5000.

HOFER, ANDREAS (1767–1810), Tyrolese statesman; with Austrian encouragement raised Tyrol against Napoleon, April 1809; Napoleon recovered possession in July, but country rose as he departed; H. came from hiding; won battle of Iselberg against Lefebvre; ruled for three months; forced to fly in Oct. 1809; betrayed, he was shot by Napoleon's orders.

HÖFFDING, HAROLD (1843–), Dan. philosopher; prof., Copenhagen Univ.; works trans. into many languages.

HOFFMAN, FRIEDRICH (1660–1742), Ger. physician; practised and taught at Jena and afterwards at Minden; first prof. of Medicine (1693), and also of Natural Philosophy at Halle; member of many foreign learned societies, and author of many medical works.

HOFFMANN, AUGUST HEINRICH, HOFFMANN VON FALLERSLEBEN (1798–1874), Ger. poet; b. Fallersleben, and called himself after his birthplace; prof. at Breslau Univ.; dismissed, 1842, on account of his *Unpolitische Lieder*; also wrote Volkslieder.

HOFFMANN, ERNST THEODOR WILHELM (1776–1822), Ger. novelist; b. Königsberg (Prussia); studied law; for some time musical director at Bamberg, Leipzig, and Dresden Theatres; composed several operas; became famous through *Phantasiestücke in Callots Manier* and *Die Serapionsbrüder* (weird stories), and *Die Elexiere des Teufels* (novel).

HOFFMANN, FRANÇOIS BENOÎT (1760–1828), Fr. critic and author of amusing operas.

HOFFMANN, JOHANN JOSEPH (1805–78), Ger. Orientalist; wrote various Jap. studies and *Catalogus librorum et manuscriptorum japonicorum* (1845).

HOFMANN, AUGUST WILHELM VON (1818–92), Ger. chemist; first director of School of Practical Chem., London; became prof. of Chem. in Berlin, 1864. He and his pupils brought the coal-tar industry under notice. His researches on analin, rosanilin, and quinoline red are classics.

HOFMANN, JOHANN CHRISTIAN KONRAD VON (1810–77), Ger. theologian and historian; pub. *Theologische Ethik, Schutzschriften, Der Schriftbeweis.*

HOFMANN, MELCHIOR (*c.* 1498–1544), Ger. Anabaptist preacher; at first a furrier, became follower of Luther; adopted extreme views on Eucharist; preached at Strassburg and Emden; became Anabaptist; sometimes thought anti-Trinitarian, but was really Valentinian.

HOFMEISTER, WILHELM FRIEDRICH BENEDICT (1824–77), Ger. botanist; prof. of Bot. at Heidelberg and an eminent morphological botanist; pointed out the analogies between *Coniferæ* and *Cryptogams.* He also worked on *Bryophytes, Pteridophytes,* and the embryology of plants.

HOFMEYR, JAN HENDRIK (1845–1909), South African politician and journalist; was for many years ruling spirit in Cape Colony of Afrikander Bond; supported Cecil Rhodes till Jameson Raid, 1895; tried to influence Kruger and to prevent outbreak of war between Boers and British; was in favour of federation of S. African colonies.

HOFSTEDE DE GROOT, PETRUS (1802–86), Dutch prof., divine, and theological writer.

HOGARTH, WILLIAM (1697–1764), Eng. artist and engraver; b. London; s. of a schoolmaster; apprenticed to an engraver, and later set up in that calling on his own account; *m.* Jane, dau. of Sir James Thornhill; achieved his first artistic success with his series of six paintings representing *The Harlot's Progress* (1731), shortly afterwards engraved by himself. This series was followed by eight scenes depicting *The Rake's Progress* (1735), *Marriage à la Mode, Industry and Idleness, The Stage Coach, The March to Finchley,* portraits of Garrick, Lavinia Fenton, scriptural pieces, etc. H. achieved immediate success with his engravings, but his original paintings found little appreciation in his own day, and many remained unsold at the time of his death. In portraiture he was more successful. H. is now recognised as one of the great Eng. artists. His purpose, in his more famous series, was to paint a story dramatically in a set of scenes, and the best of these are at once remarkable for realism and masterly humour, for H. was not only great as an artist, but equally so as a satirist and humorist.

C. Lewis Hind, *Hogarth.*

HOGG, JAMES (1770–1835), Scot. poet, known as 'the Ettrick Shepherd'; herded cattle and sheep in his youth; made disastrous ventures in farming; pub. *Scottish Pastorals* (1801), *The Mountain Bard* (1807), *The Queen's Wake* (1813)—his best work in poetry. Other writings include collections of tales, and a treatise on diseases of sheep.

Life, by Sir George Douglas.

HOGG, THOMAS JEFFERSON (1792–1862), Eng. author; was the Oxford associate and subsequent biographer of Shelley. His work was incomplete and gave offence to his relatives, but makes good reading.

HOGMANAY, name given in parts of Scotland to New Year's Eve; also called *hogg-night.*

HOGSHEAD, standard measure for liquids; made 63 wine gallons or 52½ imperial gallons in 1423.

HOHENASPERG (48° 57′ N., 10° 5′ E.), former fortress, Württemberg, Germany.

HOHENFRIEDBERG, HOHENFRIEDEBERG (50° 54′ N., 16° 14′ E.), village, in Silesia, Prussia. During the War of Austrian Succession great battle was fought at H., June 3, 1745, between Prussians under Frederick the Great, and Austrians and Saxons under Prince Charles of Lorraine; total defeat of Allies, whose losses were 15,224; Prussian losses about 4700.

HOHENHEIM (48° 42′ N., 9° 12′ E.), small town, Württemberg, Germany; famous agricultural coll. Pop. *c.* 300.

HOHENLIMBURG (51° 20′ N., 7° 33′ E.), town, Westphalia, Prussia. Pop. (1910) 13,900.

HOHENLINDEN (48° 9′ N., 11° 59′ E.), village, Upper Bavaria; scene of defeat of Austrians, under Archduke John, by French, under Moreau, Dec. 3, 1800.

HOHENLOHE, Ger. family, which held title of Count from XII. cent., and attained princely rank in XVIII. cent. The family was frequently subdivided, and many of its branches are now extinct; but there remain those of Bartenstein, Jagstberg, Schillingsfürst, and Waldenburg, which represent the R.C. line of H.-Waldenburg, founded in 1551; and those of Ingelfingen, Langenburg, and Ohringen, which are descended from the Prot. family of H.-Neuenstein, founded at the same time. The most distinguished member of the family was CHLODWIG KARL VICTOR (1819–1901), prince of H.-Schillingsfürst; he at first entered service of Prussia, but left it in 1846; in 1866 he became chief minister of Bavaria; aimed at uniting N. and S. Germany; opposed Ultramontanes in 1869, and had to resign office in 1870; ambassador to France, 1873–80; appointed gov. of Alsace-Lorraine in 1855; Imperial Chancellor in 1894. Other notable members of family are: FRIEDRICH, prince of H.-Ingelfingen (1746–1818), who served against Napoleon and was defeated at Jena; LUDWIG (1765–1829), prince of H.-Waldenburg-Bartenstein, who became marshal of France; ALEXANDER (1794–1849), prince of H.-Waldenburg-Schillingsfürst, who became priest and is credited with performing supernatural cures; and H. INGELFINGEN (1827–92), prince of Kraft, who served in Franco-Ger. War of 1870–71.

Weller, *Geschichte des Hauses Hohenlohe* (1904).

HOHENSTAUFEN (48° 44′ N., 9° 45′ E.), village, Württemberg, Germany; site of ruined castle which belonged to H. family from 1080 till 1525, when it was destroyed in Peasant Rising.

HOHENSTAUFEN, Ger. family, holding imperial crown, 1138–1254; founded by Frederick von Büren, whose son Frederick took name H. from H. Castle; emperors of family were Frederick I. (1152–90), Henry VI. (1190–97), Philip I. (1198–1208), Frederick II. (1212–50), Conrad IV. (1250–54). See EMPIRE, HOLY ROMAN.

HOHENSTEIN.—(1) (50° 47′ N., 12° 43′ E.) town, Saxony, Germany. Pop. 15,600. (2) (53° 34′ N., 20° 18′ E.) town, E. Prussia. Pop. 2500.

HOHENZOLLERN, Ger. imperial family; name derived from castle in S. Germany; family first came into prominence in 1415, when one of its members became Elector of Brandenburg; in 1701 Frederick III., Elector of Brandenburg, became first King of Prussia, and in 1871 William I., seventh King of Prussia, became first Emperor of Germany; Kaiser William II. is present head of family. Swabian branch, which dates from 1227, is represented by the present King of Rumania, a member of house of H.-Sigmaringen.

HOKKAIDO, Jap. term, denoting N. part of empire.

HOKUSAI (1760–1849), famous Jap. painter; works include great book of colour prints, *Mangwa.*

HOLBACH, PAUL HEINRICH DIETRICH BARON D' (1723–89), Fr. philosopher; denounced Christianity as source of all ill; friend of *Encyclopædists.*

HOLBEACH (52° 49′ N., 0° 1′ E.), town, Lincolnshire, England. Pop. (1911) 5259.

HOLBEIN, HANS, THE ELDER (*c.* 1460–1524), Ger. artist; painter of average ability; chiefly religious subjects; examples at Basel, Munich, and Augsburg, also at Hampton Court. He is chiefly famous as being the f. of an illustrious son.

HOLBEIN, HANS, THE YOUNGER (1497–1543), Ger. artist; s. of Hans H. (*q.v.*); b. Augsburg; in his youth assisted his f., subsequently going to Basel, where he became a member of the painters' guild, 1519. Here and at Lucerne he was extensively engaged in portraiture, mural decoration, and the

production of woodcuts, including the famous series, 'The Dance of Death.' In 1526 he visited London and executed many fine portraits of notabilities, but returned to Basel in 1528. He was settled in London again in 1532, became court painter to Henry VIII., and subsequently d. of the pestilence. H. ranks amongst the greatest of the old Ger. masters. His notable works include *The Ambassadors* (National Gallery), *Anne of Cleves* (Louvre), *Duke of Norfolk* (Windsor), *Jane Seymour* (Vienna), and numerous portraits in Eng. mansions. See Bensusan, *Holbein.*

HOLBERG, LUDWIG, BARON (1684–1754), Dan. author; b. Bergen; lived in England, 1706–8; became prof. of Metaphysics at Copenhagen, subsequently of Rhetoric and History. His earliest literary successes were his satirical poems, *Peder Paars*, *Hans Mikkelsen's Metamorphoses*, etc. Upon the opening of the Dan. theatre at Copenhagen, H. supplied its stage with a long series of brilliant comedies, which have taken a high place in Dan. literature. Other important works include his *Autobiography*, *History of Denmark*, and *History of the Jews.*

HOLBORN, central metropolitan borough, London, England; contains Chapel of Ethelreda, St. Andrew's Church, City Temple, Lincoln's Inn, Gray's Inn, Brit. Museum, and many other public buildings.

HOLCROFT, THOMAS (1745–1809), Eng. dramatist; was in turn pedlar, stable-boy, schoolmaster, stage-promoter, and actor; his melodrama, *The Road to Ruin* (1792), was highly successful, and is still played. He also wrote novels and verses, and pub. trans. from German and French.

HOLDEN, SIR ISAAC, Bart. (1807–97), Eng. inventor; after a life of struggle, invented a wool-comber (1847), and established, near Paris, wool-combing industry, which brought him wealth.

HÖLDERLIN, JOHANN CHRISTIAN FRIEDRICH (1770–1843), Ger. poet; b. Lauffen; became insane, 1802; wrote excellent lyrics; *Empedokles* (tragedy, unfinished), *Hyperion* (romance in letters), etc.

HOLDERNESS, EARLDOM OF, Eng. honour bestowed on John Ramsay, Lord Haddington, in 1621, who died childless. In 1644 Prince Rupert received the earldom, which again became extinct on his death, 1682. Conyers, Lord Conyers and D'Arcy, representative of ancient Yorks families, was cr. Earl of H. in 1682, and the earldom descended in his line until 1778, when it became finally extinct.

HOLDHEIM, SAMUEL (1806–60), Jewish nationalist; rabbi at Berlin.

HOLDING, see SMALL HOLDINGS, CROFTER.

HOLGUIN (20° 50′ N., 76° 29′ W.), town, Cuba, W. Indies. Pop. 7592.

HOLIDAYS, originally 'holy' days, *i.e.* days on which no work should be done; in modern England Bank H's are the only h's recognised by the State; these are not observed in Scotland, nor is Good Friday, which is customarily kept in England. Quebec still observes some of the old feast days (the h. properly so called), but the rest of the Dominion and the Brit. Colonies have their own new systems.

In U.S.A. there are no legal h's; the presidential proclamation of Thanksgiving Day (usually last Thursday in Nov.) makes it legal holiday in Columbia and the Territories, though it is generally observed. Other h's generally observed are Independence Day (July 4), Labor Day (first Monday in Sept.), and these are legal in most states, which have also various other statutory h's.

HOLINSHED, or HOLLINGSHEAD, RAPHAEL (d. *c.* 1580), Eng. chronicler; wrote *Chronicles of England, Scotland, and Ireland* (pub. 1578), from which Shakespeare's Eng. hist. plays were largely drawn.

HOLKAR, title of Mahratta ruler of Indore.

HOLL, FRANK (1845–88), Eng. artist; R.A., 1884; achieved distinction as painter of genre subjects, but later devoted himself to portraiture, his sitters including Gladstone, Chamberlain, Bright, Lords Wolseley and Roberts.

HOLLAND, NETHERLANDS, a kingdom on the coast of N. Europe, without mountains, and only protected in many places by dams from inundation by the sea. The coast-line and area of the country have often changed, through the reclaiming of land on one side and floods on the other. The country is covered by a network of canals, and is entirely drained into the North Sea.

CLIMATE is similar to that of S. England, but in mid-summer is unhealthy in low parts near the sea.

History.—For one or two cent's B.C. the land we call Holland was occupied by the Frisians and Batavi. The country was conquered by Rome, but let slip in the IV. cent. on the coming of the Franks. It was converted to Christianity about the VIII. cent., and formed part of the Empire of the Karlings. The name Holland was given to the district which still forms the provinces of N. and S. Holland in the XI. cent., when the Counts of Holland rose to importance. The various states which made up the *Netherlands* passed, some by marriage, some by conquest, to the Dukes of Burgundy, and then by descent to the Emperor Charles V. He was a firm though a harsh ruler, but the accession of his s., Philip II., in sympathy a Spaniard, and nothing of a Dutchman, meant terrible oppression for the country by king and Inquisition. The result was the famous revolt of the Netherlands under William of Orange, a lieut. of Philip, and member of a princely house in the S. of France. William's great protagonist in war was the Duke of Alva.

In 1572 a successful rising took place of the N. provinces (the Southern romained under Span. then Austrian domination till they became 'Belgium'). William of Orange became virtual ruler. The Union of Utrecht was formed in 1579, and the provinces declared themselves free of Span. control, 1581. William was murdered at Philip's instigation in 1584. The war with Spain grew fiercer, but in 1609 a truce was signed for twelve years. But the next few years were largely taken up with religious struggles between the Orthodox and Arminian parties, with the result that the Arminians were banished. Thenceforward Holland grew rapidly, not only politically, for she became famous in arts and science as well. In the XVII. cent. she exerted a greater influence in Europe than she has ever done before or since. She became a rival of England, and there was war between the two countries under Cromwell and Charles II. The wars (THE DUTCH WARS, 1652–53, 1663–67, 1672–78) left things much as they were. In the first, the two Eng. victories off Kent and the *Three Days Battle*, Feb. 18–20, 1653, seriously damaged commerce and left both sides exhausted. The second war saw the Dutch fleet in the Medway, and London struck with terror. In 1672 the English and French made an abortive attempt to invade Holland, and John de Witt, who had really guided the affairs of the Dutch, became so unpopular that he was murdered. William of Orange now came into power. French took Bonn, 1673, and Ghent and Ypres later: but Peace of Nimeguen, 1678, ended the war.

William of Orange became king of England and Scotland in 1688, and Dutch troops fought with English in the campaigns against Louis XIV. After William's death in 1702, a republic was established once more, and a period of general decline set in. By the Treaty of Utrecht, 1713, the Span. Netherlands, which France had tried to obtain, had become Austrian. But the Dutch Republic ceased from that time to have much say in European politics. In 1747 William IV. of Orange was elected Stadtholder of all the seven provinces, and the office was declared hereditary in his family. War broke out with Britain as the result of a quarrel over naval matters in 1780, and by the Treaty of Paris, 1793, certain colonies were surrendered to Britain. Meanwhile there was a certain party adverse to the house of Orange, and after internal disputes, William of Orange was re-established under Prussian and Brit. auspices.

But the Fr. Revolution again upset matters, and in 1795 the country was conquered by Republican troops. The Orange family fled, and the anti-Orange party

was overjoyed at the Fr. victory. A BATAVIAN REPUBLIC was established: nominally, a Fr. alliance was formed; practically, the country was under Fr. domination. Britain got the Dutch colonies: there was a short respite from war after the *Peace of Amiens*, 1802, but soon came more conflicts, and in 1806 Napoleon made his brother, Louis Bonaparte, king of Holland. A revolt broke out in 1813, and William V. of Orange was recognised as sovereign prince, and as king in 1815, the Belgian provinces being united to the Dutch. But a quarrel arose between the Dutch and Belgians (different in many ways by race, religion, and temperament), and an independent kingdom of Belgium was established in 1831. The constitution was revised in 1848. Quarrels about religious education took place continually during the reign of William II. (1849–1900), the father of the present Queen Wilhelmina. Another political question has been that of the suffrage: in 1896 it was extended so as to almost double the number of electors. In 1901 the queen married Prince Henry of Mecklenburg-Schwerin. During the South African War, Dutch sympathies were strongly with the Boors.

The GOVERNMENT is a constitutional monarchy with an Upper Chamber or States General, consisting of 50 members elected by the provincial estates from the wealthiest citizens, and of high officials (members to be at least 30 years old), and a Second Chamber of 100 members elected for 4 years (electors to be 25 and members 30). Justice is administered by a high court at The Hague and several other tribunals.

RELIGION.—The Dutch are a religious people; complete religious toleration exists, and there have been many refugees, consequently many faiths are represented. There is a Dutch Reformed Church, which is the National Church, and several other Prot. bodies which are offshoots from it. There are a fair number of Rom. Catholics, also Old Catholics and Jews.

EDUCATION is entirely under State control; primary education is free, and for secondary education the fees are low. There are univ's at Amsterdam, Groningen, Utrecht, and Leyden.

FINANCE.—Revenue (1912) was £16,839,018; expenditure, £18,501,488.

The army is recruited by lot from men of 20; in the land militia service is for 8 years, in the sea militia for 5. About 12,000 serve 8½ months in a foot, and 18 months in a mounted regiment; the remainder, *c.* 5000, only for 4 months. Every citizen must serve from 25 to 35 in the Civil Guard. The total war strength is about 175,000. The navy is recruited voluntarily.

COLONIAL POSSESSIONS.—Holland owns parts of the E. Indies, and less important possessions in the W. Indies. E. Indies possessions (with areas in sq. miles) are: Java and Madura, 50,554; Sumatra, 161,612; Borneo, W. coast, 55,825; Borneo, S. and E., 156,912; Billiton, 1863; Banka, 4460; Riau-Lingga Archipelago, 16,301; Celebes, 71,470; Molucca Islands, 43,864; New Guinea, 151,789; Timor Archipelago, 17,698; Bali and Lombok, 4065. Total area, 736,413 sq. miles.

W. Indies possessions are: Dutch Guiana, 46,000; Curaçao Colony, 403. Total area, 46,403 sq. miles. Total area of Dutch colonies, 782,816 sq. miles.

RESOURCES AND INDUSTRIES.—Agriculture and pasturage are of greater importance than industries; cheese and butter and flower bulbs are exported. Chief industries are shipbuilding, diamond-cutting, manufacture of sugar, salt, cocoa, paper, glass, vinegar, earthenware; brewing and distilling are important. Coal is found, but in small quantity. Chief ports are Amsterdam, Rotterdam, Flushing, and The Hague (capital). H. is a free-trade country. Canals are more important than railways for transport.

Pop. (1910) 5,945,155. Map, see BELGIUM.

Rogers, *Holland*; Wharton, *Holland of To-day* (1912).

Dutch Language and Literature.—Dutch is one of the Low-German languages, of the same family as Old English and Frisian. Its development belongs to three periods: *Old* D., derived from various Teutonic tribal dialects, which first began to take shape about the IX. cent.; *Middle* D. (XII. to end of XIV. cent's), which became the language of a considerable portion of Germany, Belgium, and northern France; and *Modern* D., which dates from the XV. cent. Dutch is spoken not only in Holland, but in the Union of South Africa, by colonials of Dutch descent who use for conversational purposes a *patois* known as the 'Taal.'

The Middle D. period witnessed the introduction of numerous epics and romances, chiefly derived from foreign sources, including *Floris en Blancefloer*, *Reinaert* (Reynard the Fox), *Roman van Lancelot*. During the XIV. cent., however, the flourishing trade of Holland had made that country one of the chief industrial markets of the world, and so with the rise of commercial prosperity there gradually came into being a more distinctive form of expression, out of which grew a lit. which was characteristic of the people and the times. This lit. began with Jacob van Maerlant, whose social satires, under the name of *Naturen Bloeme*, appeared about 1263, and was followed in 1284 by his greater work, *De Spieghel Historiael* (Mirror of History); after him came other writers, chiefly on hist. or moral subjects, including Jan van Boendale (1280–1365), Jan de Weert, and Melis Stoke. The romantic school of poetry was still represented by the works of Jan van Heelu, Hein van Aken, and Dirk Potter, but their influence was not lasting, and the moralists of the Maerlant type maintained their supremacy.

Modern D. is represented in its pioneer stage by the works of Coornhert, Spieghel, and Visscher, and a master stylist in Pieter Cornelissen Hooft (1581–1647), whose work in history, poetry, and drama is of high character. The greatest poet Holland has produced was Joost van den Vondel (1587–1679), whose tragedies, chiefly on Scriptural subjects, are marked by great imagination and expression, and are said to have influenced Milton. The greatest of these is *Lucifer*. Jacob Cats (1577–1660) was a poet of another order, whose work was invariably witty though sometimes coarse, and secured a lasting popularity. Other writers of outstanding abilities belonging to this period include Van der Goes, Oudaen, and the historian Geeraerdt Brandt. The XVIII. cent. witnessed a decline in D. poetry, but a writer of remarkable attainments arose in William Bilderdijk (1756–1831), whose influence on the D. lit. was very marked; and the XIX. cent. has witnessed the rise of many writers of poetry, history, fiction, and belles-letters whose works are distinguished by charm and originality.

Flemish Literature.—As distinct from the Old Dutch lit., modern Flem. lit. came into existence during early part of the XIX. cent. Its exponents include a number of poets and realistic and hist. novelists, amongst whom may be named Karel Ledeganck, Jan van Beers, J. T. van Rijswijck, P. van Duyse, Peter van Kerckhoven, J. L. D. Sleeckx, Jan Snieders, Julius de Geyter, Emmanuel Hiel, and numerous other writers.

HOLLAND (42° 48′ N., 86° 6′ W.), town, Michigan, U.S.A. Pop. (1910) 10,490.

HOLLAND, an unbleached linen cloth originally manufactured in H.

HOLLAND, CHARLES (1733–69), Eng. actor, of days of Garrick; his s. CHARLES (1768–1849) was also a prominent player.

HOLLAND, HENRY FOX, 1ST BARON (1705–74), Brit. politician; held various offices of state; Leader of Lower House, 1755, 1762; Paymaster-Gen., 1757.

HOLLAND, HENRY RICH, 1ST EARL OF (1590–1649), Eng. soldier and politician; arranged marriage between Charles I. and Henrietta Maria; changed sides several times during Civil War; taken prisoner at St. Neots, 1647, and executed, 1649.

HOLLAND, HENRY RICHARD VASSALL FOX, 3RD BARON (1773–1840), Brit. politician; Lord Privy Seal in 'All the Talents' Cabinet, 1806; Chancellor of Duchy of Lancaster, 1830; wrote *Memoirs of Whig Party*.

HOLLAND, JOSIAH GILBERT (1819–81), Amer. essayist, verse-writer, novelist; founder of *Scribner's Monthly* (1870), called later *The Century*.

HOLLAND, PHILEMON (1552–1637), Eng. translator of Gk. and Lat. classics. His s. HENRY (1583–c. 1650), wrote *Baziliologia* (1618) and *Heroologia* (1620).

HOLLAND, RICHARD DE (fl. second half of XV. cent.), Scot. poet; author of the *Book of the Howlat*, an alliterative rhymed poem.

HOLLAND, SIR HENRY, Bart. (1788–1873), Eng. physician; practised medicine with great success in London; travelled much abroad, and knew most eminent people of his time; author of works on medicine, travel, and other subjects.

HOLLANDS, or GIN. See SPIRITS.

HOLLAR, WENCESLAUS (1607–77), Bohemian engraver who took up his residence in England (1637), and has left numerous fine architectural and topographical prints, besides portraits and miscellaneous studies; illustrated (*inter alia*) 1st vol. of Dugdale's *Monasticon*.

HOLLES, DENZIL, BARON HOLLES (1599–1680), Eng. politician; b. at Houghton, Nottinghamshire; M.P., 1624; in 1629 he forced Speaker to remain seated while resolutions against the king's unjust taxes were put to the House, and was accordingly arrested and imprisoned in Tower till 1630, when he was set free, and withdrew temporarily to private life. H. sat in Short and Long Parliaments, 1640; helped to formulate the Grand Remonstrance in 1641, and in 1642 was one of the five impeached members. During Civil War he at first played an active part, served with some distinction at Edgehill, but suffered defeat at Brentford; later he withdrew from active service and made efforts for peace; twice impeached by army, in 1645 and 1647, and subsequently fled to France. H. had considerable share in Restoration of Charles II., by whom he was appointed ambassador to Paris; concluded *Treaty of Breda*, 1667; in later years he opposed the king's policy. Author of *Memoirs* and a number of political pamphlets.

HOLLESCHAU (49° 19′ N., 17° 36′ E.), town, Moravia, Austria; linen. Pop. (1911) 5954.

HOLLOWAY, THOMAS (1800–83), Eng. patent medicine manufacturer, who made large fortune from pills and ointment, and built **Holloway College** for women, at Englefield Green, Surrey (1887).

HOLLY, an evergreen shrub, *Ilex aquifolium*, with smooth grey bark and dark glossy leaves with spines on the margin. It will not grow in the shade of other trees. The flowers are *dioecious*. The female flowers have abortive *stamens* and the male ones an abortive *pistil*. The bright crimson berries severely irritate the digestive tract of man, but are eaten by birds. The wood, used for turned articles, is smooth, hard, white, even-grained, stains well, and when dyed black is used as imitation ebony.

HOLLY SPRINGS (34° 46′ N., 89° 26′ W.), town, Mississippi, U.S.A. Pop. (1910) 2192.

HOLLYHOCK, *Althea rosea*, a plant belonging to natural order *Malvaceæ*. Flowers are regular *polypetalous*, *hypogynous*, and the *stamens* ripen first.

HOLMES, OLIVER WENDELL (1809–94), Amer. author and physician; b. Cambridge, Mass.; ed. at Harvard; practised med. at Boston; prof of Anatomy at Harvard for thirty-five years from 1847. H. made his mark with *The Autocrat of the Breakfast Table* (1857), which was followed by the equally successful *Professor* (1860) and *Poet* (1871), of the same series. Amongst his other important works are a novel, *Elsie Venner* (1861), *Our Hundred Days in Europe* (1887), and several collections of poems. His poetry is generally of a popular character, but as a prose essayist he ranks high.

Life, by Kennedy (1883), Morse (1896), Townsend (1909).

HOLMFIRTH (53° 34′ N., 1° 47′ W.), town, Yorkshire, England. Pop. (1911) 9248.

HOLOCEPHALI, see under FISHES.

HOLOFERNES, see JUDITH, BOOK OF.

HOLOSTEI, see under FISHES.

HOLOTHUROIDEA, see ECHINODERMATA.

HOLROYD, SIR CHARLES (1861–), Eng. Director of National Gallery since 1906; formerly keeper of Tate Gallery; amongst his important pictures are *The Satyr King*, *Pan and the Peasants*, *The Supper at Emmaus*; also famed as etcher.

HOLSTE, LUC (1596–1661), Ger. classical scholar and learned author.

HOLSTEIN (c. 54° N., 10° E.), S. division of Schleswig-Holstein (*q.v.*), Germany.

HOLSTEIN, FRIEDRICH VON (1837–1909), Ger. politician; minister of foreign affairs for many years; opposed increase of Ger. fleet.

HOLT, SIR JOHN (1642–1710), Eng. chief justice; Recorder of London, 1686; Member of Convention Parliament, 1689; Lord Chief Justice of King's Bench, 1689.

HOLTEI, KARL EDWARD VON (1798–1880), Ger. poet; b. Breslau; writer of 'Singspiele' (*Der Alte Feldherr*, *Die Wiener in Berlin*, *Lenore*, etc.); poems in dialect—*Schlesischen Gedichte*; also novels.

HÖLTY, LUDWIG HEINRICH CHRISTOPH (1748–76), one of chief Ger. poets of the '*Göttinger Dichterbund*.'

HOLTZENDORFF, JOACHIM WILHELM FRANZ PHILIPP VON (1829–89), Ger. prof. of Law and author of books on jurisprudence.

HOLTZMANN, HEINRICH JULIUS (1832–1910), Ger. higher critic in theology.

HOLUB, EMIL (1847–1902), Bohemian African explorer and author of books of travel.

HOLY ALLIANCE, THE (1815), a sort of treaty drawn up by the Emperor Alexander I. of Russia, in which he, the Austrian emperor, and king of Prussia agreed to govern their dominions on principles of 'Justice, Christian Charity, and Peace.' Though Alexander's intentions were good the H. A. came to stand for reactionary principles in Europe.

HOLY GRAIL, see GRAIL, THE HOLY.

HOLY ISLAND, LINDISFARNE (55° 42′ N., 1° 48′ W.), island, off Northumberland, England; connected with mainland at low tide by sandy tract; has ruined Benedictine monastery. Pop. 650.

HOLY LAND, see PALESTINE.

HOLY ROMAN EMPIRE, see EMPIRE, HOLY ROMAN.

HOLY SEPULCHRE, KNIGHTS OF THE, see under HOSPITALLERS.

HOLY WATER.—In Early Church running water was used for baptism, and was not specially consecrated. Water in baptism not only symbolised purity, but carried away sin. The h. w. now used in churches is consecrated in various rites. For royal or special baptisms water from the Jordan is used.

HOLY WEEK, week before Easter, observed in the R.C. and Gk. churches by special religious exercises.

HOLYHEAD (53° 18′ N., 4° 39′ W.), port, Holy Isle, Anglesey, N. Wales; fine harbour; old church. Pop. (1911) 10,638.

HOLYOAKE, GEORGE JACOB (1817–1906), Eng. journalist and pioneer of the Co-operative movement in England; named his views 'secularism.'

HOLYOKE (42° 12′ N., 4° 25′ E.), town, Massachusetts, U.S.A., on Connecticut River, which is here dammed to supply water power; great seat of paper manufacture; cotton and woollen mills. Pop. (1910) 57,730.

HOLYROOD, royal palace, Edinburgh; founded, 1128, by David I., as an abbey; palace foundations laid, c. 1501; sacked by English, 1544 and 1650; rebuilt by Charles II., 1671–79.

HOLYSTONE, piece of stone used for scrubbing

the decks of ships; so called because its use demands a kneeling attitude.

HOLYWELL (53° 17′ N., 3° 13′ W.), town, Flintshire, Wales; above St. Winifred's well is Perpendicular chapel. Pop. (1911) 2549.

HOLYWOOD (54° 38′ N., 5° 50′ W.), port, County Down, Ireland; site of former monastery.

HOLZMINDEN (51° 50′ N., 9° 25′ E.), town, Brunswick, Germany. Pop. (1910) 10,250.

HOMAGE, term used under the feudal system for formal acknowledgment made by tenant that military service was due from him for the lands into which he was entering; the tenant knelt, placed his hands between the lord's hands, and swore fealty.

HOMBURG-VOR-DER-HÖHE (50° 14′ N., 8° 36′ E.), town, Hesse-Nassau, Germany; noted watering-place; has saline and chalybeate springs; in vicinity is Saalburg. Pop. (1910) 14,315.

HOME, EARLDOM OF, title bestowed on Alexander, 6th Lord H., in 1605. Third earl's estates were sequestered during Commonwealth, but subsequently recovered.

HOME, JOHN (1722–1808), Scot. dramatic poet; b. Leith; ed. for Church; officiated in E. Lothian; his famous play, *Douglas*, was produced in Edinburgh (1756), with great success, and was seen at Covent Garden in the year following; later became Secy. to Lord Bute, and subsequently tutor to Prince of Wales (George III.).

HOME OFFICE, department of Brit. government; at head is Home Sec., under whom are parliamentary and permanent under-sec., two permanent assistant under-sec's (one of whom is a barrister), numbers of clerks, inspectors of factories, prisons, etc. Sec. of State for Home Department maintains law and order in England and Wales, controls prisons, administers Labour Acts, Licensing Acts, Vivisection Act, Cruelty to Animals Act, etc. In 1913 he took over the control of Aerial Navigation Acts of 1911 and 1913 (see FLIGHT).

HOME RULE, see IRELAND (*History*), ENGLAND (*History*).

HOMEL, GOMEL (52° 26′ N., 30° 52′ E.), town, Mogilev, Russia. Pop. 80,900.

HOMER, greatest epic poet; b. between 1100–900 B.C., in Greece; exact birthplace uncertain, traditionally Chios; known by his poems, the *Iliad* and the *Odyssey*, which were originally ascribed to him but are almost certainly of different authorship. From internal evidence it is calculated that about a century separates the poems. They existed before the introduction of writing, and were handed down by word of mouth by the *rhapsodists*, who sometimes perverted the order of lines or interpolated passages of their own composition. Many poems are ascribed to H., the *Homeric Hymns*, the *Thebaid*, etc., but they are of different authorship though roughly contemporaneous. His writings correspond with the Mycenean and Cretan civilisations; his style is graphic and picturesque, abounding in similes; the vocabulary is large and contains many *hapax legomena*. The *Odyssey* and *Iliad* were recited at many Gk. festivals and were taught in schools; served as model for Vergil (*q.v.*) and Apollonius of Rhodes (*q.v.*). See also GREECE (LITERATURE).

HOMER, WINSLOW (1836–1910), popular Amer. genre painter.

HOMESTEAD (40° 20′ N., 79° 40′ W.), town, Pennsylvania, U.S.A.; iron and steel works. Pop. (1910) 18,713.

HOMESTEAD LAWS are statutes in force in America, whereby a settler may establish right to his dwelling. By an Act passed in 1862 any Amer. citizen of twenty-one years of age may claim 160 acres of public land; this he receives on condition of his settling there for five years, after which time he receives a title to it from government. The homestead is also protected by law from seizure by creditors. Similar laws obtain in various Brit. colonies.

HOMEYER, KARL GUSTAV (1795–1874), Ger. jurist and antiquarian.

HOMILETICS (Gk. *homilein*, to gather together), science of preaching as branch of rhetoric.

HOMILY, a religious composition simpler than a sermon. Justin Martyr says that after the reading of Scripture the minister exhorted the people. Preaching has sometimes been subordinate, *e.g.* in the Middle Ages and in some Catholic countries now. An Anglican clergyman may read one of the Homilies in the Prayer Book instead of his own sermon, a practice now obsolete.

HOMINIDÆ, a family of PRIMATES (*q.v.*).

HOMŒOPATHY, system of therapeutics, founded by S. C. F. Hahnemann (1755–1843), a Ger. physician, the main theory of which is that a disease is cured by drugs which produce in a healthy person similar symptoms to those of the disease, the therapeutic effect of any drug being ascertained or 'proved' by administering it to healthy persons in gradually increasing doses. In regard to the dose of a drug which should be given in homœopathic treatment opinions differ; but most homœopathists are agreed that small doses are necessary, while the drugs should be administered in the same form as when it was 'proved.' Hahnemann also promulgated a theory that all chronic diseases were due, directly or indirectly, to psora (itch), syphilis, or sycosis (fig-warts)—a theory which has been entirely disproved with the advance of the science of medicine, but which has had the unfortunate effect of assisting the opponents of homœopathy to ridicule the main theory of the system, with which it has really no connection. Considerable success has attended the introduction of homœopathic methods of treatment, and, according to its advocates, the development of serum therapy (*e.g.* in diphtheria, tetanus, plague) bears out the truth of the fundamental theory. In addition, it has had a great share in influencing the diminution of the quantity of drugs considered necessary for the treatment of disease, while it has also stimulated the study of the action and effects of drugs.

The opposition with which homœopathy was received by the medical profession in Britain has of late become somewhat lessened, and in addition to the London Homœopathic Hospital, founded 1850, there are a number of similar hospitals and dispensaries in provincial towns. The barriers between homœopathy and more orthodox medical treatment have, with the modern development of therapeutics, been largely broken down. In America the theory is taught in many medical schools and univ's. There are a great number of homœopathic hospitals and journals, and a large proportion of medical practitioners work in accordance with its principles.

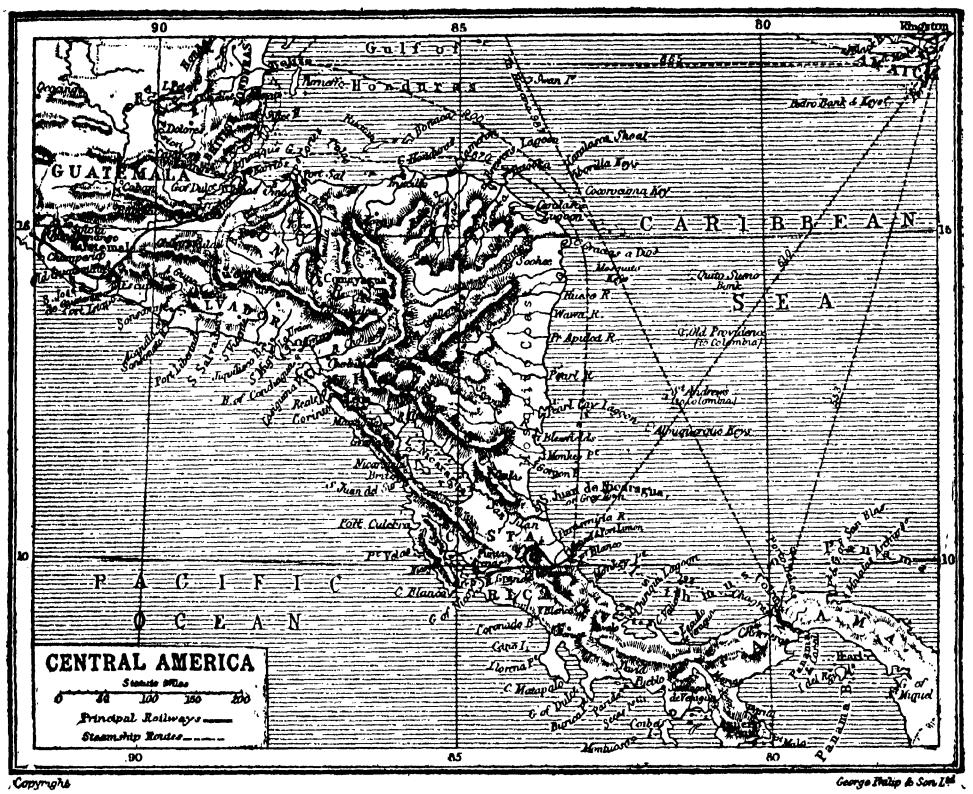
Guernsey, *Principles and Practice of H.*; Clarke, *H. Explained*.

HOMOPTERA, see HEMIPTERA.

HOMS, HEMS, HUMS (34° 46′ N., 36° 46′ E.), walled town, Syria; formerly site of famous temple of the sun; produces silk. Pop. *c.* 60,000.

HO-NAN (34° N., 113° E.), province, Central China; area 67,940 sq. miles; mountainous in W.; drained by Hoang-ho and affluents of Han-kiang. Pop. *c.* 35,316,800.

HONAWAR, ONORE (14° 17′ N., 74° 27′ E.), port, Bombay, Brit. India. Pop. *c.* 7000.



HONDA, SAN BARTOLOMEO DE HONDA (5° 12′ N., 74° 50′ W.), town, Colombia, S. America. Pop. *c.* 7000.

HONDECOETER, MELCHIOR D' (*c.* 1636–95), Dutch painter of birds; belonged to a family of painters, being s. of GISBERT and grandson of GILLIS D'H., both painters.

HONDO, see JAPAN.

HONDURAS (14° 50′ N., 87° W.), republic in Central America, bounded N. by Caribbean Sea; E. and S., Nicaragua; S., Pacific and Salvador; and W., Guatemala; area, *c.* 46,500 sq. miles; coast-line, *c.* 400 miles; capital, Tegucigalpa. Surface,

excepting narrow strip of swamp-land on the coast, is mountainous, traversed by continuation of Nicaraguan Cordillera, and forming elevated tableland with fertile plains and valleys, and rising in mountain ridges—highest point being Montaña de Salaque (*c.* 10,120 ft.); many streams, including Segovia (*c.* 350 miles) and Ulua; only large lake is Yojoa. Climate is healthy in highlands, but oppressive in lowlands. H. is rich in minerals—gold, platinum, silver, iron, etc.; bananas, cocoa-nuts, and rubber are produced; sarsaparilla is exported; industries are cattle-

species confined, with one exception, to Australia, New Zealand, and the islands of the S. Pacific. They have long bills and a long, extrusible tongue wherewith they extract honey from flowers. The Parson Bird and Bull Bird are New Zealand honey-eaters.

HONEY-GUIDES (*Indicatoridæ*), a family of about 20 species of climbing picarian birds found in Africa and Western Asia. Their name is due to the fact that some forms guide travellers to nests of bees. Like cuckoos, they make no nests, but lay their eggs in those of other birds.

HONEYSUCKLE, a twining shrub, *Lonicera Periclymenum* (*Woodbine, twisted Eglantine*); natural order *Caprifoliaceæ*, with sweet-scented, *bilabiate* flowers, night-moth *pollination*, and crimson berries.

HONFLEUR (49° 25′ N., 0° 14′ E.), port, Calvados, N.W. France; tidal harbour; exports dairy produce, fruit, vegetables; has ruined castle and fine church. Pop. *c.* 9600.

HONG-KONG (22° 18′ N., 114° 10′ E.), an island belonging to Britain and lying off S.E. coast of China at estuary of Canton River; along with a small portion of the mainland on peninsula of Kow-Lung, constitutes colony of H.-K., with an area of *c.* 30 sq. miles; capital, Victoria; extreme length, *c.* 10 miles, and breadth, *c.* 7 miles; separated from mainland by fine strait, which makes an excellent harbour. The interior is barren and rocky; trade is mostly done with China, also largely with India; chief exports being tea, silk, and opium. H.-K. has a Brit. governor and is a naval station; occupied by Britain *c.* 1840, ceded by Treaty of Nanking; univ. of H.-K. opened March 11, 1912. Pop. 366,145.

HONITON (50° 48′ N., 3° 11′ W.), town, Devonshire, England; noted for lace manufacture; produces butter; has XV.-cent. church. Pop. (1911) 3191.

HONNEF (50° 48′ N., 7° E.), town and spa, Rhenish Prussia, Germany. Pop. (1910) 6770.

HONOLULU (21° 30′ N., 157° 50′ W.), capital and principal port of Hawaiian Islands, situated on harbour on S. coast of Oahu; pleasant, well protected, clean, healthy, well planned, and highly civilised town; exports include coffee, sugar, and wool; coaling-station. Pop. *c.* 52,200.

HONORIUS I. (d. 638), pope; elected to papal chair, 625; excommunicated after death for his views concerning Monothelite heresy.

HONORIUS II. (d. 1130) became pope, 1124; ratified foundation of Knights Templars; opposed Roger of Sicily. HONORIUS II. was antipope from 1061–64; d. 1072.

HONORIUS III. (d. 1227) became pope, 1216; authorised orders of St. Dominic and St. Francis; promoted crusades; aided Henry III. of England.

HONORIUS IV. (d. 1287) elected pope, 1285; confirmed Carmelite and Augustinian eremite orders; assisted Anjou against Aragon.

HONORIUS, FLAVIUS (384–423), W. Rom. emperor from 395; reign marked by Gothic invasions; sack of Rome, 410; persecuted pagans.

HONOUR.—(1) a sense of h. is often considered the only motive of morality outside religion and fear, but its origin may perhaps be found in the two last named. (2) a feudal franchise sometimes composed of only a few manors, over which the tenant had special jurisdiction, sometimes coterminant with a hundred. The h. was often spoken of as a manor, of which the lesser manors were members.

HONOURABLE, courtesy title given in United Kingdom to younger sons of earls, children of viscounts and barons, maids of honour, and to certain officials; Privy Councillors and peers below rank of marquess are 'right h.'; marquesses, 'most h.' In America all members of Congress and important State officials are styled h.

HONTHEIM, JOHANN NIKOLAUS VON (1701–90), Ger. jurist and historian; suffragan bp. of Trier, 1748; best known as 'Febronius,' under which name he pub. *De Statu Ecclesiæ et Legitima Potestate Romani Pontificis*, a critical study of pretensions of popes; also wrote history of Trier (Treves). See FEBRONIANISM.

HONTHORST, GERARD VAN (1590–1656), fashionable Dutch painter in the Ital. manner; executed several religious pictures and many portraits of royalties, including Charles I. of England.

HOOCH, PIETER DE (1629–77), Dutch painter of interiors; obtains wonderful effects of material, reflections of light in pots and pans, and subtle expression in countenances.

HOOD, loose head-covering attached to the cloak; moulding projecting over an arch.

HOOD, ARTHUR WILLIAM ACLAND, BARON HOOD OF AVALON (1824–1901), Brit. admiral; distinguished at Sebastopol and in capture of Canton.

HOOD, JOHN BELL (1831–79), Amer. general in Confederate army in Civil War; suffered crushing defeat at Nashville.

HOOD, ROBIN, see ROBIN HOOD.

HOOD, SAMUEL, VISCOUNT HOOD (1724–1816), famous Brit. admiral; after considerable service in N. America, and in W. Indies, where he distinguished himself against French at Martinique, 1781, St. Kitts and Dominica, 1782, he obtained command of Mediterranean fleet, 1793, and captured Toulon; took Corsica, 1794.

HOOD, SIR SAMUEL (1762–1814), Brit. naval commander; served in Mediterranean, 1793; distinguished at Santa Cruz, 1797, and Battle of the Nile, 1798; commanded the *Venerable* at Algeciras and Gibraltar, 1801; defeated French in W. Indies, 1802, at Rochefort, 1805; took Madeira, 1807; aided Sweden against Russia, 1808.

HOOD, THOMAS (1799–1845), Eng. humorist and poet; b. London; ed. as an engraver; became sub-editor of *London Magazine* (1821); pub. *Odes and Addresses to Great People* (1825), *Whims and Oddities* (1826); launched *Hood's Comic Annual* (1830); was sometime edit. of Colburn's *New Monthly Magazine*; pub. *The Song of the Shirt* in *Punch* (1843); at heart a serious writer, noted for his kindly nature. His life was a long struggle with ill-health and debt. His serious poetry was overshadowed by the popularity of his comic verse.

Jerrold, *Life and Times of Thomas Hood* (1907).

HOOD, TOM (1835–74), Eng. humorist; s. of the well-known Thomas H.; author of T. H.'s *Comic Annual*.

HOODED CROW, see under CROW FAMILY.

HOOFT, PIETER CORNELISSEN (1581–1647), Dutch historian and poet; held several offices under Maurice of Orange; author of *Dutch History* in 27 vol's, *History of Henry the Great*, and of several tragedies, including *Geeraerdt van Velzen* and *Baeto*; also wrote *Granida*, a fine pastoral, and lyrical poems; a master of style.

HOOGLY, see HUGLI.

HOOGSTRATEN, SAMUEL DIRKSZ VAN (*c.* 1627–78), Dutch painter, who excelled in portrait and atmosphere.

HOOK, JAMES CLARKE (1819–1907), Eng. painter, who painted much, and with great success, from youth; noted for lightness and purity of colouring; his fame chiefly rests on seaside sketches.

HOOK, THEODORE EDWARD (1788–1841), Eng. novelist, dramatist, and wit; s. of a composer; began to write successful comic operas and sketches as a youth; was Accountant-General of Mauritius (1813–17), but owing to the defalcations of an assistant was arrested and imprisoned; became edit. of *John Bull*, a Tory organ (1820); his *Sayings and Doings* (1824–28) were highly popular; his novels include *Jack Brag*, *Gilbert Gurney*, and others; famed for his improvisations and practical jokes.

HOOK, WALTER FARQUHAR (1798–1875), Eng. ecclesiastic; dean of Chichester; wrote *Lives of the Abp's of Canterbury* (1860–76), *Ecclesiastical Biography*.

HOOKAH, large tobacco pipe much used in Turkey, Persia, and other Eastern countries; the stem passes

through two bowls, the lower containing water, which absorbs harmful ingredients of the smoke.

HOOKE, ROBERT (1635–1703), Eng. scientist; educated at Oxford; surveyor of London during rebuilding after Great Fire of 1666; invented anchor escapement of clocks and spring-balance wheel of watches; sec. of Royal Soc., 1677–82.

HOOKER, JOSEPH (1814–79), Amer. soldier; fought on Federal side in Civil War; distinguished in N. Virginia and Maryland; defeated at Chancellorsville, 1863; led 20th corps in Atlanta campaign, 1864.

HOOKER, RICHARD (1553–1600), Eng. theologian; b. Heavitree, Devon; ed. Oxford; took orders and received the living of Drayton-Beauchamps (Bucks); was appointed Master of the Temple, 1585; and subsequently held livings at Boscombe (Wilts) and Bishopsbourne (Kent). *The Four Books of the Lawes of Ecclesiastical Polity* was pub. 1594; the fifth book in 1597; and subsequent books were pub. after his death. This monumental work is a masterpiece of theological reasoning and eloquence, and is one of the finest examples of Eng. prose. Apart from his writings, H. was remarkable for his sweetness and dignity of character. *Life*, by Isaac Walton, by Vernon Staley (1907).

HOOKER, SIR JOSEPH DALTON (1817–1911), Eng. botanist and traveller, succ. his f. as director of Kew Botanical Gardens, 1865; pub. *Genera Plantarum* and a *Flora of the British Isles*; O.M., 1907; a friend of Darwin.

HOOKER, SIR WILLIAM JACKSON (1785–1865), Eng. botanist; prof. of Bot. at Glasgow, 1820; Director of Royal Botanic Gardens at Kew, 1841; collected a well-known *herbarium*, and published alone and in collaboration works on the Brit. mosses.

HOOKER, THOMAS (1586–1647), Puritan theologian; lectured in Leicestershire; emigrated to Massachusetts, 1633; helped to found Hartford, Connecticut, 1636; wrote *The Soule's Humiliation*.

HOOKE'S LAW, see ELASTICITY.

HOOLE, JOHN (1727–1803), Eng. translator and author of plays commended by Dr. Johnson.

HOOLIGAN, term applied in latter part of XIX. cent. to London street ruffians of criminal class. The earlier 'garrotters' were of a more brutal type, who half-strangled their victims from behind and rifled their pockets. The 'Mohocks' of the XVIII. cent., referred to in the *Spectator*, belonged to a better class, and though violence was often used, it was chiefly with humorous intent.

HOOPER, JOHN (*c.* 1495–1555), Prot. martyr; went to Switzerland during last reactionary years of Henry VIII.; reforming preacher under Edward VI.; chaplain to Protector Somerset; bp. of Gloucester, 1550; objected to priestly vestments; bp. of Worcester *in commendam*, 1552; imprisoned on Mary's accession, 1553; burned at Gloucester, 1555; called 'Father of Nonconformity.'

HOOPING-COUGH, see WHOOPING-COUGH.

HOOPOES (*Upupa*), so called from their call; form a genus and family of picarian birds widely distributed in desert regions of Europe, Asia, and Africa. One species (*U. epops*), with long slender bill, crested head, and orange-brown plumage marked by black and white bars, is an occasional migrant to Britain.

HOORN.—(1) (52° 36′ N., 5° 4′ E.) town, N. Holland; trades in cattle and dairy produce; has interesting XVI.- and XVII.-cent. buildings. Pop. (1910) 11,000. (2) (53° 24′ N., 5° 20′ E.) town, Friesland, Holland.

HOOSICK FALLS (42° 54′ N., 73° 20′ W.), village, New York State, U.S.A. Pop. (1910) 5532.

HOP is a twining plant, *Humulus lupulus*, natural order *Cannabineæ*, which twines in the direction of the hands of a watch (right-handed spiral). It is a perennial plant with opposite lobate leaves, and grows wild in hedges and upon river-banks. The hop is *diœcious*. The male flowers are small and terminal and borne in the axils of leaves, the floral envelope has five segments and there are five *stamens*; the female flowers are cone-like in arrangement. Each has a tubular floral envelope and is invested by a *bracteole*. The cone is made up of a series of *bracts* with two female flowers at the base of the upper surface of each. The *bracts* are membranous and covered with *glands* which secrete an oil which keeps off insects. Flowers are pollinated by the wind (*anemophilous*). The fruit is composite and is called a *Strobilus*.

The STROBILES are 1¼ in. long, with imbricated, greenish, membranous bracts which help the dispersal of the individual fruits by the wind. Each fruit is an *achene*, *i.e.* one-seeded, indehiscent, and dry. The plants are cultivated in England, Germany, France and Belgium for the strobiles, which are used in beer manufacture. They contain *lupulin*, a liquid *alkaloid*; 11 % *lupulinic acid*, a bitter crystalline principle; 1 % of an aromatic volatile oil, *valerol*, which gives them the characteristic odour; *resin*; *tannin*; a *terpene*. Owing to the valerol they have a *stomachic*, *carminative*, and *soporific* action. From April to Sep. hops, grown extensively in Kent, are tied to poles. From Oct. to Nov. they are picked. The drying of the strobiles is carefully carried out on a roller floor by blowing hot air through them. In recent years there have been recurring attacks of blight due to *Aphis humuli*. The red spider also sucks the sap. Mildew and mould attack the strobiles.

Simmonds, *Hops, their Cultivation*.

HOPE, ANTHONY, Eng. novelist; pseudonym of A. H. Hawkins; has achieved distinction in the romantic style with *The Prisoner of Zenda* (1894), and in light modern comedy with *The Dolly Dialogues*, and similar works; author of several plays, and *The Prisoner of Zenda* was successfully dramatised.

HOPE, THOMAS (*c.* 1770–1831), Eng. connoisseur, designer, and author; his houses at Deepdene and London contained wonderful art collections; won celebrity with novel, *Anastasius*.

HOPEDALE (42° 7′ N., 71° 31′ W.), town, Massachusetts, U.S.A., where socialistic community was established in 1842 by Adin Ballou. Manufactures machinery, cotton goods. Pop. 2048.

HOPE-SCOTT, JAMES ROBERT (1812–73), Eng. Q.C.; prominent in Oxford Movement; became Roman Catholic with Manning.

HOPFEN, HANS VON (1835–1904), Ger. lyrical poet and novelist.

HOPI, MOKI, tribe of N. Amer. Indians inhabiting S.W. of U.S.A.

HÔPITAL, MICHEL DE L', see L'HÔPITAL, MICHEL DE.

HÖPKEN, ANDERS JOHAN, COUNT VON (1712–89), Swed. statesman; leader of the Hats; noted for classical style of speeches.

HOPKINS, EDWARD WASHBURN (1857–), Amer. comparative philologist.

HOPKINS, ESEK (1718–1802), admiral of the first U.S.A. fleet (1776–77).

HOPKINS, JOHNS, see JOHNS HOPKINS UNIVERSITY.

HOPKINS, MARK (1802–87), Amer. theologian and pres. of Williams Coll. His bro., **ALBERT** (1807–72), won some distinction in science.

HOPKINS, SAMUEL (1721–1803), Amer. theologian; ordained 1743; made attack on slavery, arousing much opposition; wrote *Life of Jonathan Edwards* and various theological works.

HOPKINSON, FRANCIS (1737–91), Amer. politician and writer; delegate at Continental Congress, 1776, 1777; signed Declaration of Independence; wrote *The Political Catechism*, *A Prophecy*.

HOPKINSON, JOHN (1849–98), Eng. engineer; b. Manchester, 1849; senior wrangler, Trinity Coll., Cambridge, 1871; took up engineering at f.'s works and practised as consulting engineer in London from 1878; accidentally killed on Alps, 1898.

HOPKINSVILLE (36° 50′ N., 87° 31′ W.), town, Kentucky, U.S.A. Pop. (1910) 9419.

HOPLOPTERUS, see PLOVER FAMILY.

HOPPNER, JOHN (1758–1810), Eng. artist; distinguished for brilliant colouring; painted 'A Sleeping Nymph' and other classic subjects, but excelled in portraiture; a follower of Reynolds, and a rival of Lawrence; R.A., 1795; examples in Nat. Gallery.

HOP-SCOTCH, Brit. pavement game; ground is chalked into different-sized beds and the player kicks a stone from one to the other with the foot on which he hops.

HOPTON, RALPH, BARON HOPTON (1598–1652), Eng. Royalist in Civil War; gained Cornwall for king; won battle of Stratton, 1643.

HORACE, QUINTUS HORATIUS FLACCUS (65–8 B.C.), Rom. poet; b. at Venusia, in Apulia; his father, of the freedman class, contrived to have him educated at the same schools as the sons of senators and magnates at Rome and at Athens. At Athens H. joined the forces of Brutus, and served at Philippi as tribune. His depreciation of his valour is an imitation of Archilochus and Alcæus, and does not imply real cowardice. His homestead appears to have been twice confiscated, but his patron Mæcenas stood by him in his time of trouble and bestowed on him the beloved Sabine farm. In 37 B.C. H., with Mæcenas, Vergil, and others, made the famous journey to Brundusium (*Sat.* i. 5). When Vergil died (19 B.C.) Horace became chief court poet and voiced the ideals of Augustus.

His *Satires* are not vindictive in tone; they employ ridicule and not invective. The *Epistles* in tone are not unlike the moral essays of Pope. The *Epodes* are less delicate in sentiment, less restrained in passion. The *Ars Poetica* and the 2nd book of the *Epistles* are poetic treatises on literary art and criticism. The *Odes*, his lyrical poems, are H.'s greatest work; they are not original in sentiment or passionate in feeling, but they are polished, chaste, and perfect in expression.

Sellar, *The Rom. Poets of the Augustan Age* (1892); Sir Theodore Martin, *Horace*.

HORÆ (classical myth.), the 'Seasons'; three beautiful maidens, Eunomia, Dike, and Eirene, dau's of Zeus and Themis, who presided over spring, summer, and autumn, and, in a lesser degree, the hours. In the latter capacity it was their daily duty to harness the heavenly horses to the chariot of the Sun.

HORAPOLLON (fl. IV. cent. A.D.), Greek of Egypt to whom Gk. treatises on Egyptian hieroglyphics are ascribed.

HORATII, THE THREE, three Rom. bro's, who in legendary Rom. history met in battle three bro's called the Curiatii, of the Alban nation, to decide a national dispute. Two of the Horatii were slain, the third feigned flight, then, turning, slew his foes one by one.

HORATIUS COCLES, hero of Rom. legend; said to have held the Tiber bridge single-handed against the Etruscans under Lars Porsena.

HORDE (51° 30′ N., 7° 30′ E.), town, Westphalia, Prussia. Pop. (1910) 32,785.

HOREB (28° 33′ N., 33′ 56′ E.), mountain, Palestine; alternatively called Sinai (*q.v.*).

HOREHOUND (*Marrubium*), genus of plants of order *Labiatæ*; White H. (*M. vulgare*) is used medicinally as tonic, laxative, and as sedative for coughs.

HORGEN (47° 16′ N., 8° 33′ E.), town, Switzerland. Pop. (1910) 8000.

HORIZON, circle of which the centre is the person beholding, the circumference at the eyesight limit; the dip of the farther part of an object on the h. is one of proofs of spherical shape of earth.

HORMAYR, JOSEPH, BARON VON (1782–1848), Ger. historian and politician; conducted affairs during Tirolese rebellion, 1809; Austrian imperial historiographer, 1816; afterwards entered Bavarian service. Wrote *Geschichte der Tirol*.

HORMISDAS, pope, 514–523, healed schism between Eastern and Western Churches.

HORMIZD, five Sassanid kings of Persia, of whom best known is HORMIZD IV.; he became king, 578 A.D.; reformed army; warred against Romans and Turks; was deposed, 588, and slain, 590.

HORMUZ, or ORMUZ (27° 3′ N., 56° 26′ E.), ancient and famous city on Persian Gulf; exact date of foundation unknown; occupied various sites during course of history. In XIII. cent. one of chief centres of trade with India; *c.* 1300, inhabitants forced to abandon city owing to Tartar raids, and settled on island of Jerun not far distant. Here fine fortified city was built; in XVI. cent. taken by Portuguese, but still of great commercial importance; Portuguese forced to surrender to Eng. a cent. later, and Persians transferred trade to Gombroon on mainland. Minaret, portion of mosque, and other traces of city still to be found on island.

HORN, brass wind-instrument used in ancient, mediæval, and modern times for military, hunting, and state purposes; now also employed in orchestra. The term embraces a large number of instruments, from the simple coach-driver's h. to the complicated orchestral or 'French' h. (*cor de chasse, waldhorn*, or *corno*). During the XVI. and XVII. cent's the lengthening of the original hunting h. led to its being twisted into a spiral form, capable of being carried over the shoulder. By the beginning of the XVIII. cent. the h. had won a place in the orchestra. Its harshness of tone and primitive character soon suggested the need of improvement, and efforts were made to render the instrument more delicate in sound and pliable in manipulation. In experimenting with a view to refining the tone, Hempel, a well-known Dresden h. player, discovered in 1770 the means of lowering the pitch by inserting the hand into the bell of the instrument, and so invented the *hand-horn*. Tuning slides and detachable crooks of various lengths were introduced to alter the pitch and key, which was impossible in the natural h. The inferior quality of the closed or 'stuffed' notes, as compared with the 'open' notes, was finally overcome by the invention of the *valve-horn* by Stölzl and Blühml in 1815. Three valves are now generally used, being placed upon the U-shaped slides in centre of the h., which lower the pitch by altering the length of the instrument, and are thus able to produce, as open notes, every note in the chromatic scale, and execute rapid passages more evenly.

The body of the h. is about 7½ ft. in length, and, with the addition of the longest crook, more than double. The h. is a transposing instrument; music is written in treble clef, with the exception of some lower notes, which are written in bass clef, and an octave lower than they sound; two, four, or more h's are generally used in the orchestra. Horn in F, which is most often employed in the orchestra, is seldom built in that key. Bach and Händel were amongst the earliest musicians who scored for the h., and since their day all composers have regarded the h. as an integral part of the orchestra, and have assigned it solo and *ensemble* passages. In 1843 Adolphe Sax invented the *saxhorn* by using the valve-system for a keyed bugle. The mouthpiece of the saxhorn is cup-shaped, not funnel-shaped like the valve-h. The saxhorn is used chiefly in military and other brass bands.

Among the best known works written for h. may be mentioned Schumann's *Concerto* for four h's and orchestra (Opus 86); Mozart's three *Concertos* (Op. 92, 105, 106), with orchestra; Beethoven, *Sonata* for piano and h. (Op. 17), *Septet* (Op. 20); Strauss, *Concerto* (Op. 11), with orchestra; and Kalkbrenner (Op. 13), *Septet* for piano, two violins, two h's, tenor and bass.

HORN, ARVID BERNHARD, COUNT (1664–1742), Swed. politician; ambassador to Poland, 1704; secured Stanislaus I.'s election to Polish throne; premier, 1710; virtual ruler of Sweden, 1720–38; established new constitution.

HORN, KING, XIII.-cent. Eng. metrical romance. Horn, s. of an Eng. king, is set adrift at sea by pirates, lands in Cornwall, and after many vicissitudes marries the Cornish king's dau. See Ritson's *Metrical Romances*.

HORN, PHILIP DE MONTMORENCY, COUNT (1518–68), Dutch statesman who, with William of Orange

and Egmont, led the revolt of the Netherlands against Spain; executed at Alva's command.

HORNBEAM is a genus of trees, natural order *Cupuliferæ*, cohort *Fagales*; flowers resemble those of hazel, but the male *catkins* have no *bracteoles*.

HORNBILLS (*Bucerotidæ*), so called on account of their large, hollow, horny beaks; a family of picarian birds confined to Africa from the Sudan southwards, South-Eastern Asia, and the neighbouring islands. While sitting on her eggs the female is built into the tree-hollow by a mud wall, the male feeding her until the young are hatched; arboreal and terrestrial, feeding on seeds, insects, and even reptiles.

HORNBLENDE, see AMPHIBOLE.

HORN-BOOK, article once used in elementary education, consisting of a sheet of paper bearing the alphabet, Lord's Prayer, etc., placed between a flat piece of wood, with handle, and a thin sheet of horn.

HORNBY, SIR GEOFFREY THOMAS PHIPPS (1825–95), Brit. admiral; commander-in-chief in Mediterranean, 1877; Admiral of the Fleet, 1888.

HORNCASTLE (52° 43′ N., 0° 7′ W.), town, Lincolnshire, England; has old church dedicated to St. Mary, and Elizabethan grammar school; annual horse fair in August. Pop. (1911) 3900.

HORN-DANCE, old Eng. dance still performed at Abbots Bromley, Staffordshire; named from stag's antlers worn by the dancers.

HORNE, GEORGE (1730–92), Eng. cleric; bp. of Norwich; famed for *Commentary on the Psalms* (1771).

HORNE, RICHARD HENGIST (1803–84), Eng. poet and critic; pub. *Orion* (1843), an epic poem; *Death of Marlowe*, *Cosmo de Medici* (tragedies); and *A New Spirit of the Age* (criticism).

HORNE, THOMAS HARTWELL (1780–1862), Eng. theologian and scholar; pub. *Critical Study of the Holy Scriptures*, *Introduction to the Study of Bibliography*; long connected with Brit. Museum.

HORNELL (42° 21′ N., 77° 44′ W.), town, New York, U.S.A.; formerly *Hornellsville*; railway works. Pop. (1910) 13,617.

HORNEMANN, FREDERICK (fl. 1800), Ger. explorer; carried out explorations in Africa for London African Association between 1797 and 1799.

HORNER, FRANCIS (1778–1817), Brit. politician and economist; M.P., 1806; chairman of Bullion Committee, 1810; wrote for *Edinburgh Review*.

HORNET (*Vespa crabro*), reddish-brown wasp; largest in England; eats fruit, insects, etc.; U.S.A. variety is Whitefaced H. (*V. maculata*).

HORNFELS (plural, hornfelses), a rock found in diabases, basalts, and other igneous rocks, composed of felspar, hornblende, and pyroxene; of tough, durable composition, also hard and brittle; colour, dark brown and black; generally contains numerous small bright crystals of black mica.

HORNGARTH, MAKING OF THE, mediæval forensic service which still survives in the making of the Penny Hedge at Whitby; possibly the Dan. name given to the O.E. thegn's duty of hedging and ditching.

HORNPIPE, lively Eng. dance, popular amongst sailors; so called because originally accompanied on a reed pipe having horn fittings at either end.

HORNSEY (51° 35′ N., 0° 6′ W.), borough, suburb of London, Middlesex, England. Pop. (1911) 84,602.

HORODENKA (48° 40′ N., 25° 31′ E.), town, Galicia, Austria; linen, soap. Pop. (1911) 11,250.

HOROLOGY, science of measuring time. See CLOCK, TIME, CALENDAR.

HOROSCOPE, signs of the heavens at person's birth; in 'casting' the h. astrologers made diagram of 12 houses, or zodiac signs. See ASTROLOGY.

HOROWITZ, ISAIAH (*c.* 1555–*c.* 1630), Jewish rabbi; author of an important religious work, *Shelah*.

HORROCKS, JEREMIAH (1619–41), Eng. astronomer; first to show how moon follows Kepler's laws, and to account for its irregularities; revised Kepler's Rudolphine tables; predicted and first observed transit of *Venus*; first to make tidal observations.

HORROCKS, JOHN (1768–1804), Eng. manufacturer, who developed Lancashire cotton industry.

HORSE CHESTNUT, see CHESTNUT.

HORSE FAMILY (*Equidæ*), the most highly specialised family of odd-toed, hoofed (*Ungulate*) mammals, including horses, asses, and zebras, as well as many extinct forms. The compact, clean-cut bodies, long heads and tails, and maned necks of the horse and its relatives are familiar, but there are skeletal characters of more importance in separating it from its nearest allies, the Tapirs and Rhinoceroses, and these mainly reside in the teeth and limbs. The skull is very long, the eye-socket is a closed ring, and the teeth number, at highest, 44, although the early disappearance of the first cheek-tooth on each leaves 42 as the usual number. The surfaces of the back teeth, obviously grinders, are thrown into complicated crescentic folds of hard enamel, with softer cement between; and the incisors are prominent and chisel-shaped, with a central pit lined by enamel—the 'mark' whose decrease in size indicates the age of its possessor. The limbs are furnished with one hoofed digit (the third), which is functional, but it is sometimes accompanied by the second and fourth, reduced to mere splint bones, or at any rate always functionless.

Horses in a general sense are found throughout the world, but the various wild species are confined in range and are found only in the Old World, especially in Asia and Eastern Africa. Semi-wild forms occur in Australia and America, but these are the descendants of domesticated horses which have escaped from captivity, in the latter country since the Spanish conquest. In nature horses are gregarious, living in herds, the movements of which are dominated by an experienced stallion or male, the female being known as mare, and the young as foal; but they are ever on the watch and habitually move against the wind so that they may receive early notice of the scent of an enemy. They are entirely vegetarian, feeding mainly on grass, but also on young shoots of trees and herbage.

To consider less generally the members of the horse family, all the living species of which belong to the one genus *Equus*.

Heading the list on account of its familiarity and of its usefulness to man is the domestic HORSE (*E. caballus*), representatives of which roamed the plains of Europe and Asia in freedom till about the end of the XVI. cent., although the horse as a domestic animal probably dates from prehistoric times. It is characterised by a hardened lump—the 'chestnut'—on the inner side of the legs above the hock, and by the fact that the hairs of the tail grow in a tassel from its base. During the ages of servitude to man many varieties of horses have been selected and bred for special purposes. Thus perhaps most useful are the heavy cart-horses, distinguished by their weight of body and stoutness of limb, the best known being the Shire, Clydesdale, and Suffolk Punch. While bred for very necessitating cleanness and lightness of limb and body are the English Racers and American Trotters, differing in descent from the cart-horses, which are comparatively pure natives of Europe, by the interbreeding with such graceful African horses as the Arab. The characteristically small, rugged, and hardy ponies of the Shetlands, and the somewhat similar Exmoors and Dartmoors, must not be omitted, creatures particularly fitted for a hard life in barren regions where food is scanty and coarse. Last to be mentioned amongst domesticated horses are the semi-wild reversions of South America and Australia, for in neither country on its discovery did horses exist. The former are known locally as mustangs, bronchos, or cimarrones, the latter as brumbies.

Closely related to the domestic horse are the active TARPANS or WILD HORSES of the steppes, probably a decaying remnant of the original wild horses of Europe; and the small, shaggy, erect-maned PRZEVALSKI'S HORSE of Central Asia.

Differing markedly in their external appearance from

the horses are the Asses, with long ears, tail bushy at the tip and devoid of long hairs at the base, erect mane, chestnuts only on fore-limbs, and back marked with a longitudinal dark stripe. The asses are fleet, active creatures, widely distributed on the grassy plains of Central Asia and North-East Africa. The Asiatic varieties are the large reddish KIANG (*E. hemionus*) of Tibet and Mongolia, the smaller Persian and Syrian ONAGER or GHORKAR (*E. onager*), and the Indian Wild Ass (*E. indicus*). The only African representative is the African Wild Ass (*E. asinus*) of Abyssinia and the neighbourhood, the ancestor of the domestic ass or donkey.

A particularly useful, sure-footed breed for mountainous regions is the Mule, a hybrid obtained by crossing the domestic horse and ass, but mules amongst themselves produce no offspring.

Approximating in external characters to the asses are the ZEBRAS, of which four or five species are distinguished. In them, however, the solitary dorsal stripe of the ass is replaced by numerous beautiful dark brown or black bands separated by a tawny or brownish yellow ground colour. In habit they resemble asses, but they are confined to Africa, from Somaliland where the large GREVY'S ZEBRA (*E. grevyi*) is found, southwards by the plains of Portuguese and German West Africa, inhabited by BURCHELL'S ZEBRA (*E. burchelli*), to the highlands of Cape Colony to which the MOUNTAIN ZEBRA (*E. zebra*) is confined. Formerly another zebra-like creature—the QUAGGA (*E. quagga*)—also roamed the plains of South Africa, but it has been exterminated by ruthless slaughter.

The horse, as we know it, has been traced back to Pliocene times, but the remains of earlier forms have been discovered which seem to point to the ancestral line along which the modern horse developed. The differentiation appears to have followed these directions: an increase in size, a reduction in the number of functional digits, and an increasing complexity in the structure of the teeth. Thus the Eocene *Phenacodus*, at the source of the horse group, was an animal about the size of a bull-dog and had five functional toes on each foot; *Palæotherium* and *Anchitherium*, the former from the later Eocene, the latter about the size of a sheep, had three digits, and link the tapir group to the horses, while in the Pliocene *Hippotherium*, as big as a donkey, the middle digit was already outstandingly developed.

HORSE GUARDS, see GUARDS, THE.

HORSE, MASTER OF THE.—The title *Magister Equitum* was applied in Rome to the lieutenant of a Dictator; in modern times term signifies official who has charge of royal stables, equerries (minor officials in charge of departments), and artificers; third officer in royal household.

HORSE-FLIES, see GAD-FLIES.

HORSEMANSHIP, see RIDING.

HORSENS (55° 52′ N., 9° 50′ E.), town, Jutland, Denmark. Pop. (1911) 23,843.

HORSE-POWER, see under ENGINE.

HORSE-RADISH, *Cochlearia armoracia*, natural order *Cruciferæ*. The root, long, cylindrical, and fleshy, with an enlarged upper end, is used as a condiment.

HORSE-SHOEING, the custom of protecting horses' hoofs is probably coeval with domestication of horse; machine-made shoes have been largely used since Goodenough's patent invention, 1860.

HORSETAIL, vascular cryptogam with green stem and branches and brown, scale-like leaves. One generation reproduces by spores, the next by male and female cells.

HORSHAM (51° 3′ N., 0° 20′ W.), town, Sussex, England; has old church dedicated to St. Mary; site of Christ's Hospital since 1902. Pop. (1911) 11,314.

HORSLEY, JOHN (1685–1732), Eng. scholar, scientist, and Presbyterian minister; wrote *Britannia Romana, or the Roman Antiquities of Britain*, etc.

HORSLEY, JOHN CALLCOTT (1817–1903), Eng. genre painter; sturdily conservative academician.

HORSLEY, SAMUEL (1733–1806), Eng. theologian; bp. of St. David's (1788), Rochester (1793), and St. Asaph (1802); author of learned works and pamphlets defending doctrine of the Trinity against Priestly.

HORSMAN, EDWARD (1807–76), Eng. Liberal statesman; prominent Adullamite.

HORT, FENTON JOHN ANTHONY (1828–92), Anglican divine; prof. at Cambridge, 1878; known specially for edition with Westcott of the New Testament.

HORTA (27° 30′ N., 30° W.), town, on Fayal, Portug. Azores; fisheries. Pop. *c.* 7000.

HORTEN (59° 24′ N., 10° 28′ E.), port, Norway. Pop. (1910) 9820.

HORTENSE (1783–1837), see BEAUHARNAIS.

HORTENSIUS, QUINTUS, dictator to end of plebeian secession at Rome, 286 B.C.; passed *lex Hortensia*, giving independent legislative power to *plebs*.

HORTENSIUS, QUINTUS (141–50 B.C.), Rom. orator; became consul in 69 B.C.; attained fame as advocate.

HORTICULTURE, see GARDEN.

HORTON, CHRISTIANA (fl. *c.* 1714–56), Eng. actress; for long a leading performer at Drury Lane and Covent Garden.

HORTON, ROBERT FORMAN (1855–), prominent Eng. Congregational minister and theological author.

HORTON, SAMUEL DANA (1844–95), Amer. bimetallist.

HORTUS SICCUS, see HERBARIUM.

HORUS, Egyptian sun-god, represented by the hawk; divided Egyptian reverence with Osiris.

HORWICH (53° 36′ N., 2° 33′ W.), town, Lancashire, England. Pop. (1911) 16,286.

HOSAIN (d. 680), younger s. of the Caliph Ali by Fatima; tragedy of his death is re-enacted annually by the Shiites.

HOSANNA, salutation of the crowd when Christ made His triumphal entry into Jerusalem (*Mark* 11[9,10]), being part of an ancient Heb. ceremonial. See PALM SUNDAY.

HOSE, skintight foot and leg coverings, formerly reaching to the waist; the XVI.-cent. breeches were called *trunk-hose*.

HOSEA, Old Testament minor prophet. H. was a contemporary of Isaiah, and prophesied during reigns of last six kings of Israel, from Jeroboam II. to Hoshea. The book may be divided into two parts: the first (chaps. 1–3) relates the unfaithfulness of the prophet's wife, which is used as a symbol of idolatry of nation; and the second (chaps. 4–14) is a series of accusations against Children of Israel for their wickedness, which is unsparingly denounced. H. makes use of illustrations taken from domestic and rural occupations, such as baking, reaping, and sowing. Book is frequently quoted in New Testament, quotations occurring in the Gospels of *Matthew* and *Luke*, the *Apocalypse*, and the Epistle to the *Romans*.

Minor Prophets (vol. i.), Horton (*The Century Bible*); Driver, *Introduction to Literature of Old Testament*.

HOSE-PIPE, india-rubber implement for conveyance of water. The fire h.-p. is covered with carefully woven linen cloth, made circular, without seam, and done by handloom for important purposes.

HOSHANGABAD (22° 43′ N., 77° 39′ E.), town (and district), Central Provinces, India. Pop. *c.* 15,000; district has pop. *c.* 449,000.

HOSHEA (slain 721), last king of Israel; refused to pay tribute to Shalmeneser IV., king of Assyria, who attacked Israel.

HOSHIARPUR (31° 33′ N., 75° 48′ E.), town, Punjab, India; manufactures lacquer, cottons. Pop. *c.* 18,000. H. district has area of 2244 sq. miles. Pop. *c.* 990,000.

HOSIERY, stockings (see HOSE) and garments similarly manufactured by knitting. Unlike weaving, knitting is supposed to have been a late mediæval, probably Scot., invention. Shawls, when made by

hand, are knitted with two long bone needles, stockings and other round seamless things with four steel needles; one needle suffices for crochet. The stocking-frame was invented in 1589 by Lee, and completed by the addition of Jedediah Strutt's invention for rib-stitch in 1758. The warp loom was first introduced in 1775. Matthew Townsend introduced the latch needle in 1858. Circular and flat frames by which seamless h. is obtained have been invented by Fr., Ger., Belg., Eng., and Amer. manufacturers.

HOSIUS (d. 359), bp. of Cordova; authoritative member of Council of Nicæa, 325.

HOSIUS, STANISLAUS (1504–79), Polish cardinal, who suppressed Reformation in Poland.

HOSKINS, JOHN (d. 1664), Eng. miniature painter, whose works are much sought after by collectors.

HOSMER, HARRIET GOODHUE (1830–1908), remarkable Amer. sculptor.

HOSPICE, house of shelter for pilgrims and travellers, usually founded and maintained by some religious order.

HOSPITAL, an institution for the treatment of the sick and the injured. Among the ancient Egyptians and Greeks, who cultivated the art of healing to a wonderfully high degree, the sick and injured were brought to the temples of the gods for treatment, and with the development and spread of Christianity the treatment of the sick retained a close connection with religious foundations, although it is not until the time of the reign of Constantine that records exist of the establishment of h's by Christians. Separate hospitals were at an early period built for the reception of lepers and the insane, the first leper hospital in England being founded in 1118 A.D.

Until the beginning of the XVIII. cent. the number of hospitals in Britain was entirely inadequate to the needs of the country—London, for instance, having practically only St. Bartholomew's (founded 1546) and St. Thomas's (founded 1553) Hospitals; but from that time the larger towns throughout Britain began to provide themselves with more or less adequate hospital accommodation.

Of the general hospitals those with a medical school attached rank as the best, and such hospitals have well-equipped special departments for the treatment of diseases of the eye, ear, throat and nose, skin, and teeth; electrical departments, X-ray and radium departments, frequently medicinal baths departments, often wards for children and for special diseases, in addition to the ordinary medical and surgical wards.

The chief hospitals in London to which medical schools are attached are St. Bartholomew's H., Charing Cross H., St. George's H., Guy's H., King's College H., London H., St. Mary's H., Middlesex H., St. Thomas's H., University College H., and Westminster H. The Royal Infirmary, Edinburgh (founded 1730), with which the Edinburgh Medical School is connected, is the largest general hospital in Britain, and there are important h's connected with the medical schools in Manchester, Leeds, Newcastle, Liverpool, Birmingham, Sheffield, Bristol, Cardiff, Glasgow, Aberdeen, Dundee, Dublin, and Belfast.

These h's are supported by voluntary subscriptions, and most are endowed to a greater or less extent. Admittance in some of them is free, under the control of the medical officers, to all necessitous cases; in others it is necessary first to obtain a letter of introduction from a subscriber, except in cases of emergency when such a letter is not required. Some hospitals reserve certain wards for the reception of patients who pay for their accommodation.

The term *Hospital* is also applied to certain schools, endowed (*e.g.* Heriot's Hospital, Edinburgh) or supported by voluntary contributions (*e.g.* Christ's Hospital, Horsham, formerly in London), and also to certain institutions for pensioners (*e.g.* Greenwich and Chelsea Hospitals).

See INSANITY, MEDICINE.

HOSPITALLERS (*Ordo fratrum hospitalariorum Hierosolymitanorum* and *Ordo militiæ Sancti Johannis Baptistæ hospitalis Hierosolymitani*), religious military order. Its pre-Christian foundation is merely traditional. The constant stream of pilgrims to Holy Land, from the beginning of Christian era, increased after the erection of Church of Holy Sepulchre by Constantine. Pope Gregory the Great, at close of VI. cent., founded a hospital at Jerusalem. Persians captured Jerusalem, 614, but Charlemagne established a protectorate over Holy Places, 797–99, and refounded Pope Gregory's hospital, which was served by Benedictine monks from Mount of Olives. Turks captured Jerusalem, 1070–78, and destroyed all Christian edifices. Christian merchants of Amalfi obtained permission from Turks and established a hospital, c. 1050, again probably served by Benedictines; still under invocation of St. Mary. A XII.-cent. book, *Miracula*, recounts a legend that Zacharias, f. of St. John the Baptist, was its first high priest. This possibly led to dedication of hospital to St. John.

The *Miracula* relates that the administrator of the hospital, Gerard, assisted the besiegers of Jerusalem, 1099, in First Crusade, and was miraculously saved from the sultan's wrath. Gerard (d. 1120) was the true founder and first Grand Master of the later hospital, of which he became Institutor by papal bull, 1113. The Crusaders and every Western country bestowed lands on the hospital, and in 1113 the pope confirmed these grants. From the beginning it was pre-eminently a Fr. Order. It is still a vexed question whether it became a military institution and received rule under Gerard. Gerard was succeeded by Raymond du Puy (d. 1158–60). Mention of a Constable in 1126 seems to point to military character already. From 1137 the Knights Hospitallers took prominent part in crusades. Augustinian rule was given to the Order before 1153, as it was confirmed by Pope Eugenius III.; threefold vow of poverty, chastity, obedience; duty to be servants of the poor (*fratres pauperibus servientes*). Successive regulations were codified by Grand Master Pierre d'Aubusson, 1489. Friars were divided into three ranks: the knights, who were of noble birth (*chevaliers de justice*) or of distinguished merit (*chevaliers de grâce*), priests (*capellani*), and servants (*servientes armigeri*). Knights in peace wore black robe with white cross, eight-pointed, subsequently known as Maltese; in war (after 1248), red robe with white cross; standard, white cross on field gules; the Teutonic Order was subjected to this, 1143, and on suppression of Templars (1313) their lands were granted to Hospitallers.

They were forced to fly from Jerusalem, 1187; held out against Saracens at Acre till 1291; held Rhodes, 1310–1522, and became known as *Knights of Rhodes*; Turks at last took Rhodes, 1522, and knights retired to Malta, granted them by Charles V., 1530. Grand Master Philippe de Villiers de l'Isle d'Adam strenuously continued war against Turks from the Order's new home, and his successor, La Vallette, defended Malta in famous siege, 1565. In XVIII. cent. Order became merely rich aristocratic picturesque institution. Possessions in England were lost at Reformation; possessions in France confiscated, 1792. Napoleon captured Malta, 1798. Malta is still seat of the Order.

Delaville Le Roulx, *Les Hospitaliers, Mélanges, Cartulaire*; Porter, *History of the Knights of Malta.*

HOSPITIUM, Rom. term, applied to public hospitality extended to strangers from a foreign state. H. was European name for an inn in mediæval times.

HOSPODAR, title of rulers of some Slavonic states, and found in states which have been subject to Slav rule.

HOST (Lat. *hostia*, sacrifice), the element of bread in the Eucharist; circular unleavened wafers marked with emblems of the Crucifixion are used in the R.C. Church; these emblems were forbidden at the Reformation.

HOSTAGE, a person given up to an enemy as a security for the performance of certain articles of a treaty or other conditions. On the surrender of a town,

victors and vanquished gave such personal security for fulfilment of terms, the h's being later exchanged.

HOSTE, SIR WILLIAM (1780–1828), Brit. naval captain who took prominent part against France, 1809 and 1811.

HOSTIUS, Lat. poet; author of *Bellum Histricum* in verse.

HOSUR (12° 43′ N., 77° 50′ E.), town, Madras, India. Pop. *c.* 7000.

HOT SPRINGS.—(1) (34° 29′ N., 93° 1′ W.) health-resort, Arkansas, U.S.A.; thermal mineral springs; site of army and navy hospital. Pop. (1910) 14,434. (2) (37° 59′ N., 79° 50′ W.) village and health-resort, Virginia, U.S.A. Pop. 1761.

HOTCHPOT, HOTCHPOTCH.—(1) by the Statute of Distributions, 1670, in case any child other than the heir-at-law of an estate shall have any estate by settlement from the intestate, or any portion advanced, such estate or portion shall be brought into h.—that is, deducted from this child's share when division is made of the intestate's effects. (2) vegetable soup.

HOTEL, see INN.

HÔTEL-DE-VILLE, Fr. term corresponding to Eng. town hall; it usually contains barracks, prison, court-house, offices of local bodies, and residence of chief magistrate. Famous H. of Paris, burnt during riots of Commune, 1871, has been rebuilt.

HÔTEL-DIEU (God-house), Fr. name for important hospitals; some, like those of Angers and Beaune, are of architectural interest.

HOTHAM, SIR JOHN (d. 1645), Eng. gentleman of old Yorks family; inspired Yorks resistance to ship-money. He and his s. held Hull for Parliament, and were executed for planning to give it up to the king.

HOTHAM, WILLIAM, 1ST BARON (1736–1813), Brit. admiral; distinguished at St. Lucia, 1778; fought against French in Mediterranean, 1794.

HOTHO, HEINRICH GUSTAV (1802–73), Ger. writer; author of an important work on Flemish and Ger. painters.

HOTI-MARDAN, MARDAN (34° 10′ N., 72° 5′ E.), town, Peshawar, Brit. India. Pop. 3572.

HOTMAN, FRANÇOIS (1524–90), Fr. author; embraced Reformed religion; undertook Huguenot missions to Ger. princes; prof. of Law in various univ's; Councillor to Henry of Navarre, 1580; wrote *Franco-Gallia*, etc.

HOTSPUR, see PERCY, SIR HENRY.

HOTTENTOTS, South African aborigines (calling themselves *Khoikhoi*, Men of Men); sometimes but erroneously supposed to include Bushmen (*q.v.*). Their quaint language, with its 'click' sounds, led the early Dutch settlers to dub them H's (*i.e.* 'jabberers'). They were decimated and driven southwards by Bantu (or Kafirs) and pure H's now number only from 50,000 to 100,000; mostly in Cape of Good Hope, but several thousand survive in Ger. S.W. Africa. They are of middle stature, have yellowish-brown skins, woolly hair, and are characterised by steatopygia. Their tribes were pastoral and peaceful under patriarchal rule; they used poisoned arrows. Their folk-lore is described in Bleek's *Reynard in South Africa*.

Stow, *Native Races of South Africa*.

HOTTENTOT'S BREAD, see ELEPHANT'S FOOT.

HOTTINGER, JOHANN HEINRICH (1620–67), Swiss theologian and grammarian.

HOUBRAKEN, JACOBUS (1698–1780), much-admired Dutch engraver.

HOUDENC, RAOUL DE, HOUDAN (fl. XII. cent.), Fr. *trouvère* of note.

HOUDETOT, COMTESSE DE, ÉLISABETH FRANÇOISE SOPHIE DE LA LIVE DE BELLEGARDE (1730–1813), wife of the Fr. general CLAUDE CONSTANCE CÉSAR, COUNT DE H., of old territorial family; she rejected Rousseau's advances, preferring St. Lambert.

HOUDIN, ROBERT (1805–71), see CONJURING.

HOUDON, JEAN ANTOINE (1740–1828), Fr. sculptor; won *Prix de Rome* (1761); studied in Italy for ten years; achieved great success with statue of St. Bruno; later works included statues of Washington, Cicero, and Voltaire; and busts of Napoleon, Molière, Rousseau, Ney, and D'Alembert.

HOUFFALIZE (50° 8′ N., 5° 48′ E.), town, Luxemburg, Belgium. Pop. 1486.

HOUGHTON, RICHARD MONCKTON MILNES, 1ST BARON (1809–85), Eng. poet and critic; received a peerage (1863); pub. *Poetry for the People* (1840), *Palm Leaves* (1848), and other vol's of verse; also a life of Keats; a generous patron of poets and authors.

HOUGHTON-LE-SPRING (54° 51′ N., 1° 29′ W.), town, Durham, England. Pop. (1911) 9753.

HOUND'S-TONGUE (*Cynoglossum*), genus of plants of order Boraginaceæ (*q.v.*). Common hound's-tongue (*C. officinale*), found in Britain, has small red flowers and downy leaves.

HOUNSLOW (51° 28′ N., 0° 22′ W.), town, Middlesex, England; formerly site of priory. H. Heath was a highwayman's haunt. Pop. 12,000.

HOUR-GLASS, see CLOCK.

HOURI, name given in the Koran to the seventy-two beautiful women who are assigned to every 'Faithful' as spouses on entering the Muhammadan paradise.

HOURS, CANONICAL, special times in the day for devotion in Catholic Church, viz. Matins, Lauds, Prime, Terce, Sext, None, Vespers (Evensong), and Compline.

HOUSE AND HOUSING.—As most people in civilised communities are born, die, and spend a great part of each day in a house, domestic architecture, sanitation, and the conditions of occupation are matters of the first importance. Not until the XIX. cent., when the changes in modern industry created with amazing swiftness a new town population, was any serious attention given to the question of housing. The disclosures in England in 1844, concerning the housing of the working class,—the damp cellars, dark passages, vermin, lack of sanitary conveniences, absence of water-supply, and ill-repair,—were the beginning of a long series of reports, investigations, and legislative enactments on housing, that have taken place in nearly every country in Europe and in the U.S.A. To-day, crowded city tenements, slum areas, and want of accommodation in rural districts are facts of common life, proclaiming that in housing much remains to be done.

Heat, light, ventilation, and sanitation are the necessities of housing, whether rich or poor are concerned; but the housing question is primarily and essentially one of poverty. Amongst Southern nations and in semi-tropical and tropical countries housing is not so serious a matter, and here we are only concerned with those lands where it demands serious attention.

Bad housing, with its necessary accompaniment, overcrowding, means physical uncleanness and disease, want of privacy, and in many cases unavoidable intercourse with criminals; and the overcrowded town district is usually a centre of crime, vice, and epidemic sickness. Legislation, municipal activity, private enterprise, and philanthropy have all been at work to remedy the evil.

In Great Britain five Housing of the Working Classes Acts have been passed (in addition to earlier measures for sanitary reform and public health), in 1890, 1896, 1900, 1903, and 1904. The principal Act (1890) gives power to local authorities to order the demolition of houses unfit for habitation (with due compensation to the owner), and to erect dwellings for the working classes; but while whole districts have thus been cleared, and a certain number of working-class dwellings erected, in too many places the tenants evicted from the condemned slum have been driven to overcrowd elsewhere, so far in excess of rebuilding has been the pulling down. At the same time there is not a 'house famine' in the cities; for, according to the statement of Mr. John Burns, Pres. of the Local Government Board, 1909, no less than 104,107 houses were then to let, and 60,000 of these were in London.

These houses were unoccupied because the rent was too high for working-class tenants; small and cheap houses never stand empty in modern cities.

Private enterprise, often inspired by philanthropy, has also been responsible for many efforts to improve the housing conditions in cities. The late Miss Octavia Hill was famous for the excellent work her association did in London, 1864,—purchasing and renewing old house property,—and in America, Philadelphia, New York and Boston, can all point to Housing Reform on Miss Hill's lines. Twenty years before this (1845) Lord Shaftesbury's 'Association for improving the Dwelling of the Industrial Classes' (which pays 4½ % to its shareholders) began its operations. It now owns fourteen estates in London. The Peabody Fund (1864) also owns vast blocks of tenement dwellings in London. Similar commercial and semi-philanthropic housing associations exist in other cities, especially in Berlin, New York, Boston, and Philadelphia.

Well-built lodging-houses for single men (and in far fewer cases for single women) have also in the last twenty years been replacing the foul old common lodging-houses, hotbeds in their time of crime, vice, and disease. The Rowton Houses, started in 1892, charge 7d. a night, or 3s. 6d. a week, and keep up a high standard of decency.

Improved and quickened methods of transit have made it possible for multitudes of working people to live outside the city and to travel daily to and from their place of work, with the result that miles of mean streets now surround most industrial centres. But here steady improvements are at work. Building societies, co-operative societies, and Garden City associations all demand that houses shall be better built and be less ugly than the erections of the speculative builder of previous generations. By becoming shareholders in building and co-operative societies large numbers of workmen now own their dwellings—the purchase-money being borrowed on mortgage. In Belgium, France, and Germany the co-operative building companies and co-operative loan companies have been particularly successful on these lines.

The Garden City movement (started by Mr. Ebenezer Howard, 1899) promises a far better type of suburban dwelling for the comparatively prosperous middle-class person than could formerly be obtained, and its popularity is proved by the many fresh experiments made since the first garden city was planned at Letchworth in Hertfordshire. But garden cities do not provide housing accommodation at rents within the means of labouring people except to a very limited extent.

In Ireland, by the Act of 1906, houses in rural districts for workmen are erected on the demand of three residents by the local authority without all the delay that occurs in England, where rural housing, hampered by stringent building bye-laws, and want of legal driving power, is generally far behind town building.

E. R. Dewsnup, *Housing Problem in England*; W. Thompson, *Housing Up-to-Date*; J. S. Nettleford, *Practical Housing Reform*.

HOUSE-FLY (*Muscidæ*).—With the House-Fly (*Musca domestica*) are ranked the Blue-bottles (*Calliphora*), Green-bottles (*Lucilia*), and the dreaded African Tse-tse Fly (*Glossina*). The eggs of Muscid flies are generally laid upon dung, decaying matter, or carrion, and upon this the larvæ feed. In this way they are of some value as scavengers; but otherwise they cause much trouble. The House-Fly may carry germs of disease upon its feet or proboscis, and transfer these to human food; the larvæ of Blue-bottles and Green-bottles frequently bore into the skin of sheep, causing great irritation and sometimes death; the 'screw-worm' larva of one species of *Lucilia* bores in the nasal cavities of man and higher animals; and Tse-tse Flies are the carriers of the organisms which cause the fatal native disease of sleeping sickness and the troublesome animal disease, nagana, in Africa.

HOUSE OF COMMONS, see PARLIAMENT.

HOUSE OF LORDS, see PARLIAMENT.

HOUSEBREAKING, see under THEFT.

HOUSEBURNING, see ARSON.

HOUSEHOLD, ROYAL.—King and queen have each a separate household, some of the officials being honorary, while others are paid out of Civil List. The greater officials go out of office with every change of government, and are chosen from persons of high rank in the political party which happens to be in power. The principal officials are the Lord Steward, the Lord Chamberlain, and the Master of the Horse; there are also certain personal appointments made by king himself, most important being Master of Household.

HOUSEL, meaning sacrifice, obsolete Eng. name for Eucharist.

HOUSE-LEEK (*Sempervivum*), genus of plants of order Crassulaceæ (*q.v.*).

HOUSMAN, ALFRED EDWARD (1859–), Eng. poet and scholar; prof. of Latin, Cambridge; author of *A Shropshire Lad* (1896).

HOUSMAN, LAURENCE (1867–), Eng. writer and artist; first achieved celebrity as book-illustrator; author of *An Englishwoman's Love Letters* (1900), *A Modern Antæus*, *Sabrina Warham*, etc.; also plays and several vol's of verse.

HOUSSAS, see HAUSAS.

HOUSSAYE, ARSÈNE (1815–96), Fr. novelist and poet; his novels include *Les Filles d'Ève*, *La Couronne de Bluets*, etc.; poetry, *Cent et un sonnets*, also dramas, critical and hist. works. His s. HENRI (1848–) is a historian and academician.

HOUSTON (29° 46′ N., 95° 24′ W.), town, Texas, U.S.A.; important railway centre; manufactures machinery, railway carriages, iron goods; has large shipping trade in cotton, grain, oil. Pop. (1910) 78,800.

HOUSTON, SAMUEL (1793–1863), Amer. soldier and politician; as commander-in-chief in Texas, he defeated Mexicans in 1836; pres. of Texas, 1836–38, 1841–44; gov. of Texas, 1859–61.

HOUWALD, CHRISTOPH ERNST, FREIHERR VON (1778–1845), Ger. dramatist and author; pub. *Romantische Akkorder*, *Jakob Thau*, *der Hofnarr*, etc.; also some plays.

HÒVA, or MERINA, the dominant tribes of Madagascar, occupying the plateau of Imerina; small and slightly built, yellow complexion, hair black and long; converts to Christianity.

HOVE (50° 50′ N., 0° 21′ W.), town, Sussex, England. Pop. (1911) 42,173.

HOVENDEN, THOMAS (1840–95), popular Amer. painter.

HOVER-FLIES (*Syrphidæ*), conspicuous flies, often with body wasp-like in colour, to be seen resting on or poised over flowers in summer.

HOW, WILLIAM WALSHAM (1823–97), Eng. Churchman; bp. of Wakefield (1888); prominent East End work; writer of hymns.

HOWARD, old Eng. family, said to have been settled in Norfolk as far back as X. cent. In XV. cent. Sir Robert H. married the dau. of Mowbray, Duke of Norfolk, and his s., Sir John H., was in 1483 cr. Duke of Norfolk and Earl Marshal of England, an office hereditary in the family ever since. The first duke was killed at *Bosworth* and attainted; but his s. Thomas won battle of *Flodden*, and regained the dukedom in 1514; third duke was uncle of Anne Boleyn and Catherine Howard, queens of Henry VIII.; his grandson and successor m. heiress of Arundel earldom, thus bringing that title to the H. family; this duke was afterwards attainted and beheaded for plotting in favour of Mary, Queen of Scots, 1572. The family regained dukedom from Charles II. after the Restoration. Present is 15th duke, and is premier duke of England. The Earls of Effingham, Suffolk, and Carlisle are of same stock.

HOWARD, BRONSON (1842–1908), Amer. playwright; among his plays are *Young Mrs. Winthrop* and *Old Love Letters*.

HOWARD, CATHERINE (1521–42), fifth queen of Henry VIII.; dau. of Lord Edmund Howard; m.

Henry, 1540; charged with unfaithfulness, and beheaded in Tower.

HOWARD, JOHN (1726–1790), famous Eng. philanthropist; b. in London. On being app. high sheriff of Bedford, he inspected the prison, and, finding many abuses both there and in other Eng. gaols which he subsequently visited, gave himself up to securing reforms in management of prisons and prisoners. He afterwards visited the prisons of many European countries, which he described, with those of England, in his *State of Prisons* (pub. 1777). He also carried out researches on the plague.

Stoughton, *Howard and his Friends.*

HOWARD, LORD WILLIAM (1563–1640), Eng. antiquary; known as 'Belted Will,' of Naworth Castle, Cumberland; famed for his genealogical studies.

HOWARD OF EFFINGHAM, CHARLES, 2ND BARON (1536–1624), Eng. admiral; Lord High Admiral, 1585–1619; commanded Eng. fleet against Armada, 1588; joint-commander in expedition against Cadiz, 1596; cr. Earl of Northampton, 1596; ambassador to Spain, 1605. His first wife, Katharine Carey, according to legend, failed to deliver Essex's ring to Queen Elizabeth.

HOWARD OF EFFINGHAM, WILLIAM, 1ST BARON (*c.* 1510–73), Eng. admiral; gov. of Calais (1552); Lord High Admiral (1553); raised to peerage (1554); highly esteemed for his public services under Henry VIII. and Elizabeth.

HOWARD, OLIVER OTIS (1830–1909), Amer. general; fought for union in Civil War; distinguished at *Fair Oaks, Antietam, Gettysburg, Chattanooga*; served on Freedmen's Bureau, 1865–74; established Lincoln Univ., Cumberland Gap, Tennessee.

HOWARD, SIR ROBERT (1626–98), Eng. dramatist; s. of Earl of Berkshire; fought on king's side in Civil War; wrote *The Committee* (1663), a comedy, and collaborated with his bro.-in-law, Dryden, in *The Indian Queen.*

HOWE, ELIAS (1819–67), Amer. inventor; granted patent (1846) for the sewing-machine which bears his name.

HOWE, JOHN (1630–1706), Eng. Nonconformist divine; ed. Cambridge and Oxford; app. domestic chaplain to Cromwell; after 1662 became Nonconformist; wrote theol. works; a zealous and broad-minded man.

HOWE, JOSEPH (1804–73), Canadian politician; had considerable share in obtaining responsible administration for Nova Scotia; Prime Minister, Nova Scotia, 1860.

HOWE, JULIA WARD (1819–1910), Amer. author and philanthropist; was associated with her husband, DR. S. G. HOWE, in editing the *Boston Commonwealth*, and in numerous philanthropic and social reform movements; wrote *The Battle-hymn of the Republic*, and several vol's of verse; also *Sex and Education, Life of Margaret Fuller*, etc.

HOWE, RICHARD, EARL HOWE (1726–99), Brit. admiral; saw considerable service during war of Amer. Revolution; as commander of Channel fleet, relieved Gibraltar in 1782; First Lord of Admiralty, 1783; on June 1, 1794, defeated French off Cape Ushant, day of this victory being long known as *Glorious First of June.*

HOWE, SAMUEL GRIDLEY (1801–76), Amer. philanthropist; served in Gk. war of independence; helped to establish Perkins Institution for blind at Boston; founded school for idiots at South Boston, subsequently removed to Waltham; advocated abolition of slavery; sanitary commissioner in Civil War.

HOWE, WILLIAM, 5TH VISCOUNT HOWE (1729–1814), Brit. general; distinguished himself at *Abraham's Heights*, Quebec; commander-in-chief in Amer. War of Independence.

HOWEL DDA ('the Good') (d. 950), king of Wales (943); maintained peace and codified the laws.

HOWELL, JAMES (d. 1666), Brit. author; travelled extensively and famed for his Royalist sympathies; wrote *Dodona's Grove*, an allegory, and numerous other works, but chiefly noted for his *Familiar Letters* (1645–55), written in the Fleet prison.

HOWELLS, WILLIAM DEAN (1837–), Amer. novelist and critic; famed for realistic studies of modern life; *The Rise of Silas Lapham, A Woman's Reason, A Modern Instance*, etc.; also vol's of poems and essays.

HOWITT, WILLIAM (1793–1879), Eng. author; wrote *History of Priestcraft, Rural Life in England, Visits to Remarkable Places*, etc. His wife, MARY (1799–1888), wrote novels, trans. Frederica Brema and Hans Andersen, and was joint-author with her husband of *The Forest Minstrel, The Ruined Abbeys and Castles of Great Britain*, and numerous other works.

HOWITZER, light ordnance used in field and siege operations; of 5-in. and 6-in. calibre, throwing shells of from 50 to 120 lb.

HOWRAH (22° 31′ N., 88° 20′ E.), town, Bengal, India; jute, cotton. Pop. *c.* 160,000. District has area 509 sq. miles. Pop. *c.* 860,000.

HOWSON, JOHN SAUL (1816–85), Anglican divine and theological writer; dean of Chester, 1867.

HOWTH (53° 23′ N., 6° 3′ W.), town, County Dublin, Ireland. Pop. 1166.

HOXTER (51° 46′ N., 9° 22′ E.), town, Westphalia, Prussia; interesting old buildings. Pop. (1905) *c.* 7700.

HOY (58° 50′ N., 3° 18′ W.), mountainous island, Orkney, Scotland; has celebrated Dwarfie Stone, in which are excavated rooms. Pop. 1216.

HOYLAKE (53° 24′ N., 3° 11′ W.), town, Cheshire, England. Pop. (with W. Kirby, 1911) 14,029.

HOYLAND NETHER (53° 30′ N., 1° 26′ W.), town, Yorkshire, England. Pop. (1911) 14,639.

HOYLE, EDMOND (1672–1769), Eng. pioneer authority on whist; wrote on games, and taught whist in London; his *Short Treatise on Whist* was pub. 1742.

HOZIER, PIERRE D', SEIGNEUR DE LA GARDE (1592–1660), Fr. record-searcher; historiographer and genealogist of France, 1634; *juge d'armes*, 1641; wrote *Recueil Armorial des anciennes maisons de Bretagne*, etc. Several of his descendants also became *juges d'armes.*

HRABANUS MAURUS MAGNENTIUS (*c.* 776–856), pupil of Alcuin, abbot of Fulda, 822–42; retired for study and devotion; abp. of Mainz, 847; wrote commentaries on Scripture, and numerous theological and other works.

HRADSCHIN, see PRAGUE.

HRÓLFR KRAKI (fl. *c.* VI. cent.), semi-mythical Dan. king, celebrated in the sagas.

HROSVITHA, ROSWITHA (*c.* 930–1000), early mediæval dramatist; entered Benedictine nunnery of Gandersheim *c.* 959; wrote religious poems, 6 dramas (her best works), and historical chronicles, viz. *Carmen de Gestis Oddonis* (epic), *De primordiis et fundatoribus cœnobii Gandersheimensis* (a poem narrating the history of the convent).

HSUAN-TSANG (fl. 664), Chin. writer of travels; became a Buddhist monk in early life, won great reputation for learning and sanctity, and finally visited India in order to penetrate Buddhist arcana; he traversed vast deserts alone, and left invaluable accounts of the districts through which he passed. The Ind. pilgrimage was considered specially meritorious by the Chin. Buddhists, whose writings are an important source for history of India.

HUAMANGA, GUAMANGA, see AYACUCHO.

HUAMBISIS, S. Amer. tribe of mixed Span. and Ind. descent.

HUANACO, see CAMEL FAMILY.

HUANCAVELICA (12° 55′ E., 75° 2′ W.), town, Peru, S. America. Pop. *c.* 6000; of dept. *c.* 167,840.

HUÁNUCO, GUANUCO (9° 54′ S., 76° 49′ W.), town, Peru, S. America. Pop. *c.* 7000.

HUARAZ (9° 16′ S., 77° 23′ W.), town, Peru, S. America. Pop. 7046.

HUARTE DE SAN JUAN (1530–92), Span.

physician; renowned for his writings showing the connection between psychology and physiology.

HUASTECS, Mayan tribe of N. Amer. Indians.

HUBER, JOHANN NEPOMUK (1830–79), Ger. theologian; wrote, as **Janus,** *The Pope and the Council*; an Old Catholic leader.

HUBER, LUDWIG FERDINAND (1764–1804), Ger. dramatist, critic, and journalist of some influence.

HUBERT, ST. (656–728), bp. of Liége; feast-day, Nov. 3; patron saint of hunters. Legend says that he was converted by appearance of Christ on the Cross above the deer's head when shooting.

HUBERTUSBURG (51° 17′ N., 12° 56′ E.), old castle, Saxony, Germany. Treaty of H., 1763, ended Seven Years War.

HUBLI (15° 18′ N., 75° 11′ E.), town, Bombay, India. Pop. (1911) 60,214.

HÜBNER, EMIL (1834–1901), Ger. philologist, who wrote important works on inscriptions.

HÜBNER, JOSEPH ALEXANDER, COUNT (1811–92), Austrian diplomat; ambassador to France, 1849–79; to Italy, 1865–67; wrote *Sixte Quint* and other works.

HUC, ÉVARISTE RÉGIS (1813–60), Fr. missionary; after an unsuccessful mission to Tibet, wrote *Voyage dans la Tartarie, le Thibet et la Chine* (1851–52), and other valuable books on those regions.

HUCBALD (*c.* 840–930), Benedictine monk, author of the *Harmonica Institutio* and possibly of other works on music.

HU-CHOW-FU (30° 49′ N., 120° 5′ E.), town, Cheh-kiang, China.

HUCHOWN 'OF THE HALL ROYAL,' person stated by Wyntoun the chronicler (XIV.–XV. cent.) to have written 'the great geste of Arthur,' *The Awntyrs of Gawain,* and *The Pistyl of Susan.* See *Huchown,* by Geo. Neilson.

HUCHTENBURG, JAN VAN (1646–1733), Dutch painter of battle-scenes.

HUCKABACK, thick linen material much used for face towels.

HUCKNALL TORKARD (53° 2′ N., 1° 12′ W.), town, Nottinghamshire, England. Pop. (1911) 15,870.

HUDDERSFIELD (53° 39′ N., 1° 47′ W.), town, Yorkshire, England; situated in extensive coal-field; centre of 'fancy' woollen industry; manufactures iron goods, machinery; fine public buildings and park. Pop. (1911) 107,825.

HUDSON (42° 12′ N., 73° 51′ W.), town, New York, U.S.A.; manufactures Portland cement, hosiery, etc. Pop. (1910) 11,417.

HUDSON BAY (*c.* 60 N., 87° W.), great inland sea, N.E. of North America; receives drainage of great part of Canada by Churchill, Nelson, Albany, and other rivers. Area, *c.* 500,000 sq. miles; connected with Atlantic by Hudson Strait. A railway is being built to connect H. B. with the centre and west of Canada. Hudson Strait is open to navigation for two or three months in the year.

HUDSON, GEORGE (1800–71), Eng. financier; called 'railway king'; promoted railway extensions in England; acquired large fortune, subsequently lost.

HUDSON, HENRY (d. 1611), famous Brit. explorer. In 1607 he attempted to discover a north-east passage to Pacific; in 1609 explored H. River; afterwards sailed to Arctic Ocean, hoping to find a north-west passage; discovered H. Strait and Bay. On last voyage crew mutinied, and H. and others were cast adrift and never heard of again. *Life,* by Asher (Hakluyt Soc.), and by E. M. Bacon.

HUDSON RIVER (41° 50′ N., 73° 58′ W.), beautiful and important river in New York State, U.S.A.; called after Henry Hudson, who first explored it (1609); rises in Adirondack Mts.; total length, *c.* 350 miles (tidal, *c.* 150). Principal tributaries are Sacondaga, Mohawk, and Wallkill. About 60 miles from New York (at mouth) river passes through picturesque highlands into great expanse—Haverstraw and Tappan (*c.* 12 miles by 4½) Bays—after which a steep wall (called the Palisades), rising 300–500 ft. from brink of river (here 1 or 2 miles broad and called *North River*), extends to upper part of New York.

Bruce, *The Hudson* (1895); E. M. Bacon, *The Hudson River from Ocean to Source.*

HUDSON'S BAY COMPANY, joint-stock company, founded 1670 by Prince Rupert and seventeen others, under charter from Charles II., for the importation of furs and skins into Gt. Britain from N. America. In 1869 its exclusive rights were ceded to the Brit. Government for £300,000, but the trade is still continued under certain reservations. See Willson, *The Great Company, 1667–1871* (1900).

HUÉ (16° 24′ N., 107° 32′ E.), fortified town, Fr. Indo-China; capital of Annam; has royal palace. Pop. *c.* 50,000.

HUE AND CRY, old process, in Eng. law, of pursuing felons with horn-blowing and shouting; if taken, they were summarily dealt with; later meaning, police proclamation regarding offenders, etc.

HUEHUETENANGO (15° 30′ N., 91° 41′ W.), town, Guatemala, Cent. America. Pop. (1905) *c.* 12,000. H. department has area of 5700 sq. miles. Pop. *c.* 120,000.

HUELVA (37° 32′ N., 6° 50′ W.), frontier province, S.W. Spain; area, 3913 sq. miles; has valuable copper mines. Pop. (1910) 309,744. Its capital, HUELVA, has pop. (1910) 27,700.

HUERCAL OVERA (37° 26′ N., 2° 1′ W.), town, S.E. Spain. Pop. 15,763.

HUESCA (42° 11′ N., 0° 10′ W.), province, Spain; area, 5848 sq. miles; watered by Aragon and other affluents of Ebro, N. occupied by Pyrenees; produces wine, grain, fruit. Pop. (1910) 247,027. Its capital, HUESCA, has a cathedral. Pop. (1900) 12,600.

HUET, PIERRE DANIEL (1630–1721), Fr. scholar; student of math's, astron., and anat.; edit. Latin classics; bp. of Avranches, 1689, then abbot of Fontenay; left valuable library.

HUFELAND, CHRISTOPH WILHELM (1762–1836), Ger. physician; prof. of Med. at Jena (1793); principal of Medical Coll. (1798) and prof. of Pathology and Therapeutics (1809) at Berlin Univ.; author of many medical works.

HUFELAND, GOTTLIEB (1760–1817), Ger. jurist; wrote *Lehrbuch des Naturrechts* and other works on legislation and political economy.

HUG, JOHANN LEONHARD (1765–1846), Ger. Biblical (R.C.), Oriental, and classical scholar; prof. at Freiburg, 1791–1845.

HUGGINS, SIR WILLIAM (1824–1910), Eng. astronomer; pioneer in stellar spectroscopy and photography; made many striking discoveries relative to origin, constitution, and condition of the heavenly bodies; list of papers in his *Atlas of Representative Stellar Spectra.*

HUGH THE GREAT (d. 956), Duke of the Franks and Count of Paris; founder of the fortunes of his house, and father of H. Capet.

HUGH CAPET (*c.* 938–96), king of France; founder of Capetian dynasty; s. of Hugh, Count of Paris and Duke of France; elected and crowned, 987; warred against Charles of Lorraine, his capture of whom in 991 closed the war.

HUGH DE PUISET (*c.* 1125–95), bp. of Durham and Earl of Northumberland; exercised powerful influence upon the political affairs of the reign of Richard I.

HUGH OF ST. CHER (*c.* 1200–63), Fr. Dominican priest and cardinal; besides playing prominent part as a churchman, wrote theological works of interest.

HUGH OF ST. VICTOR (*c.* 1079–1141), canon of Hamersleben, Saxony; had great reputation as mystic in XII. cent.

HUGH, ST., OF LINCOLN, OR OF AVALON (*c.* 1140–1200), prior of first Eng. Carthusian house at Witham (Somerset); bp. of Lincoln, 1186; strong defender of rights of Church, and pious man; not to be confused with HUGH OF WELLS, bp. of Lincoln, or ST. HUGH OF

LINCOLN, Christian boy traditionally crucified by Jews.

HUGHES, DAVID EDWARD (1831–1900), Eng. electrician; made fortune by invention of type-printing telegraph instrument, adopted everywhere; perfected telephone by invention of microphone.

HUGHES, SIR EDWARD (*c.* 1720–94), Brit. admiral; served at *Porto Bello* under Vernon; commander-in-chief in East Indies, 1778–83; took Goree from French; promoted admiral, 1793.

HUGHES, HUGH PRICE (1847–1902), Brit. Wesleyan minister; b. Carmarthen; founded *Methodist Times*, 1885; started West London Mission, 1887; pres. of Wesleyan Conference, 1898; famed for fearless utterances in cause of social reform.

HUGHES, JOHN (1677–1720), Eng. author; chiefly known as writer of successful tragedy, *The Siege of Damascus* (1720); wrote for *Spectator*; produced numerous trans. in prose and verse.

HUGHES, JOHN (1797–1864), R.C. divine; went to America from Ireland, 1817; bp. of New York; keen Catholic controversialist.

HUGHES, THOMAS (XVI. cent.), Eng. dramatist; wrote *The Misfortunes of Arthur*, played before Queen Elizabeth at Greenwich (1588).

HUGHES, THOMAS (1822–96), Eng. judge and author; ed. Rugby and Oxford; became a County Court judge; was greatly influenced by the religious views of F. D. Maurice and Kingsley; pub. *The Manliness of Christ* (1879). He is best known, however, by his famous story, *Tom Brown's School-days* (1857), and its sequel, *Tom Brown at Oxford* (1861).

HUGLI, HOOGHLY (22° 57′ N., 88° 19′ E.), town, Bengal, India, on H. River; has fine mosque and various educational establishments. Pop. 29,383. H. district has area of *c.* 1200 sq. miles. Pop. 1,049,282.

HUGLI, HOOGHLY (21° 40′ N., 87° 50′ E.), most westerly mouth of Ganges, entering Indian Ocean, and that up which trade passes to Calcutta.

HUGO, GUSTAV VON (1764–1844), Ger. jurist; chiefly known for his *Lehrbuch eines Zivilistischen Kursus* (1792–1821).

HUGO, VICTOR MARIE (1802–85), Fr. author; b. at Besançon; travelled with his f., General Count Hugo (1774–1828), through Spain and Italy during Napoleonic campaigns; returned to Paris for education. From outset H.'s private and public life were troubled. Nearly all his children died in his lifetime, and he lived his last years with his grandchildren. H. entered Parliament after Revolution of 1848; became ardent Republican, and after *coup d'état* of Dec. 2, 1851, retired to Channel Islands until 1870; returned to Paris, and took deep interest in politics, working with all his might for abolition of capital punishment, etc. His funeral was a magnificent one, and he was laid to rest in the Panthéon as perhaps the greatest figure in Fr. Lit.

H. was the great leader of Romantic school of Fr. lit. (see under FRANCE). His poems, dramas, and romances, on every subject and in numberless forms, aroused an enthusiasm almost unparalleled in lit.; through him the current set definitely in favour of the new Romantic movement; his dramas, *Hernani* (1830), *Le Roi s'amuse* (1832), *Lucrèce Borgia* (1833), etc., and novels, *Le Dernier Jour d'un condamné* (1829), *Notre-Dame de Paris* (1831), *Les Misérables* (1862), *Les Travailleurs de la Mer* (1866), *L'Homme qui Rit* (1869), were epoch-making and were only surpassed in greatness by his lyrics. One of the great features of H.'s writing was frequent use of *motif* of oppressed virtue and evil fate: the hero from opening of life to close of story is subject of misfortunes, which are final word of tragical imagination; he is deformed, like the bell-ringer of *Notre-Dame*, or distorted, like terrible '*homme qui rit*,' or a convict with the luck against him, like Jean Valjean; he does not so much struggle against destiny as suffer a continuous series of attacks, and finally succumb. This 'eternal note of sadness' is one of the charms of H., as of the whole school. Love of liberty, justice, glory, nature, children, are also outstanding features of his work; his 'Paradise Lost and Regained,' *La Légende des Siècles* (1859 onwards), was praised by Swinburne as the greatest poem of XIX. cent. H.'s rhetorical effects are somewhat alien to the austerer age which has followed; but he will always remain one of the literary giants of the XIX. cent.

Swinburne, *A Study of Victor Hugo* (1886); monographs by J. P. Nichol (1892), Claretie (1902), Marzials, etc.

HUGUENOTS, name given to Fr. Protestants who in XVI. and XVII. cent's banded themselves together to secure personal liberty and religious freedom. Long struggle began in 1562, with massacre of number of H's at Vassy by R.C. followers of the Guises, and towards close of same year the H's were defeated at *Dreux*; two months later the murder of Duke of Guise by a Calvinist fanatic put an end to hostilities, and peace of Amboise was arranged, 1563. In 1567 war again broke out, and H's were defeated at *St. Denis*; by Treaty of Longjumeau (1568) peace was restored for a short time; but the following year saw a resumption of hostilities; the H's again suffering defeat at *Jarnac*, while Condé was murdered, 1569. Henry of Navarre and Coligny then became leaders of Prot. party, and in 1570 hostilities again came to an end by Treaty of St. Germains.

Two years later occurred the terrible massacre of St. Bartholomew's Eve, Aug. 24, 1572; the example of Paris was followed in other towns, and in two months from 20,000 to 30,000 H's were slain in France. The remainder again took up arms and were successful in obtaining in 1575 numerous concessions, some of which were subsequently revoked. In 1589 Henry of Navarre came to Fr. throne, and in 1598 he granted religious freedom by Edict of Nantes; but after his death civil war recommenced and H's were again defeated. For many years, in spite of confirmation of Edict of Nantes, they were subjected to persecution; and in 1685 the Edict was revoked, great numbers of H's fled from the country, and their church was annihilated; revived in XVIII. cent., and after various vicissitudes finally obtained equality with rest of population after the Revolution.

Browning, *History of the Huguenots* (1840); Smiles, *History of the Huguenots* (1867); and works by H. M. Baird.

HUGUES, CLOVIS (1851–1907), Fr. Socialist, politician and author of amusing comedies, poems, etc.

HUICHOL, tribe of Indians of Central America.

HUITZILOPOCHTLI, ancient Mexican war-god, to whom wholesale human sacrifice was made.

HULDA, Teutonic goddess of the spindle and marriage.

HULL (45° 23′ N., 75° 46′ W.), town, Quebec, Canada; paper- and sawmills. Pop. 14,000.

HULL, KINGSTON-ON-HULL (53° 45′ N., 0° 20′ W.), river-port and borough, Yorkshire, England, with Holy Trinity Church, St. Mary's Lowgate (1333), town hall, library, theatre, nautical school, and extensive docks. Shipbuilding, machinery, chains, ropes, canvas, chemicals, tanning, sugar-refining, etc. H. made free borough of Kingston-on-Hull by Edward I., 1299; besieged by Royalists, 1643; extensive trade with Continent, and headquarters for deep-sea fisheries. Pop. (1911) 278,024.

HULL (from A.-S. *helan*, to cover), capsule or chrysalis; whole lower part of a ship.

HULL, ISAAC (1775–1843), Amer. naval commander who took the Brit. ship *Guerrière*, 1812.

HULLAH, JOHN PYKE (1812–84), Eng. composer; prof. at King's, Queen's, and Bedford Colleges, London; strongly opposed Tonic Sol-Fa movement.

HULME, WILLIAM (1631–91), Lancashire man who founded exhibitions at Oxford with endowment in Manchester; the property has appreciated enormously and now supports several Manchester institu-

tions; district of Manchester where the property lies is called H.

HÜLS (51° 23′ N., 6° 31′ E.), town, Rhine prov., Prussia. Pop. (1910) 6868.

HULSE, JOHN (1708–90), Eng. divine who bequeathed funds to Cambridge Univ. for four lectures (HULSEAN LECTURES) to be delivered before the univ. annually on the evidences of the Christian religion.

HUMACAO (18° 16′ N., 65° 44′ W.), town, Porto Rico, W. Indies. Pop. 4428.

HUMANE SOCIETY, ROYAL, established 1774 to teach methods of resuscitating the half-drowned; it maintains boats and boatmen to watch swimmers at many bathing-places, grants medals for rescues, and offers swimming prizes.

HUMANISM, literally that which attaches primary importance to man, but used more specifically of Renaissance movement of XV. cent., and beginning of modern thought.

HUMANITARIAN.—(1) humane; (2) denying divinity of Christ, while accepting God the Father; (3) erecting morality into a religion.

HUMAYUN, NASR ED-DIN, MUHAMMAD (*c.* 1510–56), emperor of Delhi; second of the Mogul line, and preserved realm acquired by his f., Baber (*q.v.*), though first spent many years in fighting.

HUMBER (53° 40′ N., 0° 12′ ..), estuary of Trent and Yorkshire Ouse, E. coast f England, between Yorks and Lincoln.

HUMBERT I., RANIERI CARLO GIOVANNI MARIA FERDINANDO EUGENIO (1844–1900), king of Italy, s. of Victor Emmanuel II.; succ. 1878; supported Triple Alliance and also maintained friendly relation with Britain; advocated colonisation on Red Sea littoral; assassinated by anarchist Bresci.

HUMBOLDT, FRIEDRICH HEINRICH ALEXANDER, BARON VON (1769–1859), Ger. naturalist and explorer; explored course of the Orinoco, the Andes, the Amazon, and Mexico. He introduced *guano* into Europe and in 1817 delineated *isothermal* lines. Besides accounts of the natural history of the regions he explored he wrote works on plant distribution, laws of temperature, magnetism, volcanoes, terrestrial magnetism, and the igneous nature of rocks. He devoted much attention to climate and the conditions which control it. As a favourite of Frederick William III, of Prussia, he could not undertake further expeditions, with the exception of a journey to Siberia, in his sixtieth year, during which he determined the height of the plateau and discovered diamonds in the gold washings of the Ural. In his seventy-sixth year he wrote the *Kosmos*, in which are embodied the results of his personal observations and his generalisations from those and his wide scientific knowledge.

Lowenberg, *Humboldt* (trans. by Lassell).

HUMBOLDT, KARL WILHELM VON (1767–1835), Ger. statesman and author of valuable philological works; bro. of above; as Prussian member of Public Instruction established Univ. of Berlin (1809).

HUME, ALEXANDER (1557–1609), Scot. poet, author of *Hymns, or Sacred Songs* (1599).

HUME, DAVID (1711–1776), Scot. historian and philosopher; b. Edinburgh; s. of a small landowner in Berwickshire; studied at Edinburgh Univ., and became interested in speculation; in 1739 pub. first two vol's of *Treatise of Human Nature*, but to his bitter disappointment the work was a failure; tried, unsuccessfully, to get chair of Moral Philosophy at Edinburgh, 1744; made librarian at Advocate's Library, Edinburgh, 1751. His *Philosophical Essays* were pub. in 1748, and *Political Discourses*, 1751. In 1753 H. set to work to write the history of England. His qualifications and aims in writing were distinctly above those of his day, though by no means equal to those of ours. His *Natural History of Religion* appeared in 1757. He was much honoured during the visit he paid to Paris in 1763; app. Under-Sec. of State to the Home Department, 1766; in London, 1767–69; returned to Edinburgh; had a furious quarrel with Rousseau; latterly in much better financial circumstances than before; d. a much respected man.

H.'s philosophy, it has been said, is more self-consistent than that of either Berkeley or Locke, and he has been called the typical *empiricist* philosopher, the 'empiricists' being those who assert that all our knowledge comes from experience. His philosophy is not a completely worked out system, but several of his theories are important. He distinguishes only between *impressions* and *ideas*, the latter the outcome of the former, but what impressions he does not know. If the two are difficult to fit together, the idea is the *manner of conceiving* the impression. The two together constitute conscious experience. Space and time have hardly any real existence. His theory of math's is sometimes thought to conflict with his empiricism. In dealing with the theory of knowledge he says: 'All our distinct perceptions are distinct existences, and the mind never perceives any real connection among distinct existences.' His theol. was really agnostic. His philosophy makes empiricism as satisfactory as it can be made.

H.'s hist. work was important, but his *History of England* has long been superseded and does not survive to the extent, *e.g.*, of Gibbon's *Decline and Fall.* In economics he was an opponent of the Mercantilists. He perceived the connection between economics and sociology, and the importance of hist. treatment. He believed firmly in free trade.

Burton, *Life and Correspondence of David Hume*; Calderwood, *David Hume*; Works edit. by H. Green and Grose.

HUME, JOSEPH (1777–1855), Brit. politician; entered Ind. medical service, 1797; M.P. 1812; advocated removal of R.C. disabilities and economy in government expenditure.

HUMILIATI, Ital. religious order; origin uncertain, perhaps at Rome, 1178; rule granted by Innocent III., 1201, to order of priests (the third, a lay order originally, then also one of women); suppressed, 1571.

HUMMEL, JOHANN NEPOMUK (1778–1837), composer and pianist; b. Pressburg, Hungary; brilliant extempore player; best compositions pianoforte and chamber music.

HUMMING-BIRD, name given to members of the *Trochilidæ* on account of humming sound produced by their extremely rapid wing-pulsations. The *Trochilidæ*, which include the smallest known birds, are confined to the New World, the majority occurring in equatorial and subtropical belts, although the family's range extends from Alaska to Tierra del Fuego. The males' exquisitely lustrous and gorgeous plumage defies description, and its distribution in tufts, gorgets, crests, and the like, enhances its native brilliance. H-b's seldom rest, but flit tirelessly from blossom to blossom, feeding on honey-loving insects, by means of long, tubular, forked tongues, and doubtless assisting in fertilisation of the flowers visited. The nest is a highly finished structure, closely resembling its surroundings, being clothed with mosses and lichens. The males are exceedingly pugnacious, fighting fiercely among themselves, and also attacking, with remarkable valour, any creature passing near the sitting hen.

Gould, *Monograph on the Trochilidæ* (5 vol's, 1849).

HUMOUR (Lat. *humor*, damp) had already become an Eng. word of the same equivalence as its Lat. progenitor in 1382, but had then already been applied to what the Schoolmen named the cardinal fluids of the body—blood, choler, melancholy, and phlegm. The predominant h. became the means of classification of temperaments; thus the word is used by Shakespeare and the XVII.-cent. writers of 'comedies of h's.' In late XVII. cent. h. appears as a term for a sense of broad fun. To-day, wit is an intellectual cleverness which raises a smile; it may be unkind, unsympathetic. H. is more elemental, it is of the heart, not the intellect; it is born of incongruous incidents, and its product is

laughter. Oscar Wilde is a wit; J. M. Barrie is a humorist.

In drama wit is the province of comedy; h., of farce. Notable humorists are Aristophanes, Chaucer, Dunbar, Rabelais, Molière, Cervantes, Shakespeare (great wit also), Swift, Sterne, Addison, Fielding, Smollett, Goldsmith, Dickens, O. Wendell Holmes, Mark Twain, Max Adeler, Charles Lever, Jerome K. Jerome, W. W. Jacobs, Stephen Leacock.

HUMPERDINCK, ENGELBERT (1854–), Ger. composer; prof. at Berlin; wrote *Hänsel und Gretel*, a fairy opera, music for *The Miracle* (1912), etc.

HUMPHREY, LAWRENCE, Humfrey (*c.* 1527–90), Eng. ecclesiastic; pres. of Magdalen Coll., 1561; promoted Reformed religion; dean of Gloucester, 1571, Winchester, 1580.

HUMPHREYS, ANDREW ATKINSON (1810–83), Amer. military engineer; performed engineering services early in Civil War, subsequently distinguishing himself in the field.

HUMPHRY, OZIAS (1742–1810), Eng. painter, whose miniatures are valued by collectors.

HUMS, see Homs.

HUNALD, Duke of Aquitaine (from 735–45); crushed by Charles Martel and Pippin.

HU-NAN (27° 30′ N., 111° 30′ E.), province, Central China; area, *c.* 83,380 sq. miles; surface hilly; lies in Yangtse-Kiang basin; coal, tea, rice. Pop. (1910) 22,169,673.

HUNDRED (A.-S. *hund*, hundred; *red* signifies computation), Eng. numeral. The h. as a division of the shire may have been originally the land inhabited by 100 families; tradition ascribed the institution of the h. to Alfred the Great, but it is probably much older; divisions corresponding to the h. are called *wards* in N., *wapentakes* in Yorks and Midlands, *rape* in Sussex, *lathe* in Kent.

HUNDRED DAYS, see France (History: 1815).

HUNDRED YEARS WAR, struggle between England and France, 1337–1453, originating in English claim to crown of France; from 1337 to 1364 fortune favoured English; then ensued a period of French success; after 1380 French again suffered disaster, but they rallied under Joan of Arc in 1429, and the English were expelled in 1453. See England and France (History).

HUNGARY, the eastern and larger of the two states forming the monarchy of Austria-Hungary (*q.v.*); situated in S.E. of Central Europe, and bounded on E. by Austria and Rumania; W. and N. by Austria; S. by Rumania, Servia, Bosnia, and Austria. Total area, *c.* 125,400 sq. miles; only seaboard is on the Adriatic, and is not quite 100 miles long. H. is hemmed in on N.W., N.E., and S.E. by Carpathian Mts., and S. by the Danube, Save, and Unna rivers.

The kingdom of H. in its widest sense—the 'Realm of the Crown of St. Stephen'—comprises H. proper, with which is included the former grand-principality of Transylvania and the province of Croatia-Slavonia; of the total area of the kingdom H. proper has *c.* 109,000 sq. miles and Croatia-Slavonia *c.* 16,400 sq. miles.

H. consists of an extensive central plain surrounded by high mountains—mostly belonging to the Carpathians and also the Alps, separated by the Danube valley; the Carpathian portion begins in the N., at Dévény (near Pressburg, Pozony), on left bank of Danube, and after running N.E. and E. turns S.E. and W. in great irregular circles, ending near Orsova, meeting the Balkan Mts. at the 'Iron Gates' of the Danube; the greatest elevations reached are in the Tátra Mts., in N. H. proper, in E. and S. of Transylvania (Transylvanian Alps), and in E. portion of the Banat; the highest peak is Gerlsdorf or Spitze, or Gerlachfalva —in Tátra group, and *c.* 8700 ft. in height. The portion of H. situated on right bank of Danube is filled by Alpine System—the southern outlying group of the Alps; the groups are the Leitha Mts., the Styrian Mts., the Lower Hungarian Highlands—a continuation of the former and the Bakony Forest; the latter, lying entirely in Hungarian territory, extends to Danube, near Budapest; the highest peak is Koroshegy (*c.* 2320 ft.); ramifications of this group, lying to N.E., are called the Vertes group (1570 ft.) and Pilis group (2470 ft.). The Lower Hungarian Highlands extend between the Danube, Mur, and Lake Balaton, and attain an altitude of *c.* 2200 ft. in Mesek Hills. The province of Croatia-Slavonia belongs mostly to the Karst region, and is traversed by the Dinaric Alps. These mountain systems enclose two extensive plains, of which the smaller, called the 'Little Hungarian Alföld,' or Pressburg Basin, covers an area of *c.* 6000 sq. miles, and lies W. of Bakony or Mávra, which separates it from the Great Hungarian Alföld, the largest plain in Europe, extending over *c.* 37,000 sq. miles, and with an average height of 300 to 350 ft. The Pest extends over greater part of central and S. H., and is traversed by the Theiss (Tisza), and though frequently barren and sandy, is rich and productive. H. is well provided with rivers and springs, except in some mountainous districts—notably the districts between Danube and Drave and Danube and Theiss; in N. and E. rivers are common; all rivers belong to the Danube watershed, except Poprád in N. and a few small streams flowing into the Adriatic; the Danube, the greatest river, enters H. at *c.* 400 ft. above sea-level and leaves it at *c.* 130 ft.; it enters through a narrow defile called Porta Hungarica at Dévény (near Pressburg), and after flowing *c.* 585 miles leaves at the 'Iron Gates'—another narrow defile. It forms several islands, many of remarkable size, including the island of Schütt, St. Andrew's Island, Csepel and Margitta islands; the principal tributaries in H. are, on right, Rab, Drave, and Save; on left, Waag, Neutra, Gran, Eipel, Theiss,—which receives many tributaries,—Temes, and Cserna. The total length of the Hungarian system is *c.* 8800 miles, of which about a third is navigable.

There are two large lakes in H., viz. Balaton, or Platten-See (the largest in S. Europe), and Ferto, or Neusiedeler See; there are many small lakes, and large tracts of marches along banks of rivers, besides other marches. There are many interesting caverns; the Aggtelek or Baradla Cave, in county of Gömör, is one of the largest in the world, and contains various fossil mammalian remains. Fonacza Cave, in Bihar, has also fossil remains; other remarkable caverns are the Okno and Vodi Caverns, and the ice cave at Dobsina.

Geology.—The centre plain shows Eocene and Miocene Age deposits. The N. hills are connected with the Carpathians and are of Palæozoic and Mesozoic rocks.

Climate is, in general, continental; the minimum temperature is obtained in Jan., maximum in July; rainfall is small except in mountains, and in the Carpathians the winters are severe and last half the year.

Literature of H. was for a long time confined to Lat., under the influence of the Catholic clergy; at the close of the XVIII. cent., however, the natural language was revived, and Hungarian lit. is now in a healthy state; the Magyars have no lack of dramatic art and excel in belles-lettres; owing to their strong political character, legal and constitutional questions have long been a popular subject with writers, statesmen, and scholars; there are many writers on jurisprudence, one work, *The Theory of Law and Civil Society*, by Prof. Pulszky, being written in English.

The Magyars have been no less successful in lit. of an hist. naturo, especially in monographs; these histories, written in early times in Latin, have of late made very good progress, but the tendency is to lean towards monographs with a resulting dearth of more general histories; there is the same want in literary histories; the monographs, however, are of an excellent standard. A favourite subject of study is that of æsthetics, and XX.-cent. writers have also made excellent progress in the departments of science proper. A notable feature is the tremendous growth of Magyar periodicals.

Resources.—H. has great wealth and variety of

minerals; the more important are coal, nitre, sulphur, alum, soda, saltpetre, gypsum, porcelain earth, pipeclay, asphalt, petroleum, marble, and ores of gold, silver, mercury, copper, iron, lead, zinc, antimony, cobalt, and arsenic; gold and silver are chiefly found in Transylvania; salt mines are a State monopoly; and H. possesses a large number of cold and several hot mineral springs, the most important being at Budapest, Mehádia, and Eger.

The cultivation of the soil is the chief industry, furnishing employment (including forestry) to over 65 % of the population. Of the total area about 54 % is arable land, about 18 % woodland, and about 13 % meadowland; the chief agricultural products are wheat, rye, barley, oats, maize (the latter being the principal product of Croatia-Slavonia); the principal fruits—which are important both for inland consumption and exportation—are apricots (*Kecskemét*), cherries (*Körös*).

About a quarter of H. is occupied by forests—especially the slopes of the Carpathians; almost a half are State-owned, and are chiefly oak, fir, pine, and beech. Live stock has improved both in quality and numbers; the Magyar horse has been improved by Government efforts and is now largely exported; the Government is also interested in cattle-breeding, the principal breeds being native or Swiss; pigs are reared extensively throughout the country; other rural occupations are dairy-farming, sheep-breeding, poultry- and bee-keeping, market-gardening, and horticultural pursuits.

The principal manufacturing industries are flour-milling, the chief mills being at Budapest, and the flour forming chief export; brewing and distilling; the sugar industry has made rapid progress, and other industries are State tobacco manufactures; iron-foundries—chiefly at Budapest; leather manufactures; paper-mills (largest at Fiume); glass and earthenware works; manufactures of chemicals and wooden products; petroleum refineries; woollen yarns and cloth manufactures, as well as establishments for knitting and weaving. The chief imports are cottons, woollens, prepared leathers, coal, clothes, furniture, linen; and the chief exports are flour, wheat, etc., oxen, swine, eggs, wine, woods, and leathers. Trade is chiefly carried on with Austria and Germany; the imports from Britain are mostly woollen goods, steam vessels, and coal; and exports mostly flour, raw sugar, and barley.

The principal towns are Budapest, Szegod, Szabadka, Debres, Debreczen, Zágráb, Temesvár, Hecskemét, Nagyvárad, Arad, Hodmedzö-Vasarhely, Kolozsvar. Among the chief watering-places are Balaton-Fured, on Lake Balaton Schmecks in the High Tátra; and Hercules Furds (Baths of H.), near Mehádia. On the Adriatic lies the port of Fiume, the only direct outlet by sea.

The extent of railway lines is very considerable, although many parts are still reached solely by roads; there are few canals, the principal being Franz Josef (70 miles); total length of navigable rivers is *c.* 3100 miles; the only foreign river communication is furnished by the Danube.

There are three univ's maintained by the State, at Budapest, Kolozsvar, and Zágráb; there are also numerous coll's—industrial, technical, agricultural, theological, etc. Perfect equality is enjoyed among all legally recognised religions, viz. R.C. (over 60 %), Gk., Evangelical, and Jewish, as well as others.

H. is peopled by numerous distinct races, speaking different languages; the dominant race is the Magyar or Hungarian. Numbers are: (1910) Hungarians, 10,050,575; Rumanians, 2,949,032; Germans, 2,037,435; Slovaks, 1,967,970; Croatians, 1,833,162; Servians, 1,106,471; Ruthenians, 475,587. Total pop. (1910) 20,886,487.

For HISTORY, see AUSTRIA-HUNGARY.

Alden, *H. of To-day* (1909); Bovill, *H. and the Hungarians* (1908); Stokes, *Hungary* (1909); Riedl, *A History of Hungarian Lit.* (1906).

HUNGER AND THIRST, sensations which lead animals to eat and drink; whether they are experienced by plants still remains a mystery, nor are they always a faithful index of need for nourishment.

HUNGERFORD (51° 25′ N., 1° 30′ W.), town, Berkshire and Wiltshire, England. Pop. (1911) 9009.

HUNGERFORD, WALTER, BARON HUNGERFORD (d. 1449), Eng. soldier; fought at *Agincourt*. His descendant, SIR EDWARD, fought for Parliament in Civil War.

HÜNINGEN (47° 37′ N., 7° 32′ E.), town, Alsace, Germany. Pop. 3304.

HUNNERIC (d. 484), king of Vandals of Africa.

HUNS, Mongolian race who invaded Europe in IV. cent. A.D. They waged war with the Goths then inhabiting Central Europe, and drove them S. into Spain, Italy, and Balkan Peninsula, thus indirectly causing destruction of Rom. Empire. Under Attila (*q.v.*) they founded a large empire, which after his death was disintegrated. All trace of them in Europe has now been lost, although at one time they reached as far W. as Gaul. Probably akin to the White H's who invaded Persia in V. cent.

HUNSDON, BARONY OF, granted in 1559 to HENRY CAREY (*c.* 1524–96), nephew of Anne Boleyn, a brave soldier and favourite of Queen Elizabeth. His s. and heir, GEORGE (1547–1603), 2nd baron, received various royal grants; his nephew, HENRY, 4th baron, was cr. Earl of Dover in 1628. The barony became extinct in 1765.

HUNSTANTON (52° 57′ N., 0° 30′ E.), town, Norfolk, England. Pop. (1911) 2510.

HUNT, ALFRED WILLIAM (1830–96), Eng. landscape painter; praised by Ruskin.

HUNT, HENRY (1773–1835), Eng. radical politician; famous as 'Orator Hunt'; associated with the risings occasioned by distress resulting from Napoleonic wars.

HUNT, HENRY JACKSON (1819–89), U.S.A. army officer; distinguished himself as chief of artillery in the Civil War.

HUNT, JAMES HENRY LEIGH (1784–1859), Eng. poet and essayist; b. Southgate; ed. Christ's Hospital; became clerk in War Office; subsequently editor of *The Examiner* (1808), a Radical newspaper, founded by his bro.; was fined and imprisoned (1813) for two years for publishing an uncomplimentary truth about the Prince Regent; pub. his best-known poem, *The Story of Rimini* (1816). Amongst other journalistic ventures may be mentioned the starting of *The Indicator* (1818), *The Companion* (1828), *The Tatler* (1830), and *Leigh Hunt's London Journal* (1834). Amongst his original works may be named *Lord Byron and his Contemporaries* (1828), *Collected Poems* (1832), *A Legend of Florence* (drama), *Sir Ralph Esher* (novel), *Imagination and Fancy, Wit and Humour, The Town, Men, Women, and Books*, etc. His *Autobiography* was pub. 1850. H. was intimately associated with Keats, Byron, and other poets of the day. His own verse is now little read, and his fame rests chiefly upon his genial essays.

Monkhouse, *Life* (1893).

HUNT, WILLIAM HENRY (1790–1864), Eng. genre painter, whose water-colours show perfection of colour and technique.

HUNT, WILLIAM HOLMAN (1827–1910), Eng. artist; b. London; turned from commerce to art; formed friendship with Millais, and became one of founders of Pre-Raphaelite Brotherhood. His earlier pictures dealt chiefly with hist. subjects, but he later devoted himself to painting Biblical and allegorical pictures, and became recognised as the greatest of modern religious artists. His *The Light of the World* is at Keble Coll., Oxford, *The Hireling Shepherd* and *The Shadow of Death* at Manchester, *The Triumph of the Innocents* at Liverpool.

Mary Coleridge, *Holman Hunt* (Masterpieces in Colour Series).

HUNT, WILLIAM MORRIS (1824–79), Amer. painter who helped to found Amer. impressionist school.

HUNTER, JOHN (1728–93), Scot. surgeon, ana-

tomist, and physiologist; b. (Feb. 13) at Long Calderwood, East Kilbride, Lanarkshire, the youngest of ten children. H. had but little schooling; in 1748 he became assistant in his bro. William's dissecting-room in London; later took charge of his bro.'s practical class, and attended Cheselden's lectures at Chelsea Hospital; a surgeon's pupil at St. Bartholomew's (1751); surgeon's pupil (1754) and house-surgeon (1756) at St. George's Hospital; staff-surgeon in the army (1760), serving in the Belle Isle and Portugal expeditions; retired (1763) on half-pay, and commenced to practise as a surgeon in London, teaching, in addition, anat. and operative surgery. H. was elected F.R.S. (1767), obtained post of surgeon to St. George's Hospital (1768), and began to take pupils, one of the first being Edward Jenner (*q.v.*). His reputation as a surgeon was now greatly increasing; app. surgeon-extraordinary to the king (1776); built a museum and lecture-rooms for himself (1783–85); app. deputy-surgeon-general to the army (1786); surgeon-general and inspector-general of hospitals (1790); awarded the Royal Society's Copley medal (1787), and, on Pott's death (1788) became acknowledged head of surgical profession in England; d. suddenly on Oct. 16, 1793. In 1859 his remains were transferred to Westminster Abbey. His museum of over 10,500 specimens was purchased by the nation for £15,000, the custody being accepted by the Corporation (afterwards Royal College) of Surgeons. H.'s works include, in addition to scientific papers on many varied subjects, *Natural History of the Human Teeth, Venereal Disease, Observations on Certain Parts of the Animal Economy*, and, his most important work, *Treatise on the Blood, Inflammation and Gunshot Wounds*. His most famous operation was the ligature of the femoral artery in the thigh for the cure of popliteal aneurism. He is one of the founders of pathology, and it was during his lifetime that surgery was raised from the art of the barber-surgeon to the dignity of a science.

Stephen Paget, *Life* (1897).

HUNTER, ROBERT MERCER TALIAFERRO (1809–87), Amer. statesman; Sec. of State for the Confederacy in the Civil War.

HUNTER, SIR WILLIAM WILSON (1840–1900), Brit. writer; superintended statistical survey of India, epitomised in *Imperial Gazeteer of India*; wrote *The Indian Empire*, etc.

HUNTER, WILLIAM (1718–83), Scot. physician and anatomist; elder bro. of John Hunter (*q.v.*); ed. at Glasgow Univ., went to London, and commenced to lecture on operative surgery (1746), afterwards including a course on anat., in addition to practising as a surgeon. He gave up surgery for obstetrics, being app. surgeon-accoucheur at Middlesex Hospital (1748) and at Brit. Lying-in Hospital (1749). He built a house, with lecture-room, dissecting-rooms, and museum, in Great Windmill Street, where he carried on his teaching and lecturing work; eventually left fine collection of specimens and library to Glasgow Univ.

HUNTER, WILLIAM ALEXANDER (1844–98), prominent Scot. writer on law, especially Rom. law.

HUNTING is a sport of the highest antiquity; depictions of wild beasts with hunters in pursuit are found on Assyrian and Egyptian sculptures. Hounds were in common use, while even lions were trained to follow game. The Greeks hunted big game on horseback or by trapping, and were particularly fond of hare-hunting (see Xenophon's Cynegeticus).

In mediæval times the stag was extensively hunted by kings and nobles, and stringent forest-laws were passed by William I. and other rulers. It is still practised in Devonshire; powerful hounds are employed to track down quarry. Fox-hunting (*q.v.*) is found in most English-speaking lands. Otter-hunting is practised on foot with otter hounds; hunters are armed with spear. Beagles are employed in hare-hunting, which is quite different from coursing; owing to the timidity of the quarry, this is a sport which necessitates quietness.

Big-game hunting is a sport which, owing to its expense, can be followed by comparatively few.

HUNTINGDON.—(1) (52° 20′ N., 0° 11′ W.) county town, Huntingdonshire, England, on Ouse; has XIII.-cent. grammar school and interesting churches; birthplace of Oliver Cromwell. Pop. (1911) 4003. (2) (40° 32′ N., 78° 3′ W.) town, Pennsylvania, U.S.A. Pop. (1910) 6861.

HUNTINGDON, EARLDOM OF.—George, Baron Hastings (d. 1545), was a favourite of Henry VIII., by whom he was cr. Earl of H. (1529); helped to put down Pilgrimage of Grace. Henry, 3rd earl, was at one time charged with custody of Mary, Queen of Scots.

HUNTINGDON, SELINA HASTINGS, COUNTESS OF (1707–91), Eng. religious worker; supporter of Methodism; founded chapels where Eng. Church liturgy was used, but her movement severed itself from Church of England, 1799; her *Connexion* still exists. See *Countess of H. and her Circle*, by Tytler.

HUNTINGDONSHIRE (52° 29′ N., 0° 15′ W.), midland county, England, bounded N. and W. by Northampton, S.W. by Bedford, E. by Cambridge. Surface mostly level, with slight risings in S.E. In N.E. is fen-district called Bedford Level. Chief towns, Huntingdon (capital), St. Ives, and Godmanchester. Principal rivers are Nene and Ouse. Chiefly agricultural county; much pasture-land; wheat chief grain grown; market-gardening and fruit-growing, brewing, tanning, iron-founding, and manufactures of paper and parchment. Among places of interest are abbeys of Ramsey and Sawtry; priories at St. Ives and St. Neots; churches at Hartford, Old Fletton, Ramsey, and Alwalton; remains of palace at Buckden; ancient castles of Kimbolton and Huntingdon, and Hinchingbrook House, seat of Cromwell family. Pop. (1911) 55,600.

HUNTINGTON.—(1) (40° 52′ N., 85° 25′ W.) town, Indiana, U.S.A. Pop. (1910) 10,272. (2) (40° 53′ N., 73° 27′ W.) town, Long Island, New York, U.S.A.; shipbuilding. Pop. (1910) 12,004. (3) (38° 30′ N., 82° 26′ W.) town, W. Virginia, U.S.A.; manufactures machinery. Pop. (1910) 31,161.

HUNTINGTON, DANIEL (1816–1906), Amer. painter, who executed portraits of several prominent people, and was pres. of the National Academy.

HUNTINGTOWER AND RUTHENVENFIELD (56° 24′ N., 3° 27′ W.), village, Perthshire, Scotland; site of H. Castle, where Raid of Ruthven took place, 1582.

HUNTLY (57° 27′ N., 2° 47′ W.), town, Aberdeenshire, Scotland. Pop. (1911) 4229.

HUNTLY, EARLDOM AND MARQUISATE OF, titles held by Gordons since 1449 and 1599 respectively; George Gordon, 1st marquess (1562–1626), conspired against James I. His s., the 2nd marquess, fought for Charles I. in Civil War, and was executed, 1649. Fourth marquess raised to ducal rank as Duke of Gordon, 1684.

HUNTSVILLE (34° 45° N., 86° 40′ W.), town, Alabama, U.S.A.; cotton factories. Pop. (1910) 7611.

HUNYADI, JÁNOS (*c.* 1387–1456), Hungarian soldier and politician; instrumental in obtaining Wladislaus of Poland's election as king of Hungary; subsequently conducted war against Turks, whom he defeated at *Hermanstadt* and near Iron Gates of Danube, 1442; he was defeated at *Varna* in 1444, when the king was slain; during heir's minority H. acted as regent; in 1448 he was defeated by Turks at *Kossovo*, and in 1456, with support of Giovanni da Capistrano, he accomplished relief of Belgrade; d. in following month.

HUNYADI, LÁSZLÓ (1433–57), Hungarian statesman; executed through plots of his enemies; eldest s. of the great János.

HUNZA (36° 22′ N., 74° 50′ E.) and **NAGAR** (36° 6′ N., 74° 50′ E.), towns and small states, Kashmir, Brit. India.

HUON OF BORDEAUX, a hero of Charlemagne

cycle of Fr. romances, H., Duke of Guienne, being one of Charlemagne's paladins.

HU-PEH (*c.* 31° N., 113° E.), province, Central China; area, *c.* 71,410 sq. miles. Pop. (1910) 35,280,685.

HUPFELD, HERMANN (1796–1866), Ger. writer on Bible sources and Hebrew antiquities.

HURD, RICHARD (1720–1808), Eng. ecclesiastic and author; bp. successively of Lichfield and Worcester; declined primacy; pub. *Letters on Chivalry and Romance, Dissertations on Poetry, An Introduction to the Prophecies*, etc.

HURLSTONE, FREDERICK YEATES (1800–69), Eng. hist. and portrait painter.

HURON (45° N., 82° 30′ W.), one of great N. American lakes, between Michigan state and Ontario; connected with Lakes Superior, Michigan, and Erie by St. Mary River, Mackinac Strait, and St. Clair River respectively.

HURONS, members of tribe of N. Amer. Indians, who inhabited shores of Lake H., but were early exterminated.

HURRICANE, violent storm, with rain, thunder, and lightning, common in West Indies and other places during autumn months.

HURRY, SIR JOHN (d. 1650), Eng. military leader; served with distinction in Civil War, but frequently changed sides; beheaded at Edinburgh.

HURST, JOHN FLETCHER (1834–1903), Amer. Methodist Episcopal bp., and author of several books on ecclesiastical history.

HURSTMONCEAUX (50° 52′ N., 0° 20′ E.), village, Sussex, England; ruined XV.-cent. castle.

HUSBAND, originally the owner of the house (A.-S. *hus*), with feminine 'housewife' (A.-S. *húswif*); general idea of a caretaker developed from this meaning.

HUSBAND AND WIFE, LEGAL RELATIONS OF, see MARRIAGE, DIVORCE, EVIDENCE.

HUSHI, Rumanian HUSI (46° 45′ N., 28° 11′ E.), town, Moldavia, Rumania; bp.'s see; produces wine; Treaty of Pruth signed here, 1711. Pop. 15,000.

HUSKISSON, WILLIAM (1770–1830), Brit. financier and politician; Sec. of Treasury, 1804; pres., Board of Trade, 1823; Colonial Sec., 1827. Advocated free trade, and secured reduction of import duties.

HUSS, JOHN (*c.* 1373–1415), Bohemian religious leader, of peasant family; studied at Prague Univ., where he lectured, becoming rector of Bethlehem chapel, 1402. H. studied Wycliffe's writings, and gradually adopted unorthodox views; proceedings taken against him, 1408; forbidden to preach or perform priestly duties; elected rector of Univ., 1409, but this led to further proceedings against him; excommunicated, 1410, and writings burnt; after further troubles obliged to leave Prague in 1412, and wrote *De Ecclesia*. In 1414 he went to the general council at Constance to defend his views, being granted a safe conduct from King Sigismund; after lengthy trial condemned July 6, 1415, and, refusing to recant, burnt. Continuing the work of Wycliffe, H. helped to prepare the way for the Reformation.

Count Lützow, *Life and Times of John Huss* (1909).

HUSSAR, name originally given in 1458 to Hungarian light cavalry soldiers; name means 'twenty,' since one man in twenty was chosen for service.

HUSSITES, religious party in Bohemia, named from John Huss (*q.v.*), soon after whose death they arose. The special conditions of Bohemia aided them; the avarice and corruption of its priests was infamous, and the Slav peasantry disliked Ger. domination. The H's split into two groups—the *Utraquists* (or *Calixtines*), those whose main claim was communion in both kinds, and the *Taborites*, who were extreme. Continual fighting took place between these two, and also with Ger. troops. As it seemed impossible to crush them, a treaty was signed by the H's, Rom. delegates, and King Sigismund, the main clause of which allowed communion in both kinds. This concession continued till 1620. The H's were mostly absorbed in Protestantism at the Reformation.

Count Lützow, *Bohemia: an Historical Sketch.*

HUSTING, Early Eng. court, of which traces are found in the old Danelagh (*q.v.*); it survived as the county court of London city, and gave its name to election platforms.

HUSUM (54° 29′ N., 9° 3′ E.), seaport town, Schleswig-Holstein, Germany; large cattle markets; oyster fisheries. Pop. (1910) 9429.

HUTCHESON, FRANCIS (1694–1746), Brit. theologian and metaphysician; b. N. of Ireland; ed. Glasgow Univ., 1710–16; became minister of a dissenting congregation in Dublin, and established a school; though a dissenter, he was on good terms with the bp's of the Irish Church; in 1729 became prof. of Moral Philosophy at Glasgow; many Eng. and Irish dissenters came to study under him. His writings deal with metaphysics, logic, and ethics, of which the last are best known. H. held man has a number of senses—consciousness, sense of beauty, a public sense, a moral sense, sense of the ridiculous, etc., of which the 'moral sense' is fundamental. His philosophy follows Locke in many points (not in all), and is in opposition to Hobbes.

Scott, *Francis Hutcheson*; Martineau, *Types of Ethical Theory.*

HUTCHINSON (38° 1′ N., 98° W.), city, Kansas, U.S.A., on Arkansas; salt-works. Pop. (1910) 16,364.

HUTCHINSON, ANNE (1600–43), religious fanatic; b. in England; m. and emigrated to America, 1634; caused a schism in Boston congregation and was excommunicated.

HUTCHINSON, JOHN (1615–64), Eng. soldier; colonel in parliamentary army in Civil War and died in prison.

Life, by his wife, LUCY H.

HUTCHINSON, JOHN (1674–1737), Eng. theologian, who made stalwart stand against the march of science; characteristic treatise was *Glory or Gravity.*

HUTCHINSON, SIR JONATHAN (1828–1913), Eng. surgeon; prof. of Surgery and Pathology at Royal Coll. of Surgeons (1877–82); pres. Royal Coll. of Surgeons (1889); founder of the London Postgraduate School of Med.; made important researches in different branches of med., particularly regarding leprosy, and on which he became the greatest living authority; author of numerous works on medical subjects.

HUTCHINSON, THOMAS (1711–80), Brit. gov. of Massachusetts; constrained to order Brit. troops from Boston, 1770; Loyalist gov. of Massachusetts, 1771–74, though not in sympathy with government actions; superseded by Gage.

HUTTEN, PHILIPP VON (*c.* 1511–46), Ger. adventurer whose Venezuelan discoveries were turned to profit of Spain.

HUTTEN, ULRICH VON (1488–1523), Ger. humanist and reformer; first trained as monk, but left in disgust; from 1504–15 wandered about Germany and Italy; author (in part) of famous *Epistolæ Obscurorum Virorum*; attacked Papacy and quarrelled with Erasmus, but was received by Zwingli; a passionately sincere reformer, but a man of dissolute life, headstrong, and lacking in self-control; wrote much in Latin and German.

HUTTER, LEONHARD (1563–1616), Ger. religious controversialist, called the second Luther.

HUTTON, CHARLES (1737–1823), Eng. mathematician, taught at Newcastle till 1773; then prof. of Mathematics at Woolwich. Pub. *Mathematical Tables* (1785), *Mathematical and Philosophical Dictionary* (1795–96), *Course of Mathematics* (1798 and 1811).

HUTTON, JAMES (1726–97), Scot. geologist; ed. Edinburgh High School and Univ.; abandoned study of law for that of medicine; took M.D. (London) 1749, and after some little time abandoned the profession and took up agriculture; began study of geology as hobby and put forward theory that geology is not cosmogony; studied also atmospheric changes and several branches of physics.

HUTTON, RICHARD HOLT (1826–97), Eng. miscellaneous prose writer and edit.; joint-edit. of the *National Review*, 1855–65, and of the *Spectator*, 1861 onwards.

HUXLEY, THOMAS HENRY (1825–95), one of the greatest of Eng. zoologists and biologists; b. at Ealing in 1825; app. assistant-surgeon on H.M.S. *Rattlesnake*. During the four years' cruise in Australian seas, he studied the delicate surface fauna of the ocean. The result was the forsaking of medical for biological science. From 1854 till he retired in 1885, H. was palæontologist and lecturer on Natural History at the Royal School of Mines.

Keen as he was on scientific research, H.'s mind was essentially practical, and he laboured strenuously in popular lectures and 'Lay Sermons' to make abstruse science—the Evolution Theory of Darwin in particular—clear to the people. He was a member of the Fisheries Commission and of the London School Board; he was a constant critic of political and social progress, and a bitter opponent of all narrowness of thought. More than any of his predecessors, he made the study of zoo. in the univ's a practical training instead of an accumulation of hearsay information.

From examining the anatomy and relationships of Medusæ, he wandered to Vertebrate Anat., where he discussed the structure and origin of the skull, the characters of fossil Ganoid Fishes, and the systematic arrangement of Birds. Besides his printed lectures and essays, he wrote many masterly general works, e.g. *Man's Place in Nature* (1863), *Lessons in Elementary Physiology* (1866), *Anat. of the Invertebrates* (1870), and *The Crayfish* (1881).

Life and Letters, by his s. Leonard (1900), Mitchell (1900), Davis (1907), Clodd (1902).

HUY, Flemish HOEY (50° 32′ N., 5° 15′ E.), town, on Meuse, Belgium; distilleries; paper-mills. Pop. 14,500.

HUYGENS, CHRISTIAN (1629–95), Dutch mathematician; studied civil law at Leyden, Breda, and Paris; investigated oscillations of pendulum and was first to show Saturn's ring surrounds planet; measured its inclination to ecliptic; was founder of undulatory theory of light; in *Traité de la lumière* (1690) gave explanation of reflection and refraction, also accounted for double refraction in uniaxal crystals. Discovered polarisation of light. Work unrecognised for many years.

HUYGENS, SIR CONSTANTIJN (1596–1687), Dutch poet and statesman; best works are *Batara Tempe*, *Dagwerck* (a didactic poem), and *Oogentroosi* (a consolatory poem). H. accomplished many important diplomatic missions.

HUYSMANS, CORNELIS, THE YOUNGER (1648–1727), Dutch landscape painter of luxuriant Ital. style.

HUYSMANS, JORIS KARL (1848–1907), Fr. novelist, whose realism is mixture of Zola with Maupassant, without the latter's polish; later works are psychological studies of religious experiences.

HUYSUM, JAN VAN (1682–1749), Dutch painter of wonderful vases of fruit, flowers, butterflies, etc.; considered master of this kind of painting.

HWANG-HO, see HOANG-HO.

HWEN-TSANG, HSUAN-TSANG (*q.v.*).

HYACINTH, a genus of monocotyledonous plants; natural order, *Liliaceæ*. The hyacinth, *Hyacinthus orientalis*, is a perennial herb with a bulb. Foliage-leaves are long, narrow, parallel-veined, with sheathing bases. A bare stem terminates in a raceme of pendulous brightly coloured flowers in the axils of bracts; three petaloid sepals and three petals form a single tube with six free segments.

HYACINTH, JACINTH, red stone used by ancients as ornament; variety of ZIRCON (*q.v.*).

HYACINTHUS (classical myth.), beautiful youth slain accidentally by Apollo; from his blood grew Gk. hyacinth (clearly not our flower of that name), inscribed with exclamation of woe, 'Ai!' Great Spartan midsummer festival, the *Hyacinthia*.

HYADES, in Gk. myth., seven maidens who watched over Dionysus; changed by Zeus into stars and placed in constellation Taurus.

HYÆNAS (HYÆNIDÆ), a family of carnivores comprising seventeen species and races, confined to the tropical and sub-tropical areas of the Old World. Remains of the Cave-Hyæna have been found in Britain.

HYALONEMA, see under SPONGES.

HYBLA MAJOR (*Megara Hyblæa*), ancient city, Sicily, site uncertain.

HYBLA MINOR (mod. Paterno) (37° 32′ N., 14° 53′ E.), ancient city, Sicily, on S. slope of Mt. Etna.

HYBRIDS.—One of the chief causes of the separation of species of animals and plants has been the fact that members of a species are fertile amongst themselves, but are not fertile with members of another species. This rule is not universal, however, for occasionally species are found which interbreed with other species, the progeny of such a union being known as hybrids, and the phenomenon as hybridism. But it must be remembered that where hybridism occurs the species concerned are *closely* related, for while a Hare and a Rabbit may interbreed occasionally, it is absurd to think of either breeding with a Porcupine, although distantly related in the same natural order of Mammals. Another general fact is that hybrids are seldom fertile amongst themselves, although there is no apparent reason why this should be so. Mules—the offspring of horses and asses—are infertile with each other, but sometimes produce young when mated again with the pure parental forms. In the animal world hybrids seem to occur in nature not infrequently amongst deer, game-birds, ducks, and fishes, *e.g.* Roach mating with Bream or Rudd, and Carp with Tench or Bream. And artificial hybrids among these and many others, such as the species of such lowly creatures as Sea Urchins, are not uncommon. In the vegetable world the artificial crossing or hybridising of species of plants has led to many new forms. It is unfortunate, for clearness' sake, that the word 'hybrid' is used for the progeny not only of two species, but also of two varieties of one species, when the word 'mongrel' would have indicated the latter class more distinctly. Varietal mongrels or hybrids are so much under man's control and have given rise to so many useful breeds, that they are of the utmost importance. A few are mentioned in the article on MENDELISM.

HYDASPES, river JHELUM (*q.v.*).

HYDE (53° 27′ N., 2° 5′ W.), town, Cheshire, England; cotton manufactures; coal mines. Pop. (1911) 33,444.

HYDE, Eng. family; held Clarendon and Rochester earldoms, XVII.–XVIII. cent's. SIR NICHOLAS (d. 1631), chief justice; SIR LAURENCE, attorney-gen. to Anne, James I.'s wife.

HYDE DE NEUVILLE, JEAN GUILLAUME, BARON (1776–1857), Fr. diplomat; ambassador to U.S., 1816; Portugal, 1823; Marine Minister, 1828.

HYDE, EDWARD, see CLARENDON, EARL OF.

HYDE, THOMAS (1636–1703), Eng. Oriental scholar and pioneer in study of Persian antiquities.

HYDE PARK (42° 15′ N., 71° 8′ W.), town, Massachussetts, U.S.A.; machinery, cotton. Pop. (1910) 15,507.

HYDER ALI, HAIDAR ALI (*c.* 1722–82), famous soldier; native of India, who became Maharajah of Mysore; conquered Calicut and other native states; formed alliance with French, and took Arcot in 1769; defeated in several engagements by Sir Eyre Coote, 1781.

HYDERABAD, HAIDARABAD (17° 50′ N., 78° 40′ E.), principal native state in India, lying between provinces of Madras and Bombay in the Deccan; area, *c.* 82,700 sq. miles; capital, Hyderabad. Country fertile, but badly cultivated. Tableland traversed by the Godavari in N., and Kistna in S.; climate healthy; chief products are rice, wheat, maize, cotton, etc. Nizam and State are Muhammadan; otherwise mostly Hindu. Pop. *c.* 11,500,000.

HYDERABAD, HAIDARABAD (17° 21′ N., 78° 30′ E.),

city; capital of above state; surrounded by walls; principal buildings are the Mecca mosque and Brit. Residency; fourth largest city and one of chief seats of Muhammadanism in India; important commerical centre; extensive water-works. Pop. 452,000.

HYDERABAD, HAIDARABAD (25° 23′ N., 68° 24′ E.), city; capital, Hyderabad, Scind, Bombay, Brit. India; near E. bank of Indus; strongly fortified; manufactures silks, gold-work. Pop. 71,000.

HYDRA, in Gk. legend, nine-headed monster inhabiting Lerna in Argolis; slain by Heracles.

HYDRA, ancient *Hydrea* (37° 20′ N., 23° 30′ E.), small island on S.E. coast of Argolis, Greece; took prominent part in the Gk. war of independence; contains seaport of H.; active trade. Pop. 20,000.

HYDRA, see under HYDROMEDUSÆ.

HYDRACTINIA, see under HYDROMEDUSÆ.

HYDRANGEA, a deciduous shrub, *Hydrangea hortensia*, with oval, strongly veined opposite leaves. The *inflorescence* is a *corymb* of pink or blue flowers; the petals are absent and sepals are petaloid.

HYDRATES, compounds containing water of crystallisation and other salts where water molecules do not change.

HYDRAZINE, DIAMIDOGEN ($H_2N . NH_2$), is a colourless liquid, B.P. 113°·5 C., formed by complex organic decomposition. It is heavier than and soluble in water, and at 0° C. forms colourless crystals. It reacts vigorously with the *halogens* and is a strong reducing agent.

HYDRIDA, see under HYDROMEDUSÆ.

HYDROCARBONS, organic compounds of hydrogen and oxygen. See CHEMISTRY.

HYDROCELE, collection of fluid, usually serous, in vicinity of the testis or spermatic cord, commonly due to chronic inflammation, perhaps syphilitic, of testis, manifested as a fluctuating swelling of the scrotum with a dragging feeling; treated by slight operation of tapping, injecting various substances, or excising part of tunica vaginalis and draining.

HYDROCEPHALUS, condition of brain in which the ventricles or cavities are distended with fluid, due either to malformation or to chronic inflammation; it is either congenital or develops in the first few months of life, and the upper part of the head is increased in size out of proportion to the rest of the body; the brain may be pressed on by the fluid, so that the intelligence is impaired, and hydrocephalics do not usually live long. Treatment is unsatisfactory, and best is merely maintenance of the health of the individual with nourishing foods and tonics.

HYDROCHARITACEÆ, monocotyledonous, natural order of aquatic character, the majority of forms possessing narrow, submerged leaves; flowers are regular, trimorphic, and unisexual; represented in Britain by *Hydrocharis morsus ranæ*, with floating leaves.

HYDROCHLORIC ACID (HCl), colourless gas, liquefying under cold and pressure, liquid boiling at −83·6 C.; when dry, inactive with metals; readily soluble in water, saturated solution at 15° C. having S.G. 1·21; solution called MURIATIC ACID, SPIRITS OF SALT; manufactured by strong sulphuric acid on common salt (see also ALKALI); commercial a. is yellow and used for making bleaching powder and in soldering; forms chlorides.

HYDROCHŒRUS, see CAVY FAMILY.

HYDROCYANIC ACID, PRUSSIC ACID (*q.v.*).

HYDROFLUORIC ACID, see FLUORINE.

HYDROGEN (H=1) is a tasteless, odourless, and colourless gas. It is the lightest known substance and therefore constitutes the standard of *Atomic Weight* and *Valence*. At −253° C. it is a colourless liquid. *Hydrogen* burns in air and oxygen with a non-luminous blue flame. It is prepared—(1) by the action of metals on water, different metals abstracting the oxygen at cold, moderate, and high temperatures; (2) by the action of a suitable acid on a suitable metal. All acids contain *hydrogen*. *Hydrogen*, either as a gas at a high temperature, or in the nascent condition at ordinary temperature, is a reducing agent, for it abstracts *oxygen* from compounds. A mixture of *hydrogen* and *oxygen* when ignited unite with explosive violence to form water. The position of *hydrogen* in the *periodic* system is not definite. As a univalent element it must be placed at the head of either the alkali metals or the halogens, but it resembles neither closely.

Hydrogen peroxide (H_2O_2), unstable viscid liquid obtained by combination of hydrated peroxide of barium and sulphuric acid (dilute); strong oxidising agent employed largely in bleaching and dyeing.

HYDROGRAPHY, see MAP.

HYDROLYSIS, see ELECTRICITY (*Hydrolysis*).

HYDROMECHANICS is the study of the dynamical properties of fluids, and naturally consists of two divisions. The first, *Hydrostatics*, is the study of fluids in equilibrium or at rest. The second, *Hydrodynamics*, is concerned with fluids in motion. For these purposes, a fluid is defined as any substance which can yield continuously to any force which tends to divide it along any plane. If through any body we draw an imaginary plane surface, the stress (tension, pressure, or shearing force) acting across this plane can be resolved into two components: one perpendicular to, the other along, the plane. In a solid, both components may be present. In a fluid at rest, the perpendicular component alone can be present. Fluids, therefore, include both liquids and gases.

The basis for the first division of the subject—**Hydrostatics**—is given by the principle just enunciated, that in a fluid at rest the stress in any plane drawn through the fluid must always be normal to that plane. This stress generally takes the form of a pressure, which is measured *at* any point by the thrust or pressure exerted over unit area including the point. It may be expressed in atmospheres, pounds weight, or tons weight per square inch or square foot, or (if the C.G.S. system be adopted) in dynes per square centimetre. The principal theorems of hydrostatics may be summarised as follows, it being understood, of course, that they apply to fluids *at rest* or *in equilibrium*: (1) the pressure at any point of a fluid is the same in all directions; (2) pressure is transmissible from one point to another in the same mass of fluid—*i.e.* any additional pressure applied to an incompressible fluid will be transmitted equally to every point of the fluid; (3) in liquids acted on by gravity, the pressure is uniform over all points in the same horizontal plane, and therefore the free surface of a liquid at rest under gravity is a horizontal plane; (4) the pressure at any point in a homogeneous liquid acted on by gravity is proportional to the depth of the point below the free surface—hence, liquids 'find their level,' as the saying is, and where two liquids do not mix, their surface of separation is a horizontal plane; (5) the pressure on any plane area immersed in a fluid is equal to the weight of a column of the liquid whose cross-sectional area is equal to the immersed area and whose height is equal to the depth below the free surface of the centre of gravity of the immersed area; (6) any body which is wholly or partially immersed in a fluid acted on by gravity experiences an upward thrust equal in amount to the weight of fluid displaced by the body, and this thrust acts vertically upwards through the centre of gravity of the displaced fluid (*Archimedes' principle*); (7) in order that a body floating freely in a fluid may be in equilibrium, the condition involved in (6) above must be satisfied, and, further, the centres of gravity of the displaced fluid and of the floating body must lie in the same vertical line.

These theorems (for the proofs of which the reader is referred to any treatise on the subject) have a very extensive application in the sciences, arts, and industries, and we have only space to mention a few in illustration. The transmissibility of fluid pressure is applied to the conveyance of power from one point to another. At a central station, hydraulic presses or accumulators apply pressure to a body of water; pipes in communication with the press convey the pressure to cranes, motors, lifts, and other hydraulic

machines. The principle that water finds its own level is familiar to all. The variation of pressure with depth is the principle of Hare's hydrometer and of similar methods of determining the density of liquids. It is also illustrated by the diminishing pressure of the atmosphere as we ascend from sea-level, but in this case the rate of diminution is complicated by the fact that air is compressible. In the case of the water in an ocean, the proportionate increase of pressure with depth is more nearly correct, owing to the low compressibility of water. The expression given in (5) above for the total thrust on an immersed surface is constantly in use for calculating the stresses on dock gates, reservoir walls, dams, and other immersed surfaces.

Archimedes' principle, taken together with the conditions of equilibrium given in (7), introduces the whole question as to the equilibrium of ships, submarines, diving-bells, caissons, balloons, and all other bodies which are supported vertically by the upward thrust of the fluid in which they are wholly or partially immersed. In this connection, the question of *stability* of equilibrium of a floating body arises, and thus introduces matters of the utmost importance in naval architecture. The principle of Archimedes also forms the basis of a method for ascertaining the *specific gravity* of a body. For if the upward thrust of a body when totally immersed in water is equal to the weight of an equal volume of water, the weight of the body when weighed in water will be diminished by this amount. Hence the ratio of the weight of the body to the difference between the weights in water and air gives the specific gravity. Obviously, also, the ratio of the diminutions in weight of the same body when weighed in a given liquid and in water, is equal to the specific gravity of the liquid. In the case of a body specifically lighter than water, it floats in water with that proportion of its whole volume immersed which equals the specific gravity of the body. This is the basis for the construction of *hydrometers*, which are used to give direct readings of the specific gravity of liquids.

In **Hydrodynamics**, we start with the assumption that liquids are perfect—*i.e.* that the relative motions of their parts are not impeded by viscous friction. There is no liquid in nature which satisfies this condition, but in many liquids the effects of viscosity are so slight that they may be neglected. Later on in the treatment of the subject, the equations of motion are modified so as to allow for viscosity, but their complicated character has rendered their solution difficult except in a few simpler cases. It is not possible to give here any explanation of the hydrodynamical equations, but one or two of the leading ideas connected with them may be mentioned. The motions of a fluid may be treated in two ways. We may fix attention on a given volume of space and take into account the amounts of fluid which enter or leave that space. Or we may choose a certain small volume of the liquid and study the changes which, during its motion, it may undergo in shape, position, speed, pressure, etc. In either case we are led to the equations which describe the motion of the fluid. The whole mass may then be mapped out by lines which at each point have the same direction as the velocity of the fluid at that point. These are termed *lines of flow*, or *stream-lines*. Following the gravitational analogy, according to which water, in flowing down a hillside, always takes the steepest possible course, we can draw a series of surfaces in the fluid such that they are always at right angles to the stream-lines.

Such surfaces are termed *surfaces of equi-velocity potential*, and the fluid will always move from places of higher to places of lower velocity potential. The term *irrotational* is applied to those species of fluid motion in which a velocity potential exists, in order to distinguish them from cases of rotational or vortex motion where such potential does not exist. Another way of looking at irrotational motion is to imagine that each stream-line begins at some point where fluid is continuously produced and ends at some point where it is continuously annihilated—that is, to start from a *source* and end at a *sink*. In rotational or vortex motion, a cylindrical portion of the fluid of very small diameter is in rotation about its axis. Such motion is accompanied by a tension between the ends of the vortex and a pressure on its cylindrical surface or boundary. It can be proved that, in a perfect fluid, vortex motion cannot be created, and if in existence it cannot be destroyed. In a viscous fluid, however, vortices can be produced, but if left to itself without a supply of energy from without, the vortex is destroyed in time by the viscous forces in the fluid.

Greenhill's *Hydrostatics*; Minchin's *Hydrostatics and Hydrokinetics*; Edser's *General Physics*.

HYDROMEDUSÆ, Hydrozoa (Gk. *hudor*, water; *medusa*, a Gorgon), one of the largest classes of the Cœlenterates, containing individuals which at first sight seem to have little in common, such as the plant-like Zoophytes, the gelatinous Swimming-Bells, and Portug. Man-of-War. The diversity is due, first, to the occurrence of alternation of generations (*q.v.*) and the consequent difference between a vegetative asexual and a free-swimming individual; and second, to the grouping of individuals in colonies in which a considerable amount of specialisation may take place.

The vegetative asexual stock is known as the polyp or hydranth. It consists of a two-layered, fixed, elongated sac, opening to the exterior by a projecting mouth, surrounded by tentacles, which leads directly, without a pharynx, into a simple gastric cavity. Where differentiation of polyps occurs (as in *Hydractinea* or the *Siphonophora*) the structure may be considerably modified.

The structure of the sexual swimming-bell or medusoid is more complicated, though essentially like that of an inverted polyp. It is bell-shaped, a margin furnished with tentacles and bearing within a narrow horizontal ledge,—the velum or craspedon (Gk. *kraspedu*, a fringe),—which gives the name craspedote to this type of medusoid. Within the bell hangs a clapper—the manubrium—at the lower end of which is situated the mouth. In the ectoderm of both medusoid and polyp are many stinging cells (nematocysts), but these are specially abundant in the tentacles.

The movement of the polyp is almost confined to the lengthening and contracting of body and tentacles, but the medusoid swims freely by means of regular pulsations of the bell.

In the polyp special nerve cells exist, although there seems to be no nervous system except in a few cases, such as *Tubularia*; but in the medusoid the edge of the bell is furnished with a double ring of nerve fibres which control the swimming movements. The medusoid also possesses marginal sense organs—statocysts—utilised in equilibration, but these have no representatives in the polyp.

Both free and fixed individuals live on minute animals, chiefly crustaceans, which are killed by the poisoned threads of the stinging cells. From the mouth the food passes directly into the simple gastric cavity, where it is digested. There is no excretory system, and undigested particles are simply ejected by the mouth.

Asexual reproduction is common. Simple buds may arise on the body of a polyp, as in *Hydra*, which develop into new individuals and in some cases are set free, or in other cases remain attached to the parent, thus forming a colony; or again, especially in running water, shoots may break away and form the basis of a new colony. Sexual reproduction in general involves an 'alternation of generations.' From the polyp or vegetative colony, buds arise, some of which develop into medusoids in which sexual products are formed; but many modifications occur. The medusoid buds may become free swimming-bells, may remain as medusoids attached to the polyp, or may degenerate into simple reproductive sacs. In some cases, the polyp directly bears the sexual organs without any trace of alternation. Amongst some of the H., hermaphroditism

is the rule, while in others, male and female products are borne by separate individuals or even separate colonies. The egg, discharged directly to the exterior, is fertilised outside the parent and becomes a free-swimming larva, from which a sedentary polyp develops. The majority of the H. are marine.

A few polyp forms, such as *Hydra* and *Cordylophora*, occur in fresh or brackish water, and medusoid forms, *Limnocodium* and *Limnocnida*, in African and Southern Asiatic lakes. The marine plant-like forms occur attached to rocks and stones at the bottom of the sea, or to floating foreign bodies such as seaweeds, the hulls of ships, etc. To these they remain attached throughout life. The free-swimming forms are generally found floating near the surface of the ocean. Owing to the free stage which occurs in most H., their distribution is cosmopolitan. They occur at all depths, but are most common in the shallow water of the coralline zone. In arctic and subarctic seas, individuals are especially numerous and vigorous.

As represented by the Graptolites, H. appear early in geological time, these forms being found in Upper Cambrian, Ordovician, and Silurian systems, while the uncertain or doubtful Hydrocorallines—the Stromatoporoids—also occur in primary formations. Recent types, however, for example, *Hydractinia*, appear only in the Tertiary period.

Owing to their beauty and the readiness with which they can be obtained, many polyps are objects of interest to naturalists. Colonial individuals form part of the food supply of shore fishes, and the minute medusoid forms, such as *Lizzia*, which sometimes occur in drifting patches estimated to contain as many as 1,600,000,000,000,000 individuals, are the main food of whales and many fishes. On account of their stinging properties some h. are troublesome to naked divers in tropical seas, but the class as a whole has little direct significance for mankind.

The H., which compose the simplest class of Cœlenterate animals, are divided into these orders:—

Order I. **Hydrida or Eleutheroblastea.**—Fixed solitary polyps, without alternation of generations, e.g. *Hydra*, found in fresh water and probably cosmopolitan.

Order II. **Milleporina.**—Colonial forms with massive thick-set calcareous skeleton ('coral'), and polyps of different kinds, e.g. *Millepora*—a shallow-water reef-coral found in all warm seas.

Order III. **Symnoblastea or Anthomedusæ.**—Polypoid form, solitary or colonial, without highly developed chitinous vessels protecting the polyp (hydrothecæ) or the sexual products (gonangia). Medusoid form when set free, with sexual cells on manubrium, e.g. *Tubularia, Syncoryne, Hydractinia*, common on Brit. coasts; or the fresh-water *Cordylophora*.

Order IV. **Calyptoblastea or Leptomedusæ.**—Polypoid forms, almost all colonial, with well-developed chitinous external skeleton produced into hydrothecæ and gonangia. The medusæ bear the sexual cells under the radial canals. Examples, *Halecium, Sertularia, Plumularia*, common off the coasts of Britain.

Orders III. and IV. are commonly grouped under the name Zoophytes (Gr. *zoon*, an animal; *phutos*, a plant), a name descriptive of the plant-like appearance of the polyp colonies.

Order V. **Stylasterina.**—Colonial forms with tree-like 'coral' skeleton and polyps of different kinds. Widely distributed corals, usually found in deep water and warm seas, e.g. *Stylaster, Sporadopora*.

Order VI. **Trachymedusæ.**—Minute free-swimming jelly-fishes, found in all seas, most common in the warmer parts of the great oceans, sometimes at a depth of 100 fathoms, but more often at or within a few fathoms of the surface. Characterised by an entire margin bearing tentacles and protected sense-organs (statocysts); radial canals, 4 to 8 in number, bearing reproductive products. Examples are *Liriope, Geryone*, and the fresh-water *Limnocodium*.

Order VII. **Narcomedusæ.**—Minute jelly-fishes, which, like the last order, occur in the sea, and more commonly in warm waters. They live at or near the surface, but one form has been found in the Atlantic at a depth of 1675 fathoms. From the Trachymedusæ they are distinguished by possessing a lobed margin, tentacles on the upper surface, sense-organs unprotected, radial canals 8 to 32 in number, sexual products on the stomach wall. Examples are *Cunina* and *Æginа*.

Order VIII. **Siphonophora.**—Jelly-fishes of complicated structure composed of greatly specialised individuals aggregated into a colony. Sexual products are produced in gonophores, which are rarely set free. Found in all seas, but especially in tropical and sub-tropical regions, generally drifting near the surface, *e.g.* Portuguese Man-of-War (*Physalia*), *Physophora, Velella*.

Extinct Groups.—(1) **Graptolites.**—Small colonies found in Palæozoic rocks (Upper Cambrian, Ordovician, and Silurian). Their structure resembles that of some zoophytes, and on this account they are generally placed near the Calyptoblastæ.

(2) **Stromatoporoids.**—Massive forms arranged in layers, found in the Primary formations, and generally placed with the Hydrocorallinæ (although some authorities regard these as Protozoa).

HYDROMETER is an instrument for determining the *density* of liquids and solids. It is an application of the principle that when a body floats in fluid under the action of gravity the weight of the body is equal to that of the fluid displaced. Boyle was the first to employ h's. A h. consists of a glass bulb with a long stem sealed and graduated. The bulb is weighted with mercury or small shot, a sufficient quantity being used to immerse the whole of the bulb in the heaviest liquid in which it is to be used. The height and diameter of the stem must be such that the h. will float in the lightest liquid in which it is to be used. The point to which the h. sinks in the lightest liquid, and that to which it rises in the heaviest liquid, are then marked on the stem with the densities of these liquids, and the distance between graduated. The *density* of any liquid not greater or less than those marked on the stem can be obtained by placing the h. in a tall cylindrical vessel full of the liquid and reading the mark to which it sinks. Care must be taken that no air-bubbles adhere to its surface and that it does not touch the sides of the vessel.—Nicholson's Hydrometer, made of metal, has a pan above and below the bulb and only one mark on the stem. From these pans the weights in air and water of a solid are obtained, and the formula weight in air divided by weight in water is the required density.

HYDROPATHY, the treatment of disease by pure water, is a method which has been employed since ancient times, Hippocrates, Galen, and other classical medical writers praising it highly. In the XVIII. cent. water began to be used externally and internally for fevers, and Priessnitz (1799–1851), a farmer at Gräfenberg, Silesia, treated sprains, wounds, and many other conditions, with great success, by applying water to every part of the body; and during the first half of the XIX cent. treatment by water became very popular, hydropathic establishments springing up in numbers in England (*e.g.* Malvern and Matlock), Scotland, France, Germany, and America. Water is best drunk about an hour before meals; only very little, and that hot, during meals; while, early in the morning and late at night, water is of benefit in flushing out the stomach and bowels. In the form of steam, water has a valuable effect in irritation or inflammation of the respiratory passages and lungs. The methods of applying water externally to the body include hot or cold packing, for cooling or inducing sweating; hot-air baths (Turkish) to stimulate the nervous and vascular systems and for the treatment of gout and rheumatism; spray, shower, plunge, douche, needle baths, having a stimulating and tonic effect on the system; sitz, head, and

foot baths, for local congestions and inflammations; and hot and cold fomentations or poultices for numerous local conditions, wounds, sprains, etc.

See BATHS; also Metcalfe, *Rise and Progress of Hydropathy*.

HYDROPHILY, see POLLINATION.

HYDROPHOBIA, an infectious disease occurring among certain animals, particularly dogs and other animals of the canine species, and communicable by them to man, infection being most usually carried by the bite of a rabid animal. The first symptom of the disease in a dog is a change in its habits; it is gloomy and restless; the restlessness increases, the animal snaps at everything and tears up and swallows all kinds of unusual things; the eyes are dull, the mouth continually open, and it has a characteristic high-toned bark; it becomes much excited in the presence of another dog and tries to attack it; gradually convulsions, paralysis, and coma come on and death ensues.

In man the incubation period is from about a fortnight to seven or eight months, but six weeks is the average period. The first symptoms are mental depression and restlessness, sleeplessness and nervous excitability; the symptoms become worse and the person suffers much from thirst, but on making the effort to drink is seized with a spasm of the muscles of swallowing and breathing; these and other paroxysms increase in severity, then weakness and paralysis develop, convulsions and coma ensue, and result in death.

The former treatment was to excise the part infected or to apply to it a caustic or the actual cautery, but the researches of Pasteur have revolutionised the treatment. It depends on the fact that a virus can be extracted from the tissues of a rabid animal and then either attenuated or intensified. The spinal cords of rabbits which have been inoculated are dried for different periods, the diminution of virulence being proportional of the length of time they are kept, and emulsions made from them are injected into the individual affected, the strength of the virulence of the emulsion being gradually increased up to the standard strength. An individual so treated does not exhibit any symptom of hydrophobia.

HYDROPLANES, see under FLIGHT.

HYDROSTATICS, see HYDROMECHANICS.

HYDROTHECÆ, see GRAPTOLITES.

HYDROXIDES, compounds containing hydrogen and oxygen not in form of water, thus differing from hydrates (*q.v.*); mostly basic in action; common h. is Sodium H. ($NaOH$).

HYDROXYLAMINE, HYDROXY-AMMONIA ($NH_2.OH$), is a liquid which with acids forms salts; prepared by acting on nitric acid with nascent hydrogen.

HYDROZOA, HYDROMEDUSÆ (*q.v.*).

HYENA, see HYÆNAS.

HYÈRES (43° 7′ N., 6° 5′ E.), town, dep. Var, France, near Mediterranean, on Riviera; noted winter health-resort; trade in fruits and salt; birthplace of Massillon. Pop. 18,500.

HYGIEIA, Gk. goddess of health, dau. of Æsculapius, god of med.; bore snake in her hand.

HYGIENE, the science of the preservation of health, including all principles concerning the well-being of man physically and mentally, and in regard to his environment. See DIGESTION, FOOD, BACTERIOLOGY, VENTILATION, PUBLIC HEALTH.

HYGINUS, THE SURVEYOR (98–117 A.D.), author of Lat. treatise on surveying.

HYGINUS, GAIUS JULIUS, Rom. writer, whose *Fabularum Liber* and *De Astronomia* have survived.

HYGINUS, ST., pope (*c.* 136–140); feast on Jan. 10 or 11.

HYGROMETER (Gk. *hugros*, damp), apparatus for gauging humidity of atmosphere; commonest form is 'wet and dry bulb h.,' consisting of two thermometers, one with moistened bulb. The difference between the two marks the humidity, and may amount to several degrees on a dry day, or nothing if air is saturated. Daniel's h. (1820) was bent tube containing ether, each end terminating in a bulb, one of which was covered with cloth. Evaporation took place when ether was poured upon cloth, and this resulted in cooling of cloth-covered bulb and condensation of ether inside the tube, producing moisture upon surface of other bulb. The temperature at which this condensation takes place is called the 'dew-point.'

The first h. was invented in 1676 by Coniers.

HYKSOS, SHEPHERD KINGS, an Asiatic race who conquered Egypt in XV. cent. B.C., and kept possession of country for several cent's, after which a rebellion occurred, and they were expelled; they have been identified with the Jews by some writers, including Josephus.

HYLAS (classical myth.), s. of Theiodamas, and beloved by Heraklos; removed from earth by water-nymphs.

HYLOBATIDÆ, a family of PRIMATES (*q.v.*).

HYLOZOISM, term applied to any doctrine which affirms life and spiritual processes to be a property of matter.

HYMEN, Gk. god of marriage, s. of Apollo and Urania; represented with veil and torch.

HYMENOPTERA (Gk. *hymen*, marriage; *pteron*, a wing), an order with between 30,000 and 40,000 members, which include Saw-Flies, Gall-Flies, Ichneumon Flies, Bees, Wasps, Ants, etc., and includes the most highly developed of Insects. The name signifies that the upper and under wings on each side are 'wedded' or linked together in flight by a row of hooks in the latter, which catch in a hard rim of the former. H. are generally active, neat insects, with four usually transparent wings, strong mandibles, often with a 'waist,' the females furnished with a saw, sting, or boring or piercing ovipositor; and the larva undergoing a complete and abrupt metamorphosis in assuming the adult form.

There is great diversity in the habits of H. Some are 'Solitary' Bees, others live in societies which show marvellous organisation and co-operation; the industry of some is proverbial, but others live parasitically on the produce of that industry. Yet all show a nervous energy, a rapidity, accuracy, and skill in action that suggests intelligence.

Parthenogenesis is common amongst H., as also is the occurrence of different forms, such as queen, drones, workers, soldiers, in one species.

H. are on the whole beneficial to man—bees, for example, store honey, and ichneumons destroy insect pests, but others, such as saw-flies, do considerable harm by damaging the young shoots of forest trees.

HYMENOSTOMATA, a group of INFUSORIA (*q.v.*).

HYMETTUS, modern TRELLO VOUNI (37° 56′ N., 23° 49′ E.), mountain, Attica, Greece; famous for its honey; height, 3370 ft.

HYMN.—The Gk. *hymnos* denotes a poem written in memory of heroes or addressed to the gods. The *Homeric* h's are very ancient, but the so-called *Orphic* h's were only composed about the beginning of the Christian era. Though our *hymn* is of Gk. derivation, the hist. antecedents of Christian h's are to be sought in ancient Israel. The words *hymn* and *psalm* were practically interchangeable. It is recorded of Christ and the Twelve that 'when they had sung a h. they went out,' after the Last Supper, and in the Epistles h's are several times referred to. But a h. does not necessarily mean one that is in metre, like our modern h's—*e.g.* the *Benedictus* and *Magnificat* have always had a prominent place in Christian devotion, and are spoken of by early writers as h's. Hymnody developed in Eastern Christian Churches before those of the West; in Pliny's letter to Trajan, about 100 A.D., which is so valuable as throwing light on the Church in Bithynia, he speaks of the Christians singing h's to Christ.

In the Syrian Church of the II. and III. cent's, Bardesanes and his s. Harmonius wrote h's, as also did Ephraim. At the outbreak of the Arian con-

troversy, first the Arians and then the orthodox made use of h's to popularise their views. Certain h.-books were very popular in the Gk. Church in the VI. and VII. cent's, but by the X. were hardly used at all. The Emperors Leo the Philosopher and Constantine Porphyrogenitus and several saints wrote h's. In the Western Church, Hilary is said to have been the first hymnologist, and after him St. Ambrose in the IV. cent. introduced h's into the Church of Milan. His h's were used in Benedictine houses. Later h. writers were Pope Gregory the Great and the Venerable Bede. Until the VI. cent. the metrical forms of classic Latin verse were used, but rhyme and rhythmical metre were used in the later part of the Middle Ages. The famous h., *Veni Creator Spiritus*, was possibly the work of the Emperor Charles the Bald, and the *Veni Sancte Spiritus* of King Robert II. of France. Other famous mediæval h's are the *Dies Iræ* of Thomas of Celano, the follower of St. Francis, and the *Stabat Mater Dolorosa* of Jacobus de Benedictis. Mediæval hymnody was closely allied with monasticism.

With the Renaissance everything essentially mediæval fell into disrepute, and mediæval h's were 'edited' to conform to a more classical Latinity. A new h.-book and breviary was commanded in 1525 to be produced by the pope. The present breviary is that of 1631. Many famous h's were written at, or soon after, the Reformation, particularly those in the 'vulgar tongue,' though Latin was still used even by reformers. Luther wrote *Ein Feste Burg ist unser Gott*. The use of h's is not prohibited in the Eng. Prayer Book, but they are not enjoined. Several metrical versions of the Psalms were produced in Eng., but they have had a wider vogue in Scotland. Charles I. tried unsuccessfully to introduce the version of the Psalms made by his father, James I. In 1696 Tate and Brady issued their 'New Version' of the Psalms. This met with a mixed reception, but the balance of opinion tends to prefer the plainness of the older versions to the more regular poetic form of the later. It is, however, now agreed that no metrical translation of the Psalms can be entirely satisfactory, and that their spirit is best caught and expressed in other ways. There were several Eng. h. writers in the XVII. cent., among them John Cosin, Bp. of Durham; John Milton, Jeremy Taylor; and Bp. Ken.

But it was not till the beginning of the XVIII. cent. that Eng. h's were either numerous or, on the whole, striking or beautiful. Philip Doddridge and, still more, Isaac Watts, did much to raise Eng. hymnody to the place it now holds. Though much that Watts wrote is now (perhaps deservedly) neglected, some of his h's are undoubtedly among the finest in English, for of some of them—*O God, our help in ages past, When I survey the wondrous Cross, There is a land of pure delight*—congregations seem never to tire. The Methodist revival again did much for hymnody. Charles Wesley, whose h's have a somewhat different flavour from those of Watts, wrote *Jesu, lover of my soul*, and *Rejoice, the Lord is King*, and many others. Nor did he stand alone. Among his contemporaries were John Byrom, who wrote *Christians Awake*; Toplady, author of *Rock of Ages*; and Cowper, of *Sometimes a light surprises* and *There is a fountain filled with blood*. The XIX. cent. produced even more h's than the XVIII. Until recently h's were more popular among Nonconformists and Evangelicals, for the older school of High Churchmen had a feeling against collections of h's officially unauthorised. Among well-known h. writers of the XIX. and XX. cent's have been James Edmeston, H. F. Lyte, J. Mason Neale, Christopher Wordsworth, F. R. Havergal, Cardinal Newman, Dean Stanley, Horatius Bonar, and in America, Edmund H. Sears and the Quaker poet Whittier. Some very beautiful h's are comparatively little known, e.g. *Eternal Light*, by Thomas Binney.

Of collections of h's the most popular in the Anglican church is *Hymns Ancient and Modern*. In the Nonconformist Churches a large number of different h.-books are used. Certain h's are to be found in nearly all, and thus hymnody often unites dogmatically or ecclesiastically sundered Christians. Few h's are more universally loved among orthodox Protestants than *Lead, kindly light*, of Cardinal Newman, and *Nearer, my God, to Thee*, of the Unitarian, Sarah Flower Adams.

Various collections of h's often give list of authors, with dates of birth and death. The historical edition of *Hymns Ancient and Modern* gives additional information. Julian, *Dictionary of Hymnology*, best work on the whole subject; J. M. Neale, *Hymns of the Eastern Church*; Donehoe, *Early Christian Hymns*; R. E. Prothero, *The Psalms in Human Life*.

HYOGO, see HIOGO.

HYOID BONE, see SKULL.

HYOSCYAMUS, see HENBANE.

HYPÆTHROS, name given by the Rom. architect Vitruvius (I. cent. B.C.) to openings in the roofs of the larger Gk. temples; his mention of the h. is a factor in the disputed question of the lighting of Gk. temples.

HYPALLAGE, term of rhetoric for change of usual relation of words, *e.g.* Vergil, *Æneid*, i. 237: *Quæ te . . . sententia vertit?*

HYPATIA (370–415), dau. of Theon; lecturer, Platonic school at Alexandria, founded by Plotinus; mathematician and philosopher; murdered by fanatics.

HYPERÆSTHESIA, over-activity of sensory nerves; symptom of diseases of brain or spinal cord or of hysteria (*q.v.*).

HYPERBATON (Gk. *huperbaton*, stepping over), term of rhetoric for alteration of order of words for sake of emphasis.

HYPERBOLA, a conic section obtained by cutting a cone with a plane perpendicular to base of cone.

HYPERBOLE (Gk. *huperballein*, to throw beyond), term of rhetoric for exaggeration.

HYPERBOREANS, in Gk. legend, people who lived in unknown regions of north (*i.e.* of the north wind, Boreas).

HYPEREIDES (*c.* 390–322 B.C.), Attic orator; pupil of Isocrates; opposed Philip and Alexander of Macedon; advocated Lamian War; was captured and killed by Antipater.

HYPERION, a Titan in Gk. mythology; s. of Uranus and Gæa and f. of Helios; title-character of unfinished masterpiece of Keats.

HYPEROODON, bottle-nosed whale. See under WHALES.

HYPERSTHENE, mineral found in Skye and Labrador; orthorhombic, with bronze lustre or brown or green coloration; belongs to pyroxene group; S.G. *c.* 3·5.

HYPERTROPHY, overgrowth of an organ or other part of the body, either through increase in the size of the components of the tissues or through increase in their number, or by a combination of both. H. is due to increased exercise of a part in its functions or to increase of its blood supply; some forms of h., *e.g.* goitre, elephantiasis, are due to disease.

HYPNOTICS, see NARCOTICS.

HYPNOTISM, term including everything relating to the induction of a state resembling sleep, called hypnosis. This state differs from sleep in an increased and extreme suggestibility of the individual, in a loss of sensitiveness of the sense organs, in a tendency to anæsthesia, and in an increased rapidity of the pulse and the respirations. Usually an individual awakened from hypnosis does not remember what has happened during the state, but the memory of this may be brought back by post-hypnotic suggestion. Somnambulism, or sleep-walking, is a state resembling hypnosis, which seems to be induced generally under the influence of mental excitement, and is hereditary in some persons, while certain *yogis* in India, dervishes in Northern Africa, and others can bring about a similar state voluntarily.

Hypnosis is induced usually by the subject fixing his eyes on some small object in such a position that there is slight muscular strain in gazing at it, and passively allowing the hypnotiser to suggest to him the ideas of weariness of the limbs, heaviness of the eyes, and sleep. Some hypnotisers pass the hands monotonously and slowly close to or over the face. Soon the eyes close, the subject becomes drowsy, but instead of allowing him to pass into a natural sleep the hypnotiser, by speaking, etc., keeps in contact with him and thus maintains control. In this state the subject knows what is going on around him, but is only able to do what the hypnotiser allows or commands him, and he may pass into a deeper state of hypnosis, resembling coma, in which he is more profoundly influenced than in the lighter stages. Under suggestion the subject may use his limbs with much greater strength than ordinarily, while anæsthesia of a part of the body, so deep that a surgical operation may be performed, may also be brought about by suggestion.

Several theories regarding hypnosis have been propounded, but the explanation which seems to give most promise of solution of the problem, upon which research, still being made, is that hypnosis is the temporary blocking of the nervous links between the different systems of neural dispositions (the conditions of the rise of ideas to consciousness) of the brain, so that each idea works out its effects free from the interference or inhibition of antagonistic ideas, and thus is more effective than normally.

On the Continent and in America h. has been employed to a considerable extent in the treatment of disease, and its benefit is now beginning to be recognised in Britain. It is chiefly of value in the cure of drug and other bad habits, in insomnia, neuralgia, hysteria, and other nervous derangements, in epilepsy, paralysis, sea-sickness, dyspepsia, and other similar conditions, but it requires much careful study and judgment by the physician, and should not be employed by inexperienced persons.

Tuckey, *Treatment by Hypnotism and Suggestion*; Milne Bramwell, *Hypnotism*.

HYPOCAUST (Gk. *hupo*, beneath; *kauein*, to burn), Rom. chamber containing heating apparatus.

HYPOCHLOROUS ACID (HClO), strong bleaching agent formed by combination of nitric acid (dilute) and bleaching powder.

HYPOCHONDRIASIS, nervous condition characterised by mental depression and delusions regarding the state of the health; the general health and appetite are usually quite good, but no persuasion as to the real condition is of any avail; in its most advanced form h. is a form of insanity. The treatment is general—change of air and scene, moderate exercise, and such interests as serve to turn the sufferer's mind to other matters.

HYPODERMA, see Bot Flies.

HYPOGASTRIC PLEXUS, see Nervous System.

HYPOGLOSSAL, see Nervous System.

HYPOGYNOUS, see Flower.

HYPOSTASIS, personality (*persona*), an independent and incommunicable existence; used to mean person of the Trinity in early Christian controversies.

HYPOSTOMATA, see Ostracoderms.

HYPOSTYLE (Gk. *hupo*, under; *stulos*, a column), architectural term for Egyptian and classical buildings in which rows of columns support flat ceiling. See Architecture.

HYPOTHEC (Gk. *hupotheke*, thing pledged), right given by Scot. law over effects of a debtor (Eng. lien).

HYPOTHESIS, supposition accepted by scientific thought as a guide to further inquiry; requires verification before being held to be a demonstrated theory. See Logic.

HYPOTRACHELIUM (Gk. *hupo*, under; *trachelos*, neck), name given by Rom. architect Vitruvius to moulding between the annulet of the capital and the shaft in Gk. buildings.

HYRACOIDEA, see Procavia.

HYRCANIA, modern Astarabad (36° 40′ N., 54° 30′ E.), ancient district, Persia, S. of Caspian Sea.

HYRCANUS, JOHN, I. (d. 105 B.C.), Jewish chief priest (135); youngest s. of Simon Maccabeus; forced to acknowledge suzerainty of Antiochus, but conquered Samaria and restored Jewish prosperity. His unfortunate grandson, John Hyrcanus II. (executed 30 B.C.), Jewish chief priest (78–40), was the obedient vassal of the Romans.

HYRAX, see Procavia.

HYSSOP (*Hyssopus officinalis*), small perennial herb of natural order *Labiatæ*, with thin quadrangular stems, elliptical leaves growing in pairs, and spikes of small violet flowers; grows in S. Europe and as far as Central Asia; an infusion of the leaves was formerly used to relieve bruises, swellings, catarrh, etc. Hedge H. (*Gratiola officinalis*) is a herb of natural order *Scrophulariaceæ*, with cylindrical stems and solitary reddish flowers, native of S. Europe and growing in Britain; once used as a drug, with purgative, diuretic, and emetic action; formerly a remedy for dropsy and gout.

HYSTASPES.—(1) legendary Persian ruler of time of Zoroaster; (2) father of Darius I.

HYSTERIA, a form of disturbance of the nervous system, characterised by exaggeration of reflex and mental excitability with diminished will-power and control over the emotions. The causes are hereditary predisposition to nervous disease, nerve exhaustion, various conditions of the genital system, and the condition often appears at such a time as puberty, pregnancy, or the climacteric. Women are affected very much more than men, most frequently girls between fifteen and twenty-five. The symptoms are varied, and may simulate many different conditions, common symptoms being—(1) *sensory disturbances*, hyperæsthesia or anæsthesia; (2) *motor disturbances*, epilepsy, spasms [*e.g.* vaginismus (spasms of vagina), globus hystericus (spasms of throat)], paralysis; (3) *visceral disturbances*, palpitation, vomiting; (4) *mental disturbances*, melancholia, apathy, craving for sympathy, etc. Moral influence has been found to be of greater value than drugs. Changes of air, moderate exercise, tonics, and massage are of benefit.

HYSTERON-PROTERON, Gk. name given to that figure of speech which reverses the natural order (generally for emphasis).

HYSTRICOMORPHA, a sub-order of Rodents (*q.v.*).

HYSTRIX, see Porcupines.

HYTHE (51° 5′ N., 1° 5′ E.), market town and watering-place, Kent, England, near Eng. Channel; one of the Cinque Ports. Pop. (1911) 6387.

I (Phœnician and Heb. *yodh*; Gk. *iota*), ninth letter in Eng. alphabet, adopted from Lat. use of Gk. *iota*; the form was a zigzag, straightened by the Gk's; dot added to distinguish it among m's and n's in Middle Ages.

I.O.U. ('I owe you'), private document of simple nature witnessing indebtedness; of no legal value.

IAMBIC, term in prosody for verse composed of *iambi*, feet of two syllables with first short, second long, *e.g.*:—

Thĕ fring | ĕd cŭr | tăins ŏf | thine ēye | ădvance.

IAMBLICHUS (fl. II. cent. A.D.), Syrian Gk.; author of love-romance, *Babuloniaka*, of which only fragments are extant.

IAMBLICHUS (fl. 300 A.D.), Syrian philosopher; a pupil of Porphyry. Fragments of his works survive, but *On the Egyptian Mysteries*, often ascribed to him, is not really his. I. was a Neo-Platonist of great learning, and constructed an elaborate theological scheme. The Emperor Julian thought him as great as Plato. I. believed in an Absolute, and many other deities, arranged in groups. Zeus was the world-creator (Demiurge). There were also demons and angels. Thus above the world there are numbers of supernatural beings. He finds it difficult to place evil in his system.

IAPETUS (classical myth.), Titan son of Uranus and Gæa, and f. of Prometheus, Atlas, etc.; grandfather of Deucalion (*q.v.*), and possibly to be identified with Hebrew Japhet.

IAPYDES, race of Illyria subjugated by Romans, II. to I. cent. B.C.

IATROCHEMISTS, see CHEMISTRY.

IAZYGES, Sarmatian tribe now extinct, which gave Rome trouble on the Danube, I.–IV. cent. A.D.

IBADAN (8° 22′ N., 4° 3′ E.), town, in Yoruba, S. Nigeria, Brit. W. Africa. Pop. *c.* 150,000.

IBAGUÉ, SAN BONIFACIO DE IBAGUÉ (4° 30′ N., 75° 15′ W.), town, Colombia, S. America; commercial centre of an agricultural district, producing cacao, tobacco, sugar-cane. Pop. 25,787.

IBARRA (0° 23′ N., 77° 53′ W.), city, Ecuador, S. America; at foot of volcano of Imbabura; cotton and woollen industries. Pop. *c.* 11,000.

IBERIANS.—All is obscure concerning the origin of this ancient people; sometimes the term 'Iberian' was applied anciently to all who dwelt in Spain, but it was also given to the tribes dwelling particularly round the Ebro. Humboldt, in 1821, started the theory—since widely accepted—of an early Iberian population, still surviving in the Basques, found in Spain, Southern France, Corsica, Sardinia, Sicily, and in Celtic Britain.

IBERIS, CANDYTUFT, genus of plants, order Cruciferæ; annual C. is popular garden flower.

IBEX (*Capra*), animal of Goat family; varieties: Alpine i. (*C. ibex*), Arab. i. (*C. walie*), Himalaya i. (*C. siberica*), Abyssinian i. (*C. walie*); have long, ridged horns; gregarious, but males and females form different flocks after breeding-time.

IBIS (*Ibis æthiopica*), a bird allied to storks and spoonbills; head and neck dark and naked; plumage white, apart from glossy black dorsal feathers; beak long and curved; held sacred by ancient Egyptians, and often found in mummified condition.

IBLIS (Arab. from Gk. *diabolos*), fallen angel whose history is related in the *Koran*.

IBN 'ABD RABBIHI (860–940), Arab. poet; author of valuable anthology.

IBN 'ARABI (1165–1240), Muhammadan theological writer and mystic; chief work, the valuable *Al-futûhât almakkija* (The Meccan Revelations).

IBN BATUTA, ABU ABDULLAH MUHAMMAD (1304–78), Arab. traveller and writer; b. at Tangier; spent many years travelling in Asia, Africa, and Europe, visiting Egypt, Palestine, Persia, Mesopotamia, Arabia, Asia Minor, Russia, India, China, and Spain; he made pilgrimage to Mecca four times, and during visit to India was appointed kazi at Delhi; wrote an interesting account of his travels.

IBN DURAID (837–934), Arab. poet and writer on Arab. etymology.

IBN EL ATHÎR, name of three bro's, noted Arab. authors; the greatest was IZZ ED DÎN (1160–1234), historian, whose works are of much value.

IBN EL FÂRIDH (1181–1235), Arab. mystical poet; author of much-read *Diwan*.

IBN FARADI (962–1012), Span. Arab. historian; wrote works on Andalusia.

IBN GABIROL, AVICEBRON (XI. cent.), Jewish thinker; wrote poetic, liturgical, and philosophical works; his philosophy was influenced by Neoplatonism and sometimes thought heretical by Jews; his Arabic works trans. into Latin influenced the Schoolmen.

IBN HISHÂM, ABD EL MALIK (d. 834), Arab. philosopher and edit. of Ibn Ishâk's (*q.v.*) biography of Muhammad.

IBN ISHAK, MUHAMMAD (d. 766), Arab. historian; author of Life of Muhammad, of which valuable excerpts are preserved by Ibn Hishâm (*q.v.*).

IBN JUBAIR (1145–1217), Span. Arab. author of travels in the East.

IBN KHALDÛN (1332–1406), Arab. historian; served various rulers, at Fez, Tlemçen, and Tunis; app. cadi at Cairo, 1384, 1399; author of *Universal History*, a work dealing chiefly with Arabs and Berbers.

IBN KHALLIKAN (1211–82), Arab. author of a dictionary of Muhammadan biography.

IBN USAIBI'A (1203–70), Arab. physician; practised med. in Cairo and afterwards near Damascus; author of *Lives of the Physicians*.

IBO (5° 24′ N., 6° 27′ E.), district, Brit. W. Africa, on lower Niger; chief town, Ibo; palm-oil.

IBRAHIM PASHA (1789–1848), adopted s. of Muhammad Ali, viceroy of Egypt; supported Turkey in Gk. War of Independence, and was defeated by Allies at Navarino, 1827; twice invaded Syria; defeated Turks at Nezib, 1839; viceroy of Egypt, 1848.

IBSEN, HENRIK (1828–1906), Norwegian dramatist and poet; born at Skien; served seven years in a chemist's shop at Grimstad; wrote blank-verse plays, which were produced, and took part in stage-management, 1850 onwards, at Bergen. *The Warriors in Helgeland*, a romantic dramatic poem, was printed, 1858, but refused by managers. His first great protest against social conventions was *Love's Comedy*; its hero made eloquent poetic diatribes (furnishing Shaw with some attractive characters), and epitomises the moral in the last line—'"A health to Amor, late of earth, in tea."' *Brand*, a beautiful lyric against moral deadness, appeared in 1866; its theme was repeated in the greater *Peer Gynt* with its marvellous songs. From this time I.'s position in literature was assured. He now abandoned verse and substituted analysis and irony for lyrical attacks on middle-class vices. *The Pillars of Society* (1877) started an exposure of the *bourgeoisie*, a constant theme of novelists and playwrights since. *A Doll's House*

(1879), *Hedda Gabler* (1890), and other plays have largely destroyed the XIX. cent. ideal of womanliness. It is unfortunate that in the light and characteristic satire, *An Enemy of the People* (1882), 'Dr. Stockmann,' when played in England, should be represented as a figure of fun. In *The Wild Duck* (1884) I. ironically ridicules the attempts of reformers. In numerous other plays he analysed modern life and created characters which have become literary personalities. *The Master-Builder* (1892), perhaps his chief work, has hardly yet become absorbed into common thought.

Jæger, *Life* (1894); Bernard Shaw, *The Quintessence of Ibsenism* (1892); Edmund Gosse, *Life* (1908); R. E. Roberts, *I.: a Critical Study* (1912).

IBYCUS (fl. VI. cent. B.C.), poet of Gk. colony of Rhegium; fragments remain; cranes discovered his murderers.

ICA, ECCA, or YCA (14° S., 75° 52′ W.), maritime department, Peru, S. America, between Lima and Arequipa; capital, Ica; wine, fruits. Pop. *c.* 100,000.

ICARUS, see DÆDALUS.

ICE is solid water, and is precipitated as *snow*, *frost*, or *hail*. It consists of colourless crystals of *hexagonal* form, with a well-marked habit of *twinning*. Ice at 0° C. is less dense than water, and floats on it. Ice contracts on melting.

Iceberg is mass of ice, floating in water, retaining its equilibrium by submersion of most of its bulk; frequently 300 feet high; of great danger to vessels; if in quantities, affect surrounding temperature considerably. ICE-FLOES are floating fields of ice driven together by pressure of bergs.

ICELAND (13° 22′ to 24° 35′ W., 63° 12′ to 66° 33′ N.), large island belonging to Denmark; in north part of Atlantic Ocean, on fringe of Arctic Circle; it is situated about 500 miles N. of Scotland, 160 miles S.E. of Greenland, and 570 miles from Norway; length from E. to W., 300 miles; breadth, 200 miles; area, 39,756 sq. miles; length of coast, *c.* 3730 miles; coast-line rugged with numerous bays and fjords on N., W., and E. coasts, forming excellent harbours; S. coast flat and unbroken; largest bays are Faxaflói and Breidifjord in west. The island is roughly oval in form; in north-west is an irregularly shaped peninsula almost cut off from main island by the bays of Hunafloi and Breidifjord; interior a barren plateau covered with immense lava-fields, ice-plains, and volcanic mountains; most of the peaks are covered with perpetual snow and ice; highest mountain, Oräfacjökull, 6241 ft., near S.E. coast. I. has over 100 volcanoes; the best known are Hekla, 5110 ft., Askja (with crater of some 30 sq. miles), Katla, Laki, Skapterjökull, etc.

The largest lava-field, Odadahroun, is over 1500 sq. miles; the ice-fields cover an area of more than 5000 sq. miles; largest glaciers are Vatnajökull, in S.E. (nearly 3300 sq. miles), Hofsjökull (520 sq. miles), Langenjökull (500 sq. miles) and Myrdalsjökull (390 sq. miles). I. has many rivers and lakes formed by ice and melting snow; the largest rivers are Hvitá (White River), Thjorsá, Olfusá, Jökulsá; principal lakes, Thingvallavatn in S., and Mývatn in N.; numerous hot springs, the Geyser best known; fine pasture-land on coast and along rivers, but vegetation on the whole very poor; fauna consists mainly of fox and reindeer; polar bear is sometimes floated down with ice from Greenland; numerous birds, seals, and whales; climate damp, cold, stormy, and very changeable; winters comparatively mild; N. coast washed by Arctic current, S., W., and E. coasts by Gulf Stream; principal towns, Reykjavik (capital), on S.W. coast, with school of med., theology, navigation, etc., national library, and good harbour; Seysdisfjord in east, Akursyri in north; transport done chiefly by horses; bridges have been built since 1888, and roads have been improved.

I. was discovered by Irish Culdees in VIII. cent.; visited by Norwegian vikings, 870; permanent Norwegian settlements on S.W. coast, 870–90; on N. and W. coast, 890–900; on S., E., and S.E. coasts, 900–30; Icelandic Republic formed, X. cent.; united to Norway, 1262; came under Dan. rule, 1380; received home rule, 1874, which was extended in 1903. Famous volcanic eruptions: Mount Katla, 1721; Hekla, 1766; Laki, 1783 (lava covering an area of 2188 sq. miles); Askja, 1875; violent earthquakes in 1784, 1885, 1896. The Icelandic language now spoken is very much the same as in XII. and XIII. cent's and earlier; at that time named *Dönsk tunga* (Dan. tongue) or *Norroena* (northern tongue), and spoken in Scandinavia and elsewhere until XIII. cent.

Icelandic lit. flourished from middle of XI. cent. to end of XIII. cent., and from XIX. cent. onwards, and consists of songs, scaldic poetry, and sagas; until the XII. cent. the songs and lit. were handed down by word of mouth by wandering minstrels or skalds; among the best-known works are mythical and heroic songs (Voluspa, Hamerscheimt, Hávamál, etc., compiled in the poetical Edda (*q.v.*); and sagas, including Volsunasaga, Egla, Eyrbyggia, Laxdoela, Viga-Glum, Gretti the Strong, Egil, Gisli, Burnt Njal, etc.; a collection of the sagas was made by Ari (1067–1148) in the famous prose Edda (*q.v.*); he also wrote the Konungábók (Book of Kings), Landnamábók (Book of Settlements); other celebrated writers were Saemund (1056–1133); Snorri Sturlason (1179–1241), who wrote Hemskringla or the Lives of the Kings of Norway; Sturla Thordarson (1214–84), who wrote Islendingasaga and Life of Hakon the Old. To the modern period belong John Thorlaksson (1714–1819), Halgrimson (1807–45), and Steingrimur Thorsteinsson (1830), poets; Jon Thoroddson (1819–68) and Gestur Palsson (1852–59), novelists.

I. is administered by a minister (app. by king of Denmark) and legislative assembly (Althing); women vote for Parliament; education universal; religion Lutheran; bp. resides at Reykjavik; trade, now chiefly carried on with Denmark and Britain, in the hands of Norsemen and Icelanders, XIV. cent., English, XV. cent., Germans, XVI. cent.; a monopoly of Dan. Government, 1602–1786; open to all nations, 1854; chief exports, whale oil, cod-liver oil, salt fish, eiderdown, wool, fur, sheep, horses; potatoes, vegetables, and hay are grown; sulphur, lignite, spar, and coal are found; cattle-breeding and fishing chief occupations; many tourists are now attracted to I. by fine fishing and interesting scenery; population concentrated on coast and lowlands, only a quarter of the island being habitable. Pop. (1911) 85,089.

Annandale, *The Faroes and Iceland* (1905); W. Morris and Magnusson, *The Saga Library* (1891–95).

ICELAND MOSS, a lichen, *Cetraria islandica*, found in Iceland and N. Europe; edible.

ICELAND SPAR, see CALCITE.

ICE-PLANT (*Mesembryanthemum crystallinum*), creeping plant bearing white flowers; leaves have glistening appearance, whence name.

ICE-YACHTING, sport carried on principally in Scandinavia, Gulf of Finland, and N. America; a sailing-vessel is used, with runner-plank instead of keel. A speed of over 80 miles an hour can be attained on the Hudson River with a favourable wind.

ICENI, see BOADICEA.

I-CHANG (30° 48′ N., 111° 32′ E.), town, treaty port, Hu-peh, China, on Yang-tze-kiang. Pop. (1911) 45,000.

ICHNEUMON, a small mammal allied to weasel, living in Egypt and N. Africa generally; feeds on snakes and on crocodile eggs.

ICHNEUMON FLIES (*Ichneumonida*), a family of Hymenopterous insects, with long, thin bodies, and long ovipositors. They pierce and lay their eggs in the larvæ of other insects, on which the young feed. Many agricultural pests are thus kept in check.

ICHNOGRAPHY, architectural name for ground-plan or horizontal section of a building.

ICHNOLOGY, science of footprints. See FOSSIL, PALÆONTOLOGY.

ICHTHYOLOGY.—Günther, in his *Study of Fishes*, 1880, defines I. as 'the branch of zoology which treats

of the internal and external structure of fishes, their mode of life, and their distribution in space and time,' and perhaps to these should now be added a study of the economic aspect of the group.

ICHTHYOPHAGI (Gk. *ichthus*, a fish; *phagein*, to eat), tribes of various coast-regions so called by Gk. geographers.

ICHTHYOPHIS, see BATRACHIA.

ICHTHYOPSIDA, see FISHES.

ICHTHYORNIS, see under ODONTHORNITHES.

ICHTHYOSAURUS, see REPTILES.

ICHTHYOSIS, XERODERMA, dry and scaly condition of the skin, due to general thickening, with atrophy of sebaceous glands, occurring either congenitally or at an early stage of life. The only treatment is palliative ointments, etc.

ICKNIELD STREET, name of pre-Rom. road to be traced in Berks and Bucks, England; Rom. road running north and south through Midlands.

ICONIUM, ancient city, Asia Minor, situated on plateau on slopes of Taurus Mts. Capital of Lycaonia under Romans. Walls of modern city (KONIEH or KONIA) built from materials taken from buildings of I. Contains famous monastery of dancing dervishes, ruins of mosques and tombs; manufactures carpets and coloured leather. Pop. *c.* 45,000.

ICONOCLASTS.—In the primitive Church there was a general feeling against the use of art in Christian worship. This was owing partly to the idolatry which accompanied heathen worship. That they, like the Jews, had no images in their churches amazed their heathen neighbours. From the IV. cent. paintings and sculptures were employed in Christian worship. Only then the symbol of the cross came into use, and there was strong prejudice against a crucifix. The famous *iconoclastic* controversy arose in the Eastern Empire in the VIII. cent. The attack on images was begun by Leo III. (d. 740); it was continued by Constantine V., but the Empress Irene restored them; another iconoclastic reaction took place, but came to an end with the Emperor Theophilus (d. 826). The later Church did not take up the position of the extremists that images were themselves possessed of sacramental power, neither did it reject them altogether. In the Eastern Church *icons* like flat pictures are used, whereas the Catholic Church in the West has always believed in images, crucifixes, etc., as means of instruction.

ICONOGRAPHY (Gk. *eikon*, image; *graphein*, to describe), writing about engravings; history of Christian relics or pictures.

ICONOSTASIS (Gk. *eikon*, image; *stasis*, standing), division in Gk. churches between outer choir and inner sanctuary; adorned with *ikons*, *i.e.* pictures of saints, etc.

ICTICYON, see DOG FAMILY.

ICTINUS, Gk. architect of temple of Apollo, of which sculptures are in Brit. Museum, of Parthenon (433 B.C.).

IDA (d. 559), king of Bernicia; established Anglian rule over Bernicia (547).

IDAHO (43° N., 115° W.), a W. state of U.S.A., bounded N. by Brit. Columbia and Montana, E. by Montana and Wyoming, S. by Utah and Nevada, W. by Oregon and Washington. Area, *c.* 84,000 sq. miles, of which *c.* 500 are water. Principal city is Boise City. Except small area in S. the surface is rugged and mountainous; the S.E. region lies in the Great Basin of U.S., while the rest, some 70,000 sq. miles, lies in the drainage basin of the Columbia River; in the N. and E., part of the Rocky Mountain system is embraced—the principal range being the Salmon River Range—separating I. from Montana; other ranges are the Saw Tooth and Baisé, on the Columbian Plateau; a prominent physical feature are the Snake River Plains; the more important lakes are Pend d'Oreille, Cœur d'Alene, and Naniksu, in the Pan-Handle in the N.; and the John Day and Bear lakes in the S.E. There is abundant vegetation in the N. and centre; forests extend on the W. slopes of the Bitter Root and Cœur d'Alene Mts. The climate is healthy. Mineral deposits, which are owned by the state, include gold, copper, lead, silver, and coal, while in the S.E. soda, gypsum, and sulphur are found; there are many state forests; grain farming is mostly confined to river valleys, but extensive irrigation works have been carried out—the most important crop being wheat; other crops are oats, barley, potatoes, hay, etc.; The principal industries are lumber and timber working, flour and grist milling; stock-raising is carried on. A large percentage of the people are Mormons. Pop. *c.* 325,000.

Resources and Attractions of Idaho (St. Louis, 1893).

IDAR, EDAR (23° 50′ N., 73° E.), native state, Gujarat, Bombay, India.

IDAS (Gk. myth.), s. of Aphareus and bro. of Lynceus; successfully rivalled Apollo for Marpessa's hand; slew Castor and then wounded Pollux, who had slain Lynceus, but was struck by thunderbolt of Zeus; strongest of mortals.

IDDESLEIGH, STAFFORD HENRY NORTHCOTE, 1ST EARL OF (1818–87), Eng. politician; held various offices of state, and as Chancellor of Exchequer in Disraeli's Ministry introduced sinking fund for reduction of National Debt, 1874; Foreign Minister, 1886.

IDEA, term which has been used in a great variety of meanings: (1) In Plato, Ideas (or Forms) are universal natures, not 'in the mind,' but the objects of knowledge; (2) in later Platonism, they are conceptions in the mind of God; (3) in Locke, they are objects of knowledge, but tend to be regarded as representations of things in the mind; in Berkeley and Hume they are definitely subjective; (4) and (5) for the Kantian and Hegelian uses, see KANT and HEGEL; (6) in modern psychology idea generally means a process of conceiving and imaging at once, or an object conceived and imaged at once; but the term is better avoided.

IDEALISM, in a general sense, means the tendency to regard everything from an ideal or imaginative standpoint; its use in philosophy is to denote that theory of the universe according to which everything (either really or as perceived) consists of *ideas*. I. has different forms: in the absolute I. of Hegel the universe consists of ideas entirely, but ideas of the universal mind not ours; in other forms of absolute i. objects have no ultimate reality except in the minds of those who perceive them—this is more properly termed *subjective* I. In Kant's I. all human experience consists of ideas, though this does not preclude the existence of objects outside our minds. I. can fairly be said to have begun with Plato. The Platonic theory of ideas is that beyond our world of sense there is an ideal world. They stand as types from which objects in our world derive whatever reality they possess. Aristotle somewhat modifies this, and makes the individual dependent on the universal will. He showed that matter cannot really be opposed to mind, nor the particular to the universal. It was not Aristotle's i. but his formal grouping into categories which the mediæval Schoolmen followed. Of modern idealists the first was really Bp. Berkeley. In some respects he carried on the work of Locke. Berkeley held that things have no real existence apart from a mind which can perceive them, though it need not be our mind but the mind of God. Though many would refuse to follow him here, he at least was the first to show that, whatever a thing be in itself, we can only know it by our own senses—a most important step in advance of that unthinking view which would make a thing just what it appears.

Works of above philosophers, and those of Bosanquet, William James, and Haldane. H. Jones, *Idealism as a Practical Creed*; Sturt, *Personal Idealism*.

IDENTIFICATION, science of the anthropometric system of identification of criminals was used by the Brit. Government, 1898–1901, but with large amount of labour for little result; i. by finger-prints was

adopted, 1901, with remarkable results, and has become the recognised way of keeping record of prisoners.

IDEOGRAPH, palæographical term for picture-writing, such as hieroglyphics.

IDES, 15th day of Rom. month.

IDIOCY, see INSANITY.

IDIOM (Gk. *idios*, peculiar to an individual or thing), form of a particular language or language of a particular locality.

IDIOSYNCRASY, peculiar physical or mental condition characteristic of an individual, often taking the form, for example, of an undue feeling of discomfort in the presence of certain animals, odours, etc., or of undue susceptibility to certain drugs, or of eccentricity of habits.

IDLE (53° 50′ N., 1° 45′ W.), town, W. Riding, Yorkshire, England; woollen goods. Pop. (1911) 17,999.

IDOCRASE, see VESUVIANITE.

IDOLATRY.—Worship of idols or 'graven images' was not, as some have supposed, first stage in religious evolution, but posterior to animism. The idol worshipper fails to distinguish between his god and the idol, in whom he thinks his god dwells. 'Idolatry' in New Testament is used loosely for pagan rites.

IDOMENEUS, in Gk. legend, king of Crete who when sailing to Trojan War promised to Poseidon in return for protection the first thing he met on landing; this was his s., whom he sacrificed; Crete being smitten with plague, his subjects banished him.

IDRIA (46° N., 14° 1′ E.), town, Carniola, Austria; quicksilver mines. Pop. (1910) 6090.

IDRISI, EDRISI (*c.* A.D. 1099–1154), Arab. geographer; born at Ceuta, of famous Muhammadan family; studied at Cordova; travelled through Asia Minor, Egypt, Morocco, Spain, and Portugal. Pub. geographical work, 1154; constructed a globe of silver, divided it on the Ptolemaic system, and wrote explanatory book, pub. in 1592, and several times reissued and translated, notably 1866, *Description de l'Afrique et de l'Espagne*, by Dozy, and *l'Italia*, by Amari and Schiaparelli, 1883.

IDUMÆA, Gk. for Edom, territory of Moab; first inhabited by Horites, then by Edomites; for some time under suzerainty of kingdom of Judah, but later independent, then conquered by Assyria; Edomites were settled in S. Palestine, II. cent. B.C.

IDUN, IDUNA, Scandinavian goddess of spring and summer; seized by Loki (winter).

IDYLL, IDYL, name given by Greeks to short creative work, at first of general but afterwards of pastoral nature; cf. I's of Theocritus, Bion, Moschus.

IFFLAND, AUGUST WILHELM (1759–1814), Ger. actor-manager and playwright; excellent as author of melodramatic comedies.

IGLAU (49° 23′ N., 15° 35′ E.), town, Moravia, Austria; textiles, tobacco. Pop. (1910) 25,914.

IGLESIAS (39° 19′ N., 8° 32′ E.), town, Sardinia; bp.'s see; lead and zinc mines. Pop. 21,000.

IGNATIEFF, NICHOLAS PAVLOVICH, COUNT (1832–1908), Russ. diplomatist, who made treaties advantageous to his country with China, Khiva, and Bokhara.

IGNATIUS (d. *c.* 117 A.D.), one of Apostolic Fathers (*q.v.*). Though so famous, very little known of him. His epistles are preserved in three recensions, and controversy has raged over the complicated literary problem they present. I. contains seven epistles preserved in Greek, also Latin, Armenian, Syriac, and Coptic versions; II. contains these seven and six others, Gk., and Lat. version; III. (discovered by Cureton, 1845), three of first seven, preserved in Syriac. The controversy over the claims of I. and II. to be the original was mostly theological. Scholars mostly now recognise II. as original and III. as shortened from it. Ignatius defends Episcopacy and protests against Docetism and Judaising tendencies in Church.

Lightfoot, *Apostolic Fathers*.

IGNATIUS LOYOLA, see LOYOLA, IGNATIUS OF.

IGNATIUS'S BEANS, seeds of *Strychnos Ignatii*, containing strychnine; found in Philippines; so named by Jesuits.

IGNEOUS ROCKS, see GEOLOGY.

IGNIS FATUUS, see WILL-O'-THE-WISP.

IGNORAMUS (Lat. pres. tense 1st person plural of verb 'to know not'), word formerly written by jury on dorso of bill of indictment which they did not find 'true'; term for stupid person.

IGNORANCE OF THE LAW does not in England excuse a man from the consequences of his acts.

IGNORANTINES, name of a religious order instituted at Rheims, 1680, now with 14,000 members from all parts of the world.

IGUALADA (41° 35′ N., 1° 34′ E.), town, Barcelona, Spain, on Noya; textiles. Pop. 10,000.

IGUANA, see LIZARDS.

IGUANODON, see REPTILES.

IGUVIUM, modern GUBBIO (*q.v.*); ancient town, Umbria, Central Italy; *c.* 23 miles N.N.E. of Perusia, with Rom. remains. Famous *Eugubine Tables*, 7 in number, with religious writings in Lat. and Umbrian, were discovered, 1444, and kept in town-house. I. was famed for majolica work up to XV. cent.; an important town in pre-Rom. period; received Rom. citizenship after Social War; destroyed by Goths, 552.

IKI-SHIMA (33° 55′ N., 129° 45′ E.), small island of Japan, N.W. of Kiushiu; area, 5858 sq. miles. Pop. *c.* 37,000.

ILAGAN (17° 5′ N., 121° 50′ E.), town, Luzon, Philippine Islands; tobacco region. Pop. *c.* 17,000.

ILCHESTER, ancient *Ischalis* (51° N., 2° 41′ W.), decayed town, Somersetshire, England, on Yeo.

ÎLE-DE-FRANCE, ancient province, France; enclosed between rivers Seine, Marne, Oise, Aisne, and Ourcq; corresponded to departments Seine, Seine-et-Oise, Seine-et-Marne, Aisne, Oise, and a small part of Nievre and Loiret; capital, Paris.

ILETSK, ILETSKOI-GORODOK (51° 29′ N., 53° 29′ E.), town, Orenburg, Russia, near junction of Ilek and Ural; salt-works. Pop. 12,500.

ILEUM, see DIGESTION.

ILEX, see under HOLLY and OAK.

ILFELD (51° 35′ N., 10° 47′ E.), town, at foot of Harz, Hanover, Germany.

ILFORD (51° 34′ N., 0° 5′ E.), town, Essex, England; photographic material works. Pop. (1911) 78,205.

ILFRACOMBE (51° 12′ N., 4° 7′ W.), watering-place and seaport, Devonshire, England, on Bristol Channel. Pop. (1911) 8935.

ILHAVO (40° 34′ N., 8° 38′ W.), seaport town, Aveiro, Portugal; manufactures glass, porcelain. Pop. 13,500.

ILI (45° N., 75° 30′ E.), river, Central Asia; rises in Tian-Shan mts., and flowing W., then N.W., enters Lake Balkash; length, 900 miles; navigable in lower course.

ILIAC PASSION, popular name for COLIC (*q.v.*).

ILIAD, see HOMER.

ILION (43° 3′ N., 75° 3′ W.), village, New York, U.S.A., on Mohawk; Remington firearms and typewriters. Pop. (1910) 6588.

ILIUM, TROY (*q.v.*).

ILKESTON (52° 58′ N., 1° 20′ W.), market town, Derbyshire, England; hosiery, lace; coal and iron mines. Pop. (1911) 7092.

ILKLEY (53° 55′ N., 1° 50′ W.), town, health-resort, W. Riding, Yorkshire, England.

ILL (48° 30′ N., 7° 30′ E.), river, Alsace, Germany; joins Rhine 9 miles below Strasburg; length, 125 miles.

ILLAWARA (34° 30′ S., 150° 30′ E.), maritime district, New South Wales, Australia; fertile; coal and iron mines. Pop. 8500.

ILLE-ET-VILAINE (48° 10′ N., 1° 40′ W.), maritime department, N.W. France, formed from part of ancient Brittany; mostly level, with occasional marshes and numerous lakes; watered chiefly by the Ille and Vilaine; fine horses and cattle are reared; cereals, flax, hemp, apples, and pears grown; pro-

duces cider, butter, and cheese; iron mines, slate quarries; oyster fisheries; capital, Rennes. Pop. (1911) 608,098.

ILLEGITIMACY is the condition of being born out of lawful wedlock. The mother may apply to the magistrate for an order of maintenance against the father of the child, or the Guardians of the Poor may make such application if the child is chargeable to the parish, and when paternity is proved or acknowledged a sum not exceeding 5s. per week for the care of the child can be required of the father. The responsibility for the bringing up of such child rests on the mother. In Scotland, but not in England, the marriage of the parents legitimises children born before wedlock. An illegitimate child cannot inherit by right of succession—for in law he has no father—but otherwise is under no legal disabilities. Eng. law recognises that the offspring is legitimate no matter how soon the birth takes place after marriage, but declares the offspring illegitimate when born of parents incompetent to marry, *i.e.* persons who are within the prohibited degrees of consanguinity or affinity.

ILLER (48° 20′ N., 10° E.), river, Bavaria, Germany; joins Danube near Ulm; length, *c.* 100 miles.

ILLINOIS (40° N., 89° 30′ W.), N. central state of U.S.A.; bounded N. by Wisconsin, E. by Lake Michigan and Indiana, S.E. and S. by the Ohio River (which separates it from Kentucky), S.W. and W. by Mississippi River (which separates it from Missouri and Iowa). Area, *c.* 56,650 sq. miles, of which *c.* 650 are water. Capital is Springfield. Situated in the prairie-plain region, partly in the valley of the Mississippi and touching the Great Lake district in the N.E., the surface slopes gently to the S. and S.W.; the average height above sea-level is 600 ft., the highest elevation being Charles Mound (*c.* 1200 ft.), on the boundary between I. and Wisconsin; bluffs are encountered along the principal rivers—the best-known being Starved Rock. There are several elevations, the largest stretching across the south from 6 to 10 miles broad, and reaching *c.* 1050 ft. above sea-level.

There are almost 300 streams—mostly tributaries of the Mississippi, but some, tributaries of the Wabash and Ohio Rivers; the most important river is the Illinois, traversing the N., central, and W. regions, and at times broadening into vast lakes—notably the lovely Peoria Lake; the Kaskaskia River in the S. and the Rock in the N. enter the Mississippi; tributaries of the Wabash and Ohio include the Embarrass, Little Wabash, Saline, and Cache in the E.; the Chicago River—only 1 mile long—originally entered Lake Michigan, but now flows, by Chicago Drainage Canal, into Mississippi; several shallow lakes lie to the N.E. The soil, especially in the river valleys, is exceedingly fertile. The climate is varied—the mean annual temperature being some 11° Fahr. higher in the S. than in the N., which again varies; but summers and winters are both severe.

The chief mineral product is coal, I. being the second largest producer in U.S., and the coal-fields extending over a vast area of *c.* 42,900 sq. miles; there are also many petroleum wells; zinc is worked, as also are lead, limestone, salt, and fluor-spar. I. is the richest of the U.S. in agriculture, the chief cereal crops being maize, wheat, oats, and hay; tobacco is grown and an active live-stock industry carried on. Chief industries are slaughtering and meat-packing, iron and steel foundries. Commerce is conducted by rivers, lakes, canals, and electric and other railroads.

Chicago—the largest city—is second largest in America; other important cities are Peoria, East St. Louis, Quincy, Springfield, Rockford, Joliet. There are many univ's. The name of the state is derived from Illinois confederacy of Indians—the original inhabitants; explored (*c.* 1673) by a Frenchman, Joliet; passed into the hands of English (*c.* 1763), and admitted to Union as State in 1818. Pop. (1910) 5,638,591.

J. F. Mather, *The Making of Illinois* (Chicago, 1900); J. H. Finley, *Illinois*.

ILLORIN, see ILORIN.

ILLUMINATI (Lat 'enlightened'), term assumed originally by sects of Christian mystics, who claimed that their minds were illuminated by supernatural light; title assumed by Rosicrucians and modern associations of political idealists.

ILLUMINATION, ART OF, the ornamentation of manuscript. The Celtic and Teutonic races of Europe had their own art before coming into contact with Rome, Celtic civilisation being at its height in the VI. cent. B.C., and the ornamentation which they afterwards applied to MSS. was largely copied from the characteristic forms of their metal-work. Byzantine art, however, which retained the classical tradition, exercised a considerable influence on Italy, where the Eastern Empire retained possessions until XI. cent., and through Italy on Europe. The earliest examples extant of Byzantine illumination (VI. cent) are of extreme splendour, some of silver writing on purple vellum, others with gaily painted designs on gilded vellum, and gracefully drawn figures in miniature as illustrations. Initials have been called attention to by the apparently independent instinct of all schools of illuminators, but all may have been influenced in some way not now to be traced by the Byzantine tradition. The great moment of the commencement of a book was not, however, celebrated so impressively in the Byzantine as in the Western schools. The great age of Byzantine illumination was the XI. cent. The characteristic Celtic interlacing of geometric designs, dragons, etc., in medallion and leaf-shapes, appear in the elaborate borders of Celtic MSS. and in the tail of the intricate initials, and the human figure is sometimes equally elaborately conventionalised with the animal. Celtic school had more influence than the Rom. on England until the Conquest. In France, Merovingian illumination of a simple kind was replaced in 800 by the Carolingian school which culminated in the X. cent.; it was marked by splendour of pigment and some success in the drawing of the miniatures. Illumination of XII.–XV. cent's has some features of ornaments of architecture of those cent's, and the miniature initial was a characteristic feature. Eng. work was noted in XIII. and XIV. cent's, but the greatest of all were the Ital. and Flemish schools of the early Renaissance, mastery of perspective and figure-drawing appearing for the first time.

Johnson, *Writing, Illuminating, and Lettering* (1906).

Illumination, the amount of light falling upon an object. If an object is illuminated it must be opaque, *i.e.* must not absorb all the light. The eye is a very poor judge of intensity of i., but it judges equality of i. fairly accurately, and all i. experiments take account of this. I. depends on the candle-power of the source and its distance.

ILLUSTRATION.—The history of i. commences with the Egyptian *Book of the Dead*. There remain no Gk. or Rom. writings which can be dated with certainty before the Christian era, but it is known that i. was practised by the Romans. It is found in the III.-cent. *Iliad* of the Ambrosian Library at Milan, developed in the miniatures of Christian art (see ILLUMINATION, ART OF), and became an important feature of printed books. The earliest impressions of the printing press, where text and i. were both engraved on wood together, are known as xylographic books. Bohner's illustrated *Fabulæ* were printed at Bamberg in 1461, Burgh's illustrated *Parvus et Magnus Catho* in England *c.* 1481. One of earliest and greatest illustrators was Albrecht Dürer (1471–1528). England hardly entered the field of art in any line in the XV. and XVI. cent's, but took the lead in i. in the XVIII. and XIX. cent's. Not only in his set i's, as for Butler's *Hudibras* (1726), but in *Marriage à la mode, The Rake's Progress*, etc., Hogarth gave interest to 'subjects of a modern kind and moral nature,' and thus stimulated i. Wood-engraving gave place to metal for i. in the XVI. cent., but the former method was revived at the close of the XVIII. cent. by Thomas Bewick whose *Quadrupeds* (1790) and *British Birds* (1797–1804)

were models of i.; the use of lithography in 1796 marked the beginning of cheap i.

At the same time the early XIX. cent. used steel for *éditions de luxe*, such as Whitaker's *History of Richmondshire*, illustrated by Turner. The most wonderful perhaps of all i's, Blake's *I's to the Book of Job*, belong to this period. Cruikshank, Leech, and Hablot K. Browne were followed by Tenniel, Mulready, and others, and they by the Pre-Raphaelites whose works, engraved by the Dalziels in *Good Words*, etc., made 'the Sixties' a great period in i. *Punch* has held a unique position among periodicals in excellence of i. since its commencement, and the *Graphic* (founded 1869) has had work of best black-and-white artists. Modern i. has been revolutionised by photogravure and (since 1875) by process. William Morris, who founded the Kelmscott Press in 1891, represents a second Pre-Raphaelite movement, but the general trend of i. is against mediævalism. A list of prominent illustrators of late times must include Abbey, Mrs. Allingham, Barnard, Beardsley, Tom Browne, Caldecott, Caton Woodville, Crane, Fildes, Frost, Furniss, Garth Jones, Dana Gibson, Green, Greenaway, Gregory, Hall, Herkomer, Holt, Phil May, Millet, Nicholson, Parsons, Partridge, Pennell, Herbert Railton, Raven Hill, Reinhardt, Renouard, Ricketts, Sambourne, Savage, Shannon, Sullivan, Hugh Thomson, Townsend, Strang, Sturge Moore, Woods.

Pennell, *Modern Illustration* (1895); Crane, *Decorative Illustration of Books* (1896).

ILLUSTRES (Lat. 'illustrious ones'), title of chief dignitaries of later Rom. empire.

ILLYRIA, wide extent of country along W. shore of Adriatic, between Fiume and Durazzo; stretches inland to Danube and Servian Morava; embraces modern provinces of Dalmatia, Bosnia, Herzegovina, and Montenegro; also S. half of Croatia-Slavonia, W. part of Servia, the sanjak of Novibazar, and extreme N. of Albania; inhabitants never clearly identified; coast colonised by Greeks, VI. and VII. cent's B.C., but some 300 years later Latin civilisation spread rapidly. After long history of continued warfare, I. (excepting some mountain tribes) ultimately became entirely Serbo-Croatian, in population, language, and culture.

ILMEN (58° 15′ N., 31° 30′ E.), fresh-water lake, near Novgorod, European Russia; area, *c.* 360 sq. miles.

ILMENAU (50° 41′ N., 10° 54′ E.), town, summer esort, grand-duchy Saxe-Weimar, Germany; porcelain and glass. Pop. (1910) 12,198.

ILMENITE, a mineral similar to hæmatite in appearance; opaque and slightly magnetic; generally found in gneisses and schists together with magnetite.

ILOILO (10° 50′ N., 122° 42′ E.), seaport, Panay, Philippine Islands; exports sugar, tobacco, rice. Pop. *c.* 20,000.

ILORIN, Illorin (8° 27′ N., 4° 30′ E.), town and province, N. Nigeria, W. Africa; important trading centre; wood-carving and leather industries. Pop. (prov.) *c.* 73,000.

ILSENBURG (51° 52′ N., 10° 40′ E.), small town, health-resort in the Harz, Saxony, Germany; iron-works. Pop. (1910) 4911.

IMAGE, term used in psychology for the impress made by an object on the eye, or for a mental impress; in theol. and art for any likeness of a person or thing; i's have played a considerable part in some religions (see Iconoclasts); in the Anglican Church adoration of i's is forbidden in art. XXII.

Image Worship.—In most great religions images have been important, not the least so in Christianity. There are different conceptions of an image: (1) it is that and nothing more; (2) it is the abode of the person or deity whom it represents, or retains a mysterious connection with him. Thus by getting possession of a man's image one could injure the man himself. This idea is called *sympathetic magic*. Images are forbidden to Muhammadans. Eating, moving, and other acts have been ascribed to images of Christ, the Virgin, and Saints, as to those of heathen gods of antiquity. See Iconoclasts.

Tylor, *Primitive Culture*; Farnell, *Evolution of Religion* (1905); Frazer, *The Golden Bough* (1900).

IMAGINATION, used generally for calling up to the mind ideas other than those conveyed by senses, and, in psychology, for calling up ideas formerly received through the senses.

IMÂM, the title of the caliph or leader of the Muhammadans; various sects have disputed as to nature and extent of his powers. See Shiites and Sunnites.

IMATRA FALLS, see Finland.

IMBECILE, weak, especially mentally weak; used of a state of mental weakness less advanced than idiocy.

IMBREX (from Lat. *imber*, rain), Lat. term for roof-tile curved to carry off rain.

IMBROS (40° 10′ N., 25° 50′ E.), Turkish island, in Ægean Sea; fertile; seat of Gk. bp. Pop. *c.* 8500.

IMERITIA, Imeretia (42° N., 43° E.), district, forming part of Kutais, Transcaucasia, Russia.

IMHOTEP, see Egypt.

IMITATION, copying the movements of a model, or the results of such movements. It may be (1) impulsive, *e.g.* 'contagious' coughing and yawning, or (a higher type, presupposing more attention) the rhythmical movements of a spectator of dancing; (2) inventional, arising from admiration of the agent copied, or of the dexterity copied, or from desire for a remoter end to which acquirement of the dexterity is a necessary means. The tendency to imitate is in most respects similar to instinctive tendencies, and is the young child's or animal's earliest mode of acquiring the habits of the race. See Psychology.

IMITATION OF CHRIST, famous devotional book dating from XV. cent.; authorship much disputed; some have ascribed it to John Gerson of Paris, and others to a John Gersen who probably never lived; but these do not now find many defenders. It must be either anonymous or (much more probably) by St. Thomas à Kempis (1380-1471); he lived near Utrecht, and the I. certainly emanates from Holland. The I. is intensely loved by Catholics and Protestants alike.

IMMACULATE CONCEPTION, see Mary.

IMMANENCE, meaning 'indwelling' as opposed to 'transcendence'; so the I. of God is the view of Him as a spiritual force in the universe, not a power controlling it from without.

IMMANUEL, Emmanuel (*q.v.*).

IMMANUEL, BEN SOLOMON (*c.* 1265–*c.* 1330), Jewish satirical poet of Italy in Dante's time.

IMMERMANN, KARL LEBERECHT (1796–1840), Ger. Romantic dramatist and novelist; b. Magdeburg; best works, *Merlin* (dramatic poem), *Die Epigonen* and *Münchhausen* (novels).

IMMIGRATION into U.S.A., Canada, and Australia has increased greatly during the XIX. and XX. cent's, owing to superabundance of population in most European countries. With the opening up of every new tract of land comes a tide of immigration. In 1910, 94,495 persons immigrated into Australia, while in 1911, 878,587 were admitted into U.S.A., 22,349 being rejected owing to strict Amer. i. laws.

Gt. Britain also attracts foreign i.; there are about 290,000 foreigners resident in the United Kingdom, but it is calculated that in 1911 there were 260,000 emigrants.

IMMORTELLES, see Everlastings.

IMMORTALITY.—Belief in I. has been widespread, but not universal. It developed in Judaism comparatively late, but it has always formed a part, perhaps the chief part, of the Christian hope, and exists in many other religions. In early Christianity it was allied with the expectation of the speedy end of the world. Many arguments have been used to uphold it, and although no one of them can prove it, the sum-total possesses great cumulative force. Besides the feeling that another world is required to redress this, it can be said matter is eternal, so must spirit be too; the materialistic argument against it can be

met by the assertion we do know that we are something more than our bodies. The pantheistic view that we shall be absorbed into divine life fails to satisfy those who believe there will be intensification rather than annulling of our personality. See HEBREW RELIGION; ESCHATOLOGY.

Charles, *Critical History of Doctrine of Future Life*; Sir Oliver Lodge, *Life and Matter*; Ward, *Naturalism and Agnosticism*; Buckle, *The After Life* (1907).

IMMUNITY, resistance to a certain disease or to a certain organism, either natural or artificially produced by different means. See BACTERIOLOGY.

IMOLA, ancient *Forum Cornelii* (44° 21′ N., 11° 43′ E.), town, Bologna, Italy; bp.'s see; manufactures cream of tartar, pottery. Pop. 33,000.

IMP, formerly scion, then child; from phrase 'i. of Satan' came modern use.

IMPEACHMENT, criminal process; in Great Britain, form of procedure in trial by House of Lords at instance of House of Commons. Of great importance in Eng. history in bringing to trial offenders too powerful to be condemned by ordinary law courts; disused in XIX. cent.; retained in constitution of U.S.A.

IMPERIAL CHAMBER (Ger. *Reichskammergericht*), from 1495 till its dissolution Court of Holy Rom. Empire; consisted of 16, then 18, judges and officials app. by empire; took place of old Imperial Court whose members were emperor's nominees. Its work was unsystematic and often taken over by the Aulic Council.

IMPERIAL CITIES in former times were cities in Germany which were directly under the emperor and owed allegiance to no intermediate lord; name became common in XIII. cent. (Ger. *Reichstadt*); cities attained their status by imperial grant or by buying their freedom from the intermediate lord; examples are Basel, Cologne, Mainz, Strassburg, Worms.

IMPERIALISM in modern usage signifies the desire to develop and consolidate an Empire; term specially applied to British Imperialists (opposed to 'Little Englanders'). Under the Imperial idea come the schemes of preferential tariff, conjoint defence of over-seas possessions, and the representation of Brit. Dominions in the Imperial Parliament.

IMPETIGO CONTAGIOSA, see SKIN (SKIN DISEASES).

IMPEY, SIR ELIJAH (1732–1809), chief-justice of Bengal; supported Warren Hastings; impeached in 1783 for action in trial of Maharajah Nand Kumar, but acquitted.

IMPHAL, MANIPUR (24° 48′ N., 94° E.), town, capital Manipur, Assam, India. Pop. 67,000.

IMPLEMENT (Lat. *implere*, to fill), Scot. legal term for fulfilment of contract.

IMPLUVIUM (Lat. from *impluere*, to rain into), receptacle in atrium of Rom. house for rain falling through *compluvium* of roof.

IMPOSITION (Lat. *imponere*, to place upon), arrangement of type after composition in printing.

IMPOST, architectural term for part of door-post on which arch rests; often forms capital of a pilaster, or is moulded.

IMPOTENCE, inability of male to perform function of reproduction; may arise from excessive nervous strain, disease, or excess.

IMPRESSIONISM IN PAINTING.—The term i. is said to have originated in Manet's claim (expressed in the preface to the catalogue of his works at the *Exposition Universelle*, 1867) that the painter's function was to render his own 'impression' of things seen. Impressionists and Post-Impressionists are united in belief that the artist may exaggerate a feature which interests him in his subject and may omit a feature which does not interest him; thus the art of this school is, above all, the expression of the individuality of the artist. Technical differences also characterise i. Manet preached pure colours and, in avoiding mixing of pigments, introduced the patchiness of i. at a near view; for this Velazquez's authority was cited. From Delacroix and Turner the Fr. school learned the interaction of colours and commenced experiments in the production of new effects by adjacent dots of colour, a process known as *pointillisme*; facility and invention in obtaining effects of texture and light are characteristic. Monet, Degas, Pissarro, Gauguin, are among the great Fr. Impressionists. England has a remarkable school of Post-Impressionists, led by the Rothensteins, who unite extreme delicacy of colouring and detail with a sense of fun, a new thing in high art. The Post-Impressionists have largely abandoned daub for pastel effects.

Lewis Hind, *Post-Impressionism* (1911); Dewhurst, *Impressionist Painting*.

IMPRESSMENT, the seizing and compelling men to enter navy; practice was resorted to in this country from the XIV. cent. till reign of George III., laws being passed to regulate the system; it has now died out, although these laws have not been repealed. Right to exercise power of i. is claimed by all sovereign authorities, and it has been resorted to by all European states.

IMPRISONMENT, punishment by incarceration (with or without hard labour) for offences which are not serious enough for penal servitude. I. in first division amounts to little more than confinement—prisoners may wear ordinary clothes, receive friends, etc.; in second division, special rules somewhat similar to above are in force; while criminal offenders are placed in third division (hard labour). The maximum term is generally two years.

Rules for i. are regulated by Home Secretary, the Secretary for Scotland, the General Prisons Board of Ireland. See PRISON.

IMPROVISATORE, poet or musician who has *gift* of composing without study and recites as he composes; apparently common in Middle Ages, but only appears as a freak in modern times.

IN CŒNA DOMINI (Lat. 'at the Lord's Supper'), papal bull, thus commencing, issued yearly against heretics, 1363–1770.

IN FORMÂ PAUPERIS (Lat. 'as a pauper'), legal term for qualification by which free counsel and solicitor may be obtained by defendant; the pauper must be worth under £25, clothes excepted.

IN-ANTIS, architectural term for classical buildings in which two columns are placed between the *antæ* of the entrance.

IN-BREEDING, see BREED.

INAGUA, see under BAHAMAS.

INCANTATION (Lat. *cantare*, to sing), spell fashioned on the belief universal in primitive men that words placed in a certain order have magical power.

INCAS, see under PERU.

INCE, WILLIAM (fl. XVIII. cent.), Eng. furniture-maker whose early work was in classical school of Chippendale; assisted later in mediæval revival.

INCE-IN-MAKERFIELD (53° 31′ N., 2° 37′ W.), town, Lancashire, England; collieries, ironworks. Pop. (1911) 22,038.

INCENDIARISM, ARSON (*q.v.*).

INCENSE, a term given to various substances which when burnt give off a sweet smell—generally used in religious worship. It was used in many ancient Oriental worships, particularly in Egypt, as appears from various monuments. It was common, too, in ancient India, where its use still survives—even among Muhammadans, who elsewhere do not use it much—and in Persia and Babylonia; it is also used in Buddhist countries. The ancient Greeks burnt i. to their gods, and it was employed in Rome on festal occasions. Among the Jews the burning of i. accompanied animal sacrifices, and in the Temple its object was partly fumigatory to overcome the stench of the blood of the slaughtered beasts. In the Christian Church its use is not definitely proved before the V. cent., as the Early

Fathers do not refer to it, but it was certainly used in the catacombs at Rome, though this may have been for sanitary reasons. Its use was regular in the Middle Ages, and is enjoined at certain portions of sung Mass in the Rom. Missal. It is likewise common in the Gk. and Eastern Churches, where there are liturgical formulæ for the censing of the bread and wine. In England, according to the uses of Sarum and Bangor, the altar was to be censed during Mass, but at the Reformation its use was generally abandoned. It was revived together with so many other ancient customs in the XIX. cent., and there was sharp controversy as to its legality, as its use in the reign of Edward VI. could not be proved. In 1899 the two abp's decided that its ceremonial use was illegal. Sometimes it has been used non-ceremonially to disinfect a church or to give a pleasant odour before service began.

INCEST (Lat. *incestus*, unchaste), sexual intercourse between persons who could not marry on account of affinity; punishable in England under Act of 1908, for the purposes of which alone the illegitimate child is not *filius nullius*. The death penalty for the offence in Scotland was abolished by the Criminal Procedure Act, 1887.

INCH, 12th part of an Eng. ft.; divided formerly into 3 barleycorns and supposed to measure 3 barleycorns placed end to end.

INCHBALD, MRS. ELIZABETH (1753–1821), Eng. actress, dramatist, and novelist; beautiful and skilful player, but never overcame impediment in speech; the writings show too much cultivation of 'sentiment.'

INCHCAPE, see BELL ROCK.

INCHCOLM and **INCHKEITH**, islands in FORTH (*q.v.*).

INCHIQUIN, BARONY AND EARLDOM OF, Irish honours. Murrough O'Brien, descendant of Brian Boroimhe, Irish king, was persuaded by the Eng. government to accept the barony of I. and earldom of Thomond. Murrough O'Brien, 6th baron, was made Earl of I. in 1654 by Charles II. for services to Charles I. His s. William, 2nd earl, was chosen out of many rivals for governorship of Tangier, the Duchess of Portsmouth interceding for him on her knees. Murrough, 5th earl, was cr. Marquess of Thomond in 1800. The marquessate and earldom became extinct in 1855, but the barony passed to a descendant of the first baron, Sir Lucius O'Brien (1800–72), grandfather of Sir Lucius William O'Brien (b. 1864), present Lord I.

INCLINOMETER, instrument for measuring the *dip* (inclination of earth's magnetic field to horizontal). Two kinds of i's are in use—the *dipping needle* and the *earth inductor*. The former is a suitably mounted, light, magnetised needle, free to move about a horizontal axis; the latter, a coil of wire spun about a diameter, adjusted until no current is induced. The inclination of the needle, or of the diameter of the coil, to the horizontal measures the dip.

INCLOSURE, AWARD, permission given by parliament for i. of Commons (*q.v.*), and division between lord of the manor and the commoners, the former receiving the largest share.

INCOME TAX, in Gt. Britain, a tax levied by state upon income whether derived from land, houses, mine shares, trades, or any other source; it was first levied in 1799, abolished in 1806, reimposed in 1842, and continues to present day; originally a war tax, it is now a permanent part of revenue. Amount has varied considerably, lowest being 2d. in the pound in 1874, highest 1s. 4d. in 1855–56. Before 1907 no distinction was made between earned and unearned incomes, but in that year an abatement was made of 3d. in the pound on all earned incomes up to £200 (rate 9d. in the pound), 1s. in the pound being the rate on earned incomes between £2000 and £3000. By the Finance Act of 1909 these rates remained unchanged; but the rate on all unearned monies and on the earned part of incomes over £3000 was raised to 1s. 2d.; a special allowance equal to the amount of income tax on £10 was allowed to parents whose total income did not exceed £500, in respect of every child under age of sixteen; and a super-tax of 6d. in the pound was levied on incomes over £5000, charged on amount by which total income exceeded £3000. Incomes not exceeding £160 are exempt, and those between £160 and £700 are allowed graduated abatements.

The levying of Taxes upon Income has now been adopted in U.S.A.

Robinson, *Law Relating to Income Tax* (1908); Fry, *Income Tax* (1910).

INCORPORATION, granting of certain powers of self-government to a town (which then becomes a borough) or a company; the town receives i. after successful petition to the crown, the company by certificate from the registrar of Joint Stock Companies.

INCUBATION AND INCUBATORS.—Incubation, originally the sitting of a hen on her eggs, now means the exposure of a living organism to a uniform temperature, under suitable conditions of moisture and ventilation; incubators are enclosed spaces with devices for securing this. For each organism there is a maximum, minimum, and optimum temperature. Incubation should be conducted at the optimum temperature and never reach the maximum or minimum. EGG INCUBATORS are employed to hatch eggs artificially, a practice known to the early Chinese and Egyptians. The latter employed *Mamals*, large closed brick ovens in which thousands of eggs were hatched. These were heated by low fires, which after the twelfth day were allowed to go out. Modern egg incubators are heated by hot air or hot water. The essential is that the incubator shall maintain a constant temperature, notwithstanding changes in temperature of the outer air, fluctuations in gas pressure, and the occasional opening of the incubator. After the tenth day the chick, having developed a fœtal respiratory organ, produces more heat, and the incubator should automatically adjust itself to this. The providing of increased air for respiration increases evaporation, and the eggs should be provided with additional moisture.

Hot-air incubators are double-walled metal cylinders, the space between the walls being packed with non-conducting material. In the centre of the floor there is a box with pipes which, after traversing the incubator, open to the exterior at the top. Inside the box there is a lamp which heats the air. The hot air then circulates through the pipes in the incubator. Fresh air is supplied to the incubator by a tube on either side of the heating box. A jar of water supplies sufficient moisture. The temperature is regulated by a valve over the main pipe from the heating chamber. Increase in temperature opens the valve, decrease closes it. The valve is worked by the expansion of a column of mercury actuating a system of levers.

BACTERIOLOGICAL INCUBATORS may be hot or cool; the former are kept at 37° C., the latter at 20° C. Cool incubators are used for gelatin cultures of pathogenic bacteria or to grow non-pathogenic bacteria and moulds. The temperature is maintained in summer by the passage of cold water round the walls and in winter by warm water. The hot incubators for pathogenic bacteria are square double-walled metal boxes covered with wood. Warm water is poured into the space between the metal walls and heated underneath by oil, gas, or electricity. The flame is regulated by a system of levers which can decrease or increase it when the temperature of the water makes a valve open or shut. The temperature of such an incubator remains constant for months. The air surrounding the incubator should be kept as still as possible and should be some degrees below the temperature of the incubator. A very carefully regulated and ventilated form of this incubator is used to rear prematurely born infants. When the child has grown sufficiently the temperature is gradually decreased.

INCUBUS (Lat. *incubare*, to lie upon), demon supposed to visit women and engender witches, etc.; the feminine form was the *succuba*.

INCUMBENT (Lat. *incumbere*, to lean upon; the reason for this name is not known), holder of a benefice in Anglican Church.

INCUNABULA (Lat. cradle; plural of *incunabulum*), title (nationalised in various countries) given to printed books of XV. cent.; of these there are about 30,000; Ger. scholars are engaged in making a complete list for the government. Previous bibliographies are Beughem, *I. typographiæ* (1688); Panzer, *Annales typographici* (1793 and 1803); Hain, *Repertorium bibliographicum* (1826–38); Proctor, *Index to the Early Printed Books in the Brit. Museum* (1898); Copinger, *Supplement to Hain's Repertorium* (1898–1902). Many facsimiles were printed in the late XIX. cent.

INDABA, intertribal conference of Kaffirs.

INDEMNITY, ACT OF, passed every session by Brit. parliament for relief of office-holders who had omitted qualifying oaths, etc.; abolished by Promissory Oaths Act, 1868.

INDENTURE, name for legal deed between two or more parties. Formerly the duplicates of the agreement were written on one parchment, which was then cut into two by indented line, so that the deed and counterpart could be fitted into one another and thus give evidence of being the same agreement.

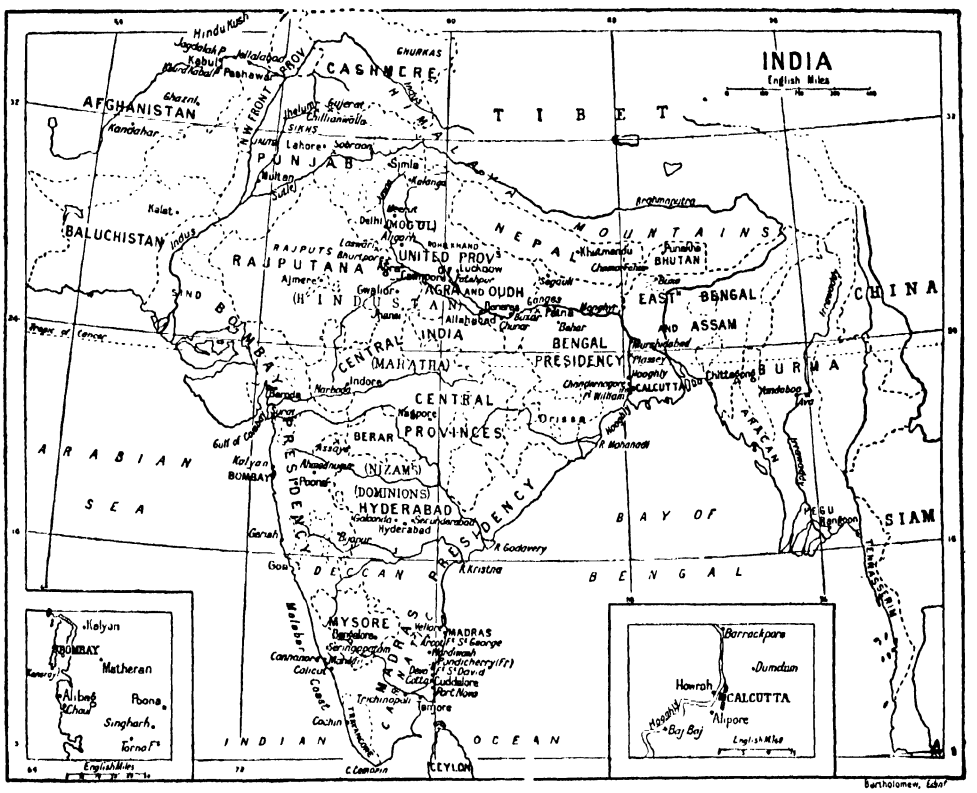
INDEPENDENCE (39° 7′ N., 94° 30′ W.), city, Missouri, U.S.A.; iron foundries, flour-mills. Pop. (1910) 9859.

INDEPENDENCE, DECLARATION OF, instrument whereby the U.S.A. repudiated the suzerainty of Great Britain in 1776; document was signed by fifty-six members, among whom were John Adams, William Ellery, William Floyd, Benjamin Franklin, Francis Hopkinson, Thomas Jefferson, John Penn and Roger Sherman. The resolution of independence was passed on July 2, and the Declaration published on July 4, which has ever since been a national holiday; it was drawn up by Jefferson, and relates the whole history of Anglo-Amer. relations; the original document is now partly illegible. Has exercised incalculable influence on U.S. constitution.

Hazleton, *The Declaration of Independence* (1906).

INDEPENDENTS, name given to churches where the individual church is supreme; often called 'Congregationalist.'

INDEX, list of words about which book contains information, arranged in alphabetical order. In learned books there used to be, and still often is, an *I. personum*, *I. locorum*, and *I. rerum*. The Eng. I. Soc. was founded 1877, and established useful rules for the important art of indexing.



Wheatley, *How to make an I.* (1902).

INDEX LIBRORUM PROHIBITORUM, or simply 'The Index,' list of books which R.C. Church officially prohibits her members from having or reading. First list was issued by Pope Paul IV. in 1557; reissued from time to time, and recast by Leo XIII., 1897, when books defending heresy were prohibited, but not necessarily books by heretics not so doing; likewise immoral books must not be read. Special permission can be given to scholars and others to read prohibited works.

INDIA, the central peninsula of S. Asia; it lies between 8° and 38° N., and 67° and 95° E. (or, including Burma, 75° E.), and is bounded N.E. by Tibet, N. by Russ. and Chin. Turkestan, N.W. by Afghanistan and Baluchistan, S.W. by the Arabian Sea, S.E. by the Bay of Bengal. It is *c.* 2000 miles long from N. to S., and *c.* 2000 miles wide from near Kurrachee to the E. boundary of Assam, the area *c.* 1,300,000, the coast-line *c.* 2000 miles. Starting from the Pamir, in the extreme N. the Karakoram Range and great mass of the Himalayas curve round along the N.E.; the Sulaiman and other ranges of Afghanistan and Baluchistan pass along the N.W. S. of all these, something like an inverted V, is a great lowland plain, from 150 to over 300 miles wide, comprising the valleys of the Ganges and lower Brahmaputra on the N.E. and the Indus on the N.W. In the centre, stretching N. from the Kathiawar Peninsula, are the Aravalli Hills; extending from the Gulf of Cambay to near Benares are the Vindhya Hills and the Kaimur Hills, immediately S. of which are, on the W., the valley of the Nerbudda, on the E. the Son, a tributary of the Ganges. S. of these are the Satpura and Mahadeo Hills, below which the great central plateau of the Deccan (1500 to 12,000 ft. of average height) stretches S. with the W. and E. Ghauts along its borders. The latter ranges meet in the S. at Nilgiri Hills, S. of which is the Palghat Gap (1000 ft.), round which hills rise to over 8500 ft. It is the only pass from E. to W. for over 700 miles. From it the Anamalai and Cardamon Hills stretch to the extreme S. of the peninsula. The Tapti enters the sea between the Satpura Hills and the N. end of the Western Ghauts; otherwise the Deccan is drained E. by the Mahanadi, Godavery, Kistna (Krishna), Cauvery, etc. The climate varies from the cold of the perpetual snows of the Himalayas to the intense, moist heat of the plains and the dry heat of the plateau, while other differences are caused by the continental conditions of the N. and insular conditions of the S. The S.W. (summer) and N.E. (winter) monsoons are much modified by local configuration. The three seasons are: hot (March to May), wet (June to Oct., later in S. Madras), and cool. The rainfall varies from 8 in. in Sind and Cutch to 12 in Rajputana, 21½ in the Punjab plains, 31 in the N. Deccan, 40–60 in Central I., W. Bengal, and Orissa, 65 in Lower Bengal, 95 in Assam and Cachar, 114 in the E. Ghauts, 139 in the W. Ghauts, and 152–73 in Lower Burma, while among the Assam Hills it is said to reach 500 to 600 ins. Owing to density of population and great evaporation any failure of the regular rains is disastrous and leads to serious famine. The subsoil of the great Indo-Gangetic plain of the north is Recent Alluvium, that of the Himalayas possibly at points Cambrian, with Crystalline, Upper and Lower Tertiary rocks, Volcanic and Cretaceous strata. Large districts of E. and S. peninsula have Crystalline rocks; fringing the Crystalline rocks of the Deccan is a strip of Recent Alluvium along the Bay of Bengal.

History.—The earliest peoples found in I. are the Dravidians (*q.v.*), who were driven S. and into the less eligible hill-districts by an Aryan invasion. This took place possibly in the II. millennium B.C., possibly earlier, and is commemorated in the contemporaneous poem the *Rig-Veda*. By the VI. cent. B.C. sixteen Aryan states had been established S. of the Himalayas, and Brahmanism, apparently not known to the Dravidians, was flourishing. In the VI. cent. Buddhism and Jainism were taught. The Hindu epic the *Mahâbhârata* gives a legendary history of this period. Magadha (Behar) became the chief state. The invasion of Alexander the Great in 327 B.C., a famous event in European history, left a permanent mark on I., as inscriptions and art show. Alexander reached the Hydaspes and retired, leaving garrisons to secure his conquests. He died (323) before revisiting I., which, shortly afterwards, became part of the Seleucid Empire. The Indian monarch, Chandragupta (321–297), recovered a good deal of territory from the Greeks and founded the dynasty of the Mauryas, which lasted until 184 B.C.; and despite various efforts of the Seleucidæ, I. broke away from Macedonian rule, the process being completed by Kadphises (fl. I. cent. A.D.), founder of the great Kushan dynasty, which had its seat at Peshawar. History has not yet been disentangled from legend for these early cent's, but the invasions of the White Huns in the V. and VI. cent's B.C. stand forth. In the early days of militant Muhammadanism I. successfully repelled several Arab inroads, but in 1001–24 the great Turk. leader Mahmud established the Ghazni dynasty in I. (1024–1186). There followed the Mongol invasion of Genghis Khan in 1219, and the inroad of Tatar hordes under Timour (the Tamerlane of E. legend) in 1397,

who captured Delhi 1398. Timour established his rule in Hindustan, but the Persian Sultan, Baber, who established his rule in I. (1519–26), was the true founder of the great Mogul Empire, famous until the close of the XVIII. cent. Renowned rulers were Akbar (1556–1605) and Aurungzebe (d. 1707), the most brilliant of the line. The last king of Delhi was deposed by the Brit. in 1858 for taking part in the Mutiny of 1857. Trade with I. was carried on by European states from the beginnings of history, its mart being Alexandria. The Cape route was discovered by Vasco da Gama (1497–98), who in 1502 established a Portuguese station at Cochin. The Dutch founded their E.I. Co. in 1602, the Fr. in 1664. The Eng. E.I. Co. received its first charter from Queen Elizabeth in 1600. In the next cent. and a half it continued to be merely a trading company, with stations at Surat, Bombay, Madras, and Calcutta, and ousted in turn Portuguese and Dutch rivals. A new era

of *Assaye*, 1803. Lord Hastings, Gov.-Gen. (1813), reduced Nepal to submission without depriving it of independence. Britain was now practically supreme over the peninsula S. of a line from the mouth of the Indus to that of the Ganges, and over the basin of the Ganges itself. Between 1848 and 1856 the Marquess of Dalhousie annexed more territory than any other Gov.-Gen. before or since. By the defeat of the Sikhs at Gujerat and elsewhere the Punjab was brought under Brit. rule. S. Burma, including the Port of Rangoon, was annexed, and, most important of Dalhousie's achievements, Oudh, 'the garden of I.' His high-handed proceedings in Oudh had much to do with the Indian Mutiny. The Mutiny broke out in 1857 at Meerut; the chief centres of the war were Delhi, Cawnpore, and Lucknow. Cawnpore was the scene of the 'Bloody Well'; Lucknow is celebrated for the relief brought to the Brit. garrison by General Havelock (*q.v.*). With the capture of Delhi, the

commenced in 1748, when Dupleix, the brilliant Fr. governor, interfered in disputes between rival princes for the throne. Britain followed suit and won first great success at Arcot in 1751 (see CLIVE). Clive was sent in 1757 to take vengeance on Surajah Dowlah, the Nabob of Bengal, for the outrage of the 'Black Hole of Calcutta,' and by his victory at Plassey laid the foundation of Brit. rule in I. The success of Sir Eyre Coote at Wandewash in 1760 led to the extinction of Fr. rule in I. Warren Hastings, Governor-General under the I. Act of 1773, played an important part in building the Brit. Empire. He subdued the Mahratta princes and collected the army with which Sir Eyre Coote crushed Hyder Ali, Sultan of Mysore, at Porto Novo, 1781. Marquess Wellesley, Gov.-Gen. 1798–1805, induced the Nizam of the Deccan and other native princes to accept Brit. protection, stormed Seringapatam, capital of Hyder Ali's successor, Tippoo, and subdued the Mahrattas, his bro. Arthur, future Duke of Wellington, winning the hard-fought battle

hes lquarters of the rebel troops, the back of the reb ellion was broken. The Derby-Disraeli Ministry the n transferred the government from the E.I. Co. to the Crown (1858). The Co. was dissolved in 1874. Th last flames of the Mutiny, kept alight by Nana Sal ib, were quenched by Lord Canning, 1859–62, but the unrest in many parts, especially Bengal, has been a ser.ous danger ever since. There have been terrible famines in 1861, 1866, 1868–69, 1874, 1876–77, and 1899. The Brit. government has made many attempts to win Muhammadan goodwill, ceasing to subsidise Hinduism in 1863, and putting a stop to various Hindu rites. Sir John (afterwards Lord) Lawrence, who became Viceroy in 1864, had to meet Hindu discontent and was forced, after some losses of Brit. forces, to agree to terms offered by Bhootaneese (1865). The Earl of Mayo became Viceroy in 1869, and was faced with serious deficiency of the revenue, and wide dislike of the new income tax (abolished 1873). Lord Ellenborough succ. him after his assassination by a convict in 1872,

and was succ. by Lord Northbrook in 1872, and Lord Lytton (1876–80). In 1876 Queen Victoria was proclaimed Empress of I. in London, and in the following year at Delhi. The invasions of N.W. tribes culminated (1878–80) in the Afghan War, by which Britain obtained possession of the mountain passes of I. Lord Ripon (Viceroy, 1880–84) by various democratic measures, including Ilbert's visionary Criminal Procedure Amendment Bill (1883, amended and passed 1884), won much unpopularity among Europeans, and at the same time countenanced the noted libel suit of 1883 against a native. He enjoyed, however, unusual native goodwill. Lord Dufferin (1884–88) introduced various reforms, annexed Upper Burma (1886) and passed an Income Tax Bill (1886). Lord Lansdowne (1888–94) and Lord Elgin (1894–99) restored the finances, the former introducing gold standard. Lord Curzon (1889–1905) reorganised the N.W. provinces, naming them the United Provinces, and called forth the latent revolutionary spirit in Bengal, which in 1905 he divided into the province of E. Bengal and Assam. He resigned after a serious dispute with Lord Kitchener, commander-in-chief, as to the respective authorities of the latter and the military member of the governor's council in time of war. The matter was decided in 1906, to the satisfaction of Lord Kitchener and the new Viceroy, Lord Minto (1905–10). The plague had been raging in the Punjab since 1897, and in 1907 there was an alarming increase of sedition there and in Bengal. Severe measures of repression were taken against both Muhammadans and Hindus. Lord Morley now brought forward measures for giving natives representation, and native satisfaction was expressed for the I. Council's Act (1909). Lord Hardinge succ. as Viceroy in 1910. George V. visited I., 1911–12, was proclaimed Emperor at Delhi Durbar (see DURBAR), and declared Delhi (*q.v.*) capital, in place of Calcutta. In 1912 E. Bengal was reunited to Bengal, and Assam was again constituted a separate province. At the same time Bihar and Orissa were combined in a province which includes Chota Nagpur. The most important vernaculars (of which there are 147) of I. are the Aryan (spoken by over 200,000,000 natives) and the Dravidian (spoken by 56,000,000), probably the indigenous speech. The former are the speeches of nearly all the tribes of N.I., the latter belong to the S. and the hill-tribes of the centre. The chief races are the Turko-Iranian of the N. (including the Afghans, Baluchi, and Brahni of Baluchistan and the N.W. Frontier Province), the Indo-Aryan of the Punjab, Rajputana, and Kashmir (represented by the Rajputs, Khatris, and Jats), the Scytho-Dravidian of the west (represented by the Mahrattas and possibly by the Kunbis and Coorgs), the Aryo-Dravidian of Behar, the United Provinces and parts of Rajputana (including Hindi), the Mongolo-Dravidian of Bengal and Orissa, the Mongoloid of the N. frontier, and the Dravidian of the Indo-Gangetic plain and the Central Provinces. The caste system of I. is an extreme example of the differences in social rank always produced by foreign conquest; the tribes who conquered the original Dravidians must, however, have largely adopted their speech. According to the census of 1911 there are in I. 3,876,000 Christians, 217,587,000 Hindus, 3,014,000 Sikhs, 1,248,000 Jains, 10,721,000 Buddhists, 100,100 Parsis, 10,295,000 Animists, 66,623,000 Muhammadans, 20,980 Jews. Christianity is on the increase; very much the largest sect is that of the Rom. Catholics. The five univ's of Calcutta, Allahábád, Bombay, Madras, and the Punjab are examining bodies for numerous dependent colleges. In 1910 there were 6443 secondary, 119,270 elementary schools. There remains a large proportion of illiteracy. Newspapers are pub. in twenty-two dialects.

Costume.—A common Hindu costume of all ranks is the loin-cloth (*dhoti*); the men's heads are shaved except for the top-knot descending from the crown. In Rajputana, however, moustache and beard, parted in the middle, are worn. Except in Bengal, modern Hindus usually wear turban or cap. The Brahmans wear a symbolical cord (*janeo*) over the left shoulder. Hindu women wear their hair parted in the middle and done closely to the head, with, sometimes, long plaits. The face is veiled. A tight-fitting bodice is worn sometimes with a skirt, sometimes with drapery gracefully wreathed round waist and shoulder. They usually go barefoot. Much the same as the Hindus' is the Parsi men's and women's dress, men invariably shaving the head; both sexes invariably wear head covering, within doors and without; little girls have long frilled knickerbockers, loosely flowing hair, and caps. The Sikh's long hair is tied in a knot behind and surmounted by an immense turban; his long beard is combed upwards from the parting in the middle. The Muhammadans shave the head, but allow the beard and moustaches to grow. They wear turbans or caps, white shirt and trousers. Both asceticism and cleanliness in dress are enjoined by their religion. The women wear trousers (pa'ejāmās), tight-fitting bodice, plaited hair, and long veil.

Government.—In 1858 I., hitherto under the rule of the E. I. Co., was transferred to the Brit. Sovereign, who in 1876 assumed the title of Emperor of I. Indian affairs are managed by a Sec. of State for I. and a Council in this country, and in I. itself by a Gov.-Gen. or Viceroy (usually appointed for five years), with a Council, while Madras, Bombay, and Bengal have governors; the United Provinces, Bihar and Orissa, Burma, and the Punjab have lieutenant-governors; and the Central Provinces, the N.W. Frontier Province, Assam, Coorg, Brit. Baluchistan, Ajmere-Merwara, the Andaman Islands, and Delhi have chief commissioners. Under these, administration is carried on by a large body of Brit. civil servants. The Council of I. in England, established under Act of 1858 abolishing the Board of Control app. by Pitt in 1784 and reformed in 1861, consists of not less than ten and not more than fourteen members, app. for seven years by the Sec. of State. At least nine must have resided ten years in I., and have been resident within five years of their appointment. No appropriation of Indian revenue can be made without consent of the Council, but this is its only controlling power.
